SERVICE MANUAL
2008 Model
FOREWORD

This Service Manual contains maintenance and repair methods for the Mitsubishi Fuso Truck FE. FG Series. Read this manual carefully as an aid in providing correct, efficient maintenance. Please note that the information and specifications contained within this manual may change without notice. This is due to product modifications and continued vehicle improvements that are made throughout the model years. Should you encounter any discrepancy in the information provided, please do not hesitate to contact your nearest Mitsubishi Fuso Dealer or Mitsubishi Fuso Truck of America, Inc.

HOW TO READ THIS MANUAL

This manual consists of the following parts:
- Specifications
- Structure and Operation
- Troubleshooting
- On-vehicle Inspection and Adjustment
- Service procedures

On-vehicle Inspection and Adjustment
- Procedures for inspection and adjustment of individual parts and assemblies as mounted on the vehicle are described including specific items to check and adjust. Specified or otherwise, inspection should be performed for looseness, play, backlash, crack, damage, etc.

Service procedures
- Procedures for servicing components and parts off the vehicle are described centering on key points in their removal, installation, disassembly, reassembly, inspection, etc.

Inspection
- Check items subject to “acceptable/unacceptable” judgement on the basis of service standards are all given.
- Some routine visual checks and cleaning of some reused parts are not described but must always be included in actual service work.

Caution
- This service manual contains important cautionary instructions and supplementary information under the following four headings which identify the nature of the instructions and information:

DANGER ⚠	Precautions that should be taken in handling potentially dangerous substances such as battery fluid and coolant additives.
WARNING ⚠	Precautionary instructions, which, if not observed, could result in serious injury or death.
CAUTION ⚠	Precautionary instructions, which, if not observed, could result in damage to or destruction of equipment or parts.
NOTE	Suggestions or supplementary information for more efficient use of equipment or better understanding.

Terms and Units
- Front and rear
  The forward running direction of the vehicle is referred to as the front and the reverse running direction is referred to as the rear.

- Left and right
  Left hand side and right hand side, when facing the forward running direction of the vehicle, are respectively left and right.

Standard value
- Standard value dimensions in designs indicating: the design dimensions of individual parts, the standard clearance between two parts when assembled, and the standard value for an assembly part, as the case may be.

Limit
- When the value of a part exceeds this, it is no longer serviceable in respect of performance and strength and must be replaced or repaired.

Tightening torque

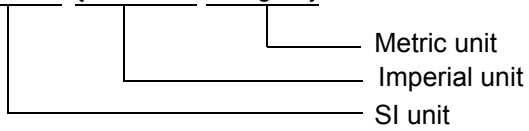
- Values are directly specified for out-of-standard tightening torques for bolts and nuts.
- Where there is no specified figure for tightening torque, follow the table covering standard tightening torques. (Values for standard tightening torques are based on thread size and material.)
- When the item is to be tightened in a wet state, “wet” is indicated. Where there is no indication, read it as dry.

Units

- Tightening torques and other parameters are given in SI* units with imperial unit and metric units added in brackets { }.

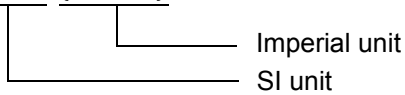
***SI: Le Système International d’Unités**

Example: 390 N·m {290 ft.lbs, 40 kgf·m}



Unit		SI unit {imperial unit, metric unit}	Conversion factor
Force		N {lbs, kgf}	9.80665 N {2.2046 lbs, 1 kgf}
Moment of force		N·m {ft.lbs, kgf·m}	9.80665 N·m {7.2329 ft.lbs, 1 kgf·m}
Pressure	Positive pressure	kPa {psi, kgf/cm^2}	98.0665 kPa {14.22 psi, 1 kgf/cm^2}
	Vacuum pressure	kPa {in.Hg, mmHg}	0.133322 kPa {0.03937 in.Hg, 1 mmHg}
Volume		J {BTU, kcal}	4186.05 J {3.96825BTU, 1 kcal}
Heat quantity		W {BTU/h, kcal/h}	1.16279W {3.96825BTU/h, 1 kcal/h}

Example: 30 mm {1.18 in.}



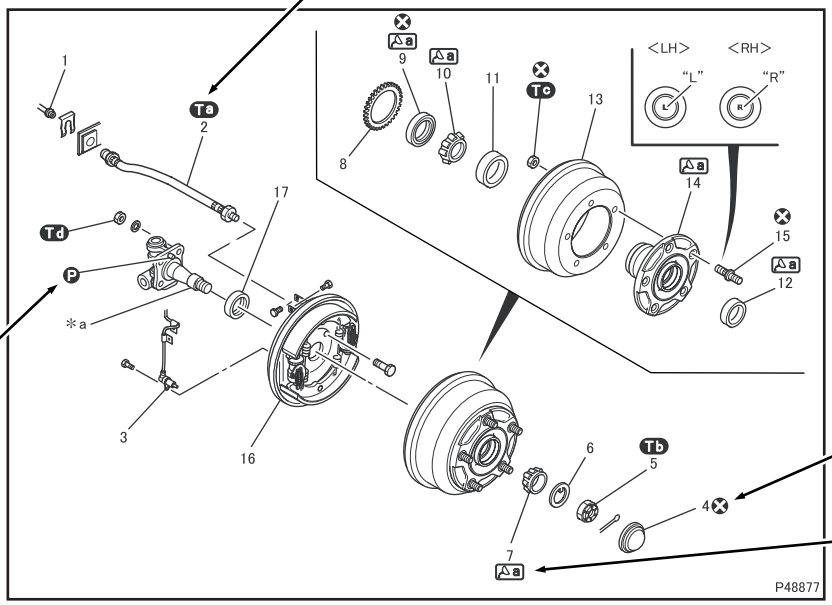
Unit	SI unit {imperial unit}	Conversion factor
Length	mm {in.}	1 mm {0.03937 in.}
	m {ft.}	1 m {3.2808 ft.}
	km {mile}	1 km {0.6214 mile}
Mass	kg {lb}	1 kg {2.2046 lb}
	g {oz}	1 g {0.035274 oz}
Temperature (in degree Celsius)	°C {°F}	1°C {(1°C × 1.8 + 32)°F}
Velocity	km/h {mph}	1 km/h {0.6214 mph}
	m/s {ft/s}	1 m/s {3.281 ft/s}
Volume	L {qts}, L {gal}	1 L {1.05336 qts}, 1 L {0.2642 gal}
	cm^3 {cu.in.}	1 cm^3 {0.061023 cu.in.}
Area	m^2 {in^2}, m^2 {ft^2}	1 m^2 {1.550 × 10^3 in^2}, 1 m^2 {1.076 × 10 ft^2}

HOW TO READ THIS MANUAL

Symbol	Denotation	Application	Remarks
Ta	Tightening torque	Parts not tightened to standard torques (standard torques specified where necessary for servicing)	Specified values shown in table See Table of Standard Tightening Torques for parts for which no tightening torques are specified.
P	Locating pin	Parts to be positioned for installation	
⊗	Non-reusable parts	Parts not to be reused	
a	Lubricant and/or sealant	Parts to be coated with lubricant or sealant for assembly or installation	Necessary lubricant and/or sealant, quantity required, etc. are specified in table.
a	Special tool	Parts for which special tools are required for service operation	Tool name/shape and part number are shown in table.
*a	Associated part	Parts associated with those removed/disassembled for servicing	

Denotes that tightening torque is specified.

WHEEL HUB AND BRAKE DRUM



Indicates position of locating pin.

Identifies non-reusable parts.

Denotes that coating with lubricant or sealant is required.

● Disassembly sequence

1 Brake pipe
2 Brake hose
3 Wheel speed sensor
4 Hub cap
5 Lock nut
6 Lock washer
7 Outer bearing inner race
8 Anti-lock brake system rotor
9 Oil seal
10 Inner bearing inner race
11 Inner bearing outer race
12 Outer bearing outer race
13 Brake drum
14 Wheel hub
15 Hub bolt
16 Front drum brake (See Gr.35A)
17 Spacer

*a: Knuckle
P: Locating pin
⊗: Non-reusable parts

● Assembly sequence

Follow the disassembly sequence in reverse.

Service standards (unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
7, 10, 11, 12	Starting torque of wheel hub bearing (Tangential force at hub bolt position with oil seal fitted in)		1 to 3.5 N·m {0.7 to 2.6 ft.lbs, 0.10 to 0.35 kgf·m} (Tangential force:8.8 to 28.4 N {2.0 to 6.4 lbs, 0.9 to 2.9 kgf})	–	Adjust or replace
14	Brake drum	Inside diameter	320 {12.6}	322 {12.7}	Repair or replace
		Cylindricality	0.05 {0.0020}	0.05 {0.0079}	

These location numbers correspond with disassembly sequence numbers.

P58289N

"Wet" is indicated when part is to be tightened with oil or grease applied to its threaded part.

Tightening torque (unit: N·m {ft.lbs, kgf·m})

Mark	Part to be tightened	Tightening torque	Remarks
Ta	Brake force tightening	13 to 17 {9.6 to 13, 1.3 to 1.7}	–
Tb	Lock nut	113 ± 15 {83 ± 11, 11.5 ± 1.5}	Wet
Tc	Nut (brake drum and wheel hub mounting)	343 ± 39 {250 ± 29, 35 ± 4}	–
Td	Nut (front drum brake mounting)	118 ± 20 {87 ± 15, 12 ± 2}	–

Lubricant and/or sealant

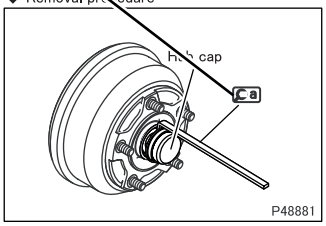
Mark	Point of application	Specified lubricant and/or sealant	Quantity
Sa	Between rolls of outer bearing inner race and inner bearing inner race	Mitsubishi wheel bearing grease	As required
	Inside wheel hub		395 ± 40 g {13.9 ± 1.41 oz}

Special tools (unit: mm {in.})

Mark	Tool name and shape	Part No.	Application
Ca	Hub Cap Wrench A: 0.5°, B: 78°  P49261	MB999108	Removal of hub cap
Cb	Oil Seal Installer A: ϕ84 {3.31}, B: ϕ70 {2.76}  05619	MB999097	Installation of oil seal

Identification marks for special tools are the same as used in the text.

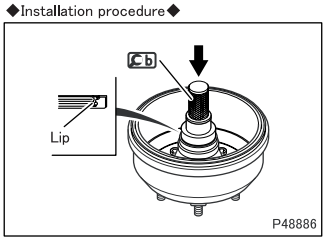
◆ Removal procedure



P48881

■Removal: Hub cap

◆Installation procedure◆



P48886

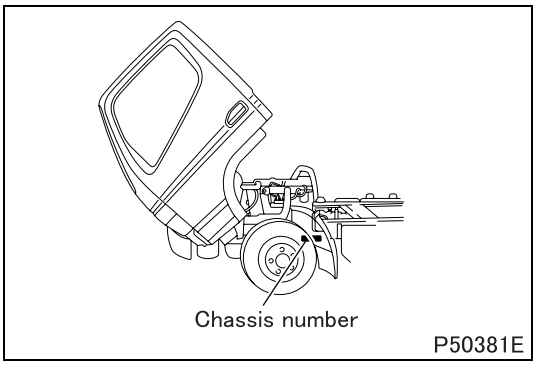
■Installation: Oil seal

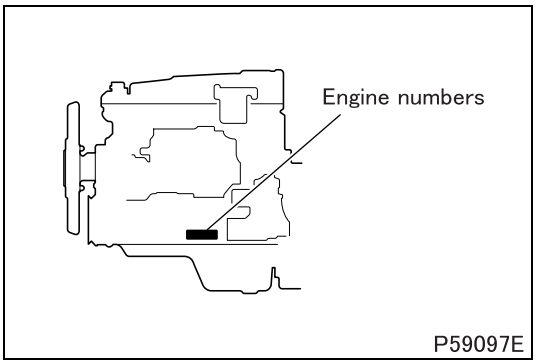
Apply grease to the lip of the oil seal, then fit the oil seal onto the wheel huh in the illustrated direction.

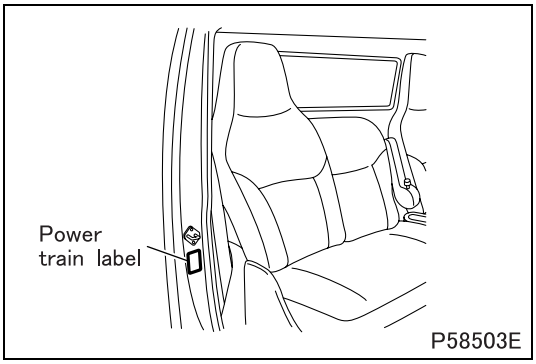
P58290N

CHASSIS NUMBER, ENGINE NUMBER, POWER TRAIN LABEL

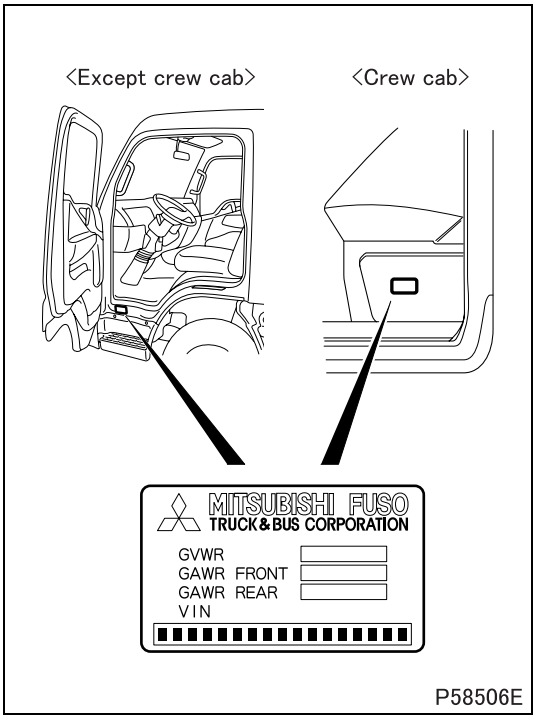
- Chassis and engine numbers are allocated to each vehicle and engine respectively in the order of production. These numbers are required at vehicle inspection for registration.







- Power train label located in the position illustrated indicates the vehicle model, chassis number and information relevant to the vehicle's power - train components.



- The vehicle identification number is punch-marked on the plate, which is attached in the position as illustrated.
  The vehicle identification number consists of a 17-digit set of alphanumeric characters. Each digit represents the following specifications.

J	L	6	A	A	D	1	S	■	9	K	■■■■■■
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)

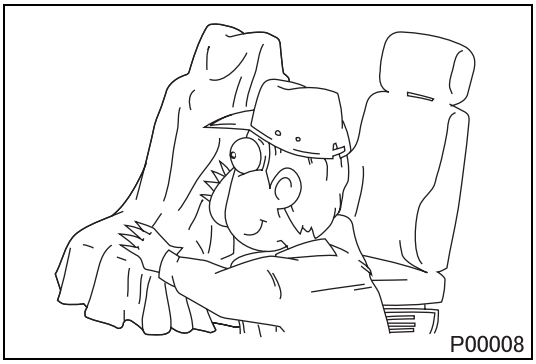
(1)	Country	J:	Japan
(2)	Make	L:	Mitsubishi Fuso
(3)	Type	6:	Incomplete vehicle
(4)	Gross vehicle weight / Brake system		
		A:	10,001 to 14,000 lbs. / Hydraulic
		B:	14,001 to 16,000 lbs. / Hydraulic
		C:	16,001 to 19,500 lbs. / Hydraulic
(5)	Line	A:	FE83D
		B:	FE84D
		C:	FE85D
		D:	FE84□W
		E:	FG84D
(6)	Series (Wheel base)	D:	2.9 to 3.19 m (9.51 to 10.46 ft.)
		E:	3.2 to 3.49 m (10.49 to 11.44 ft.)
		F:	3.5 to 3.79 m (11.48 to 12.43 ft.)
		G:	3.8 to 4.09 m (12.46 to 13.41 ft.)
		H:	4.1 to 4.39 m (13.45 to 14.40 ft.)
		J:	4.4 to 4.69 m (14.43 to 15.38 ft.)
		K:	4.7 to 4.99 m (15.41 to 16.37 ft.)
(7)	Cab chassis type	1:	Chassis cab
(8)	Engine	S:	4.899 L Diesel turbo charged and charge air cooled
(9)	Check digit		
(10)	Model year	9:	2009
(11)	Plant	K:	Kawasaki
(12)	Plant sequential number		

PRECAUTIONS FOR MAINTENANCE OPERATION

DANGER ⚠

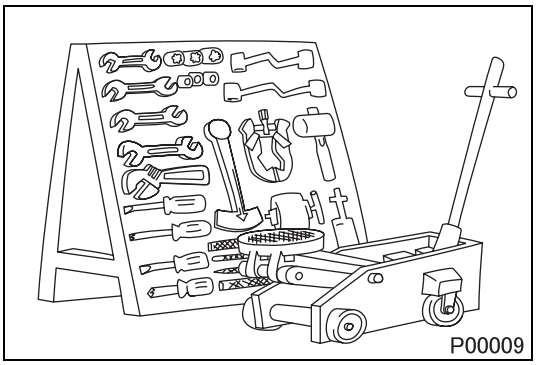
- **This product contains or emits chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.**

- Before performing service operations, inquire into the customer's complaints and ascertain the condition by checking the total distance traveled, the conditions under which the vehicle is operated, and other relevant factors on the vehicle. And note the necessary information. This information will help you to service the vehicle efficiently.
  - Check the location of the fault, and identify its cause. Based on your findings, determine whether parts must be removed or disassembled. Then, follow the service procedure given in this manual.



P00008

- Perform service operations on a level surface. Before starting, take the following preparatory steps:
  - To prevent soiling and damage, place covers over the seats, trim and floor in the cab and over the paintwork of the body.

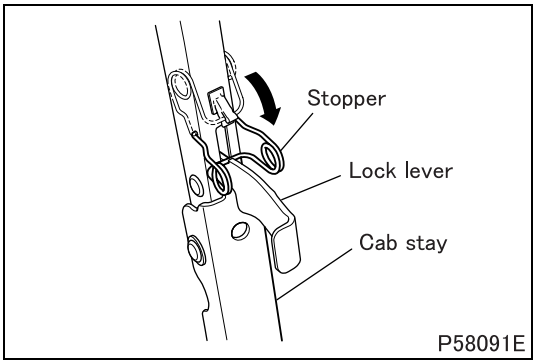


P00009

- Prepare all the general and special tools necessary for the job.

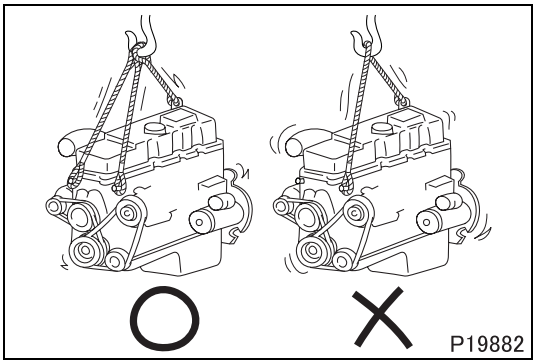
WARNING ⚠

- **Special tools must be used wherever specified in this manual. Do not attempt to use other tools since they could cause injuries and/or vehicle damage.**



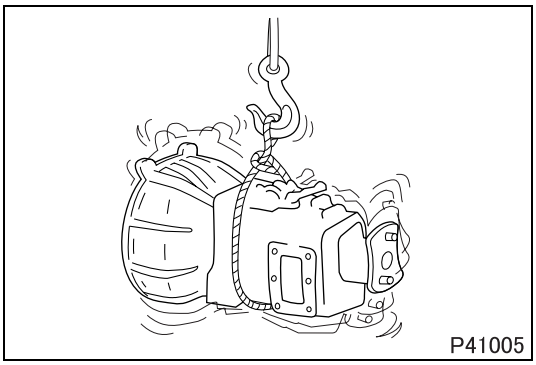
P58091E

- After manually tilting the cab, be sure to engage the stopper with the lock lever to secure the cab stay in a rigid state.



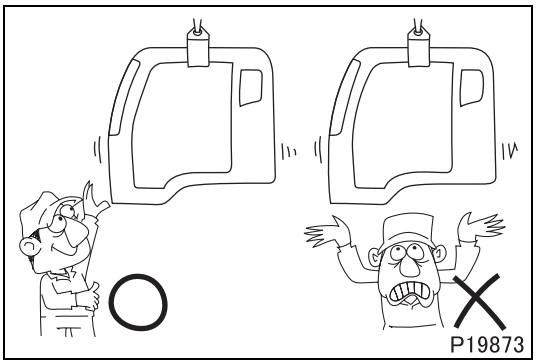
P19882

- Take extreme care when removing/installing heavy items such as engine, transmission and axle. When lifting heavy items using a cable etc., observe the following precautions.
  - Identify the mass of the item being lifted. Use the cable that is strong enough to support the mass.



P41005

  - If lifting eyes are not provided on the item being lifted, tie a cable around the item taking into account the item's center of gravity.

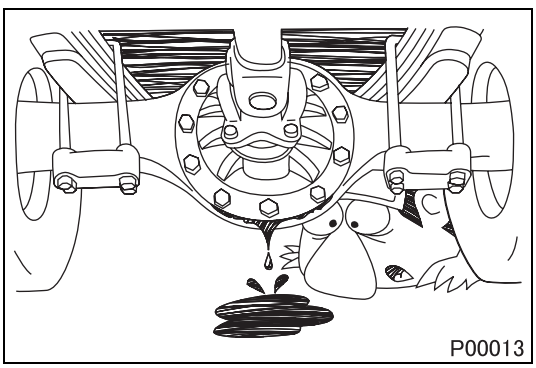


P19873

  - Do not allow anyone to pass or stay under a lifted item which may possibly fall.

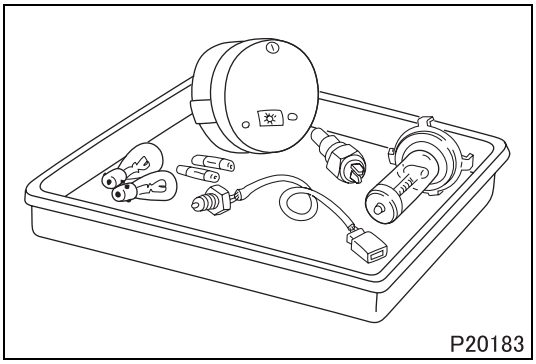
P00012

- Never work in shoes that have oily soles.
  When working with a partner or in a group, use pre-arranged signals and pay constant attention to safety. Be careful not to touch switches and levers unintentionally.



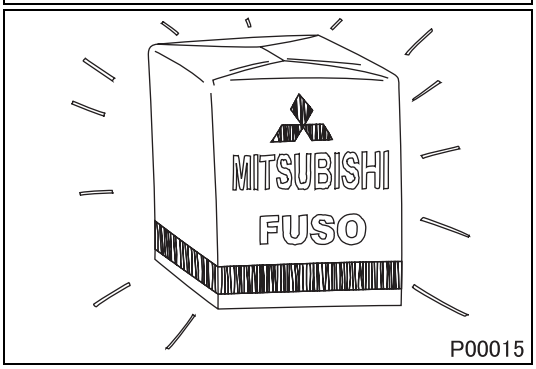
P00013

- Inspect for oil leakage etc. before washing the vehicle. If the order is reversed, any oil leakage or fault that may exist could go unnoticed during inspection.



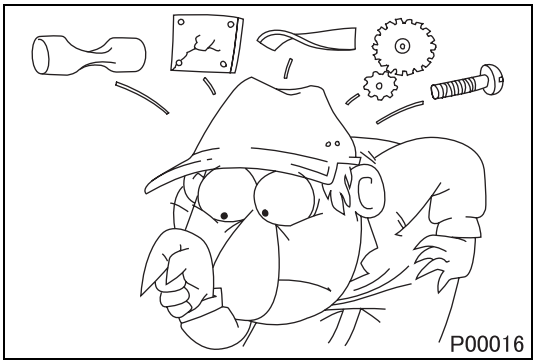
P20183

- Prepare replacement parts ready for installation.



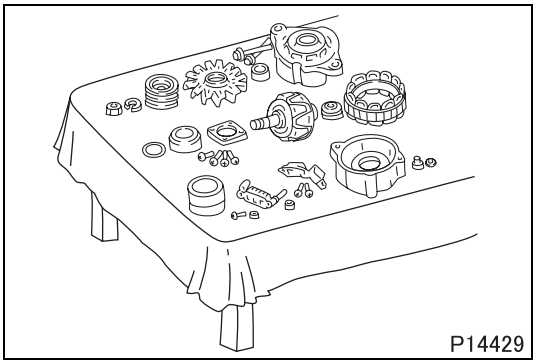
P00015

- Oil seals, packings, O-rings and other rubber parts, gaskets, and split pins must be replaced with new ones after removal. Use only genuine MITSUBISHI replacement parts.



P00016

- When disassembling parts, visually check them for wear, cracks, damage, deformation, deterioration, rust, corrosion, defective rotation, fatigue, clogging and any other possible defect.

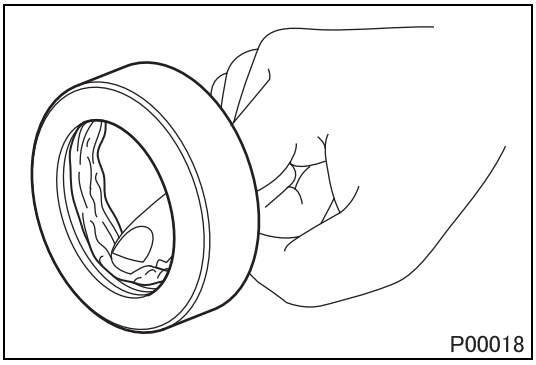


P14429

- To facilitate correct reassembly of parts, make alignment marks on them before disassembly and arrange disassembled parts neatly. Make punch marks and other alignment marks where they will not detract from parts' functionality and appearance.
- After removing parts from the vehicle, cover the area to keep it free of dust.

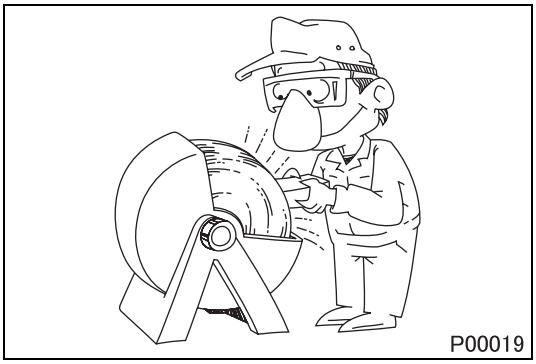
CAUTION ⚠

- **Be careful not to mix up identical parts, similar parts and parts that have left/right alignments.**
- **Keep new replacement parts and original (removed) parts separately.**



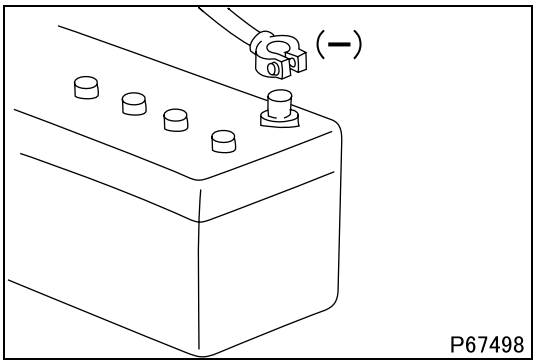
P00018

- Apply the specified oil or grease to U-seals, oil seals, dust seals and bearings before reassembly.
- Always use the specified oils and greases when performing inspection or replacement. Immediately wipe away any excess oil or grease with a rag.



P00019

- Wear safety goggles when using a grinder or welder. Wear gloves when necessary, and watch out for sharp edges and other items that might wound your hands.

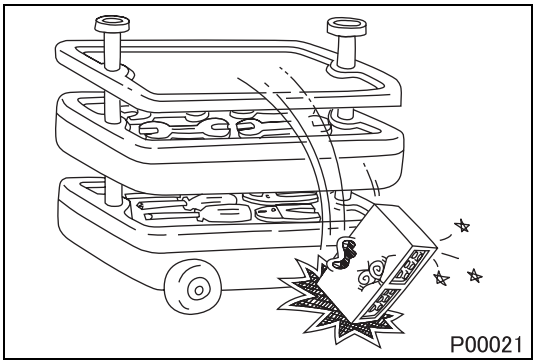


P67498

- Before working on the electrical system, disconnect the (–) battery cable to prevent short circuits.

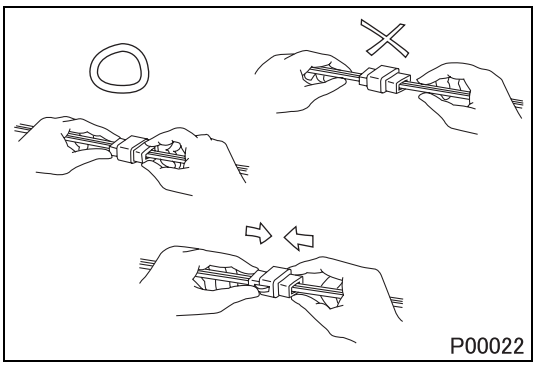
CAUTION ⚠

- **Make sure the starter switch and lighting switches are OFF before disconnecting or connecting battery cable. Semiconductor components may otherwise be damaged.**



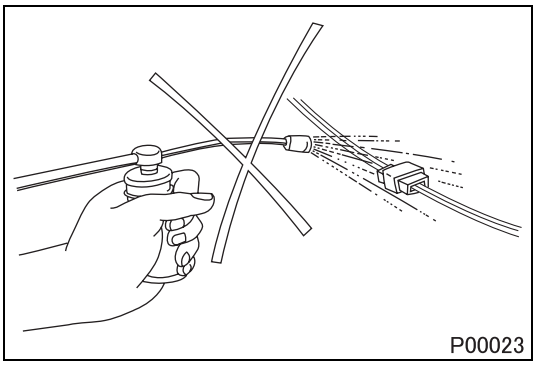
P00021

- Carefully handle sensors relays, and other items that are sensitive to shock and heat. Do not remove or paint the cover of any control unit.



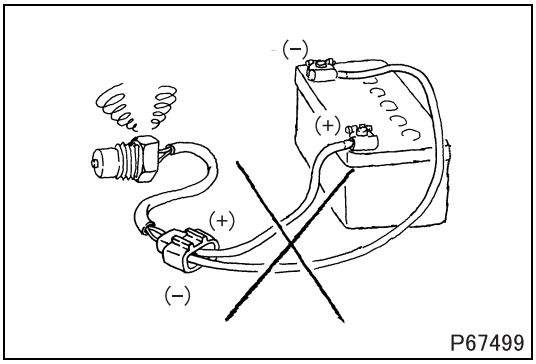
P00022

- When separating connectors, grasp the connectors themselves rather than the harnesses.
- To separate locking connectors, first push them in the direction of the arrows. To reconnect locking connectors, push them together until they click.



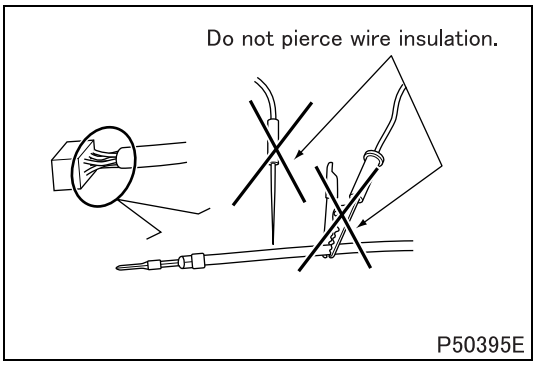
P00023

- Before washing the vehicle, cover electrical parts to keep them dry. (Use plastic sheets or the like.) Keep water away from harness connectors and sensors and immediately wipe off any water that gets on them.



- When applying a voltage to a part for inspection purposes, check that the (+) and (–) cables are connected properly then gradually increase the voltage from zero. Do not exceed the specified voltage.
  Remember that control units and sensors do not necessarily operate on the battery voltage.

1. Handling Precautions for Electric Circuits



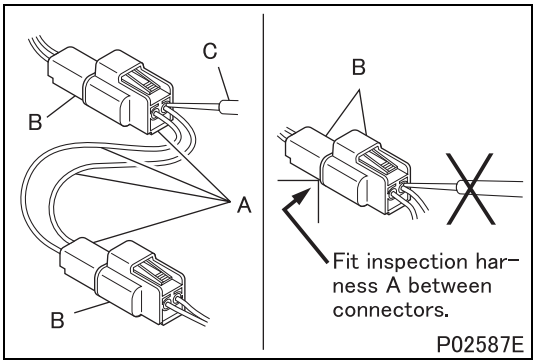
CAUTION ⚠

- **Do not pierce wire insulation with test probes or alligator clips when performing electrical inspections. Doing so can, particularly with the chassis harness, hasten corrosion.**

1.1 Inspection of harnesses

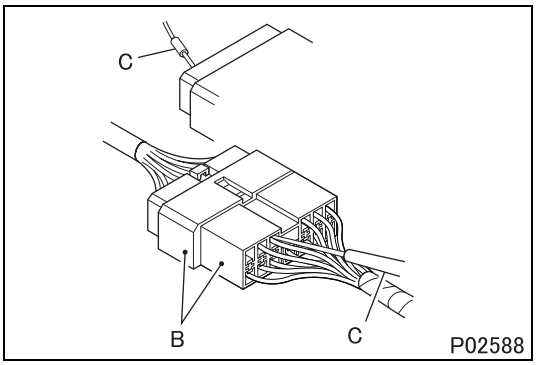
(1) Inspections with connectors fitted together

(1.1) Waterproof connectors

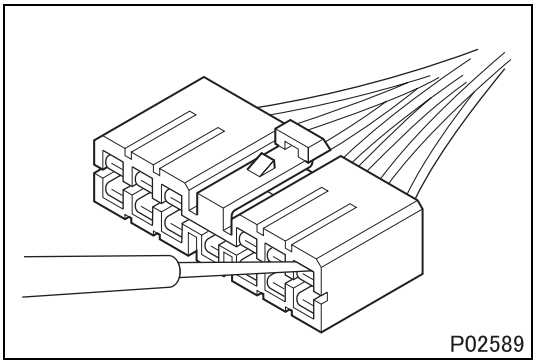


- Connect an inspection harness and connector A between the connectors B of the circuit to be inspected. Perform the inspection by applying a test probe C to the connectors of the inspection harness. Do not insert the test probe C into the wire-entry sides of the waterproof connectors since this would damage their waterproof seals and lead to rust.

(1.2) Non-waterproof connectors



- Perform the inspection by inserting a test probe C into the wire-entry sides of the connectors. An extra-narrow probe is required for control unit connectors, which are smaller than other types of connector. Do not force a regular-size probe into control unit connectors since this would cause damage.

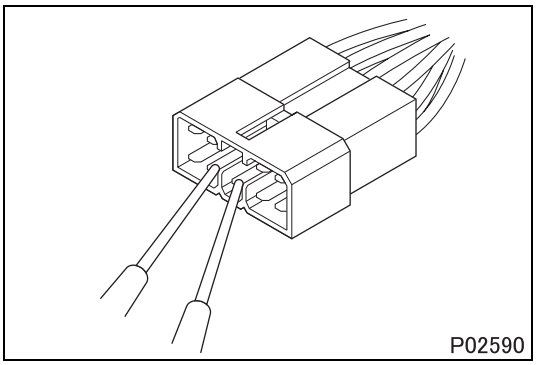


P02589

(2) Inspections with connectors separated

(2.1) Inspections on female terminals

- Perform the inspection by carefully inserting a test probe into the terminals. Do not force the test probe into the terminals since this could deform them and cause poor connections.



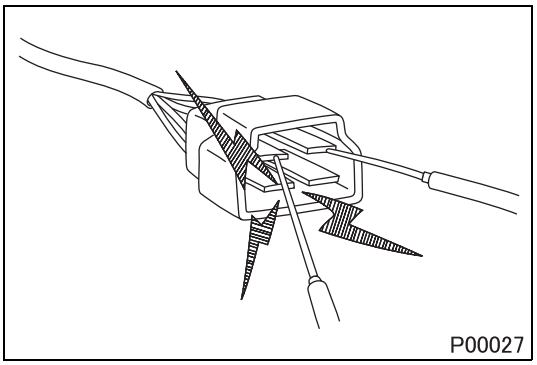
P02590

(2.2) Inspections on male terminals

- Perform the inspection by applying test probes directly to the pins.

CAUTION ⚠

- **Be careful not to short-circuit pins together with the test probes. With control unit connectors, short-circuiting of pins can cause damage to the control unit's internal circuitry.**

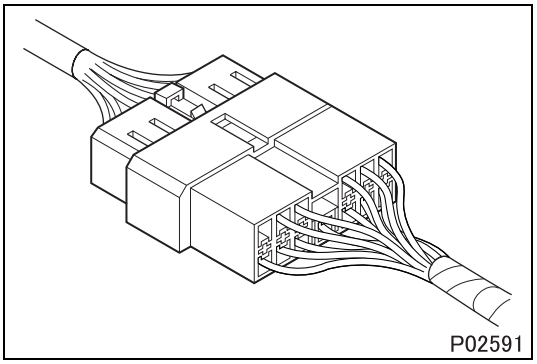


P00027

- When using a multimeter to check continuity, do not allow the test probes to touch the wrong terminals.

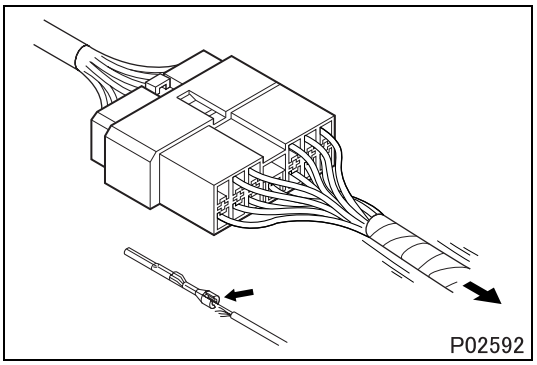
1.2 Inspection of connectors

(1) Visual inspection



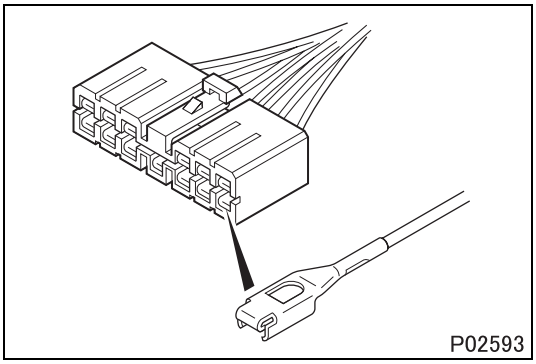
P02591

- Check that the connectors are fitted together securely.



P02592

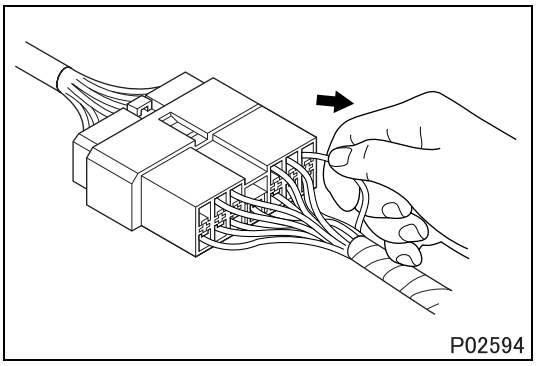
- Check whether wires have been separated from their terminals due to pulling of the harness.



P02593

- Check that male and female terminals fit together tightly.

- Check for defective connections caused by loose terminals, by rust on terminals, or by contamination of terminals by foreign substances.

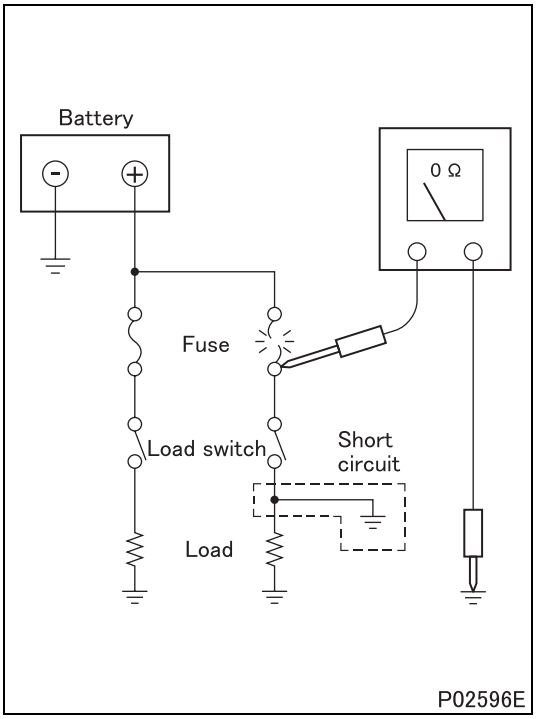


P02594

(2) Checking for loose terminals

- If connector terminal retainers become damaged, male and female terminals may not mate with each other when the connector bodies are fitted together. To check for such terminals, gently pull each wire and see whether any terminals slip out of their connector housings.

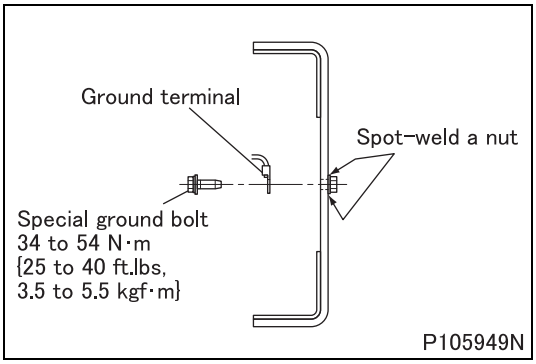
1.3 Inspections when a fuse blows



P02596E

- Remove the fuse, then measure the resistance between ground and the fuse's load side.
  Next, close the switch of each circuit connected to the fuse. If the resistance measurement between any switch and ground is zero, there is a short circuit between the switch and the load. If the resistance measurement is not zero, the circuit is not currently short-circuited; the fuse probably blew due to a momentary short circuit.

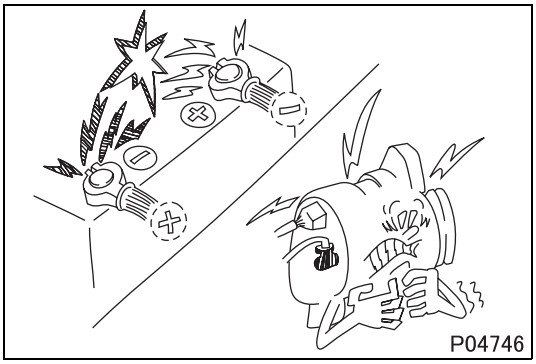
- The main causes of short circuits are as follows:
  - Harnesses trapped between chassis parts
  - Harness insulation damage due to friction or heat
  - Moisture in connectors or circuitry
  - Human error (accidental short-circuiting of components)



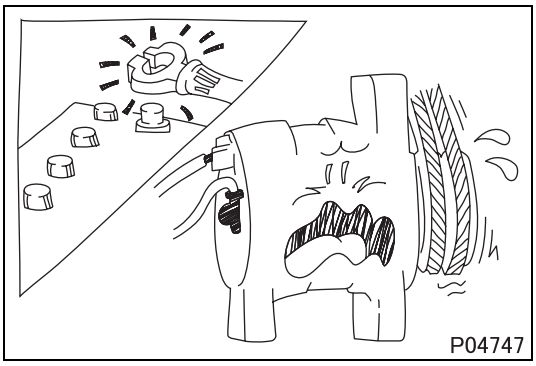
1.4 Inspection of chassis ground

- A special ground bolt is used to tighten a ground terminal. When servicing the ground point, be sure to follow the procedures described below:
  - When reinstalling the ground bolt
    Tighten the ground bolt to the specified torque.
  - When relocating the ground point
    A special ground bolt must be used. Spot-weld a nut to a frame and tighten the ground bolt to the specified torque. Be sure to apply touch-up paint to the welded point.

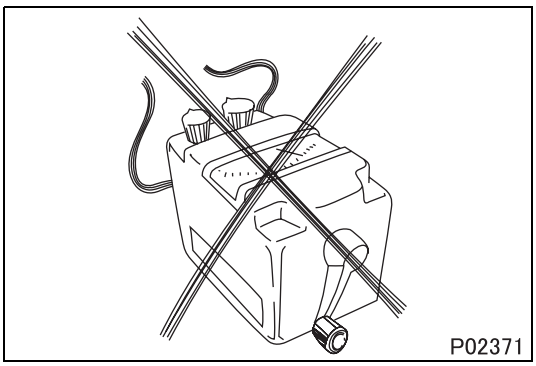
2. Service Precautions for Alternators



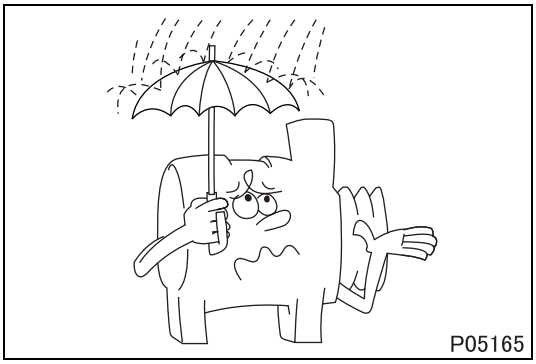
- When servicing alternators, observe the following precautions:
  - Never reverse the polarity of battery connections.
    If the polarity of the battery connections were to be reversed, a large current would flow from the battery to the alternator, damaging the diodes and regulator.



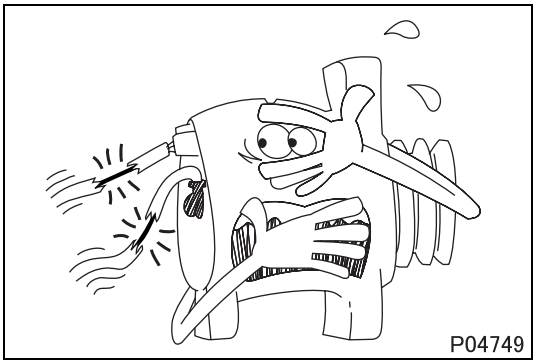
- Never disconnect the battery cables with the engine running.
  Disconnection of the battery cables during engine operation would cause a surge voltage, leading to deterioration of the diodes and regulator.



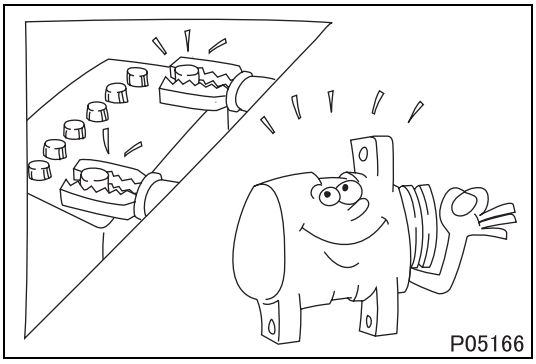
- Never perform inspections using a high-voltage multimeter.
  The use of a high-voltage multimeter could damage the diodes and regulator.



- Keep alternators dry.
  Water on alternators can cause internal short circuits and damage.

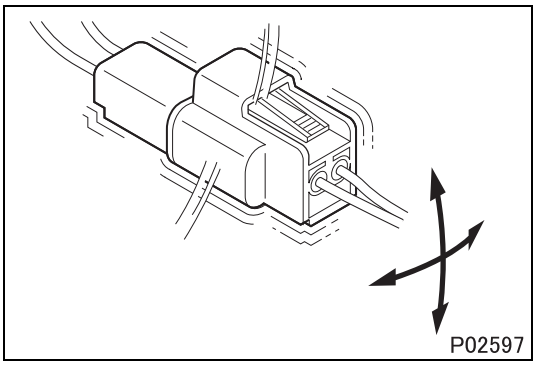


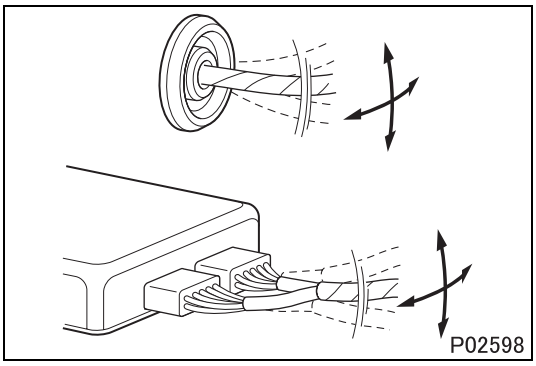
- Never operate an alternator with the B and L terminals short-circuited. Operation with the B and L terminals connected together would damage the diode trio.

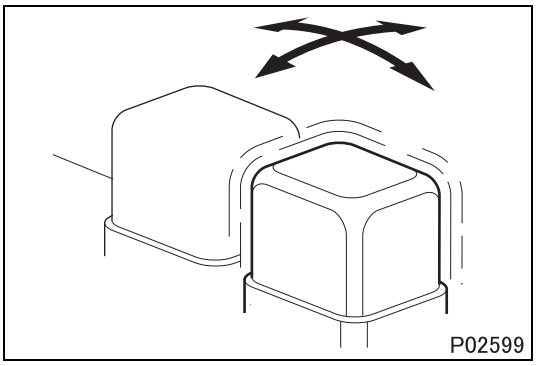


- Disconnect the battery cables before quick-charging the battery with a quick charger.
  Unless the battery cables are disconnected, quick-charging can damage the diodes and regulator.

3. Intermittent Faults





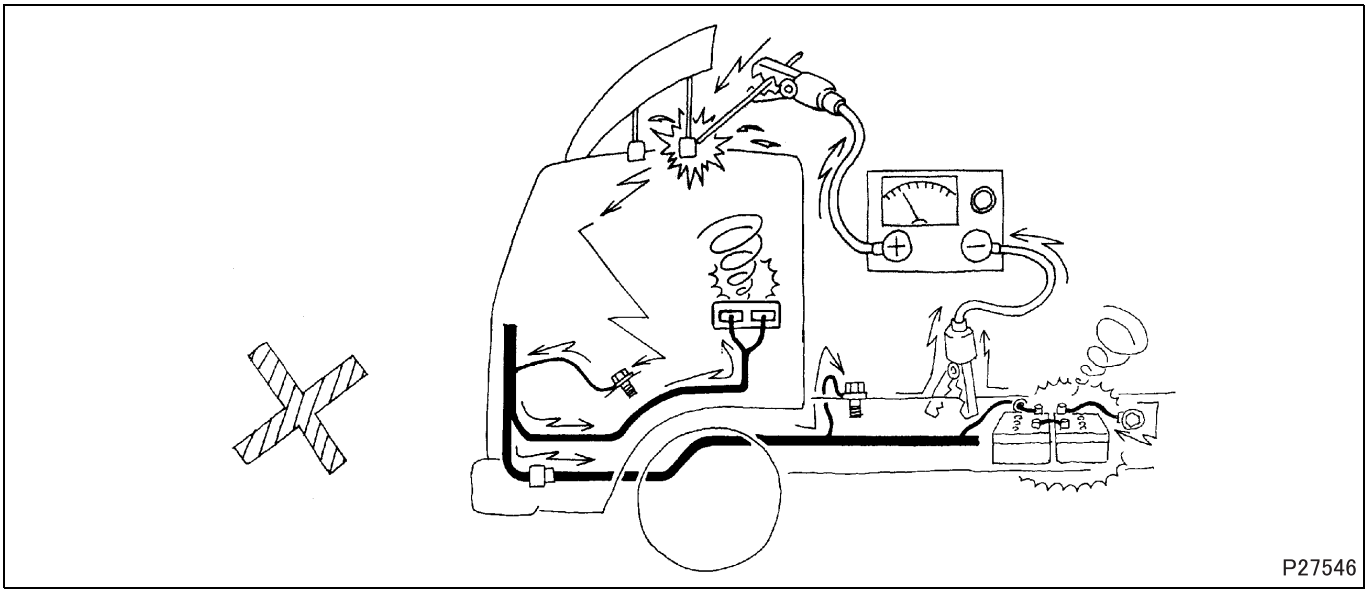


- An intermittent fault typically occurs only under certain operating conditions. Once these conditions have been identified, the cause of the intermittent fault can be ascertained easily. First, ask the customer about the vehicle operating conditions and weather conditions under which the fault occurs. Also ask about the frequency with which the fault occurs and about the fault symptoms. Then, reproduce the fault based on this information.
  In accordance with the conditions under which the fault occurs, determine whether the fault is caused by vibration, heat or other factors. if vibration is a possible factor, see if the fault can be reproduced by performing the following checks on individual connectors and other parts:
  - Gently move connectors up and down and to left and right.
  - Gently move wiring harnesses up and down and to left and right.
  - Gently wiggle sensors and other devices by hand.
  - Gently wiggle wiring harnesses on suspension systems and other moving parts.

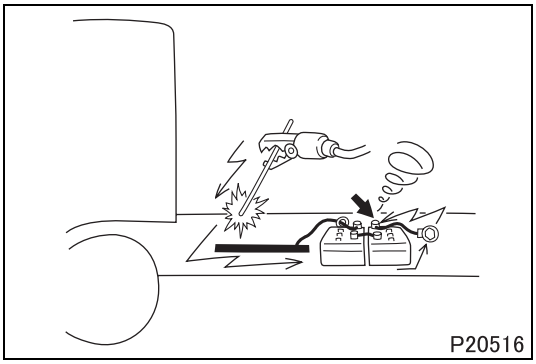
- Connectors and other parts to be checked are those included or given as likely fault locations in inspection procedures corresponding to diagnosis codes and/or fault symptoms.

4. Precautions for Arc Welding

- When arc welding is performed, current from the welder flows to ground via the vehicle's metal parts. Unless appropriate steps are taken, this current can damage control units, other electrical devices and wiring harnesses. And any electrical device near the point on the vehicle to which the (–) cable of the welder is connected, might be largely damaged.



- Current flows backward as shown below.



4.1 From battery (–) cable

To prevent damage to the battery and to electrical devices that are connected directly to the battery, it is essential to disconnect the battery's (–) cable.

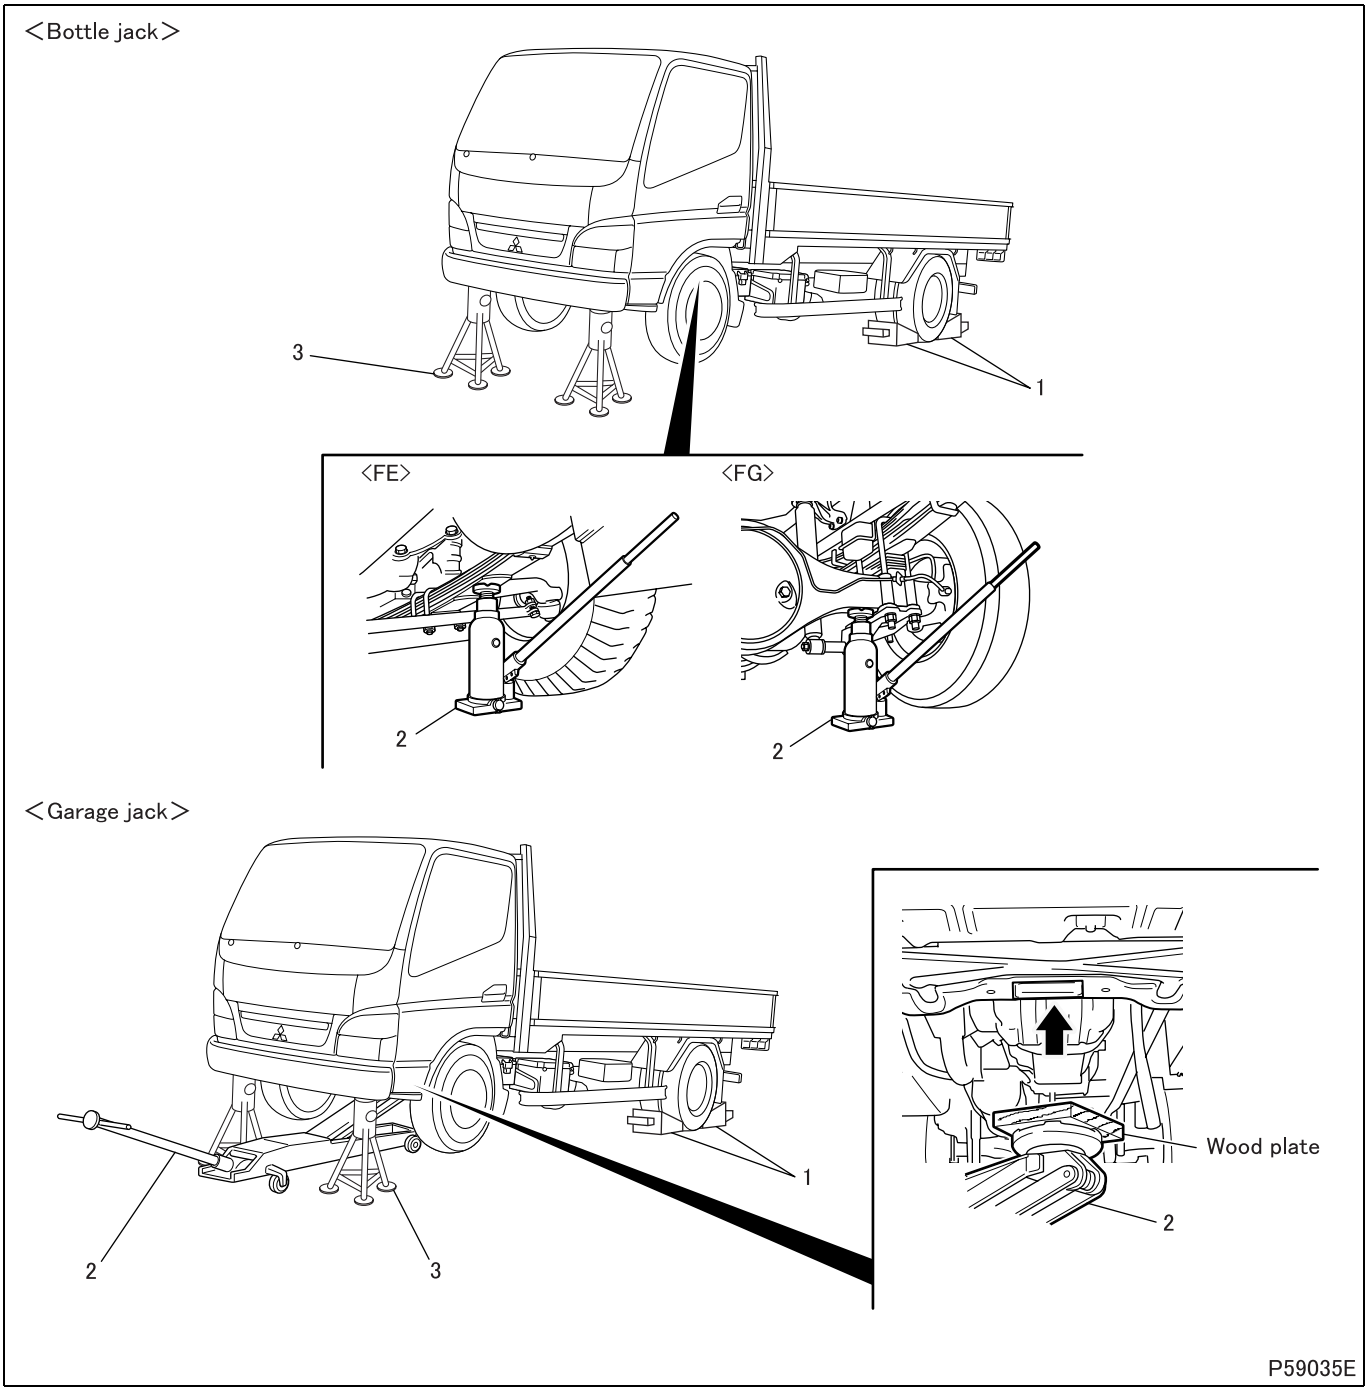
4.2 Procedure

- Turn the starter switch to the LOCK position.
- Disconnect the battery's (–) cable.
- Cover all parts of the vehicle that may be damaged by welding sparks.
- Connect the welder's (–) cable to the vehicle as close as possible to the area being welded. Do not connect the welder's (–) cable to the cab if the frame is being welded, and vice versa.
- Set the welding current in accordance with the part being welded.

M E M O

JACKING UP THE VEHICLE

<Front of Vehicle>



Jacking up procedure

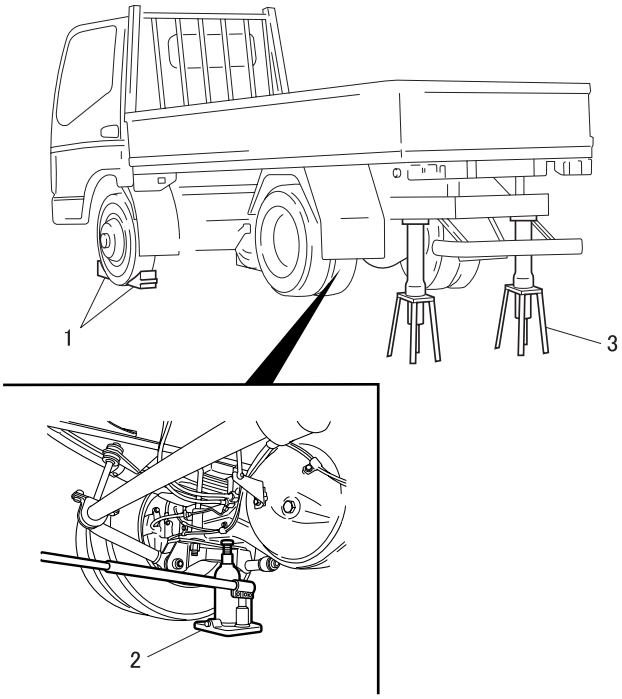
1 Place chocks against the rear wheels.
2 Set a bottle jack or garage jack and jack up the front of the vehicle.
3 Support the front of the vehicle frame on jack stands.

WARNING ⚠

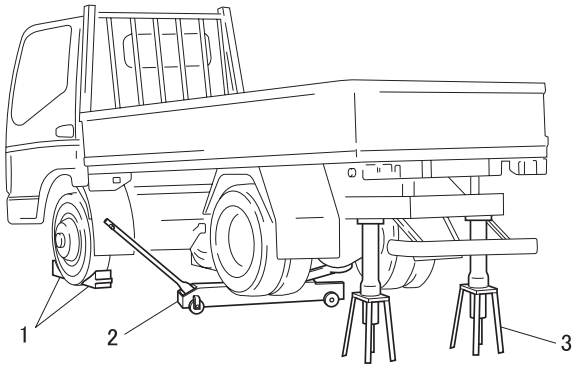
- **Chock the wheels firmly to prevent the vehicle from rolling away.**
- **Do not attempt to remove the chocks until the operation is completed.**
- **It is extremely dangerous to support the vehicle with only bottle jack or garage jack. Be sure to additionally support the front of the vehicle frame on jack stands.**
- **Never attempt to remove any of the bottle jack, garage jack, or jack stands until the operation is completed.**

<Rear of Vehicle>

＜Bottle jack＞



＜Garage jack＞



P101652E

Jacking up procedure

1 Place chocks against the rear wheels.
2 Set a bottle jack or garage jack and jack up the rear of the vehicle.
3 Support the vehicle frame on jack stands on both sides.

WARNING ⚠

- **Chock the wheels firmly to prevent the vehicle from rolling away.**
- **Do not attempt to remove the chocks until the operation is completed.**
- **It is extremely dangerous to support the vehicle with only bottle jack or garage jack. Be sure to additionally support the vehicle frame on jack stands on both sides.**
- **Never attempt to remove any of the bottle jack, garage jack, or jack stands until the operation is completed.**

DIAGNOSIS CODES

1. Diagnosis Codes

- Diagnosis codes indicate the faulty sections of the vehicle.
- A fault can be repaired by reading out the diagnosis code(s) stored in the control unit and performing the remedy for that code(s).
- Diagnosis codes can be displayed in the following two methods. Select either of them according to the system to be diagnosed.
  - Using a scanning tool (General Scanning Tool or Multi-Use Tester)
  - Using flashing of a warning lamp on meter cluster
- The table below indicates the systems for which diagnosis codes can be displayed and the methods usable for individual systems.

1.1 Systems and diagnosis code displaying methods

Warning lamp	System	Diagnosis codes displaying methods		Reference Gr
		Scanning tool	Flashing of warning lamp	
ENGINE WARNING or CHECK ENGINE or	Common rail	O	O	13EA
	Turbocharger			15
	Diesel particulate filter			
	Exhaust gas recirculation			17
	Starter continuous energizing preventing function, Preheating system			54
	Vehicle speed limitation (SLD)	O	O	13EB
	Auto cruise			
	Automatic transmission	O	O	23
ABS or	Anti-lock brake system	O	O	35E

1.2 Types of diagnosis codes <Engine control and automatic transmission>

- The diagnosis codes has no distinction of present and past.
- If a fault occurs and an electronic control unit detects the fault, the electronic control unit will store a diagnosis code in memory after a diagnosing time predetermined for each fault content and turn on the warning lamp.
- When the fault has solved, the warning lamp goes off, but the diagnosis code still remains in the memory.
- The diagnosis codes can be erased by using the scanning tool (General Scanning Tool or Multi-Use Tester) or they will be erased automatically after a specified period.

1.3 Types of diagnosis codes <Except engine control and automatic transmission>

(1) System for which present and past codes are discriminately displayed

(1.1) Present diagnosis code

- Fault developed in the vehicle after the starter switch is set to ON is indicated by corresponding diagnosis code.
- The fault warning lamp is lit at the same time.

(1.2) Past diagnosis code

- Past fault developed in the vehicle is indicated by corresponding diagnosis code stored in the memory of the electronic control unit.
- With the vehicle restored to its normal condition or the starter switch turned from OFF to ON after inspection or repair against present diagnosis codes, the present diagnosis code is stored as past diagnosis codes in the memory of the electronic control unit.
- The warning lamp is not lit because the indicated fault is not present one.

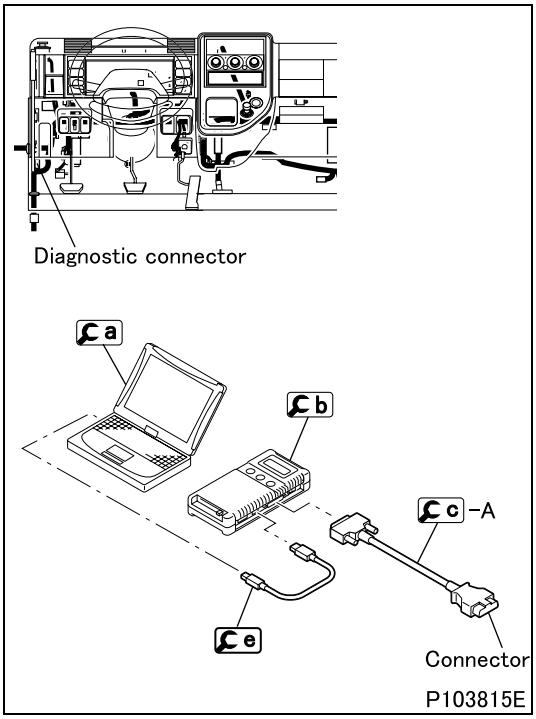
2. Reading and Erasing the Diagnosis Code

2.1 Using a Multi-Use Tester

(1) Connecting a Multi-Use Tester

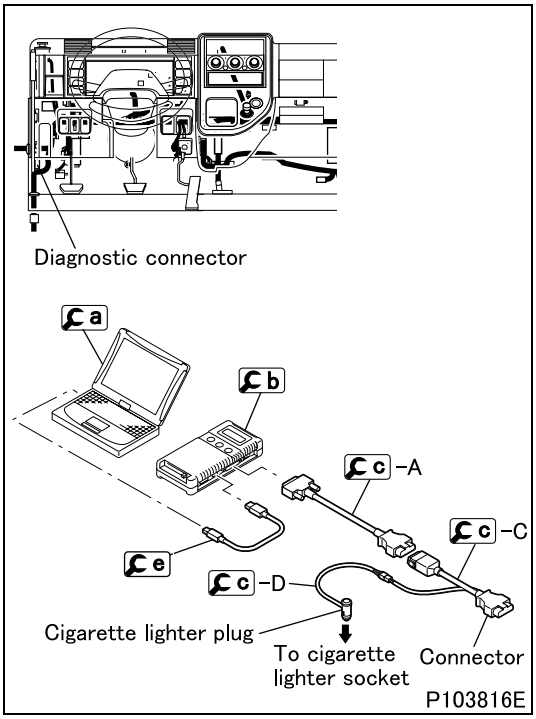
Special tools

Mark	Tool name and shape	Part No.	Application
a	PC  P57295	FMS-E08-1 (Multi-Use Tester-III version)	Data transmission to/from V.C.I.
b	V.C.I.  P57296	MH062927	Data transmission between electronic control unit and PC
c	Multi-Use Tester test Harness E A: Harness for inspection and drive recorder B: Harness for drive recorder C: Drive recorder harness D: Cigarette lighter plug harness  P100753	MH063659 A: MH063661 B: MH063663 C: MH063665 D: MH063666	Power supply to V.C.I. and communication with electronic control unit
d	Multi-Use Tester test harness D (used for extension)  P57299	MH062951	Multi-Use Tester test harness B extension
e	USB cable P57300	MH063668	Communication between V.C.I. and PC



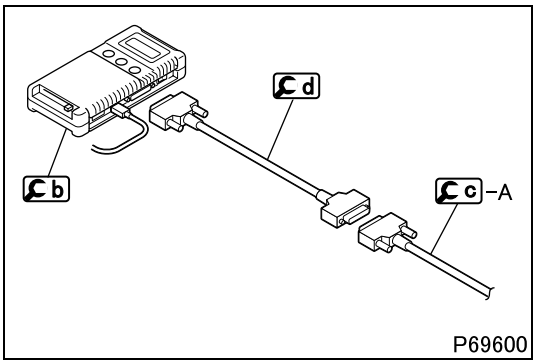
(1.1) To perform system inspection

- Move the starter switch to the LOCK position.
- Connect a, b, c-A and e as shown.
- Connect c-A connector to the diagnostic connector on the vehicle.



(1.2) To use drive recorder function

- Move the starter switch to the LOCK position.
- Connect a, b, c-A, c-C, c-D and e as shown.
- Connect c-C connector to the diagnostic connector on the vehicle.
- Connect the cigarette lighter plug of c-D to the cigarette lighter socket on the vehicle.



(1.3) To extend the Multi-Use Tester test harness

- Connect d to c-A to extend the test harness to use the Multi-Use Tester outside the vehicle.

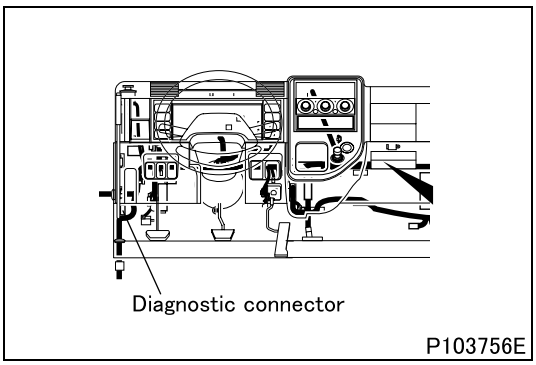
(2) Access of diagnosis code

- Set the starter switch to ON.
- Operate the Multi-Use Tester for a display of necessary diagnosis code stored in the memory of the electronic control unit and identify the location of the fault.

(3) Clearing of diagnosis code

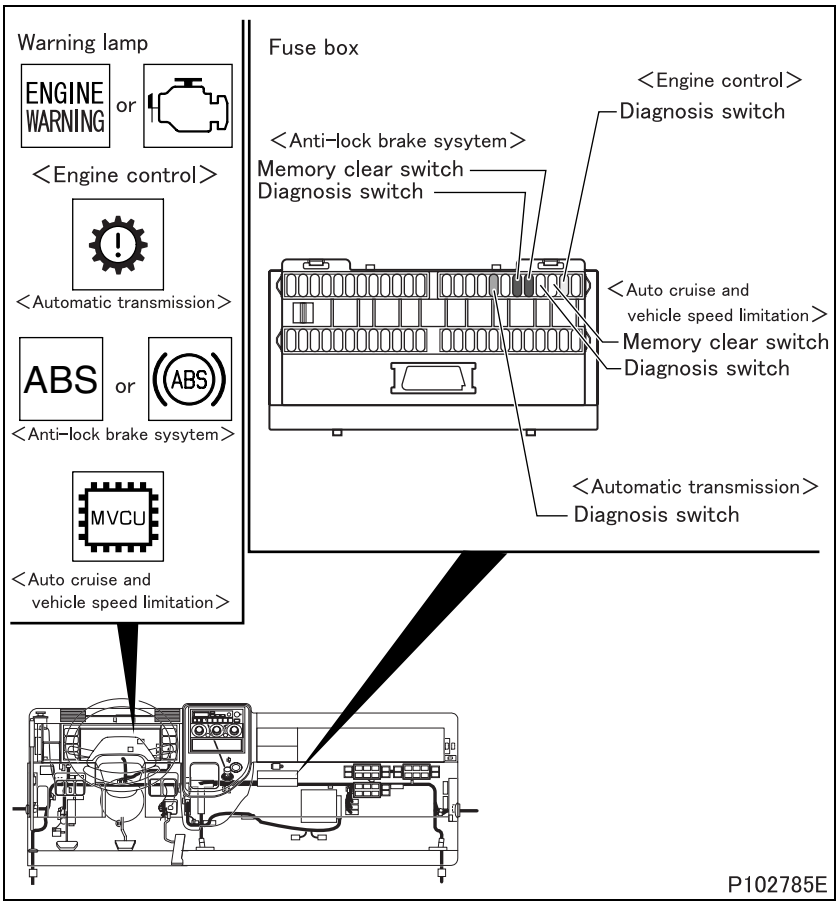
- Set the starter switch to ON (the engine not to be started).
- Operate the Multi-Use Tester to delete all the diagnosis codes stored in the memory of the electronic control unit.

2.2 Using a General Scanning Tool



- For the usage of a General Scanning Tool, refer to the instruction manual for that tool.

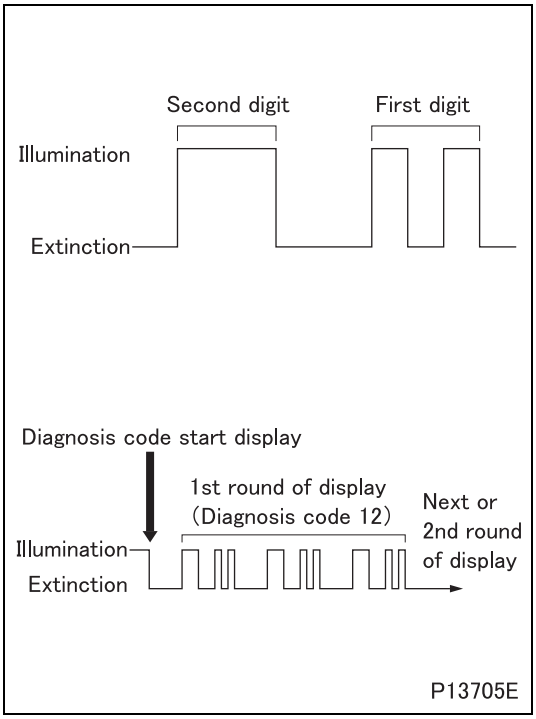
2.3 Using flashing of a warning lamp on meter cluster



- Using the diagnosis and memory clear switches, display diagnosis codes.

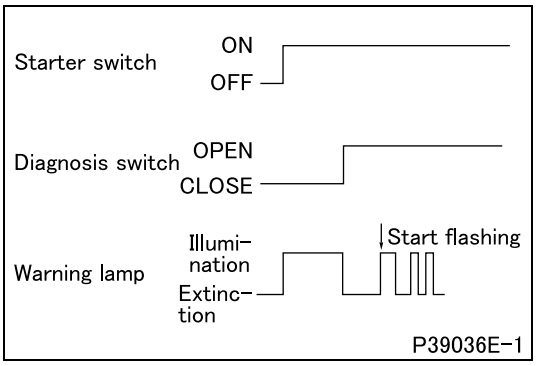
CAUTION ⚠

- **Opening the memory clear switch followed by its reconnection will erase the stored diagnosis codes from the memory. To avoid inadvertently erasing necessary codes, be sure to read well the procedure described below before handling diagnosis codes. <Except engine control and automatic transmission>**



(1) Reading diagnosis codes by flashing of warning lamp

- To read a diagnosis code, observe how may times the warning lamp flashes and how long each illumination lasts.
- The duration of illumination differs between the first and second digits.
  - Second digit: 1.2 sec.
  - First digit: 0.4 sec.
- A diagnosis code consists of the flashing of second digit and the flashing of first digit in that order. If a diagnosis code has “0” in the second digit, only the first digit will be displayed.
- The diagnosis code 01 will be displayed if the system is normal.
- The same diagnosis code will be displayed 3 times in a row before moving to the display of the next code.
- After the last diagnosis code is displayed, the first code will be displayed again 3 times in a row and then the subsequent codes. This will be repeated.



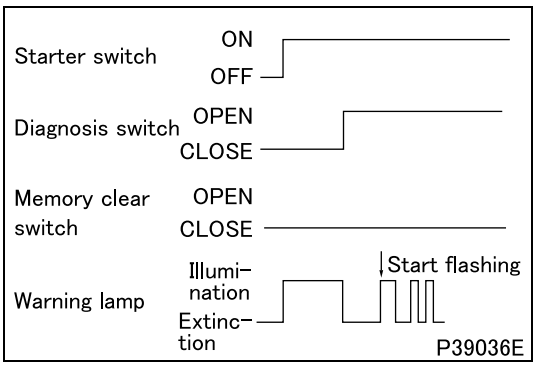
(2) Reading and erasing diagnosis codes
<Engine control and automatic transmission>

(2.1) Reading diagnosis codes

- Turn the starter switch ON.
- Remove the diagnosis switch.
- Diagnosis codes will be displayed by flashing of the warning lamp.
- When the diagnosis switch is connected, electronic control unit will stop (terminate) displaying diagnosis codes.

(2.2) Erasing diagnosis codes

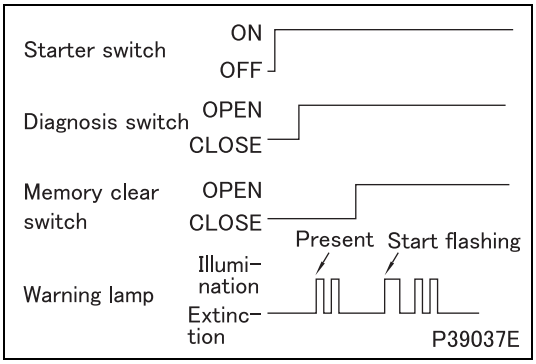
- Erase diagnosis codes with a scanning tool (General Scanning Tool or Multi-Use Tester).

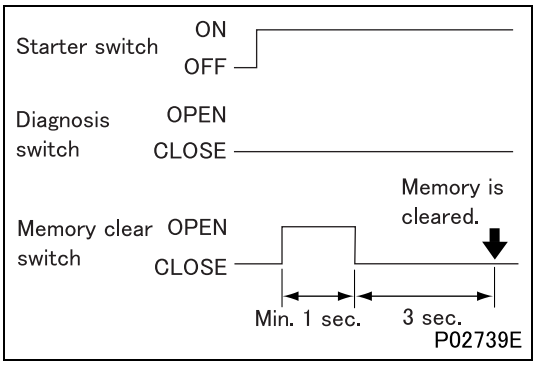


(3) Reading and erasing diagnosis codes
<Except engine control and automatic transmission>

(3.1) Present diagnosis codes

- Turn the starter switch ON.
- Remove the diagnosis switch.
- Present diagnosis codes will be displayed by flashing of the warning lamp.
- When the diagnosis switch is connected, electronic control unit will stop (terminate) displaying diagnosis codes.





(3.2) Present and past diagnosis codes

- Turn the starter switch to the ON position.
- Open the diagnosis switch.
- Present diagnosis codes will be displayed by flashing of the warning lamp.
- Open the memory clear switch.
- Present and past diagnosis codes will be displayed by flashing of the warning lamp.
- Turn the starter switch to the OFF position and connect the memory clear switch and diagnosis switch to terminate the diagnosis code displaying mode.

(3.3) Erasing diagnosis codes

- Turn the starter switch to the ON position (do not start the engine).
- Open the memory clear switch and reconnect it; all diagnosis codes stored in electronic control unit memory will be erased.
  To cancel diagnosis code erasure after opening the memory clear switch, turn the starter switch to the OFF position and then reconnect the memory clear switch.

TABLE OF STANDARD TIGHTENING TORQUES

- Use specified bolts and nuts, tightening them to the torques specified in this section unless otherwise stated.
- Threaded portions and bearing surfaces should be dry.
- Where the property class differs between the nut and bolt (or stud bolt), use the tightening torque specified in the table for the bolt.

Hexagon Headed Bolt, Stud Bolt (Unit: N·m {ft.lbs, kgf·m})

Strength	4T		7T		8T	
Identification symbol / Nominal diameter	(Stud)		 (Stud)		(Stud)

HOW TO READ THE MAINTENANCE SCHEDULE TABLES

Example Table:

Ⓔ: Exhaust emission items.
Ⓝ: Noise control items.

Item (1)	Time of inspection and maintenance (2)									Working procedures (3)	Reference Gr (4)
			Inspection interval								
	Pre-operational checks	New vehicle at 4,000 km/ 2,500 miles	Every 10,000 km/ 6,000 miles	Every 20,000 km/ 12,000 miles	Every 30,000 km/ 18,000 miles	Every 40,000 km/ 24,000 miles	Every 50,000 km/ 30,000 miles	Every 90,000 km/ 54,000 miles	Every 250,000 km/ 150 ,000 miles		
ENGINE											
Fuel, oil, or coolant leaks from engine	×									Check engine for fuel, oil and coolant leaks.	Gr11, 12 13A, 14
ⒺⓃ Engine conditions	×									Check the engine for smooth starting and quiet running.	Gr11, 13 15, 17, 54
Manifold bolts and nuts torque							×			Check inlet exhaust manifold dolts and nuts for looseness.	Gr15
Ⓔ Check and adjust valve clearance		×					×			Check valve clearance with thickness gauge.	Gr11
Ⓔ Oil filter replacement			Every 10,000 km/6,000 miles or 12 months							Replace oil filters	Gr12

(1) This column contains the maintenance and inspection items.

(2) The periods between inspection and service are based on the assumption that the vehicle will be driven approximately 60,000 kilometers (36,000 miles) per year.
Inspections which must be made are indicated by an "×" or by the appropriate period between servicing.

(3) This column provides a simplified explanation of the operational procedures involved for each inspection or maintenance item.

(4) The Gr. No. refers to the "group number" in this Service Manual. For visual checks and simple inspections, see the sections labelled "Working Procedures".

M E M O

MAINTENANCE SCHEDULE TABLES

Ⓔ: Exhaust emission items.
Ⓝ: Noise control items.

Item	Time of inspection and maintenance									Working procedures	Reference Gr
			Inspection interval								
	Pre-operational checks	New vehicle at 4,000 km/ 2,500 miles	Every 10,000 km/ 6,000 miles	Every 20,000 km/ 12,000 miles	Every 30,000 km/ 18,000 miles	Every 40,000 km/ 24,000 miles	Every 50,000 km/ 30,000 miles	Every 90,000 km/ 54,000 miles	Every 250,000 km/ 150,000 miles		
ENGINE											
Leakage of coolant, fuel and oil	×									Check the underneath of the vehicle for any sign of leakage.	Gr11, 12, 13A, 14
ⒺⓃ Engine conditions	×									Check the engine for smooth starting and quiet running.	Gr11, 13, 15, 17, 54
Manifold bolts and nuts torque							×			Check inlet exhaust manifold bolts and nuts for looseness.	Gr15
Ⓔ Check and adjust valve clearance		×					×			Check valve clearance with feeler gauge.	Gr11
Ⓔ Oil filter replacement			Every 10,000 km/6,000 miles or 12 months							Replace oil filters.	Gr12
Ⓔ Fuel filter replacement			Every 20,000 km/12,000 miles or 12 months							Replace fuel filter.	Gr13A
Ⓔ Fuel line			Every 20,000 km/12,000 miles or 12 months							Inspect the fuel tank, cap and lines for damage causing leakage.	Gr13A
ⒺⓃ Belts tension and damage	×		Every 10,000 km/6,000 miles or 12 months							Inspect belts for crack, wear and tension.	Gr14
Ⓔ Cooling system				×						Check radiator and pressure cap for sealing performance and mounting condition. Inspect hoses for looseness, deterioration, damage causing leakage. Remove dust and foreign matter deposit from radiator and intercooler front.	Gr14
Coolant level	×									Check that the coolant level is between the “FULL” and “LOW” marks on the reservoir tank.	Gr14
Coolant replacement			Every 24 months							Replace coolant.	Gr14
Ⓔ Turbocharger rotor play									×	Check turbocharger rotor play.	Gr15
Air cleaner element			Every 5,000 km/3,000 miles							Clean air cleaner element by blowing clean compressed air.	Gr15
ⒺⓃ Air cleaner element replacement						×				Replace air cleaner element.	Gr15
ⒺⓃ Exhaust system				×						Inspect the exhaust system for damage, corrosion and loose connection causing leakage.	Gr15
Ⓔ DPF			Every 10,000 km/6,000 miles or 12 months							Check DPF for blocking.	Gr15
			First 185,000 km/110,000 miles thereafter every 105,000 km/65,000 miles							DPF ash cleaning	

Item	Time of inspection and maintenance									Working procedures	Reference Gr
			Inspection interval								
	Pre-operational checks	New vehicle at 4,000 km/ 2,500 miles	Every 10,000 km/ 6,000 miles	Every 20,000 km/ 12,000 miles	Every 30,000 km/ 18,000 miles	Every 40,000 km/ 24,000 miles	Every 50,000 km/ 30,000 miles	Every 90,000 km/ 54,000 miles	Every 250,000 km/ 150,000 miles		
Ⓔ Throttle valve							×			Clean dirt and deposit from the inside of the valve.	Gr17
Ⓔ EGR valve							×			Clean dirt and deposit from the inside of the valve.	Gr17
Ⓔ Exhaust brake							×			Check for normal operation.	Gr15
POWER TRAIN											
Clutch pedal play	×									Check the clutch pedal for play.	Gr21
Clutch pedal and clutch disc wear			×							Check the pedal for free play. Check clutch disc wear.	Gr21
Range selector lever	×		Every 30,000 km/18,000 miles or 6 months							Check the operate performance of range selector lever	Gr23
Propeller shaft flange torque and universal joint looseness		×	×							Check flange yoke bolts for looseness and universal joint for play.	Gr25
Propeller shaft center bearing							×			Check center bearing if trace of grease flowing out is evident. Check center bearing for wear, damage and play.	Gr25
FRONT AND REAR AXLE											
Wheel hub bearing					×					Check wheel hub bearing for play.	Gr26, 27
Wheel hub bearing hub seals replacement					×					When wheel hub bearing grease is replaced, also replace the wheel hub bearing hub seals.	Gr26, 27
Wheel and tire	×		×							Check disc wheel for corrosion, deformation and cracks. Measure inflation pressure with tire gauge. Check tire tread and side wall for cracks and damage. Measure tire tread groove depth to make sure it is deep enough. Check tire tread for uneven wear, stepped wear and other abnormal wear.	See later section.
			×							Rotate all tires.	
Retightening wheel nuts		×	×							Check wheel nuts for looseness. Check at the first 50 to 100 km/30 to 60 miles after changing a wheel.	See later section.
SUSPENSION SYSTEM											
Suspension springs	×									Check for broken springs and tilt of vehicle body toward either side.	Gr33, 34

Item	Time of inspection and maintenance									Working procedures	Reference Gr
			Inspection interval								
	Pre-operational checks	New vehicle at 4,000 km/ 2,500 miles	Every 10,000 km/ 6,000 miles	Every 20,000 km/ 12,000 miles	Every 30,000 km/ 18,000 miles	Every 40,000 km/ 24,000 miles	Every 50,000 km/ 30,000 miles	Every 90,000 km/ 54,000 miles	Every 250,000 km/ 150,000 miles		
Retightening U-bolts		×		×						Check U-bolt nuts for looseness. Check at the first 1,000 km/600 miles after removing and retightening U-bolt nuts. Do not reuse the removed nuts. <FE 85 (front suspension)>	Gr33, 34
BRAKING SYSTEM											
Service brake pedal	×									Check brake pedal play and stroke.	Gr35A
Brake performance	×									Press the brake pedal and check that the brakes work effectively and evenly on all wheels.	Gr35A
Disc brake pad and disc			×							Check disc brake pad and disc for damage and wear.	Gr35A
Brake lining			×							Check lining for wear through inspection hole.	Gr35A
Brake drum					×					Disassemble and check drum for wear, crack and damage.	
Parking brake lever stroke	×									Check parking brake lever stroke.	Gr36
Looseness, play and damage of brake system parts			×							Inspect brake lines and hoses looseness, play and damage. Inspect wheel cylinder and brake master cylinder for looseness, play and damage.	Gr35A
STEERING SYSTEM											
Steering wheel play	×									Turn steering wheel right and left to measure play at steering wheel rim. Measure while engine is running.	Gr37
Steering wheel operation	×									Check that the steering wheel does not vibrate or pull to one side and that it is not unduly heavy. Also make sure that the steering wheel returns to its neutral position smoothly.	Gr37
Steering system			×							Check steering system for looseness, steering wheel play and operating condition. Inspect for oil leaks, booster and oil pump function.	Gr37
Drag link ball joint dust cover					×					Check the dust cover for wear, cracks and other damage.	Gr37
CAB											
Defroster	×									Make sure that warm air blows properly onto the windshield.	Gr55

Item	Time of inspection and maintenance									Working procedures	Reference Gr
			Inspection interval								
	Pre-operational checks	New vehicle at 4,000 km/ 2,500 miles	Every 10,000 km/ 6,000 miles	Every 20,000 km/ 12,000 miles	Every 30,000 km/ 18,000 miles	Every 40,000 km/ 24,000 miles	Every 50,000 km/ 30,000 miles	Every 90,000 km/ 54,000 miles	Every 250,000 km/ 150,000 miles		
Rearview mirrors	×									Seated in the driver's seat, adjust the angles for clear views of the sides and rear. Make sure the mirrors are clean.	Gr51
License plate and reflector condition	×									Check the license plate and reflectors for loose installation, damage, and dirt.	–
Door locks	×									Push down the lock knob and verify that the door does not open even when the inner handle is operated.	Gr43
Seat belts	×									Confirm that the seat belt buckles function correctly when fastening and unfastening.	Gr52
ELECTRICAL SYSTEM											
Horn operation	×									Press the horn button to check that the horn is working properly.	Gr54
Windshield washer fluid level	×									Confirm that the windshield washer fluid level is above the bottom of the inspection window.	–
Windshield wiper and washer operation	×									Check the washer for proper fluid spray direction and the wipers for normal action.	Gr51, 54
Lighting system	×									Make sure that each lamp lights up or flashes properly. Check lamp lenses for dirt and damage.	Gr54
Gauge, warning/indicator lamp operation	×									Check that gauges, warning lamps and indicators are working properly.	Gr54
Battery	×									Check the battery fluid level.	Gr54

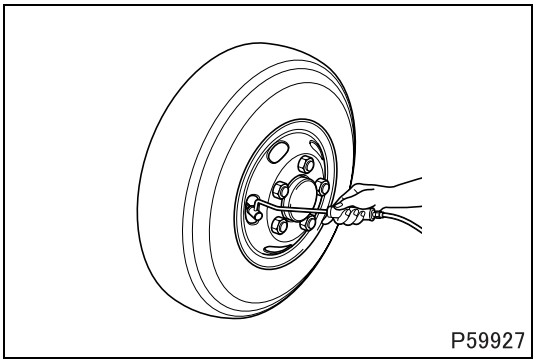
Tire

Service standards (Unit: mm {in.})

Location	Maintenance item	Standard value	Limit	Remedy
–	Depth of tire tread grooves	–	1.6 {0.063}	Replace

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Wheel nut	490 ± 49 {360 ± 36, 50 ± 5}	–

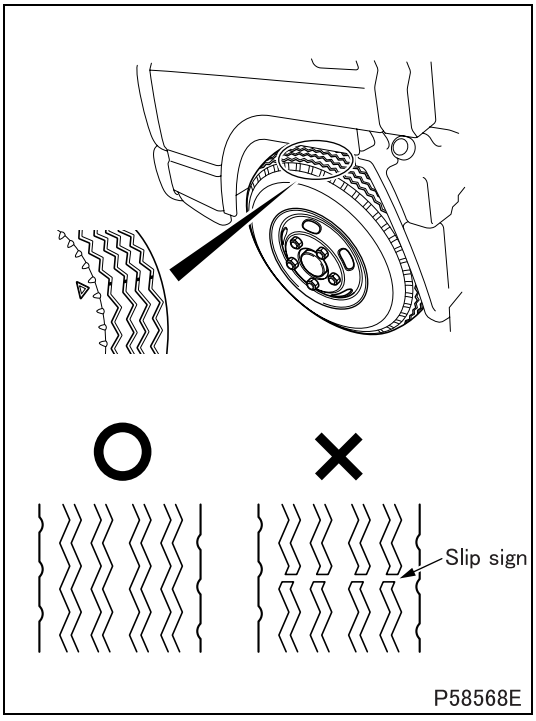


P59927

Air pressure

Tire air pressure should be checked before the vehicle is driven, while the tires are still cool.

Item / Vehicle model	Tire size	Air pressure kPa {psi, kgf/cm^2}
FE83, FE84	LT215/85R16-10PR (load range E)	550 {80, 5.5}
FE85	215/75R17.5 124/123L (load range F)	690 {100, 7.0}
FG	LT235/85R16-10PR (load range E)	550 {80, 5.5}



P58568E

CAUTION ⚠

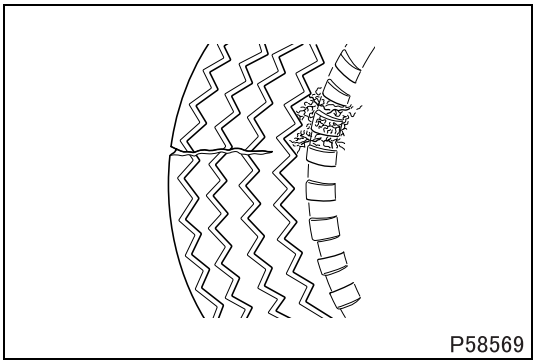
- **Make certain that there is no difference in the air pressure between the inner and outer rear tires.**
- **Make certain you use valve caps on the air valves.**
- **It is not necessary to increase the air pressure for high-speed driving.**

Checking tread depth

- Check all around the tire treads to make sure that the depth of the tread grooves is above the wear limit.
- If the tread grooves are not deep enough, slip sign appears at the position of the ⚠ mark, where the tread groove has worn away.

WARNING ⚠

- **If the depth of the tread grooves is not adequate, the tires will slip on wet roads and present a hazard. Such tires are also extremely dangerous because they are more susceptible to hydroplaning when the vehicle is running at high speeds in the rain. Such tires must be replaced with new ones as soon as possible.**



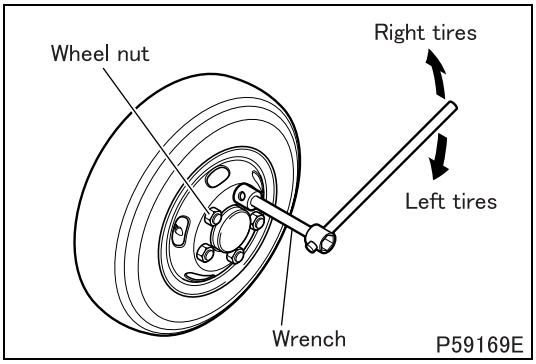
P58569

Checking for cracks, damage, and objects embedded in the treads

- Check the tire treads and walls for cracks and damage.
- Check tire treads for uneven wear or other abnormal wear.
- Check if metal objects or nails have penetrated the tires.
- Check for stones embedded between double tires.

WARNING ⚠

- **Badly damaged or worn tires are extremely dangerous, because they can be punctured more easily when the vehicle is running, they must be replaced with new ones as soon as possible.**



Removing tires

- Loosen wheel nuts slightly. The wheel nuts for right tires have right-hand threads “R”, and the wheel nuts for left tires have left-hand threads “L”.

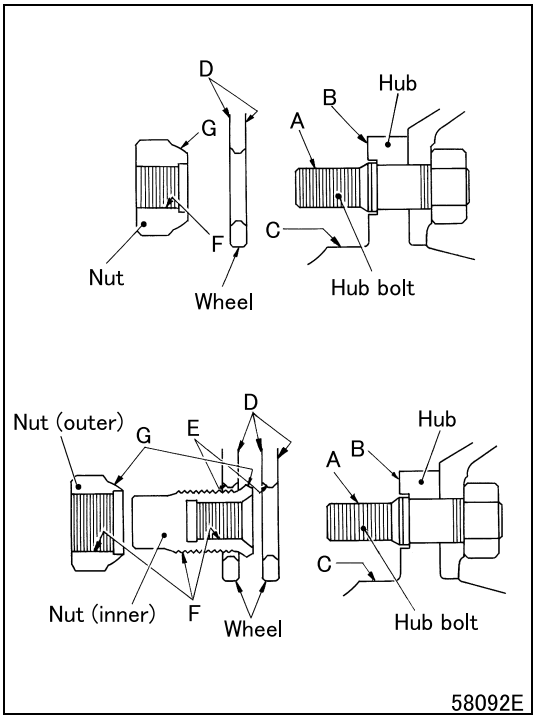
WARNING ⚠

- **Make certain that wheel nut wrench is fully engaged, all the way to the back of nuts. If it is not, it could slip.**

CAUTION ⚠

- **Only loosen wheel nuts slightly. Do not remove them.**

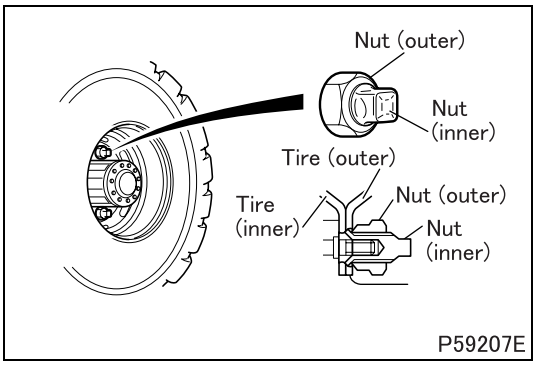
- Jack up the vehicle carefully, until the tire is slightly off the ground.
  Remove wheel nuts, then remove the tire.
- When working on the double tires at the rear of the vehicle, first remove the outside tire, then lower the vehicle and loosen the nuts on the inside tire. After doing this, jack the vehicle back up and remove the tire.



Mounting tires

To prevent wheel nuts and hub bolt from becoming loose and to prevent mounted parts (tire assemblies and hub) from being damaged, remove rust, dust, additional coatings of paint, and foreign particles from the following areas:

A: Hub bolt thread area
B: Wheel mounting surface of hub
C: Wheel alignment area of hub
D: Disc wheel mating surface
E: Disc wheel nut mounting surface
F: Wheel nut thread area
G: Wheel nut spherical area



- Install the dual rear tires as follows:
  - After mounting inner tire and fully tightening inner wheel nuts, jack the vehicle up and mount on outer tire, then tighten outer wheel nuts.
  - Even if only outside tire is to be changed, do not mount it until inner wheel nuts have been fastened at the specified torque.
  - Slide the air valves on the inside and outside tires down when mounting the tires.

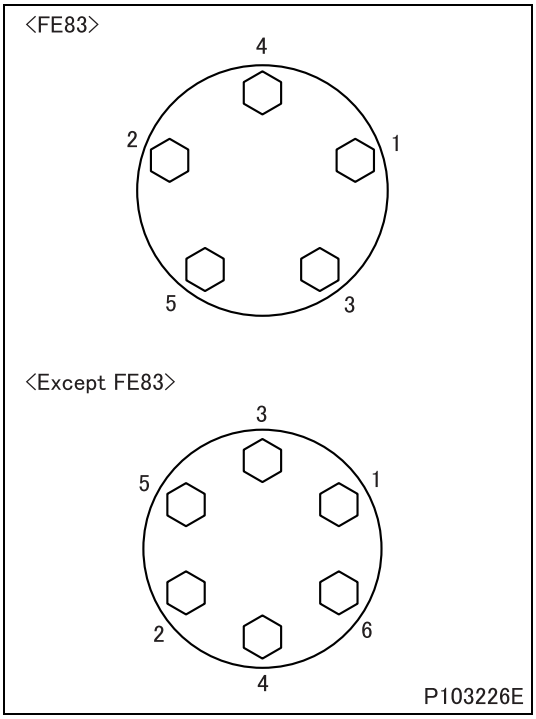
WARNING ⚠

- **If the threads are scored, or the disc wheel is deformed or cracked, change bolts, nuts and disc. Driving the truck before correcting such problems can cause the tire in question to come loose, which could be the source of major accidents.**

CAUTION ⚠

- **Check hub bolt threads carefully for damage before putting the tire on.**

- Place the tapered end of wheel nuts towards the disc wheel and fasten temporarily. Center so that there is no eccentricity between bolts and the disc wheel bolt holes.
- Lower the vehicle.



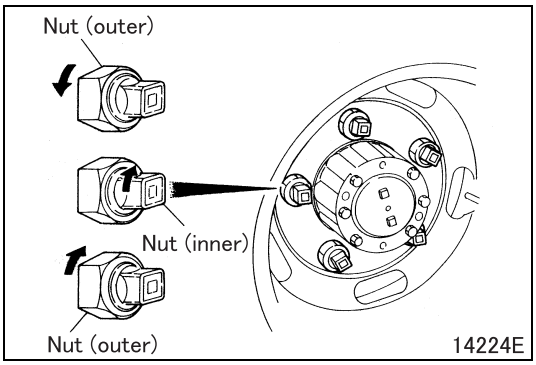
- Tighten the nuts in the order as illustrated, tightening each nut two or three times. To finish, tighten each nut at the specified torque.

WARNING ⚠

- **Always use the specified torque when tightening the wheel nuts. If the wheel nuts are not tightened properly, the wheels could come loose while the vehicle is being driven, which could result in life threatening accidents or the truck being disabled.**
- **Do not coat the threads with grease when tightening the nuts. This could result in over-tightening force, which could be dangerous.**

CAUTION ⚠

- **Over-tightening the wheel nuts can damage them.**



Checking the wheel nuts for looseness

The wheel nuts should be checked for looseness every 10,000 km (6,000 miles). All nuts should be tightened at the specified torque.

- Check the double rear tires for looseness as follows:

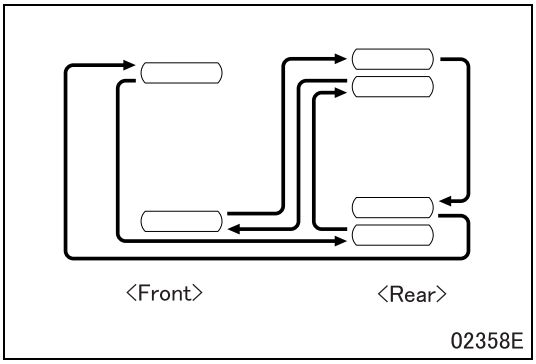
(1) Loosen outer wheel nuts.
(2) Tighten inner wheel nuts at specified torque.
(3) Tighten outer wheel nuts at specified torque.

CAUTION ⚠

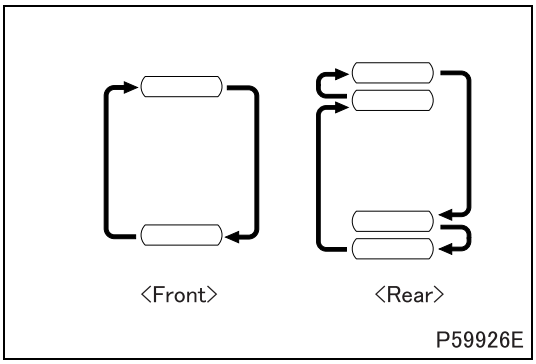
- **If outer wheel nuts are tightened without first being loosened, it might not be possible to tighten them at the specified torque.**

Tire rotation

Tires wear differently, according to the location where they are mounted. To make this wear uniform and prolong the life of your tires, they should be rotated every 10,000 km (6,000 miles) in the rotation order shown below:



- When the tread patterns for all tires are identical:



- When the tread patterns are different for the front and rear tires:

CAUTION ⚠

- **Always adjust air pressure after running-in new tires.**
- **When using tires of different tread patterns, use rib-type patterns for the front tires and traction type patterns for the rear tires.**
- **Avoid using both radial and biased tires on the same vehicle.**

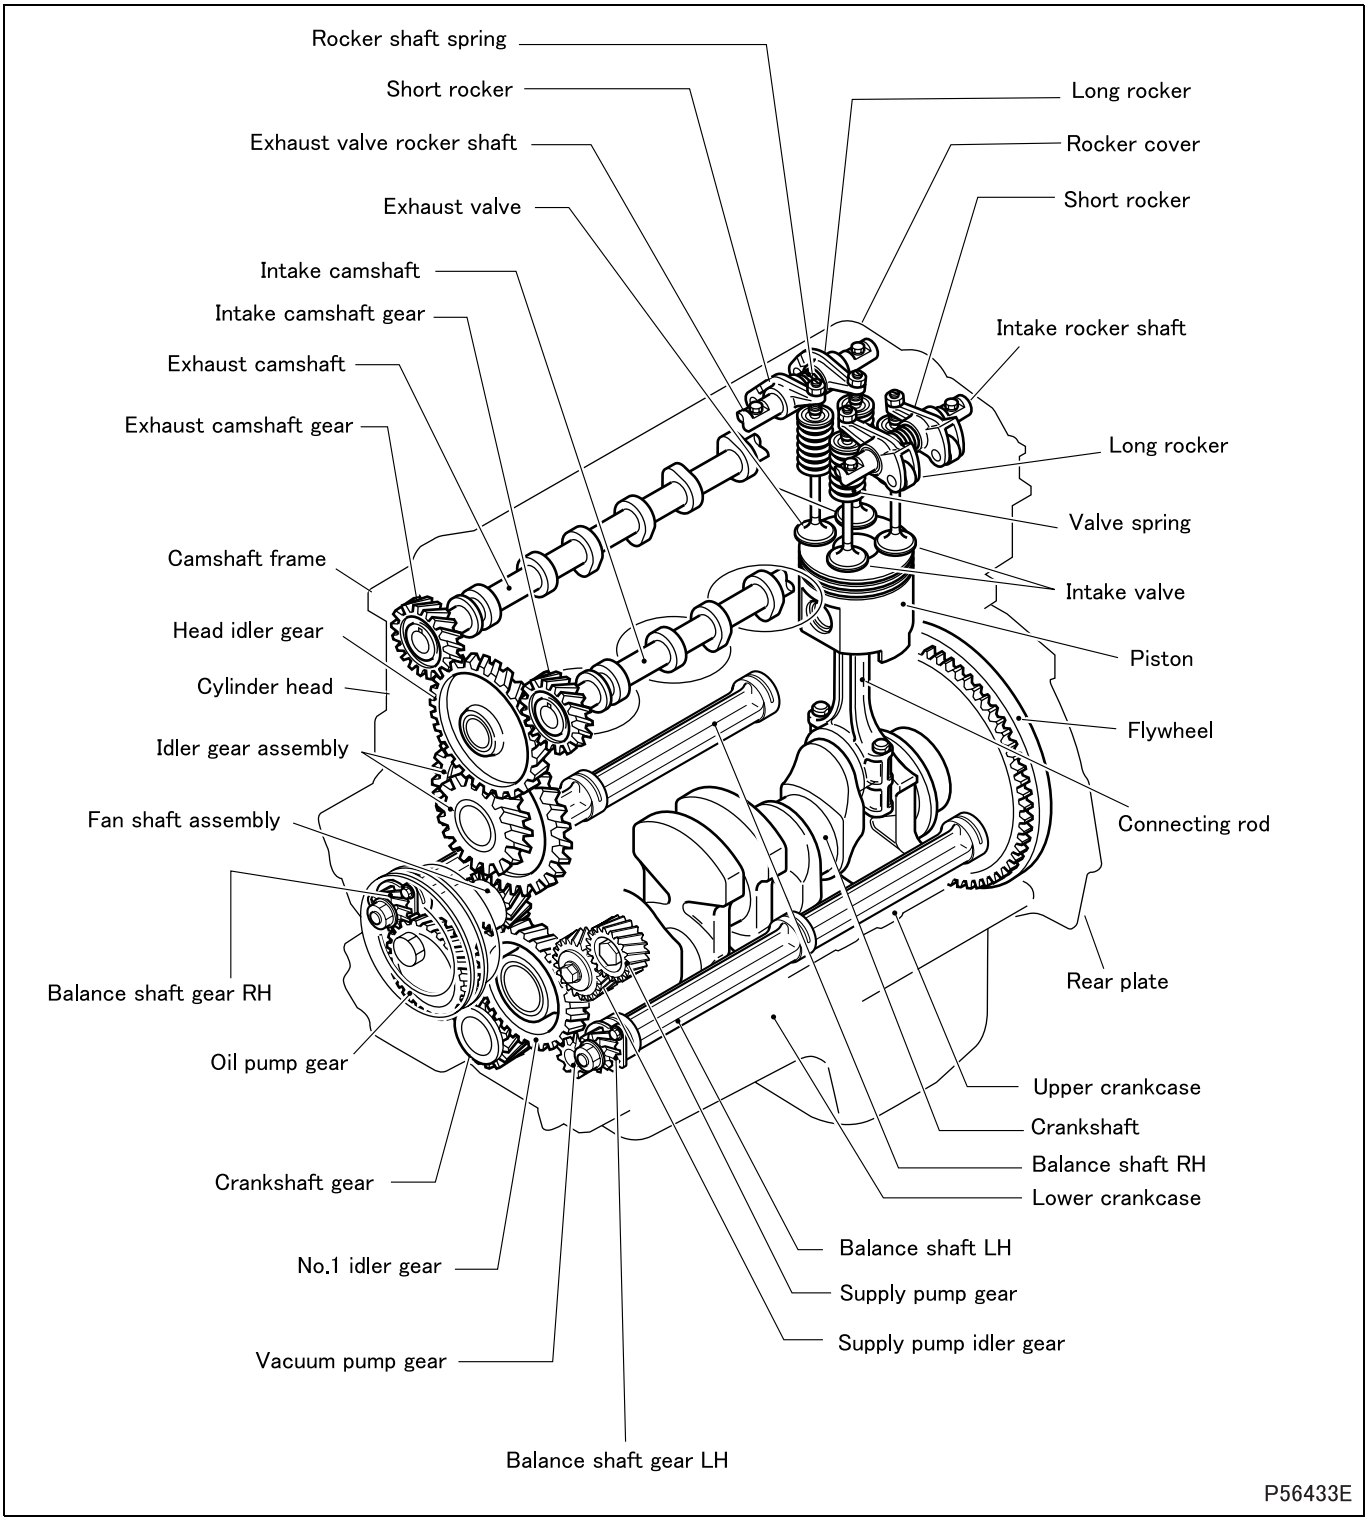
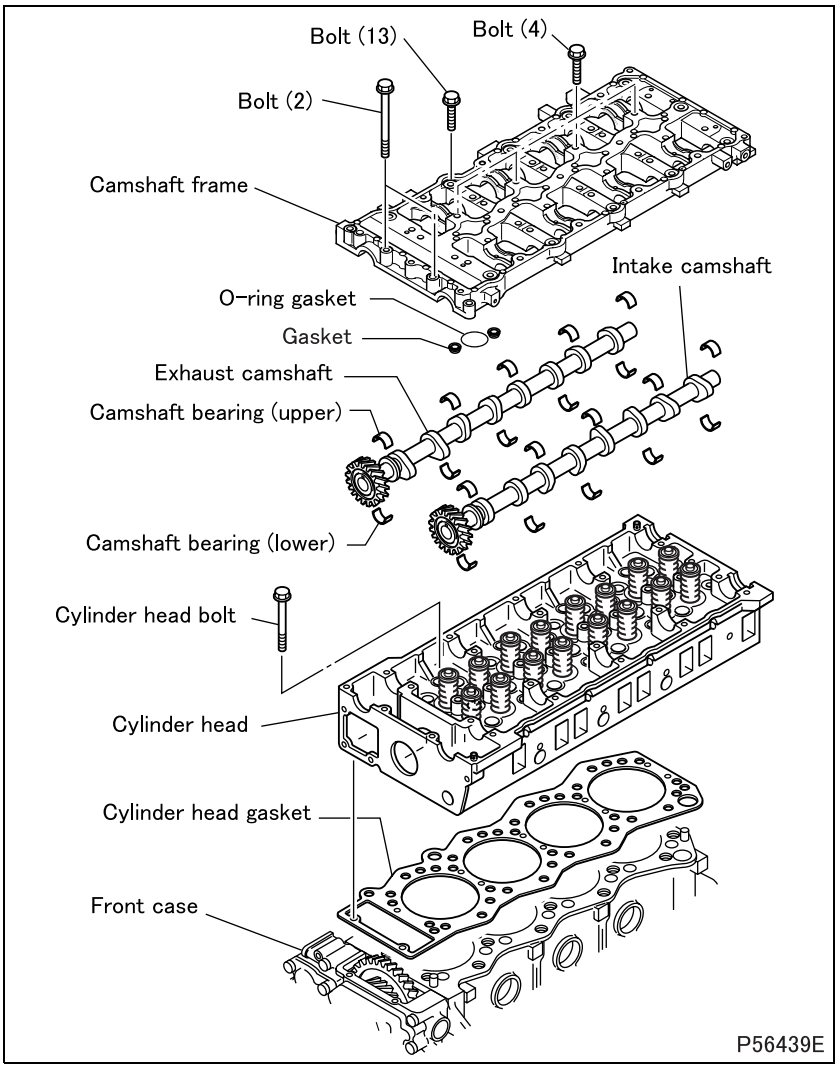
SPECIFICATIONS

Item		Specifications	
Engine model		4M50T7	4M50T8
Type		4-cylinder, in-line, water-cooled, 4-cycle diesel engine	
Combustion chamber		Direct injection type	
Valve mechanism		Double overhead camshaft (DOHC)	
Maximum output	HP / rpm	155 / 2700	185 / 2700
Maximum torque	ft.lbf / rpm	347 / 1600	391 / 1600
Bore × stroke	mm {in.}	ϕ114 × 120 {ϕ4.49 × 4.72}	
Total displacement	L {qts}	4.899 {4899}	
Compression ratio		17.5	

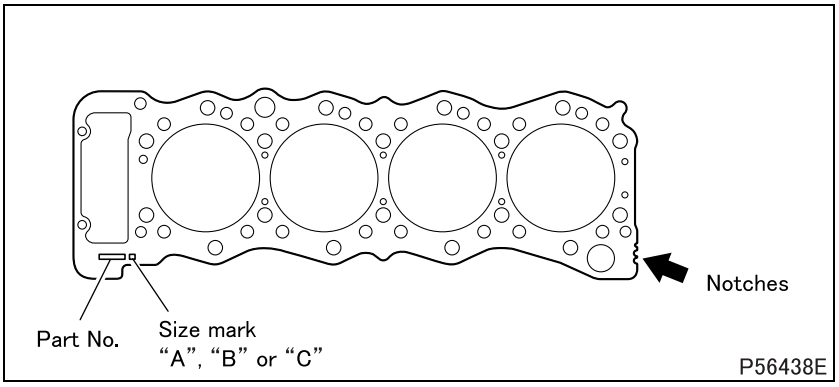
1. Exploded View



2. Cylinder Head, Cylinder Head Gasket, Camshaft and Camshaft Frame



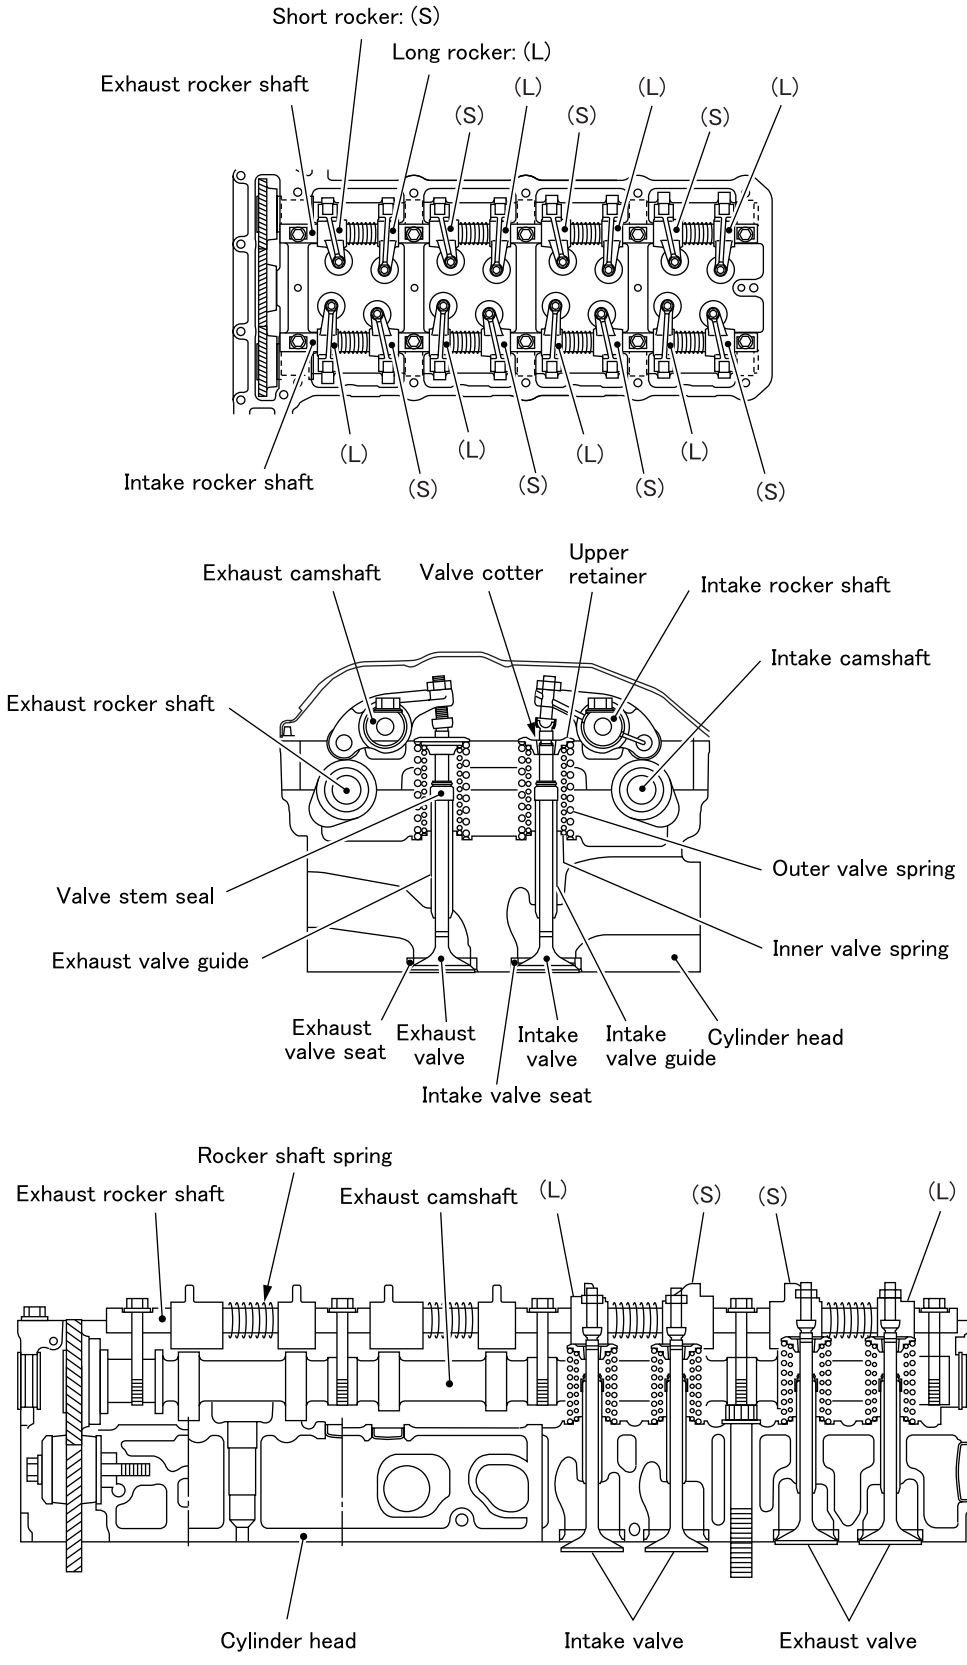
- The camshaft is supported at its journals from below by the cylinder head and retained from above by the camshaft frame.
- The upper and lower camshaft bearings are identical, but cannot be interchanged when they are reinstalled.
- The exhaust camshaft and the intake camshaft have identical gears but different cams.
- The thirteen shortest bolts and four shorter bolts fasten the camshaft frame onto the cylinder head.
- The two long bolts fasten the camshaft frame to the front case.



2.1 Cylinder head gasket

- Select and use a cylinder head gasket of a thickness that can accommodate the piston projection.
- The size (thickness) class of the gasket can be identified by the shape of the notches and size mark cut on the edge of each gasket.

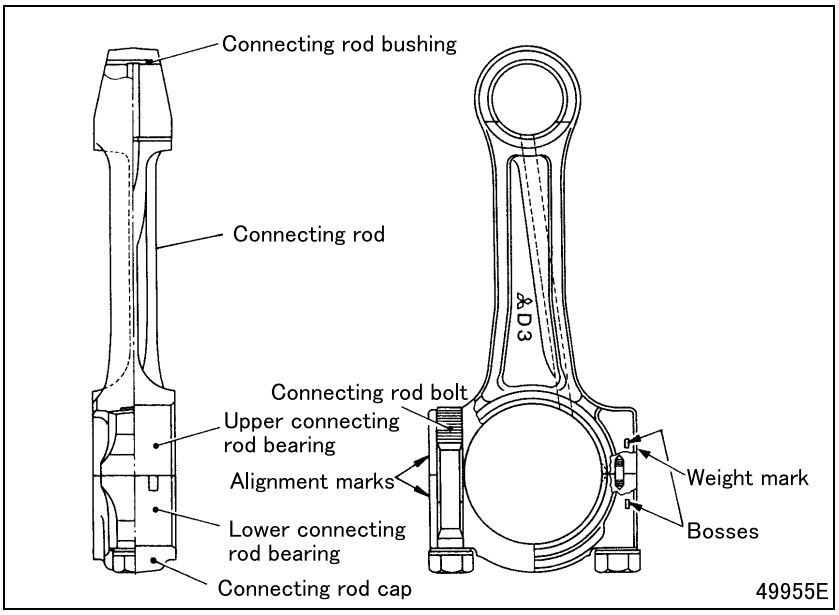
3. Valve Mechanism



P102370E

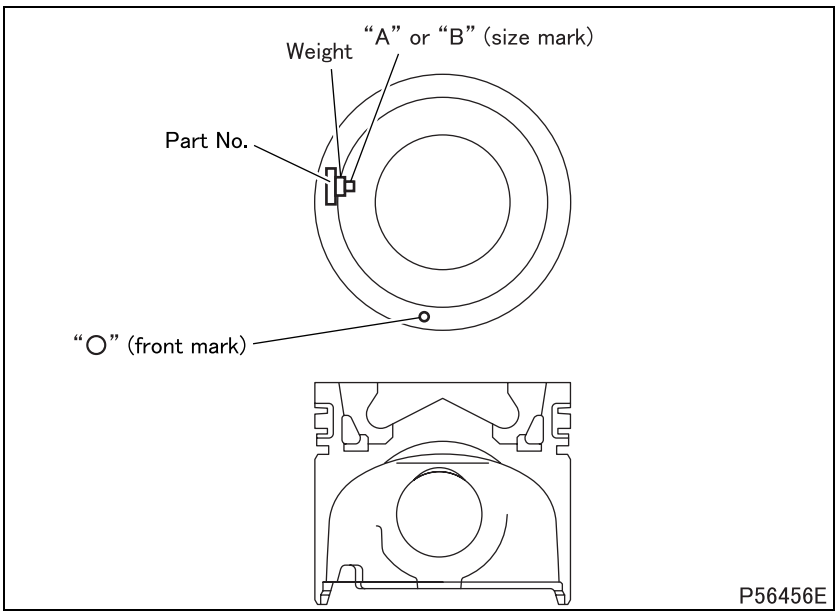
- The short rockers and the long rockers are installed differently, as shown in the illustration.
- Each valve has an inner valve spring and an outer valve spring.

4. Connecting Rod



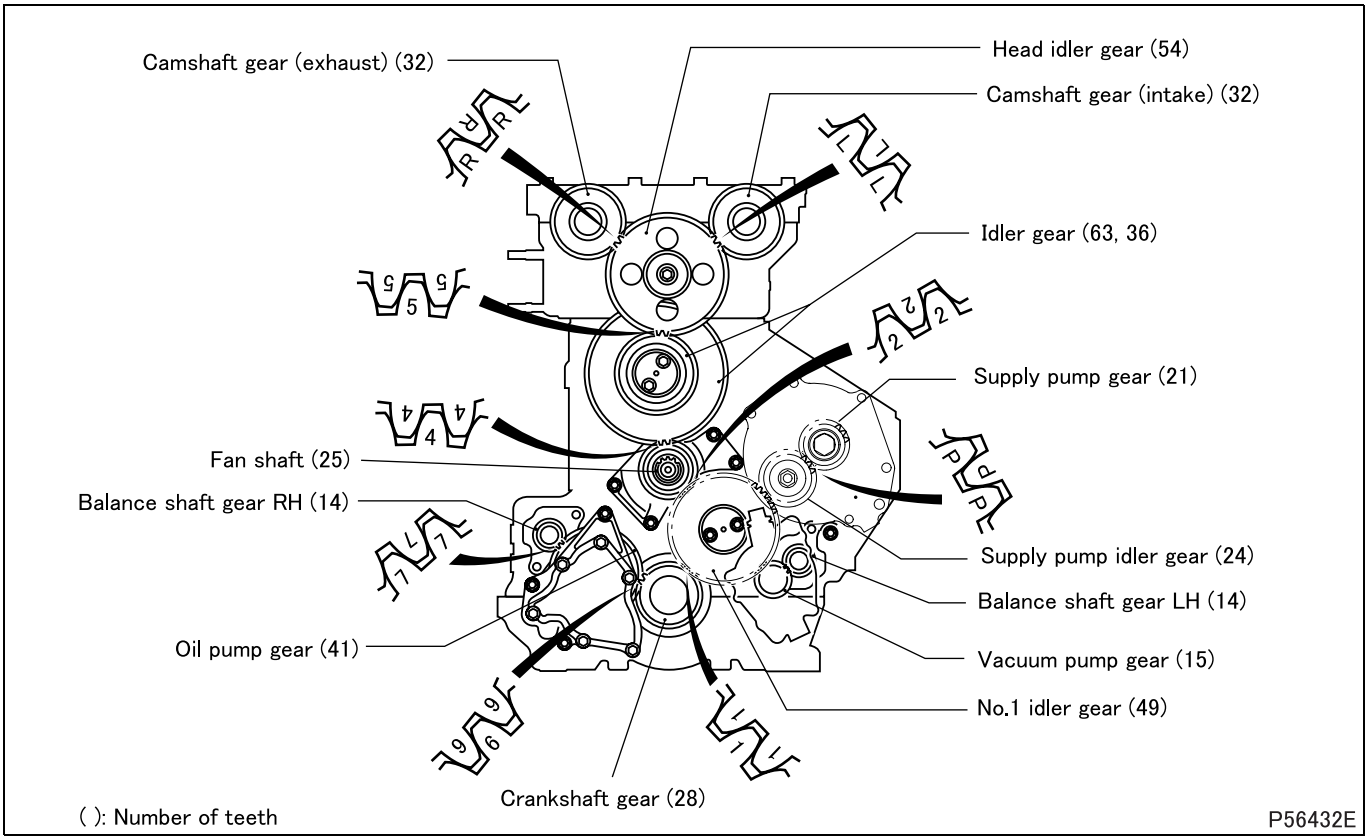
Weight mark:
"C" to "G"
(with "G" as the maximum)

5. Piston



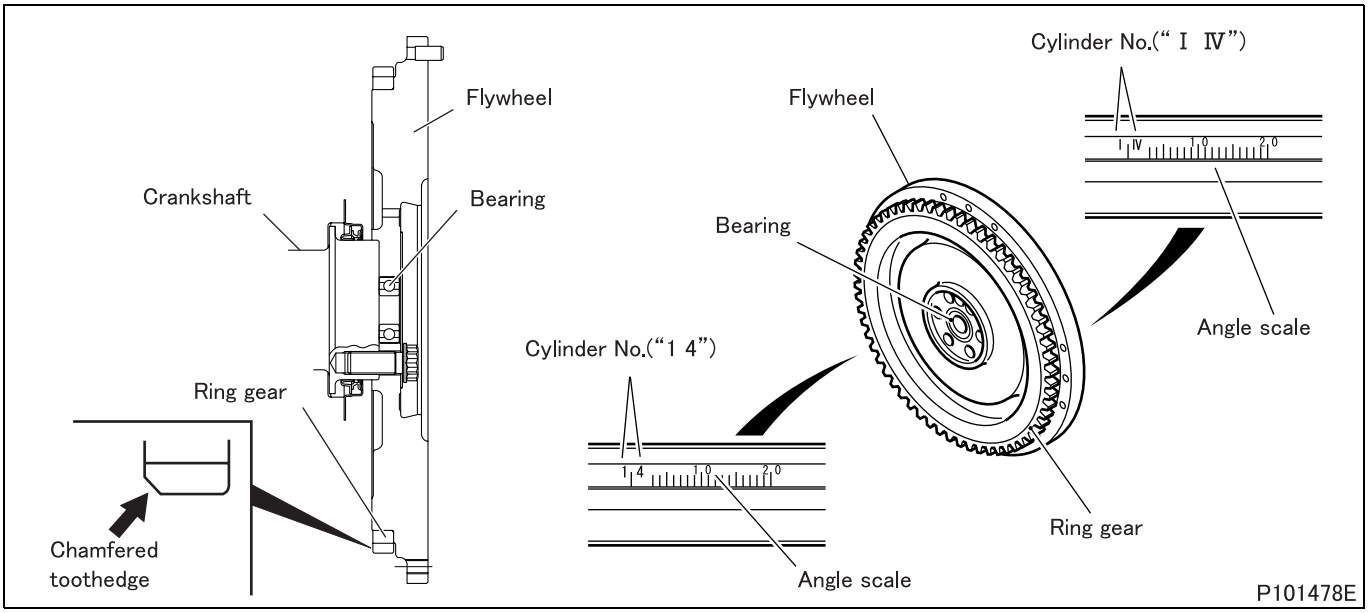
- Each piston must be mated with a cylinder in the upper crankcase that has the same size mark as the piston. The pistons are marked with either "A" or "B", where "B" stands for the larger and "A" for the smaller of the two available diameters.
- The pistons have been made lightweight by use of a special aluminum alloy, as well as by the reduction of their height.

6. Timing Gears



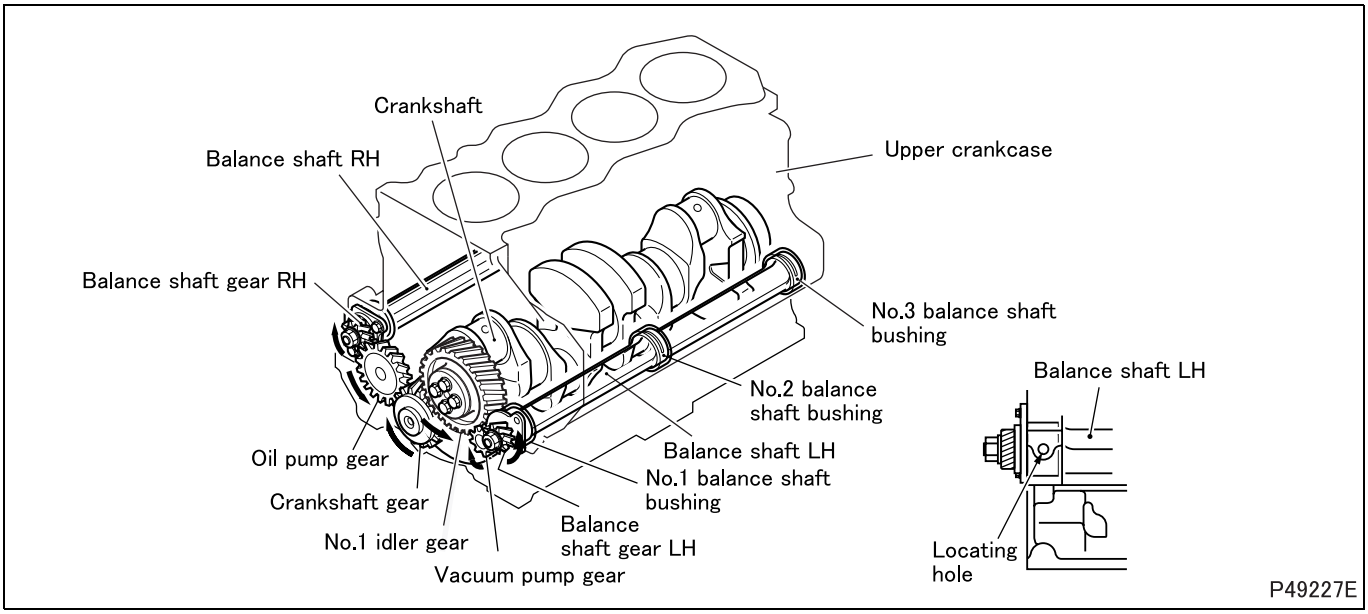
- All gears, except the vacuum pump gear, each has timing mark(s) to ensure correct engagement during assembly.

7. Flywheel

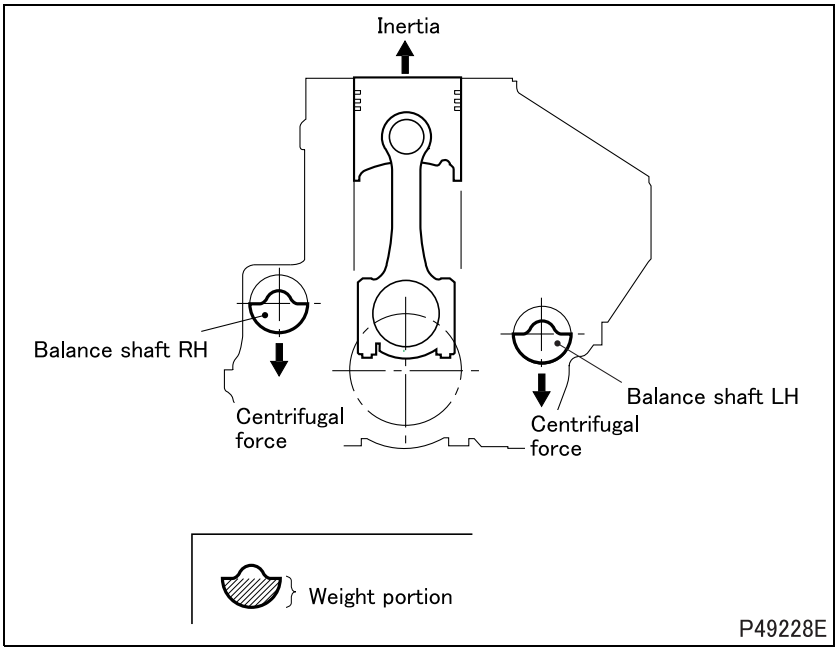


- One side of each flywheel ring gear tooth is chamfered to facilitate the engagement of the starter pinion.

8. Balance Shafts



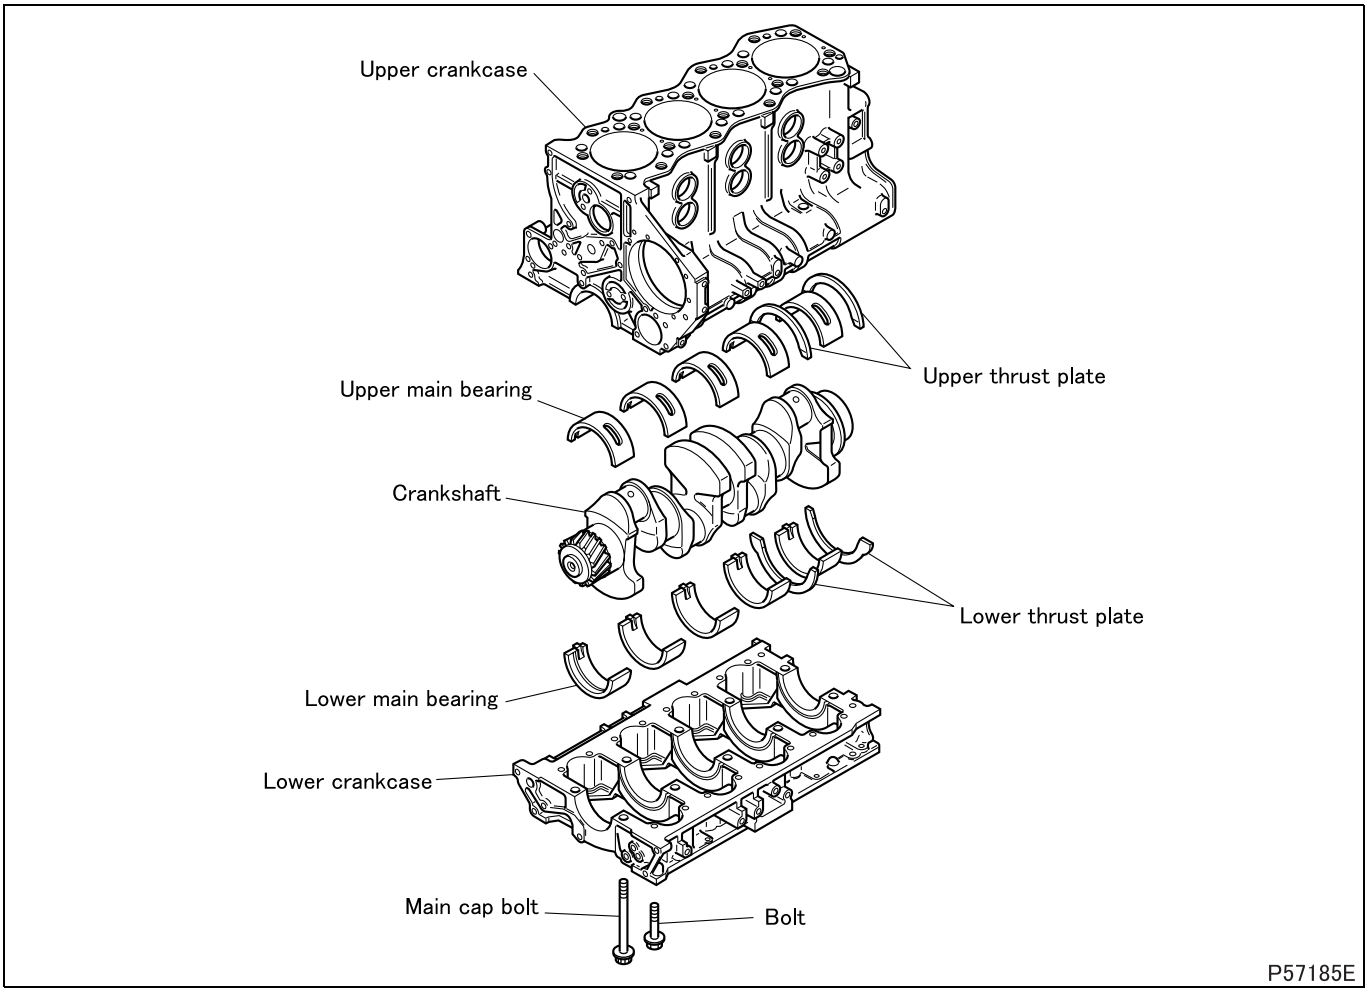
- The balance shaft RH and balance shaft LH are mounted in the upper crankcase on the right and left sides of the crankshaft. The balance shafts reduce the vibration of the engine caused by the rotation of the crankshaft.
- The balance shaft RH and balance shaft LH are both driven by timing gears. Each balance shaft is held in the upper crankcase by way of three balance shaft bushings.
- The balance shaft LH has a locating hole to enable correct installation.

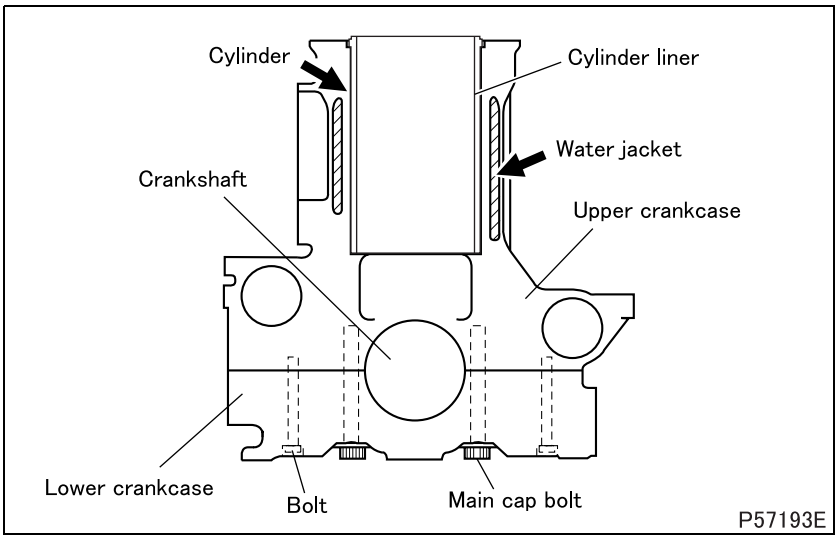


8.1 Reduction of vertical vibration (secondary vibration element)

- When the piston moves up and down, vertical vibrations are generated at the top dead center (TDC) and bottom dead center (BDC) due to inertia.
- The balance shaft LH and the balance shaft RH rotate so that their weight portions are at the bottom positions when a piston is at TDC and at the top positions when the piston is at BDC, i.e., the weight portions are always on the opposite side to the piston head.
- This creates centrifugal forces in the balance shaft RH and balance shaft LH, the total of which is equal in amount to the inertia force that the piston creates when it is at TDC or BDC. These centrifugal forces in the balance shafts cancel out the inertia forces resulting from piston's movements and reduce the amount of vertical vibration.
- The balance shafts also reduce the moment created around the crankshaft (which constitutes secondary vibration elements) when the engine is running in the middle-to-high speed range.

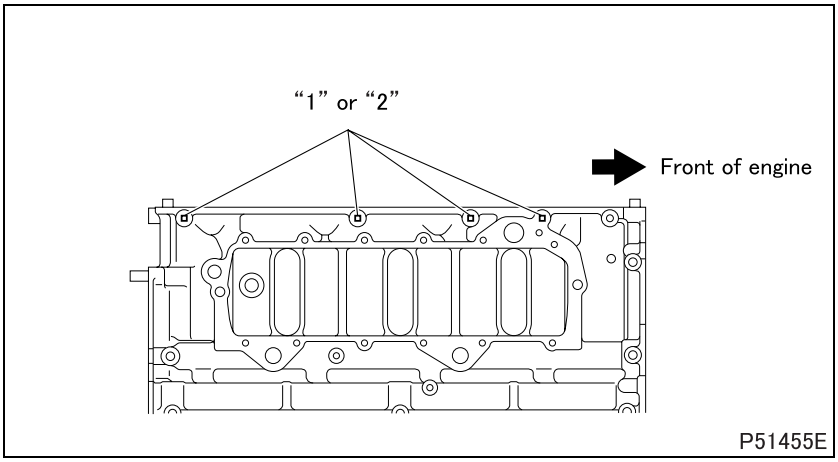
9. Crankcase and Main Bearings



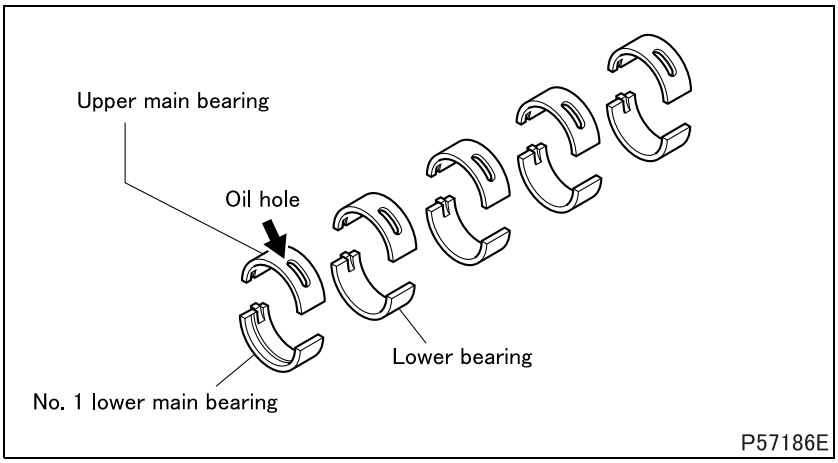


9.1 Crankcase

- The crankcase is a two-piece type consisting of an upper crankcase and a lower crankcase, which hold the crankshaft in between.
- Cylinder liners are inserted into the cylinder bores in the upper crankcase.
- An water jacket is formed in the walls of these cylinders to cool them down.
- The main cap bolts and the bolts that fasten the upper and lower crankcases together are tightened using a special method.

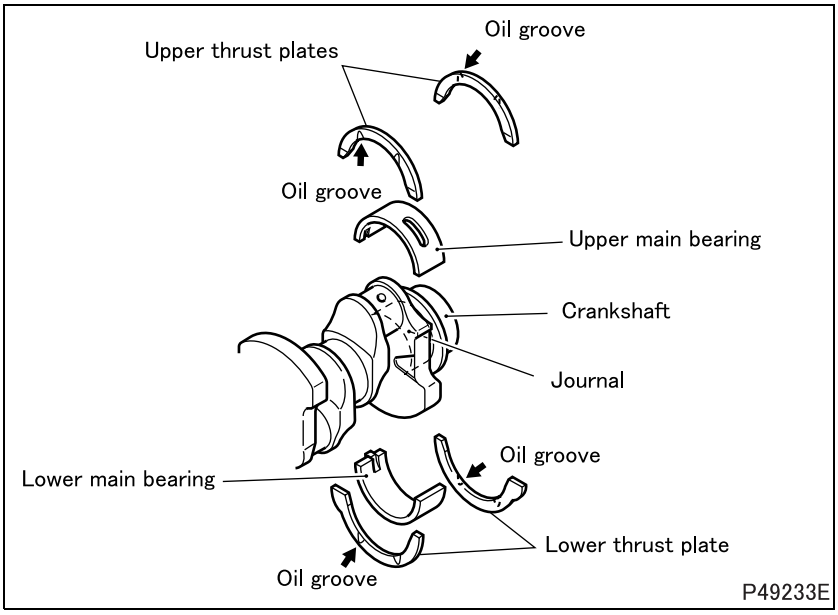


- The upper crankcase is marked with a size mark ("1" or "2") to be used as a reference in selecting cylinder liners.
- The first to forth size marks from the front of the engine correspond to the No. 1 to No. 4 cylinders.



9.2 Main bearing

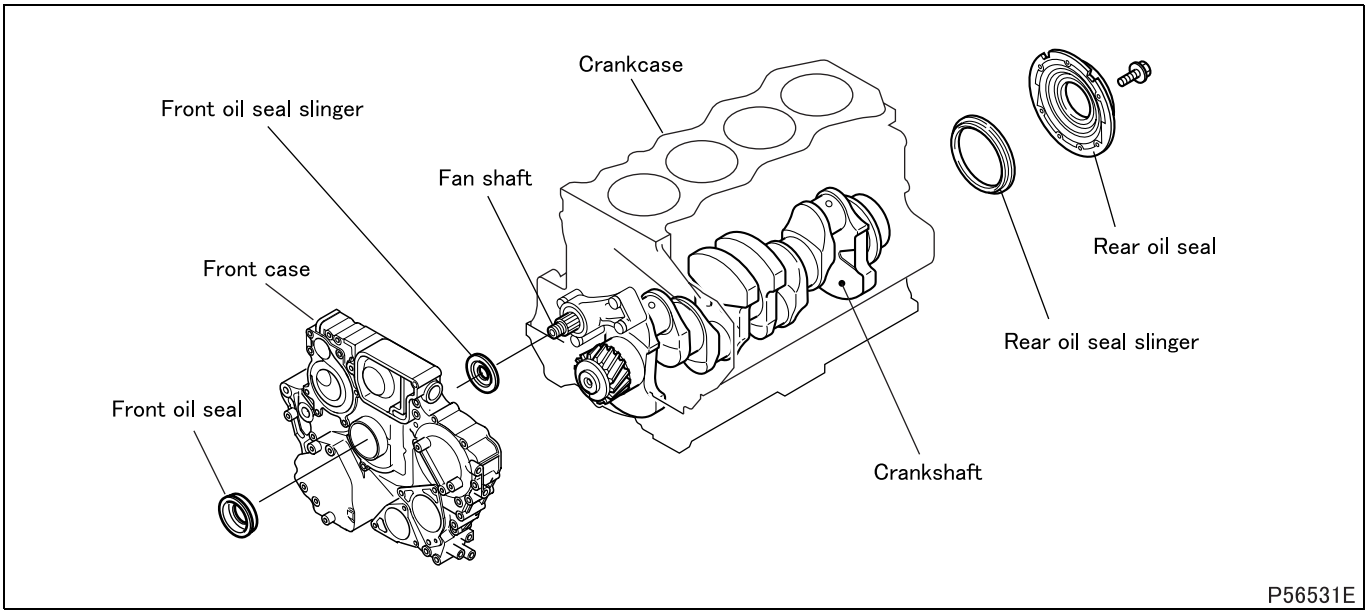
- The upper main bearings have oil holes through which engine oil is supplied to the crankshaft journals.
- An oil groove is provided in the No. 1 lower bearing.

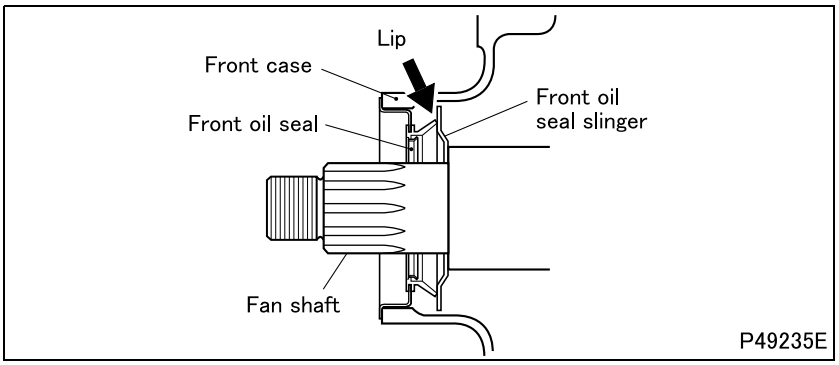


9.3 Thrust plates

- Two upper and lower thrust plate pairs are installed on both sides of the upper and lower main bearings at the rearmost journal of the crankshaft.
- Select the thrust plates of a thickness that can accommodate the crankshaft end play. The thrust plates each have two oil grooves, which assures their minimum friction against the crankshaft journal.

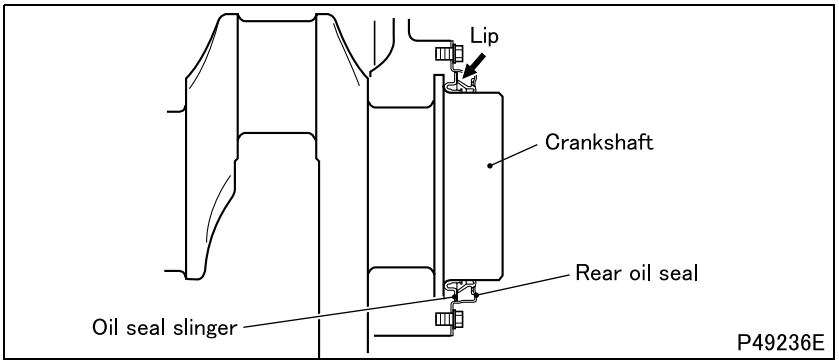
10. Oil Seals





10.1 Front oil seal

- The front oil seal is fitted in the front case and prevents oil from leaking by contact of its lip with the front oil seal slinger.
- The front oil seal slinger is press-fitted onto the fan shaft.



10.2 Rear oil seal

- The rear oil seal is fitted in the crankcase assembly and prevents oil from leaking by contact of its lip with the rear oil seal slinger.
- The rear oil seal slinger is press-fitted onto the rear end of the crankshaft.

Possible causes / Symptoms		Low power output	Abnormal engine noise	Reference Gr
Cylinder head and valve mechanism	Incorrect valve clearance	O	O	
	Defective cylinder head gasket	O	O	
	Worn valve and valve seat; carbon deposits	O	O	
	Weakened valve spring	O	O	
	Defective rocker shaft and camshaft frame		O	
	Poor lubrication of rocker shaft and camshaft frame		O	
Timing gears	Incorrect backlash in timing gears		O	
	Poor lubrication of timing gears and idler shaft		O	
Camshaft	Excessive end play in camshaft		O	
	Worn camshaft		O	
Pistons and connecting rods	Worn/damaged piston ring groove(s)	O	O	
	Worn/damaged piston ring(s)	O	O	
	Worn piston pin and connecting rod small end		O	
Crankshaft	Excessive end play in crankshaft		O	
	Incorrectly fitted crankshaft		O	
	Worn/damaged crankshaft pins and connecting rod bearings		O	
	Worn/damaged crankshaft journals and main bearings		O	
Fuel system	Defective supply pump	O	O	Gr13EA
	Faulty fuel spray from injector	O	O	Gr13A
	Air trapped in fuel system	O

Intake and exhaust system	Clogged air cleaner	O	O	Gr15
	Clogged muffler	O	O	
Incorrect oil viscosity		O		Gr12
Improper fuel		O		
Incorrectly fitted piping and hoses			O	
Defective/incorrectly fitted alternator and other auxiliaries			O	

M E M O

1. Measuring Compression Pressure

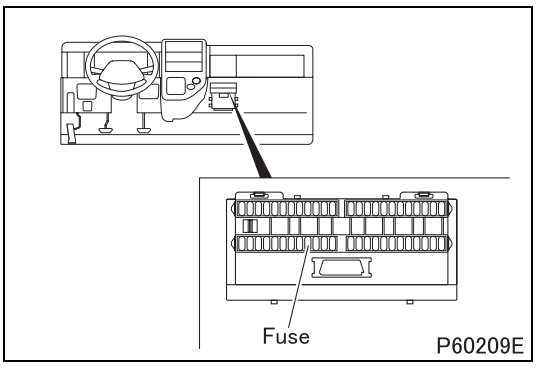
Service standards

Location	Maintenance item		Standard value	Limit	Remedy
–	Compression pressure	Each cylinder (at 220 rpm)	2840 kPa {410 psi, 29 kgf/cm^2}	2260 kPa {325 psi, 23 kgf/cm^2}	Inspect
		Cylinder-to-cylinder pressure difference	–	390 kPa {57 psi, 4 kgf/cm^2} or less	Inspect

Special tools (Unit: mm {in.})

Mark	Tool name and shape	Part No.	Application
a	Compression gauge adapter A: M14 × 1.5 B: 58 {2.28} C: φ7.2 {φ0.28} 	MH063853	Measuring compression pressure

- A drop in compression pressure can be used as a guide to determine when the engine should be overhauled.
- Measure the compression pressure at regular intervals. Keeping track of its transitions can provide a useful tool for troubleshooting. On new vehicles and vehicles with newly replaced parts, the compression pressure will be somewhat higher depending on the break-in condition of piston rings, valve seats, etc., but this will return to normal as the parts wear down.
- Before the compression measurement, confirm that the engine oil, starter, and battery are in normal condition.
- Place the vehicle in the following conditions.
  - Warm up the engine until the coolant temperature reaches approximately 75 to 85°C {167 to 185°F}.
  - Turn off the lights and auxiliaries.
  - Place the transmission in neutral (in the parking range P for automatic transmissions).
  - Place the steering wheel in the straight-ahead position.

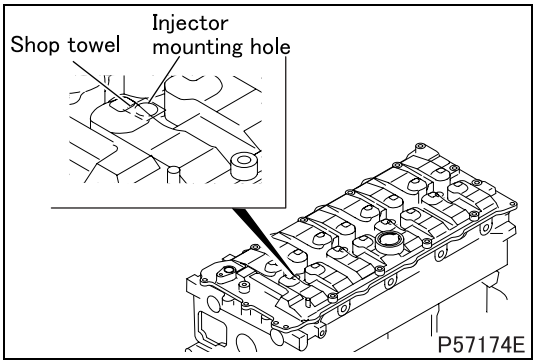


[Removal]

- Remove the fuse (M9) to prevent fuel from being injected when the engine is cranked by the starter.

CAUTION ⚠

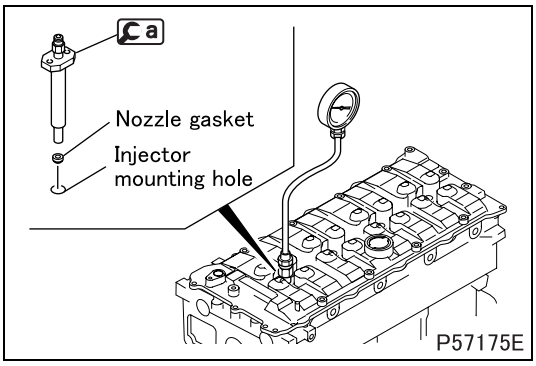
- **When cranking the engine, never shut off the power supplied to the engine electronic control unit by disconnecting the engine electronic control unit connector or other similar methods. If the engine is cranked with the power to the engine electronic control unit shut off, the supply pump will not be controlled by the electronic control unit, causing the supply pump to be malfunctioned.**



- Disconnect the injector connector and remove all injectors. (For the double-cab (fixed-cab) models, see “3. Removal and Installation of Injector <Crew Cab (Fixed type)>”.

[Inspection]

- Cover the injector mounting holes with shop towels. After cranking the engine by the starter, check that no foreign substances are deposited on the shop towels.
- If there are deposits (such as engine oil or coolant) on the shop towels, the following may be the cause:
  - Deposits of engine oil alone can mean a defective piston ring seal; the piston rings must be inspected.
  - Deposits of both engine oil and coolant can mean cracks in the cylinders; the crankcase must be replaced.



WARNING ⚠

- **When coolant and engine oil deposits are evident, cranking the engine could be dangerous as these substances, heated to high temperatures, will blow out from the injector mounting holes. Make sure to stay away from the injector mounting holes when the engine is being cranked.**

- Attach the gasket and Ca to one of the injector mounting holes. Then, connect a compression gauge to Ca.
- Crank the engine and measure the compression pressure for all the cylinders one after another. Determine the compression pressure difference between the cylinders.
- If the compression pressure is below the limit or the cylinder-to-cylinder pressure differences is not within the limit, pour a small amount of engine oil into the corresponding injector mounting hole and remeasure the compression pressure.
  - If the compression pressure increases, the piston rings and cylinder surfaces may be badly worn or otherwise damaged.
  - If the compression pressure remains unchanged, there may be seizure in the valves, the valves may be incorrectly seated or the cylinder head gasket may be defective.

[Installation]

- Install the injector. (See Gr13A.)
- Install the rocker cover and the gasket. (See later sections.)

2. Inspection and Adjustment of Valve Clearances

Service standards (Unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
–	Valve clearance (when cold)	Intake valve	0.4 {0.016}	–	Adjust
		Exhaust valve	0.5 {0.020}	–	

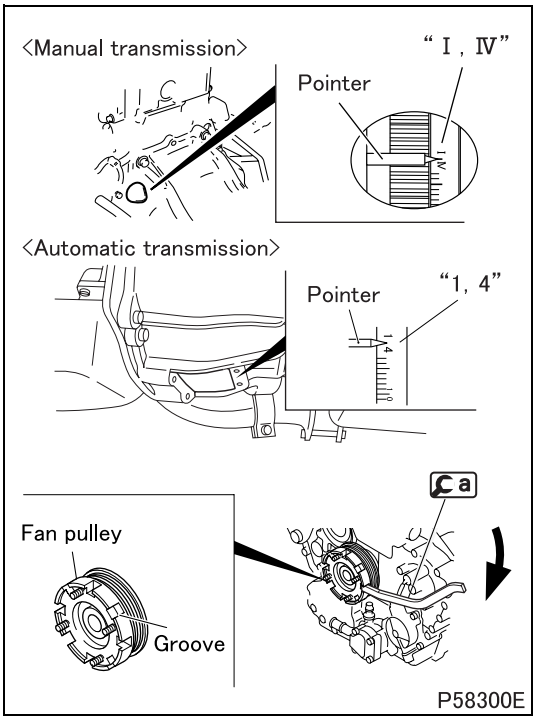
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Lock nut (adjusting screw stopping)	21 {15.5, 2.1}	–

Special tools

Mark	Tool name and shape	Part No.	Application
Ⓐ	Cranking handle  P58299	MH063704	Turning the fan pulley

- Valve clearances should be checked and adjusted as follows while the engine is still cold.

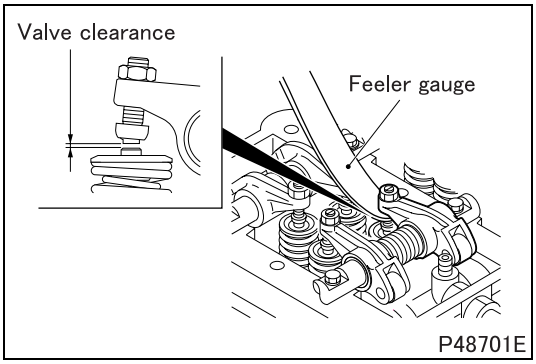


[Inspection]

CAUTION ⚠

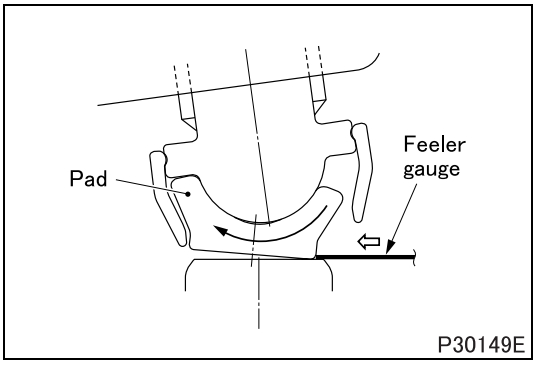
- **Never cut off the engine electronic control unit power supply when cranking the engine.**

- Remove the rocker cover.
- Disconnect the injector connector.
- Bring the No. 1 or No. 4 cylinder piston to the top dead center (TDC) on the compression stroke by the following procedure:
  - Hook Ⓐ onto the grooves in the fan pulley.
  - Turn the fan pulley in the illustrated direction to align the pointer with the "I, IV" or "1" to "4" mark on the flywheel.
  - This will place either the No. 1 or No. 4 cylinder piston at TDC on the compression stroke. The cylinder in which the rocker arms for both the intake and exhaust valves can be pushed down by hand by the valve clearance amounts has its piston at TDC. Rotate the engine by one full turn to switch the TDCs of the No. 1 and No. 4 cylinder pistons.

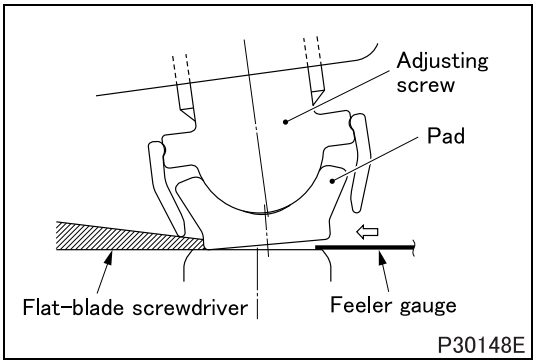


- With the No. 1 or No. 4 cylinder piston at TDC, measure the clearance of the valves marked with a circle in the table below.

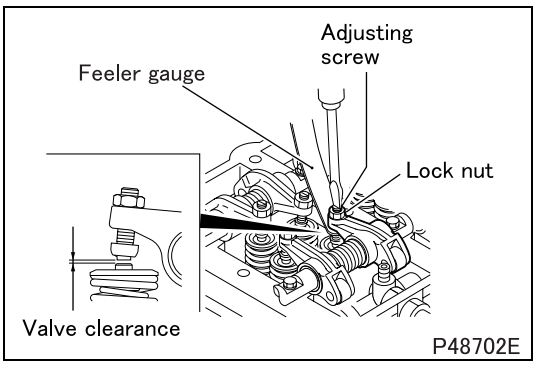
Cylinder No.	1		2		3		4	
Valve	IN	EX	IN	EX	IN	EX	IN	EX
No. 1 cylinder piston at TDC on compression stroke	O	O	O	–	–	O	–	–
No. 4 cylinder piston at TDC on compression stroke	–	–	–	O	O	–	O	O



- The feeler gauge cannot be inserted under the adjusting screw pad without carrying out the above step, as the pad will block the feeler gauge as shown in the illustration.



- To insert the feeler gauge under the adjusting screw pad, push the pad at the bottom on one side with a flat-blade screwdriver or a similar tool. Insert the feeler gauge into the small space created under the other side of the pad, as shown in the illustration.
- The feeler gauge must have a slight drag when taking measurements.
- If the feeler gauge can be moved without any resistance, the measurement will be incorrect.
- If the measurements are not within the standard value range, adjust the value clearance by the following procedures.



[Adjustment]

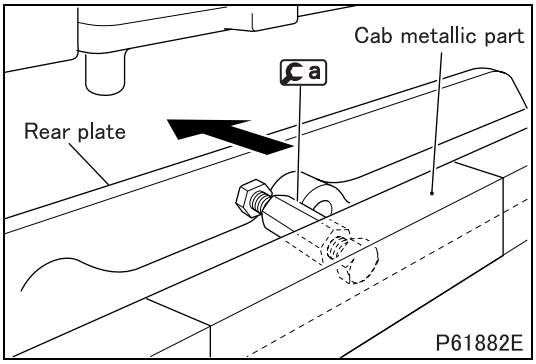
- Adjust the valve clearance by loosening the lock nut and rotating the adjusting screw so that the feeler gauge can only be moved with a slight drag.
- After the adjustment, hold the adjusting screw in position with a screwdriver and tighten the lock nut to the specified torque.
- Recheck the valve clearance with the feeler gauge, and readjust if the measurements are not within the specified value range.

3. Removal and Installation of Injector <Crew Cab (Fixed type)>

- Perform this work only when No. 3 cylinder injector on the fixed type double cab vehicle is impossible to remove and install.

Special tools

Mark	Tool name and shape	Part No.	Application
a	Turnbuckle  P61881	MH063702	Displacement of engine

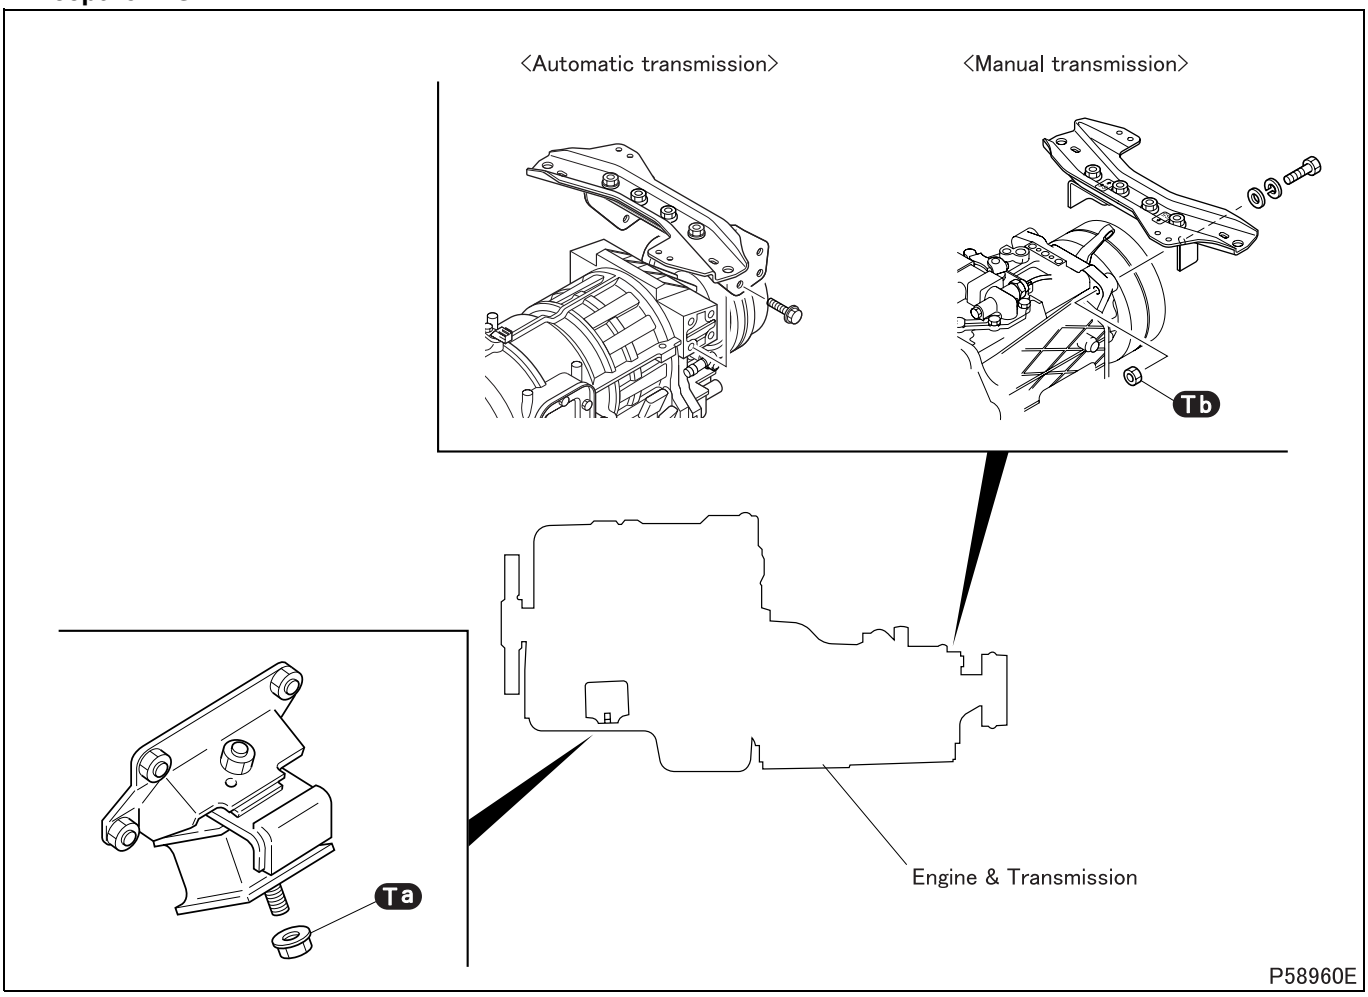


- Remove the engine cover and rear seat foot cover.
- Set a between the cab metallic part and the rear plate of the engine.
- Turning a with a spanner wrench, move the engine approximately 5 to 6 mm {0.20 to 0.24 in.} forward.
- Remove the injector of No. 3 cylinder.

M E M O

ENGINE REMOVAL AND INSTALLATION <TILT CAB>

<Except for FG>



CAUTION ⚠

- **Only use hoisting equipment appropriate for the engine and transmission weight (approximately 600 kg {1320 lb}).**

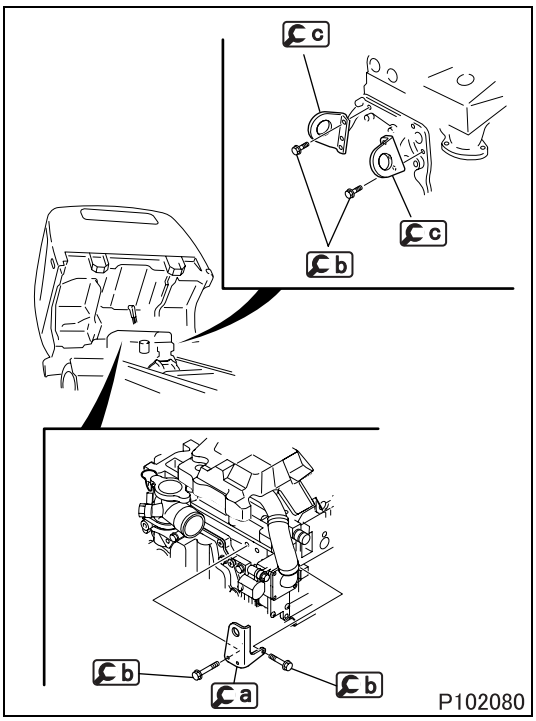
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Nut (front mounting installation)	69 to 88 {51 to 65, 7 to 9}	–
Tb	Nut (rear mounting installation)	130 to 170 {96 to 125, 13 to 17}	–

Special tools

Mark	Tool name and shape	Part No.	Application
a	Engine front hanger  P57188	MH063636	Removal and installation of engine
b	Flange bolt  P29984	MF140429 MF140433 MF140421	Installation of engine front hanger
c	Engine rear hanger  P58957	MH063711	Removal and installation of engine

◆Work before removal◆

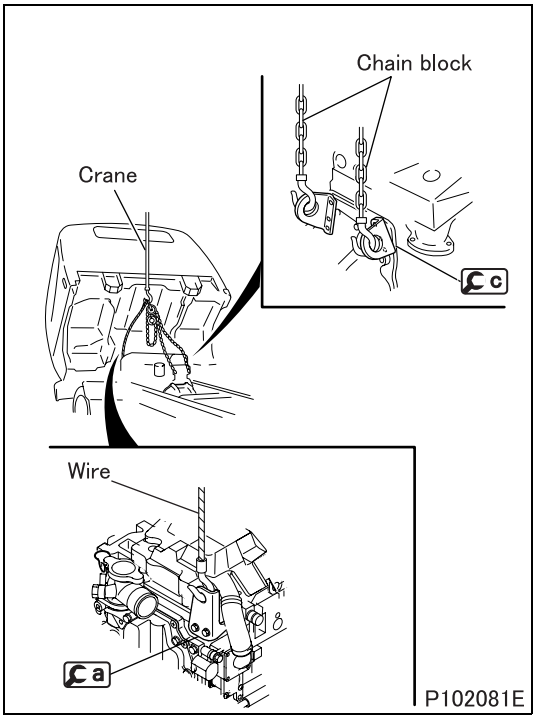


P102080

■ **Preparing for engine removal: Installation of engine front hanger and flange bolt**

- Install a, b and c on the engine.

◆Removal procedure◆

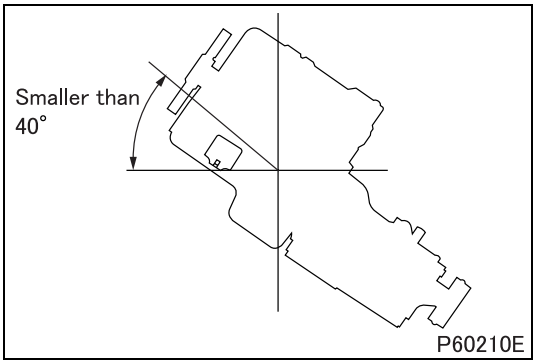


■ **Removal: Engine and transmission**

- Hook the wire rope on a and hitch the chain block to c. Then, pull all the slack out of the slings by a crane.

CAUTION ⚠

- **The slings must be strong enough to hang the engine and transmission assembly (weighing approximately 600 kg {1320 lb}).**
- **Be sure to keep the slings away from the exhaust gas recirculation pipes.**



- Make sure that all harnesses and pipes are disconnected.
- Lift the engine and transmission assembly slowing. Take care not to bump the assembly against the frame and cab.

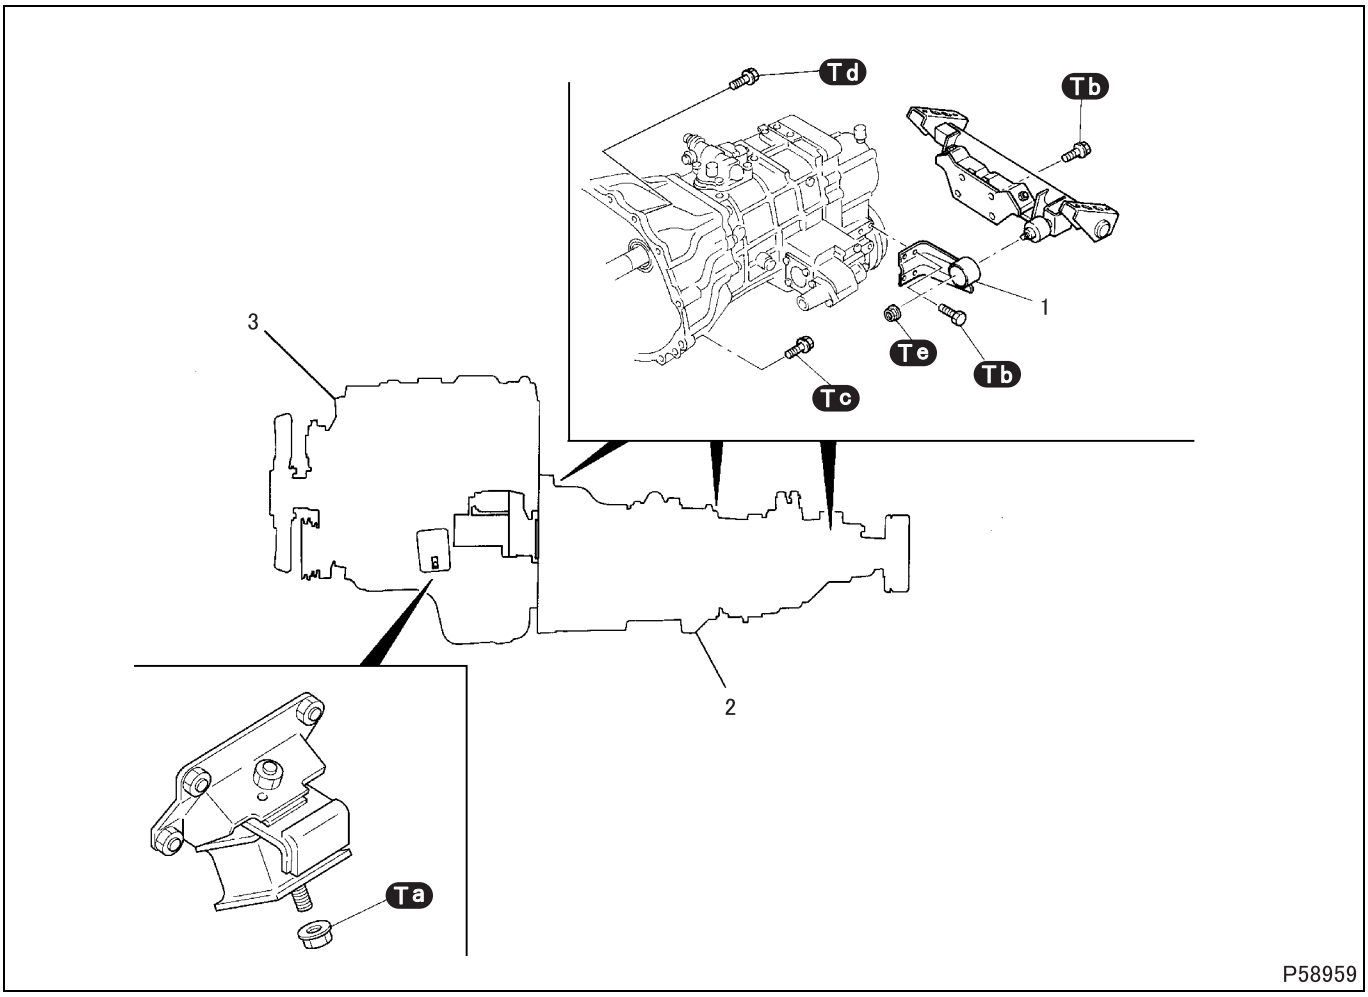
CAUTION ⚠

- **When lifting the engine and transmission assembly, do not incline it larger than 40°.**

M E M O

ENGINE REMOVAL AND INSTALLATION <TILT CAB>

<FG>



● **Removal sequence**

1 Roll stopper
2 Transmission
3 Engine

● **Installation sequence**

Follow the removal sequence in reverse.

CAUTION ⚠

- **Be careful not let the engine hit the cab or the rear body when hoisting the engine.**
- **Only use hoisting equipment appropriate for the engine weight (approximately 500 kg {110 lb}).**

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Nut (front mounting installation)	69 to 88 {51 to 65, 7 to 9}	–

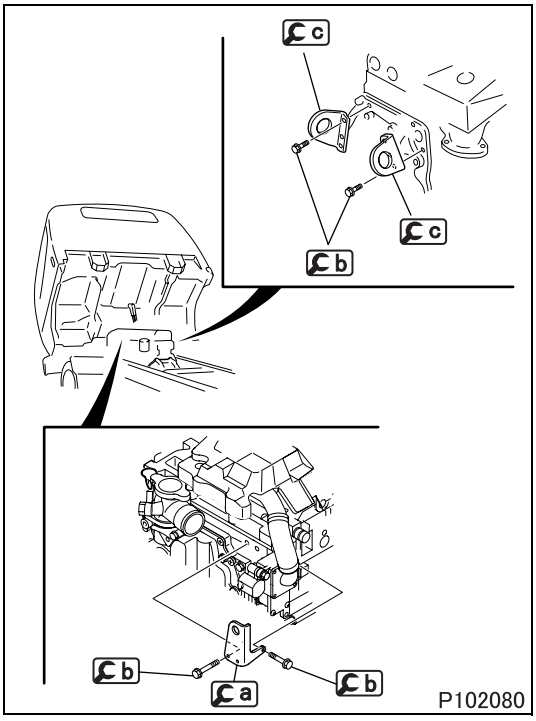
a	Engine front hanger  P57188	MH063636	Removal and installation of engine
b	Flange bolt  P29984	MF140429 MF140433 MF140421	Installation of engine front hanger
c	Engine rear hanger  P58957	MH063711	Removal and installation of engine

◆Work before removal◆

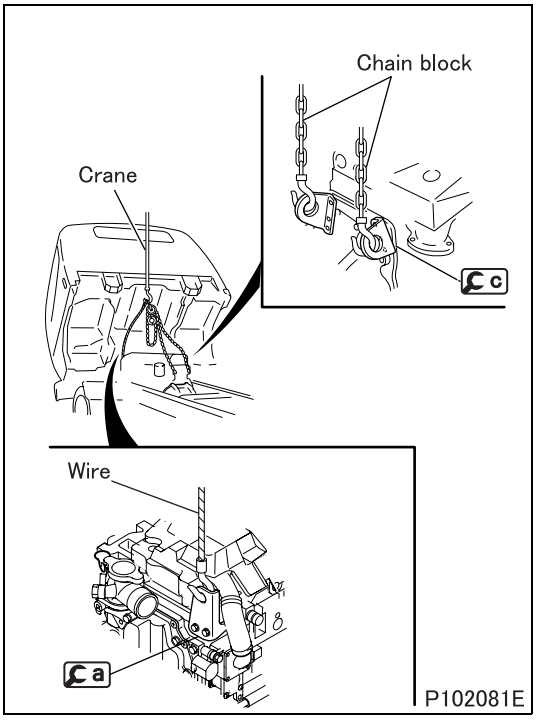


P102080

■ **Preparing for engine removal: Installation of engine front hanger and flange bolt**

- Install a, b and c on the engine.

◆Removal procedure◆

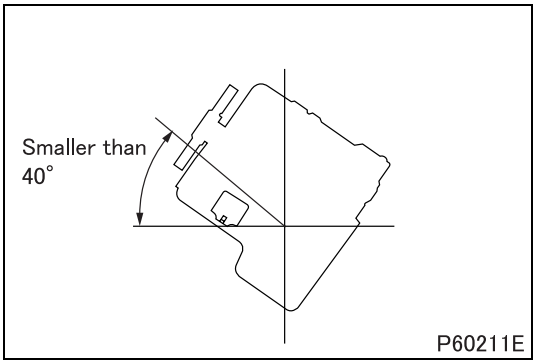


■ **Removal: Engine**

- Hook the wire rope on a and hitch the chain block to a. Pull all the slack out of the slings.

CAUTION ⚠

- **The slings must be strong enough to hang the engine (weighing approximately 500 kg {1100 lb}).**
- **Be sure to keep the slings away from the exhaust gas recirculation pipes.**



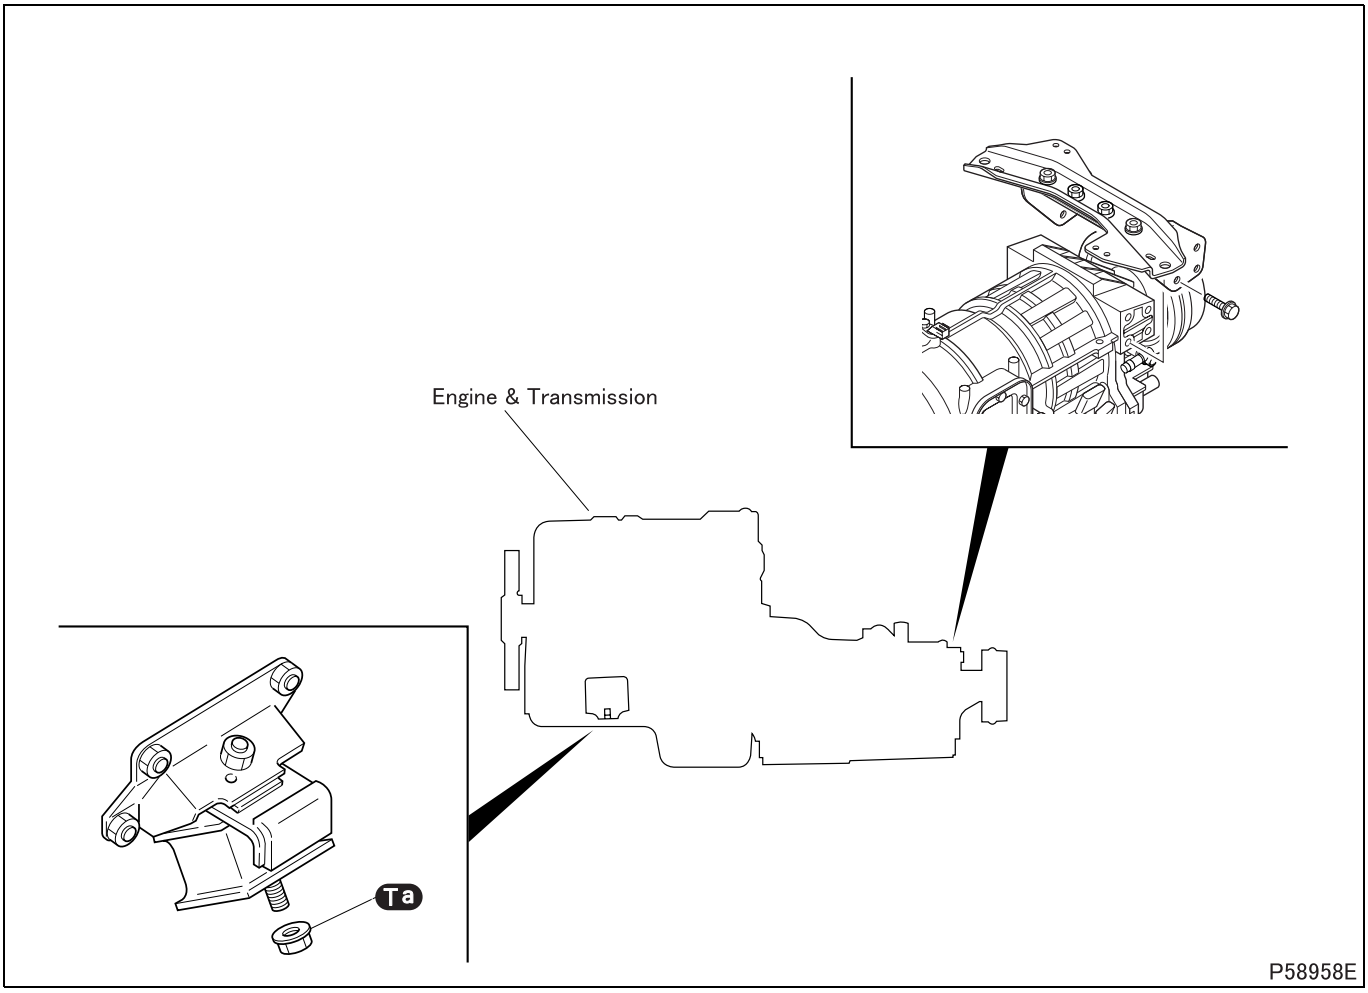
- Make sure that all harnesses and pies are disconnected.
- Hoist the engine slowly, taking care not to let the engine hit the frame and the cab.

CAUTION ⚠

- **When lifting the engine and transmission assembly, do not incline it larger than 40°.**

- Once the bottom of the engine is out of the frame, turn the engine by 90 degrees and remove it out of the vehicle.

M E M O



CAUTION ⚠

- **Before removing each part, support the engine and transmission assembly in place using an engine lifter and a transmission jack.**

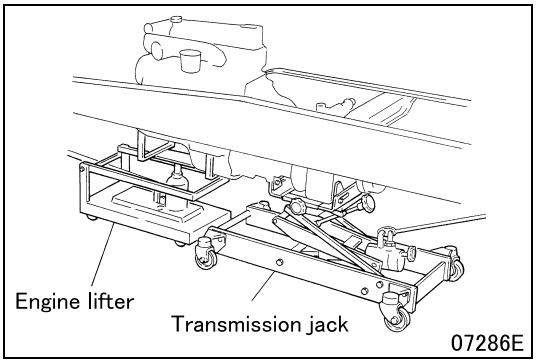
● Installation sequence

Follow the removal sequence in reverse.

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

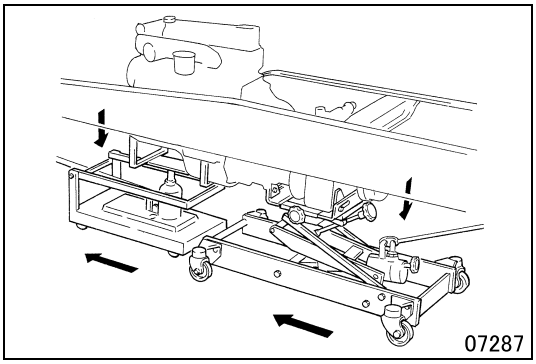
Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Nut (front mounting installation)	69 to 88 {51 to 65, 7 to 9}	–

◆Removal procedure◆



■ **Removal: Engine and transmission assembly**

- Support the engine and transmission assembly with an engine lifter and a transmission jack.
- Check that all wiring and piping have been disconnected from the engine.



- Lower the engine and transmission assembly to the greatest extent possible while keeping it horizontally balanced.
- Jack up the vehicle and slide the engine and transmission assembly forward.

ROCKER COVER

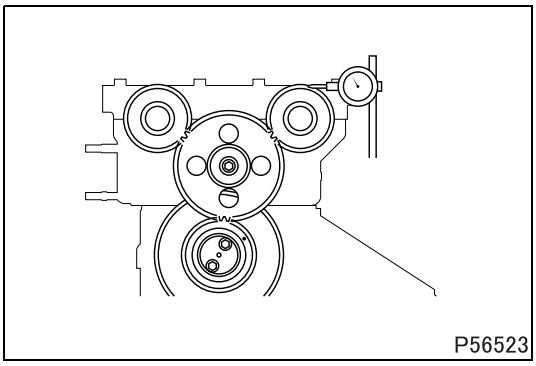
Special tools

Mark	Tool name and shape	Part No.	Application
a	Rocker shaft set tool  P103819	MH063861	Installation of rocker shaft

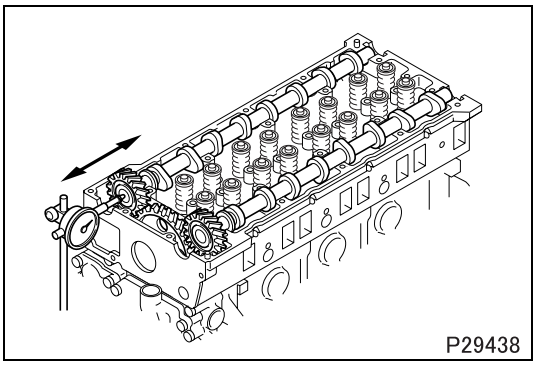
◆Work before removal◆



P56523

■ **Inspection: Backlash between gears**

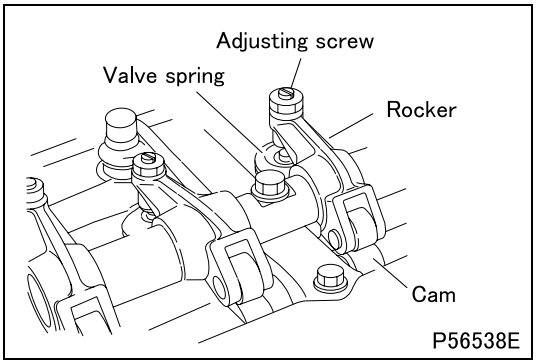
- Measure the backlash at three or more locations for each pair of gears.
- If any of the measurements exceeds the specified limit, replace the defective part(s).



P29438

■ **Inspection: Camshaft end play**

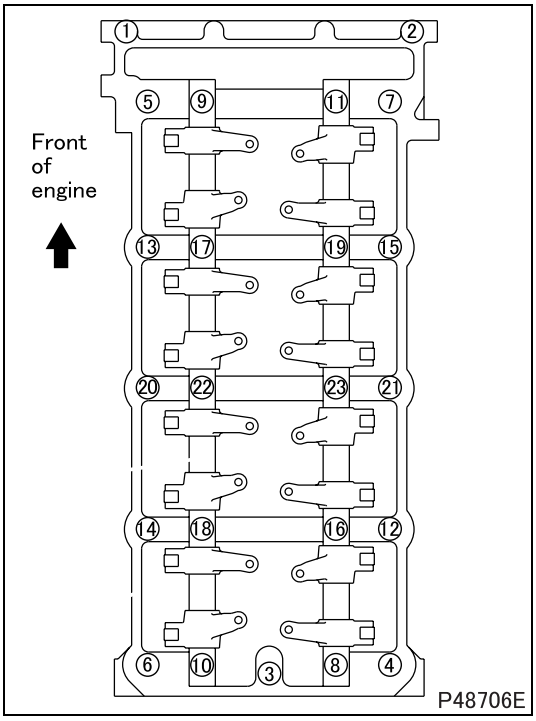
- If the end play exceeds the specified limit, replace the defective part(s).



■ **Releasing valve spring tension**

- Before removing the bolts in the next process, loosen the adjusting screws on the rockers whose valve springs are compressed (due to the cams lifting these rockers). This operation is necessary to release the tension in the valve springs, thus preventing other parts from undue forces when the bolts are removed.

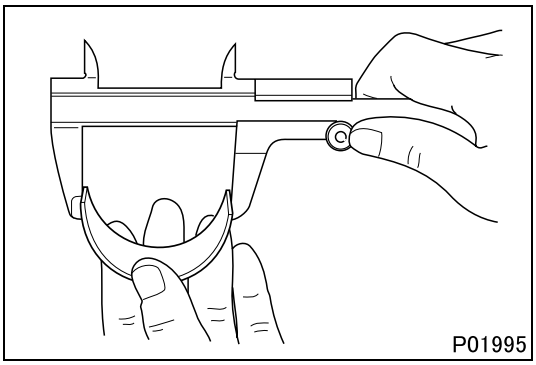
◆Removal procedure◆



■ **Removal: Rocker shafts and camshaft frame**

- Loosen the rocker shaft installation bolts (10 places) and the camshaft frame installation bolts (13 places) in several passes in the order indicated in the illustration (1 to 23). Then, remove the rocker shafts and the camshaft frame.

◆Inspection procedure◆

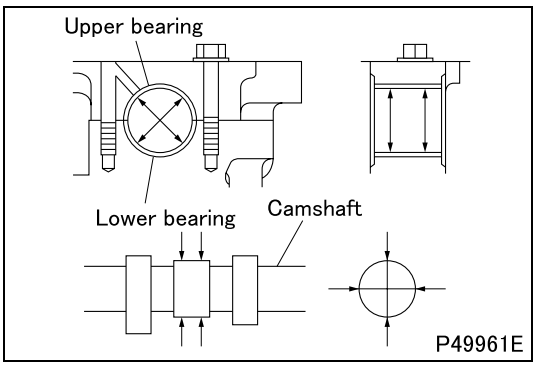


■ **Inspection: Camshaft bearing free span**

CAUTION ⚠

- **Do not force the bearings open.**

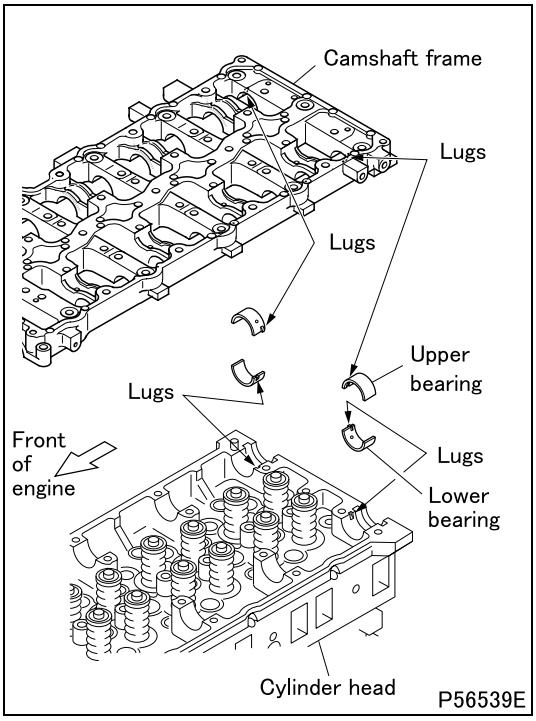
- If the measurement is less than the limit, replace upper and lower bearings as a set.



■ **Inspection: Camshaft bearing-to-camshaft clearance**

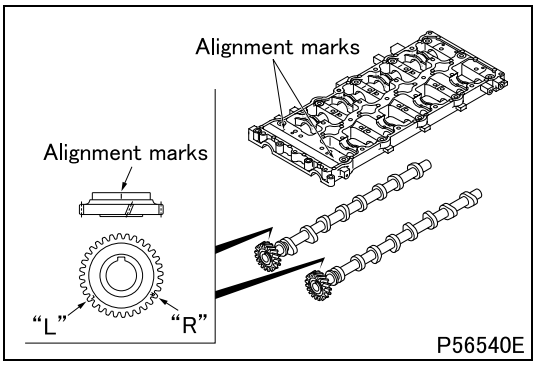
- If the measurement is not within the standard value range, replace the defective part(s).

◆Installation procedure◆

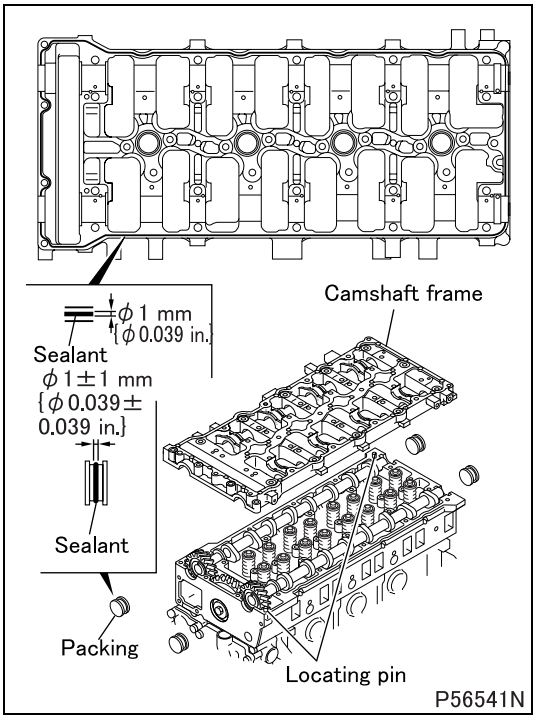


■ **Installation: Camshaft**

- Install the upper camshaft bearing on the camshaft frame and the lower camshaft bearing on the cylinder head by fitting their lugs into the notches in the camshaft frame and cylinder head.



- Place the No. 1 cylinder piston at the top dead center on the compression stroke.
- Align the mating marks on the camshaft gears with those on the camshaft frame when installing the camshafts.
- Each camshaft gear also has mating mark "L" or "R" for alignment with the head idler gear. This mark may not be exactly aligned with that on the head idler gear, as the position that the head idler gear takes when it is installed may make it impossible to align them. Such a misalignment does not lead to any undesirable consequences.

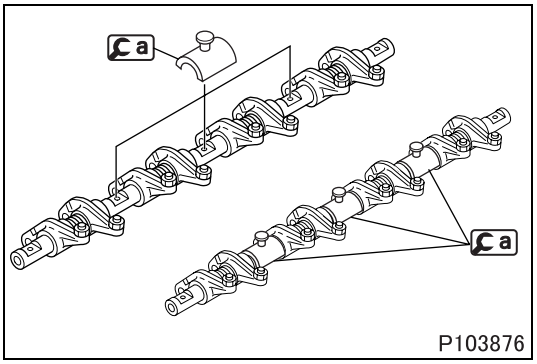


■ **Installation: Rocker shafts and camshaft frame**

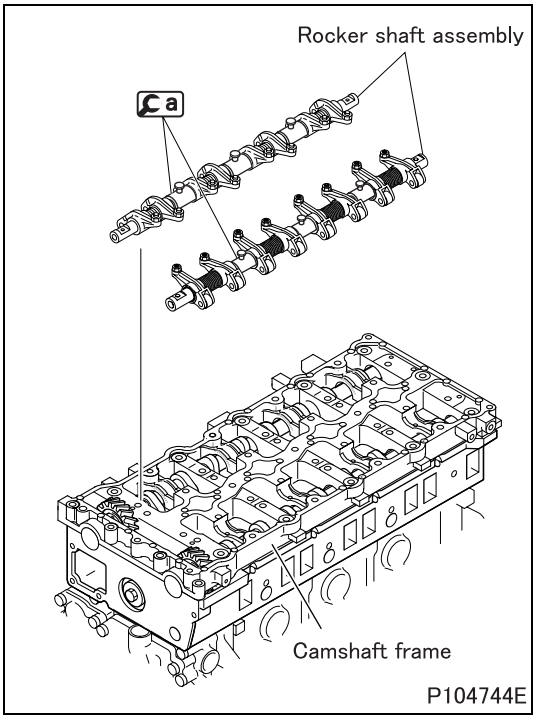
- Clean the sealant application surfaces on each part.
- Apply sealant to the entire periphery of the four packings evenly and without any breaks.
- Apply sealant to the camshaft frame evenly and without any breaks.
- Mount the camshaft frame and packing on the cylinder head within three minutes of applying the sealant, being careful not to dislodge the sealant in the process.

CAUTION ⚠

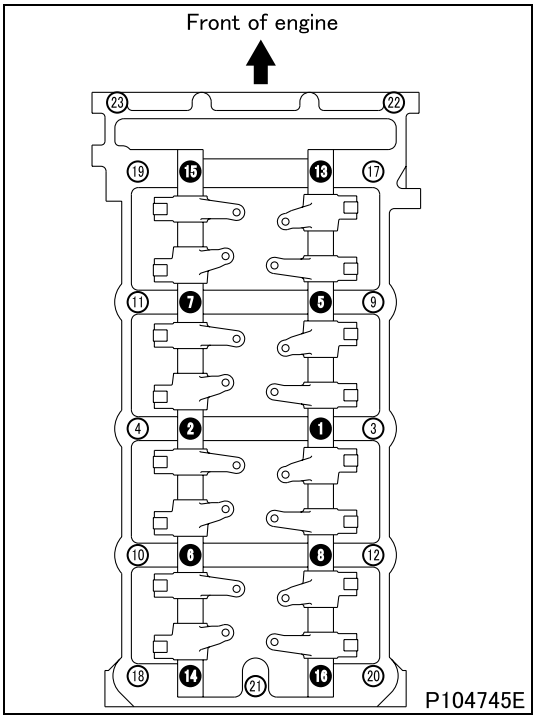
- **Do not run the engine within one hour of installing the rocker shafts and camshaft frame.**



- Install a on the rocker shafts to prevent the rocker arms from moving away from each other.



- Set the rocker shafts to the camshaft frame and then remove a.

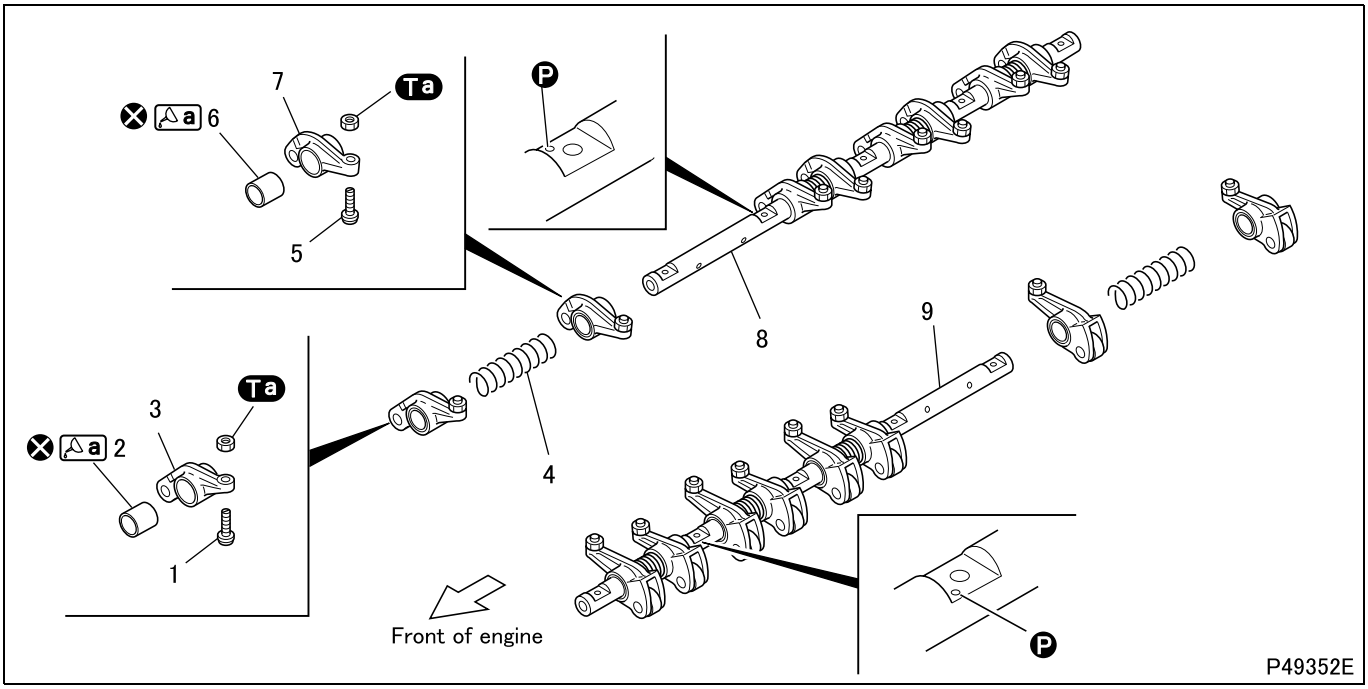


- Tighten the bolts (1 to 23) to the specified torque in the order indicated in the illustration.
  White numbered bolts are to tighten both the camshaft frame and rocker shaft.

CAUTION ⚠

- **Reapply sealant to the areas specified above if any of the bolts is loosened or removed after the rocker shafts and camshaft frame are installed.**

Rocker Shafts and Rockers



● **Disassembly sequence**

1 Adjusting screw
2 Rocker bushing
3 Short rocker
4 Rocker shaft spring
5 Adjusting screw
6 Rocker bushing
7 Long rocker
8 Exhaust rocker shaft
9 Intake rocker shaft

Ⓟ: Hole for camshaft frame locating pin
⊗: Non-reusable parts

● **Assembly sequence**

Follow the disassembly sequence in reverse.

CAUTION ⚠

- **The short rockers and long rockers must be installed alternately. Be aware that the order of installation for the intake rockers is different from the order of installation for the exhaust rockers.**

Service standards (Unit: mm {in.})

Location	Maintenance item	Standard value	Limit	Remedy
2, 6, 8, 9	Rocker bushing-to-rocker shaft clearance	0.01 to 0.08 {0.00039 to 0.0031}	0.12 {0.0047}	Replace
3, 7	Rocker (roller) radial play	0.038 to 0.100 {0.0015 to 0.0039}	–	Replace

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Lock nut (adjusting screw stopping)	21 {15.5, 2.1}	–

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity

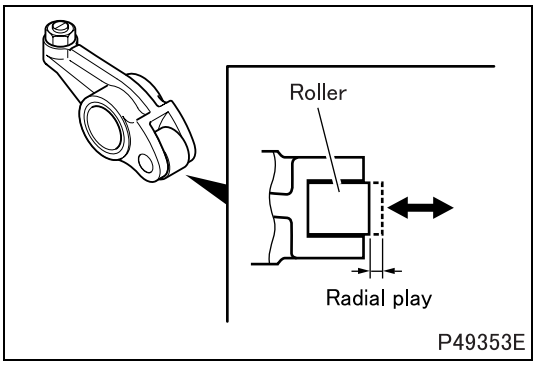
Special tools (Unit: mm {in.})

Mark	Tool name and shape	Part No.	Application
Ca	Rocker bushing puller A: φ22 {φ0.87} B: φ24.5 {φ0.96}  P29932	MH062536	Removal and installation of rocker bushing

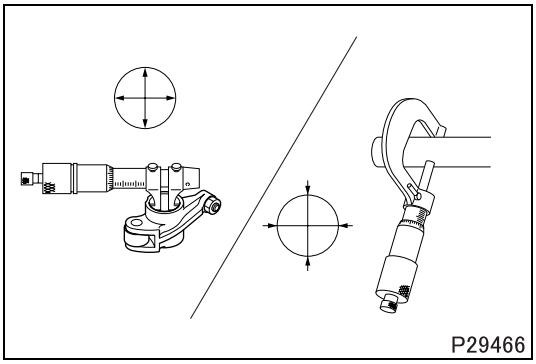
◆Inspection procedure◆



P49353E

■ Inspection: Rocker (roller) radial clearance

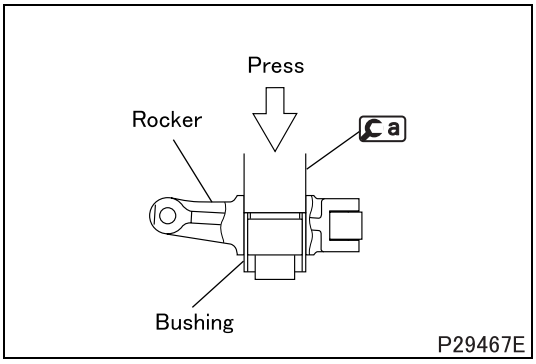
- Replace the rocker if the radial play measurement is not within the standard value range.



P29466

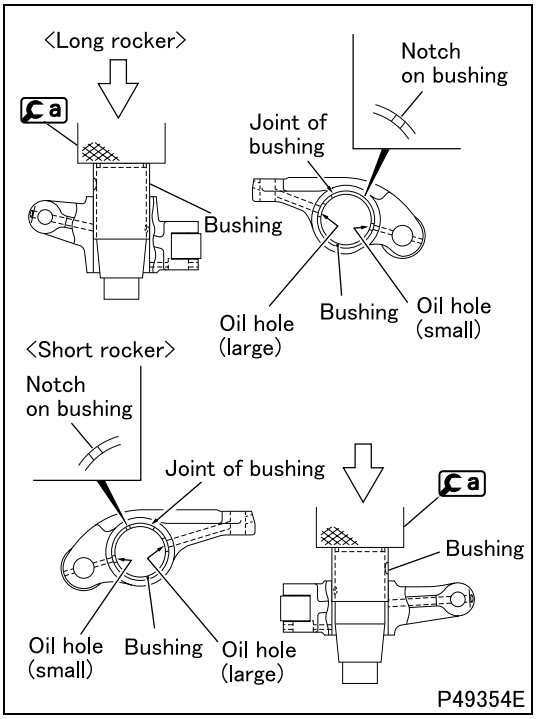
■ Inspection: Rocker bushing-to-rocker shaft clearance

- Replace the bushing if the measurement exceeds the specified limit.



P29467E

Replacement of rocker bushing
[Removal]

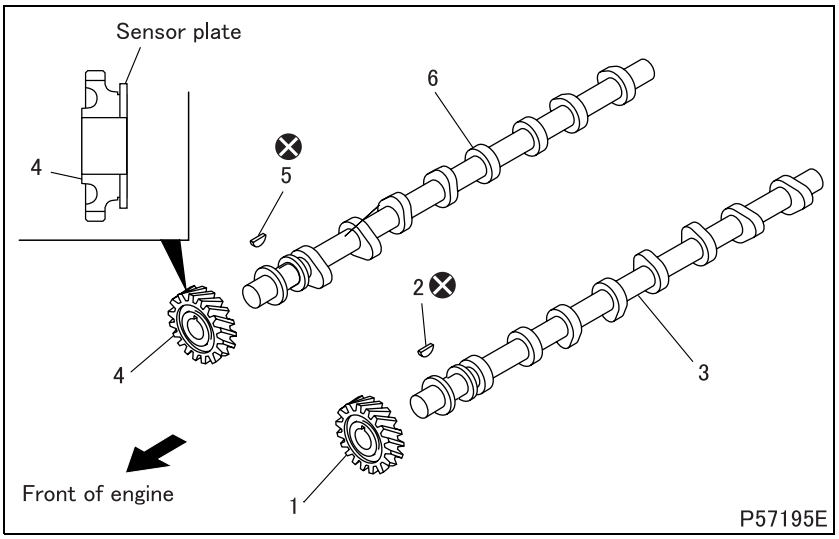


[Installation]

- Press-fit each rocker bushing in the rocker with its ends facing in the illustrated directions.

M E M O

Camshafts



● **Disassembly sequence**

1 Intake camshaft gear
2 Key
3 Intake camshaft
4 Exhaust camshaft gear
5 Key
6 Exhaust camshaft

⊗: Non-reusable parts

● **Assembly sequence**

Follow the disassembly sequence in reverse.

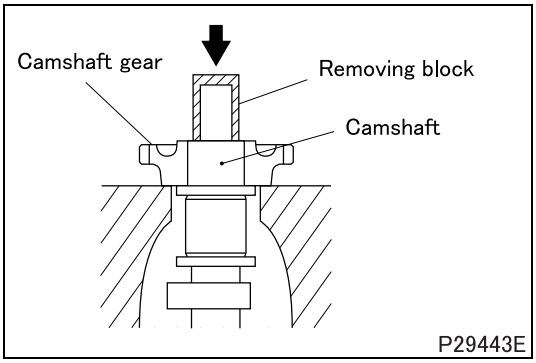
CAUTION ⚠

- **The exhaust camshaft gear has the sensor plate. Do not mistake it for the intake camshaft gear. If the gears are incorrectly installed, engine malfunction will occur.**

Service standards (Unit: mm {in.})

Location	Maintenance item			Standard value	Limit	Remedy
1, 3, 4, 6	Camshaft gear-to-camshaft interference			0.007 to 0.041 {0.00028 to 0.0016}	–	Replace
3	Intake camshaft	Cam lift	Cams for long rockers	7.219 {0.284}	–	Replace
			Lobe height: 42.219 {1.66} Base circle diameter: 35 {1.38}			
			Cams for short rockers	9.281 {0.365}	–	
			Lobe height: 44.281 {1.74} Base circle diameter: 35 {1.38}			
		Bend		0.01 {0.00039}	0.03 {0.0012}	Replace
6	Exhaust camshaft	Cam lift	Cams for long rockers	7.111 {0.279}	–	Replace
			Lobe height: 42.279 {1.66} Base circle diameter: 35.168 {1.39}			
			Cams for short rockers	9.148 {0.36}	–	
			Lobe height: 44.359 {1.75} Base circle diameter: 35.211 {1.39}			
		Bend		0.01 {0.00039}	0.03 {0.0012}	Replace

◆Removal procedure◆



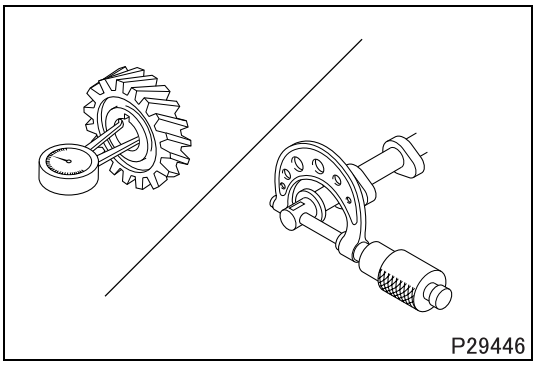
■ **Removal: Camshaft gears**

- Remove the camshaft gear by pushing on the camshaft using a press.

CAUTION ⚠

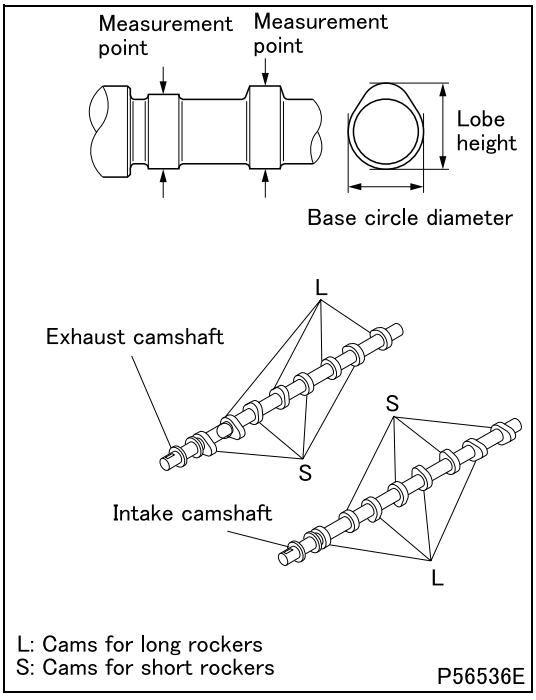
- **Do not use a hammer to remove the camshaft gear. Be sure to use a press for this purpose.**

◆Inspection procedure◆



■ **Inspection: Camshaft gear-to-camshaft interference**

- If the measurement is not within the standard value range, replace the defective part(s).



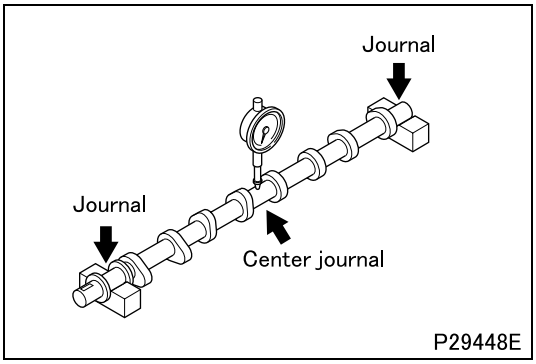
■ **Inspection: Camshaft**

(1) Cam lift

- Replace the camshaft if the difference between the cam lobe height and base circle diameter measurements is less than the specified limit.

CAUTION ⚠

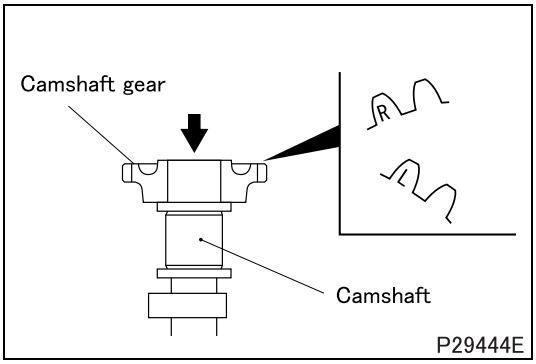
- **The cams for the long rockers (L) are different from the cams for the short rockers (S).**



(2) Bend

- Place supports under the journals at the ends of the camshaft and measure the bend of the camshaft at the central journal. The amount of camshaft bend is obtained by giving the camshaft one turn and dividing the dial gauge reading by two.
- If the measurement exceeds the specified limit, replace the camshaft.

◆Installation procedure◆



■ Installation: Camshaft gears

- Heat the camshaft gears to approximately 150°C {302°F} with a gas burner.

WARNING ⚠

- **You may burn yourself if you touch the heated gear.**

- Install the camshaft gear on the camshaft with a mating mark (“R” or “L”) facing in the illustrated direction.
- Press the gear until its end comes in close contact with the flange on the camshaft.

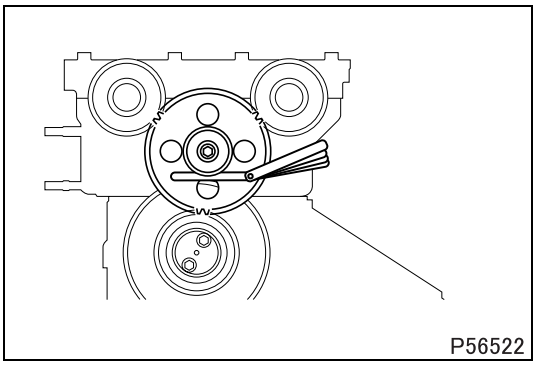
a	Idler gear bushing puller A: φ32 {φ1.26}, B: φ35 {φ1.38}  P22322	MH061779	Removal and installation of idler gear bushing

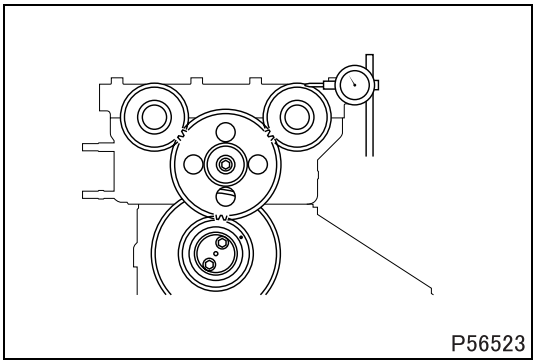
◆Inspection before removal◆



P56522

■ **Inspection: Head idler gear end play**

- If the measurement exceeds the specified limit, replace the defective part(s).

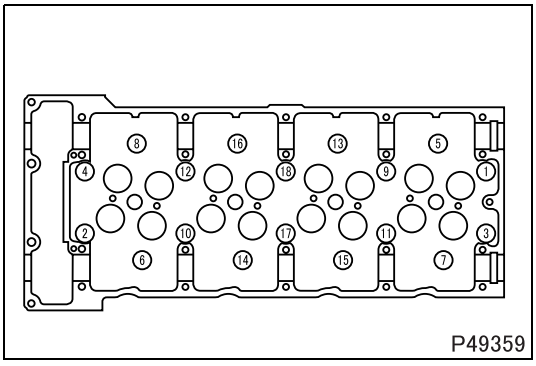


P56523

■ **Inspection: Backlash between gears**

- Measure the backlash at three or more locations for each pair of gears.
- If any of the measurements exceeds the specified limit, replace the defective part(s).

◆Removal procedure◆



P49359

■ **Removal: Cylinder head**

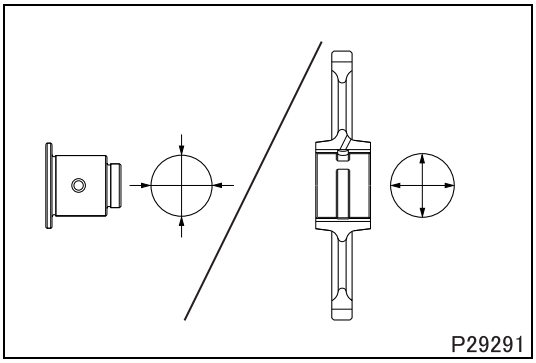
- Loosen the cylinder head bolts (1 to 18) in several passes in the order indicated in the illustration and remove the cylinder head.

■ **Removal: Cylinder head gasket**

CAUTION ⚠

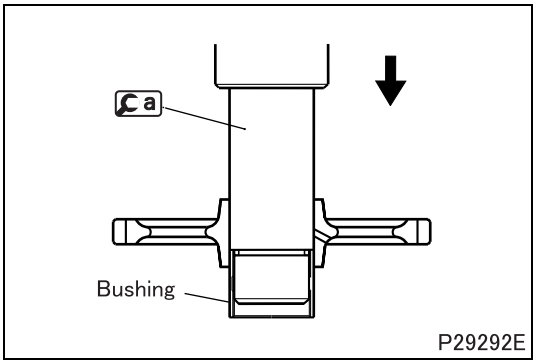
- **When removing the cylinder head gasket, be careful not to scratch the cylinder head, the upper crankcase and the front case.**

◆Inspection procedure◆

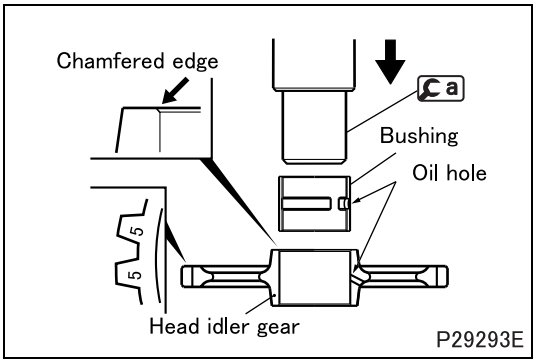


■ **Inspection: Head idler shaft-to-head idler gear bushing clearance**

- Replace the bushing if the measurement exceeds the specified limit.



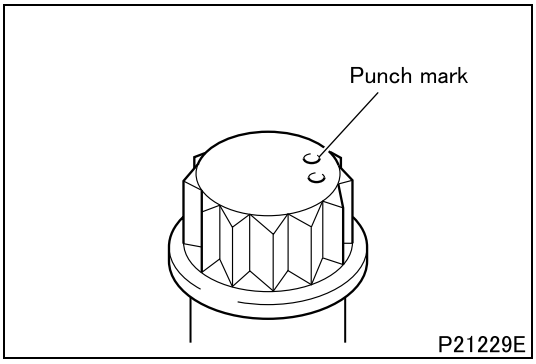
Replacement of head idler gear bushing
[Removal]



[Installation]

- Position the bushing on the head idler gear with their ends facing the illustrated directions and their oil holes on the same line.
- Using a, press the bushing into the head idler gear until it is flush with the lower edge of the chamfer on the head idler gear.
- Remeasure the clearance between the bushing and head idler shaft.
- Ream the bushing if the measurement is less than the standard value.

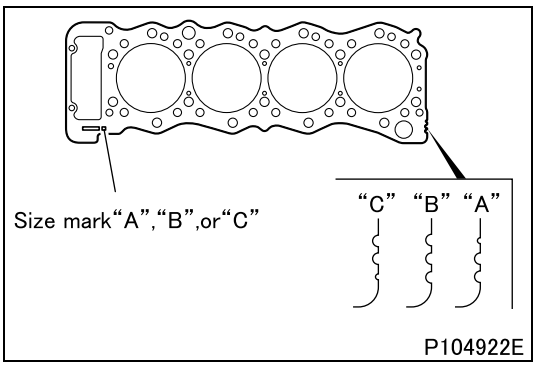
◆Installation procedure◆



■ **Installation: Cylinder head**

CAUTION ⚠

- **Before fitting the cylinder head bolts, check the punch marks on each bolt's head. Do not use the bolt if there are three punch marks.**
- **The punch marks indicate the number of times each bolt has been tightened using the torque-turn tightening method. Any bolt that already has three punch marks must be replaced.**



- The cylinder head gasket comes in three sizes. Choose the gasket appropriate for the cylinder head by the following procedure.
  - Measure the amount of piston projection for every cylinder. (See “**PISTONS, CONNECTING ROD AND CYLINDER LINERS**” section.)
  - Select a cylinder head gasket with the appropriate thickness for the average of the piston projection measurements from the table below.
  - If any of the piston projection measurements is more than 0.05 mm {0.0020 in.} larger than the average value, then use the gasket one class higher than that class (A→B, B→C).

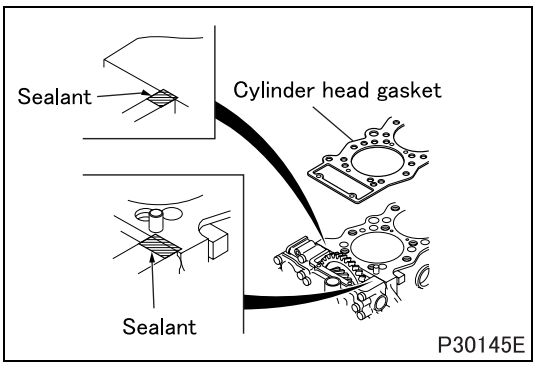
Unit: mm {in.}

Piston projection	Cylinder head gasket	
	Size	Thickness when tightened
–0.088 to –0.027 {–0.0035 to –0.0011}	“A”	0.75 ± 0.03 {0.030 ± 0.0012}
–0.027 to 0.033 {–0.0011 to 0.0013}	“B”	0.80 ± 0.03 {0.031 ± 0.0012}
0.033 to 0.094 {0.0013 to 0.0037}	“C”	0.85 ± 0.03 {0.033 ± 0.0012}

- The size class of the cylinder head gasket can be determined from the size mark or the shape of the notches cut on the gasket edge.

CAUTION ⚠

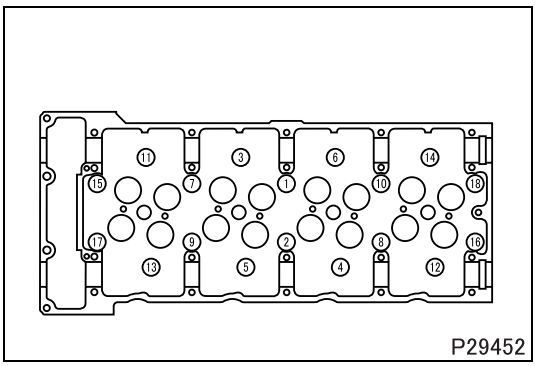
- **Replacement of the piston or connecting rod alters the piston projection. Always measure the amount of piston projection after either or both of them are replaced.**



- Clean the sealant application surfaces of each part.
- Apply sealant to the top surfaces of the joints between the upper crankcase and front case (at two places).
- Install the cylinder head and its gasket on the upper crankcase within three minutes of applying the sealant, being careful not to dislodge the sealant.

CAUTION ⚠

- **Do not run the engine within one hour of mounting the cylinderhead. If any cylinder head bolts are loosened or removed, be sure to reapply sealant to the surfaces specified above.**



- Tighten the cylinder head bolts (1 to 18) to a torque of 147 N·m {110 ft.lbs, 15 kgf·m} (wet) in the order indicated in the illustration. Then, tighten them further by 90° in the same order.
- After tightening each bolt, make a punch mark on the head of the bolt to indicate the number of times that it has been used.

CAUTION ⚠

- **Cylinder head bolts that have been tightened using the torque-turn method must never be additionally tightened after the final angular tightening.**

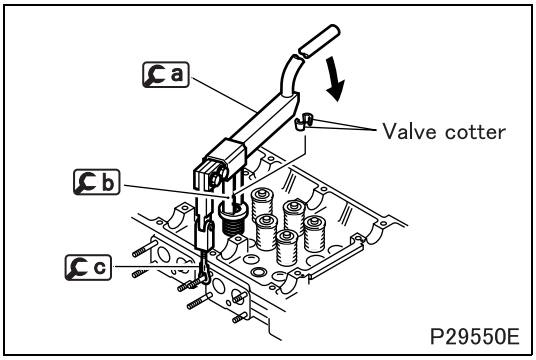
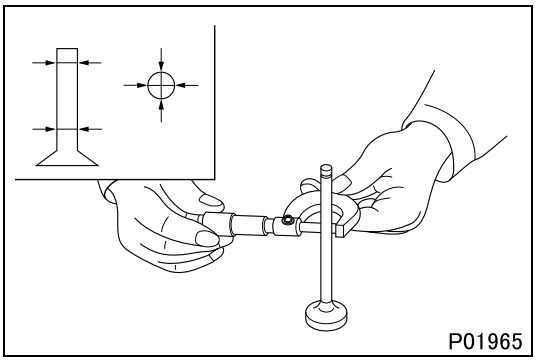
◆Removal procedure◆



■ **Removal: Valve cotters**

- Remove the valve cotters by evenly compressing the valve springs.

◆Inspection procedure◆

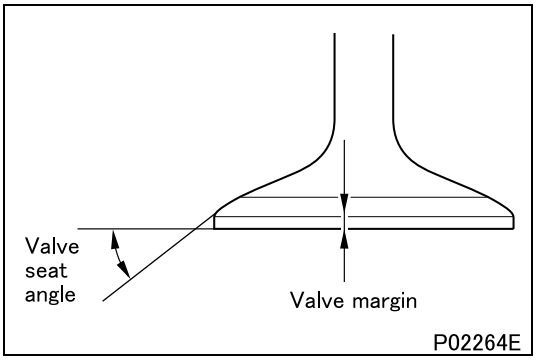


■ **Inspection: Intake valves and exhaust valves**

- If a valve is corrected or replaced with a new one as a result of the following inspection, make sure to lap the valve and valve seat.

(1) Inspection of valve stem

- Replace the valve if the stem's outside diameter is below the limit or is severely worn.

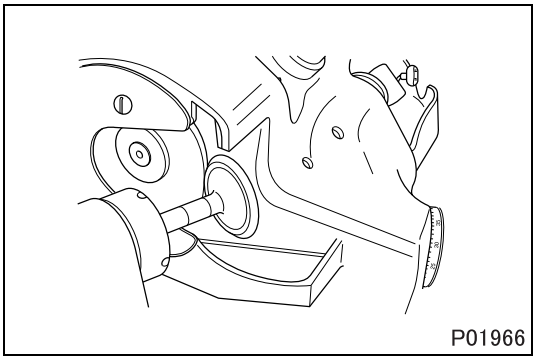


(2) Valve seat angle

- Reface or replace the valve if the measured valve is not within the standard value range.

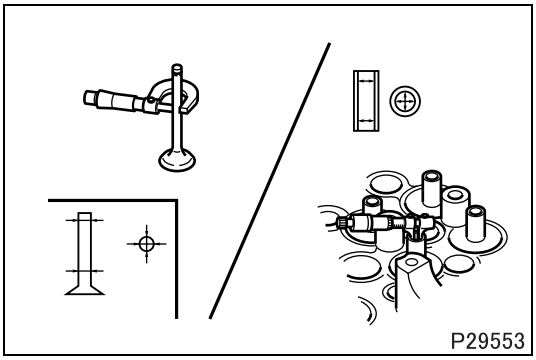
(3) Valve margin

- Reface or replace the valve if the measured valve exceeds the specified limit.



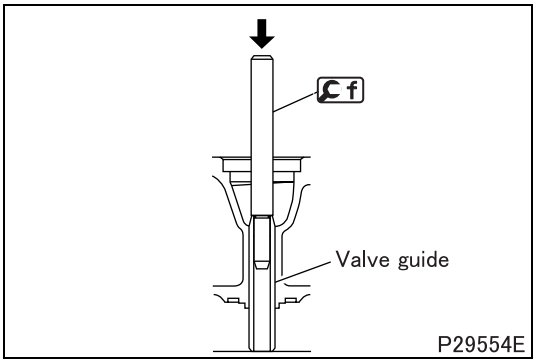
Refacing

- Limit grinding to a necessary minimum.
- If the valve margin is below the limit after grinding, replace the valve.
- After grinding, make sure to lap the valve and valve seat.

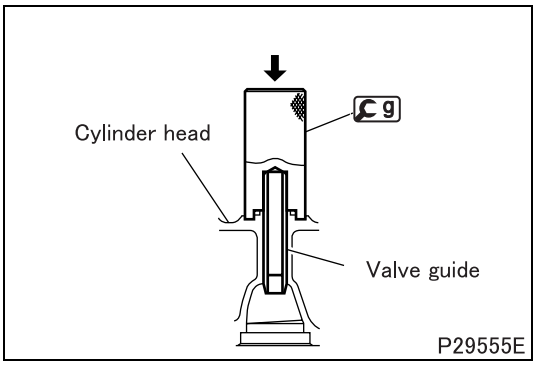


■ **Inspection: Valve-to-valve guide clearance**

- If the clearance exceeds the specified limit, replace the defective part(s).



Replacement of valve guides
[Removal]

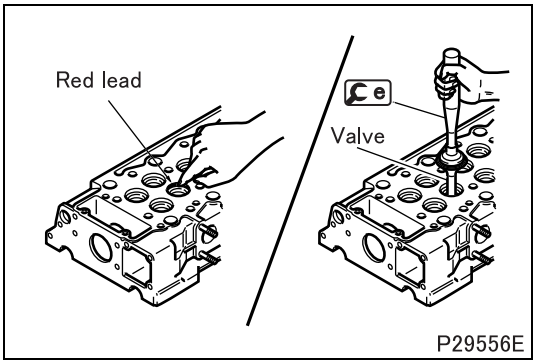


[Installation]

- Install the valve guide until g sits snugly on the cylinder head.

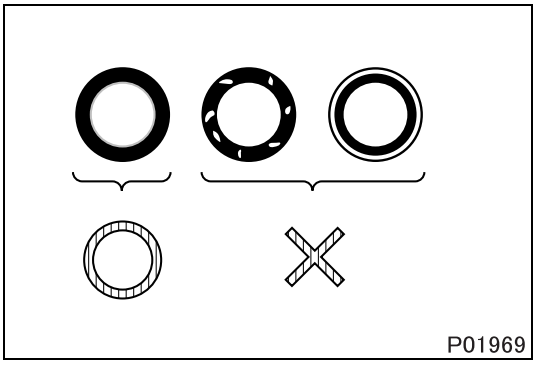
CAUTION ⚠

- **The valve guides must be pressed to the specified depth. Be sure to use g for this operation.**
- **Exhaust valve guides are longer than intake valve guides. Make sure to install the correct type of guide in each location.**



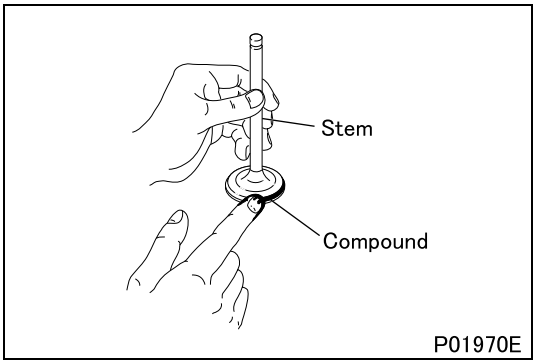
■ **Inspection: Contact between valve and valve seat**

- Before starting inspection, check that the valve and valve guide are intact.
- Apply an even coat of red lead to the valve contact surface of the valve seat.
- Strike the valve once against the valve seat. Do not rotate the valve during this operation.



- If the red lead deposited on the valve indicates a poor contact pattern, take either of the following corrective actions.

	Corrective action
Minor defect	Lapping
Serious defect	Reface or replace valve and valve seat

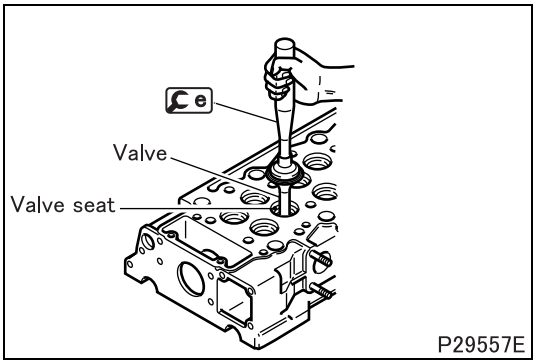


Lapping

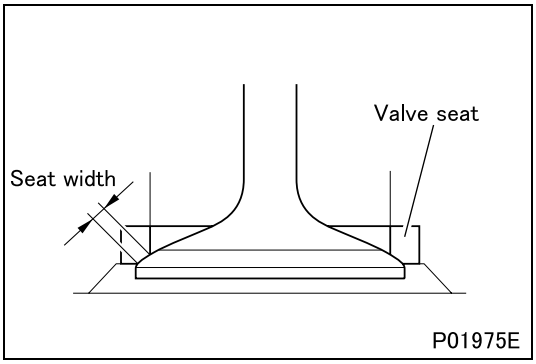
- Perform the valve lapping in the following procedure.
- Apply a thin coat of lapping compound to the seat contact surface of the valve.
- Start with an intermediate-grit compound (120 to 150 grit) and finish with a fine-grit compound (200 grit or more). Do not put any compound on the stem.
- Adding a small amount of engine oil to the lapping compound can facilitate even application.

CAUTION ⚠

- **Do not put any compound on the stem.**



- Strike the valve several times against the valve seat while rotating the valve a little at a time.
- Wash away the compound with diesel fuel.
- Apply engine oil to the valve contact surface of the valve seat and rub in the valve and seat well.
- Inspect the contact pattern of the valve and valve seat again.
- If the contact pattern is still defective, replace the valve seat.

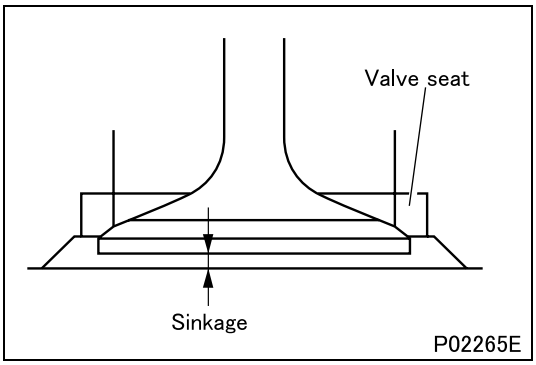


■ Inspection: Valve seats

- If a valve is corrected or replaced with a new one as a result of the following inspection, make sure to lap the valve and valve seat.

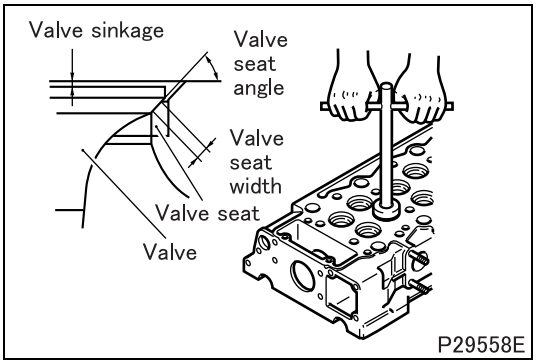
(1) Valve seat width

- If the measurement exceeds the limit, reface or replace the valve seat.



(2) Valve sinkage from cylinder head bottom surface

- Make sure that the valve and valve seat are pressed together tightly when measuring the sinkage.
- If the measurement exceeds the limit, replace the defective part(s).



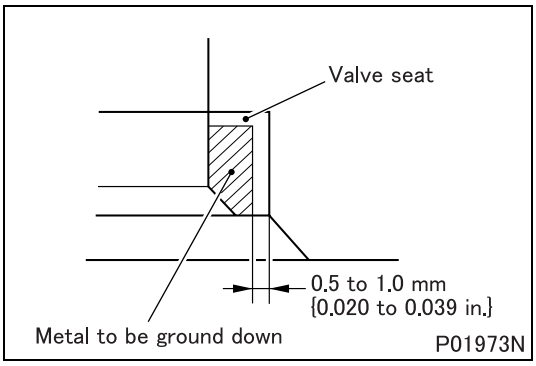
Refacing the valve seat

- Grind the valve seat using a valve seat cutter or valve seat grinder.
- Place a sandpaper of around #400 between the cutter and valve seat and grind the valve seat lightly.
- Use a 15° or 75° cutter to cut the valve seat to a width within the standard range. If the valve seat cannot be refaced to a width within the standard range, replace it.

CAUTION ⚠

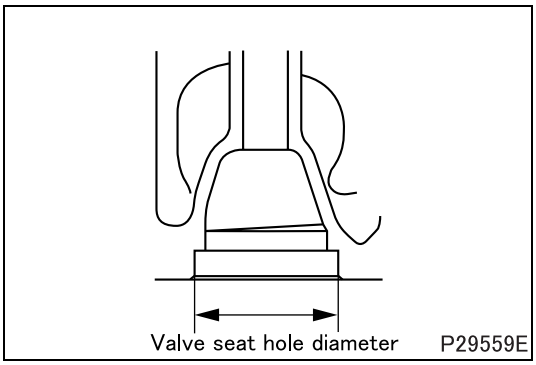
- **Make sure that the valve seat refacing does not cause the valve sinkage to exceed the specified limit.**

- After refacing, lap the valve and valve seat.



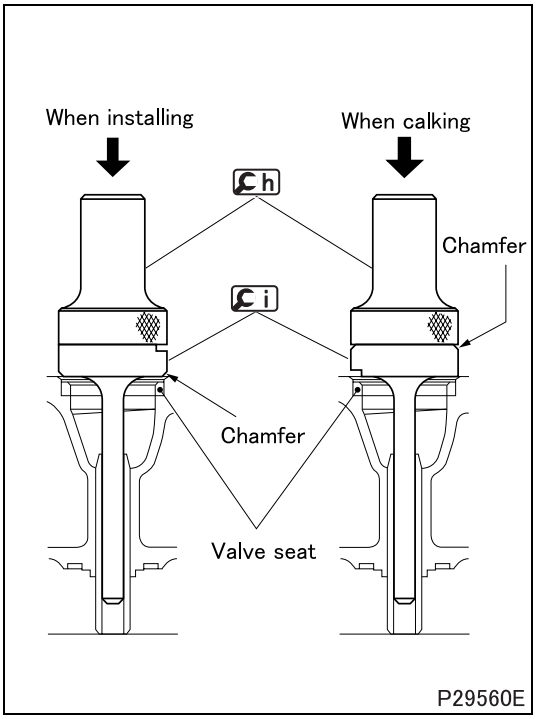
Replacement of valve seat
[Removal]

- The valve seats are installed by expansion fitting. To remove a valve seat, grind inside the metal stock to reduce the wall thickness, then remove the valve seat at room temperature.

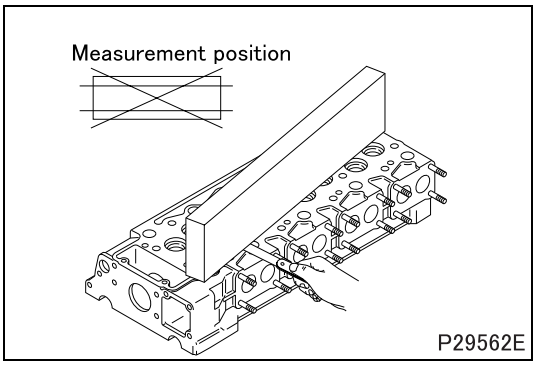


[Installation]

- Measure the diameter of the valve seat hole in the cylinder head.
- If the measurement deviates from the standard value, replace the cylinder head.



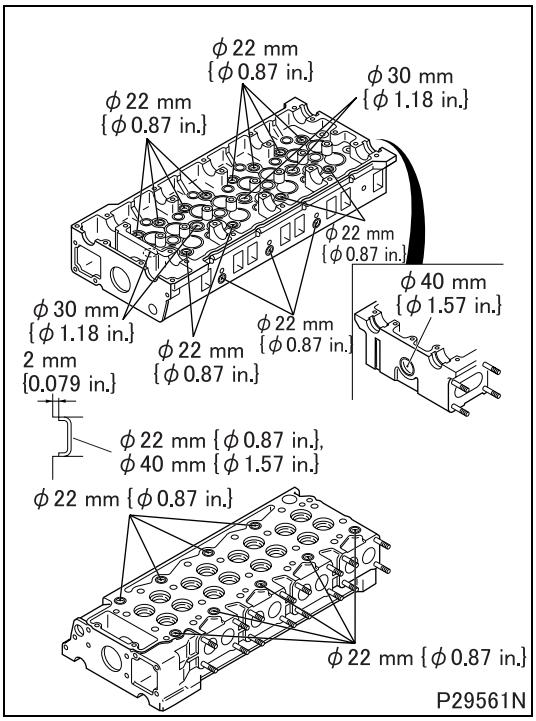
- Chill the valve seat thoroughly by immersing in it in liquid nitrogen.
- Install the valve seat in the cylinder head using h and i, with the chamfered edge of i toward the valve seat.
- Turn i over so that its chamfered edge is toward h, and calk the valve seat.
- Lap the valve seat and valve.



■ Inspection: Cylinder head bottom surface distortion

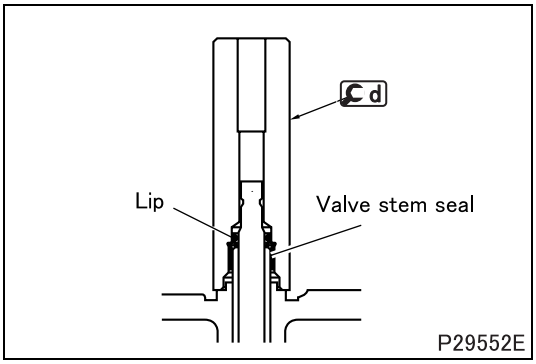
- If the distortion exceeds the limit, rectify it using a surface grinder.

◆Installation procedure◆



■Installation: Sealing caps

- Drive the sealing caps into the cylinder head to the specified depth.



■Installation: Valve stem seal

- Apply engine oil to the lip of the valve stem seal.
- Install the valve stem seal until Cd sits snugly on the cylinder head.
- After installing the valve stem seal, check that its spring is not deformed or damaged.

■Installation: Valve cotter

- To install the valve cotter, follow the removal procedure. (See **"■ Removal: Valve cotters"**.)

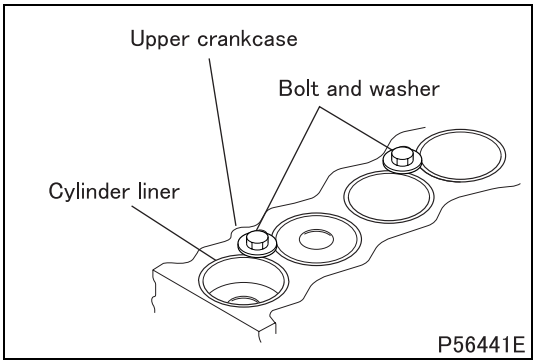
f	Bolt A: 40 {1.57}, B: M14 × 2		MF130625	
g	Washer		MH005012	

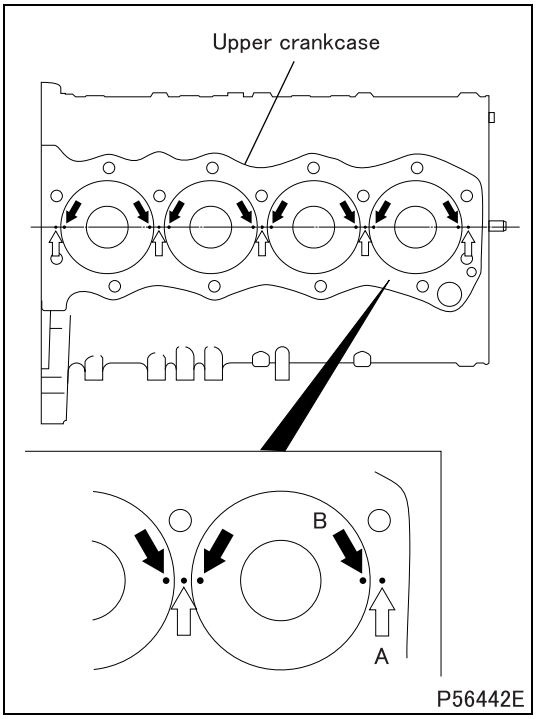
◆Inspection before removal◆



P56441E

■ Retaining cylinder liners

- The cylinder liners slips out of the upper crankcase easily when the upper crankcase is turned over or the crankshaft is rotated with pistons inside liners. To prevent this from happening, retain the flange of each cylinder liner in position with a bolt and washer.

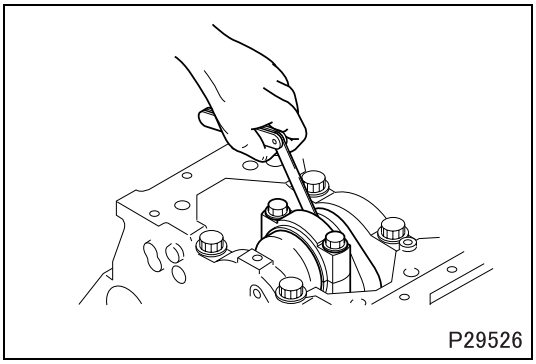


■ **Inspection: Piston projection from upper crankcase top surface**

CAUTION ⚠

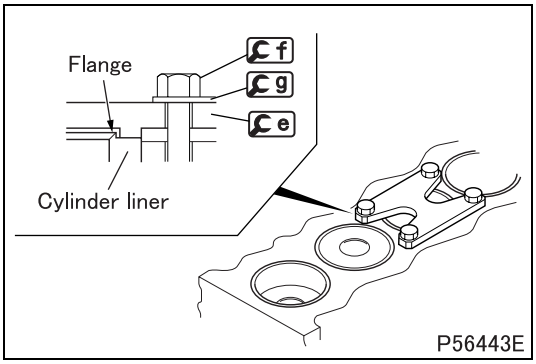
- **The amount of piston projection affects engine performance and must therefore be inspected without fail.**

- Set the piston at the top dead center.
- Mark reference points A (five points in total) on the top surface of the upper crankcase as shown in the illustration. Using each of the marks as a zero point, measure the amount of piston projection relative to the zero point (height of measurement point B – height of reference point A).
- Make the measurements at the two measurement points B for each cylinder (eight points in total) using the reference point A nearest to each measurement point, and calculate the average value of all the measurements.
- If the average value is out of the standard value range, check the clearances between all relevant parts.
- Select and use a cylinder head gasket that can accommodate the average piston projection (average value of the eight measurements). (See CYLINDER HEAD AND VALVE MECHANISM section.)



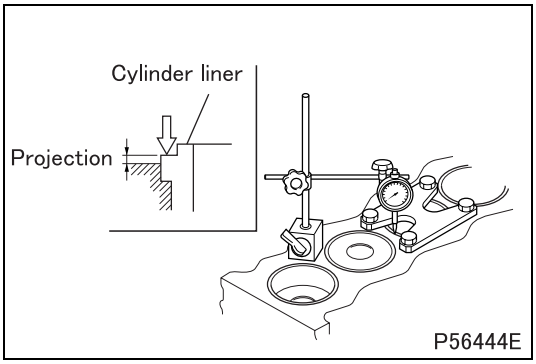
■ **Inspection: Connecting rod end play**

- Measure the end play for every connecting rod.
- If any measurement exceeds the specified limit, replace the defective part(s).



■ **Inspection: Difference in flange projection between neighboring cylinder liners**

- Install e on the upper crankcase so that it is not lying on top of any part of the flanges. Tighten f to a torque of 49 N·m {36 ft.lbs, 5 kgf·m}.

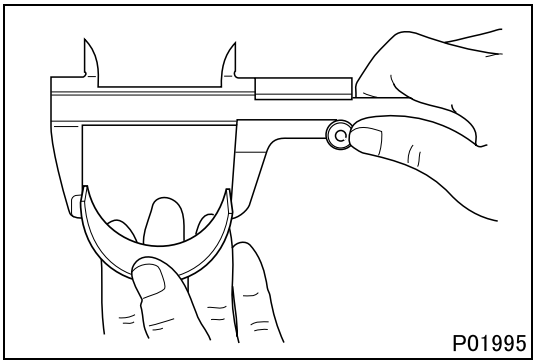


- Measure the amount of projection of the cylinder liner flange above the upper crankcase top surface.
- If the measurement is not within the standard value range, inspect the state of installation of the cylinder liner and then replace the defective part(s).
- If the difference in the amount of projection between neighboring cylinders is not within the standard value range, inspect the state of installation of the cylinder liner and then replace the defective parts.

CAUTION ⚠

- **Insufficient projection of the flange can lead to a reduced pressure around the bore of the cylinder head gasket, causing gas leakage.**

◆Inspection procedure◆

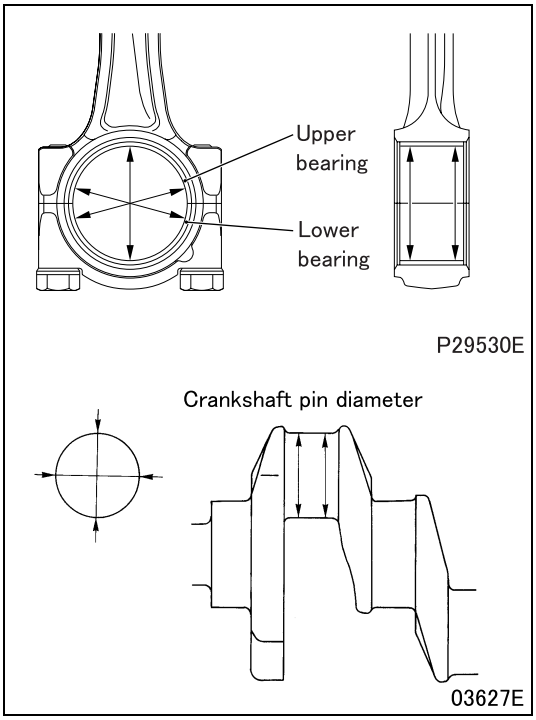


■ Inspection: Connecting rod bearing span when free

CAUTION ⚠

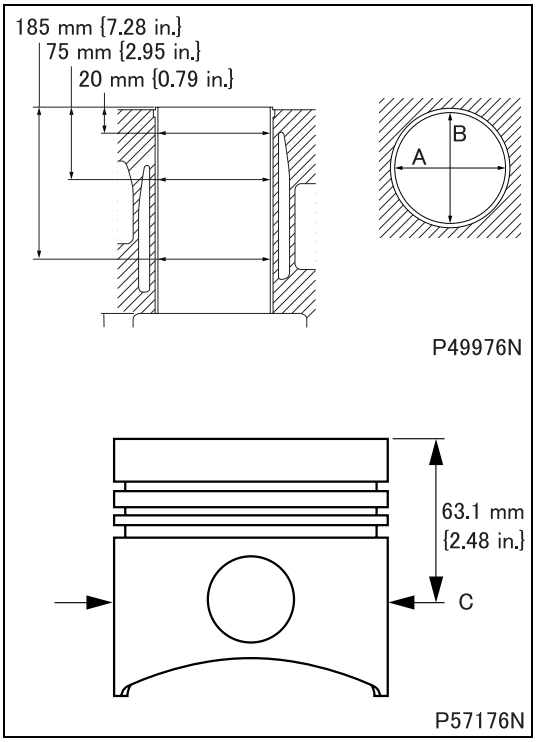
- **Do not attempt to manually expand the bearings.**

- If the span is less than the specified limit, replace both the upper and lower bearings.



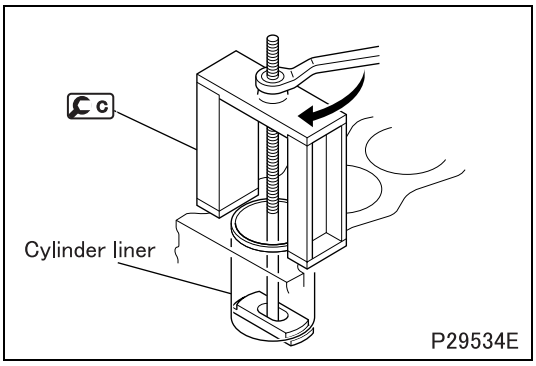
■ Inspection: Connecting rod bearing-to-crankshaft oil clearance

- Fit the lower bearing to the connecting rod cap and the upper bearing to the connecting rod, then tighten the bolts to a torque of 30 N·m {22 ft.lbs, 3.1 kgf·m}.
- Measure the inside diameter of the bearing and the diameter of the crankshaft pin.
- If the clearance exceeds the limit, replace the defective part(s).
- If a bearing has to be replaced with an undersized one, machine the crankshaft pin to the specified undersize diameter.

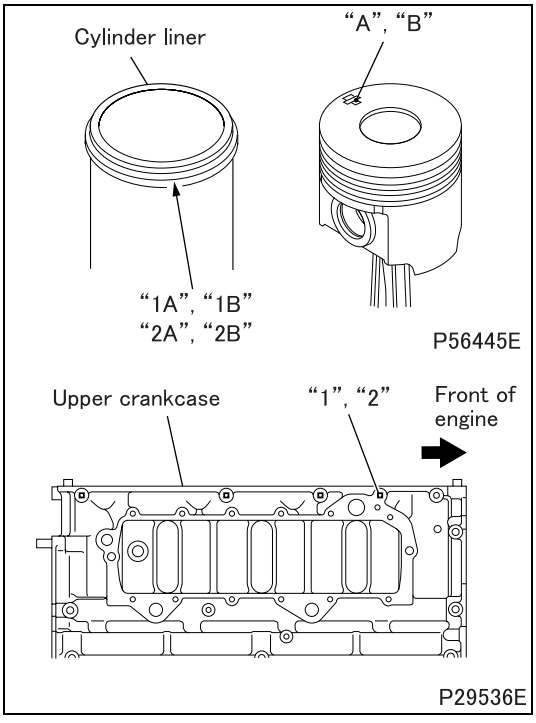


■ **Inspection: Piston-to-cylinder liner clearance**

- If the measurement is not within the standard value range, replace the defective part(s).
  - A: Cylinder bore measurement (in direction of crankshaft axis)
  - B: Cylinder bore measurement (in direction perpendicular to crankshaft axis)
  - C: Piston diameter measurement (in direction perpendicular to piston pin hole)



Replacement of cylinder liner
[Removal]



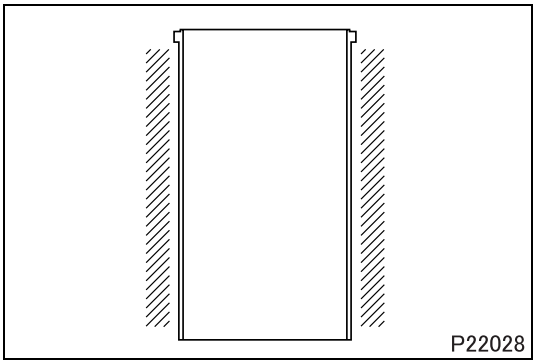
[Installation]

- When replacing cylinder liners, select the cylinder liners which correspond to the size marks on the upper crankcase and the piston.

Upper crankcase size mark	Cylinder liner size mark	Piston size mark
"1"	"1A"	"A"
	"1B"	
"2"	"2A"	
	"2B"	"B"

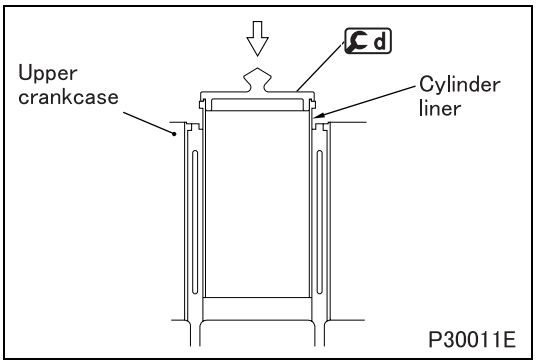
CAUTION ⚠

- **Make sure to use pistons and cylinder liners of the same size. Failure to do so may result in seizures it the engine.**



P22028

- Apply a thin coat of engine oil to the surfaces surrounding the cylinder liner of the upper crankcase (the shaded areas in the illustration).



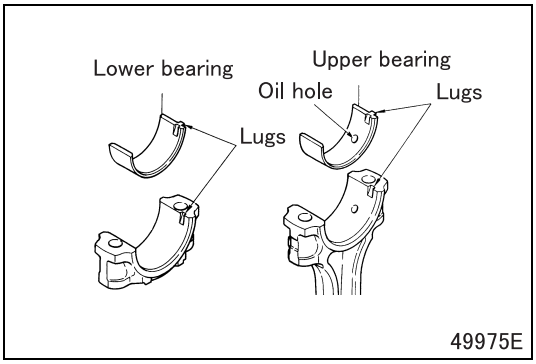
P30011E

- Insert the cylinder liner into the upper crankcase by pushing down on d by hand slowly and evenly.

CAUTION ⚠

- **Handle the cylinder liner extremely carefully, as its wall is relatively thin and can be easily damaged.**

◆Installation procedure◆

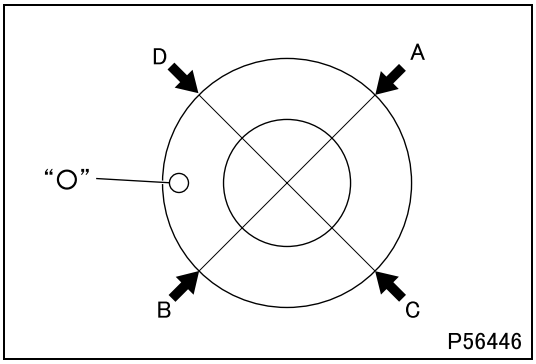


49975E

■ Installation: Connecting rod bearings

CAUTION ⚠

- **Do not reverse the positions of the lower bearing and the upper bearing (with oil hole) when installing, as this may cause seizure in the engine.**

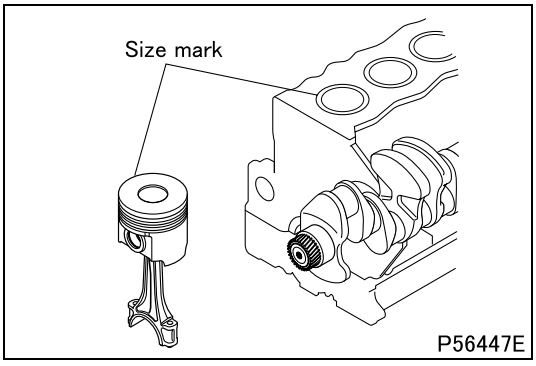


P56446

■ Installation: Piston and connecting rod assembly

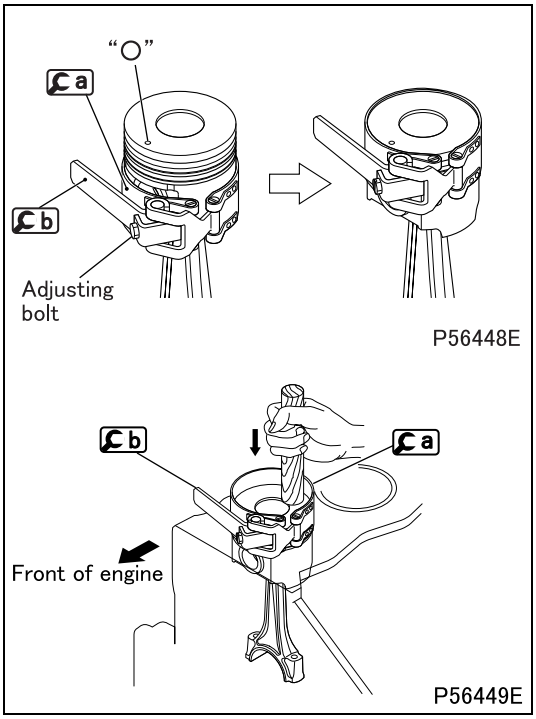
- Check that the piston ring end gaps are in their correct positions.
  A: 1st compression ring gap
  B: 2nd compression ring gap
  C: Oil ring gap
  D: Oil ring expander spring gap

"O": Front mark on piston

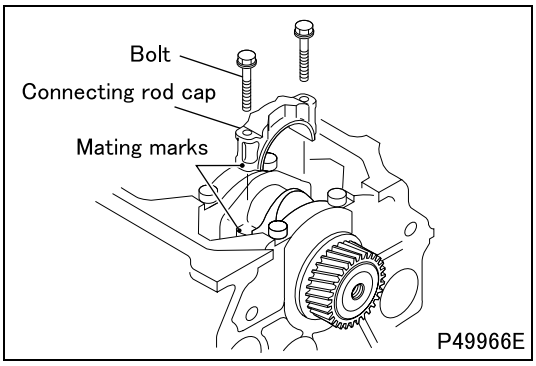


P56447E

- Check that the pistons and the cylinder liners have identical size marks ("A" or "B").
- Install the pistons in the cylinder liners. Be careful not to scratch the inner surface of the liner and the crankshaft pins.



- Face the front mark "○" of the piston toward the front of the engine.
- Using the adjusting bolt of b, adjust the inside diameter of a such that it matches the piston's skirt diameter.
- Remove the tools from the piston and apply engine oil to the following parts before reinstalling the tools around the piston rings:
  - Outside surface of piston
  - Inside surface of a
  - Inside surface of cylinder liner



- After installing the piston and connecting rod assembly, align the mating marks on the connecting rod and connecting rod cap and tighten the bolts alternately in the following manner.
  - First tighten the bolt to a torque of 29 N·m {21 ft.lbs, 3.0 kgf·m}.
  - Tighten the bolt further by turning it clockwise by 90° ± 5°.

7	Connecting rod	Bend	–	0.05 {0.0020}	Replace
		Twist	–	0.1 {0.0039}	

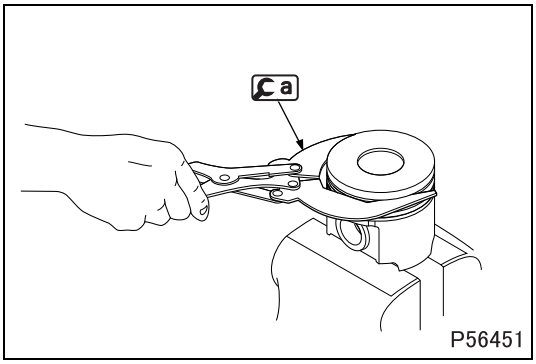
Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Piston pin outside surface	Engine oil	As required
	Connecting rod bushing outside surface		
	Connecting rod bushing fitting surface of connecting rod		

Special tools

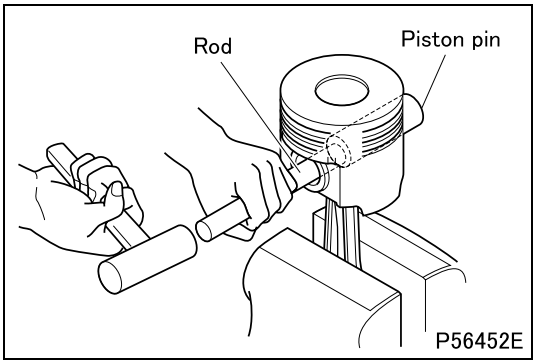
Mark	Tool name and shape	Part No.	Application
a	Piston ring tool  P56537	MH060014	Removal and installation of piston rings
b	Connecting rod bushing puller kit  P02015	MH062225	Removal and installation of connecting rod bushings

◆Removal procedure◆



P56451

■ **Removal: Piston ring**

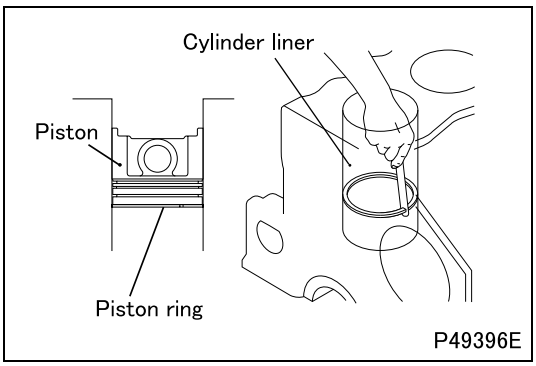


P56452E

■ **Removal: Piston pin**

- Remove the piston pin by striking it with a rod and hammer.
- If the piston pin is difficult to remove, first heat the piston in hot water or with a piston heater.

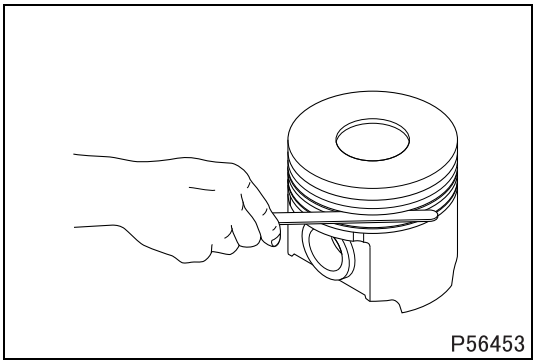
◆Inspection procedure◆



P49396E

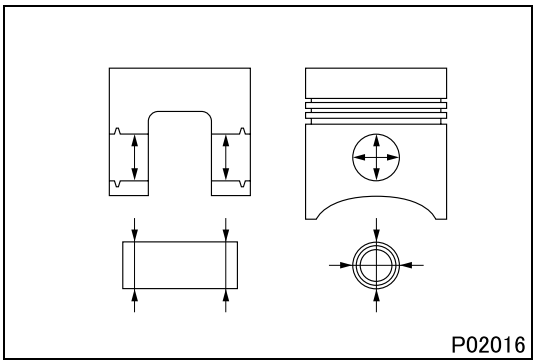
■ **Inspection: Piston ring end gap**

- Using the crown of a piston, push the piston ring horizontally into a cylinder in the cylinder liner until it reaches the lower part of the cylinder liner, where there is relatively small wear.
- Taking care not to move the piston ring, measure the end gap.
- If any of the rings has a gap exceeding the specified limit, replace all the piston rings as a set.



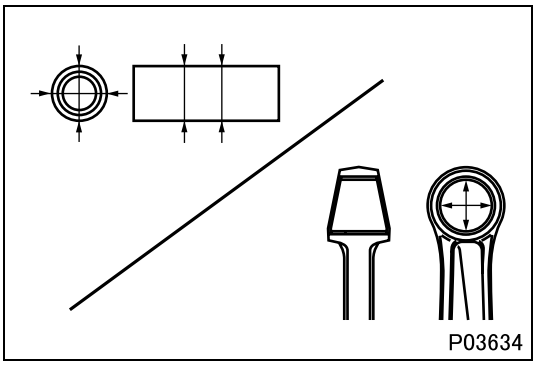
■ **Inspection: Piston ring side clearance in piston groove**

- Remove any carbon deposits from the ring groove in the piston.
- Measure the side clearance of each ring around the piston's entire periphery.
- If any of the measurements exceeds the specified limit, replace the defective part(s). If any of the piston rings is defective, replace all the rings on the piston as a set.



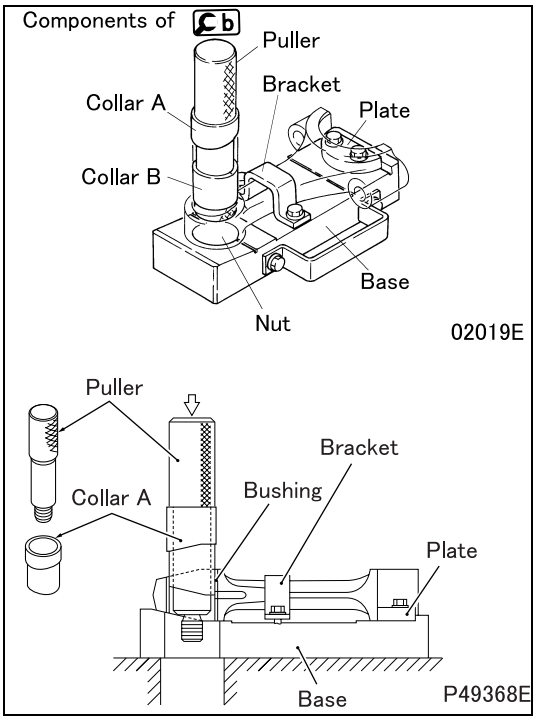
■ **Inspection: Piston pin-to-piston clearance**

- If the measurement exceeds the specified limit, replace the defective part(s).



■ **Inspection: Piston pin-to-connecting rod bushing clearance**

- If any of the measurements exceeds the specified limit, replace the bushing.

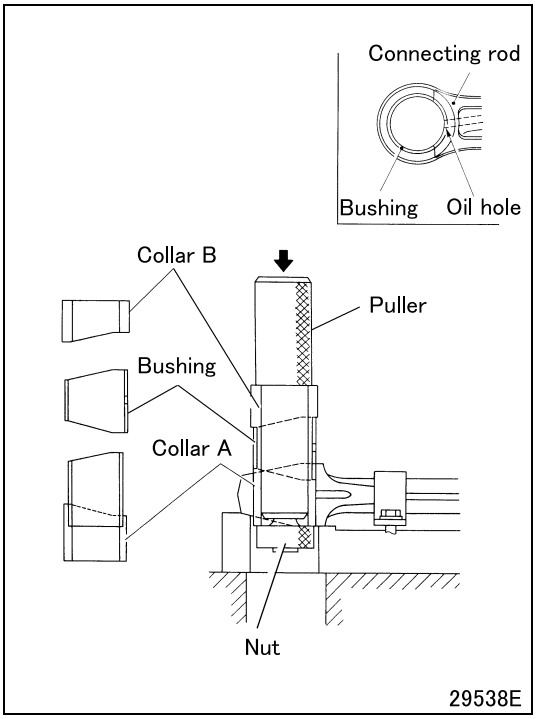


Replacement of connecting rod bushing

- Replace the connecting rod bushing using b.

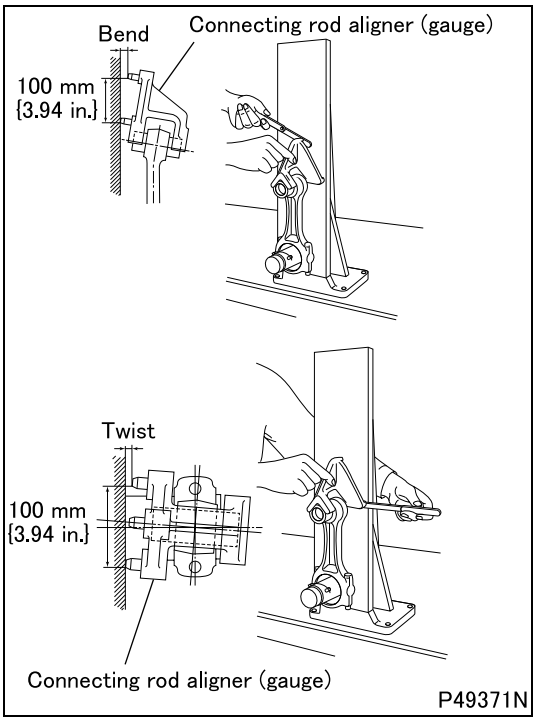
[Removal]

- Remove the upper bearing (if fitted) from the big end of the connecting rod.
- Mount the connecting rod on the base and lock it in position with the bracket and plate.
- Fit collar A over the puller with its ends facing in the illustrated directions. Then, slowly apply a pressure of approximately 49 kN {11020 lbs, 5000 kgf} to the puller with a press to force out the connecting rod bushing.



[Installation]

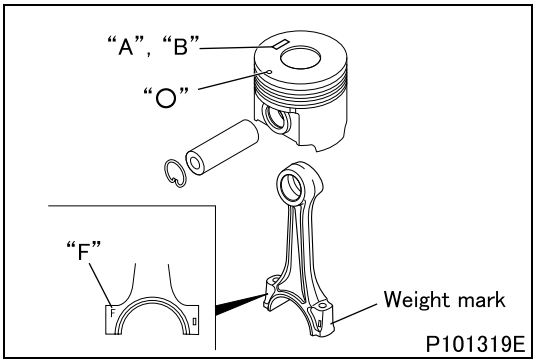
- Apply engine oil to the outside surface of the connecting rod bushing and the bushing fitting surface of the connecting rod.
- Fit collar B, the bushing, and collar A over the puller in the illustrated directions and lock this arrangement together with the nut.
- Align the oil holes in the connecting rod bushing and the connecting rod. Then, use a press to slowly apply a pressure of approximately 49 kN {11020 lbs, 5000 kgf} to the puller until the bushing is forced into place.
- After press-fitting the connecting rod bushing, measure the clearance between the piston pin and connecting rod bushing.
- If the measurement is less than the standard clearance range, ream the bushing.



■Inspection: Connecting rod bend and twist

- Mount the connecting rod on the connecting rod aligner. Also mount the connecting rod bearings, piston pin, and connecting rod cap to create the same conditions as are expected when the connecting rod is mounted on a crankshaft. Tighten the bolts of the connecting rod bearing cap to a torque of 30 N·m {22 ft.lbs, 3.1 kgf·m}.
- Measure the extent of bend and twist in the connecting rod.
- If either measurement exceeds the specified limit, replace the connecting rod.

◆Installation procedure◆

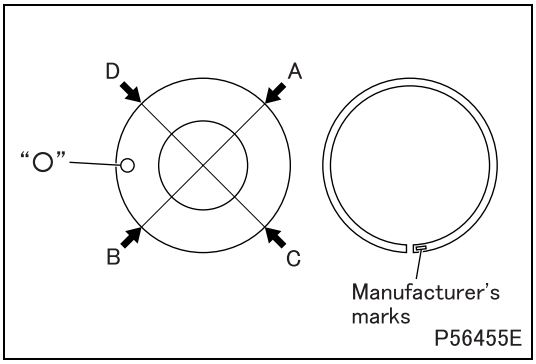


■ Installation: Piston and connecting rod

- Install pistons and connecting rods as follows when replacing them.
- All connecting rods used in the same engine must be of the same weight size mark.
  Weight mark: "C" to "G"
- Apply engine oil to the piston pin, and assemble the piston and connecting rod with their marks facing in the illustrated directions.

"O": Front mark on piston
"F": Front mark on connecting rod

- If the piston pin is difficult to insert, heat the piston in hot water or with a piston heater.



■ Installation: Piston rings

- With the manufacturer's marks (found near the piston ring end gaps) facing up, install the piston rings so that the end gap of each ring is positioned as illustrated.
  A: 1st compression ring end gap
  B: 2nd compression ring end gap
  C: Oil ring end gap
  D: Oil ring's expander spring end gap

"O": Front mark on piston

The manufacturer's marks are present only on the 1st and 2nd compression rings.

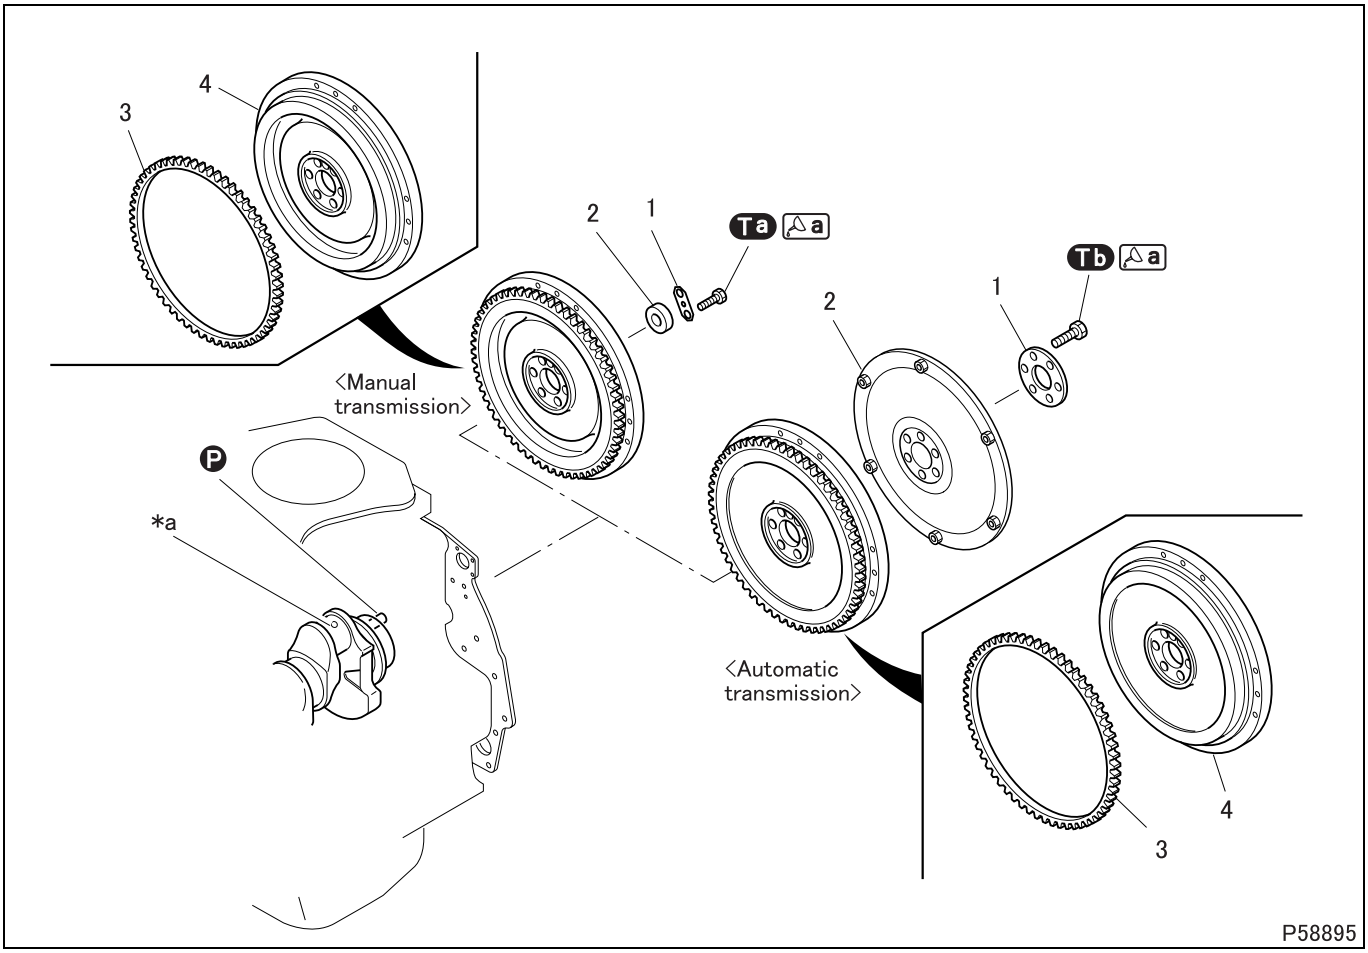
FLYWHEEL



● **Disassembly sequence**

1 Plate <Manual transmission>
Wear plate <Automatic transmission>
2 Bearing <Manual transmission>
Drive plate <Automatic transmission>
3 Ring gear
4 Flywheel

***a**: Crankshaft
Ⓟ: Locating pin

● **Assembly sequence**

Follow the disassembly sequence in reverse.

Service standards (Unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
4	Flywheel <Manual transmission>	Friction surface runout (when fitted)	–	0.2 {0.0079}	Rectify or replace
		Friction surface height	19.5 {0.77}	18.5 {0.73}	Replace
		Friction surface distortion	0.05 {0.0020} or less	0.2 {0.0079}	Rectify or replace
		Friction surface parallelism	0.1 {0.0039} or less	–	

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Bolt (flywheel installation)	59 {44, 6.0} + 40°	Wet
Tb	Bolt (flywheel installation)	118 {87, 12} + 90°	Wet

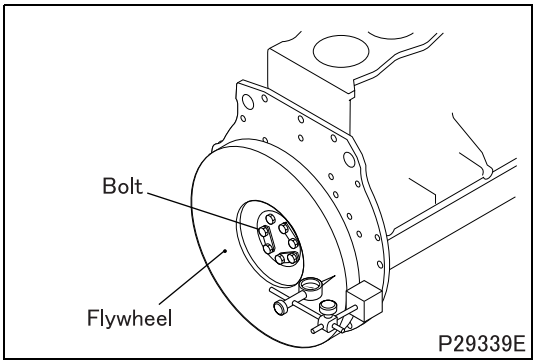
Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Bolt threads	Engine oil	As required

Special tools (Unit: mm {in.})

Mark	Tool name and shape	Part No.	Application
a	Socket wrench  P01984	MH062183	Installation of flywheel
b	Magnet base  P00471	MH062356	

◆Inspection before removal◆



■ **Inspection: Flywheel runout <Manual transmission>**

- If the runout exceeds the specified limit, check that the bolts are tightened correctly and that there are no abnormalities on the crankshaft mounting surface. If the runout is still excessive even after necessary steps have been taken according to the check results, rectify or replace the flywheel.

◆Removal procedure◆

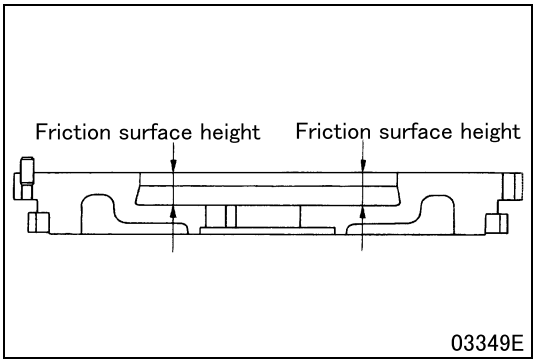
■ **Removal: Ring gear**

- Heat the ring gear evenly with a gas burner or the like until it reaches approximately 200°C {390°F}, then remove it from the flywheel.

WARNING ⚠

- **You could get burnt if you touch the heated ring gear.**

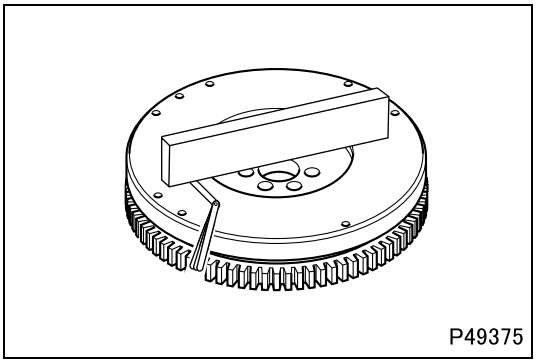
◆Inspection procedure◆



■ **Inspection: Flywheel <Manual transmission>**

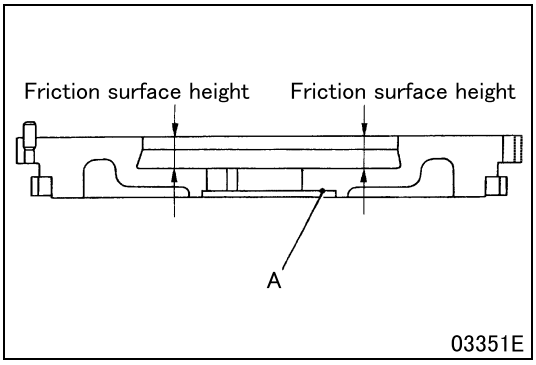
(1) Friction surface height

- If the height is below the specified limit, replace the flywheel.



(2) Friction surface distortion

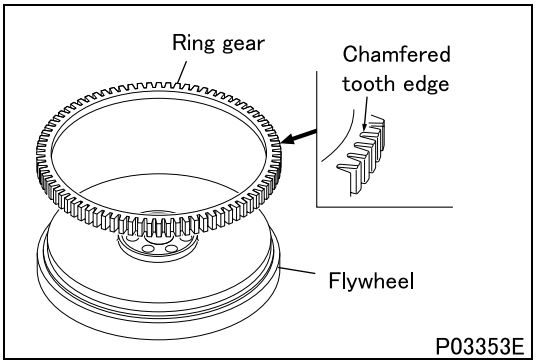
- If the measured amount of distortion is above the specified limit, rectify or replace the flywheel.



Rectification of friction surface

- Rectify the friction surface so that its height is not below the specified limit, and it is parallel with surface A within specification.

◆Installation procedure◆



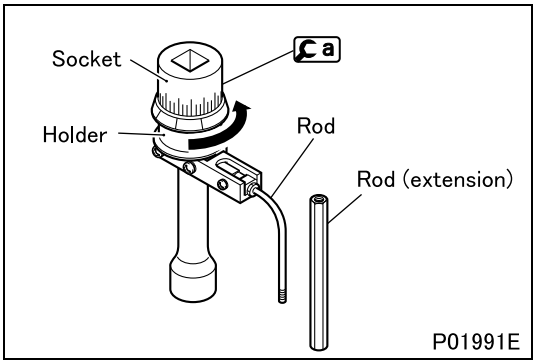
■ **Installation: Ring gear**

- Heat the ring gear evenly with a gas burner or the like until it reaches approximately 200°C {390°F}.

WARNING ⚠

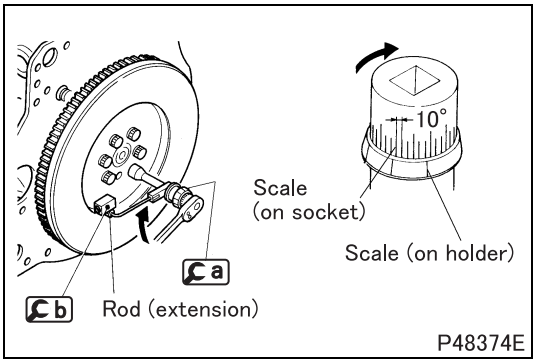
- **You could get burnt if you touch the heated ring gear.**

- Fit the ring gear with the side having non-chamfered tooth edges toward the flywheel.



■ **Installation: Flywheel <Manual transmission>**

- Tighten all the bolts to 59 N·m {44 ft.lbs, 6.0 kgf·m} and then additionally tighten them by the following procedure.
- Rotate the holder of a counterclockwise to pretension the internal spring.



- Fit a on the bolt and set b so that the rod (extension) is held pressed against it by the spring force.
- Align a scale mark on the socket with a scale mark on the holder. (This point will be the point of reference, or the 0° point.)
- Starting with this point of reference, turn the socket clockwise with a wrench by 40° ± 5° (one graduation on the socket scale represents 10°).

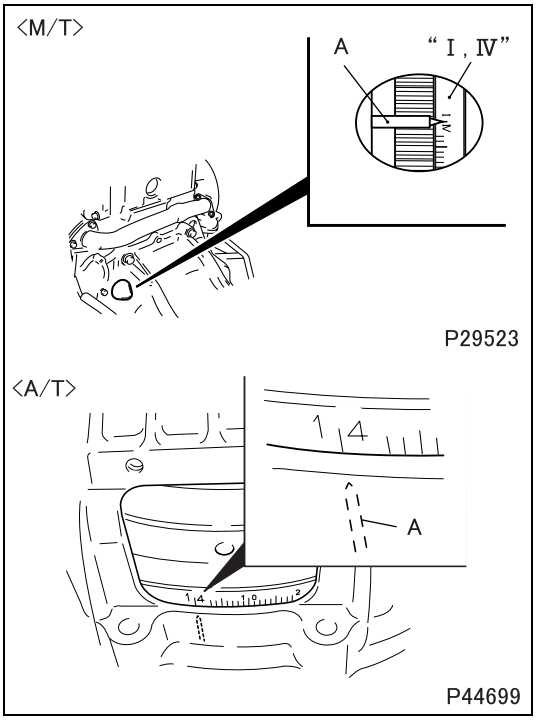
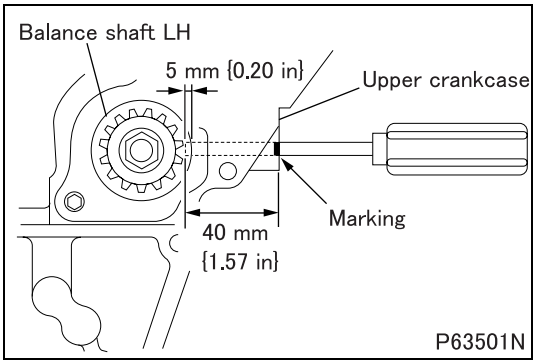
a	Holding bar A: 114 {4.49} B: φ9 {φ0.35}  P69433	MH062970	Holding of fan pulley

◆**Removal procedure**◆



■ **Removal: Vacuum pump**

- The vacuum pump also serves for positioning the balance shaft LH. Therefore, before removing the vacuum pump, hold the balance shaft in position by the following procedure.
- Align the pointer A to between the inscribed lines (Ⅰ and Ⅳ or 1 and 4) on the flywheel. (Place No.1 cylinder piston at the top dead center on compression stroke.)

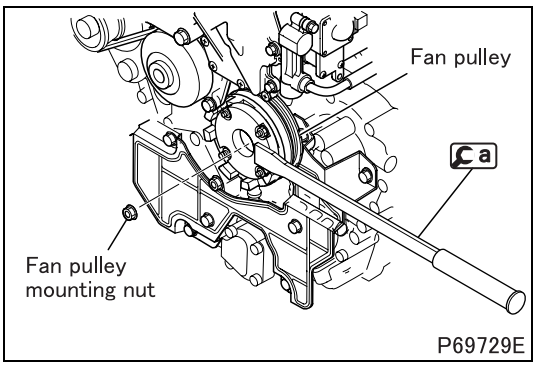


- Remove the upper crankcase plug.
- Mark a screwdriver or the like (ϕ4.5 mm {ϕ0.18 in} or less) at a point 40 mm {1.57 in} apart from its tip.
- Insert the screwdriver or the like (ϕ4.5 mm {ϕ0.18 in} or less) into the plug hole until it lightly touches the balance shaft LH.

CAUTION ⚠

- **Do not press the screwdriver hard against the balance shaft LH, as this may damage No.1 journal of the balance shaft.**

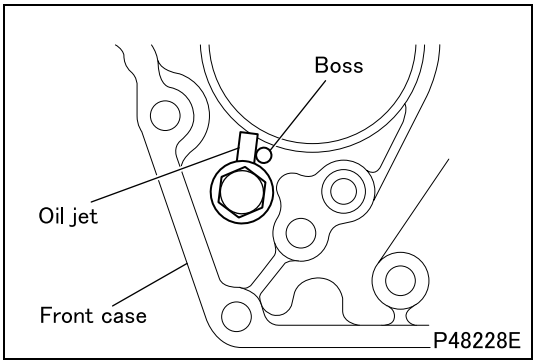
- Put the tip of the screwdriver or the like into the shaft supporting hole at No.1 journal of the balance shaft.
- This insertion depth of the screwdriver or the like into the shaft supporting hole should be 5 mm {0.20 in}.
- Remove the vacuum pump with the screwdriver or the like inserted in the hole.



■ Removal: Fan pulley

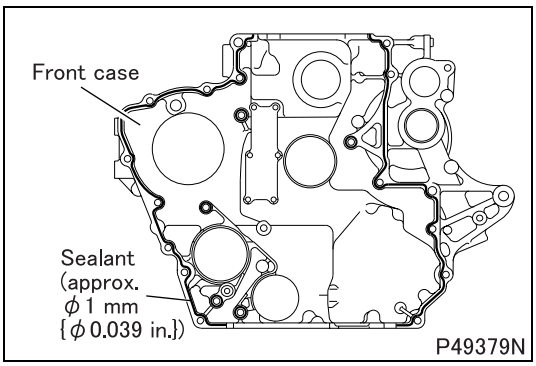
- Put Ca in position on the studs of the fan pulley and fix the tool by using nuts.
- While holding Ca, loosen the fan pulley mounting nut.

◆Installation procedure◆



■ Installation: Oil jet

- When installed, the oil jet must be in contact with the front case and its nozzle must face in the illustrated direction.

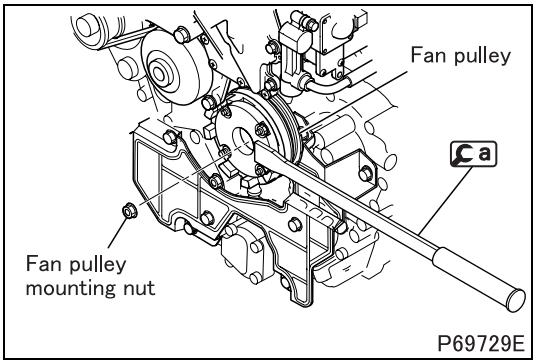


■ Installation: Front case

- Clean the sealant application surfaces of each part.
- Apply evenly thick beads of sealant to the upper crankcase mounting surface of the front case without any breaks.
- Mount the front case within three minutes of applying the sealant, being careful not to dislodge the sealant.

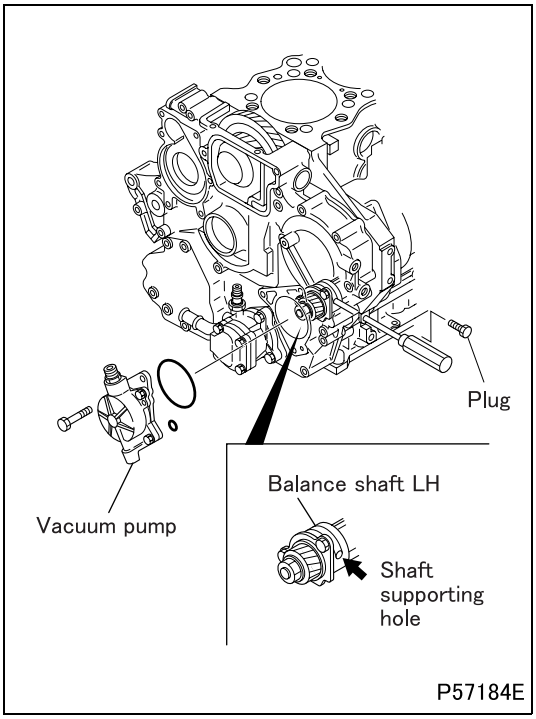
CAUTION ⚠

- **Do not run the engine within one hour of installing the front case.**
- **If the front case mounting bolts are loosened or removed, be sure to reapply sealant to the front case.**



■ **Installation: Fan pulley**

- Put Ca in position on the studs of the fan pulley and fix the tool by using nuts.
- Tighten the fan pulley mounting nut to the specified torque while holding Ca.



■ **Installation: Vacuum pump**

- The vacuum pump also serves as an element holding the balance shaft LH in place. Therefore, before installing the vacuum pump, hold the balance shaft LH in the correct position by the following procedure.
  - Place the No. 1 cylinder piston at the top dead center on compression stroke.
  - Remove the upper crankcase plug.
  - Insert a screwdriver or a similar tool into the plug hole until it lightly touches the balance shaft LH.

CAUTION ⚠

- **Do not press the screwdriver strongly against the balance shaft LH, as this may damage the No. 1 journal of the balance shaft.**

  - Turn the balance shaft LH slowly until the screwdriver aligns with the shaft support hole at the No. 1 journal and insert the screwdriver into the hole.
- Install the vacuum pump.
- After installing the vacuum pump, remove the screwdriver and reinstall the plug.

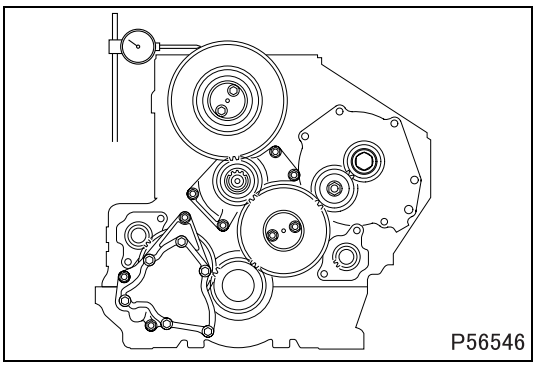
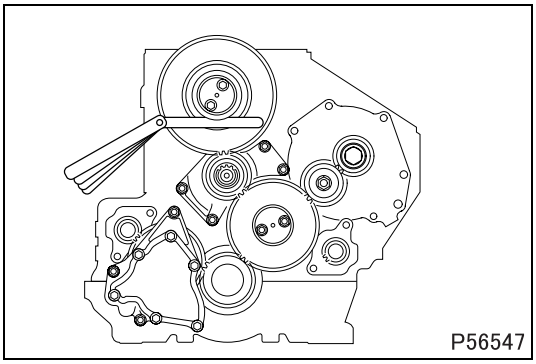
◆Inspection before removal◆



■ Inspection: Backlash between gears

- For each pair of gears, measure the backlash at more than three teeth.
- If any of the measurements exceeds the specified limit, replace the defective part(s).

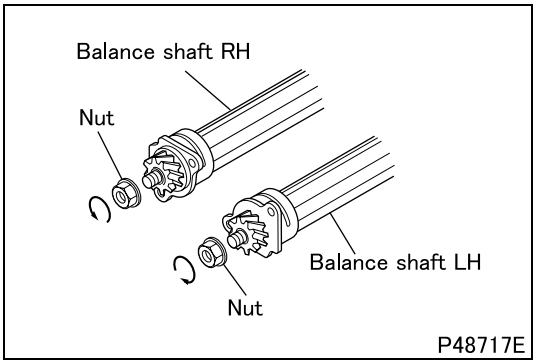


P56547

■ **Inspection: End play of each gear and shaft**

- If the measurement exceeds the specified limit, replace the defective part(s).

◆Removal procedure◆

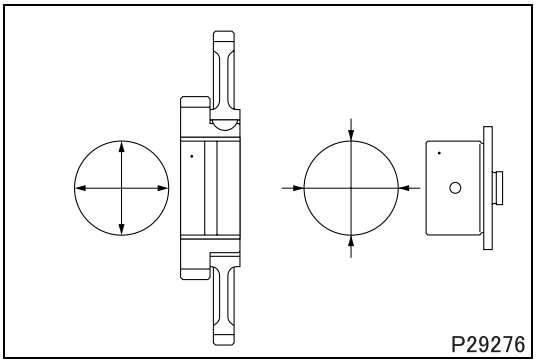


P48717E

■ **Removal: Balance shaft**

- Remove the balance shaft RH by turning its nut counterclockwise, and the balance shaft LH by turning its nut clockwise.

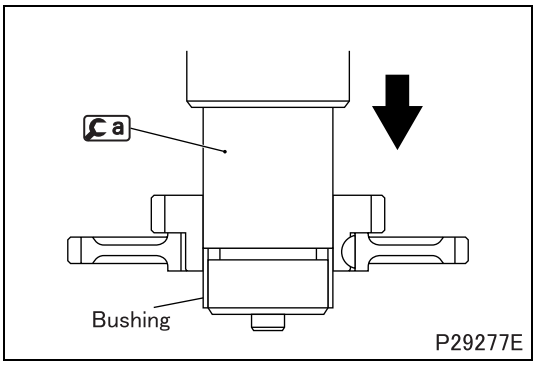
◆Inspection procedure◆



P29276

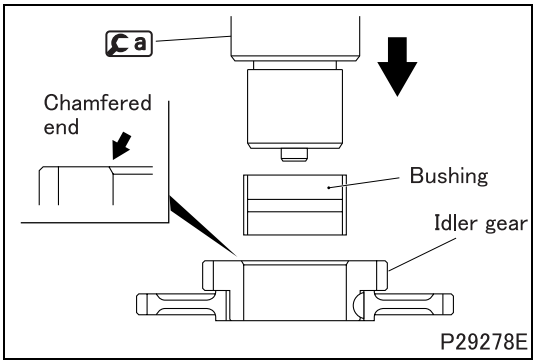
■ **Inspection: Idler gear bushing-to-idler shaft clearance**

- If the measurement exceeds the specified limit, replace the bushing.



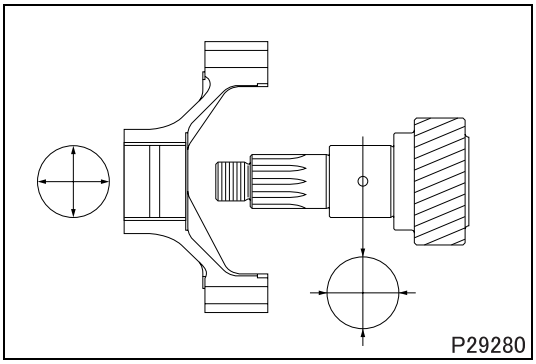
P29277E

Replacement of idler gear bushing
[Removal]



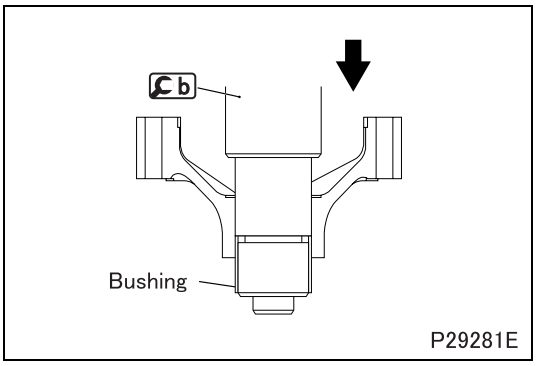
[Installation]

- Place the idler gear with its ends facing as illustrated.
- Press-fit the idler gear bushing until a sits snugly on the chamfered end of the idler gear.
- After press-fitting the bushing, measure the clearance.
- If the measurement is less than the minimum of the standard value range, ream the idler gear bushing until the clearance falls within the standard value range.

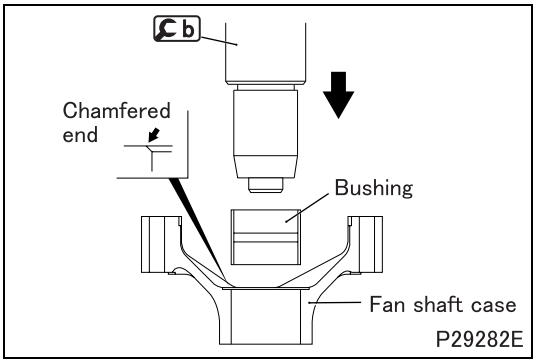


■ Inspection: Fan shaft case bushing-to-fan shaft clearance

- Replace the fan shaft case bushing if the measurement exceeds the specified limit.

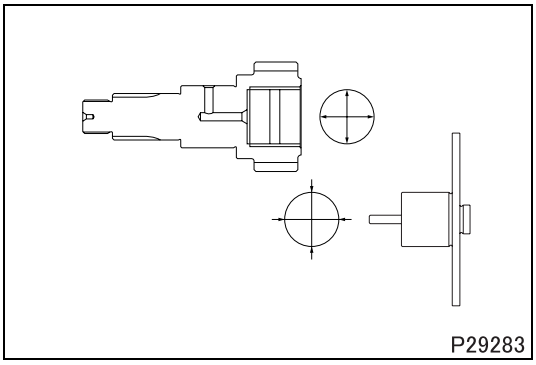


Replacement of fan shaft case bushing
[Removal]



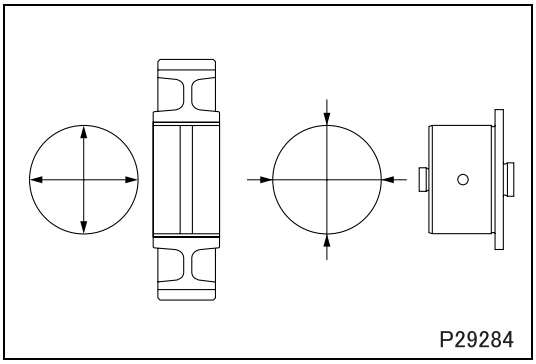
[Installation]

- Position the fan shaft case with its ends facing in the illustrated directions.
- Press in the bushing until b rests snugly on the chamfered end of the fan shaft case.
- After press-fitting the bushing, remeasure the clearance between it and the fan shaft.
- Ream the bushing if the measurement is below the standard value range.



■ Inspection: Fan shaft-to-fan gear shaft clearance

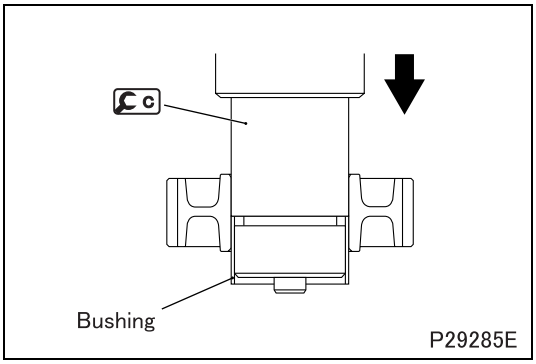
- Replace the fan shaft if the measurement exceeds the specified limit.



P29284

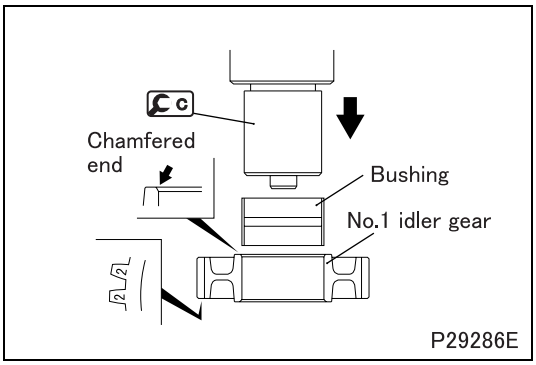
■ **Inspection: No. 1 idler gear bushing-to-No. 1 idler shaft clearance**

- Replace the bushing if the measurement exceeds the specified limit.



P29285E

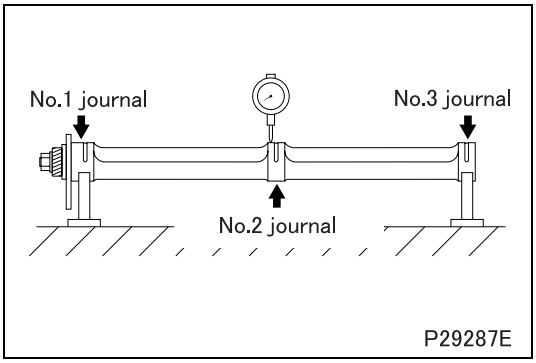
Replacement of No. 1 idler gear bushing
[Removal]



P29286E

[Installation]

- Position the No. 1 idler gear with its ends facing in the illustrated directions.
- Press in the gear bushing until C sits snugly on the chamfered end of the No. 1 idler gear.
- After press-fitting the bushing, remeasure the clearance between it and the No. 1 idler shaft.
- Ream the bushing if the measurement is below the standard value range.

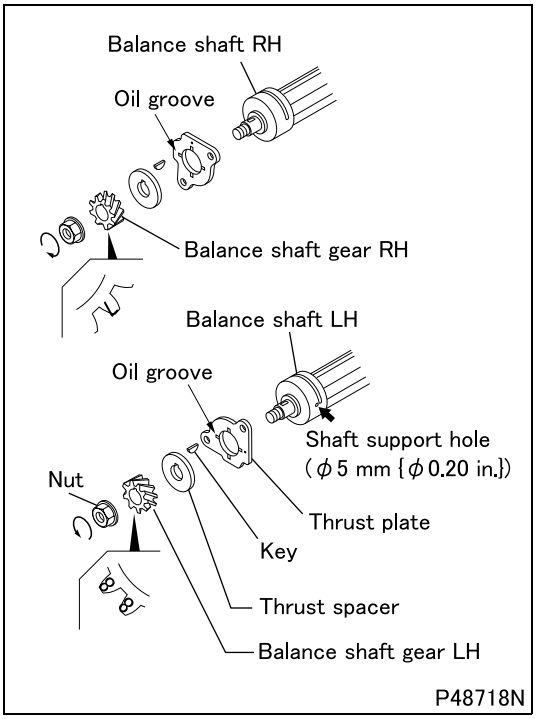


P29287E

■ **Inspection: Balance shaft bend**

- Place supports under the No. 1 and No. 3 journals of the balance shaft and measure the bend of the balance shaft at the No. 2 journal. The amount of balance shaft bend is obtained by giving the balance shaft one turn and the dial gauge reading by two.
- If the measurement exceeds the specified limit, replace the balance shaft.

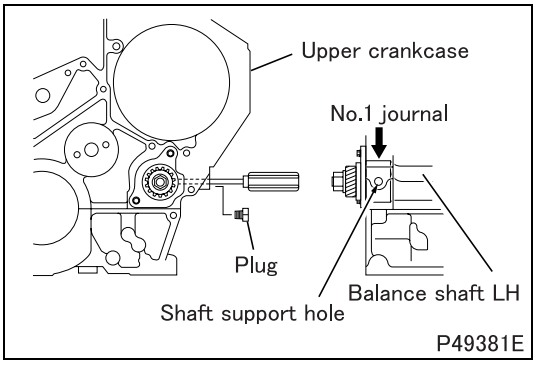
◆Installation procedure◆



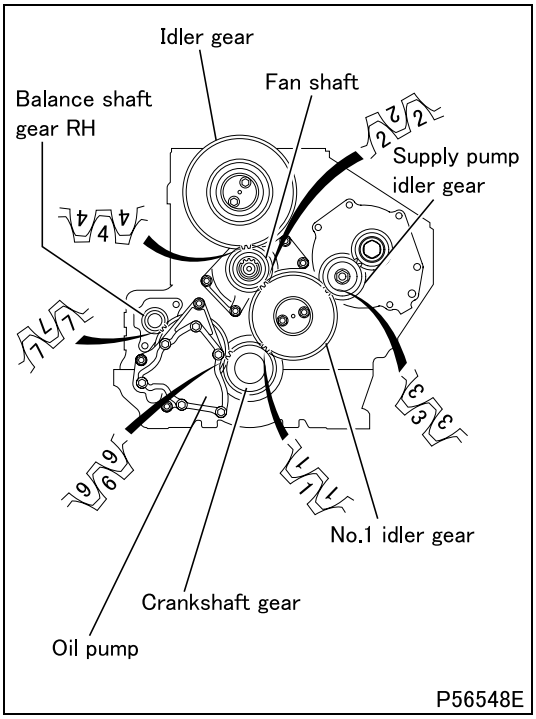
■ Installation: Balance shafts

- Install all the indicated parts on each balance shaft with their ends facing in the illustrated directions.
- Install the balance shaft RH by turning its nut clockwise, and the balance shaft LH by turning its nut counterclockwise.

- Install the balance shaft RH assembly and the balance shaft LH assembly into the crankcase according to the following procedures, which include different instructions between the two balance shafts.
  - The balance shaft RH can be installed in the crankcase without following any special procedure. (The positioning of the gear of the balance shaft RH will be finally determined by installing the oil pump.)

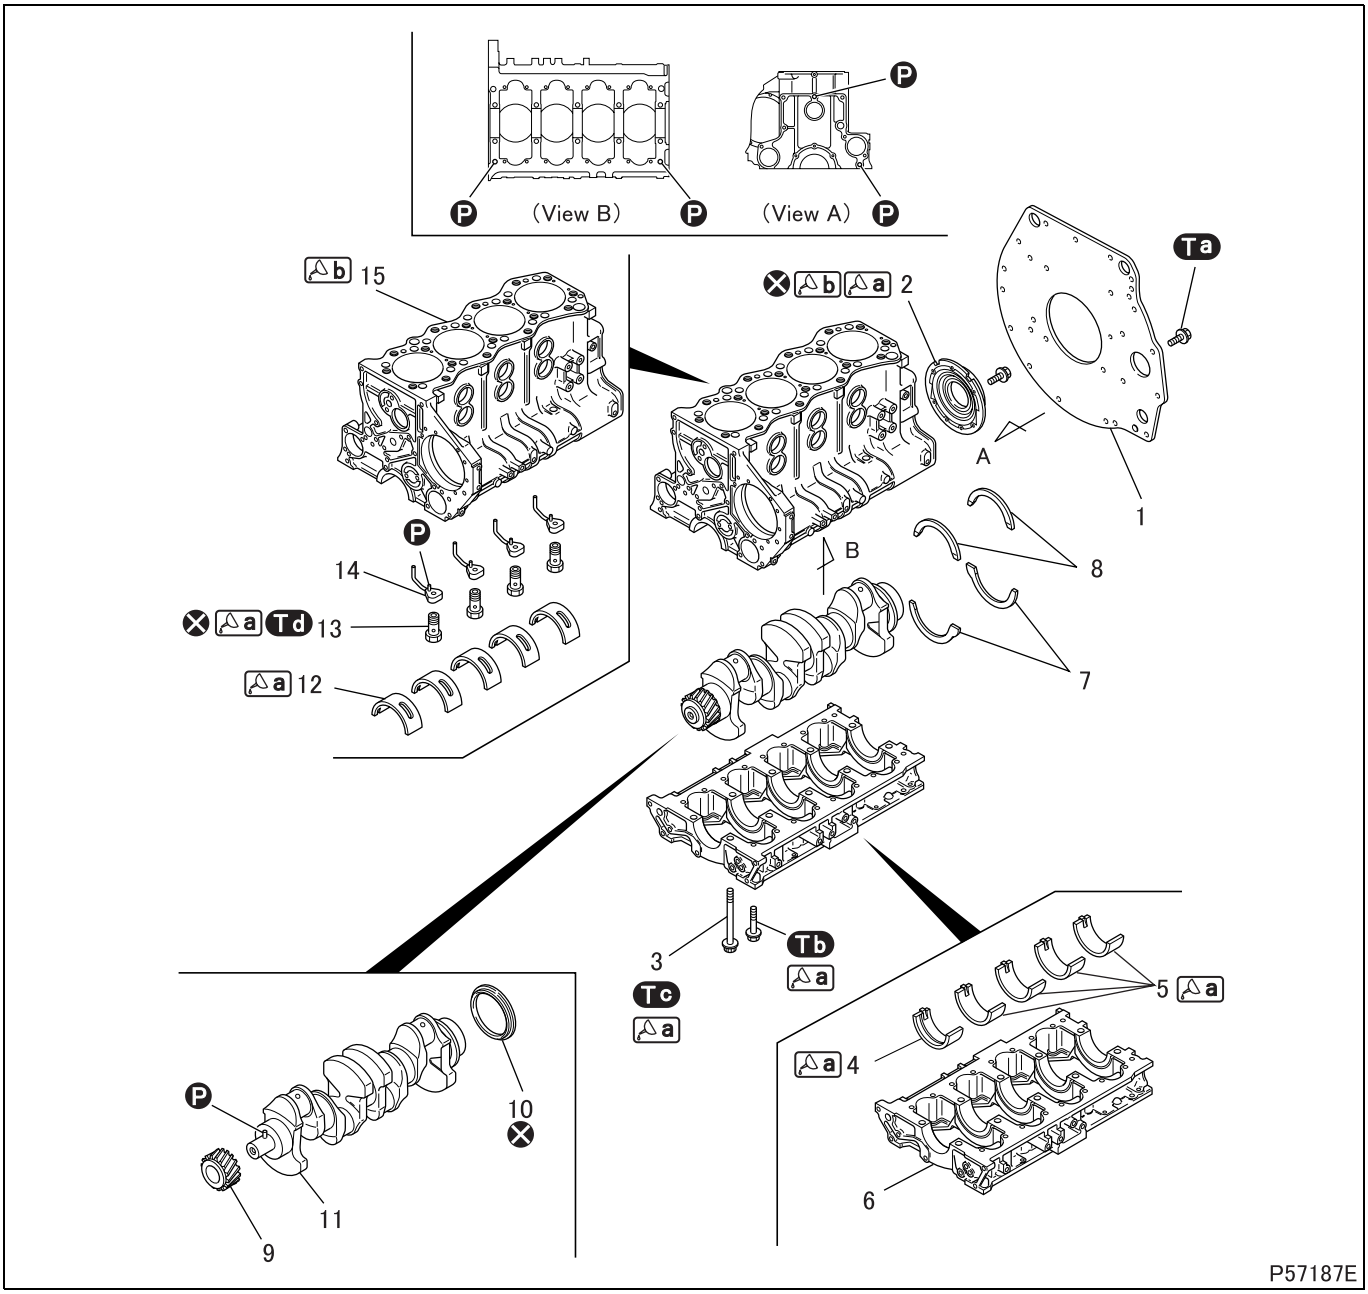


- The gear of the balance shaft LH can be engaged with other gears only after the front case is installed and then the vacuum pump is installed on the crankcase. This necessitates performing the following steps before installing the front case and vacuum pump. (The balance shaft LH cannot be rotated to adjust the gear position after the front case is installed on the crankcase.)
- Remove the plug on the upper crankcase.
- Insert a screwdriver through the plug hole and into the shaft support hole (diameter: 5 mm {0.20 in.}) on the No. 1 journal of the balance shaft LH to hold the shaft against rotation.
- Align the mating marks on each timing gear.
- This positions the balance shaft LH correctly. Leave the balance shaft in this state until installation of the front case and vacuum pump is completed.



■ **Installation: Timing gears**

- Place the No. 1 cylinder piston at top dead center to position the crankshaft gear.
- Install the oil pump gear by aligning mating mark “6” with that on the crankshaft gear, and mating mark “7” with that on the balance shaft gear RH.
- Install the No. 1 idler gear by aligning mating mark “1” with that on the crankshaft gear.
- Install the fan shaft by aligning mating mark “2” with that on the No. 1 idler gear.
- Install the idler gear by aligning mating mark “4” with that on the fan shaft.
- Install the supply pump idler gear by aligning mating mark “3” with that on the No.1 idler gear.



● **Disassembly sequence**

1 Rear plate
2 Rear oil seal
3 Main bearing cap bolt
4 No.1 Lower bearing
5 Lower main bearing
6 Lower crankcase
7 Lower thrust plate
8 Upper thrust plate
9 Crankshaft gear
10 Rear oil seal slinger
11 Crankshaft
12 Upper main bearing
13 Check valve
14 Oil jet
15 Upper crankcase

Ⓟ: Locating pin
⊗: Non-reusable parts

CAUTION ⚠

- **The lower crankcase and the upper crankcase are machined as a matched set, and cannot be replaced individually.**

● Assembly sequence

Follow the disassembly sequence in reverse.

CAUTION ⚠

- **The main bearing cap bolts are tightened using the torque-turn tightening method. Any bolt that has three punch marks must be replaced.**
- **Do not overtighten the check valve. If it is tightened to a torque exceeding the specification, the check valve may malfunction, resulting in seizures in the engine.**
- **The No. 1 lower bearing has a oil groove. Be sure to install it in the correct position, otherwise a crankshaft seizure may result.**

Service standards (Unit: mm {in.})

Location	Maintenance item			Standard value	Limit	Remedy
–	Crankshaft end play			0.10 to 0.28 {0.0039 to 0.011}	0.4 {0.016}	Replace thrust plate

b	Rear oil seal slinger installer A: φ103 {φ4.06}, B: φ100 {φ3.94}, C: φ15 {φ0.59}  P49383	MH062677	Installation of rear oil seal slinger

◆Inspection before removal◆

 P29413

■ **Inspection: Crankshaft end play**

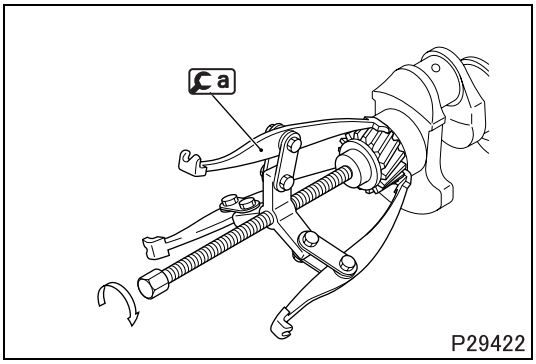
- If the measurement exceeds the specified limit, replace the thrust plates with oversize ones.
- Available oversizes:
  +0.15 mm, +0.30 mm, +0.45 mm {0.0059, 0.012, 0.018 in.}
- Replace the crankshaft if the end play is too large to adjust using oversize thrust plates.

◆Removal procedure◆

 P29415

■ **Removal: Lower crankcase**

- Loosen the bolts little by little in the order indicated in the illustration (1 to 16).
- After loosening the bolts, loosen the main cap bolts little by little in the order indicated in the illustration (17 to 26), then remove the main cap bolts.



■ **Removal: Crankshaft gear**

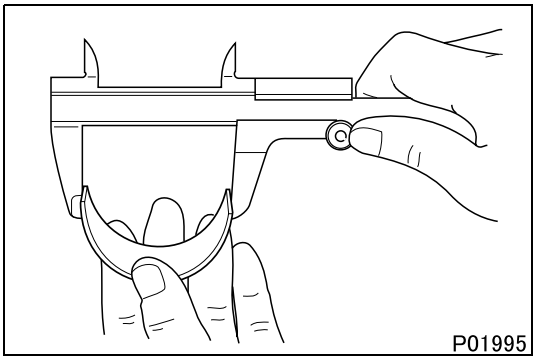
CAUTION ⚠

- **Do not tap off the crankshaft gear as this can damage it.**

■ **Removal: Rear oil seal slinger**

- Taking care not to damage the crankshaft, split the rear oil seal slinger using a chisel or a similar tool.

◆Inspection procedure◆

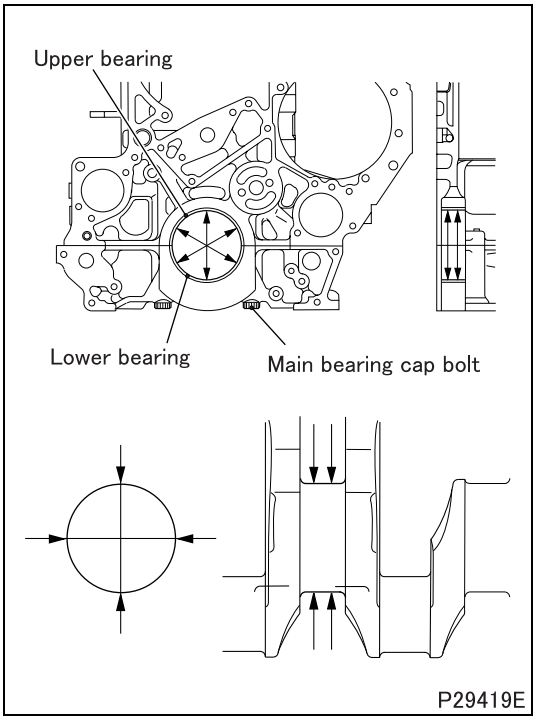


■ **Inspection: Main bearing span when free**

CAUTION ⚠

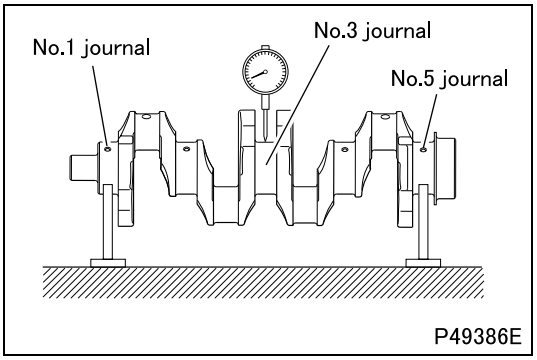
- **Do not attempt to manually expand the bearings.**

- If the measurement is less than the limit, replace upper and lower bearings as a set.



■ **Inspection: Main bearing-to-crankshaft clearance**

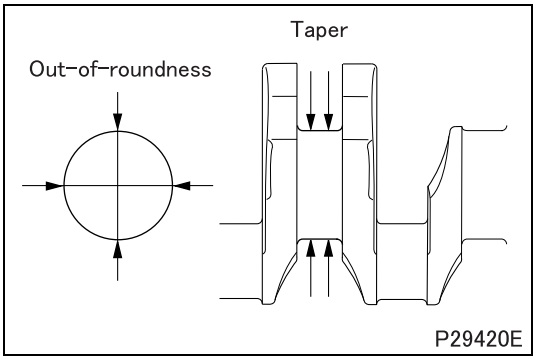
- Fit the upper bearing into the upper crankcase and the lower bearing into the lower crankcase.
- Tighten the main bearing cap bolts to a torque of 49 N·m {36 ft.lbs, 5.0 kgf·m}.
- Measure the inside diameter of the main bearing and the diameter of the corresponding crankshaft journal.
- If the difference between the measurements exceeds the specified limit, machine the crankshaft journal to one of the specified undersize dimensions indicated on the next page.



■ **Inspection: Crankshaft**

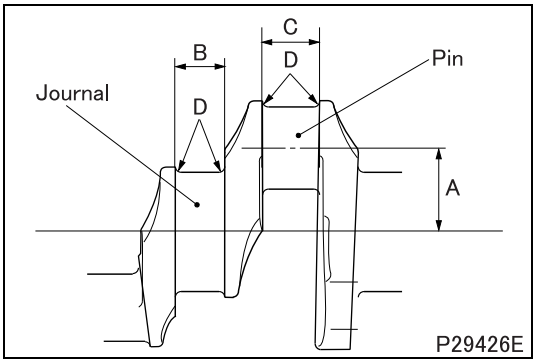
(1) Bend

- Support the crankshaft at its No. 1 journal and No. 5 journal. Measure the extent of bending in the crankshaft at the center of the No. 3 journal. The amount of crankshaft bend is obtained by giving the crankshaft one turn and dividing the dial gauge reading by two.
- If the measurement exceeds the specified limit, replace the crankshaft.



(2) Out-of-roundness and taper of crankshaft journals and pins

- If any of the measurements exceeds the specified limits, grind the crankshaft journal(s) and/or pin(s) to undersize(s) or replace the crankshaft.



Grinding of crankshaft

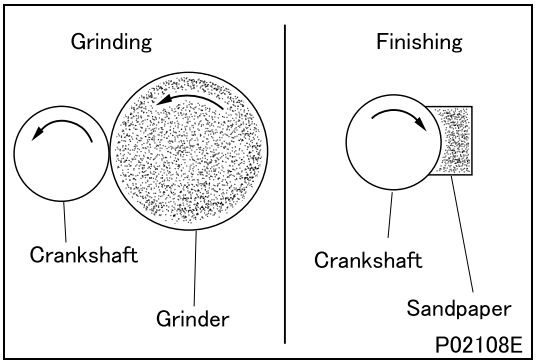
CAUTION ⚠

- **If the crankshaft is ground to an undersize, the main bearings must be replaced with the undersize ones of the corresponding undersize.**

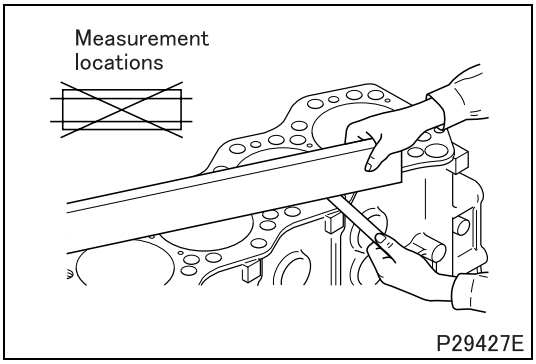
- Confirm the dimension of each position from the service standards table and rectify the crankshaft while observing the following procedures.
- Do not change the center-to-center distance A between the journal and pin.
- Do not change the journal width B and the pin width C.
- Finish the fillets D smoothly.
- Carry out a magnetic inspection to check for cracks possibly caused by grinding. Also, check that the harness of the surface has not dropped below Shore hardness number (Hs) 75.
- Replace the crankshaft if defects are evident.

Crankshaft undersize dimensions (Unit: mm {in.})

		Undersizes			
		0.25 {0.0098}	0.50 {0.020}	0.75 {0.030}	1.00 {0.039}
Finished journal diameter	No. 1, 2, 4, 5	85.68 to 85.70 {3.37 to 3.37}	85.43 to 85.45 {3.36 to 3.36}	85.18 to 85.20 {3.35 to 3.35}	84.93 to 84.95 {3.34 to 3.34}
	No. 3	85.66 to 85.68 {3.37 to 3.37}	85.41 to 85.43 {3.36 to 3.36}	85.16 to 85.18 {3.35 to 3.35}	84.91 to 84.93 {3.34 to 3.34}
Finished pin diameter		64.69 to 64.71 {2.55 to 2.55}	64.44 to 64.46 {2.54 to 2.54}	64.19 to 64.21 {2.53 to 2.53}	63.94 to 63.96 {2.52 to 2.52}
Out-of-roundness		0.01 {0.00039} or less			
Taper		0.006 {0.00024} or less			



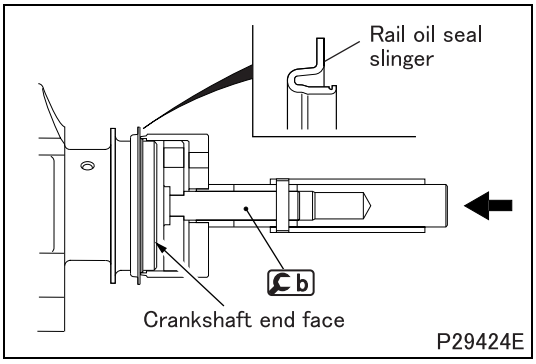
- When grinding, turn both the crankshaft and the grinder counterclockwise as viewed from the crankshaft front end.
- When finishing the crankshaft with whetstone or sandpaper, rotate the crankshaft clockwise.



■ Inspection: Distortion of upper crankcase top surface

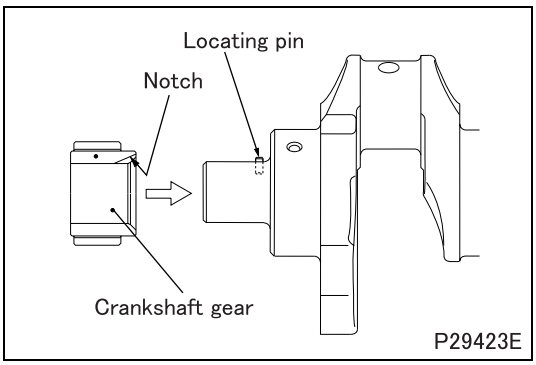
- If the measurement exceeds the specified limit, grind the crankcase top surface with a surface grinder.
- Limit the amount of removed metal to make sure that the amount of piston projection above the crankcase top surface stays within the standard value range. (See PISTONS, CONNECTING ROD AND CYLINDER LINERS section.)

◆Installation procedure◆



■ Installation: Rear oil seal slinger

- Press in the rear oil seal slinger until b sits snugly on the crankshaft end surface.



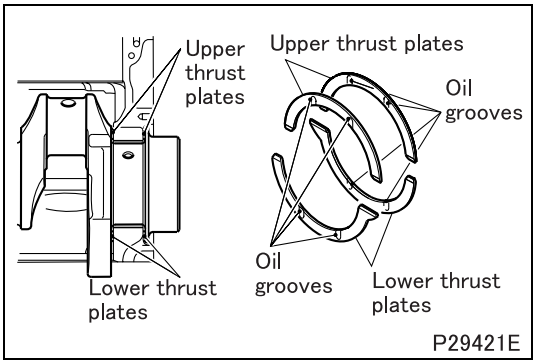
■ Installation: Crankshaft gear

- Heat the crankshaft gear to approximately 150°C {300°F} with a gas burner or the like.

CAUTION ⚠

- **Be careful not to get burned.**

- Align the locating pin in the crankshaft with the slot in the crankshaft gear. Drive the gear into position by lightly striking its end face with a plastic hammer.



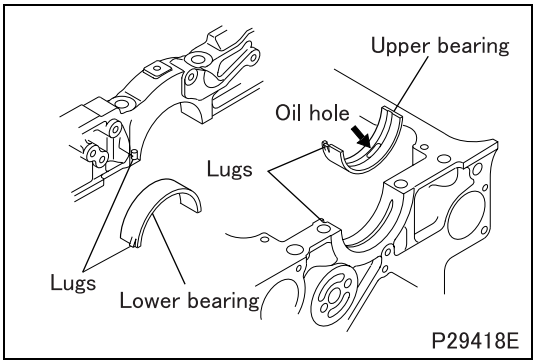
■ **Installation: Thrust plate**

- Install the thrust plates on both sides of the rearmost main bearing with the oil grooves on the inner plates facing inward and those on the outer plates outward as shown in the illustration.

CAUTION ⚠

- **Be sure to orient the oil grooves as indicated above, otherwise seizures may occur in the engine.**

- Use oversize thrust plates when adjusting the crankshaft end play. The upper and lower thrust plates on the same side must be of the same size. The thrust plates on one side may differ in size from those on the other side.

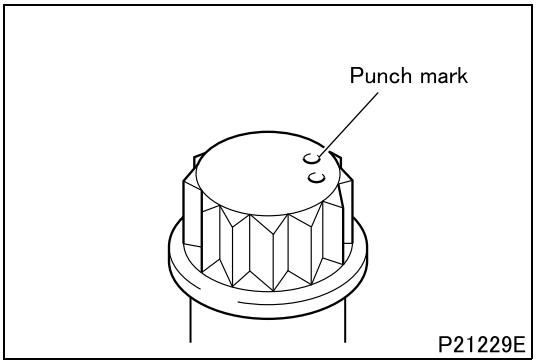


■ **Installation: Main bearings**

- Install the main bearings with their lugs aligned as shown in the illustration. When the crankshaft journals have been ground to an undersize, use undersize main bearings.
  Available main bearing undersizes:
  0.25 mm {0.0098 in.}, 0.50 mm {0.020 in.}, 0.75 mm {0.030 in.}, 1.00 mm {0.039 in.}

CAUTION ⚠

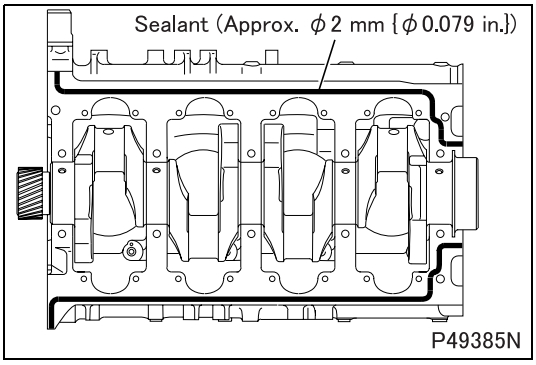
- **The upper main bearing has an oil hole. The lower main bearing has no oil hole. Do not confuse the upper and lower bearings, as this can cause seizure in the engine.**



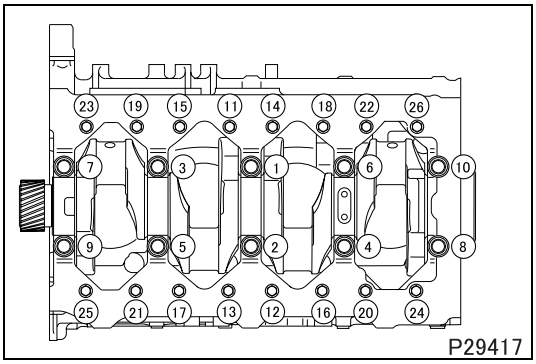
■ **Installation: Lower crankcase**

CAUTION ⚠

- **Before installing the main bearing cap bolts, check the number of punch marks on the head of each bolt. (A bolt with two or less marks is reusable.)**
- **The number of punch marks corresponds with the number of times the main cap bolt has been tightened using the torque-turn tightening method. Any bolt that has three marks (i.e. that has been used three times) must be replaced.**



- Clean all sealant application surfaces.
- Apply evenly thick beads of sealant to the upper crankcase without any breaks as shown in the illustration.
- Install the lower crankcase within three minutes of applying the sealant, being careful not to dislodge the sealant.



P29417

- Apply engine oil to the main cap bolt threads and seating surfaces of the bolt heads, then tighten them to a torque of 49 N·m {36 ft.lbs, 5.0 kgf·m} in the order indicated in the illustration (1 to 10).
- Tighten each main cap bolt further by 90° in the same order.
- Finally, tighten each bolt to the specified torque in the order indicated in the illustration (11 to 26).

CAUTION ⚠

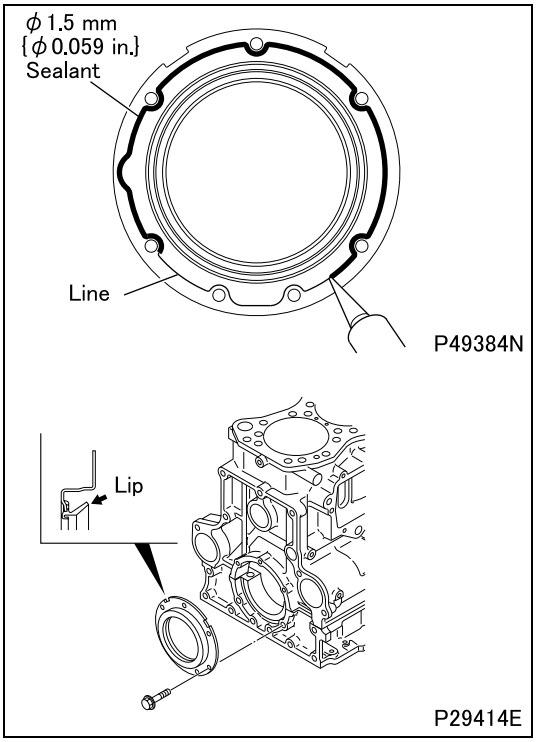
- **After installing the bolts, wait at least an hour before starting the engine.**
- **Apply new beads of sealant whenever the main cap bolts have been loosened or removed.**

- After tightening the bolts using the above torque-turn tightening method, make a punch mark on the head of each bolt to indicate the number of times that it has been used.

CAUTION ⚠

- **The bolts that have been tightened using the torque-turn method must never be additionally tightened after the final angular tightening.**

- After installing the main bearing caps, rotate the crankshaft by hand. If it cannot be rotated smoothly, inspect the main bearing caps for correct installation.



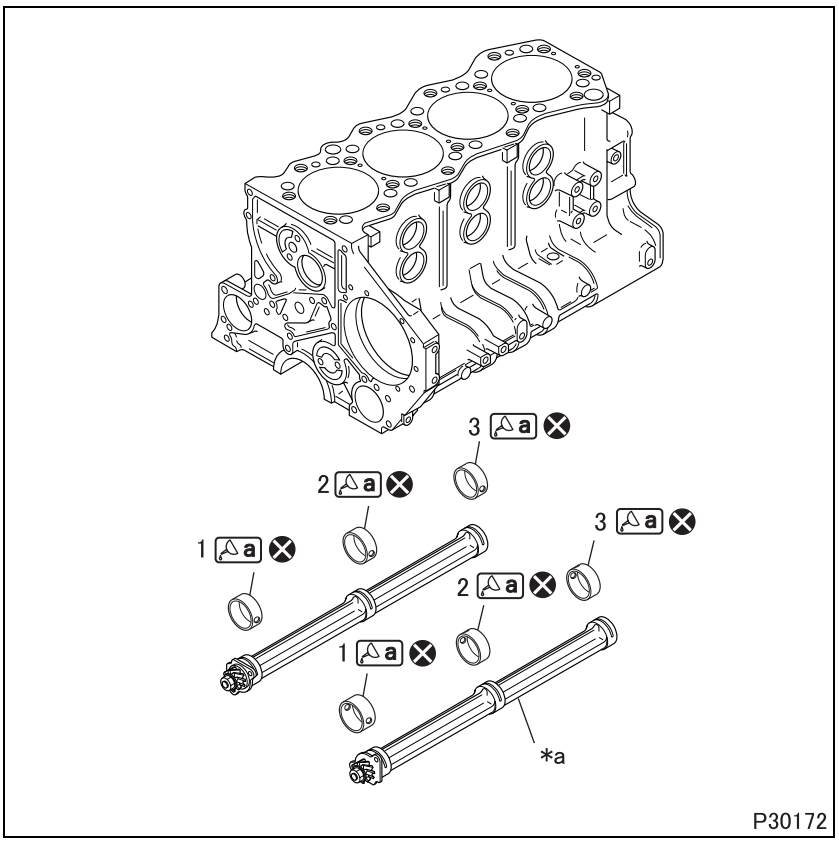
■ Installation: Rear oil seal

- Apply engine oil to the lip of the rear oil seal.
- Clean the seal surface of the crankshaft.
- Apply a bead of sealant along the line on the rear oil seal evenly without any breaks.
- Install the rear oil seal within three minutes after applying the sealant. Be careful not to let the applied sealant slip out of place during installation.

CAUTION ⚠

- **After fitting the rear oil seal, wait at least an hour before starting the engine.**
- **Apply a new bead of sealant whenever the mounting bolts of the rear oil seal have been loosened.**

BALANCE SHAFT BUSHINGS



● **Disassembly sequence**

1 No. 1 balance shaft bushing
2 No. 2 balance shaft bushing
3 No. 3 balance shaft bushing

***a**: Balance shaft
⊗: Non-reusable parts

● **Assembly sequence**

Follow the disassembly sequence in reverse.

Service standards (Unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
1 to 3, *a	Balance shaft journal-to-balance shaft bushing clearance	No. 1	0.055 to 0.099 {0.0022 to 0.0039}	0.15 {0.0059}	Replace
		No. 2	0.075 to 0.119 {0.030 to 0.0047}		
		No. 3	0.055 to 0.099 {0.0022 to 0.0039}		

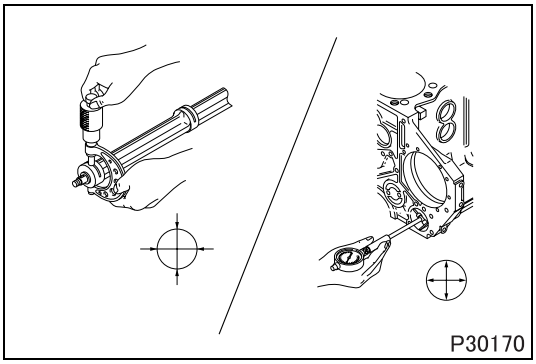
Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Balance shaft bushing inner surface	Engine oil	As required

Special tools

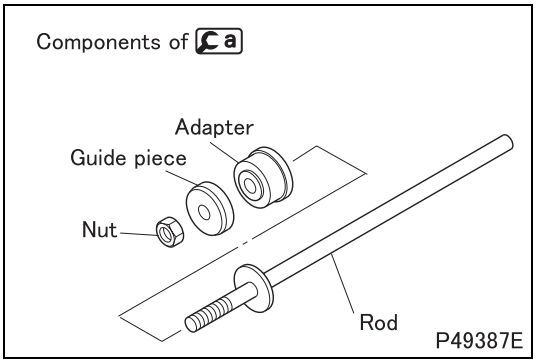
Mark	Tool name and shape	Part No.	Application
a	Balance shaft bushing installer and extractor 	MH062782	Removal and installation of balance shaft bushing

◆Inspection procedure◆



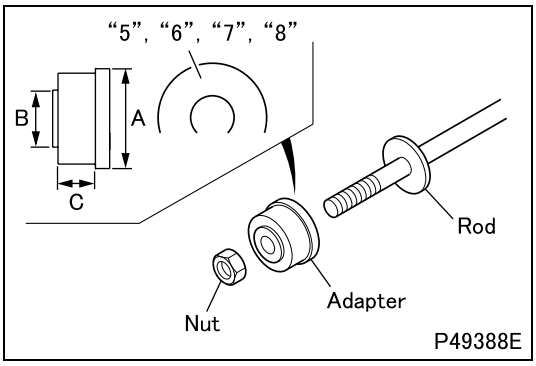
■ **Inspection: Balance shaft-to-balance shaft bushing clearance**

- Replace the bushing if the measurement exceeds the specified limit.



Replacement of balance shaft bushing

- Replace the bushing using a.

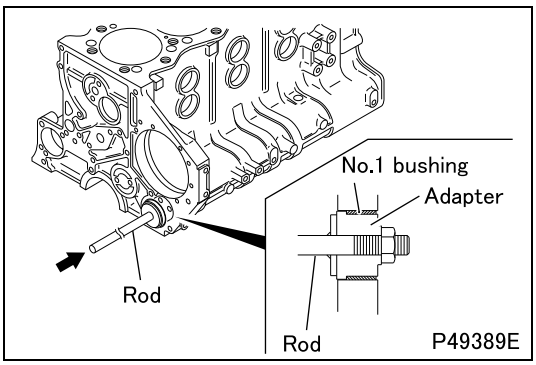


[Removal]

- To remove the bushings, use the rod fitted with an adapter corresponding to the size of each bushing.

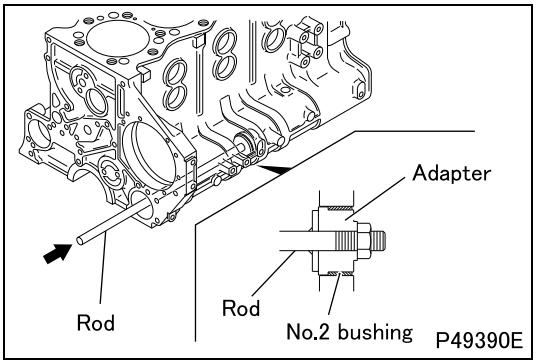
Unit: mm {in.}

Bushing		Adapter			
		Identification mark	A	B	C
No. 1	Left	"5"	ϕ55.25 {ϕ2.18}	ϕ51.5 {ϕ2.03}	26.5 {1.04}
	Right	"6"			21.5 {0.85}
No. 2		"7"	ϕ55 {ϕ2.17}	ϕ51 {ϕ2.01}	
No. 3		"8"	ϕ54.75 {ϕ2.16}	ϕ50.5 {ϕ1.99}	

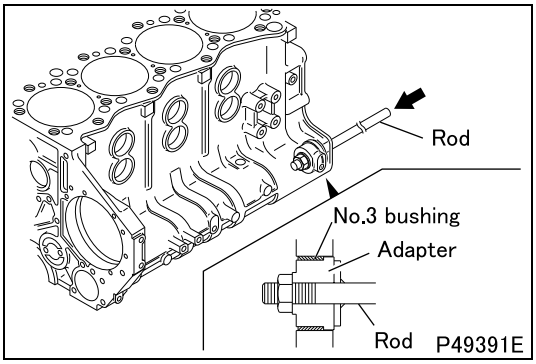


- Remove the No. 1 bushing by tapping on the rod from the front of the engine.

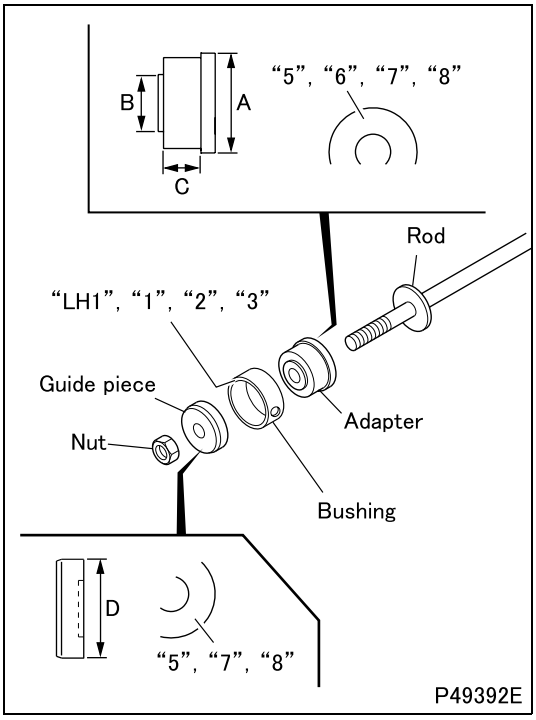
BALANCE SHAFT BUSHINGS



- Remove the No. 2 bushing by tapping on the rod from the front of the engine.



- Remove the No. 3 bushing by tapping on the rod from the back of the engine.



[Installation]

- To install the bushings, use the rod fitted with an adapter corresponding to the size of each bushing. Each bushing has an identification mark. These identification marks are used to distinguish between the No. 1, No. 2 and No. 3 bushings. If the identification mark is not clear, measure the outside diameter of the bushing and use the measurement as a means of identification.

Unit: mm {in.}

Bushing				Adapter				Guide piece	
		Identification mark	Outside diameter	Identification mark	A	B	C	Identification mark	D
No. 1	Left	"LH1"	ϕ55.25 {ϕ2.18}	"5"	ϕ55.25 {ϕ2.18}	ϕ51.5 {ϕ2.03}	26.5 {1.04}	"5"	ϕ55.25 {ϕ2.18}
	Right	"1"	ϕ55.25 {ϕ2.18}	"6"			21.5 {0.85}	"6"

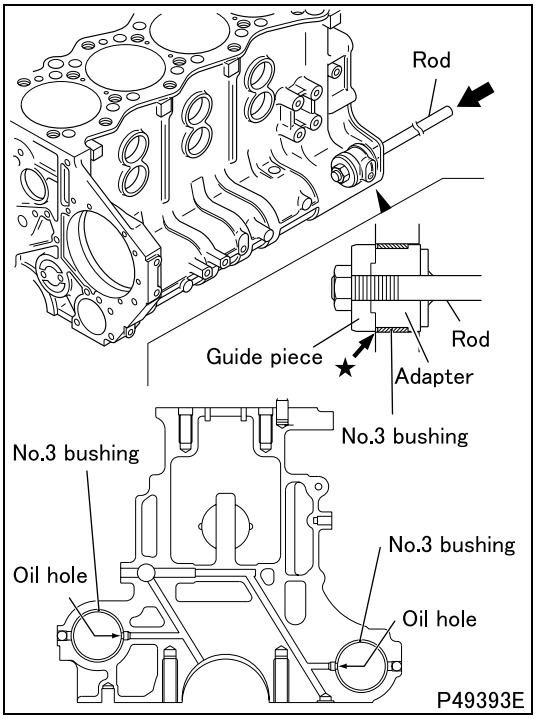
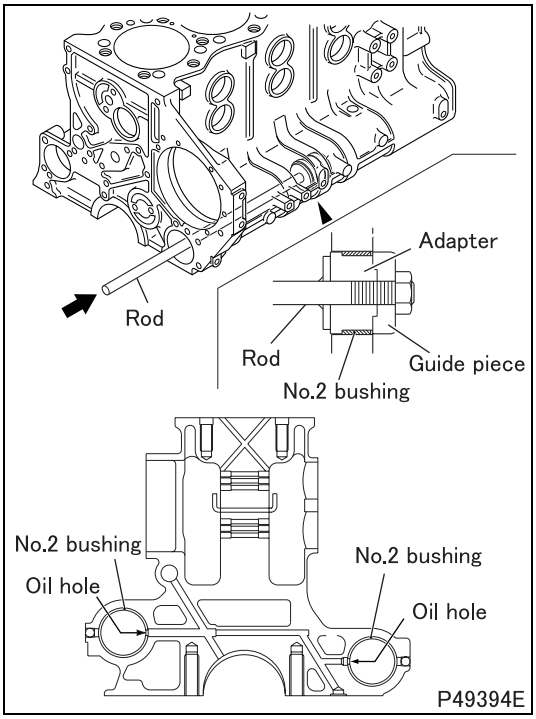
No. 3		"3"	ϕ54.75 {ϕ2.16}	"8"	ϕ54.75 {ϕ2.16}	ϕ50.5 {ϕ1.99}		"8"	ϕ54.75 {ϕ2.16}

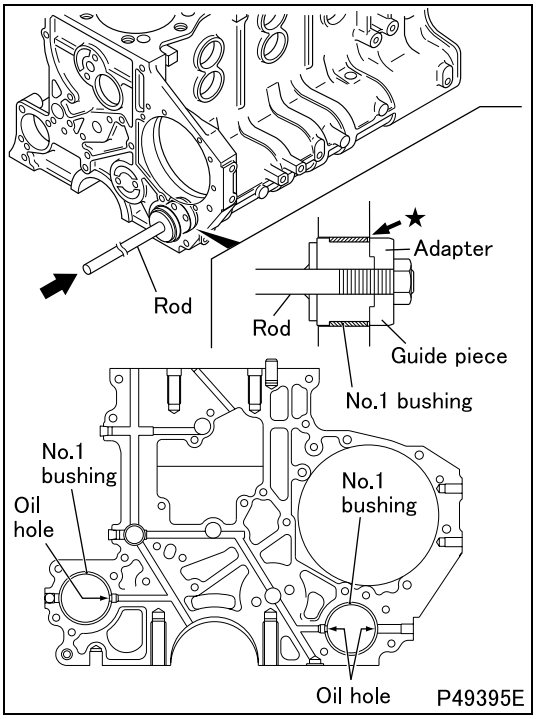


- Align the oil hole in the No. 3 bushing with the oil hole in the upper crankcase.
- Force the No. 3 bushing into the upper crankcase as deep as the ★ mark in the illustration by tapping on the rod from the rear of the engine.



- Align the oil hole in the No. 2 bushing with the oil hole in the upper crankcase.
- Force the No. 2 bushing into the upper crankcase to the illustrated position by tapping on the rod from the front of the engine.

BALANCE SHAFT BUSHINGS



- Align the oil hole(s) in the No. 1 bushing with the oil hole(s) in the upper crankcase.
- Force the No. 1 bushing into the upper crankcase as deep as the ★ mark in the illustration by tapping on the rod from the front of the engine.

CAUTION ⚠

- **The left and right No. 1 bushings are different from each other, and should not be installed in reverse positions.**
- **The left No. 1 bushing has two oil holes, whereas the right No. 1 bushing has only one oil hole.**

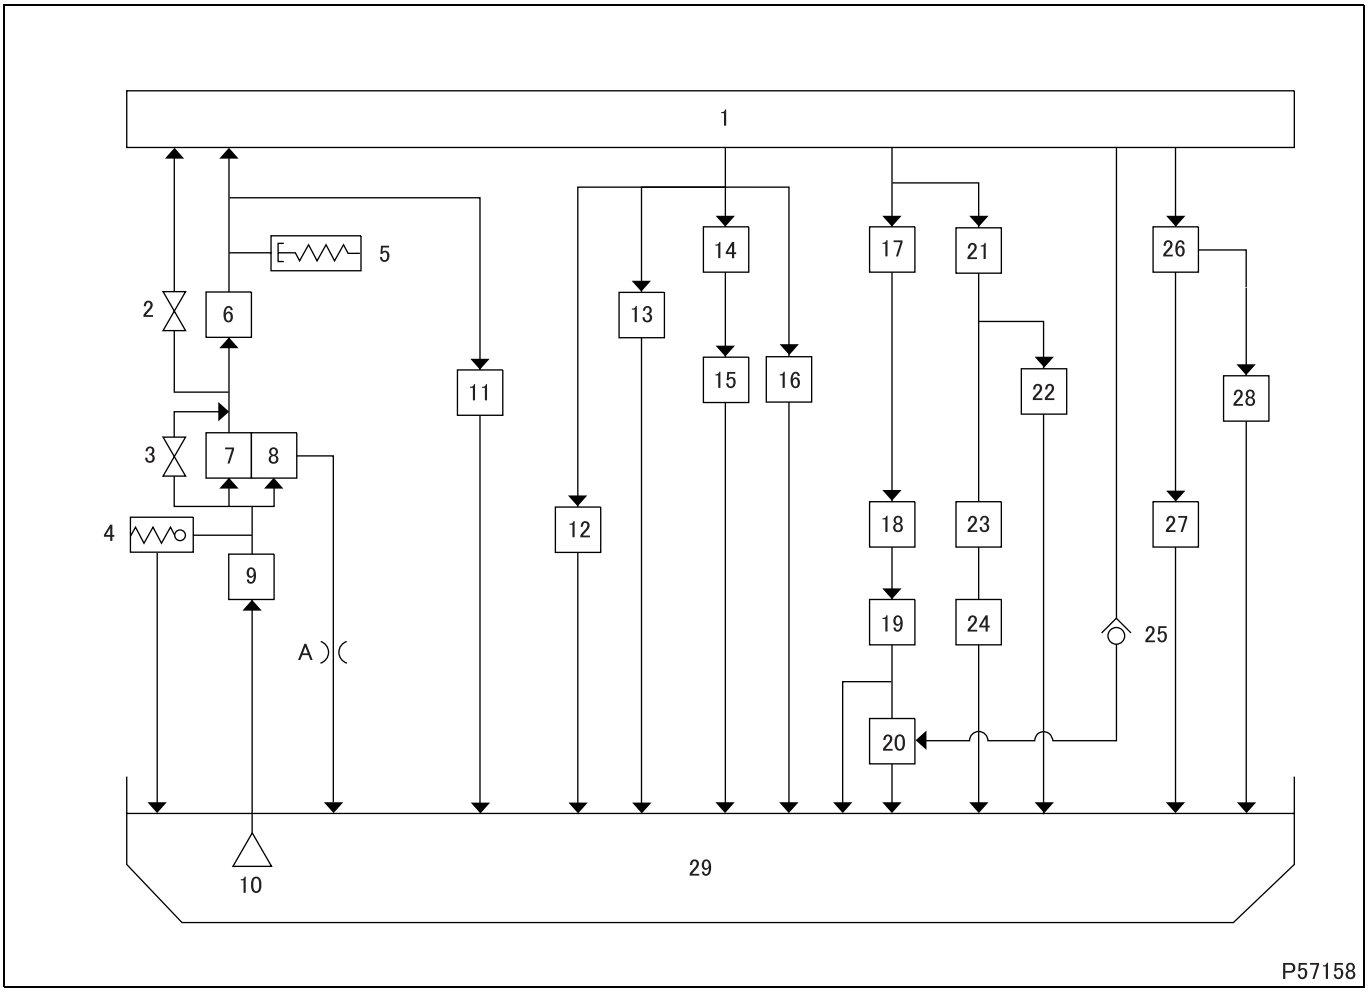
OIL FILTER..... 12-26

OIL COOLER..... 12-30

SPECIFICATIONS

Item			Specifications
Method of lubrication			Forced lubrication by oil pump
Oil filter			Spin-on filter paper type
Oil cooler			Shell and plate type (multiple-plate type)
Engine oil	Grade		API classification CJ-4
	Quantity L (qts)	Oil pan	Approx. 7 {7.4}
		Oil filter	Approx. 1 {1.1}
Regulator valve opening pressure		kPa {psi, kgf/cm^2}	600 $^{+100}_{0}$ {87 $^{+15}_{0}$, 6 $^{+1}_{0}$ }
Bypass valve opening pressure		kPa {psi, kgf/cm^2}	390 ± 29 {57 ± 4.2, 4.0 ± 0.3}

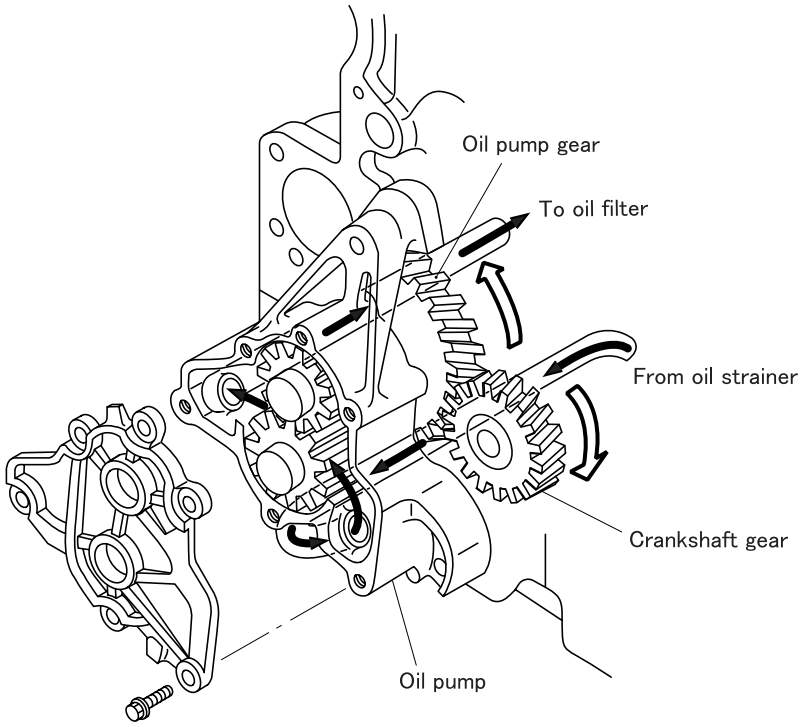
1. Lubrication System



1 Main oil gallery
2 Bypass valve
3 Bypass valve
4 Regulator valve
5 Engine oil pressure switch
6 Oil cooler
7 Full-flow filter element
8 Bypass filter element
9 Oil pump
10 Oil strainer
11 Turbocharger
12 Oil jet for gear
13 Vacuum pump
14 Idler bushing
15 Timing gear
16 Balance shaft bushing LH
17 Crankshaft main bearing
18 Connecting rod bearing
19 Connecting rod bushing
20 Piston
21 Balance shaft bushing RH
22 Supply pump gear bushing
23 Supply pump idler gear bushing
24 Supply pump idler gear shaft
25 Check valve for oil jet
26 Rocker bushing
27 Camshaft bushing
28 Rocker roller
29 Oil pan

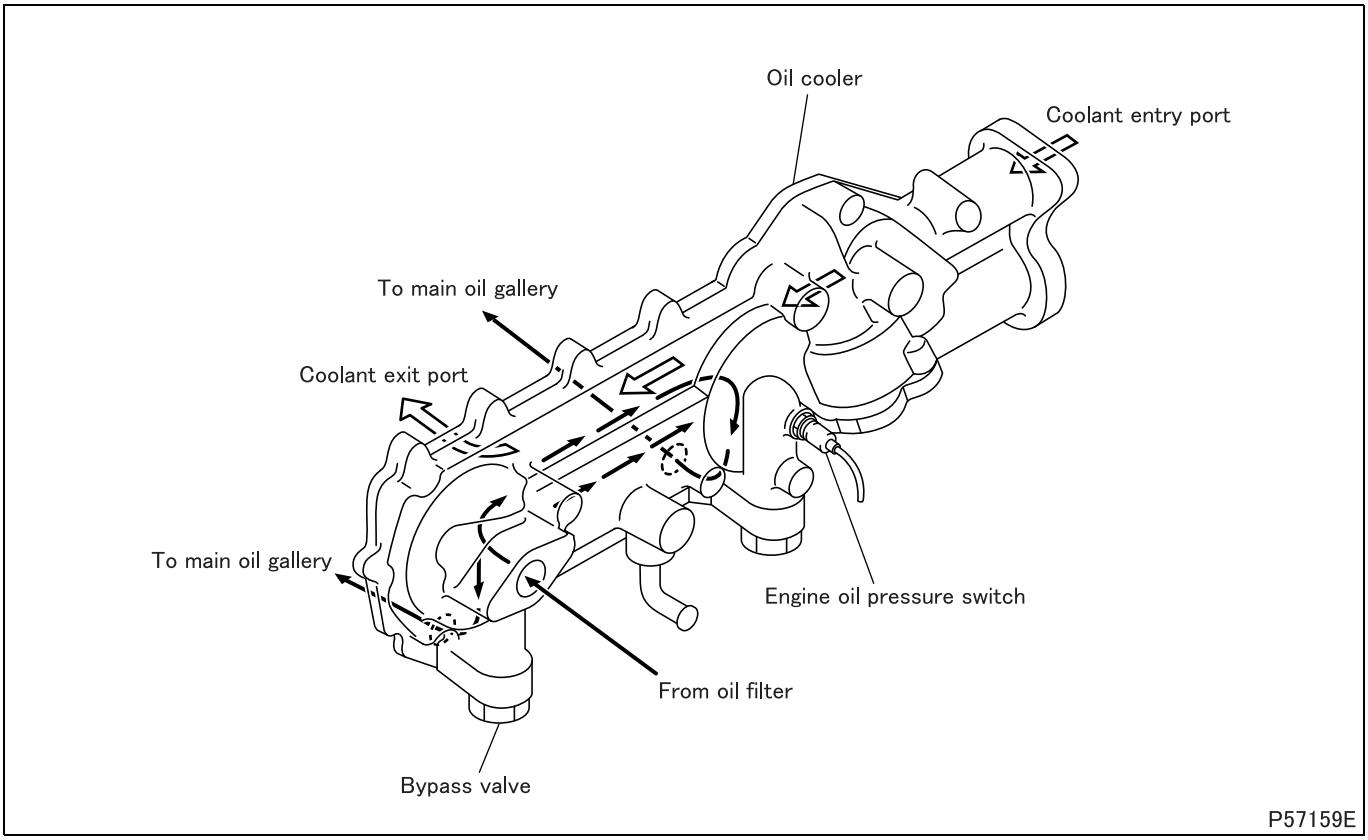
A: Orifice

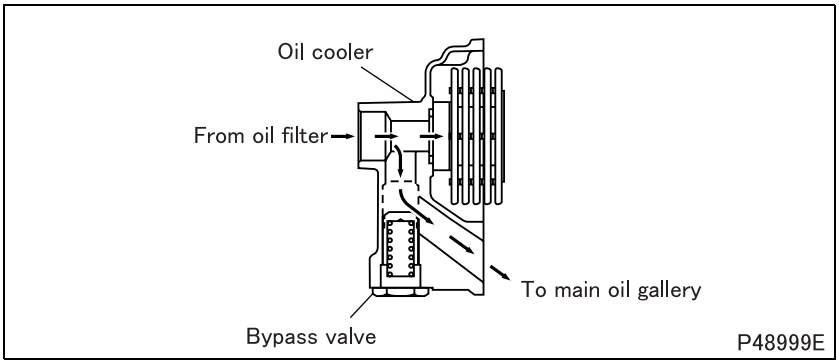
2. Oil Pump



- This engine uses a gear-type oil pump driven by the rotation of the crankshaft transmitted through the engagement of the crankshaft gear and the oil pump gear.

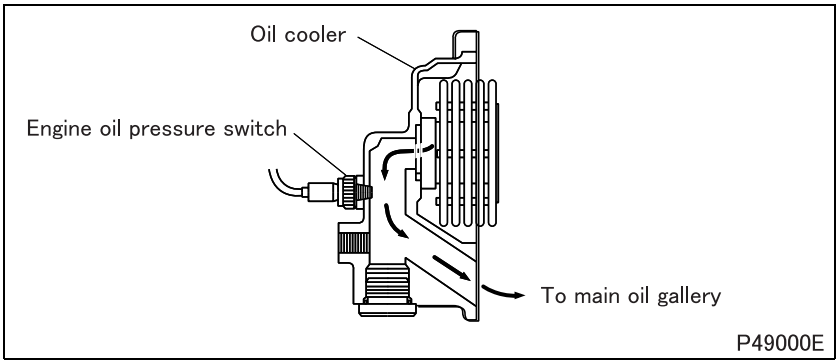
3. Oil Cooler





3.1 Bypass valve

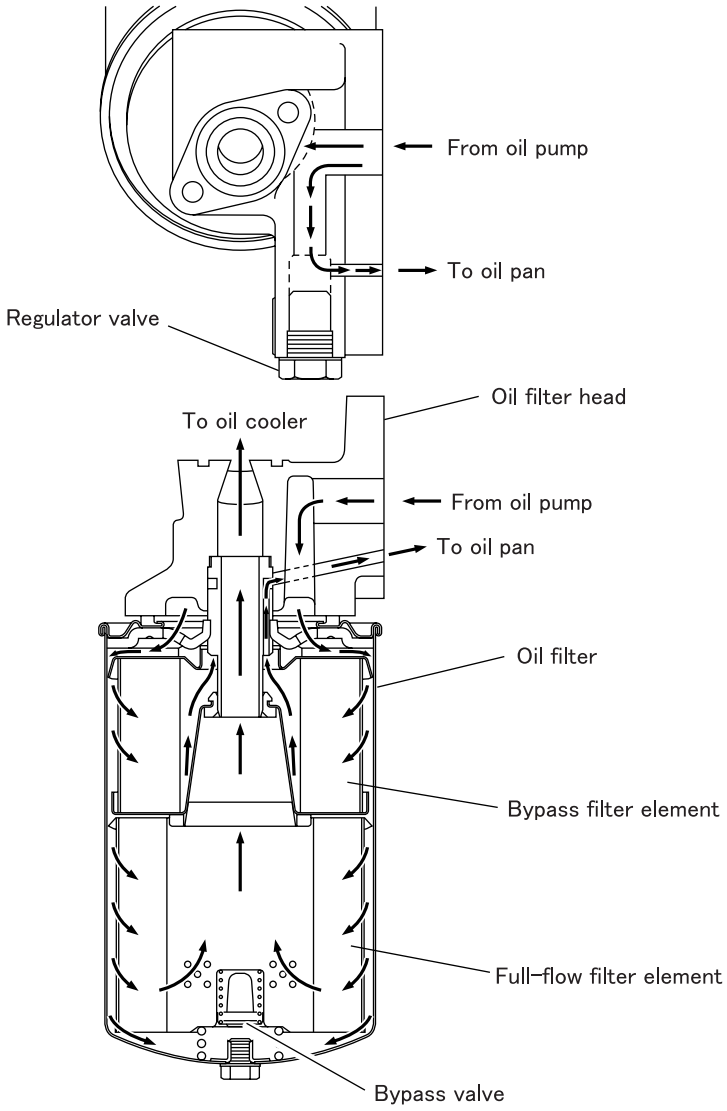
- When the engine oil is cool and its viscosity is high, or when the oil cooler element becomes clogged and restricts the flow of the engine oil, the bypass valve opens to let the engine oil bypass the oil cooler and flow directly to the main oil gallery.



3.2 Engine oil pressure switch

- When the pressure of the engine oil to the main oil gallery drops below the specified level, an electrical contact inside the engine oil pressure switch closes.
- This causes a warning lamp on the meter cluster to illuminate and notify the operator of the excessive pressure drop.

4. Oil Filter

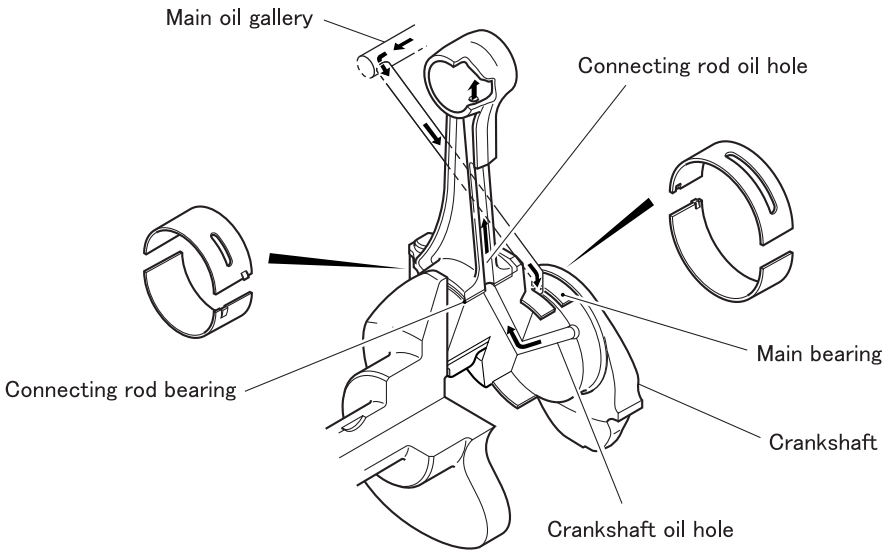


- The oil filter used in this engine is a spin-on, paper-filter type that incorporates both a bypass filter and a full-flow filter.
- A bypass valve is installed in the lower part of the oil filter. When the filter elements are clogged, this valve opens to let the engine oil bypass the filter elements and flow directly to the oil cooler, thereby preventing seizures in the engine.
- A regulator valve is installed on the oil filter head. When the oil pressure in the main oil gallery exceeds the specified level, the regulator valve opens to adjust the oil pressure by returning part of the engine oil to the oil pan.

5. Lubrication of Engine Components

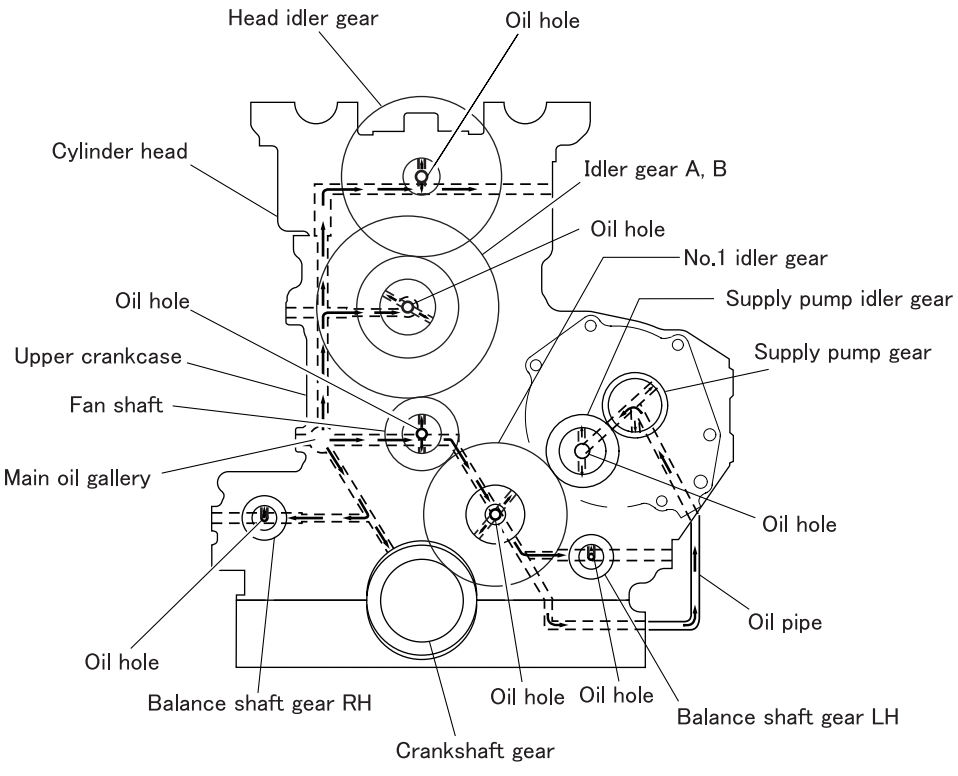
- The engine oil in the main oil gallery lubricates the engine components in the following ways.

5.1 Main bearing and connecting rod bearing

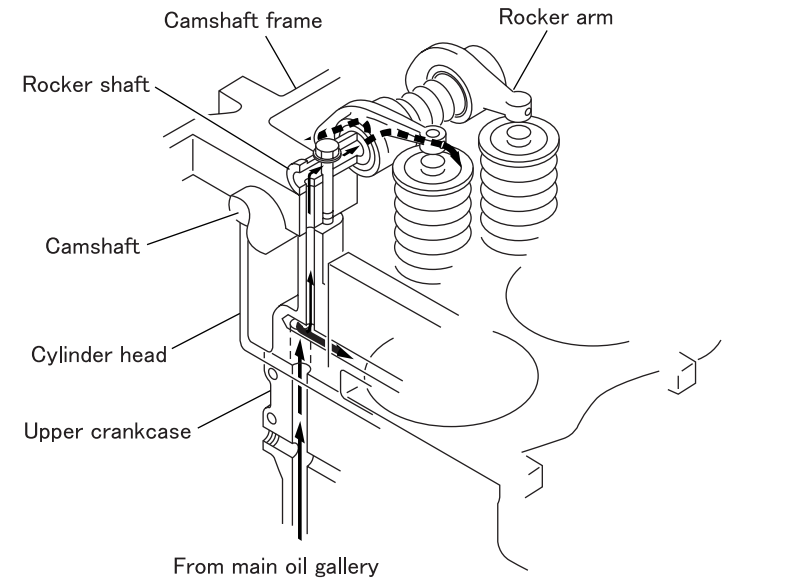


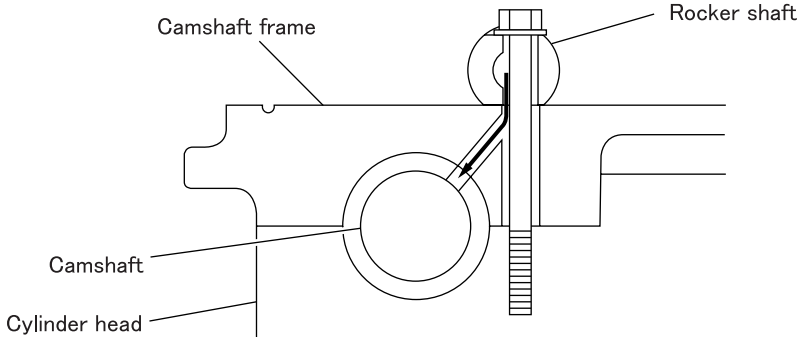
- Engine oil supplied through an oil passage in the crankshaft lubricates the big end (connecting rod bearing) of each connecting rod. Simultaneously, engine oil supplied through an oil passage in the connecting rod lubricates the connecting rod's small end.

5.2 Timing gears



5.3 Valve mechanism

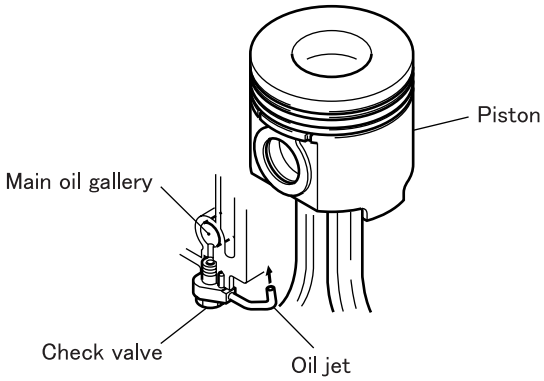




P49003E

- The engine oil flows from the main oil gallery to the rocker shaft through the oil passages in the upper crankcase, cylinder head, and camshaft frame.
- The engine oil in the rocker shaft lubricates the rocker arms and camshaft, then returns to the oil pan.

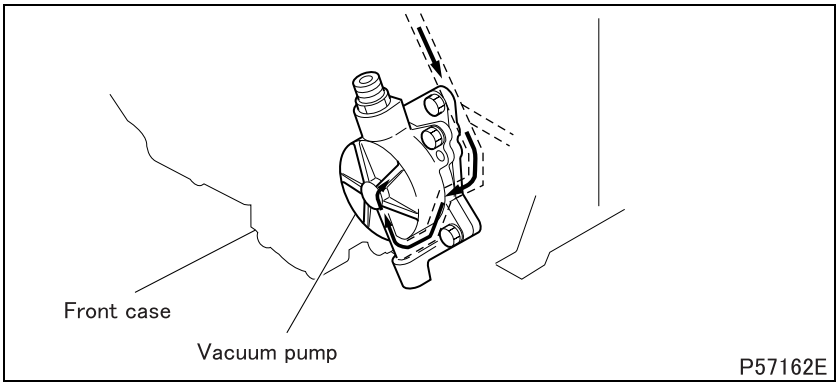
5.4 Check valves and oil jets



P56457E

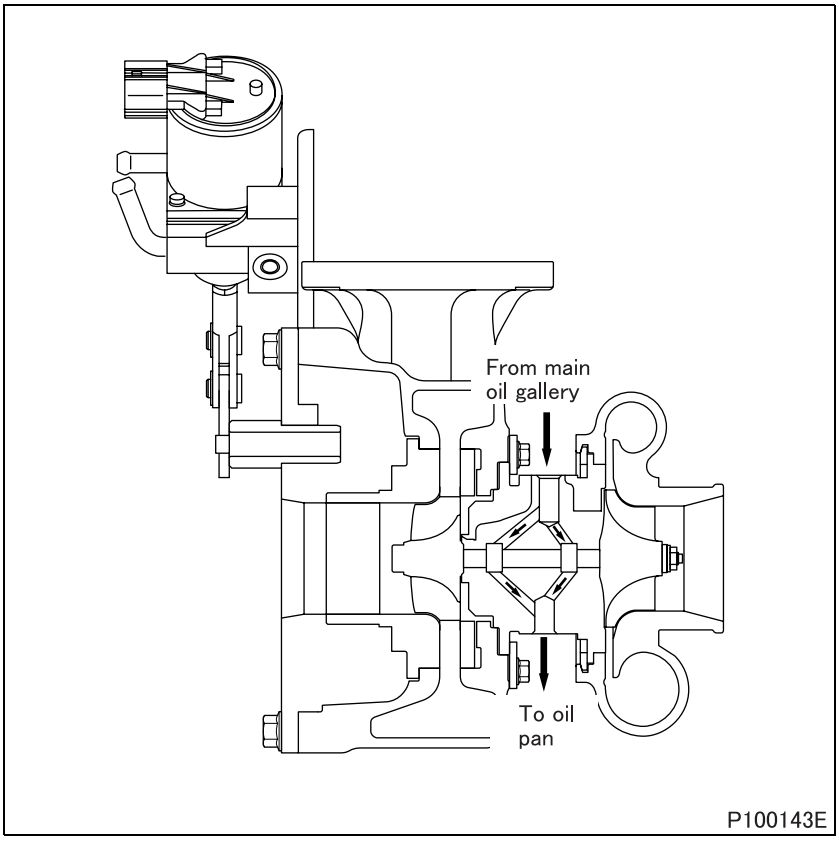
- An oil jet is fitted in the lower part of the main oil gallery for each cylinder.
- Engine oil is sprayed out of the oil jet into the piston to cool the piston.
- Each oil jet is fitted with a check valve that opens and closes at predetermined oil pressure levels. At low engine speeds, the check valve closes to maintain the required volume of oil in the lubrication system and prevent reductions in oil pressure.

5.5 Vacuum pump



- Engine oil flows through the oil passages in the front case to the vacuum pump.
- The oil in the pump lubricates the vanes, and then is discharged into the front case from the air discharge port of the vacuum pump along with air, and returns to the oil pan.

5.6 Turbocharger



- Engine oil is fed to the bearing housing from the main oil gallery through the oil pipe to lubricate the inside of the turbocharger.
- The piston rings, which are installed on both sides of the turbine wheel shaft, serve as oil seals.

Possible causes \ Symptoms		Engine is difficult to start	Overheating	Low oil pressure	Excessive oil consumption (oil leakage)	Reference Gr
Oil cooler	Incorrectly mounted element		O	O	O	
	Defective gasket		O	O	O	
	Defective O-ring		O	O	O	
	Clogged element		O	O		
	Damaged element		O	O	O	
	Weakened bypass valve spring		O			
Oil pump	Malfunctioning oil pump		O	O		
	Interference between oil pump gear and oil pump case and/or cover	O		O		
Oil filter	Incorrect installation				O	
	Clogged element		O	O		
	Defective gasket			O		
Weakened regulator valve spring				O		
Incorrectly mounted and/or clogged oil strainer			O	O		
Defective fan shaft front oil seal					O	Gr11
Defective crankshaft rear oil seal					O	
Incorrectly mounted front case					O	
Defective piston cooling oil jet(s)			O	O		
Incorrectly mounted gear lubrication oil jet				O		
Oil working its way up into combustion chamber(s) through piston rings					O	
Oil working its way down into combustion chamber(s) through valves					O	
Too high oil viscosity		O				
Poor oil quality			O			
Deterioration of oil			O			
Fuel mixed with oil			O

1. Oil Filter Replacement

<Downward type>

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Drain plug (oil filter)	9.8 ± 1.96 {7.2 ± 1.4, 1.0 ± 0.2}	–

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Oil filter	Engine oil (API classification CJ-4)	Approx. 1 L {1.1 qts}

Special tools

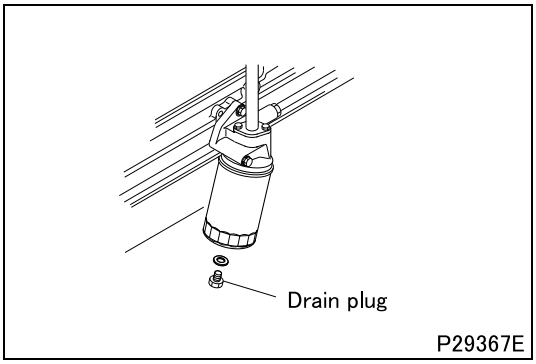
Mark	Tool name and shape	Part No.	Application
a	Oil filter element socket  P08550	MH061566	Removal of oil filter

WARNING ⚠

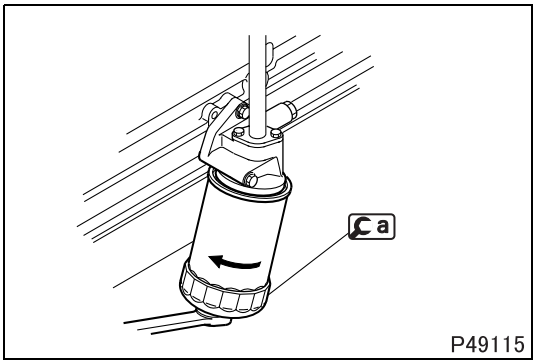
- **Wipe up any spilled engine oil, as it can cause fires.**

CAUTION ⚠

- **Make sure not to put any engine oil on the belt when working on the oil filter. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**



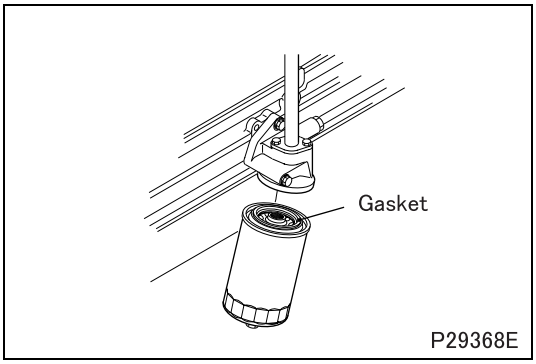
P29367E



P49115

[Removal]

- Remove the drain plug and drain the oil out of the oil filter.



[Installation]

- Clean the oil filter mounting surfaces of the oil filter head.
- Apply a thin coat of engine oil on the oil filter gasket.
- Screw in the oil filter by hand until the gasket touches the oil filter head. Then, tighten the filter by turning it further by three quarters (3/4) of a turn.
- After installing the oil filter, start the engine and check that there are no oil leaks.
- Remove and reinstall the oil filter if it is leaky.
- Stop the engine and check the engine oil level.
- Add engine oil if necessary.

<Upward type>

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Oil filter	Engine oil (API classification CJ-4)	Approx. 1 L {1.1 qts}

Special tools

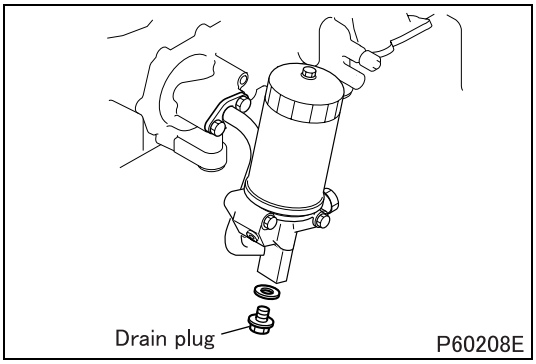
Mark	Tool name and shape	Part No.	Application
a	Oil filter wrench  P105191	MH063855	Removal of oil filter

WARNING ⚠

- **Wipe up any spilled engine oil, as it can cause fires.**

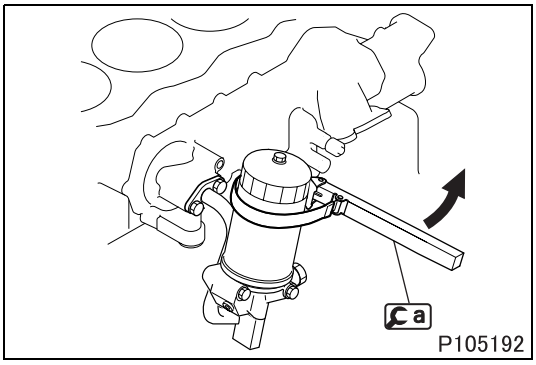
CAUTION ⚠

- **Make sure not to put any engine oil on the belt when working on the oil filter. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**



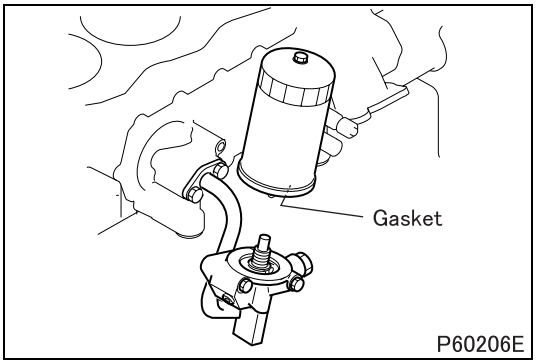
[Removal]

- Remove the drain plug and drain the oil out of the oil filter.



NOTE

- **When the oil filter is removed, a small amount of engine oil may spill out. Before proceeding to the removal procedure, keep a piece of waste cloth ready for catching any spilled oil.**



[Installation]

- Clean the oil filter mounting surfaces of the oil filter head.
- Apply a thin coat of engine oil on the oil filter gasket.
- Screw in the oil filter by hand until the gasket touches the oil filter head. Then, tighten the filter by turning it further by three quarters (3/4) of a turn.
- After installing the oil filter, start the engine and check that there are no oil leaks.
- Remove and reinstall the oil filter if it is leaky.
- Stop the engine and check the engine oil level.
- Add engine oil if necessary.

2. Engine Oil Replacement

<Downward type>

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Drain plug (oil filter)	9.8 ± 1.96 {7.2 ± 1.4, 1.0 ± 0.2}	–
–	Drain plug (oil pan)	34.3 to 43.1 {25 to 32, 3.5 to 4.4}	–

Lubricant and/or sealant

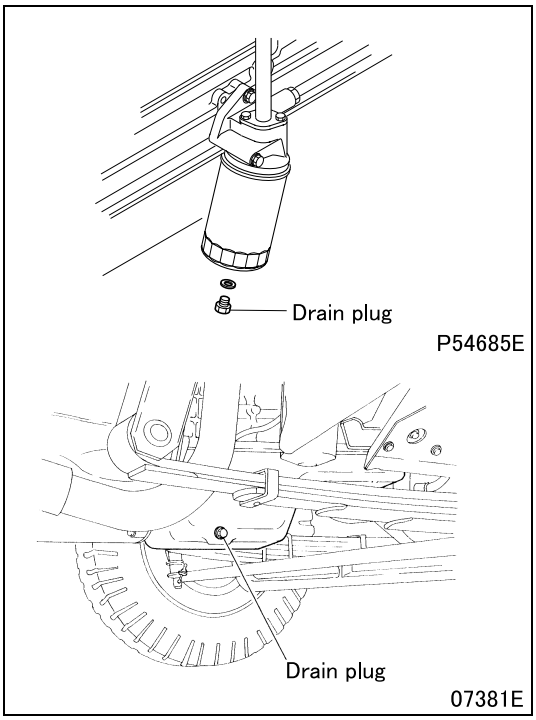
Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Oil filter	Engine oil (API classification CJ-4)	Approx. 1 L {1.1 qts}
	Oil pan		Approx. 7 L {7.4 qts}

WARNING ⚠

- **Wipe up any spilled engine oil, as it can cause fires.**

CAUTION ⚠

- **Make sure not to put any engine oil on the belt during engine oil replacement. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**



[Draining]

- Remove the filler cap.
- Remove the drain plugs of the oil filter and oil pan to drain out the engine oil.

[Refilling]

- Tighten the drain plug to the specified torque, then pour a specified amount of new engine oil into the engine.
- Stop the engine and check the engine oil level.
- Add engine oil if necessary.

<Upward type>

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Drain plug (oil pipe)	34.3 to 39.2 {25 to 29, 3.5 to 3.9}	–
–	Drain plug (oil pan)	34.3 to 43.1 {25 to 32, 3.5 to 4.4}	–

Lubricant and/or sealant

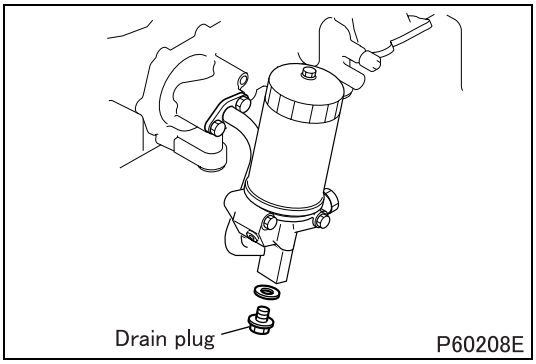
Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Oil filter	Engine oil (API classification CJ-4)	Approx. 1 L {1.1 qts}
	Oil pan		Approx. 9 L {9.5 qts}

WARNING ⚠

- **Wipe up any spilled engine oil, as it can cause fires.**

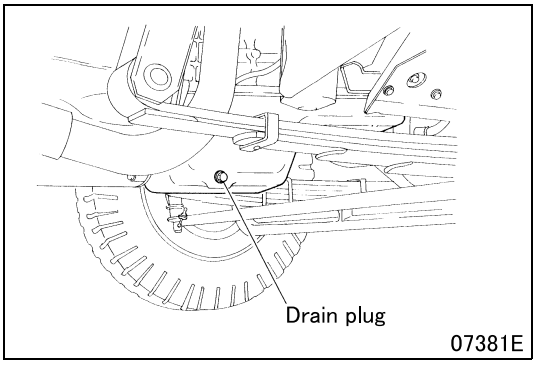
CAUTION ⚠

- **Make sure not to put any engine oil on the belt during engine oil replacement. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**



[Draining]

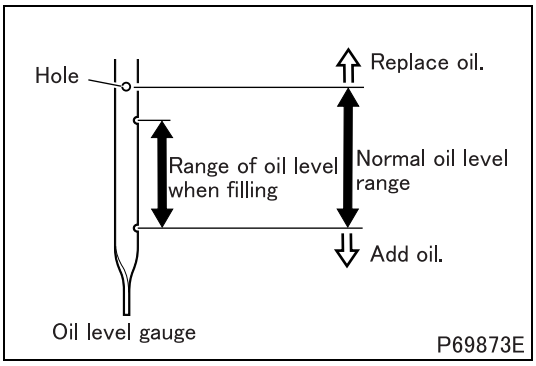
- Remove the filler cap.
- Remove the drain plugs of the oil filter and oil pan to drain out the engine oil.



[Refilling]

- Tighten the drain plug to the specified torque, then pour a specified amount of new engine oil into the engine.
- Stop the engine and check the engine oil level.
- Add engine oil if necessary.

3. Engine Oil Level Inspection



- When regenerating the DPF (diesel particulate filter), a part of the injected fuel may mix into the engine oil and may increase the quantity of oil.
- If the oil level is out of the normal range, add or replace the engine oil.

CAUTION ⚠

- **If the engine oil level exceeds the hole on the oil level gauge, replace the engine oil immediately as the oil has deteriorated and may cause seizure.**

- If remarkable increase of the engine oil is observed, check the following even the oil level is within the normal range.
  - Seizure of piston ring and piston
  - Excessive clearance between piston and cylinder liner

4. Oil Pressure Measurement

Service standards

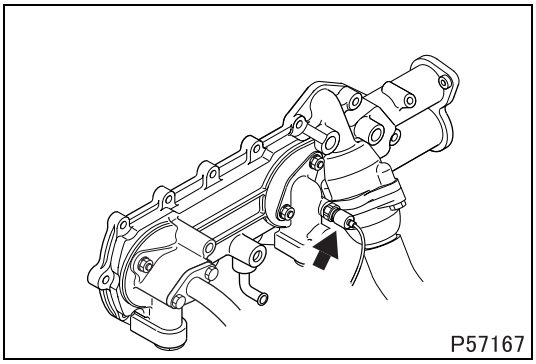
Location	Maintenance item		Standard value	Limit	Remedy
–	Oil pressure (oil temperature at 70 to 90°C {158 to 195°F})	No-load minimum speed	195 kPa {28 psi, 2.0 kgf/cm^2}	98 kPa {14 psi, 1.0 kgf/cm^2}	Inspect
		No-load maximum speed	295 to 490 kPa {43 to 71 psi, 3 to 5 kgf/cm^2}	195 kPa {28 psi, 2.0 kgf/cm^2}	

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Engine oil pressure switch	7.8 to 14.7 {5.8 to 11, 0.8 to 1.5}	Sealant With cold engine

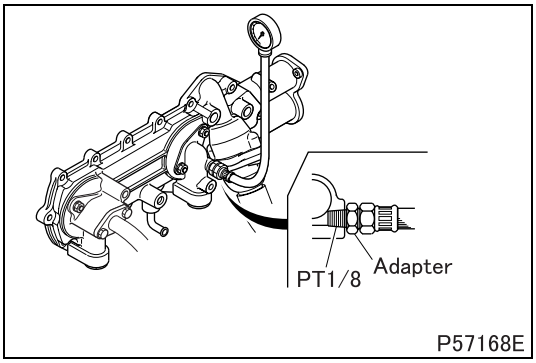
Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Engine oil pressure switch threads	ThreeBond 1215	As required



P57167

- Remove the engine oil pressure switch.



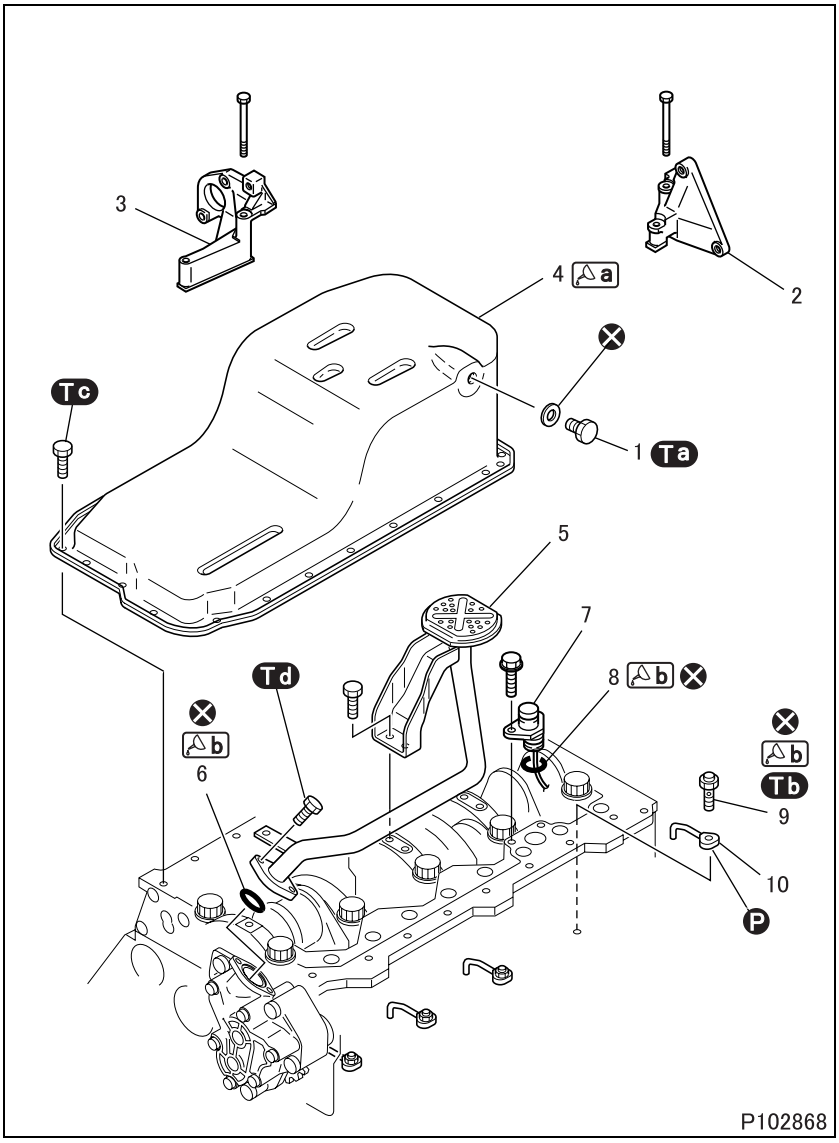
P57168E

- Using an adapter, connect an oil pressure gauge to the engine oil pressure switch mounting hole.
- Warm up the engine until the oil temperature reaches 70 to 90°C {158 to 195°F}.
- Measure the oil pressure while running the engine at a minimum speed and then at maximum speed, both under no load.
- If the measurements are below the specified limits, overhaul the lubrication system.
- After taking the measurements, apply sealant to the threads of the oil pressure switch and tighten the switch to the specified torque.

CAUTION ⚠

- **Reinstall the oil pressure switch only when the engine is cold.**

OIL PAN, OIL STRAINER AND OIL JETS



● **Disassembly sequence**

1 Drain plug

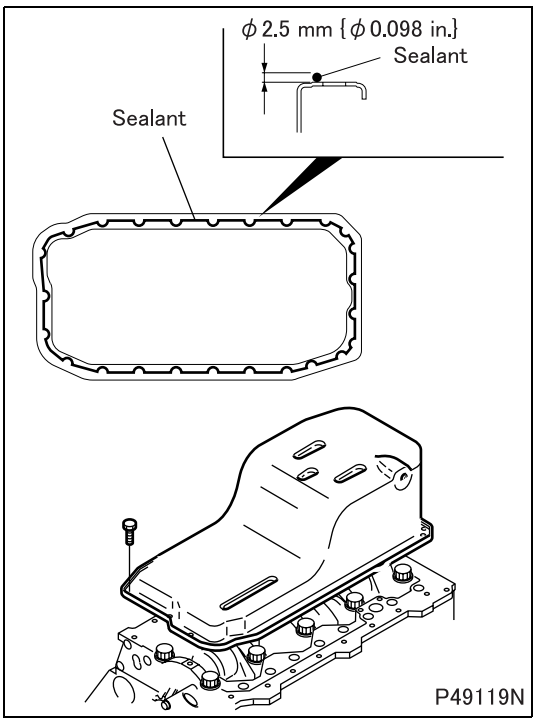
Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Crankcase mounting surface of oil pan	ThreeBond 1207C	As required
b	O-ring	Engine oil	As required
	Check valve threads		

◆Installation procedure◆



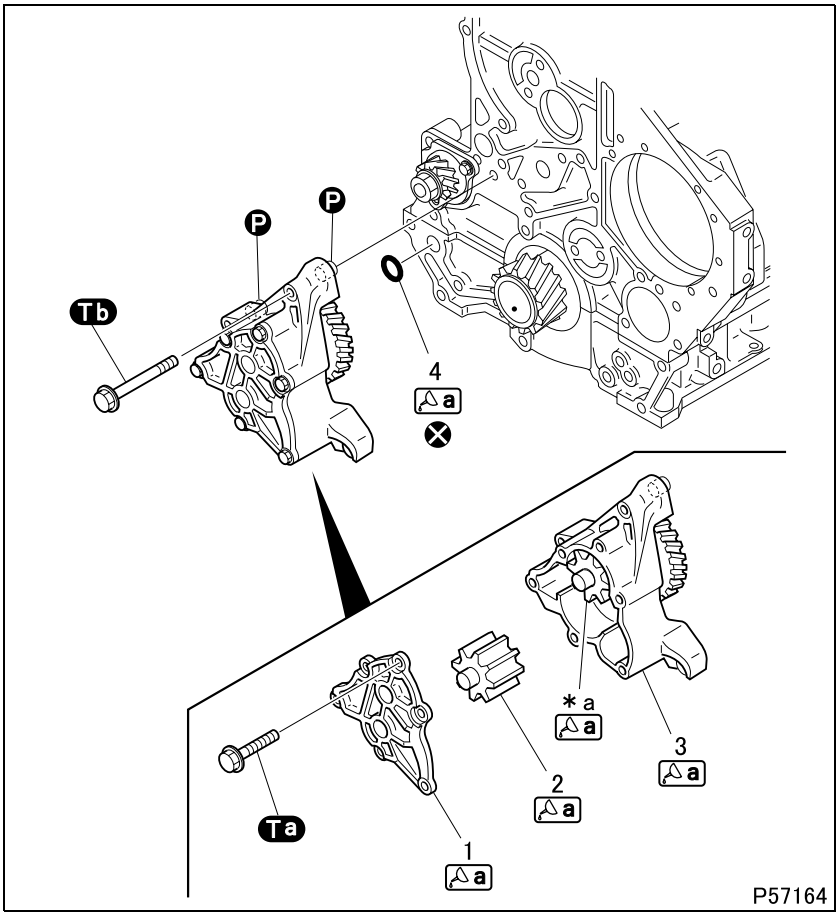
■ **Installation: Oil pan**

- Clean the mating surfaces of each part.
- Apply a bead of sealant to the mating surface of the oil pan evenly and without any breaks as shown in the illustration.
- Mount the oil pan within three minutes of applying the sealant. Make sure that the sealant stays in place.

CAUTION ⚠

- **Do not start the engine less than an hour after installation.**
- **If the oil pan mounting bolts were loosened or removed, be sure to reapply sealant.**

OIL PUMP



● **Disassembly sequence**

1 Oil pump cover
2 Driven gear
3 Gear and case assembly
4 O-ring

***a**: Drive gear

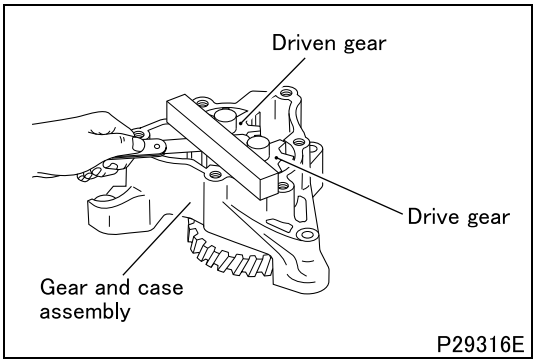
◆Inspection procedure◆

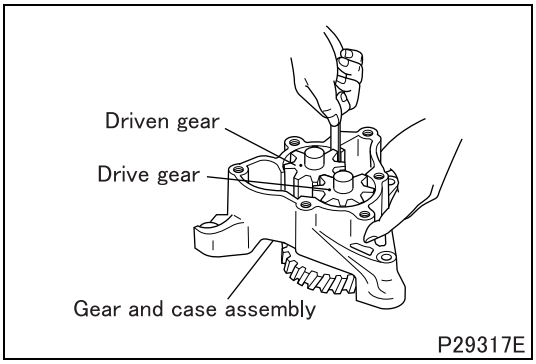


P29316E

■ **Inspection: Driven gear, drive gear and gear and case assembly**

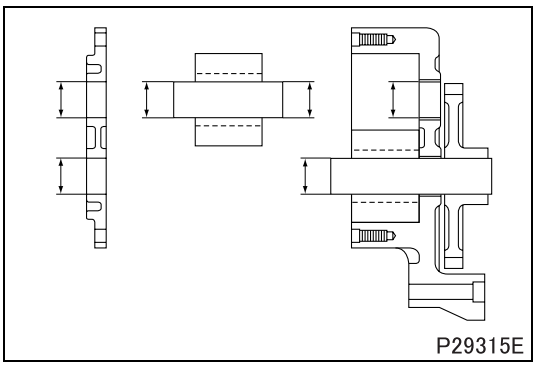
- Carry out the following inspection. Replace the oil pump if any defects are found.

(1) Sinkage of each gear from gear and case assembly end surface



P29317E

(2) Gear and case assembly-to-tooth tip clearance for each gear

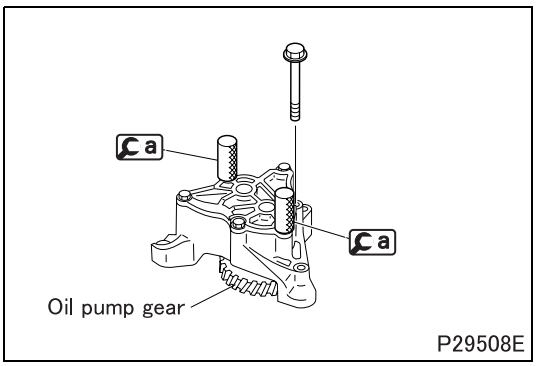


P29315E

■ **Inspection: Oil pump cover, driven gear, and gear and case assembly**

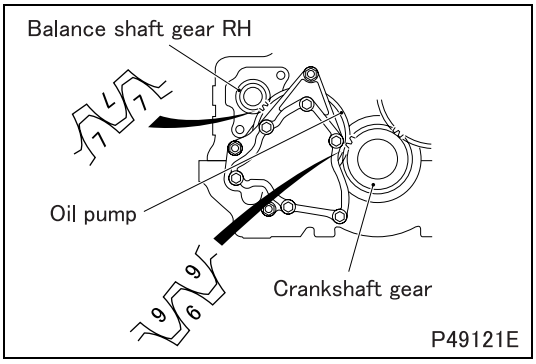
- Measure the clearance between each gear's shaft and the oil pump cover, as well as between each gear's shaft and the gear and case assembly.
- If the measurements are not within the standard value range, replace the oil pump.

◆Installation procedure◆



■ **Installation: Oil pump cover and gear and case assembly**

- Apply engine oil to each component.
- Hold the oil pump cover in place on the gear and case assembly by fitting two a s in the illustrated locations.
- Install a bolt into an empty bolt hole and tighten it to the specified torque.
- Remove the two a s. Install the rest of the bolts and tighten them to the specified torque.
- After installing all the bolts, turn the oil pump gear by hand and check that it rotates smoothly.
- Disassemble and reassemble the oil pump cover and gear and case assembly if the oil pump gear does not rotate smoothly.



■ **Installation: Oil pump**

- Place the No.1 cylinder piston at top dead center to bring the crankshaft gear to an appropriate position.
- Inject approximately 5 cm^3 {0.3 cu. in.} of engine oil.
- Align the mating mark "**6**" on the crankshaft gear and the mating mark "**7**" on the balance shaft gear RH with the corresponding mating marks on the oil pump gear, and then install the oil pump gear.

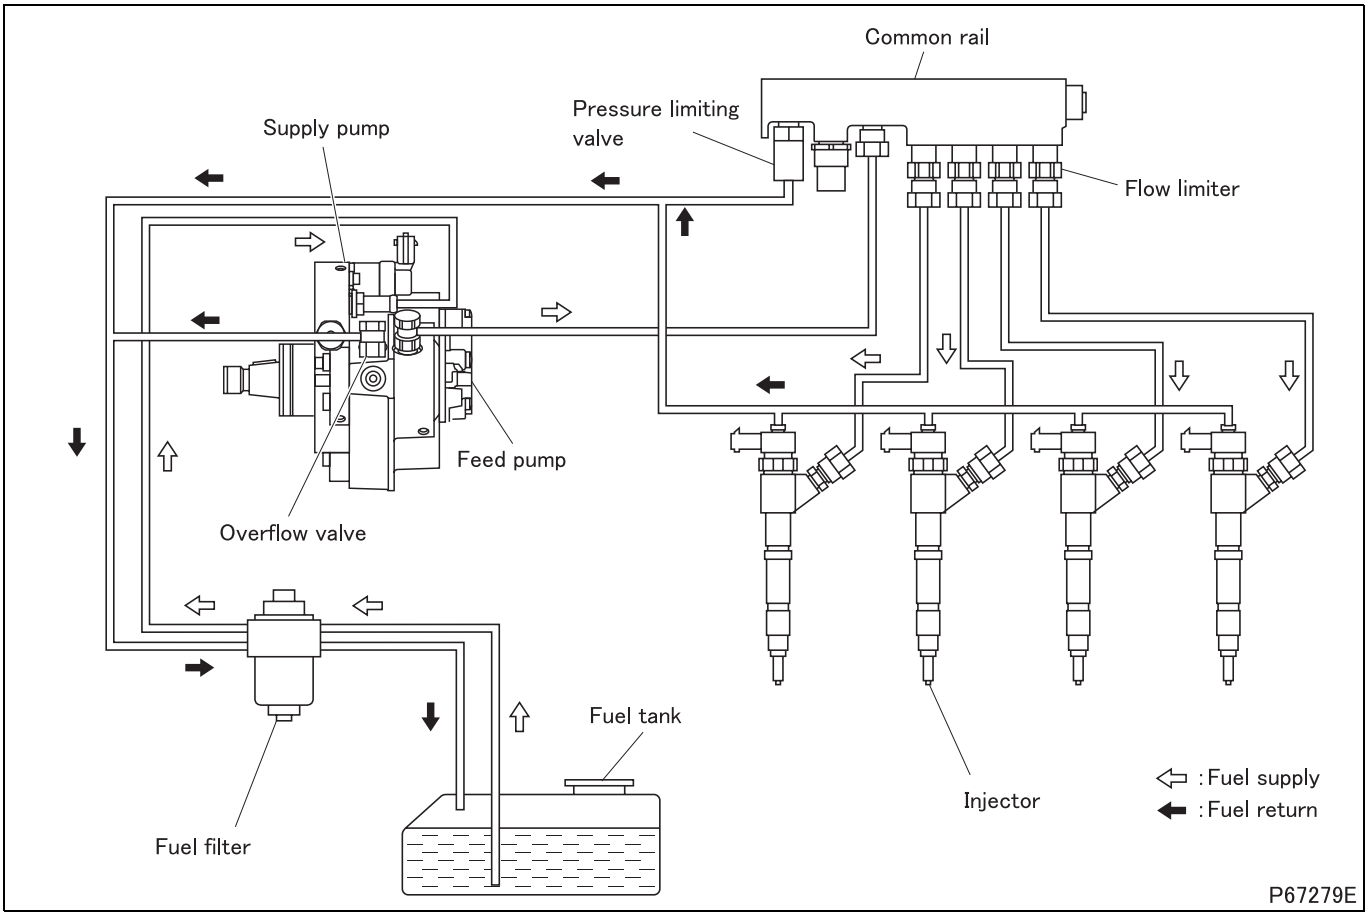
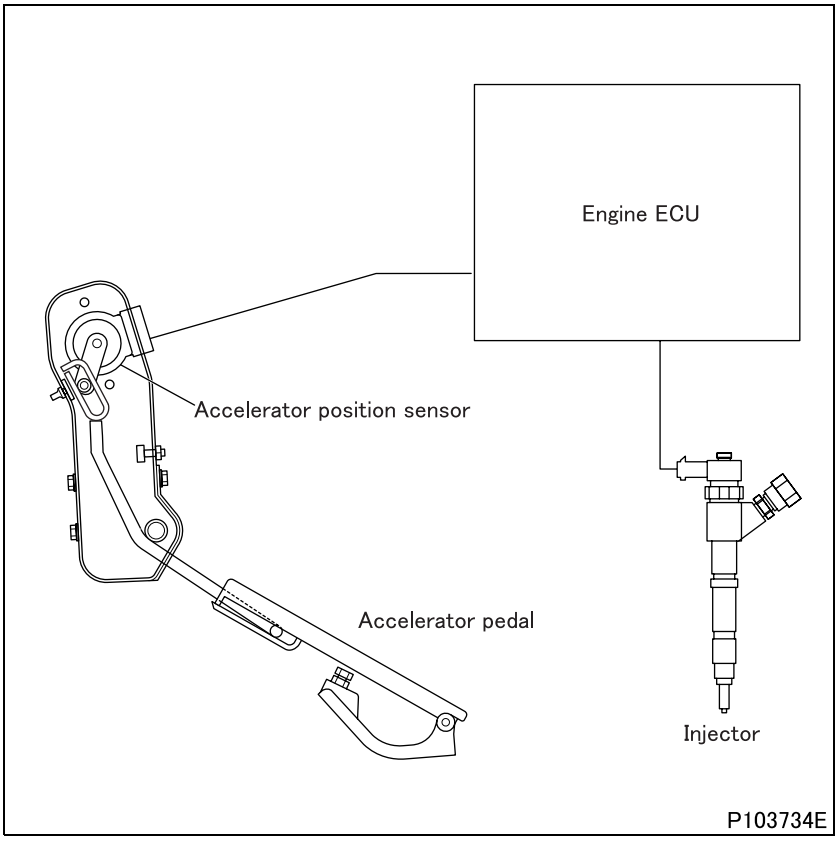
1. Fuel System (Flow of Fuel)



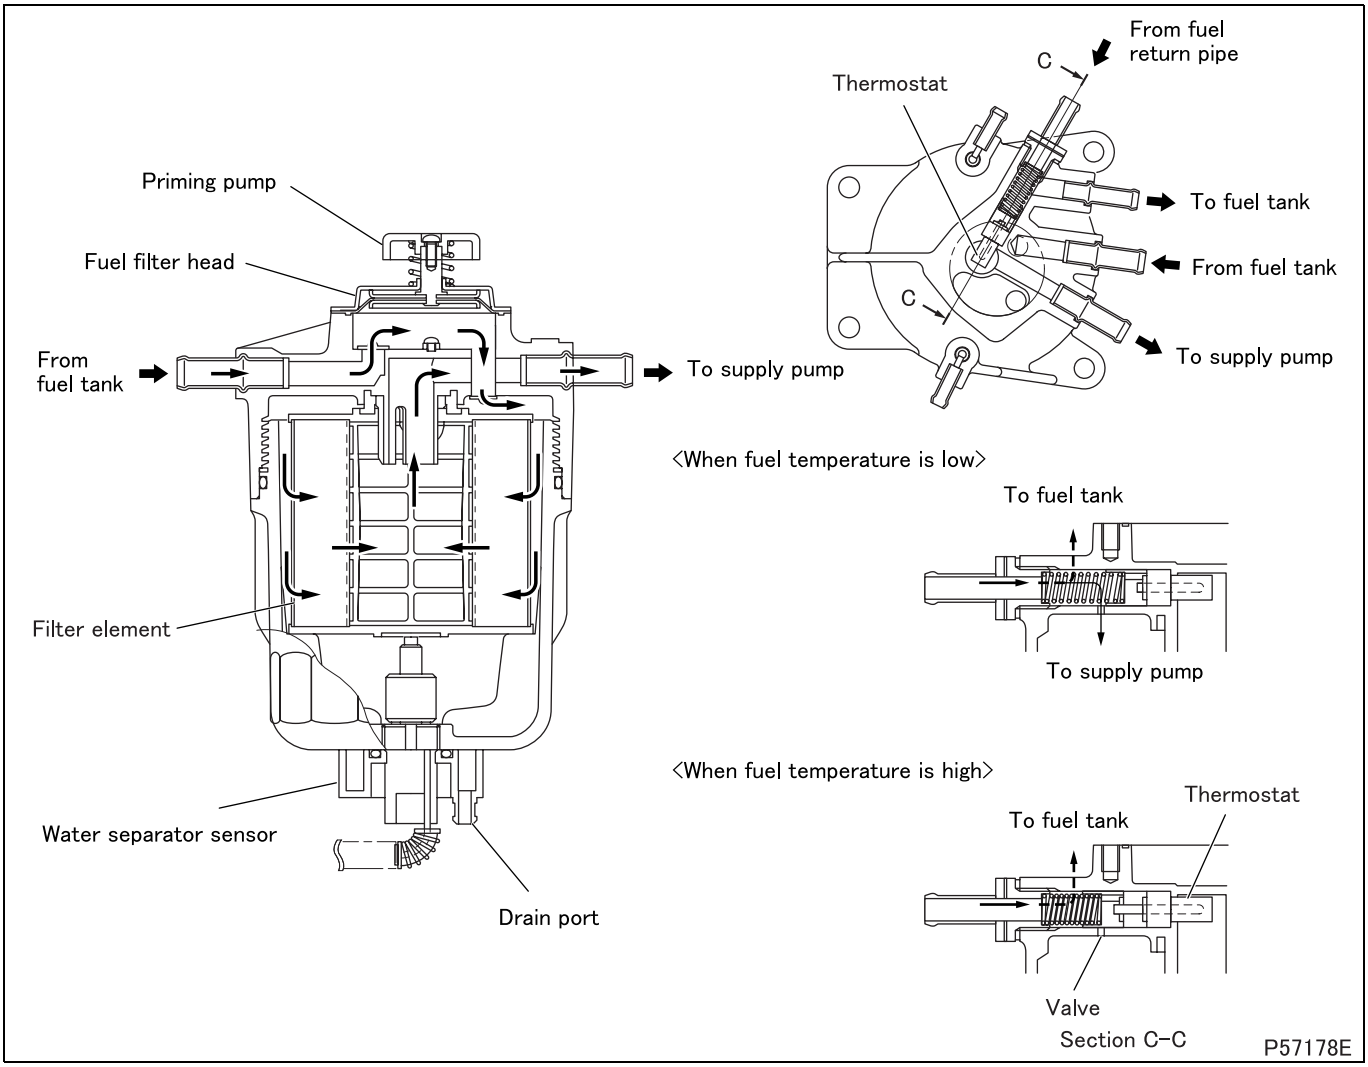
- The feed pump, which is driven by the camshaft inside the supply pump, draws up the fuel from inside the fuel tank and sends it through the fuel filter, where dust and other impurities in the fuel are filtered out.
- The filtered fuel is then sent to the supply pump, where it is compressed. The compressed fuel is accumulated in the common rail for a time, then sprayed out through the injection nozzles into the combustion chamber.
- If fuel leaks from an injection pipe at the pipe joint, the flow limiter is activated to close the fuel passage, preventing the fuel from flowing elsewhere.
- The excess fuel from the injectors returns to the fuel tank through the fuel return hose.
- When the internal fuel pressure of the Common Rail exceeds the limit, the pressure limiting valve opens to allow part of the fuel to return to the fuel tank.
- When the internal fuel pressure of the supply pump exceeds the limit, the overflow valve opens to allow part of the fuel to return to the fuel tank.

2. Engine Control



- The engine is electronically controlled by the engine electronic control unit (ECU).
- The accelerator position sensor detects how much the accelerator pedal is pressed and sends the corresponding electronic signal to the engine electronic control unit, which calculates an appropriate amount of fuel based on the signals and controls fuel injection accordingly.

3. Fuel Filter



- The fuel filter removes impurities in the fuel through the filter element and also separates water from fuel.
- The water that has been separated from the fuel collects at the bottom of the fuel filter. A water separator sensor is installed in the fuel filter, which activates the warning lamp on the meter cluster when the water reaches a certain level.
- The water can be drained through the drain port by loosening the water separator sensor.
- A priming pump is provided at the fuel filter head. The priming pump is used for air-bleeding the fuel system.
- When the fuel temperature rises, the thermostat swells and the valve of the fuel filter head is closed. The high-temperature fuel entirely returns to the fuel tank through the fuel return pipe.
- When the fuel temperature lowers, the thermostat does not swell and the valve to the fuel filter remains open. The high-temperature fuel returning through the fuel return pipe is let through the valve to mix into the fuel around the element. The fuel around the element is warmed as a result and wax in it (precipitated when the fuel temperature is low) is dissolved to prevent clogging of the element.

Possible causes \ Symptoms		Engine refuses to start	Engine is difficult to start	Engine knocks	Engine output is unstable	Engine output is insufficient	Engine maximum speed is too high	Engine is idling unstably	Engine stops soon after starting	Engine does not reach maximum speed	Engine does not stop	Accelerator pedal is too stiff	Fuel supply is insufficient	Warning lamp illuminates	Reference Gr

ON-VEHICLE INSPECTION AND ADJUSTMENT

1. Inspecting and Adjusting No-load Minimum and Maximum Speeds

Service standards

Location	Maintenance item	Standard value	Limit	Remedy
–	No-load minimum speed (idling speed)	650 ± 25 rpm	–	Rectify or replace
–	No-load maximum speed	3100 ± 50 rpm	–	Rectify or replace

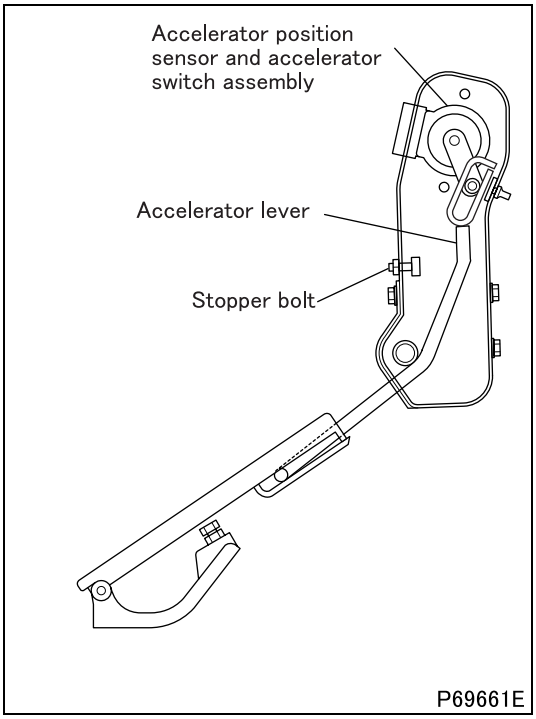
[Work before inspection and adjustment]

- Before starting the inspection and adjustment, carry out the following preparatory steps:
- Warm up the engine until the engine coolant temperature is approximately 80 to 95°C {176 to 203°F};
- Turn off all lamps and accessories;
- Put the transmission in neutral (P-range for automatic transmission);
- Set the steering wheel at the straight-ahead position; and
- Attach the probe of the tachometer to an infector.

[Inspection and adjustment]

(1) No-load minimum speed

- Without pressing the accelerator pedal, measure the engine speed.
- If the speed is not within the standard value range, inspect the accelerator position sensor and accelerator switch assembly. (See Gr13EA.)
- If no defects are evident during the above inspection, check for any diagnosis codes related with the fuel system and inspect the supply pump and engine electronic control unit. (See Gr13EA.)



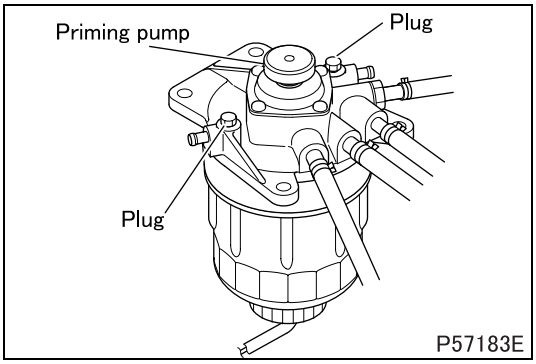
(2) No-load maximum speed

- Press the accelerator pedal as far as it will go.
- With the accelerator lever touching the stopper bolt, measure the engine speed.
- If the speed is not within the standard value range, inspect the accelerator position sensor and accelerator switch assembly. (See Gr13EA.)
- If no defects are evident during the above inspection, check for any diagnosis codes related with the fuel system and inspect the supply pump and engine electronic control unit. (See Gr13EA.)

2. Air-bleeding of Fuel System

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Plug	10 ± 2 {7.4 ± 1.5, 1 ± 0.2}	–



- Loosen one of the plugs on the fuel filter.
- Move the priming pump up and down to pump out the fuel.
- Continue operating the priming pump until the fuel flowing out of the plug is free of air bubbles.
- When no more air bubbles are evident, tighten the plug to the specified torque.
- Feed the fuel some more by operating the priming pump further until a strong resistance is felt.
- When the fuel temperature is low, you may not feel the resistance. Be sure to operate the priming pump several times even in such a case.
- Wipe up any spilled fuel and start the engine.
- Check that there is no fuel leakage.

WARNING ⚠

- **Fuel is highly flammable. Keep it away from flames and sources of heat.**
- **To avoid risk of fire, wipe up any spilled fuel.**

3. Fuel Filter Replacement

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

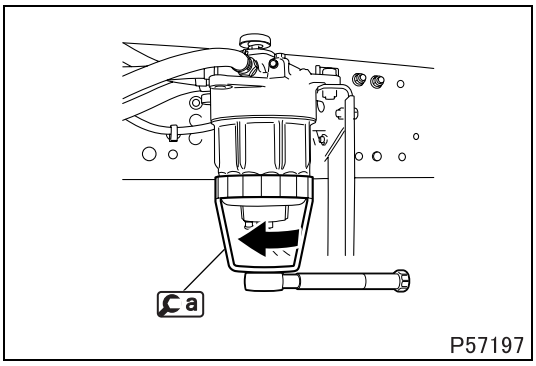
Mark	Parts to be tightened	Tightening torque	Remarks
–	Water separator sensor	5 ± 1 {3.7 ± 0.7, 0.5 ± 0.1}	–
–	Case	30 ± 2 {22 ± 1.5, 3.1 ± 0.2}	–

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	O-ring	Engine oil	As required

Special tools

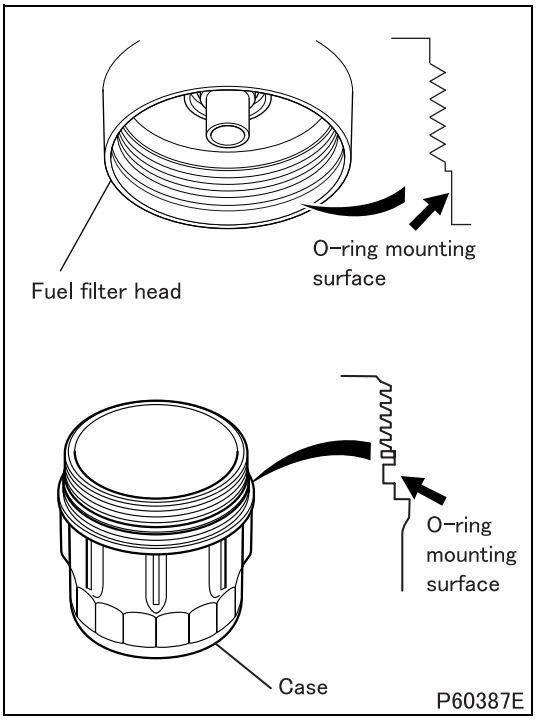
Mark	Tool name and shape	Part No.	Application
ⓐ	Filter wrench  P57179	MH063203	Removal and installation of case



P57197

[Removal]

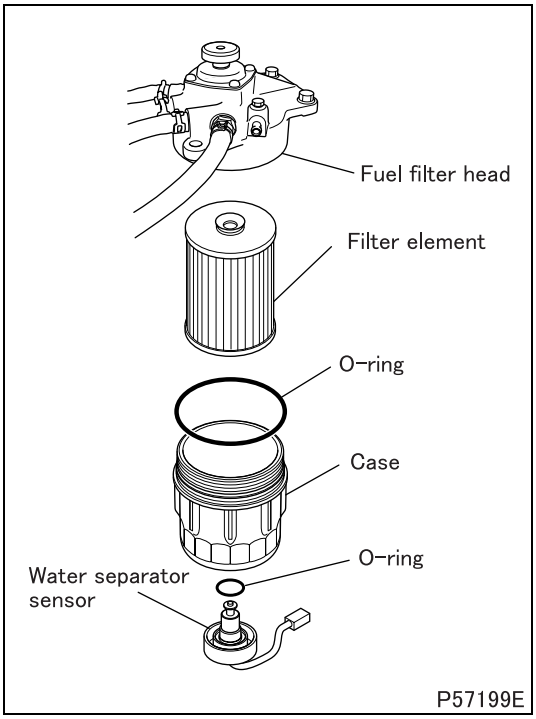
- Loosen the water separator sensor and drain fuel from the case.
- Remove the case using ⓐ.



P60387E

[Installation]

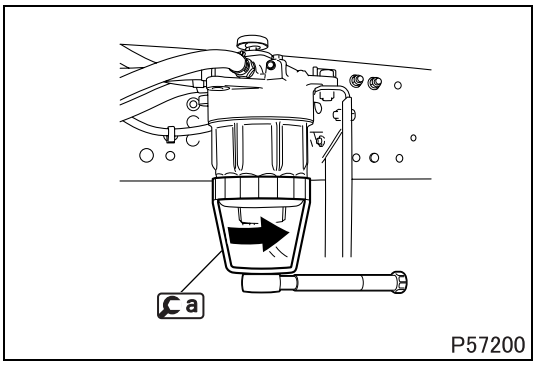
- Clean the O-ring mounting surface of the fuel filter head.



- Replace the filter element and O-ring with new one.
- Apply a thin coat of engine oil to the O-ring, and install it on the case and water separator sensor.

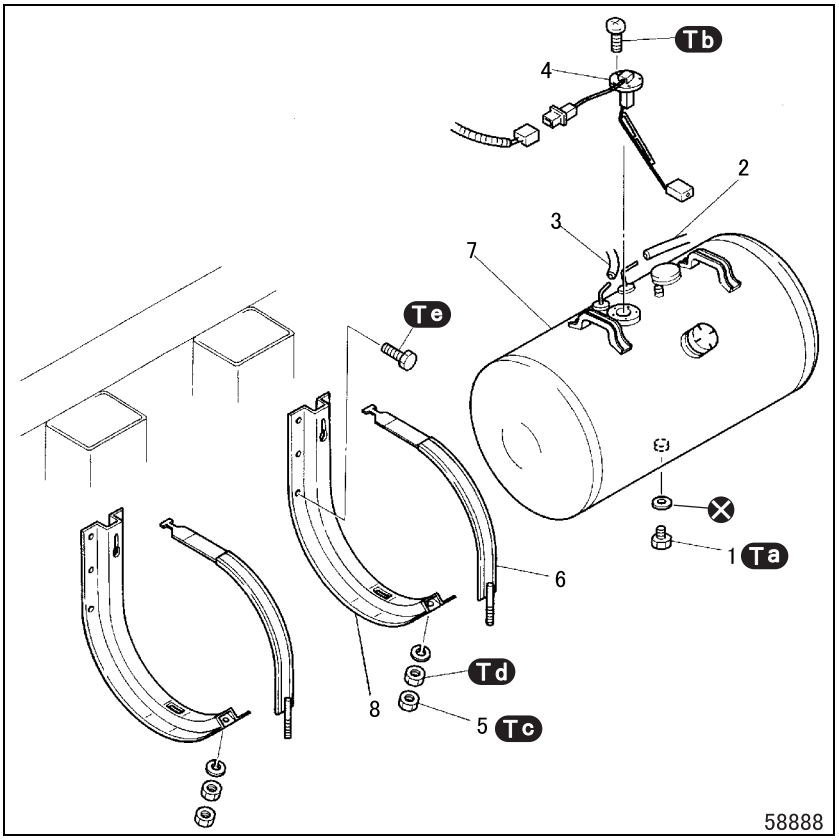
CAUTION ⚠

- **Be sure to use only genuine MITSUBISHI filter elements. The use of non-genuine fuel filters can cause engine failure.**
- **Prevent fine dust particles from entering the fuel filter and fuel pipe, as they can cause problems such as faulty fuel injection.**



- Use a to tighten the case to the specified torque.
- Install the water separator sensor, and then air-bleed the fuel system.
- Start the engine, and check that there is no fuel leakage.
- Reinstall the fuel filter if there is any leakage.

FUEL TANK <OUT SIDE FRAME TYPE>



● **Removal sequence**

1 Drain plug
2 Suction hose
3 Return hose
4 Fuel level sensor
5 Lock nut
6 Fuel tank band
7 Fuel tank
8 Fuel tank bracket

⊗: Non-reusable parts

● **Installation sequence**

Follow the removal sequence in reverse.

DANGER ⚠

- **Do not allow any flames or sources of heat near the fuel tank, as it may explode.**

WARNING ⚠

- **Fuel is highly flammable. Keep it away from flames and sources of heat.**
- **To avoid risk of fire, wipe up any spilled fuel.**

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Drain plug	49 to 88.2 {36 to 65, 5.0 to 9.0}	–

Te	Bolt (fuel tank bracket mounting)	70 to 90 {52 to 66, 7.1 to 9.2}	–

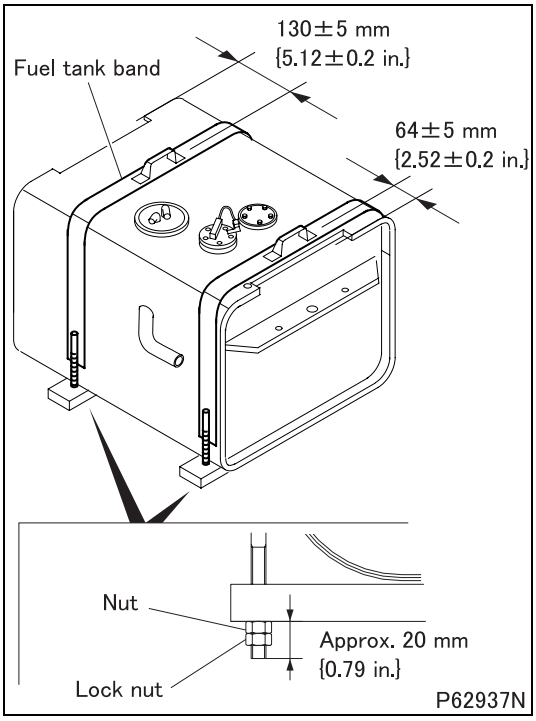
◆Inspection procedure◆



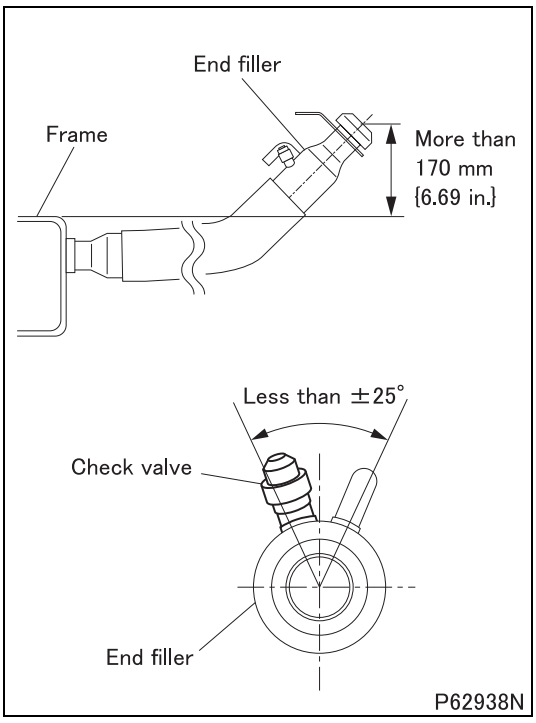
■ Installation: Fuel tank band

- Install the fuel tank band so that the position of the band and the protrusion of the band thread is as illustrated.

CAUTION ⚠

- **Install the fuel tank band so that the band isn't over the protrusion of the fuel tank.**

- Tighten the nuts alternately so that the fuel tank contacts the fuel support in order symmetry and evenly.
- After tightening the nuts to the specified torque, tighten the lock nut the specified torque.



■ Installation: End filler

- Install the end filler so that the installing positions of the end filler mouth and the check valve are as illustrated.

FUEL FILTER

a	O-ring	Engine oil	As required

Special tools

Mark	Tool name and shape	Part No.	Application
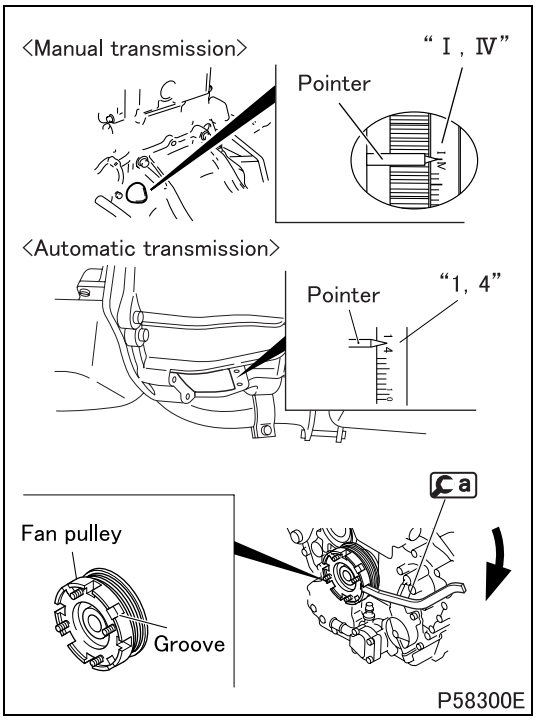
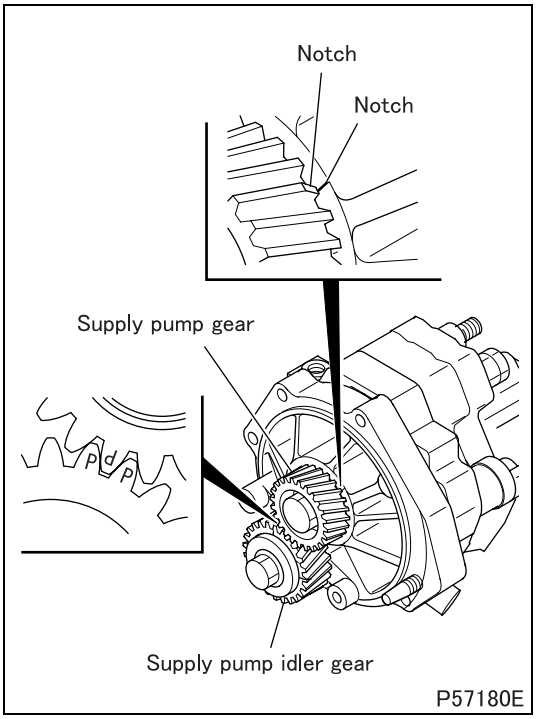
a	Cranking handle  P58299	MH063704	Rotating the fan pulley

◆Installation procedure◆

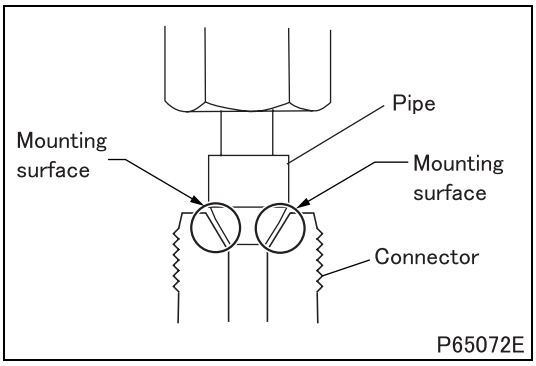


■ Installation: Supply pump

- Remove the rocker cover.
- Bring the No. 1 cylinder piston to the top dead center (TDC) on the compression stroke by the following procedure:
- Hook a on a groove in the fan pulley.
- Turn the fan pulley in the illustrated direction so that the pointer is aligned with the **"Ⅰ, Ⅳ"** or **"1"** to **"4"** mark on the inscribed scale on the flywheel.
- This will place either the No. 1 or No. 4 cylinder piston at TDC on the compression stroke. The cylinder in which the rocker arms for both the intake and exhaust valves can be pushed down by hand by the valve clearance amounts has its piston at TDC. Rotate the engine by one full turn to switch the TDCs of the No. 1 and No. 4 cylinder pistons.



- Align the match mark “P” on the supply pump idler gear with that of the supply pump gear.
- Align the notch on the flange plate with the notch on the supply pump gear.
- Check that the notch on the flange plate and the notch on the supply pump gear are correctly aligned, and then push the supply pump.

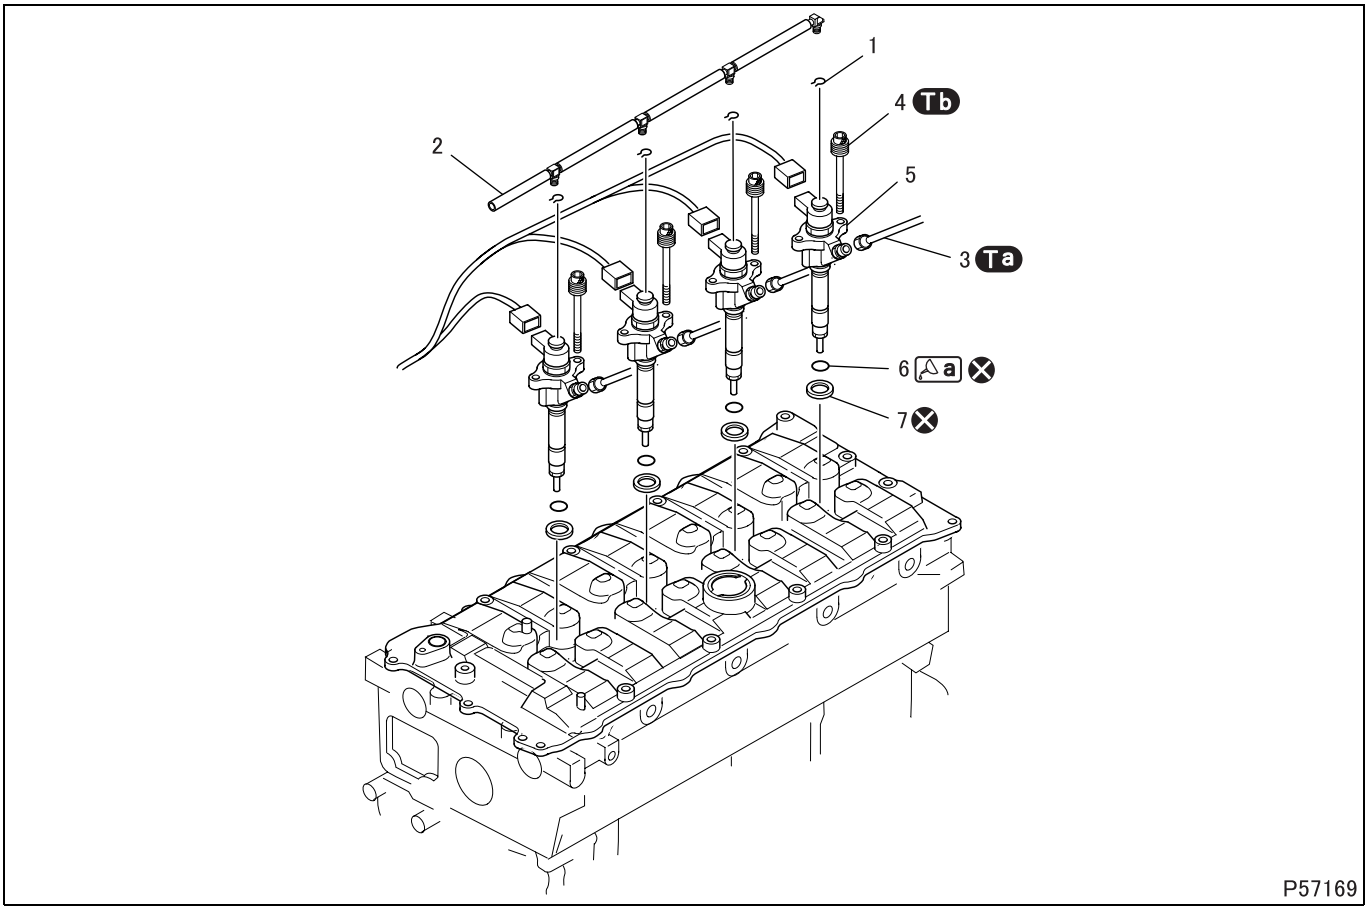


■ Installation: Fuel pipe

- Ensure that the pipe and mounting surfaces of the connector are flat and free from damage.
- Bring the pipe into intimate contact with mounting surfaces of the connector evenly, and temporarily tighten it without applying an excessive force.
- Tighten it to the specified torque after temporary tightening.

M E M O

INJECTOR



● **Disassembly sequence**

1 Snap ring
2 Fuel return hose
3 Injection pipe
4 Bolt (with hexagonal hole)
5 Injector
6 O-ring
7 Nozzle gasket

⊗: Non-reusable parts

WARNING ⚠

- **Fuel is highly flammable. Do not handle it near flames or heat.**
- **Spilled fuel may catch fire and therefore, must be wiped off completely.**

CAUTION ⚠

- **Before attempting to remove the injectors, turn the starter switch to the LOCK position.**
- **Carefully handle the injector, taking care not to damage the threaded portion and nozzle as high pressure is applied to the injector.**
- **To eliminate fuel injection and other problems, protect the injectors and pipes, that have been removed, from the ingress of contaminants.**

- Contact Bosch service station for any service needs of the injector.

● Assembly sequence

Follow the disassembly sequence in reverse.

CAUTION ⚠

- **Do not attempt to clean the nozzle hole with a wire brush or other similar tools, or the hole can be damaged.**
- **Be sure to tighten the nozzle bridge bolts to the specified torque. Overtightening the bolts can deform the injectors, resulting in incorrect fuel injection.**
- **If an injector is replaced with a new one, the injector correction data must be written in the engine electronic control unit.**
- **For the data writing work, consult your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.**

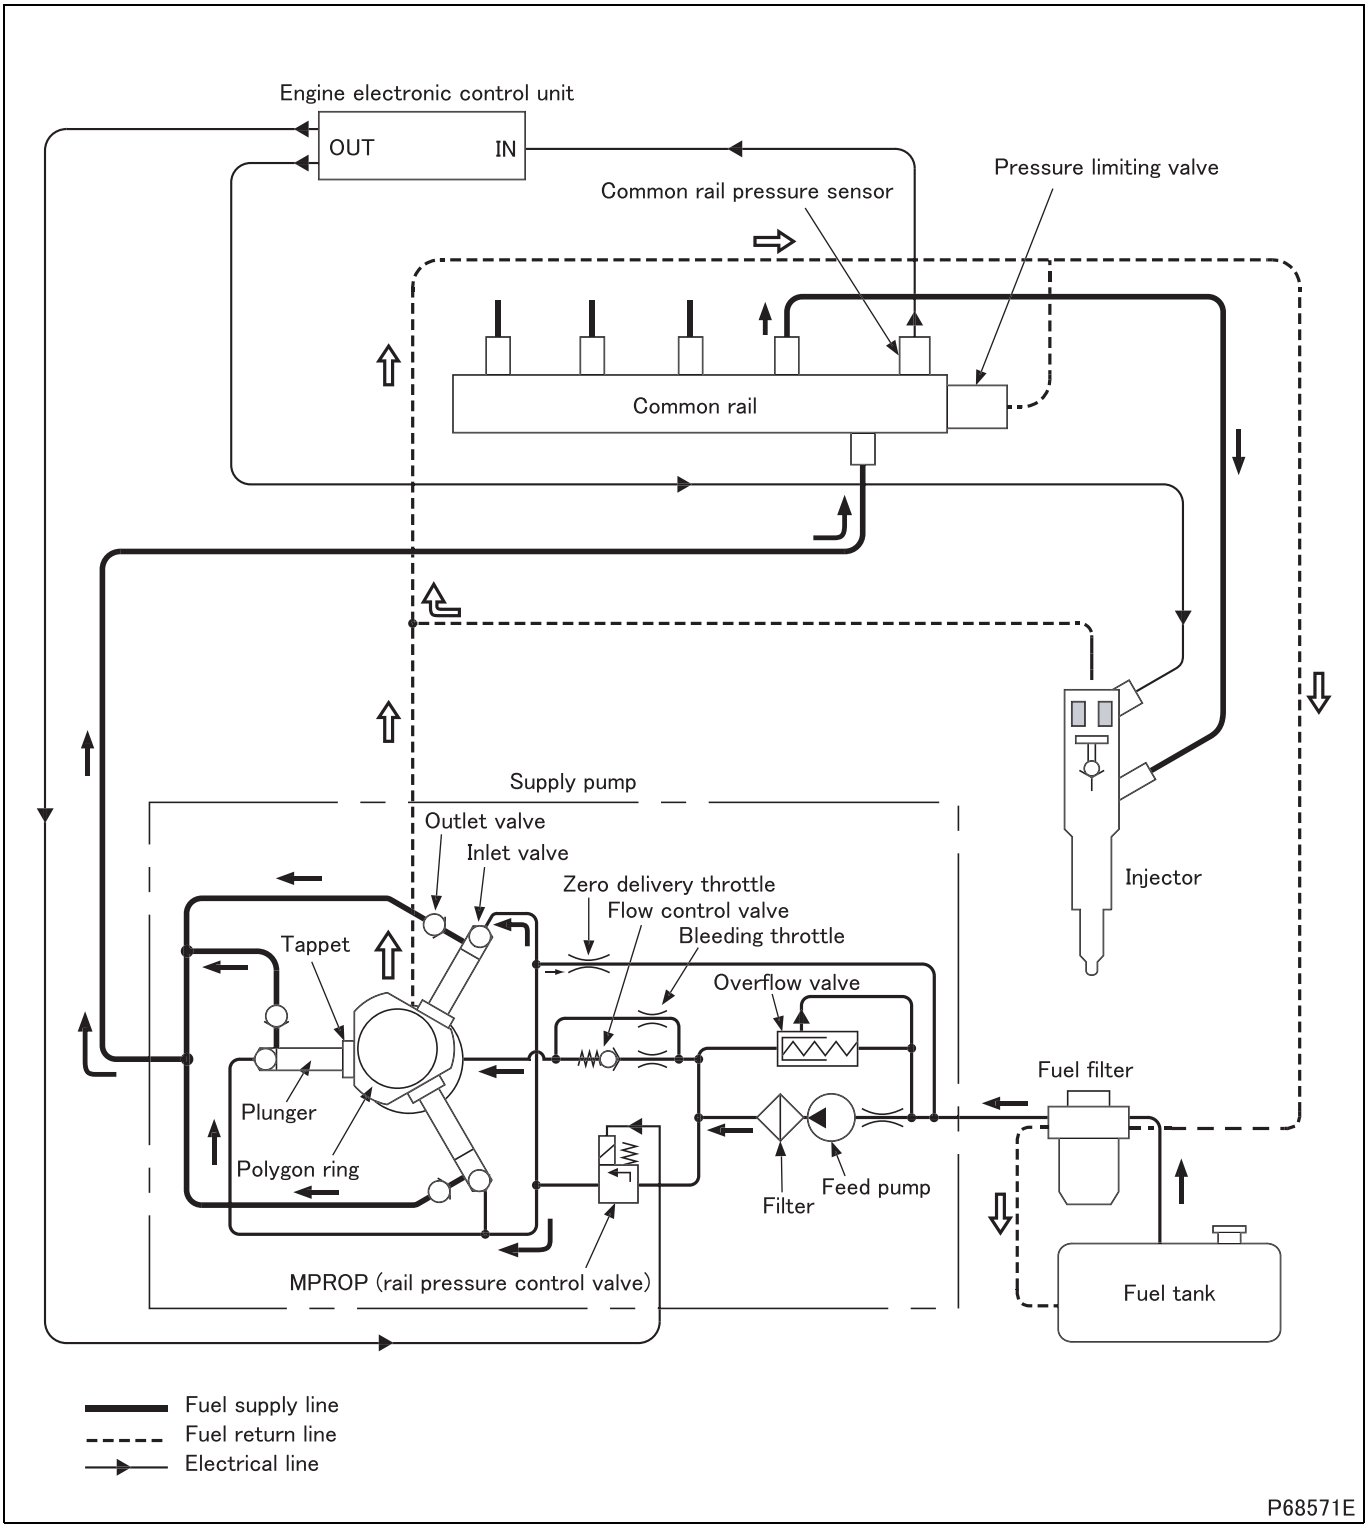
	Rated voltage V		12

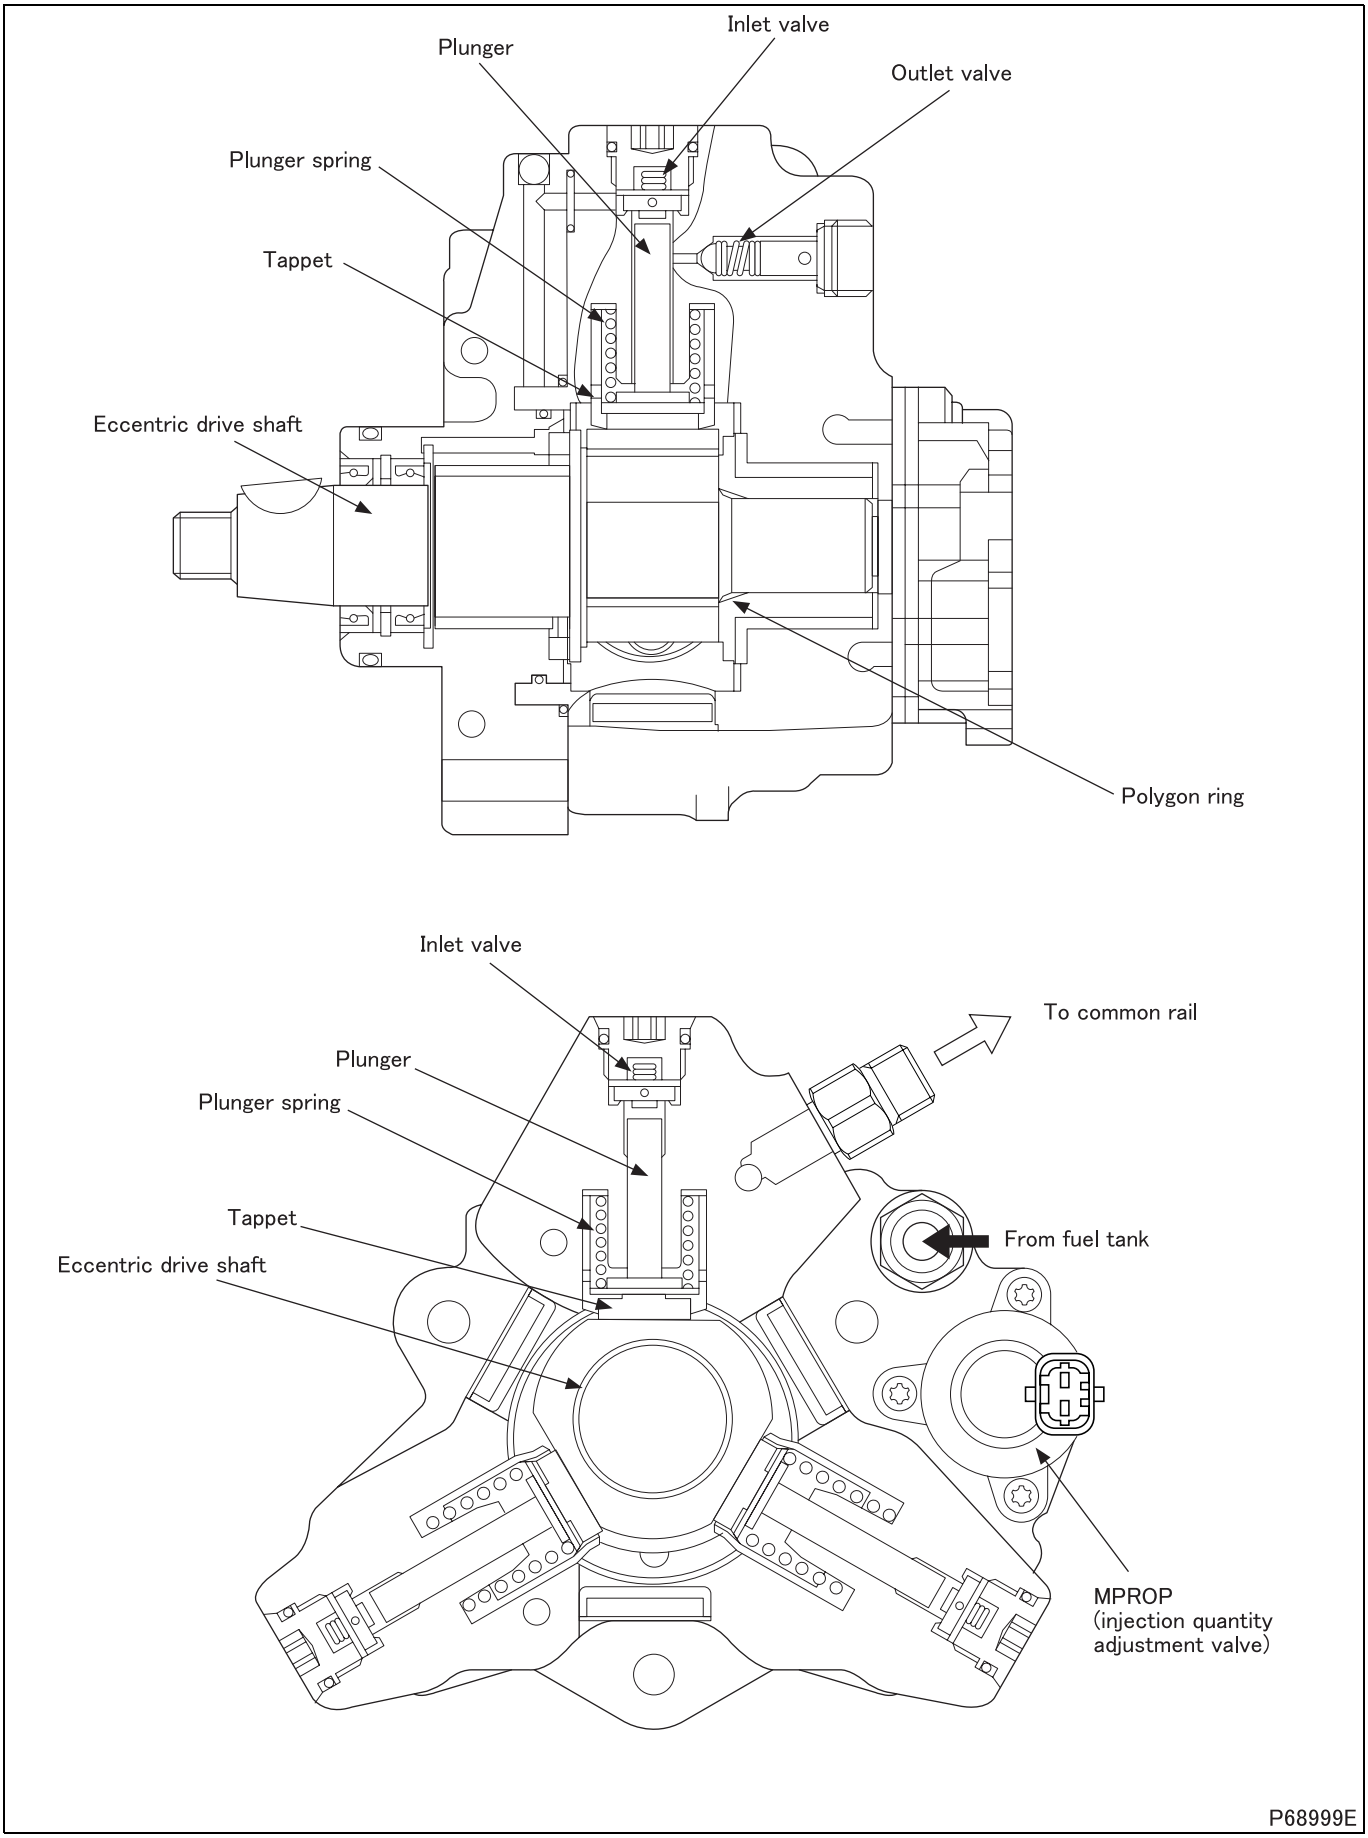
1. Overview

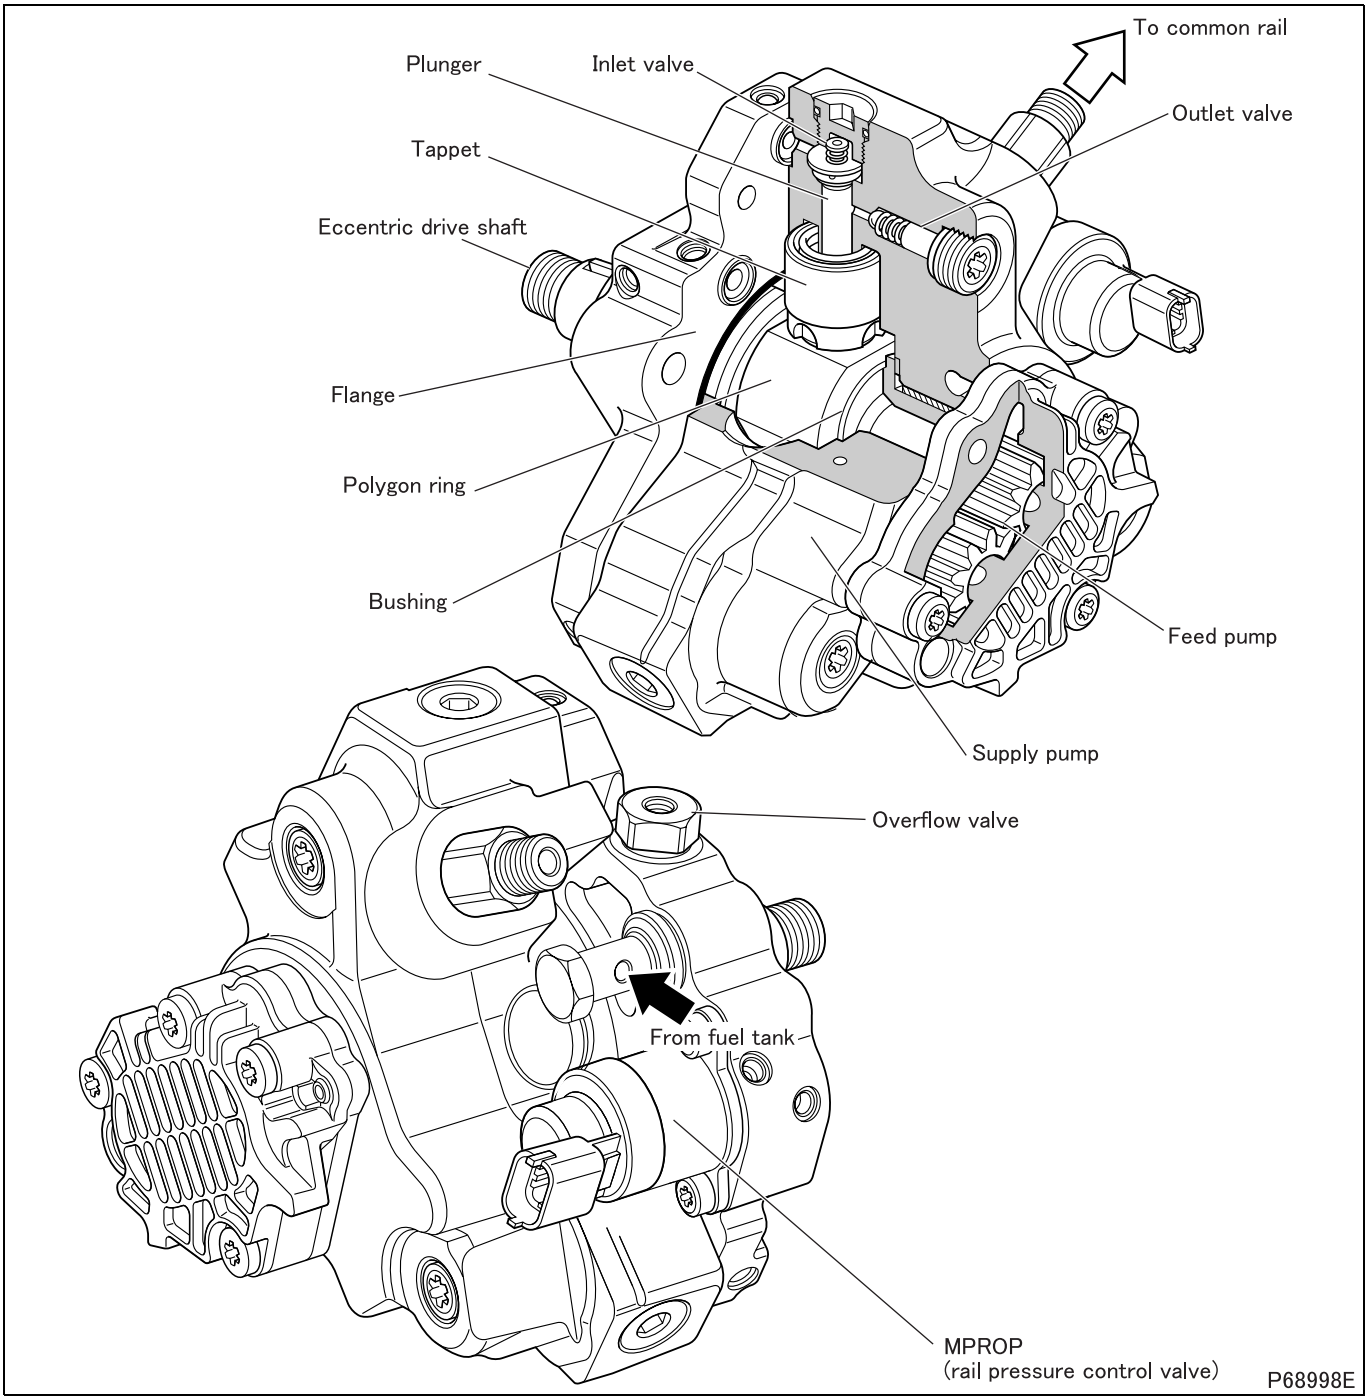
- In the common rail system, an electronic control unit monitors various aspects of the engine (engine speed, throttle opening, coolant temperature, etc.) using information from sensors. In accordance with these data, the electronic control unit effects control over the fuel injection quantity, fuel injection timing, and fuel injection pressure in order to optimize the engine's operation.
- The electronic control unit has a diagnosis function that enables it to recognize abnormalities in the common rail system's major components and alert the driver to them.
- The common rail system consists mainly of an electronically controlled supply pump; injectors; a common rail; and the electronic control unit and sensors that are used to control the other components.



- When the engine is cranked by means of the starter switch, the feed pump (this is located inside the supply pump) simultaneously draws fuel from the fuel tank and feeds it via the fuel filter to the MPROP (rail pressure control valve). A quantity of fuel metered by the MPROP is supplied via the inlet valves to the plunger chambers.
- The fuel in the plunger chambers is pressurized. The outlet valves are then opened, and the fuel is fed under pressure to the common rail.
- The pressurized fuel is held in the common rail and then uniformly fed to the injectors.
- In response to signals from the engine electronic control unit, a magnetic valve in each injector causes the injector to inject fuel into the relevant combustion chamber at the optimal timing and in the optimal quantity.

1.1 Supply pump

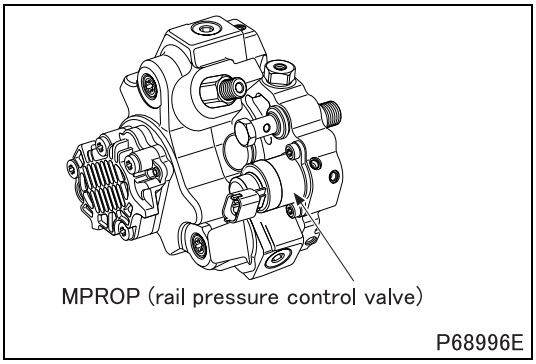




CAUTION ⚠

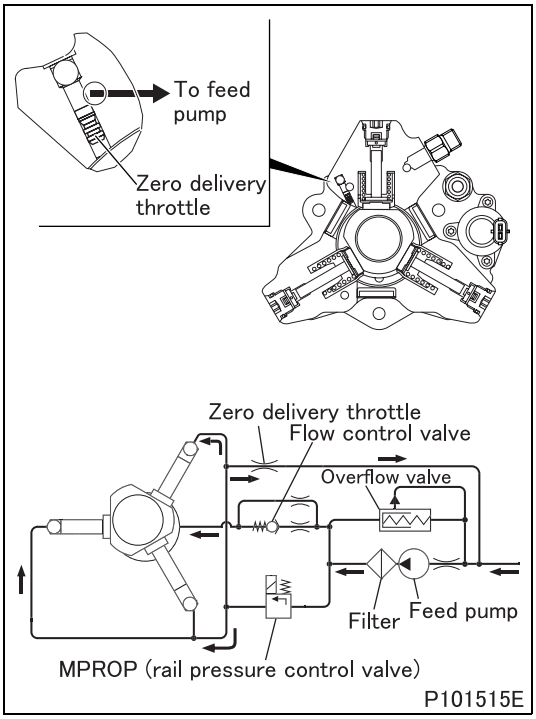
- **Be sure to connect the MPROP (rail pressure control valve) connector to the engine harness before starting the engine. If the engine were started with the MPROP connector not connected, control of the supply pump by the engine electronic control unit would not be possible and a fault would ensue.**

- The supply pump pressurizes fuel and supplies it in a highly pressurized state.
- Fuel drawn from the fuel tank by the feed pump is not supplied directly to the plungers. It is supplied first to the MPROP (rail pressure control valve), which controls the amount of fuel reaching the plungers.
- If the fuel pressure exceeds a certain level, the overflow valve returns fuel to the inlet side of the feed pump. This operation keeps the fuel pressure constant.
- Rotation of the eccentric drive shaft causes (via the tappets) up-down movement of the plungers. Fuel in the plunger chambers is thus highly pressurized.



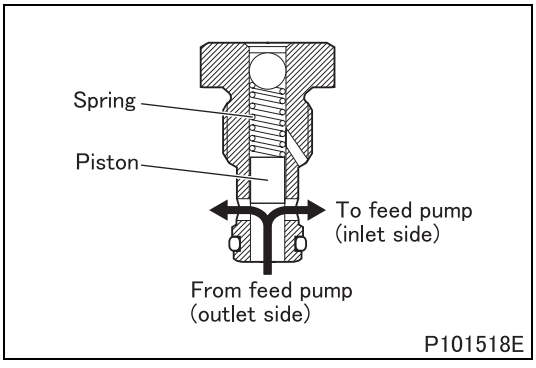
(1) MPROP (rail pressure control valve)

- The MPROP receives fuel from the feed pump and feeds fuel toward the plungers of the supply pump in such a quantity that the fuel pressure corresponds to that required by the engine electronic control unit.
- When the MPROP is not operating, i.e., when current is not flowing, fuel flows at its maximum rate. When current flows, the piston in the MPROP is pressed down such that fuel is not fed toward the plungers.



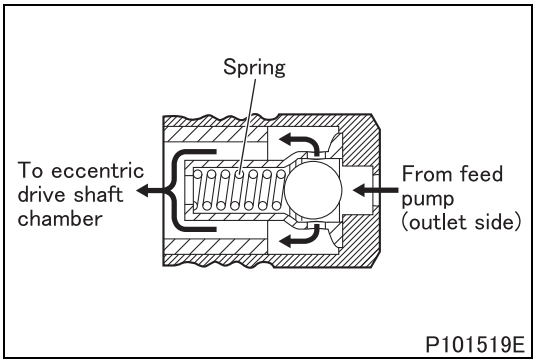
(2) Zero delivery throttle

- A small amount of fuel can flow through the MPROP (rail pressure control valve) even when no fuel is to be supplied. The zero delivery throttle prevents this fuel flow by returning the fuel to the inlet port side of the feed pump to zero the fuel delivery to the plunger.



(3) Overflow valve

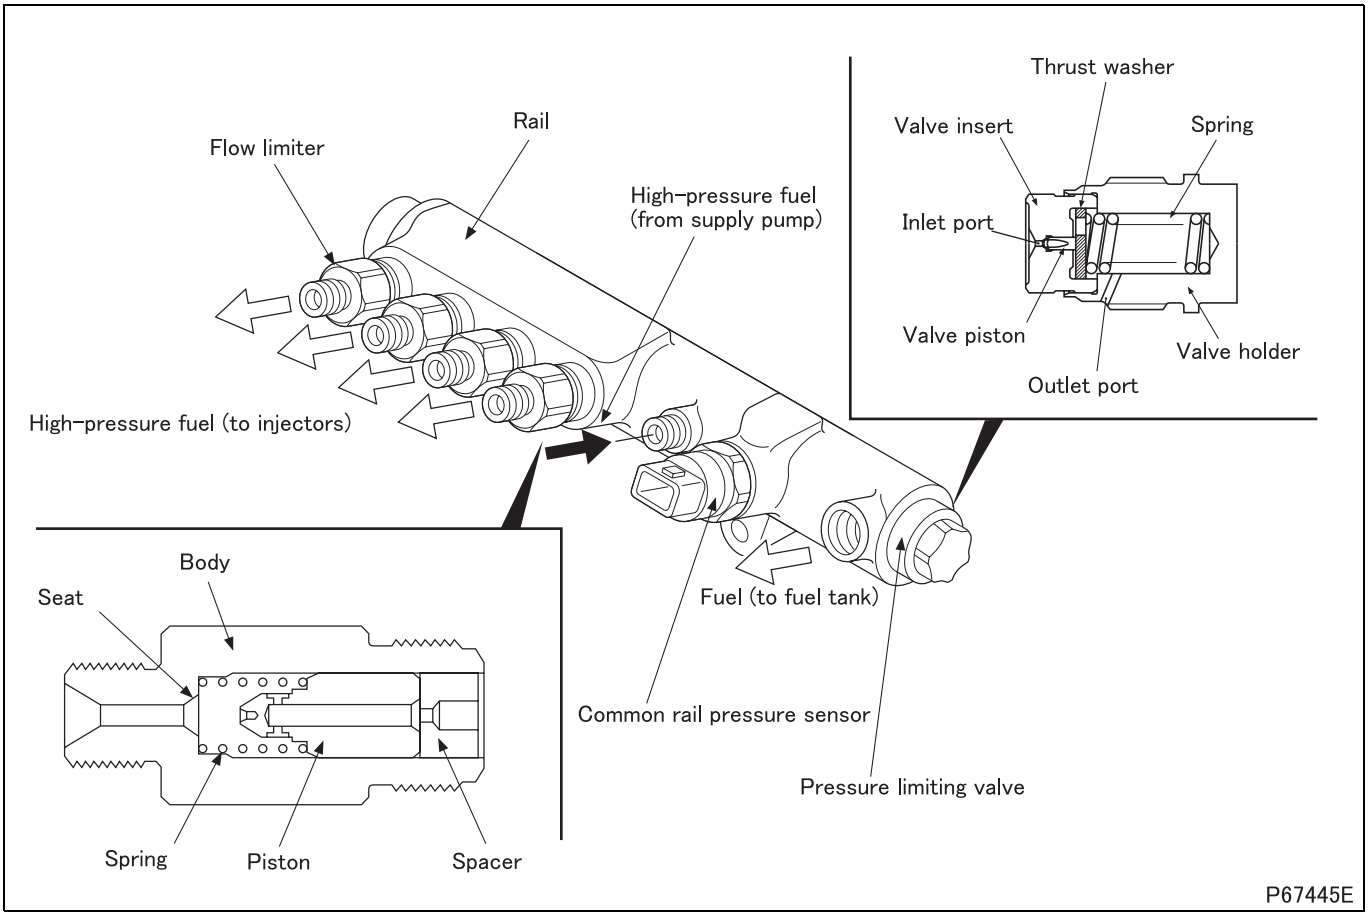
- The overflow valve limits the pressure of the fuel sent from the feed pump to the predetermined level.
- When fuel pressure exceeds the predetermined level, it overcomes the spring force of the overflow valve to move the piston, returning the fuel to the inlet side of the feed pump.
  The fuel which has overflowed enters into the eccentric drive shaft chamber to lubricate the parts in the chamber.



(4) Flow control valve

- The flow control valve sends the fuel from the feed pump into the eccentric drive shaft chamber for lubrication of parts in the chamber.
- When the revolution of the feed pump increases, fuel pressure also increases. It overcomes the spring force of the flow control valve to move the ball, sending the fuel to the eccentric drive shaft chamber for lubrication of parts in the chamber.

1.2 Common rail

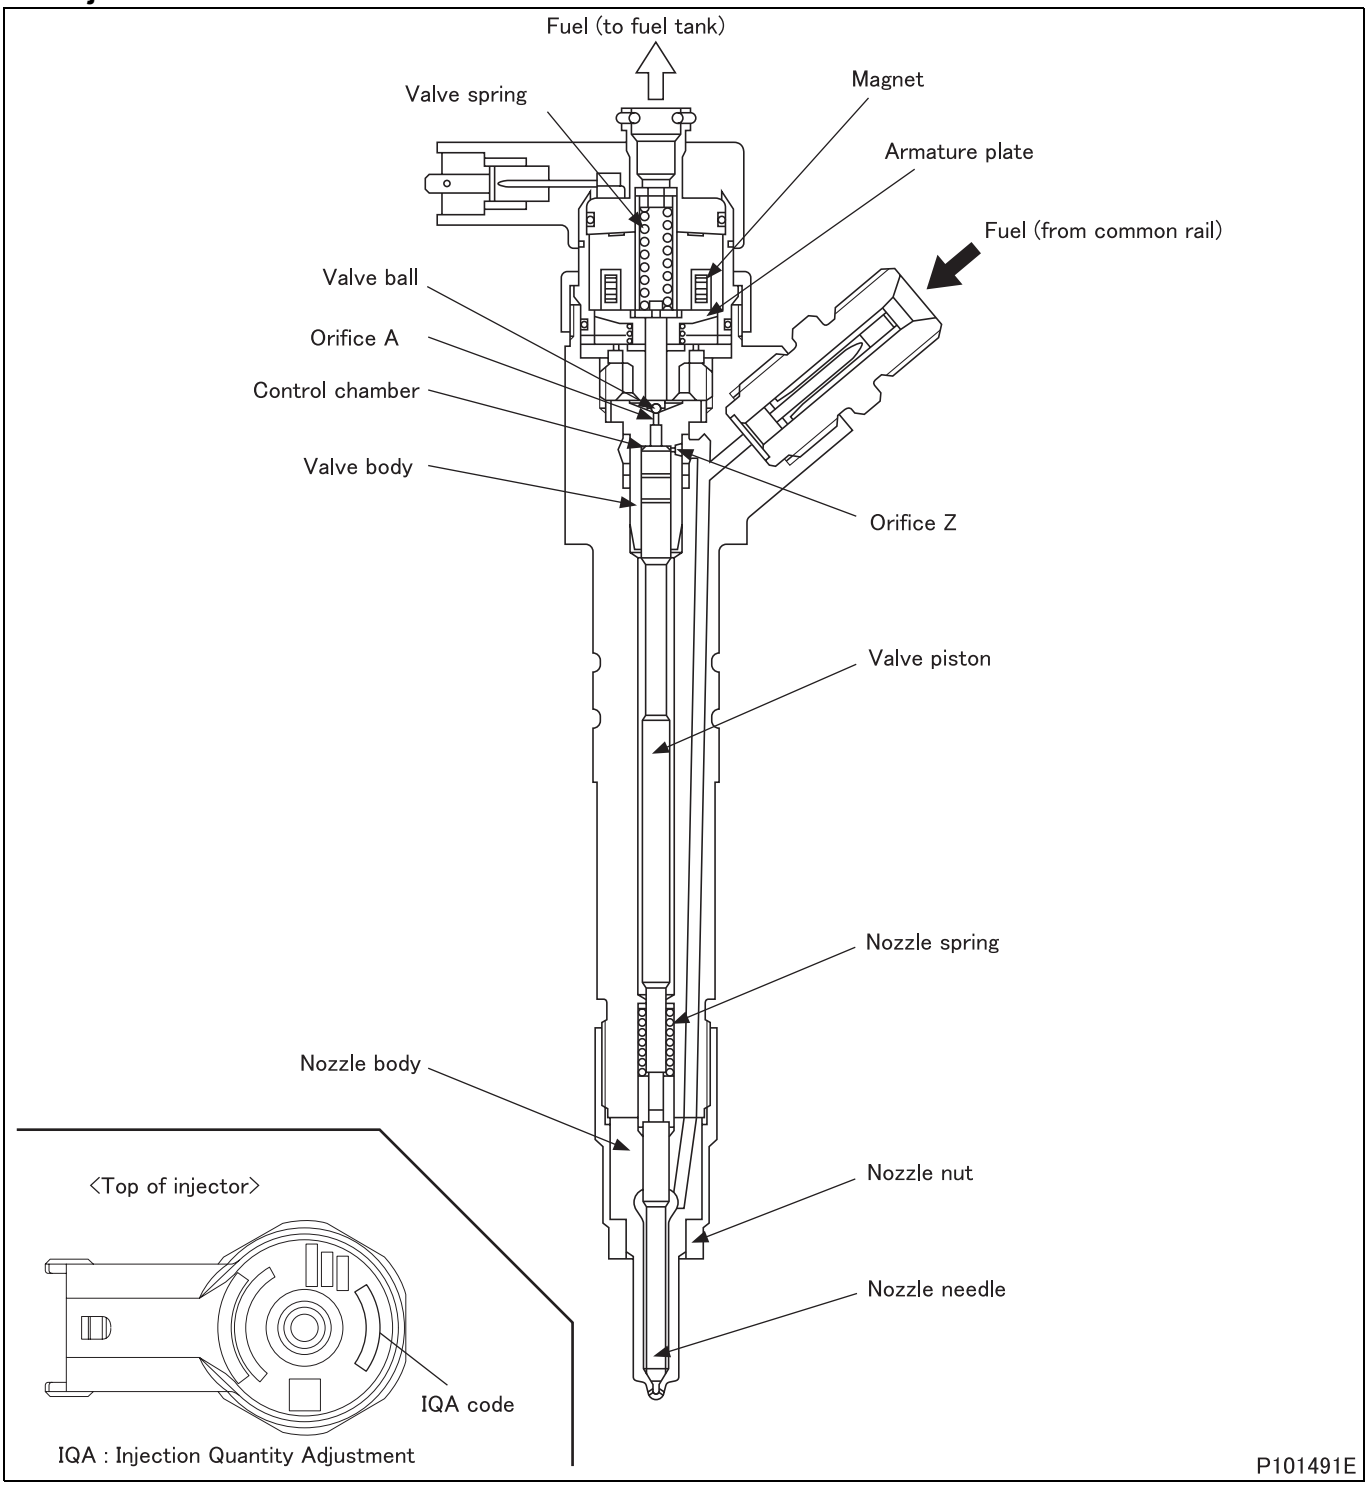


- The common rail distributes to the injectors high-pressure fuel that has been fed from the supply pump.
- Each flow limiter prevents an abnormal outflow of fuel. It does so by blocking the fuel passage in the event of fuel leakage from the injection pipe or excessive injection of fuel from the injector.
- The common rail pressure sensor is used in feedback control. It senses the fuel pressure inside the common rail and feeds a corresponding signal to the electronic control unit.
- If the fuel pressure in the common rail exceeds a certain, set level, the piston in the pressure limiting valve pushes and compresses the spring such that fuel is able to escape. The pressure limiting valve thus prevents the fuel pressure from becoming higher than the set pressure.

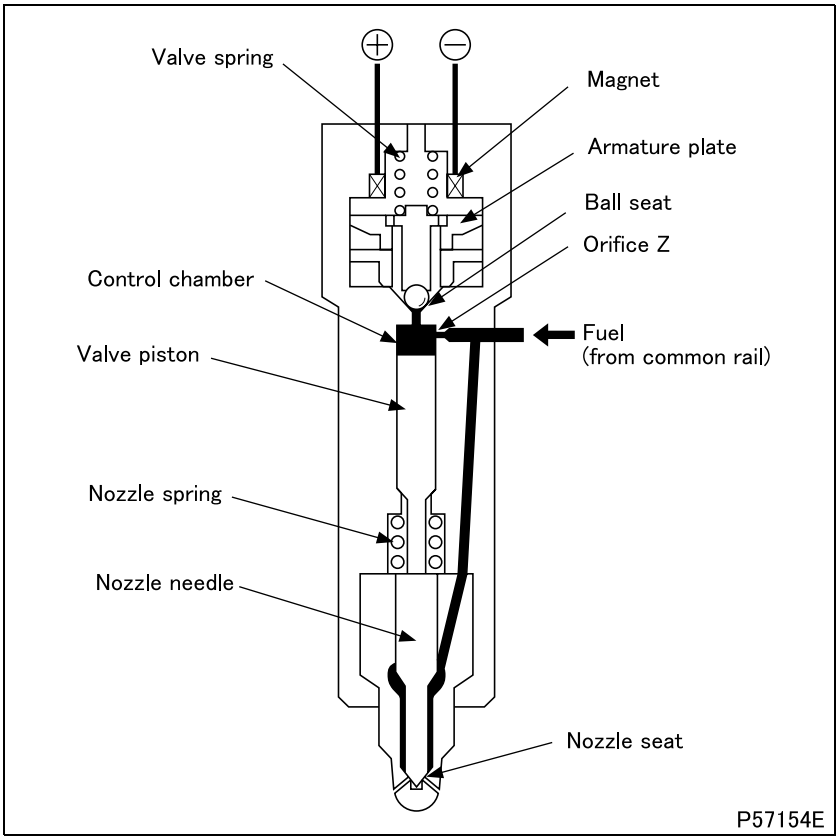
Flow limiter

- During normal operation, the piston moves (thus pushing and compressing the spring) to the extent necessary for one injection quantity to pass through. The piston does not make contact with the seat at this time. When injection is complete, the piston is returned to its initial position by the spring.
- If the amount of fuel passing through the flow limiter becomes excessively great, the piston presses against the seat, thereby closing the fuel passage and preventing an abnormal outflow of fuel.
  When the piston has pressed against the seat, it does not return to its original position until the engine has been stopped and the pressure in the common rail has come down.

1.3 Injector



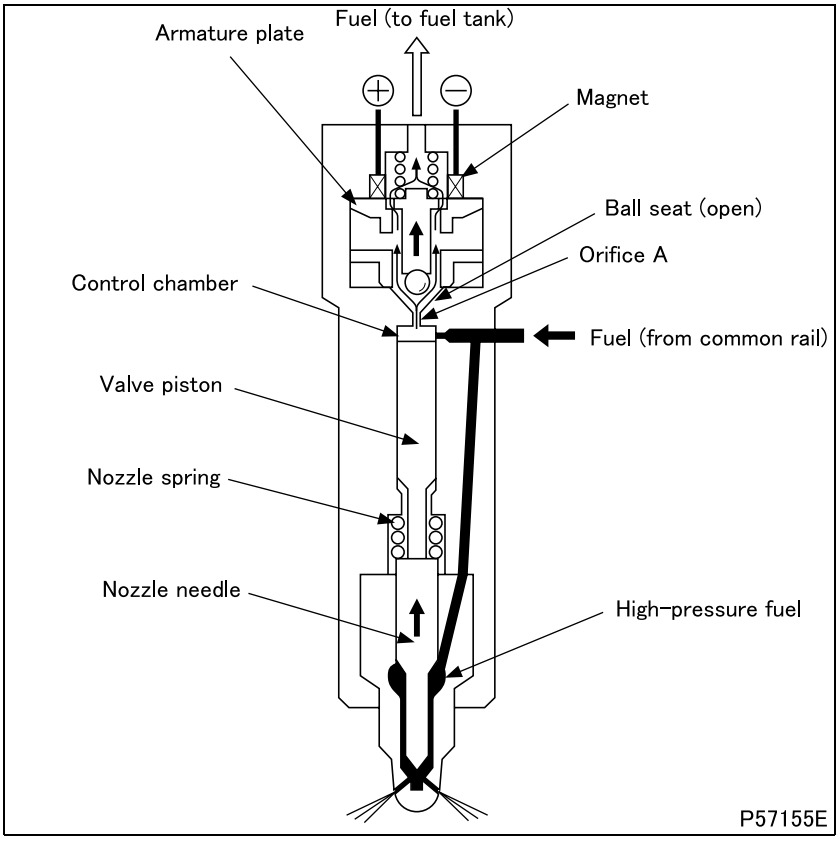
- In accordance with electrical signals from the engine electronic control unit, the injector supplies high-pressure fuel from the common rail to the relevant combustion chamber of the engine at the optimal timing and in the optimal quantity.
- The injector is divided into the control section and injector section.
  - The control section consists of the control chamber, magnet, spring, armature plate, valve ball, valve body, valve piston, orifice A, and orifice Z. The valve piston is located between the control section and the injector section.
  - The injector section consists of the nozzle body, nozzle needle, nozzle spring, and nozzle nut.
- On the top of the injector is marked the IQA (Injection Quantity Adjustment) code for entry of injector correction data into the engine electronic control unit.
- The fluctuation of each injector in injection quantity is thereby restrained.



(1) Operation

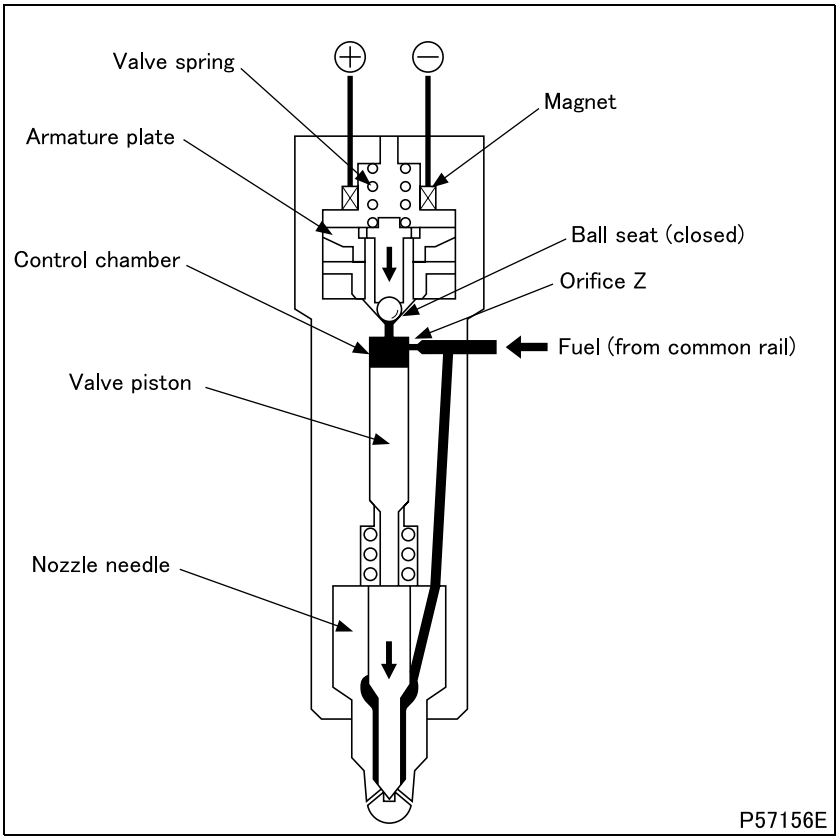
(1.1) Injection not taking place

- With the magnet not energized, the armature plate is pushed up by the valve spring such that the ball seat is closed.
- The high-pressure fuel acts upon the control chamber via orifice Z. The same pressure acts upon the nozzle needle.
- The fuel pressure acting on the nozzle needle cannot overcome the valve piston and nozzle spring, so the nozzle needle stays in its downward-pushed position and injection does not take place.



(1.2) Start of injection

- When the magnet is energized, the resulting electromagnetic force draws the armature plate upward, causing the ball seat to open.
- Fuel in the control chamber passes through the ball seat and orifice A and flows to the fuel tank.
- With the pressure in the control chamber reduced, the fuel acting on the nozzle needle overcomes the valve piston and nozzle spring, pushing up the nozzle needle such that injection starts.
- If the magnet remains energized, the injection rate reaches its maximum level.

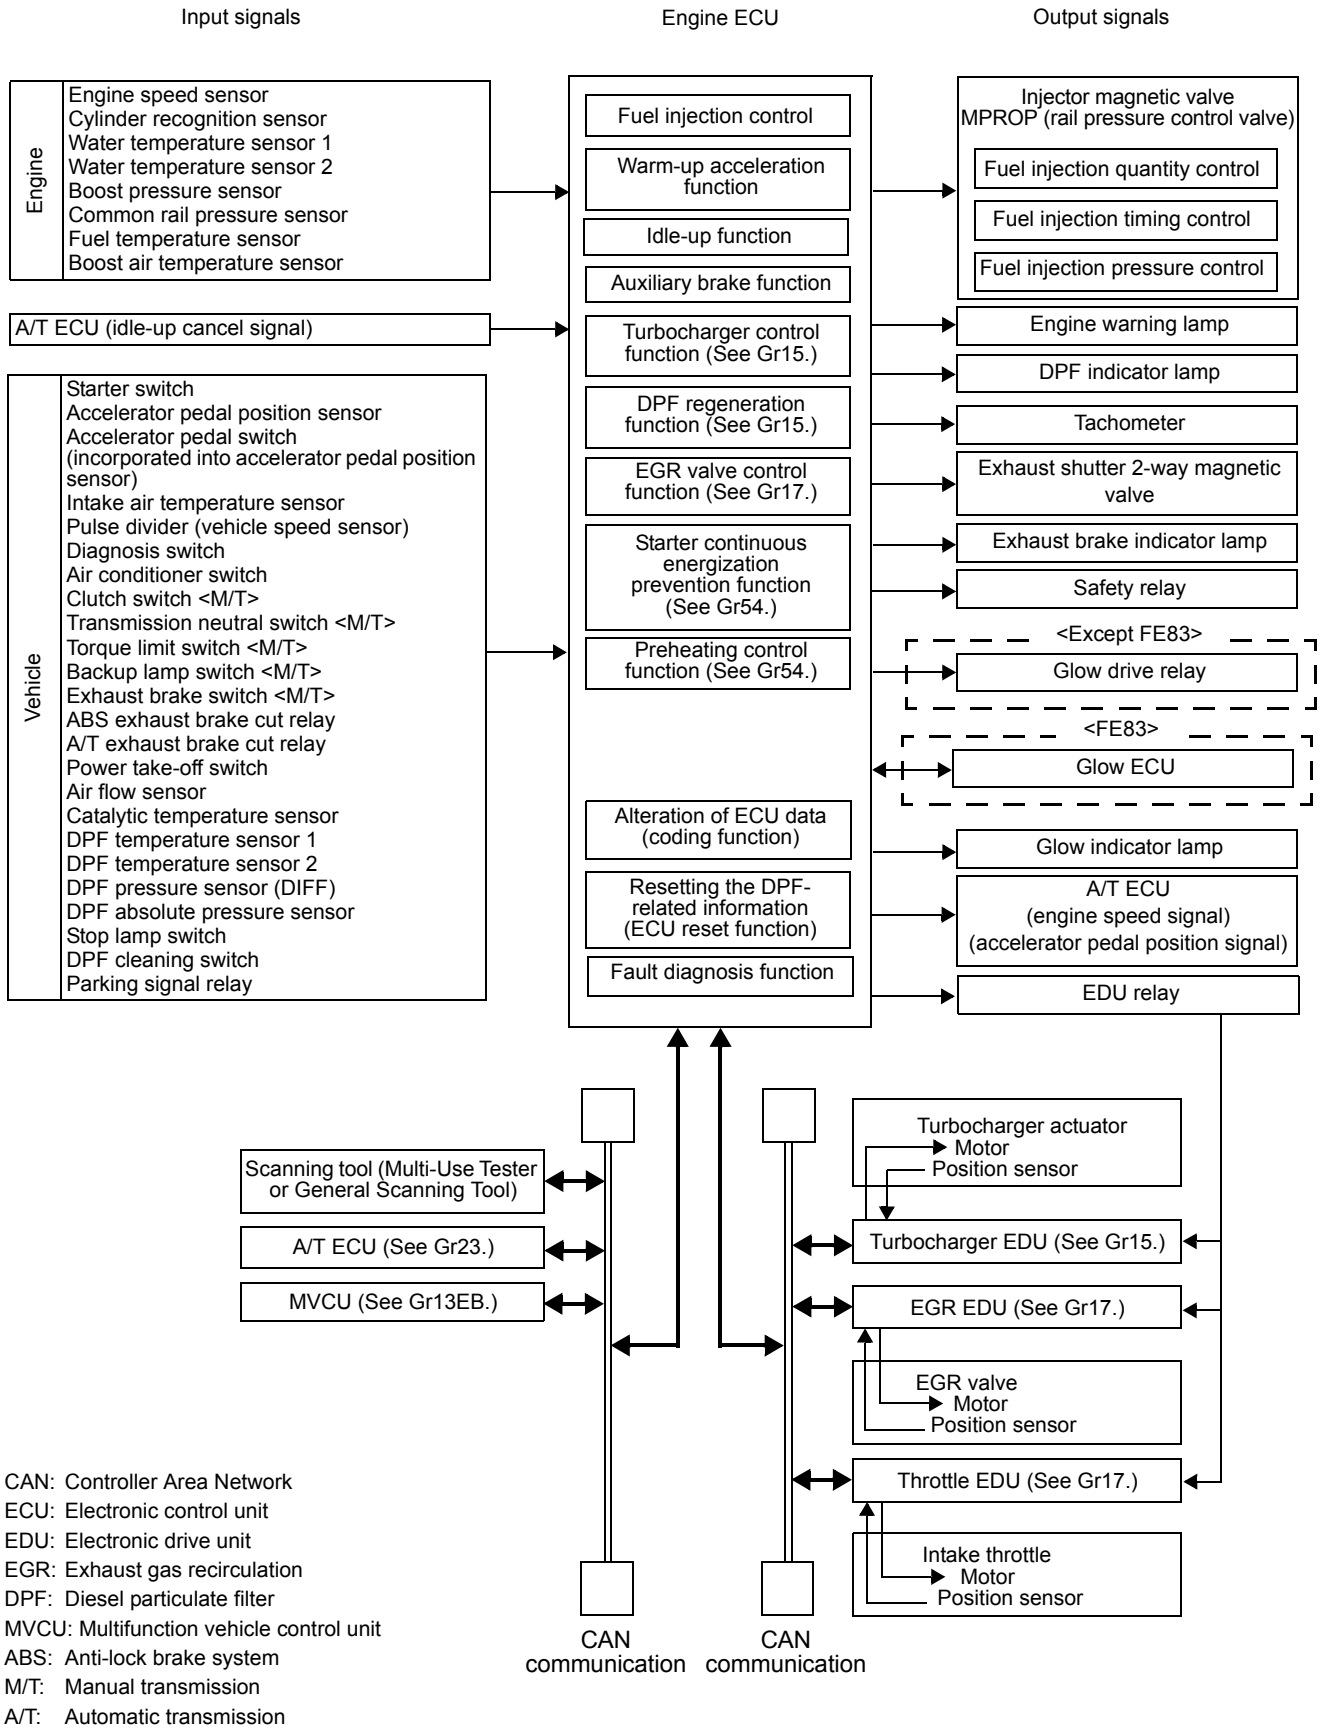


(1.3) End of injection

- When energization of the magnet is stopped, the armature plate is pushed downward by the valve spring such that the ball seat closes. At this time, fuel flows into the control chamber via orifice Z, pushing down the valve piston and nozzle needle such that injection finishes.

2. Electronic Control System

2.1 System block diagram

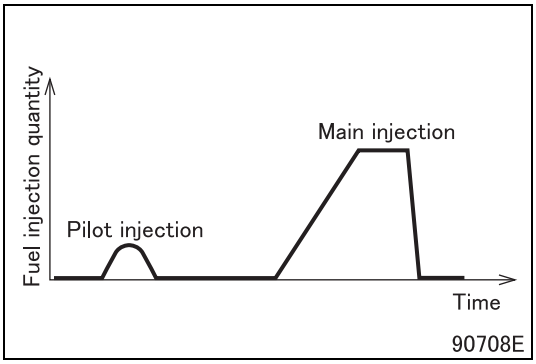


CAN: Controller Area Network
ECU: Electronic control unit
EDU: Electronic drive unit
EGR: Exhaust gas recirculation
DPF: Diesel particulate filter
MVCU: Multifunction vehicle control unit
ABS: Anti-lock brake system
M/T: Manual transmission
A/T: Automatic transmission

Part name	Main function/operation
Engine speed sensor	Sensing of engine speed
Cylinder recognition sensor	Cylinder recognition
Water temperature sensor 1	Sensing of coolant temperature
Water temperature sensor 2	• Backup of coolant temperature • Sensing of coolant temperature for temperature gauge
Boost pressure sensor	Sensing of boost pressure
Common rail pressure sensor	Sensing of common rail pressure
Fuel temperature sensor	Sensing of fuel temperature
Boost air temperature sensor	Detection of intake air temperature after joining the exhaust gas recirculation
Starter switch	Senses that the engine is in starting condition with the starter switch in START position.
Accelerator pedal position sensor	Sensing of extent of accelerator pedal depression
Accelerator pedal switch (incorporated into accelerator pedal position sensor)	Sensing of released/pressed condition of accelerator pedal (ON with pedal released)
Intake air temperature sensor	Sensing of intake air temperature
Pulse divider (vehicle speed sensor)	Sensing of vehicle speed
Diagnosis switch	Output of diagnosis codes
Air conditioner switch	ON when air conditioner is operating
Clutch switch <M/T>	Sensing of released/pressed condition of clutch pedal (OFF with pedal released)
Transmission neutral switch <M/T>	Detection of transmission neutral condition (OFF with transmission in neutral)
Torque limit switch <M/T>	Detection of transmission 1st and Rev positions
Backup lamp switch <M/T>	
Exhaust brake switch	Operation of auxiliary brake
ABS exhaust brake cut relay	Exhaust brake cut signal for ABS operation
Automatic transmission exhaust brake cut relay	Exhaust brake cut signal with selector in P or N range position and vehicle at low speed
Power take-off switch	Operation of power take-off
Air flow sensor	Sensing of intake air flow rate
Catalytic temperature sensor	Detection of front oxidation catalytic inlet temperature
DPF temperature sensor 1	Detection of ceramic filter inlet temperature
DPF temperature sensor 2	Detection of ceramic filter outlet temperature
DPF absolute pressure sensor	Sensing of DPF absolute pressure value
DPF pressure sensor (DIFF)	Sensing of DPF filter differential pressure
Stop lamp switch	Sensing of released/pressed condition of brake pedal (OFF with pedal released)
DPF cleaning switch	ON/OFF changeover of DPF manual regeneration
Parking signal relay (parking brake switch)	Detection of parking condition (turns ON when the parking brake is applied)
Injector magnetic valve	Control of fuel injection pressure, fuel injection quantity, and fuel injection timing
MPROP (rail pressure control valve)	Control of fuel injection pressure
Engine warning lamp	Indication of system abnormalities Illuminates when the particulate matter accumulation in the DPF ceramic filter is excessive
DPF indicator lamp	Illuminates when the particulate matter accumulates in the DPF ceramic filter
Tachometer	Indicates engine speed (revolutions per minute)

Part name		Main function/operation
Exhaust shutter 2-way magnetic valve		ON/OFF changeover of exhaust shutter valve
Exhaust brake indicator lamp		Illuminates when exhaust brake system is operating
Safety relay		Changeover of starter continuous energization prevention function
Glow drive relay <Except FE83>		ON/OFF changeover of glow plugs
Glow ECU <FE83>		ON/OFF changeover of glow plugs and troubleshooting
Glow indicator lamp		ON when preheating system is started
Automatic transmission ECU	Idle-up cancel signal	Releasing the idle-up except N range
	Engine speed signal	Output of engine speed for A/T control
	Accelerator pedal position signal	Output of extent of accelerator pedal for A/T control
EDU relay		ON/OFF changeover of power supply to turbocharger, EGR and throttle EDU
CAN communication (Turbocharger EDU, EGR EDU, throttle EDU)		Engine data recognized by the engine ECU are outputted to the CAN bus to enable systems to obtain data that they need for control. Each system's EDU issues signals to the engine ECU to enable it to effect engine control appropriate to control of the system. (See Gr15 for Turbocharger EDU control.) (See Gr17 for EGR EDU and throttle EDU control.)
CAN communication (A/T ECU, MVCU)		Engine data recognized by the engine ECU are outputted to the CAN bus to enable systems to obtain data that they need for control. The A/T ECU and MVCU issue signals to the engine ECU to enable it to effect engine control appropriate to control of the system. (See Gr23 for A/T ECU.) (See Gr13EB for MVCU.)
CAN communication (scanning tool)		Indicating and erasing fault codes and obtaining the vehicle data of the ECU

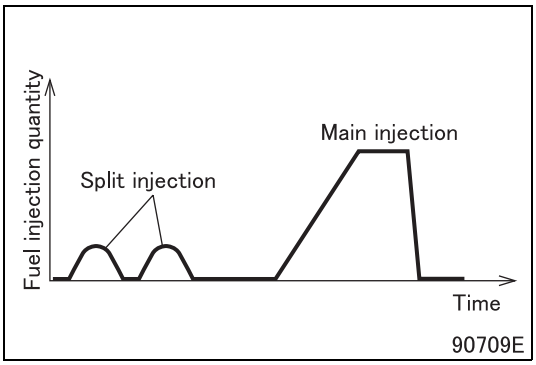
M E M O



2.2 Fuel injection rate control

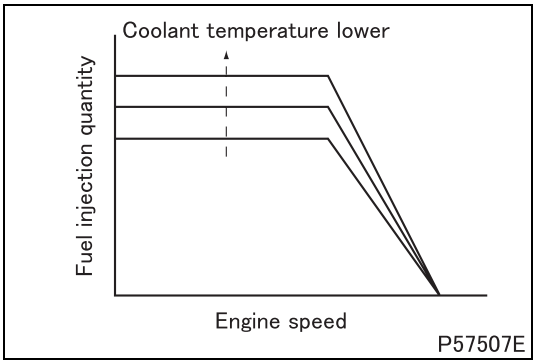
(1) Pilot injection

- Pilot injection entails the injection of an extremely small amount of fuel ahead of the main injection.
- Pilot injection suppresses heat generation early in the injection cycle and thus suppresses NOx generation and noise at the start of combustion.



(2) Split injection control

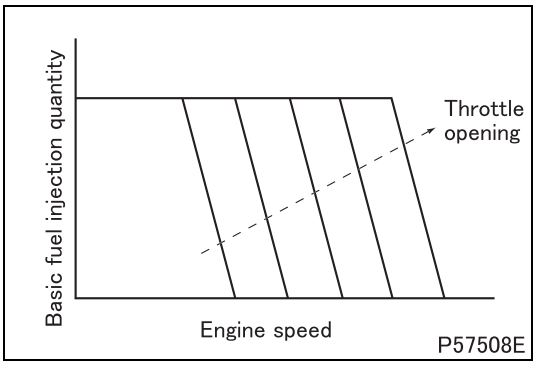
- Split injection entails the injection of an extremely small amount of fuel two or more times ahead of the main injection.
- Split injection increases the fuel's combustibility and thus enhances the engine's cold startability.



2.3 Fuel injection quantity control

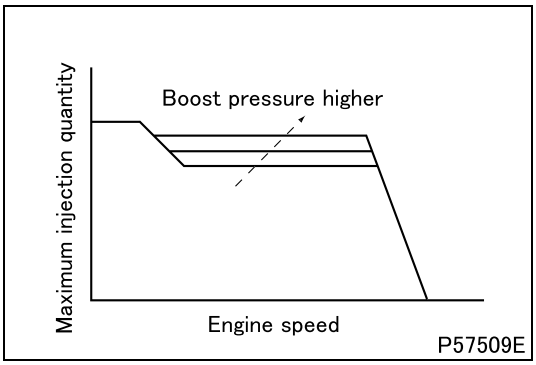
(1) Fuel injection quantity during engine startup

- During engine startup, the fuel injection quantity is determined in accordance with the engine speed and coolant temperature.



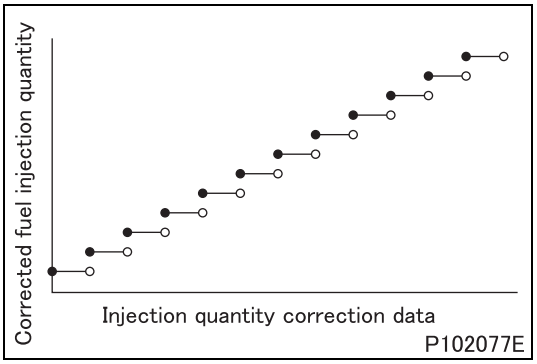
(2) Basic fuel injection quantity

- The basic fuel injection quantity is determined in accordance with the engine speed and throttle opening.



(3) Maximum injection quantity

- The maximum injection quantity is calculated from the engine speed and boost pressure.

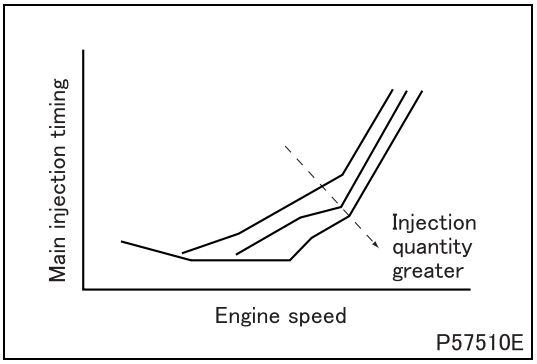


(4) Injection quantity correction

- Injection quantity correction is performed to restrain fluctuations in fuel injection quantity.
- Injection quantity correction data are stored in the engine electronic control unit.
- The storage of injection quantity correction data is effected by the coding function of the Multi-Use Tester.

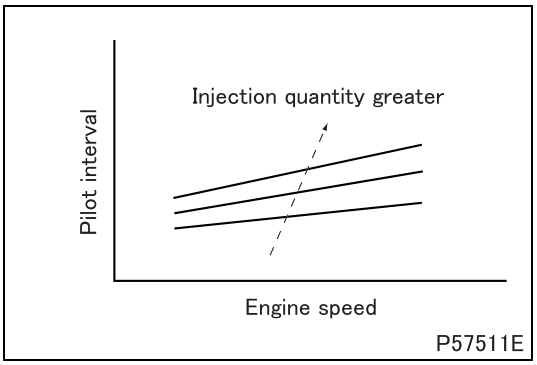
2.4 Fuel injection timing control

(1) Main injection timing



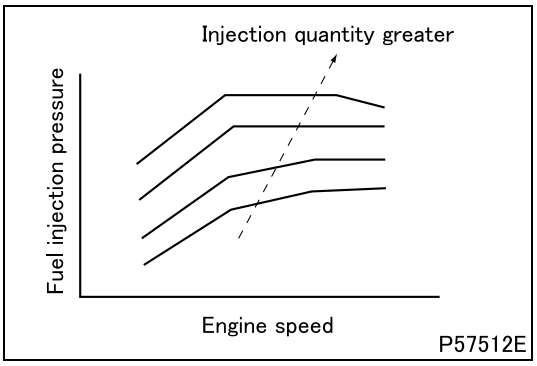
- The main injection timing is calculated from the fuel injection quantity and engine speed.

(2) Pilot injection timing (pilot interval)



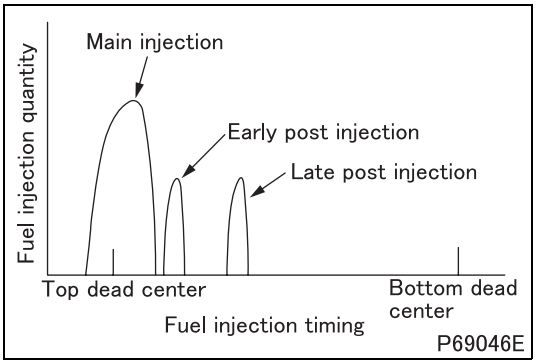
- The pilot interval is calculated from the fuel injection quantity and engine speed.

2.5 Fuel injection pressure control



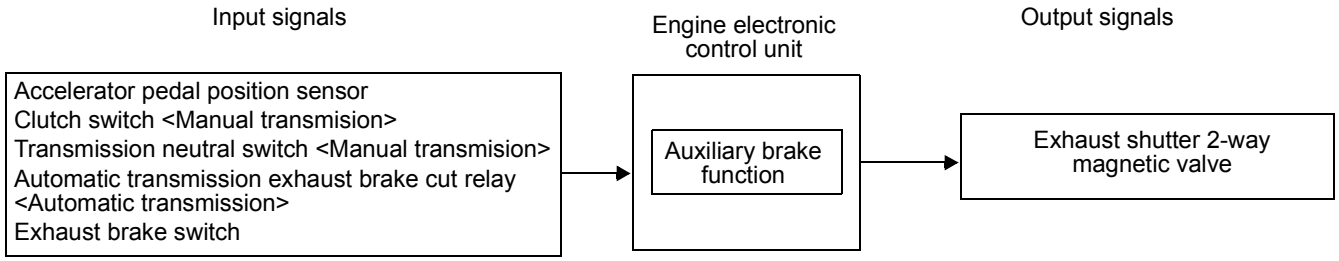
- The fuel injection pressure is calculated from the fuel injection quantity and engine speed.

2.6 Fuel injection control for DPF regeneration



- Fuel injection control for diesel particular filter regeneration is performed in such a way, with early post injection and late post injection added after conventional fuel injection (main injection), exhaust gas temperature is increased to burn out particulate matter (PM) collected in the DPF.

2.7 Auxiliary brake function



- The auxiliary brake function activates or deactivates the exhaust shutter 2-way magnetic valve according to the vehicle condition to control the exhaust brake.

2.8 Idle-up function

- The idle-up function increases the engine idling speed when a load is applied to the engine by other system (such as air conditioner, PTO) or when the warm-up acceleration function and DPF regeneration are activated.

2.9 Alteration of electronic control unit data (coding function)

- Vehicle information and equipment specifications are registered in each engine electronic control unit as coded data (coding data).
- When an engine electronic control unit or some equipment is replaced, it is necessary to alter registered related data or register new related data using a Multi-Use Tester (for details, see REGISTRATION AND ALTERATION OF DATA IN ENGINE ELECTRONIC CONTROL UNIT).
- For data alteration/registration and data write operation, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.

2.10 Resetting the diesel particulate filter related information (resetting electronic control unit)

- In the diesel particulate filter regeneration control system, the engine electronic control unit accumulates various information to control the diesel particulate filter regeneration as diesel particulate filter history.
- These accumulated data are automatically initialized by the engine electronic control unit at diesel particulate filter cleaning for regeneration. In the case where the diesel particulate filter regeneration involved the replacement of ceramic filter, etc., however, the initialization of accumulated data is impossible and therefore it is necessary to reset diesel particulate filter related information (the electronic control unit) using a Multi-Use Tester. (for reset procedure, see Gr15.)
- It is necessary to reset diesel particulate filter related information (the electronic control unit) after the following operations are performed.
  - Replacement of diesel particulate filter ceramic filter
  - Cleaning of diesel particulate filter ceramic filter

2.11 Diagnostic function

(1) Overview

- The system continuously monitors the sensors and other system components. If any fault is detected, the system warns the driver of this by displaying the relevant fault information on the meter cluster. At the same time, the system also stores a relevant fault code in the memory and starts operation in the fault mode.
- When control is performed during a failure, the system function is limited to ensure the safety of the vehicle and driver.

(2) Reading fault code

- It is possible to read memorized fault codes using a scanning tool (Multi-Use Tester or General Scanning Tool) or from the number of flashes of the warning lamp in the meter cluster.
- Diagnosis codes shown by the scanning tool (Multi-Use Tester or General Scanning Tool) and those indicated by the flashing of the warning lamp (flash codes) are different.
- Diagnosis codes shown by the scanning tool are more specific than flash codes.

(3) Erasing of fault code

- Control status during fault is back to normal with the fault location serviced. Although it depends on fault code, the warning lamp is not extinguished until the driving cycle has been repeated several times.
- The driving cycle means a period of a series of engine operations from engine start with starter switch ON to completion of after-run sequence with the starter switch OFF.

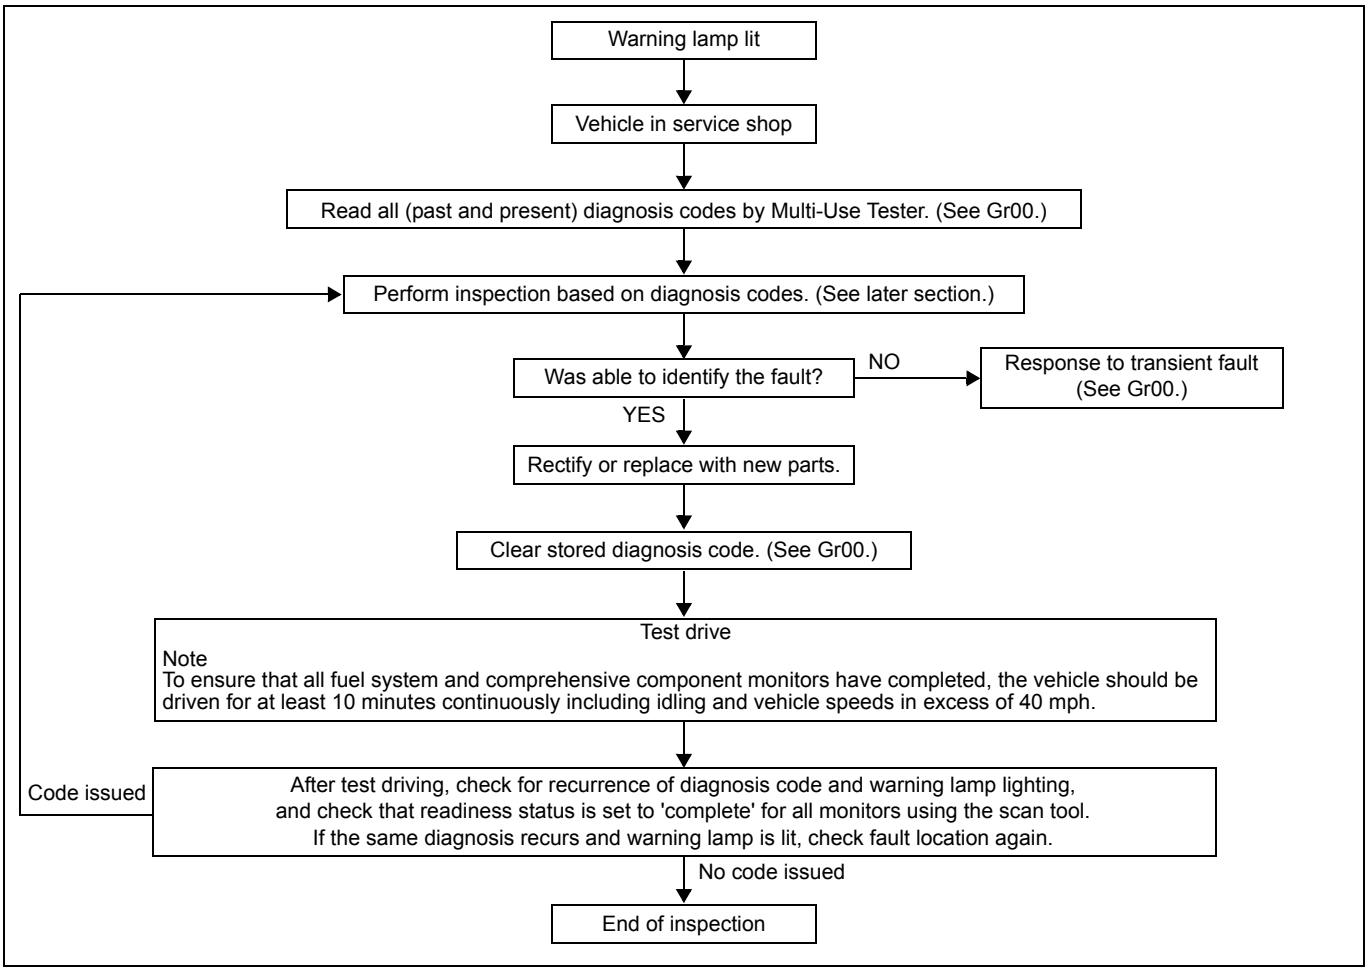
1. Diagnosis Procedure

- Perform the inspection in accordance with the following flowchart.



2. Diagnostic Precautions

- Before measuring voltage, check the battery for charged condition and specific gravity. If system inspection is performed with the battery uncharged or reduced in specific gravity, accurate measurements cannot be achieved.
- Before disconnecting battery cables, harnesses and connectors, set the starter switch to LOCK or OFF, then allow at least 20 seconds.
- To avoid having electrical parts damaged, set the starter switch and lighting switch to LOCK or OFF before reconnecting battery cables, harnesses and connectors.
- When performing measurement with the tester, handle the test bar carefully so that it does not damage internal circuit and other electrical parts of the electronic control unit to result in a short-circuit failure between terminals in connector or between connector and car body.
- Resistance is affected by temperature. Determine the necessity of resistance measurement following given temperature specification as a guide. Otherwise, use normal temperature (10 to 35°C {50 to 95°F}) as the measuring condition.
- To start the engine, be sure to connect the connector of the MPROP (rail pressure control valve) to the engine harness. If the engine is started without connecting the MPROP connector, the engine electronic control unit cannot control the supply pump and the fault of the engine may result.
- If the electronic control unit is replaced with a new one, some data must be registered in the new electronic control unit for proper engine control. This also applied to the case when replacing the electronic control unit with the one that has been used in other vehicle. (See “REGISTRATION AND ALTERATION OF DATA IN ENGINE ELECTRONIC CONTROL UNIT”.)

3. Inspections Based on Fault Codes

3.1 Fault code list

- Fault codes can be monitored through the scanning tool (General Scanning Tool or Multi-Use Tester) or the flashing of the warning lamp in the meter cluster.
- There are two kinds of fault codes, i.e., fault code displayed by the General Scanning Tool or Multi-Use Tester and flash code given by the flashing of the warning lamp.
- Scanning tool (General Scanning Tool or Multi-Use Tester) can display diagnosis codes that are more specific than flash codes.
- Diagnosis codes asterisked in the list differ in fault diagnosis period according to the fault diagnosis condition. (For details on fault diagnosis condition, see “Inspection against Each Diagnosis Code”)
- Occurrence of diagnosis codes marked with ■ or ▲ in the list depends on vehicle specification.
  ■: Automatic transmission
  ▲: FE83

Regen: Regeneration

DC[Drive cycle]: “Start switch ON to start engine till starter switch OFF” constitutes 1 DC.

[Fault code]
Diagnosis code: P0002/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
MPROP (rail pressure control valve) control saturated
[Diagnosis check]
- MPROP (rail pressure control valve) signal conversion (analog/digital) function in the engine electronic control unit is monitored for fault.

[Code generation condition]
- Signal remains unconverted for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- MPROP (rail pressure control valve) control is stopped.
- Misfire detection is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of engine electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0003/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
Low signal range check
[Diagnosis check]
- MPROP (rail pressure control valve) is monitored for fault.

[Code generation condition]
- MPROP (rail pressure control valve) voltage exceeds 4 V.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

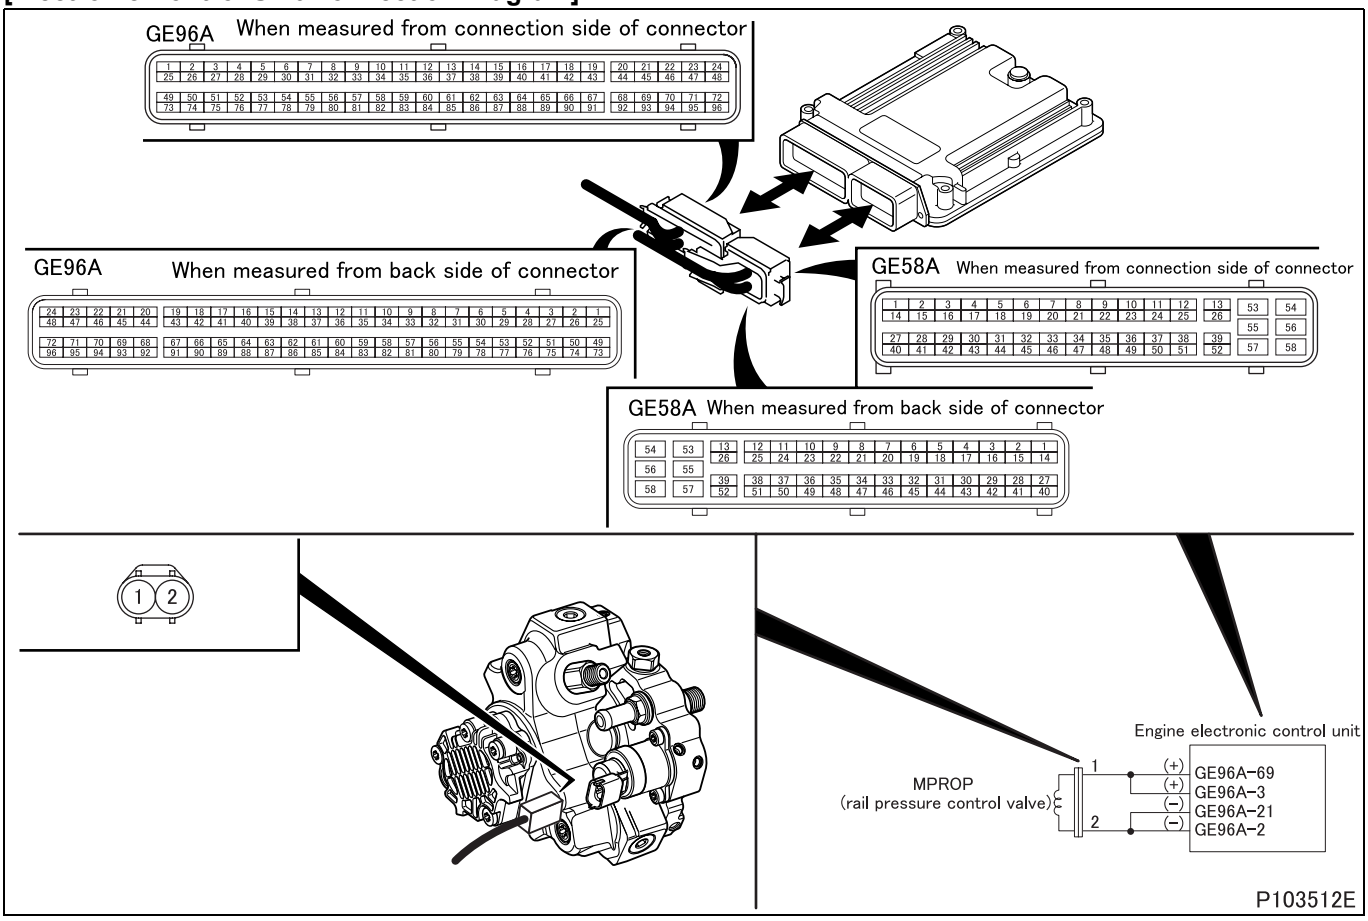
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- MPROP (rail pressure control valve) control is stopped.
- Misfire detection is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

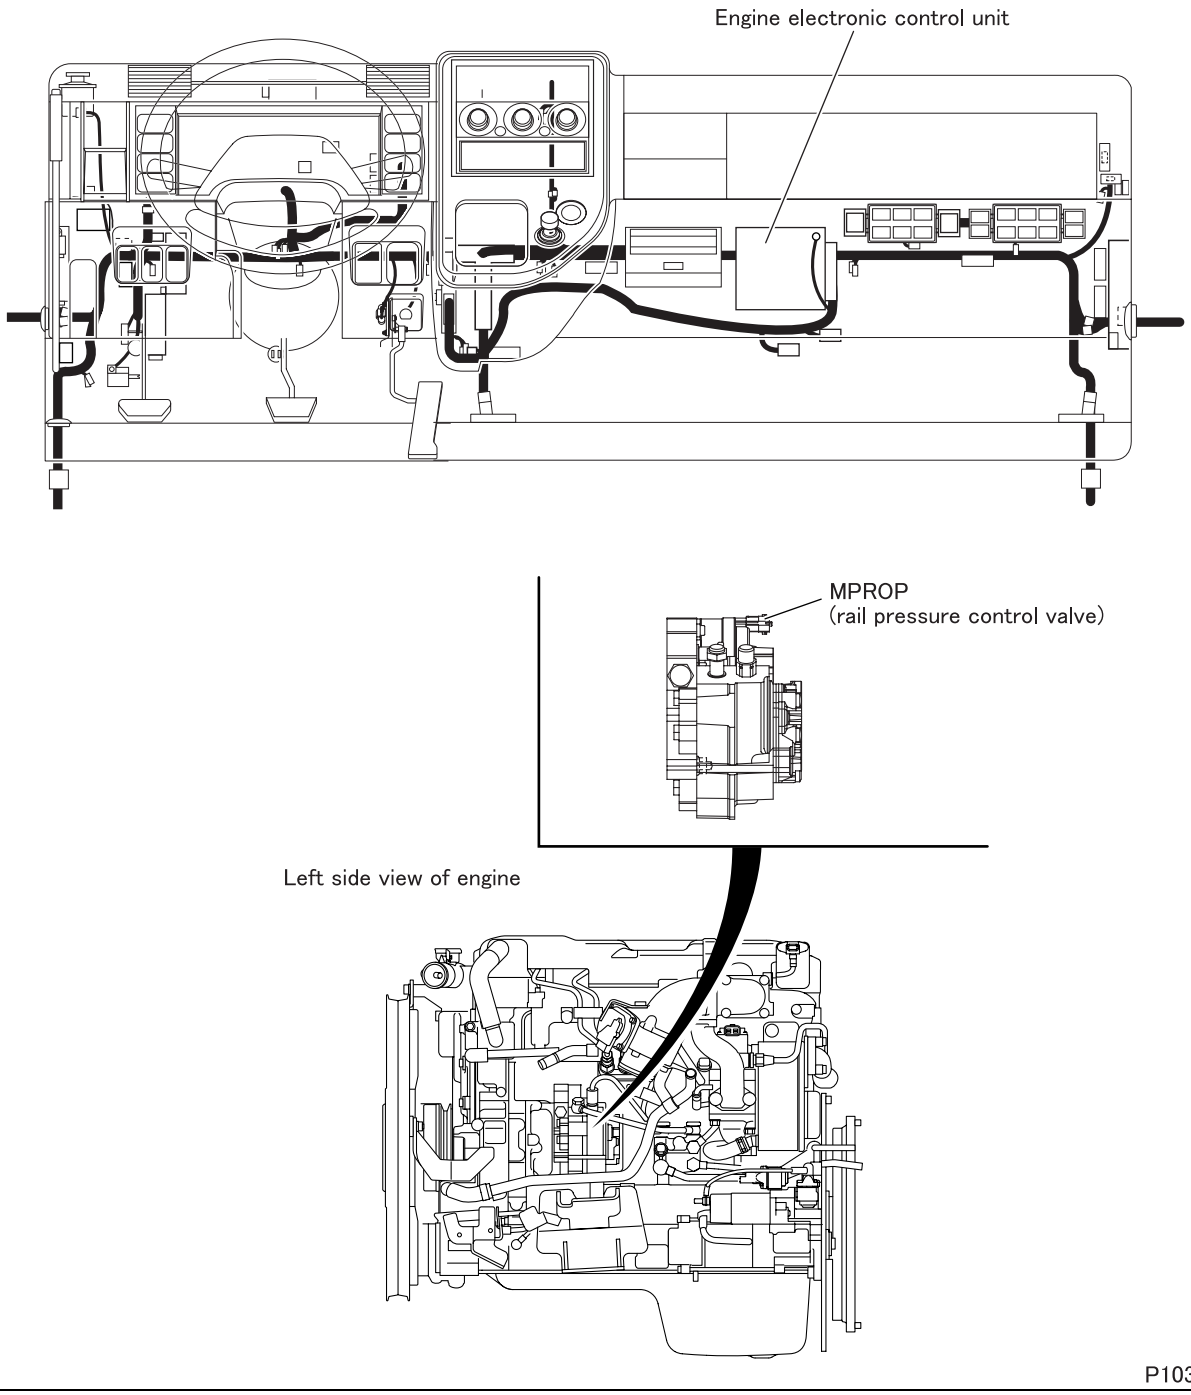
[Probable cause of trouble]
- Open-circuit of harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Modify connector.

[Fault code]
Diagnosis code: P0004/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
High signal range check
[Diagnosis check]
- MPROP (rail pressure control valve) is monitored for fault.

[Code generation condition]
- MPROP (rail pressure control valve) voltage remains below 0 V for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

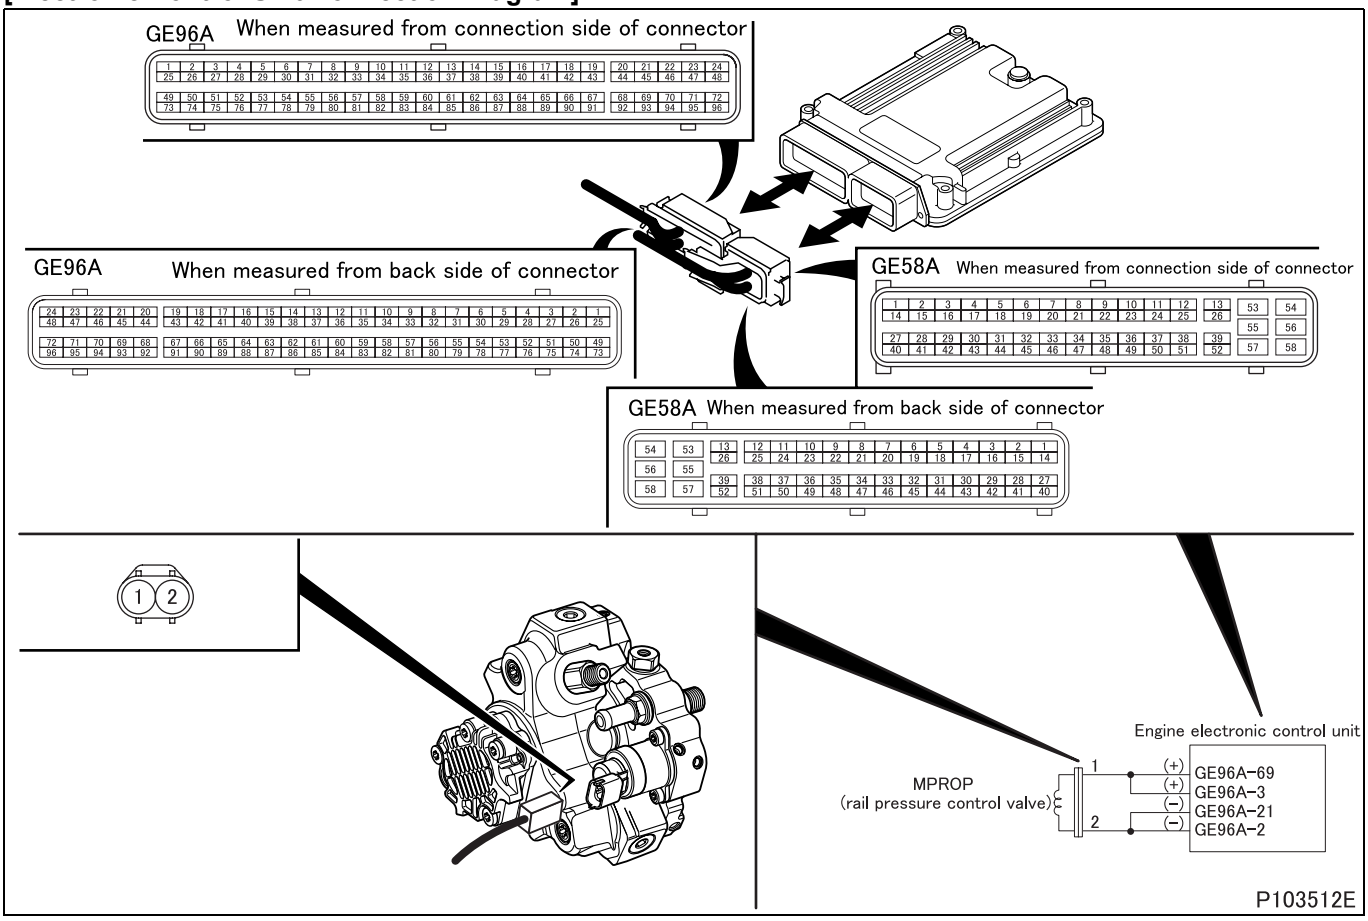
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- MPROP (rail pressure control valve) control is stopped.
- Misfire detection is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

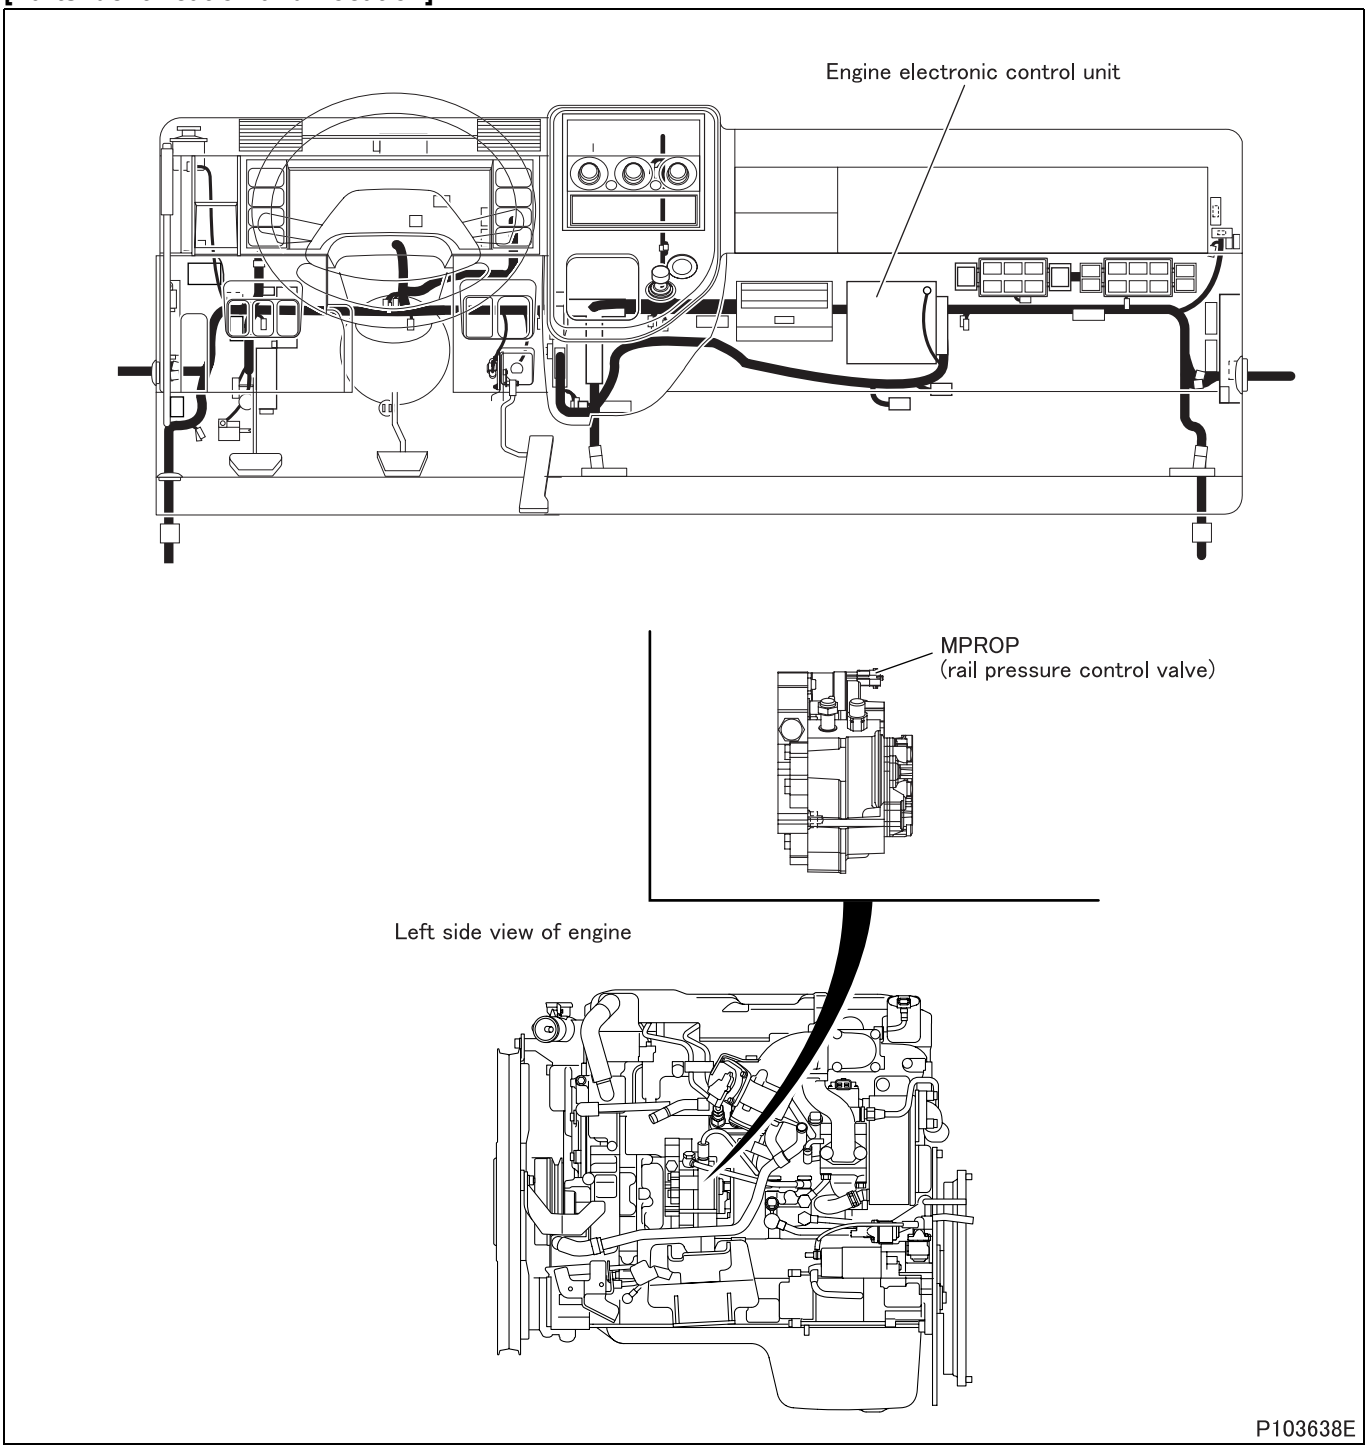
[Probable cause of trouble]
- Short-circuit harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Modify connector.

[Fault code]
Diagnosis code: P0016/Flash code: 12, 14, 15
[Monitor]
Both speed sensor (Engine speed sensor, Cylinder recognition sensor)
[Fault (outline)]
- Cam/crank signals present
- Gap phase shift

[Diagnosis check]
- Output signals of engine speed sensor and cylinder recognition sensor at engine start are compared for abnormality.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Input signals from engine speed sensor and cylinder recognition sensor remain unreceived for more than 6 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

<Condition (2)>
- Signals from engine speed sensor and cylinder recognition sensor differ by more than 12 pulses.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation.)

<Condition (3)>
- Backup control of cylinder recognition sensor is started due to failure of engine speed sensor.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<Condition (1)>
- Engine operating mode: starting
- Safety relay: OFF

<Condition (2)>
- Starter switch: ON
- Engine speed: more than 20 rpm

<Condition (3)>
- Engine speed sensor: faulty

[Control effected by electronic control unit during fault]
- Electronic control unit differs in the way of control by the diagnosis check item.

<Condition (1)>
- Engine stopped

<Condition (2)>
- Misfire detection is stopped.
- Related fault check is stopped.

<Condition (3)>
- Engine torque is limited.
- Auto cruise control stopped
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of engine speed sensor
- Malfunction of cylinder recognition sensor
- Malfunction of electronic control unit

[Recoverability]

- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>

- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

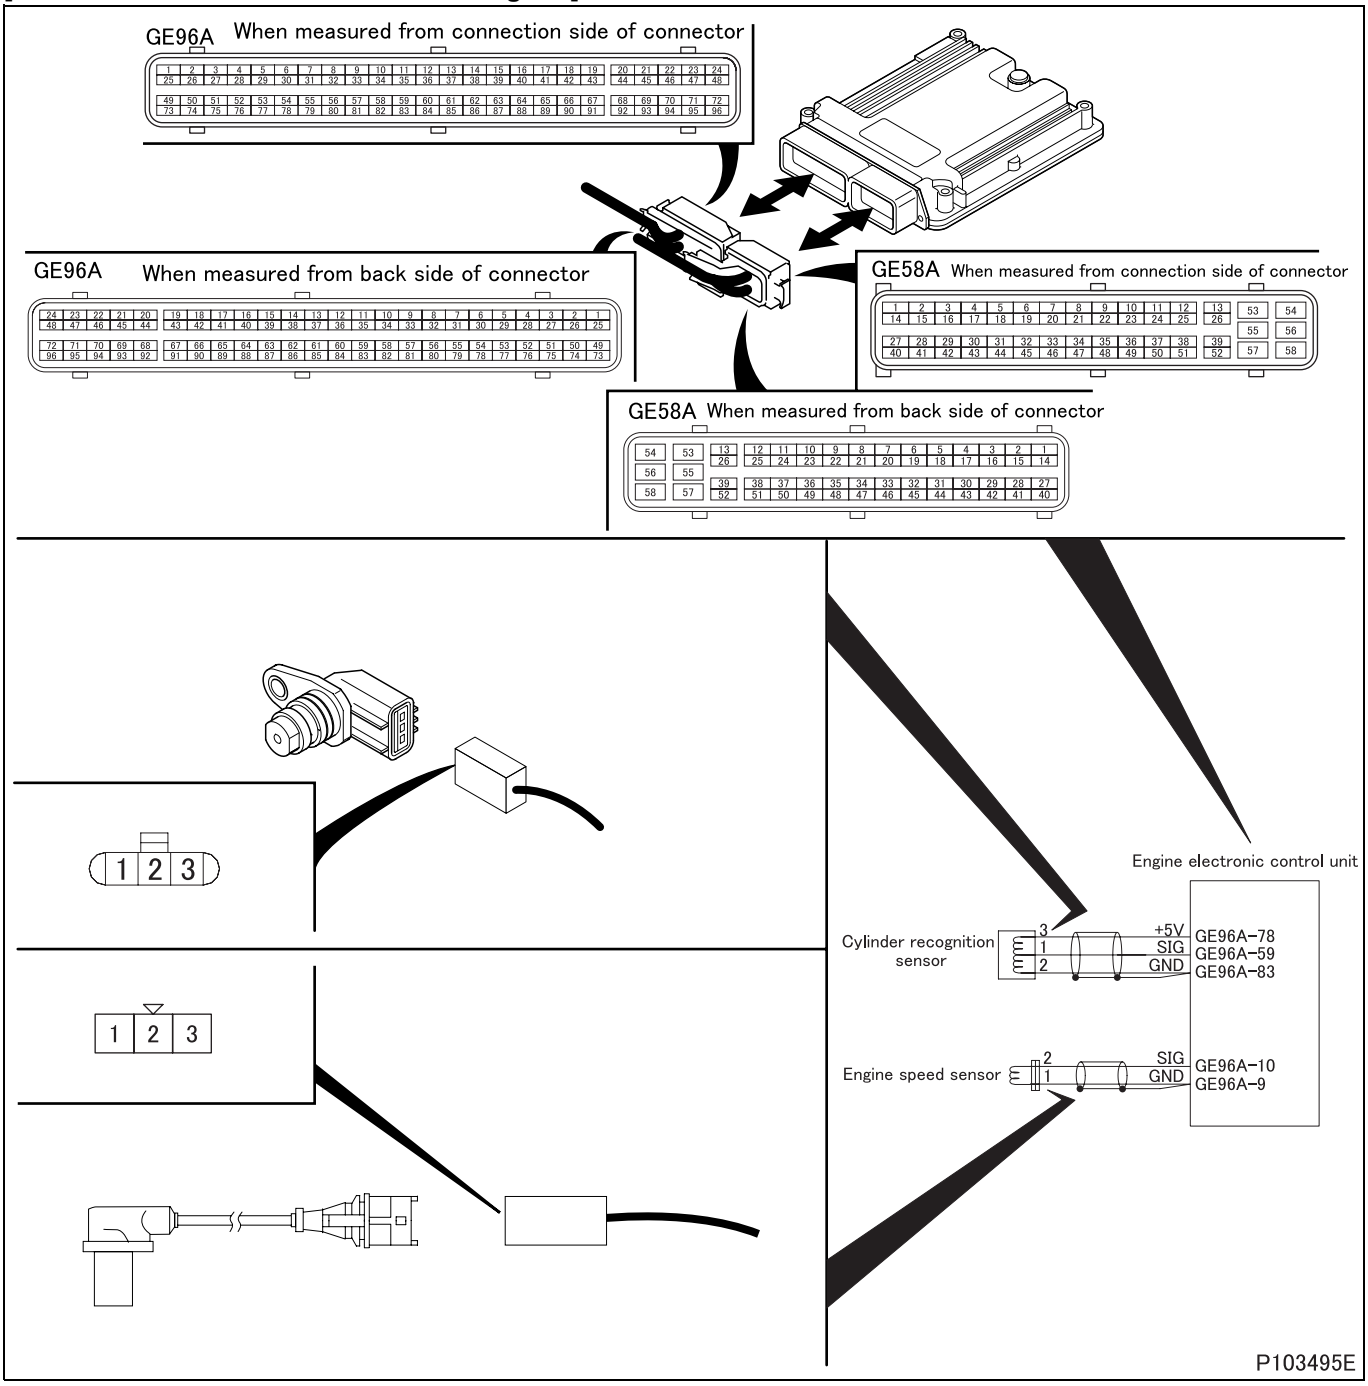
<Condition (2)>

- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

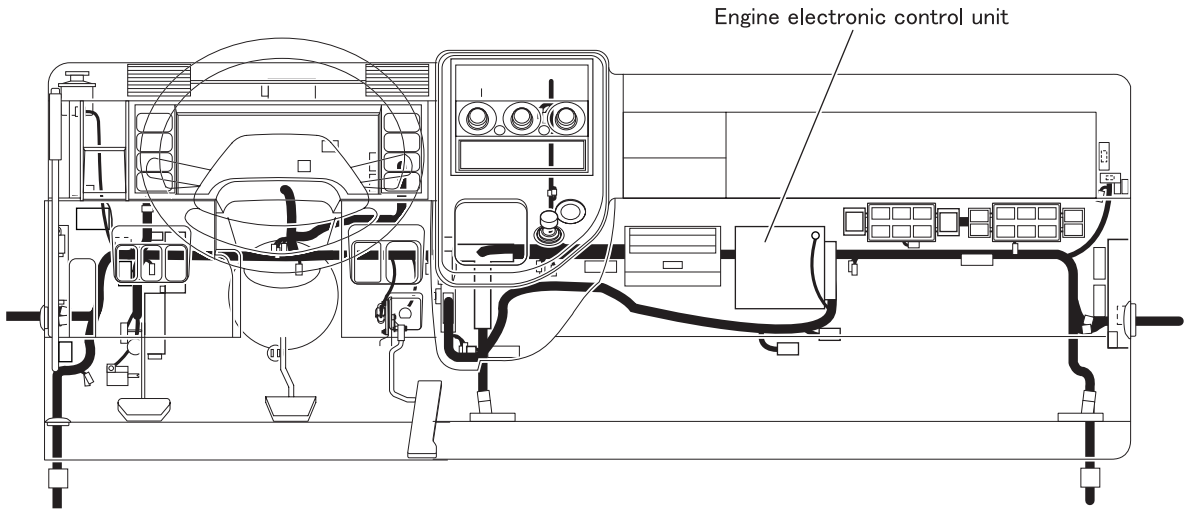
<Condition (3)>

- Diagnosis code is cleared simultaneously with recovery.

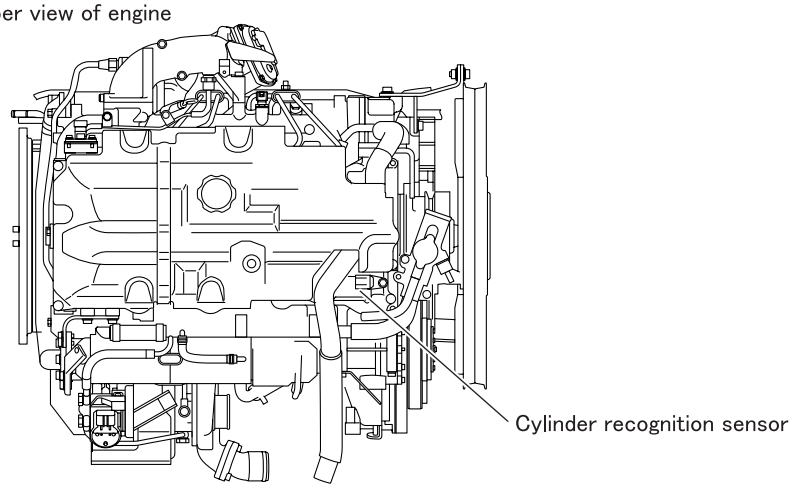
[Electronic Control Unit Connection Diagram]



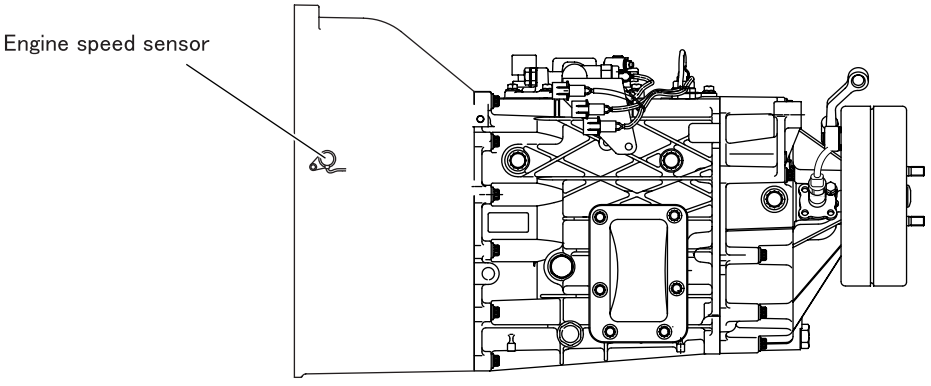
[Parts Identification and Location]



Upper view of engine



Left side view of transmission



P103623E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

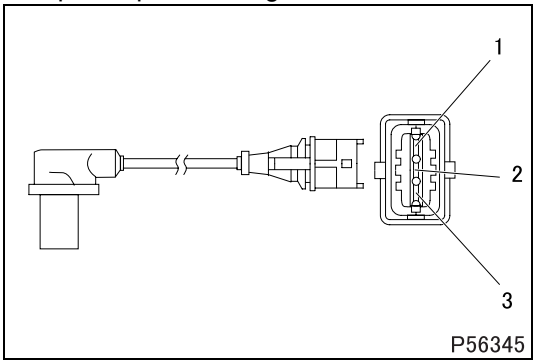
Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (engine speed sensor)
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 9 and 10.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		860 ± 86 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of engine speed sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of engine speed sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		860 ± 86 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of sensor

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between electronic control unit and engine speed sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 10
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between electronic control unit and engine speed sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 9
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by electronic control unit connector (signal) (cylinder recognition sensor)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 59 (+) and 83 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		1 V or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 8.

Step 8	Inspection items		Inspection by electronic control unit connector (power supply) (cylinder recognition sensor)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 78 (+) and 83 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Go to step 10.

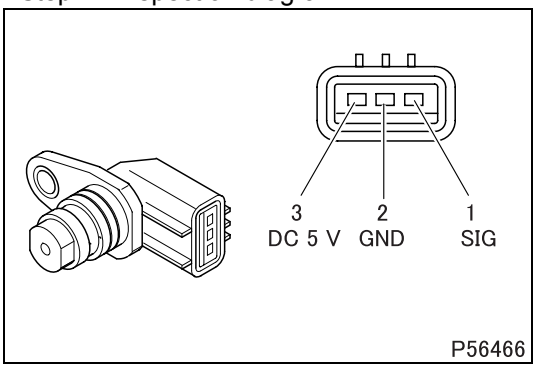
Step 9	Inspection items		Inspection by electronic control unit connector (ground) (cylinder recognition sensor)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 83 (+) and (GE58A) 53 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Go to step 10.

Step 10	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 17.
		NO	Modify connector.

Step 11	Inspection items		Inspection of cylinder recognition sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 12	Inspection items		Inspection of cylinder recognition sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and 3.
	Inspection condition		–
	Requirements		200 to 1800 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of sensor

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of harness between electronic control unit and cylinder recognition sensor (power supply)
	Maintenance item		Measure value of voltage between sensor connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 15.
		NO	Go to step 14.

Step 14	Inspection items		Inspection of harness between electronic control unit and cylinder recognition sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 78
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 17.
		NO	Modify harness.

Step 15	Inspection items		Inspection of harness between electronic control unit and cylinder recognition sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 83
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Modify harness.

Step 16	Inspection items		Inspection of harness between electronic control unit and cylinder recognition sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 59
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 17.
		NO	Modify harness.

Step 17	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0045/Flash code: 51
[Monitor]
Failure of turbocharger actuator
[Fault (outline)]
Circuit
[Diagnosis check]
- Turbocharger electronic drive unit monitors built-in motor of turbocharger actuator for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Monitoring by turbocharger electronic drive unit is performed from initial operational status of motor at starter switch ON.

[Code generation condition]
- Actuator motor circuit remains open as detected by electronic drive unit for 2 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

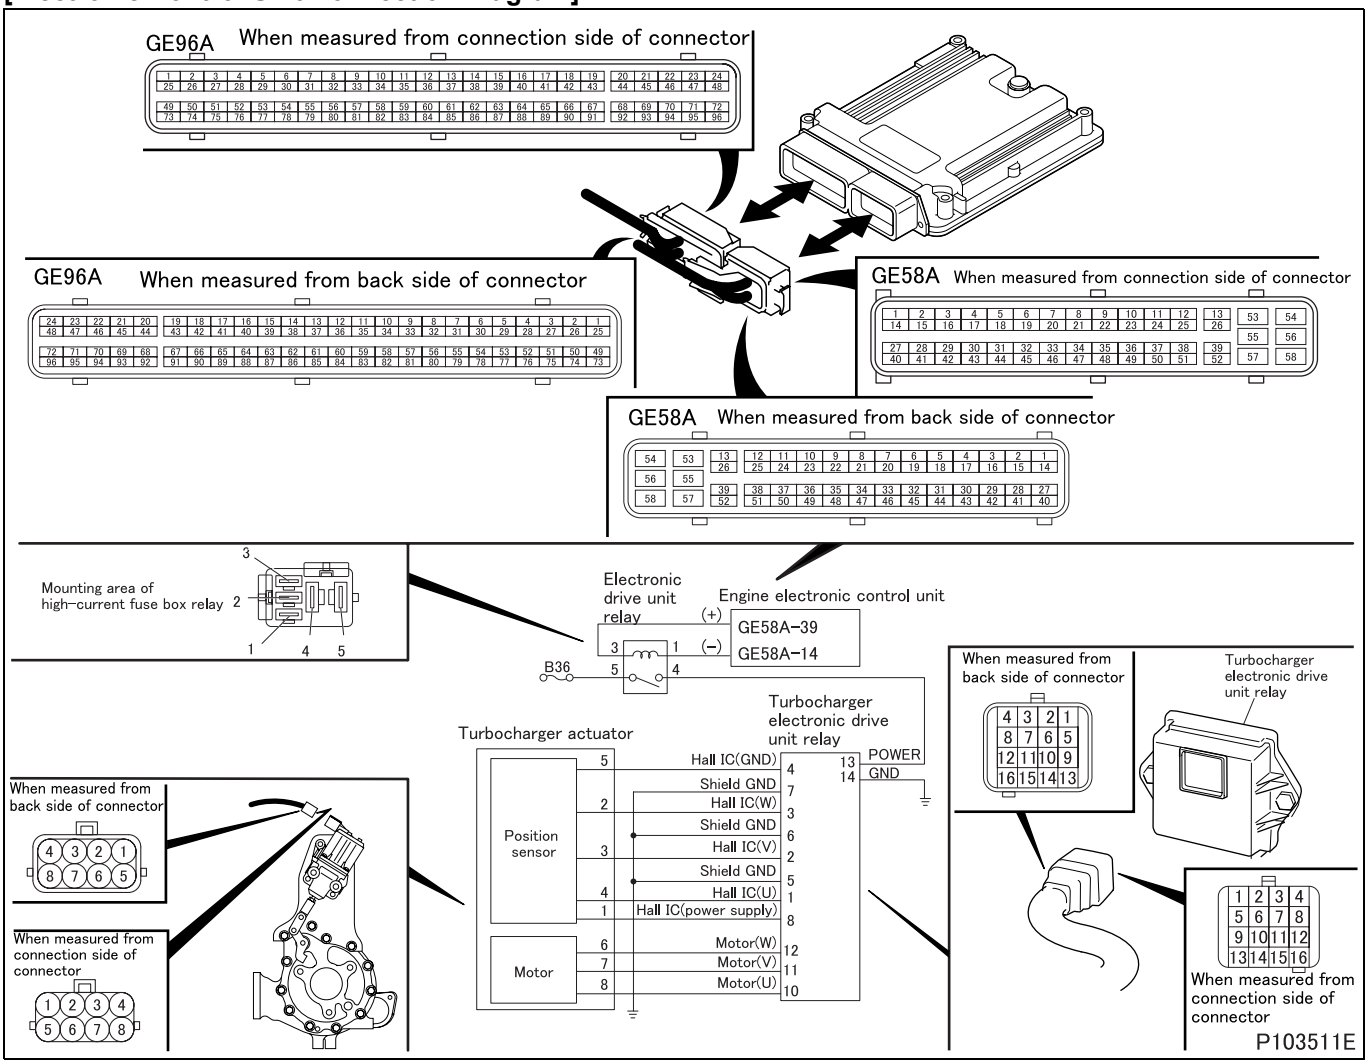
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

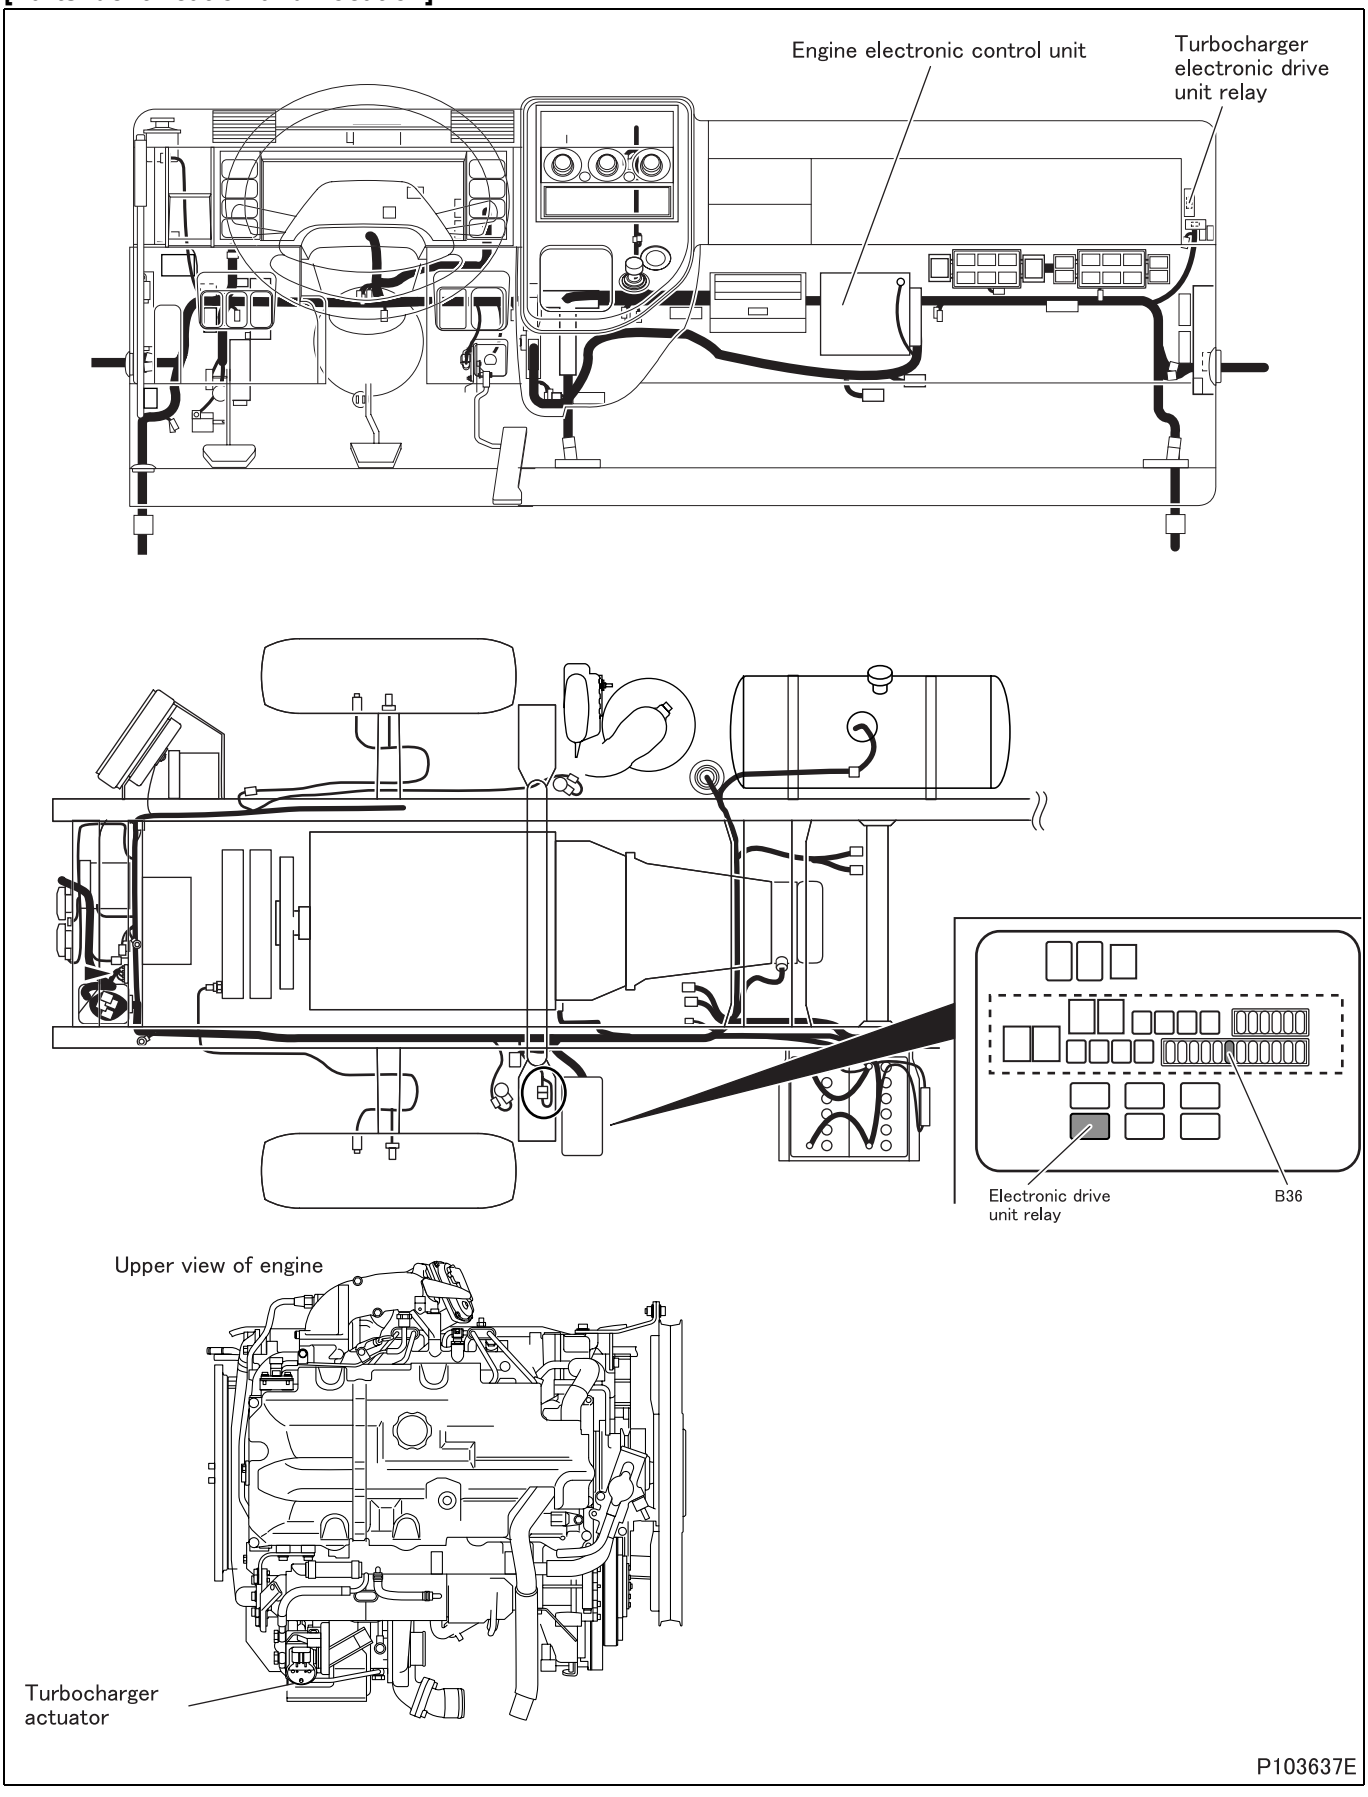
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and turbocharger actuator
- Malfunction of each connector
- Malfunction of turbocharger motor (built in turbocharger actuator)
- Malfunction of turbocharger position sensor (built in turbocharger actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of turbocharger actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9
		NO	Modify harness.

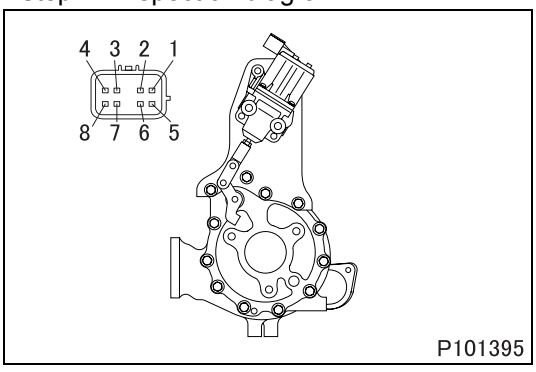
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals. • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - turbocharger actuator connector terminal No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - turbocharger actuator connector terminal No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - turbocharger actuator connector terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of turbocharger actuator unit (motor)
	Maintenance item		Measure value of resistance between following turbocharger actuator connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		Keep turbocharger actuator installed on vehicle. Remove harness connector, and measure turbocharger actuator side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of turbocharger actuator.

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of turbocharger actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between following electronic drive unit connector terminals • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A4 “VGT 1”
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - turbocharger actuator connector terminal No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - turbocharger actuator connector terminal No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - turbocharger actuator connector terminal No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - turbocharger actuator connector terminal No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - turbocharger actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of turbocharger, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0046/Flash code: 51
[Monitor]
Failure of turbocharger actuator
[Fault (outline)]
Circuit
[Diagnosis check]
- Turbocharger electronic control drive monitors built-in motor of turbocharger actuator for sticking of parts and sends fault information to engine electronic control unit through controller area network communication.
- Turbocharger electronic drive unit determines actual shaft position from position sensor output data and calculates target shaft position from actual position data.

[Code generation condition]
- Actuator motor remains stuck as detected by electronic drive unit for 2 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

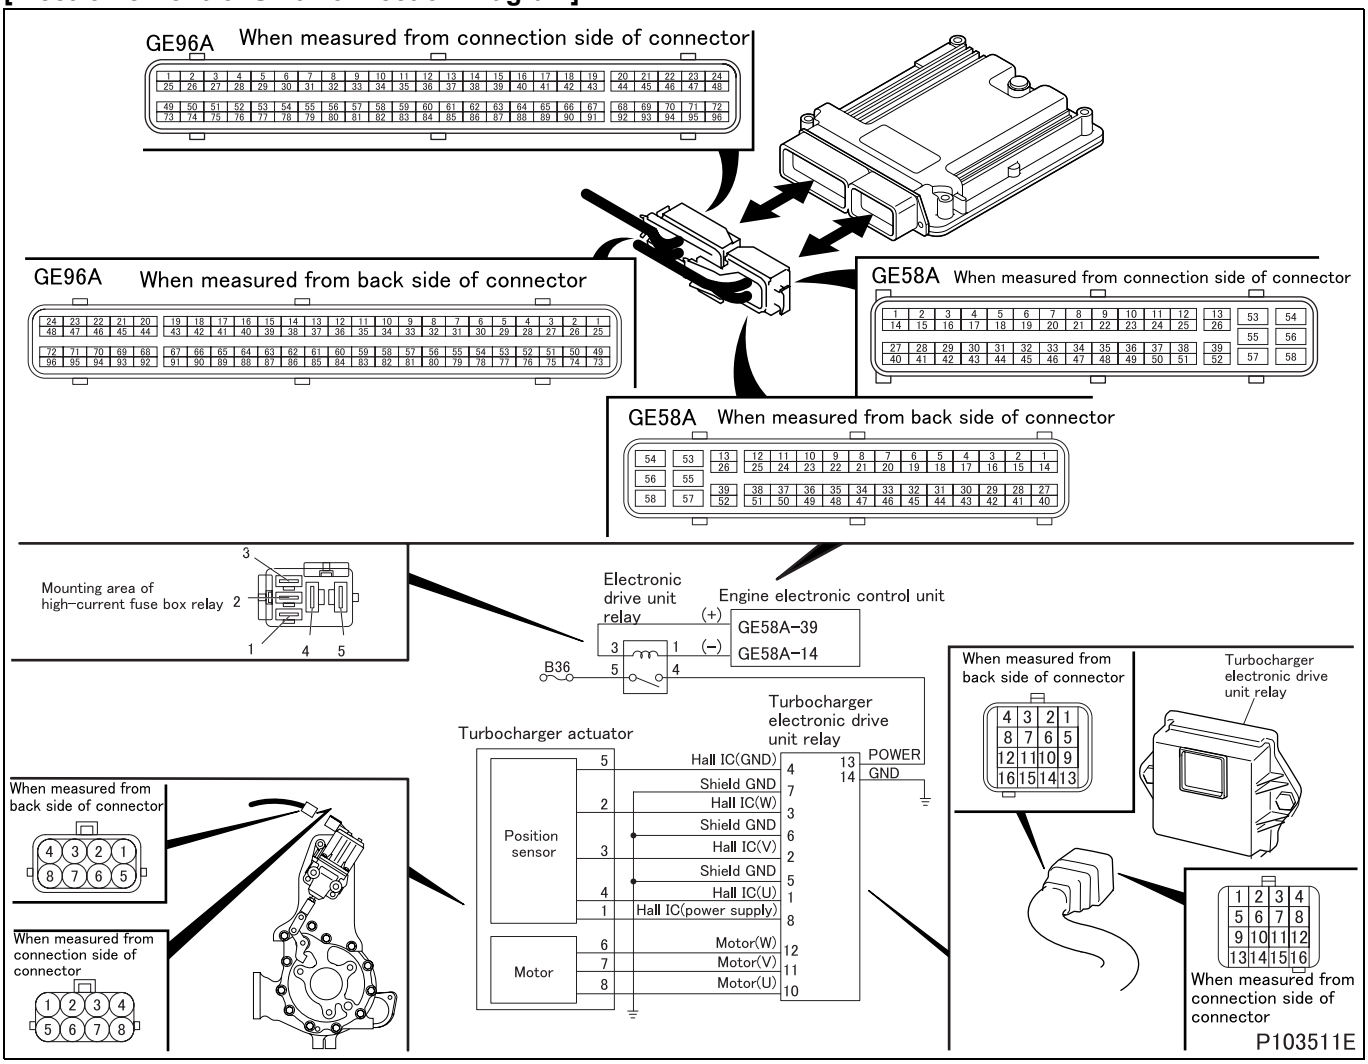
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

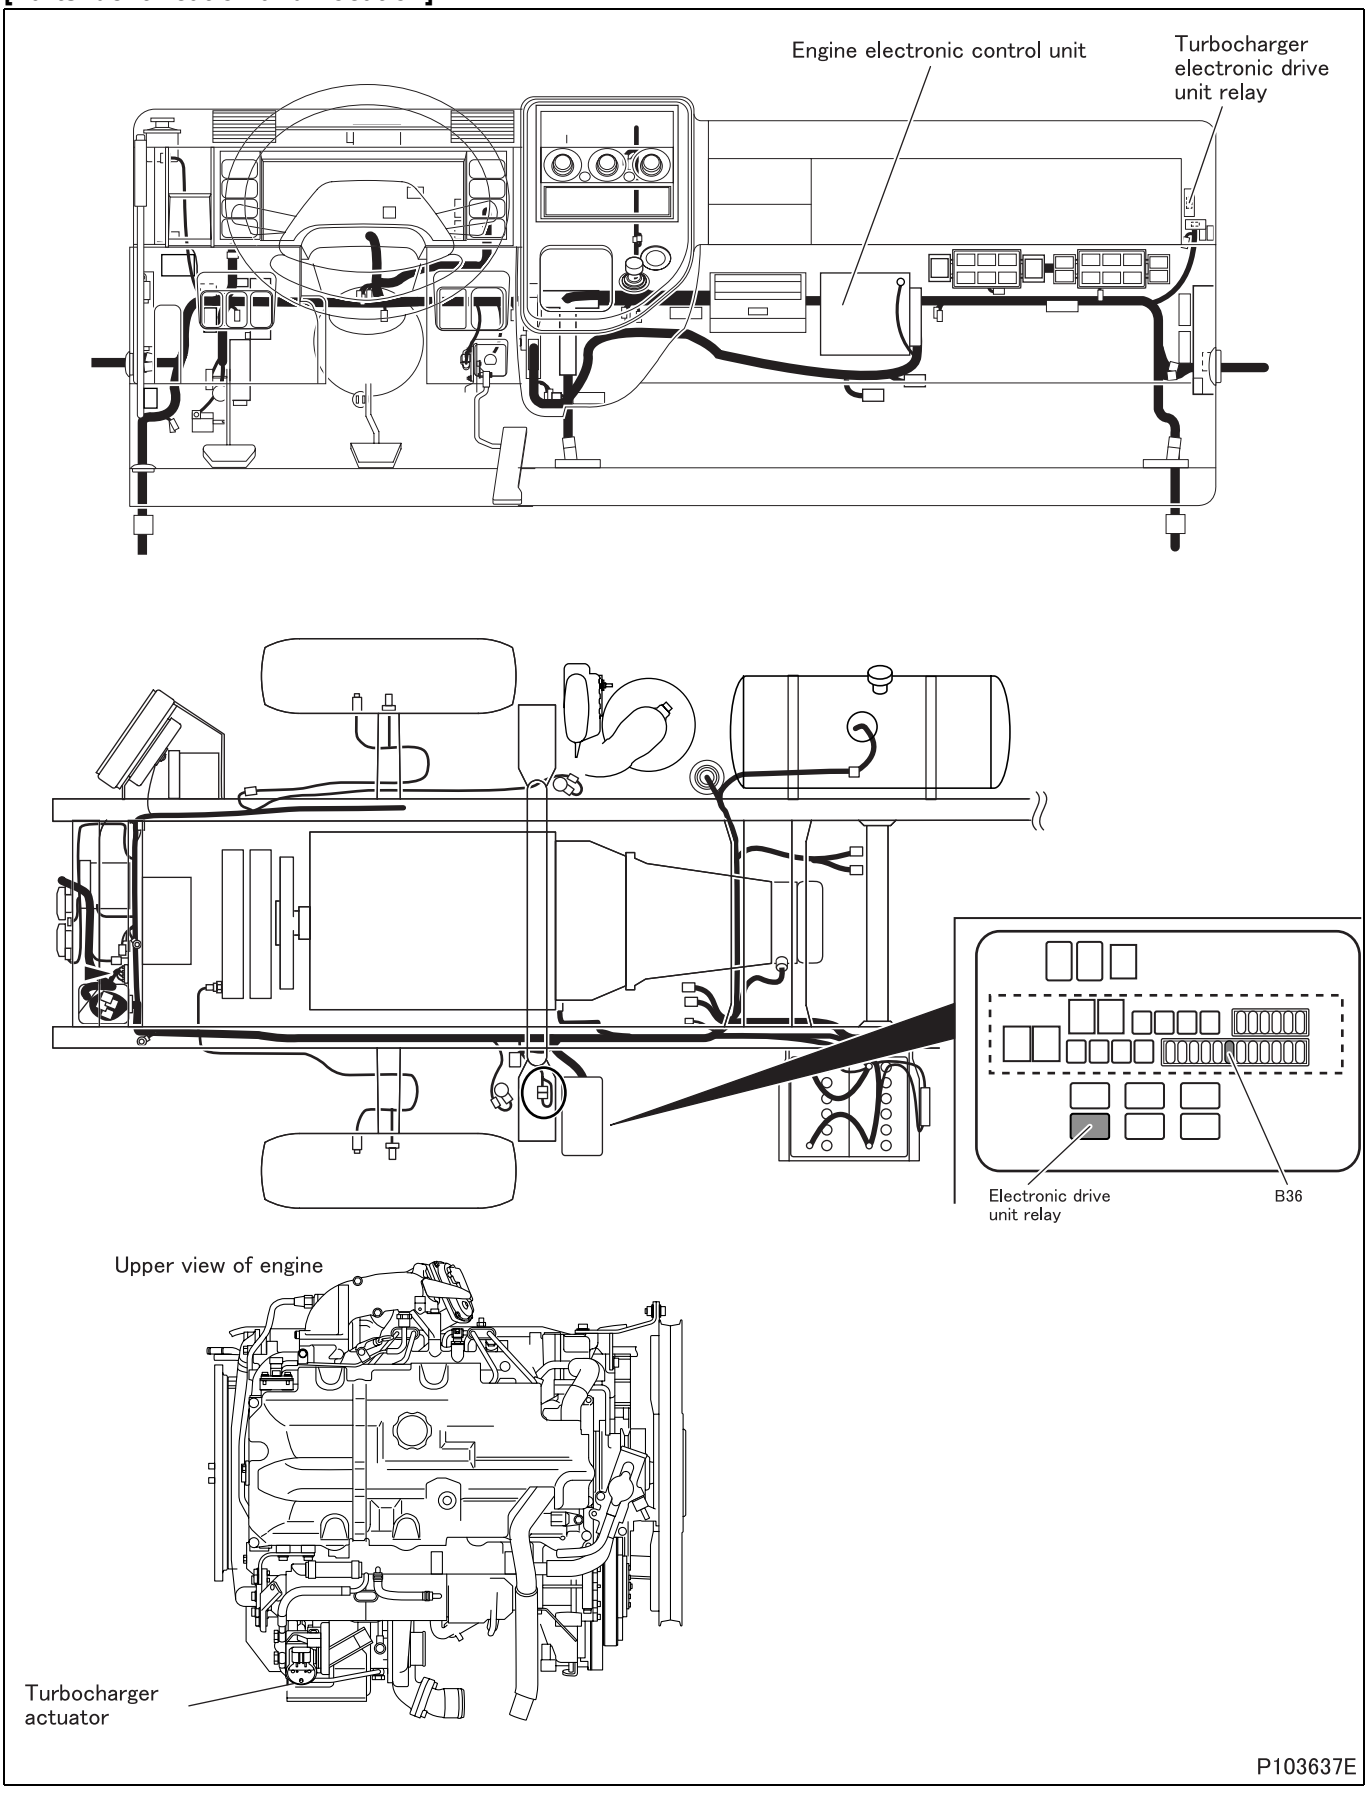
[Probable cause of trouble]
- Turbocharger actuator unit stuck
- Malfunction of electronic drive unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of turbocharger actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9
		NO	Modify harness.

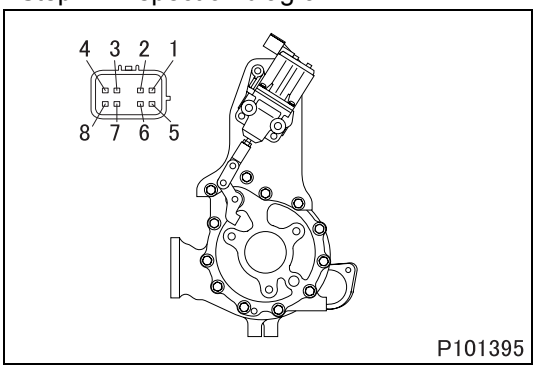
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals. • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - turbocharger actuator connector terminal No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - turbocharger actuator connector terminal No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - turbocharger actuator connector terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of turbocharger actuator unit (motor)
	Maintenance item		Measure value of resistance between following turbocharger actuator connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		Keep turbocharger actuator installed on vehicle. Remove harness connector, and measure turbocharger actuator side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of turbocharger actuator.

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of turbocharger actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between following electronic drive unit connector terminals • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform Multi-Use Tester actuator test item No. A4 “VGT 1”
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - turbocharger actuator connector terminal No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - turbocharger actuator connector terminal No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - turbocharger actuator connector terminal No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - turbocharger actuator connector terminal No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - turbocharger actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of turbocharger, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0047/Flash code: 51
[Monitor]
Failure of turbocharger actuator
[Fault (outline)]
Circuit
[Diagnosis check]
- Turbocharger electronic drive unit monitors built-in motor of turbocharger actuator for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Monitoring by turbocharger electronic drive unit is performed from internal current detection circuit.

[Code generation condition]
- Actuator motor circuit remains shorted as detected by electronic drive unit for 2 seconds. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

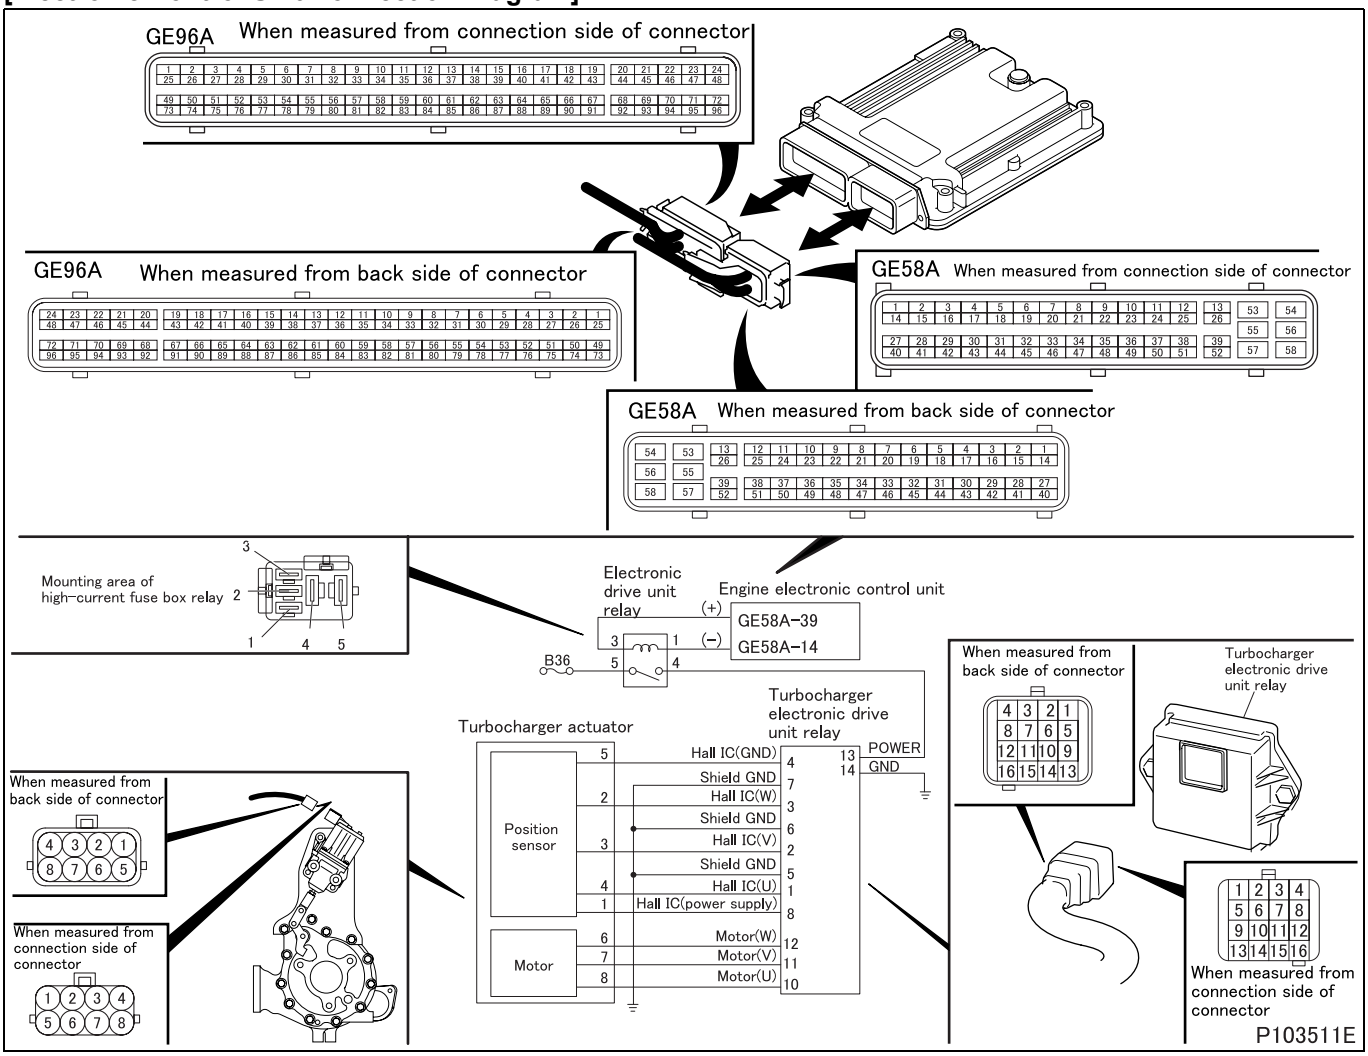
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

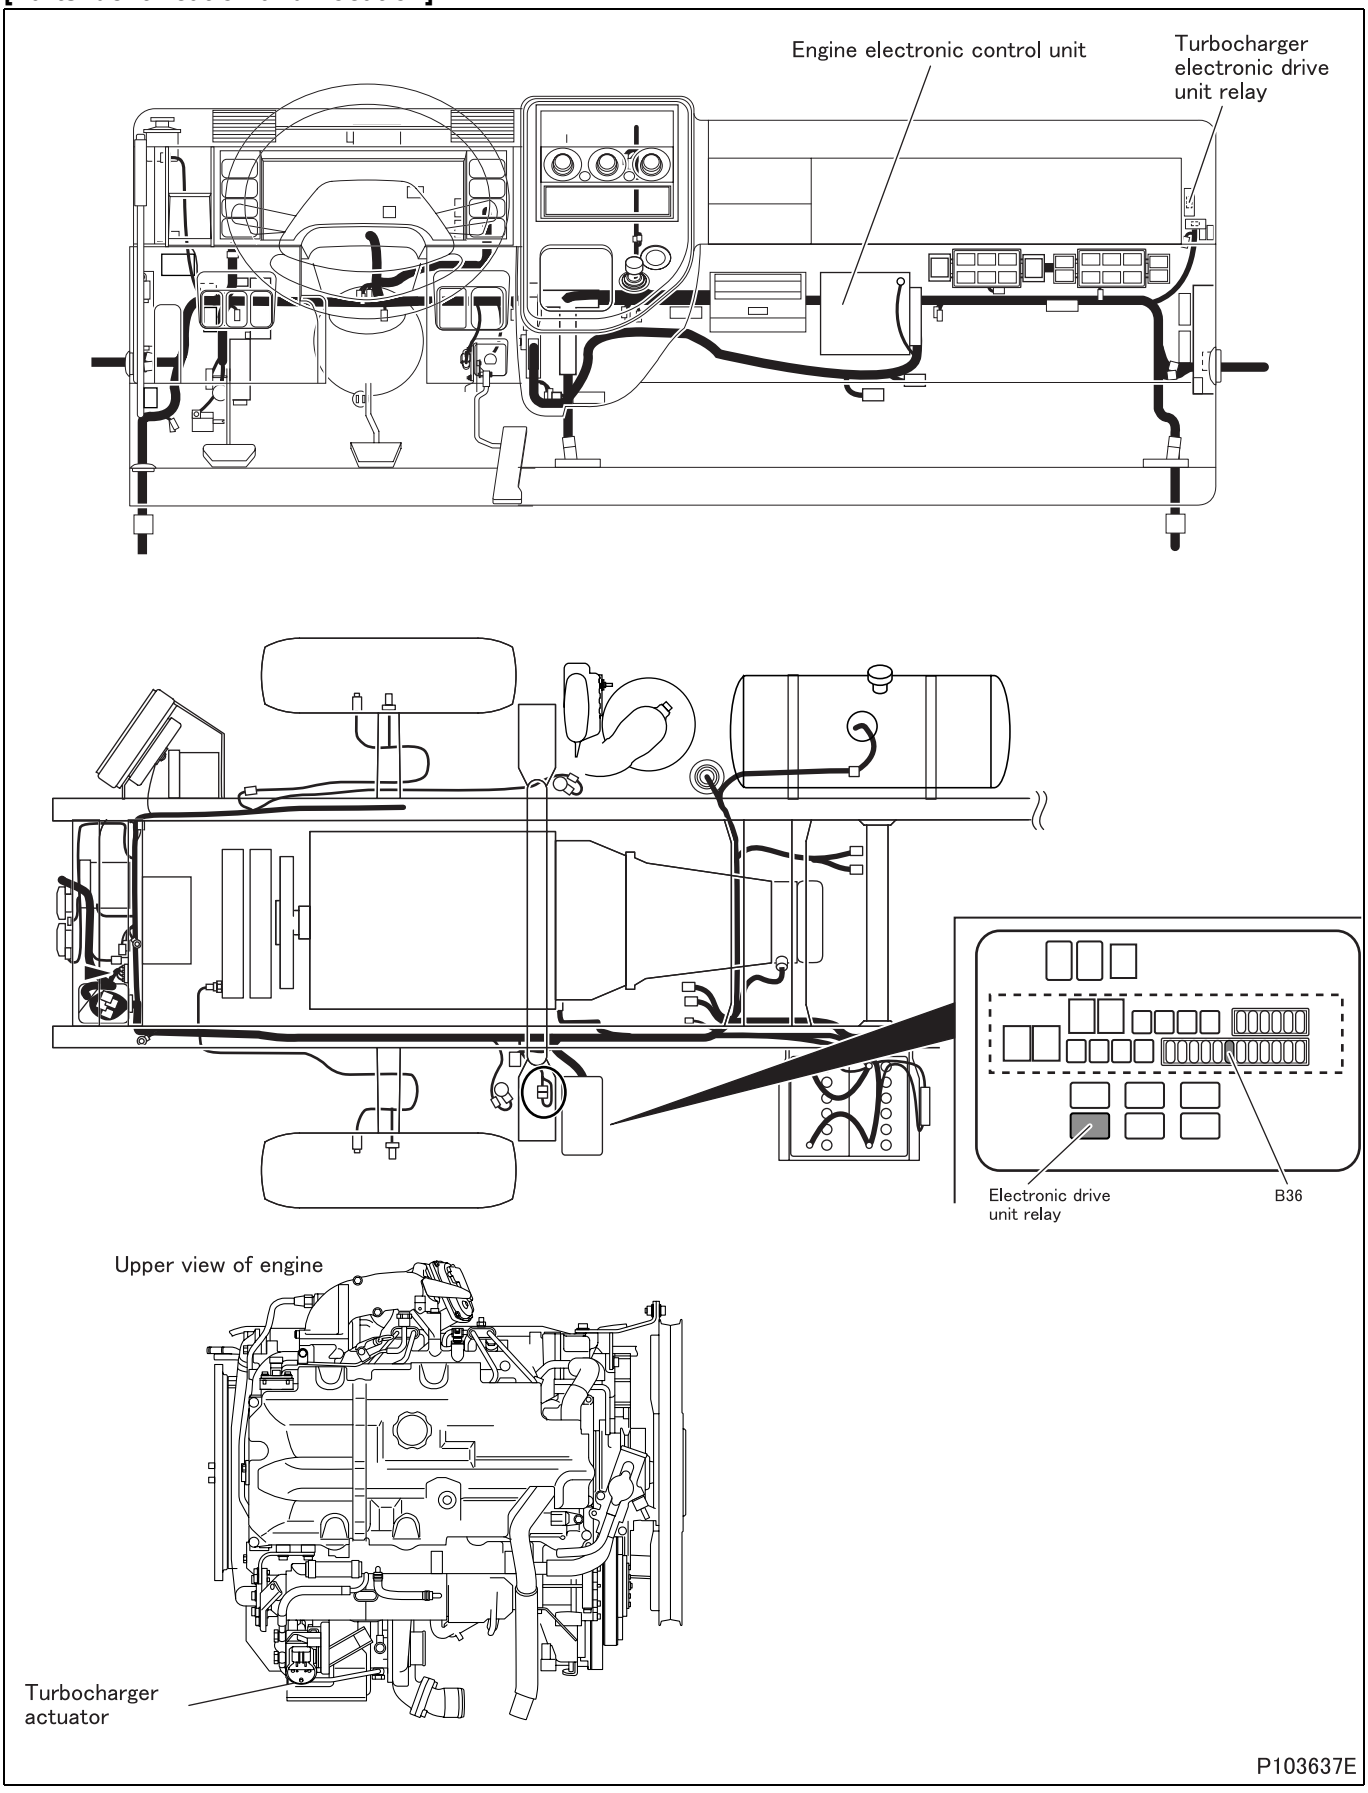
[Probable cause of trouble]
- Open-circuit or short-circuit harness between electronic drive unit and turbocharger actuator
- Malfunction of each connector
- Malfunction of turbocharger motor (built in turbocharger actuator)
- Malfunction of turbocharger position sensor (built in turbocharger actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Mult-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit relay
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of turbocharger actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform Multi-Use Tester actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9
		NO	Modify harness.

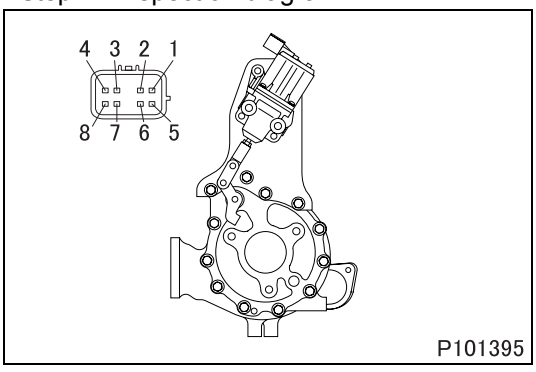
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals. • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - turbocharger actuator connector terminal No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - turbocharger actuator connector terminal No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - turbocharger actuator connector terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of turbocharger actuator unit (motor)
	Maintenance item		Measure value of resistance between following turbocharger actuator connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		Keep turbocharger actuator installed on vehicle. Remove harness connector, and measure turbocharger actuator side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of turbocharger actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of turbocharger actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between following electronic drive unit connector terminals • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A4 “VGT 1”
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - variable geometry turbocharger actuator connector terminal No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - turbocharger actuator connector terminal No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - turbocharger actuator connector terminal No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - turbocharger actuator connector terminal No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - turbocharger actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of turbocharger, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “54: Target VGT Position, 55: Actual VGT Position”) **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0069/Flash code: 19
[Monitor]
Characteristic abnormality of atmospheric pressure sensor (built into engine electronic control unit)
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Values of atmospheric pressure sensor and boost pressure sensor are compared when engine is in considerably low speed operation (value of boost pressure sensor is corrected value by exhaust gas recirculation valve position and throttle position)

[Code generation condition]
- Atmospheric pressure value remains higher than boost pressure value by 14 kPa {2.0 psi, 0.1 kgf/cm^2} for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Engine speed: less than 850 rpm
- Fuel injection quantity: less than 10 mg/cyc
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- In-use performance counter is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0234 “Overboost” • P0236 “Boost Press SNSR (Plausi)” • P0237 “Boost Press SNSR (Low)” • P0238 “Boost Press SNSR (High)” • P0299 “Turbocharger (Underboost)” • P2228 “Atm Press SNSR (Low)” • P2229 “Atm Press SNSR (High)”
	Inspection condition		• Starter switch: ON • Engine: Idling
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 20 “Atmospheric Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0087/Flash code: 36
[Monitor]
Abnormality of common rail pressure (comparison)
[Fault (outline)]
Rail pressure regulator adjustment
[Diagnosis check]
- Pressure in common rail is detected as actual common rail pressure by common rail pressure sensor and compared with target common rail pressure for control by engine electronic control unit.

[Code generation condition]
- Actual common rail pressure remains higher than target common rail pressure by 300 bar or more for 10 seconds (not reaching the target pressure). (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Common rail pressure control: closed loop control

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of supply pump (overflow valve)
- Malfunction of pressure limiting valve
- Airtight malfunction of injector
- Plugged fuel system
- Fuel leakage
- Malfunction of common rail pressure sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is no fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 6.

Step 3	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on pipe or hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Correct and replace suction pipe or hose.

Step 4	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 5.

Step 5	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 6.

Step 6	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of supply pump

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel pipe between supply pump and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of fuel pipe

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of rail

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel injection pipes (four) between injector and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of injection pipe

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Replacement of injector

Step 11	Inspection items		Check inside of combustion chamber.
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Replacement of injector of object cylinder

Step 12	Inspection items		Replacement of rail (common rail pressure sensor, flow damper and pressure limiter abnormal)
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing rail.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 13.

Step 13	Inspection items		Replacement of supply pump
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Replacement of injectors (four)

[Fault code]
Diagnosis code: P0088/Flash code: 23
[Monitor]
Abnormality of common rail pressure (pressure: high)
[Fault (outline)]
Plausibility
[Diagnosis check]
- Pressure in common rail is detected as actual common rail pressure by common rail pressure sensor and compared with target common rail pressure for control by engine electronic control unit.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Actual common rail pressure remains 300 bar apart from target common rail pressure for 10 seconds (considerably exceeding the target value).
  (Warning lamp (orange) is lit and diagnosis code is displayed on first establishment of code generation condition.)

<Condition (2)>
- Common rail pressure remains at 190 MPa {27560 psi, 1937 kgf/cm^2} or higher for 5 consecutive seconds.
  (Warning lamp (red) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Common rail pressure control: closed loop control

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the color of warning lamp.
<Warning lamp: Orange>
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

<Warning lamp: Red>
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Malfunction of supply pump (overflow valve)
- Malfunction of pressure limiting valve
- Airtight malfunction of injector
- Plugged fuel system
- Fuel leakage
- Malfunction of common rail pressure sensor

[Recoverability]

- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>

- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

<Condition (2)>

- Lamp is extinguished and code is cleared simultaneously with recovery.

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Inspect diagnosis code that is occurring.

[Fault code]
Diagnosis code: P0089/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
Overload
[Diagnosis check]
- Engine electronic control unit internal function monitors MPROP (rail pressure control valve) circuit for overcurrent.

[Code generation condition]
- Overcurrent remains as detected by engine electronic control unit internal function for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

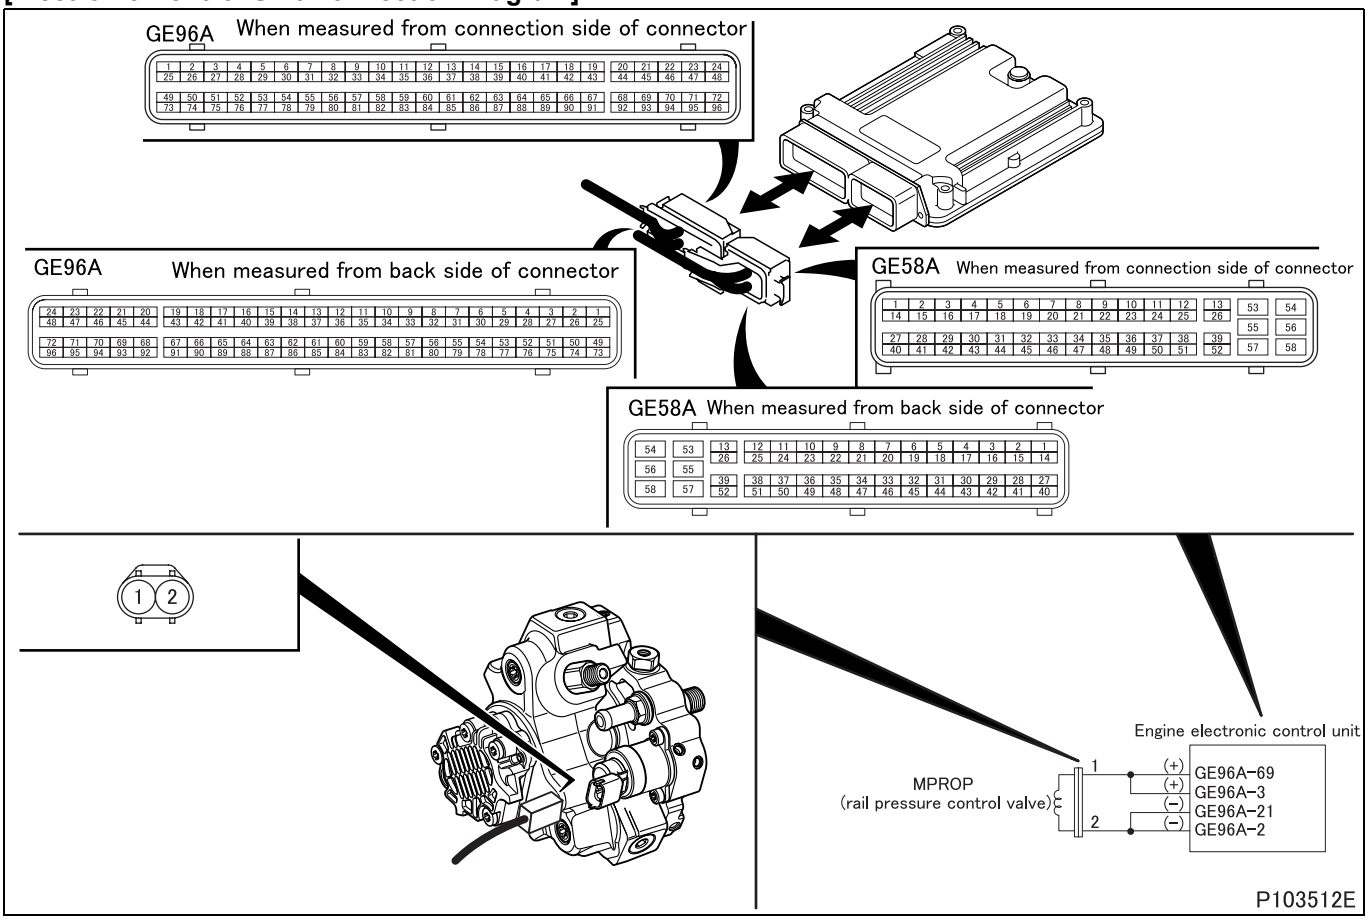
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

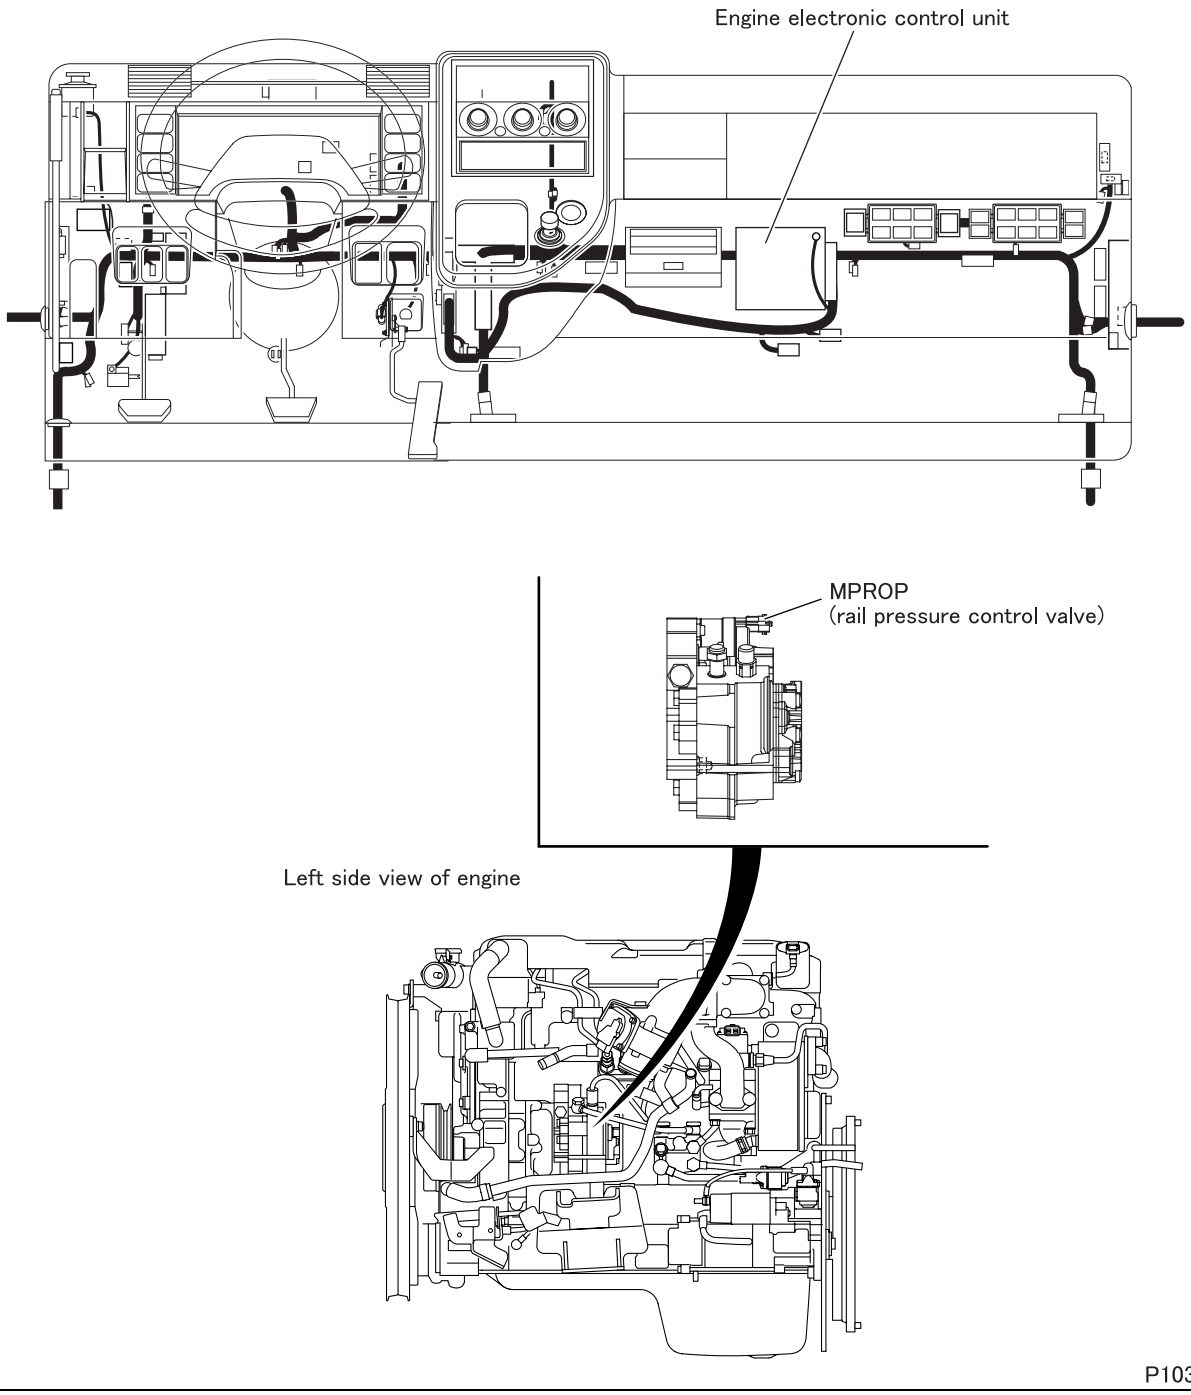
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

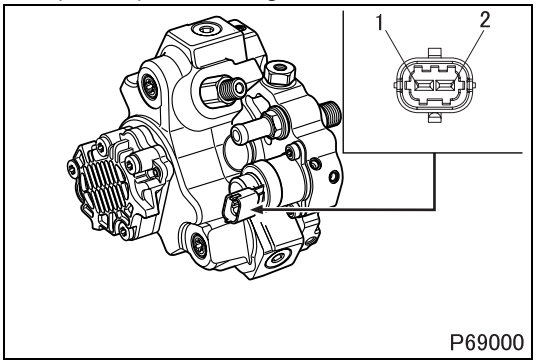
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Go to step 3.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of MPROP (rail pressure control valve) unit
	Maintenance item		Check continuity across MPROP (rail pressure control valve) connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of supply pump

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between electronic control unit and MPROP (rail pressure control valve) (power supply)
	Maintenance item		Check circuit between MPROP (rail pressure control valve) connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 3 or No. 69.
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between electronic control unit and MPROP (rail pressure control valve) (ground)
	Maintenance item		Check circuit between MPROP (rail pressure control valve) connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 2 or No. 21.
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check” under the following conditions.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		This diagnosis code is not displayed again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0090/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
MPROP (rail pressure control valve) open – circuit
[Diagnosis check]
- Engine electronic control unit internal function monitors MPROP (rail pressure control valve) for open-circuit.

[Code generation condition]
- Open-circuit remains as detected by engine electronic control unit internal function for 0.3 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

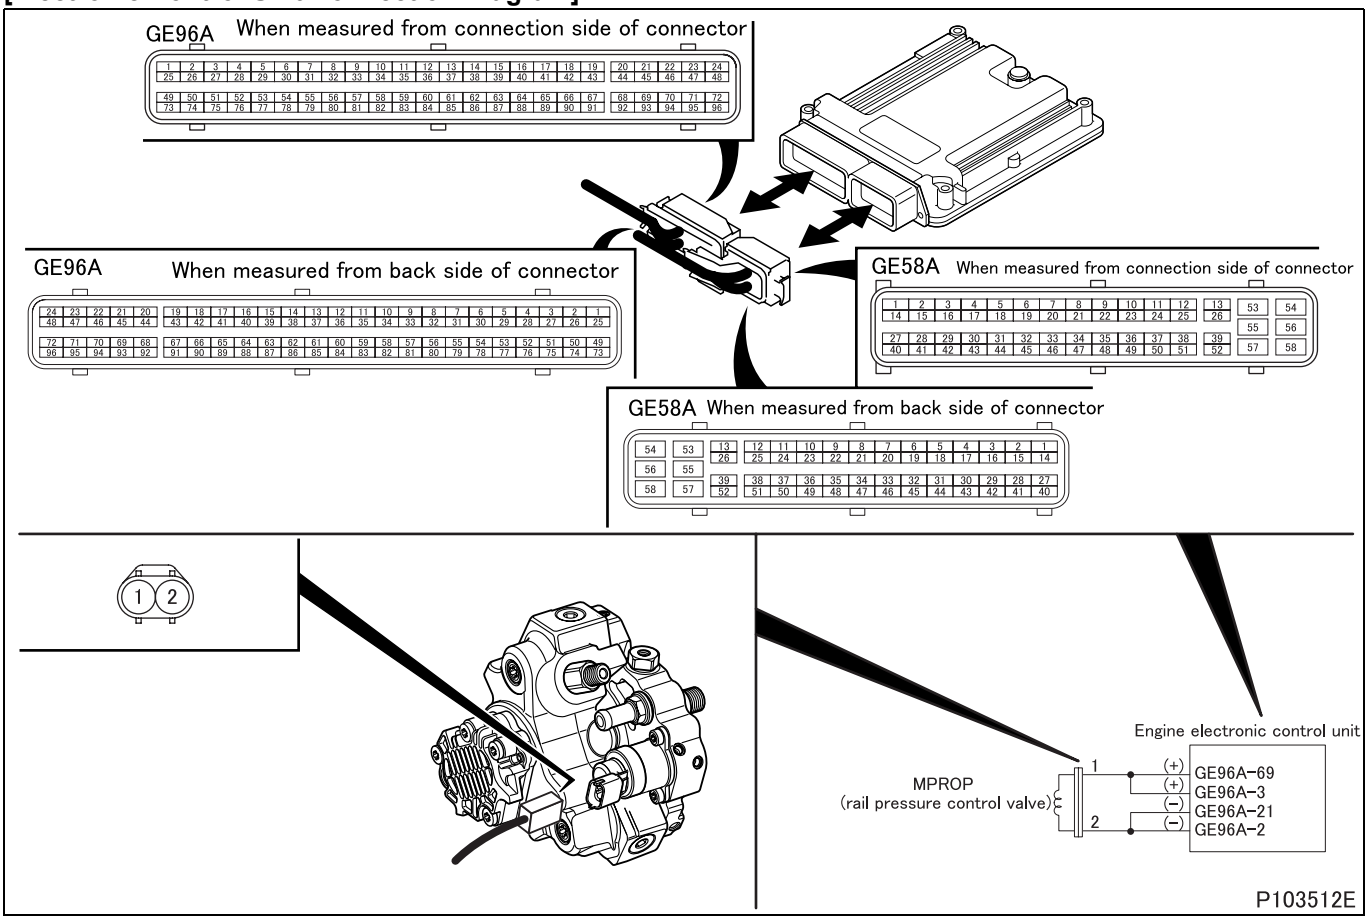
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

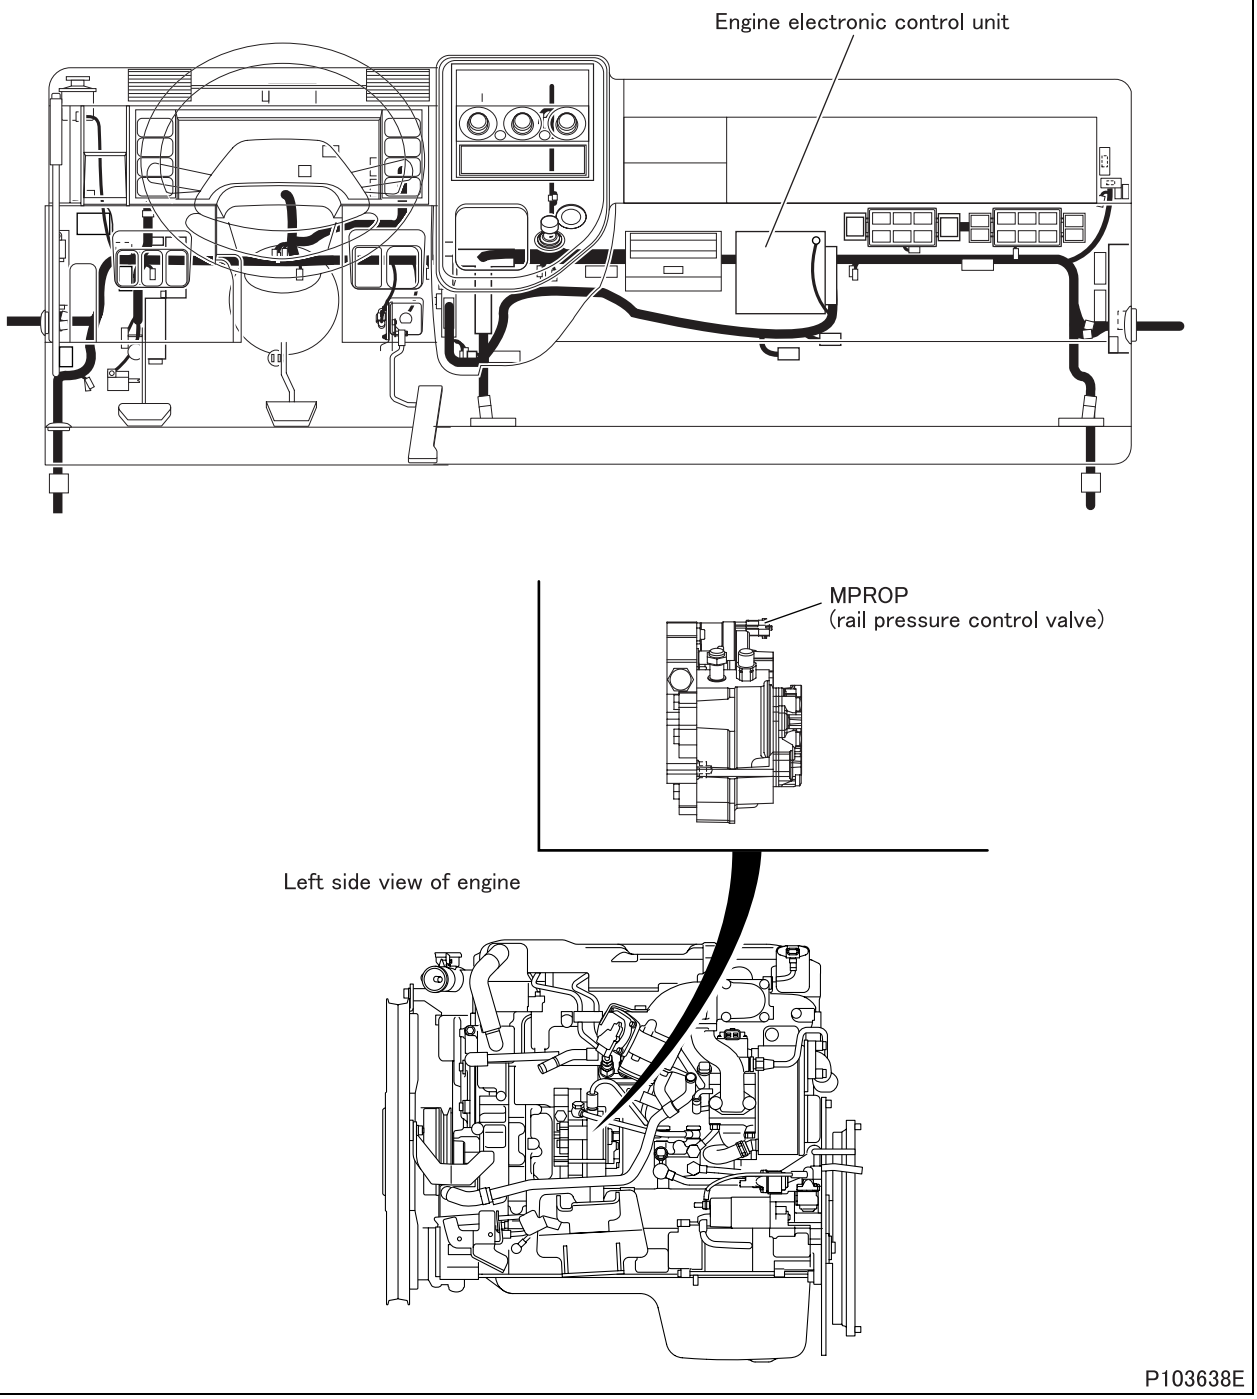
[Probable cause of trouble]
- Open-circuit of harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Modify connector.

[Fault code]
Diagnosis code: P0091/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
MPROP (rail pressure control valve) short circuit
[Diagnosis check]
- Engine electronic control unit internal function monitors MPROP (rail pressure control valve) for short-circuit to ground.

[Code generation condition]
- MPROP circuit remains shorted to ground as detected by engine electronic control unit internal function for 0.3 second. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

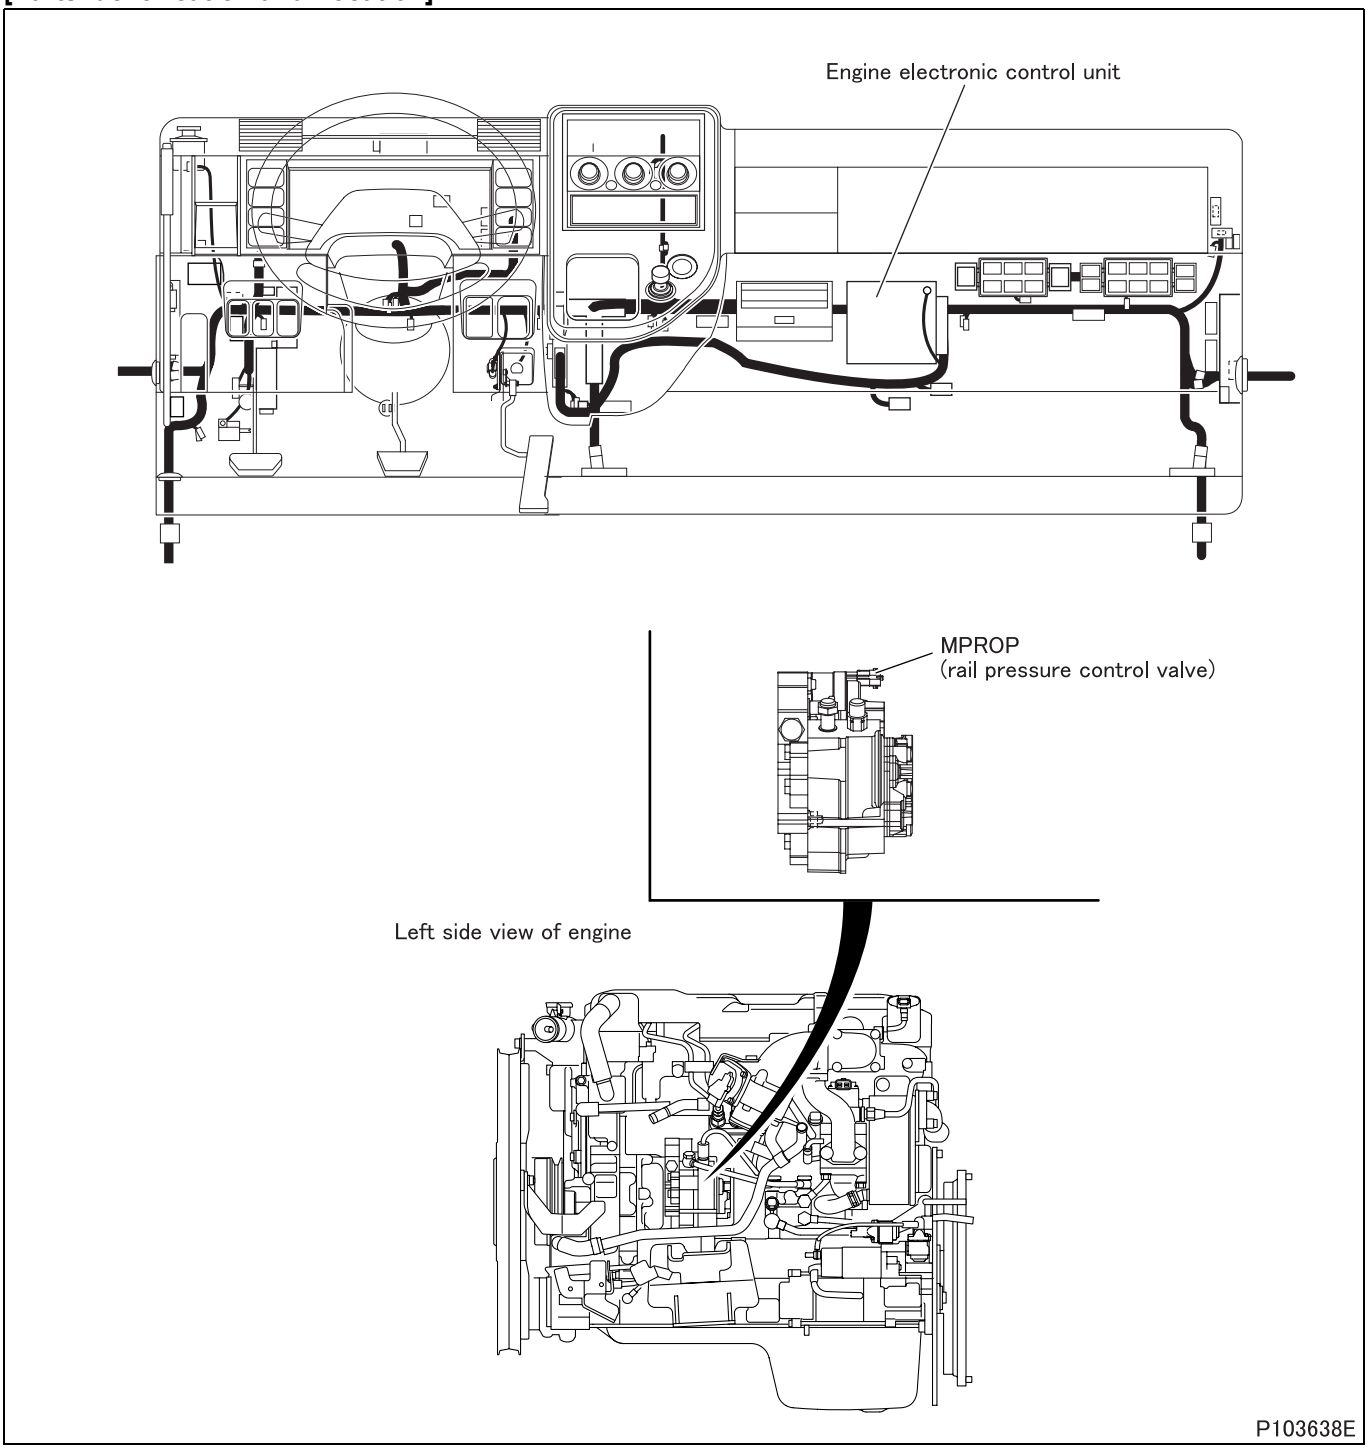
[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Modify connector.

[Fault code]
Diagnosis code: P0092/Flash code: 63
[Monitor]
Failure of MPROP (rail pressure control valve)
[Fault (outline)]
MPROP (rail pressure control valve) short circuit
[Diagnosis check]
- Engine electronic control unit internal function monitors MPROP (rail pressure control valve) for short-circuit to power supply.

[Code generation condition]
- MPROP circuit remains shorted to power supply as detected by engine electronic control unit internal function for 0.3 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

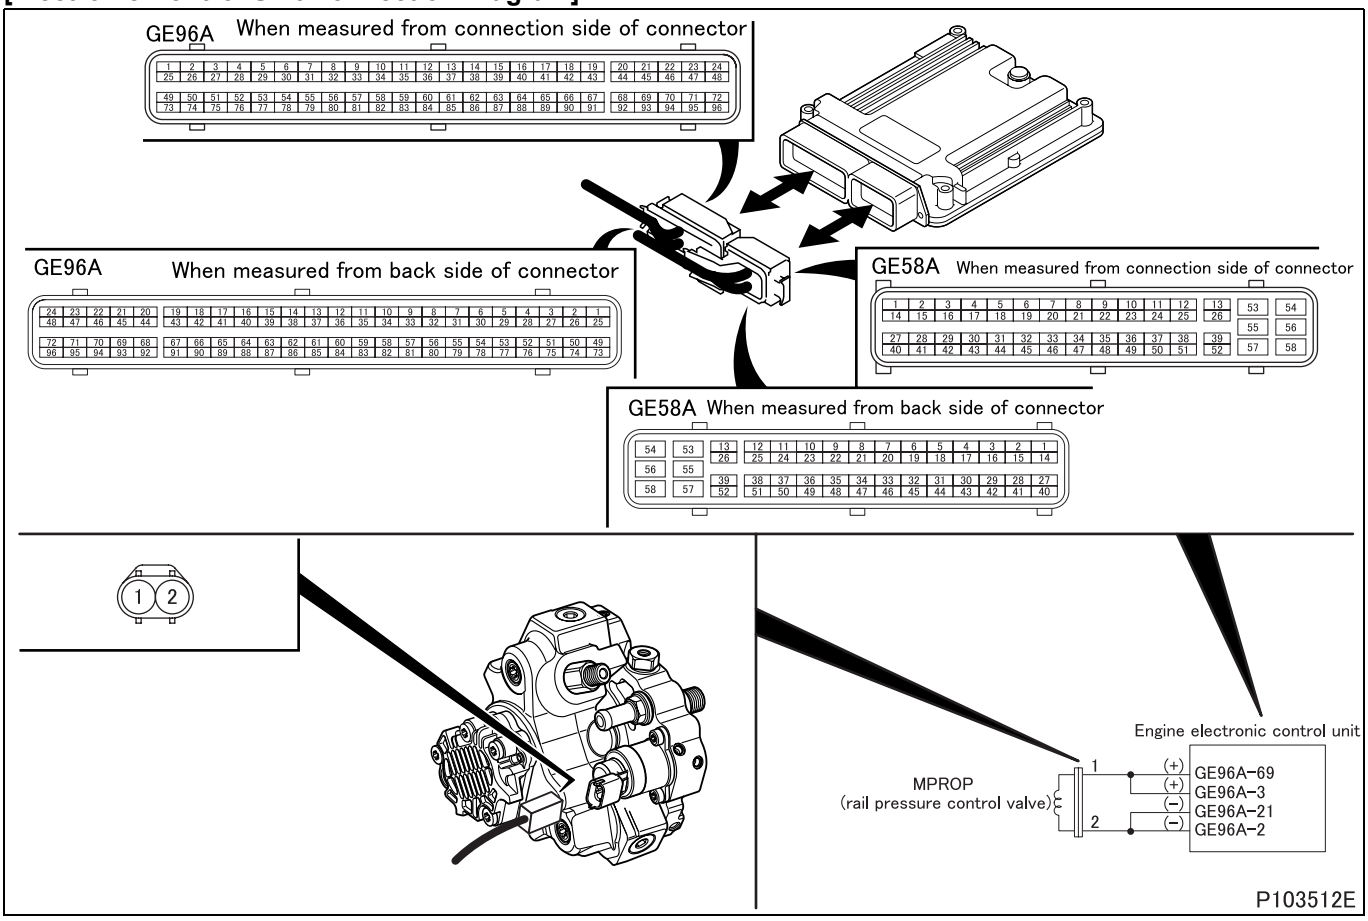
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- MPROP (rail pressure control valve) control is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

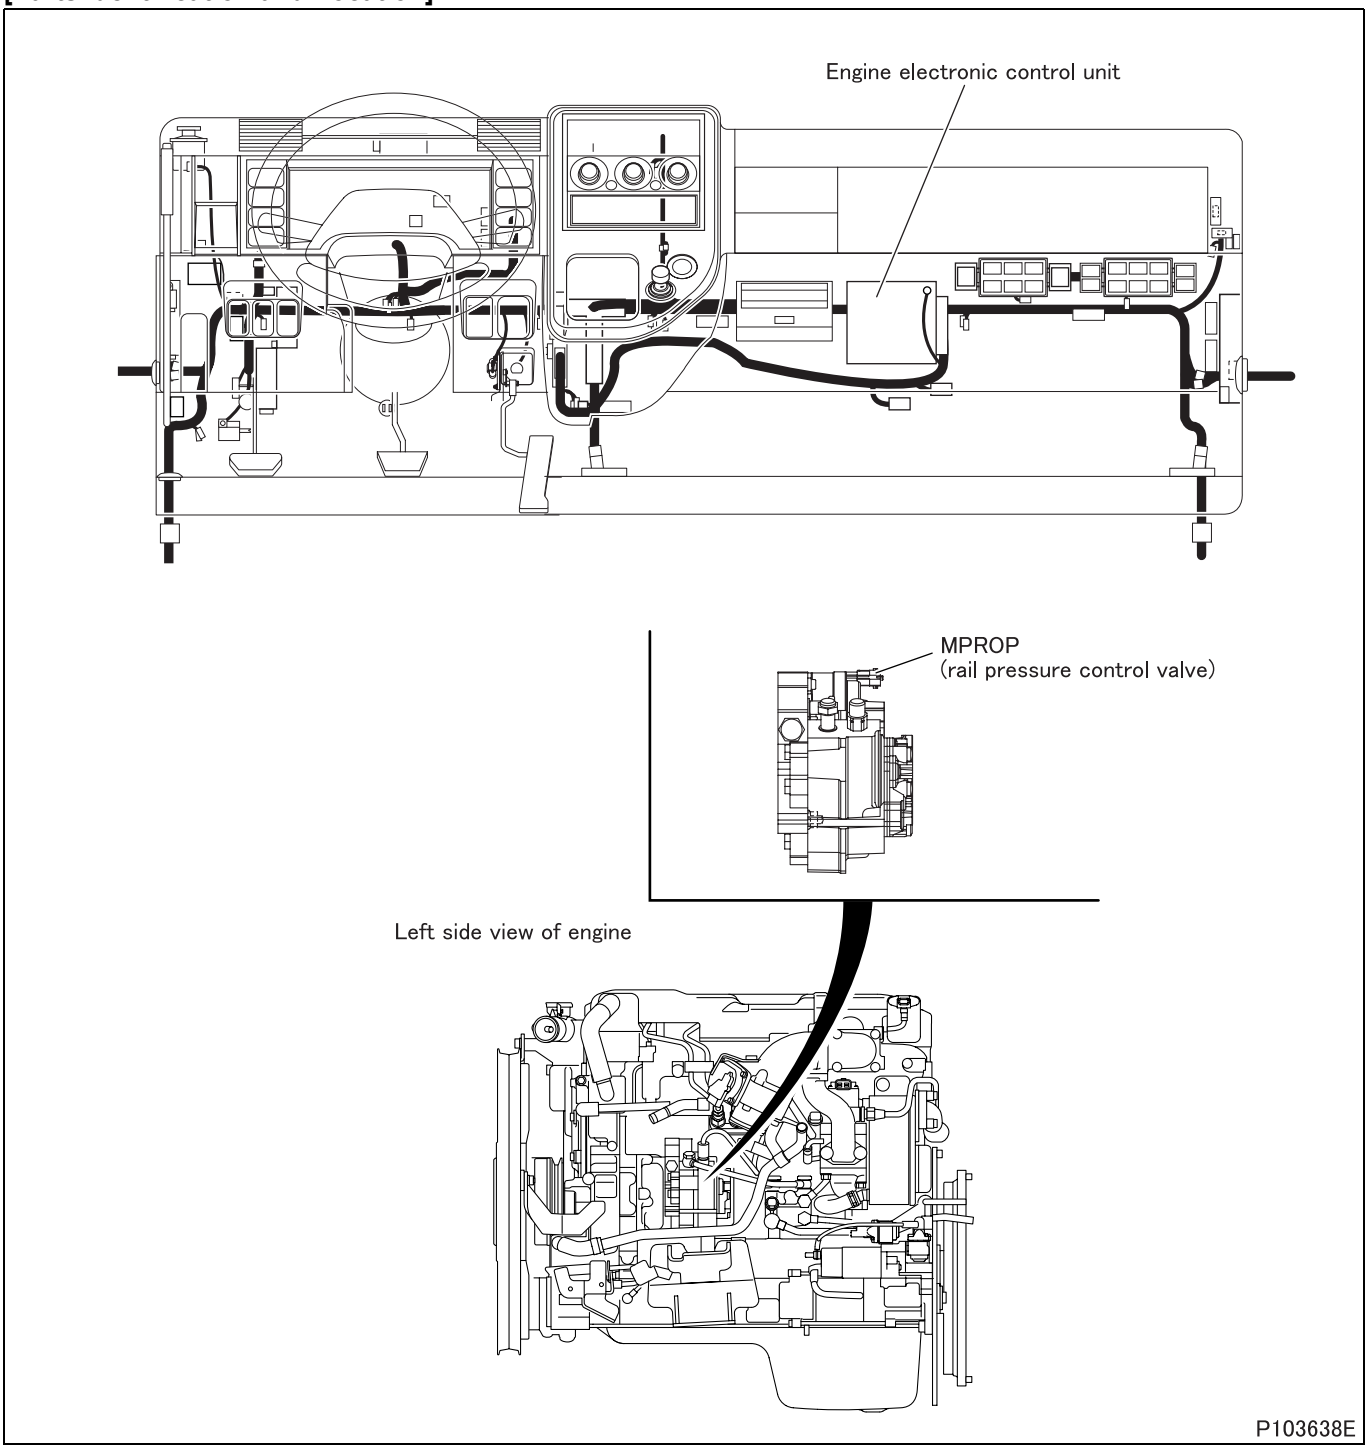
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and MPROP (rail pressure control valve)
- Malfunction of each connector
- Malfunction of MPROP (rail pressure control valve)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 3 or No. 69 and No. 2 or No. 21.
	Inspection condition		Disconnect electronic control unit and harness, and measure from connection side of harness connector.
	Requirements		2.6 to 3.15 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of MPROP (rail pressure control valve) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Modify connector.

[Fault code]
Diagnosis code: P0093/Flash code: 22
[Monitor]
Abnormality of common rail pressure (fuel leakage)
[Fault (outline)]
Fuel leakage
[Diagnosis check]
- Common rail pressure is monitored during at-fault control (diagnosis code P0087).

[Code generation condition]
- Actual common rail pressure remains 300 bar apart from target common rail pressure for 60 seconds in spite of full supply pump output.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Malfunction of supply pump
- Malfunction of pressure limiter
- Airtight malfunction of injector
- Plugged fuel system
- Fuel leakage
- Malfunction of common rail pressure sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (At the same time as recovery, warning lamp is extinguished and diagnosis code is cleared.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Correct and replace wet or abnormal parts.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on pipe or hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Correct and replace suction pipe or hose.

Step 4	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 5.

Step 5	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 6.

Step 6	Inspection items		Check inside of combustion chamber.
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of supply pump
		NO	Replacement of injector of object cylinder

[Fault code]
Diagnosis code: P0097/Flash code: 9
[Monitor]
Failure of boost air temperature sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Boost air temperature sensor output voltage is monitored.

[Code generation condition]
- Output voltage of boost air temperature sensor remains below 0.2 V for 1 second. (sensor temperature: 146°C {295°F} or higher)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

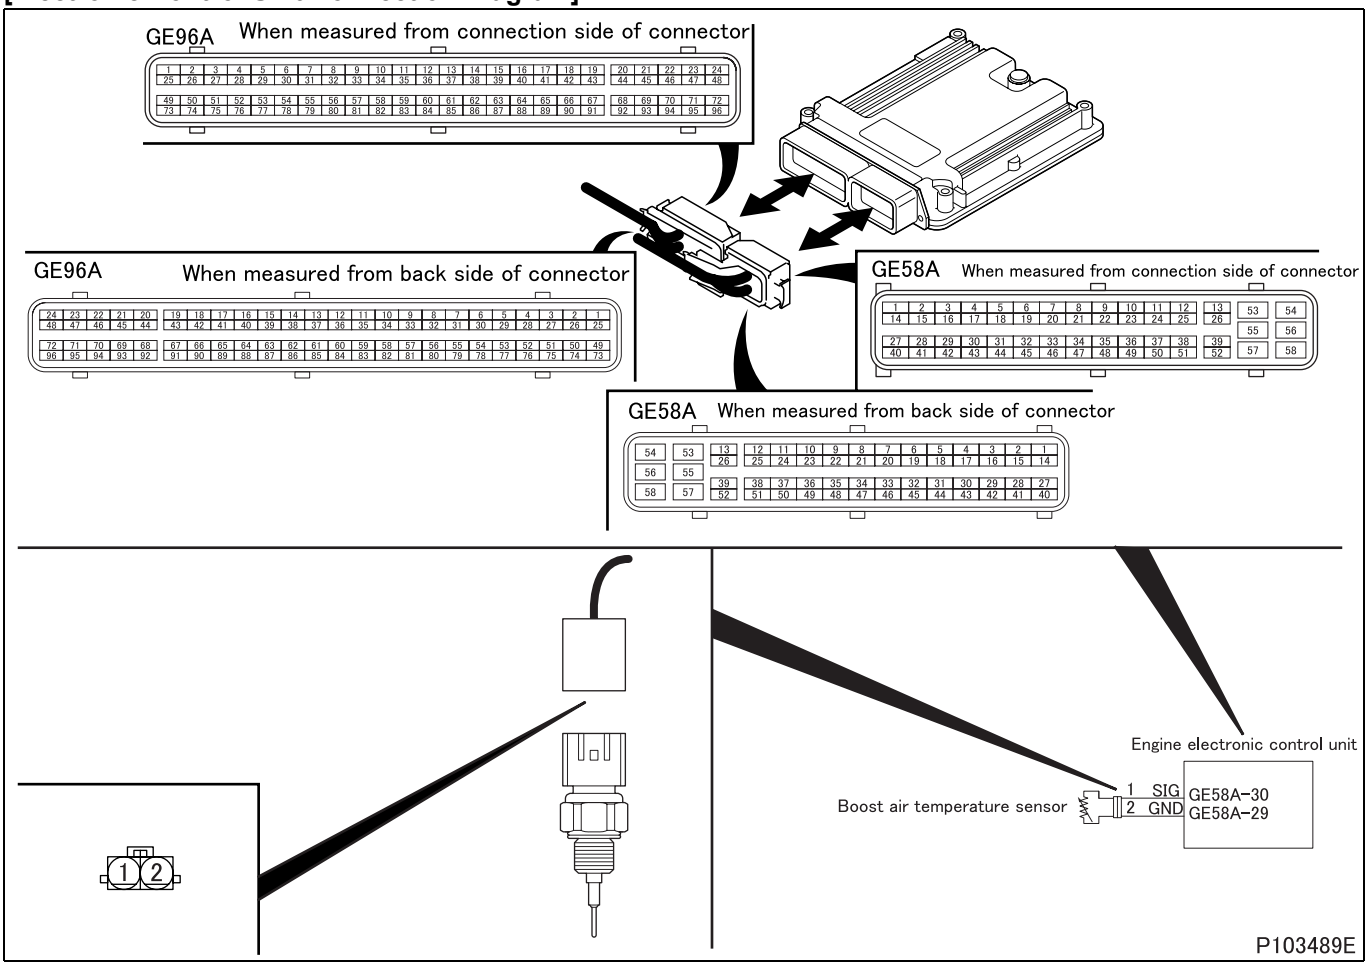
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation gas temperature is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

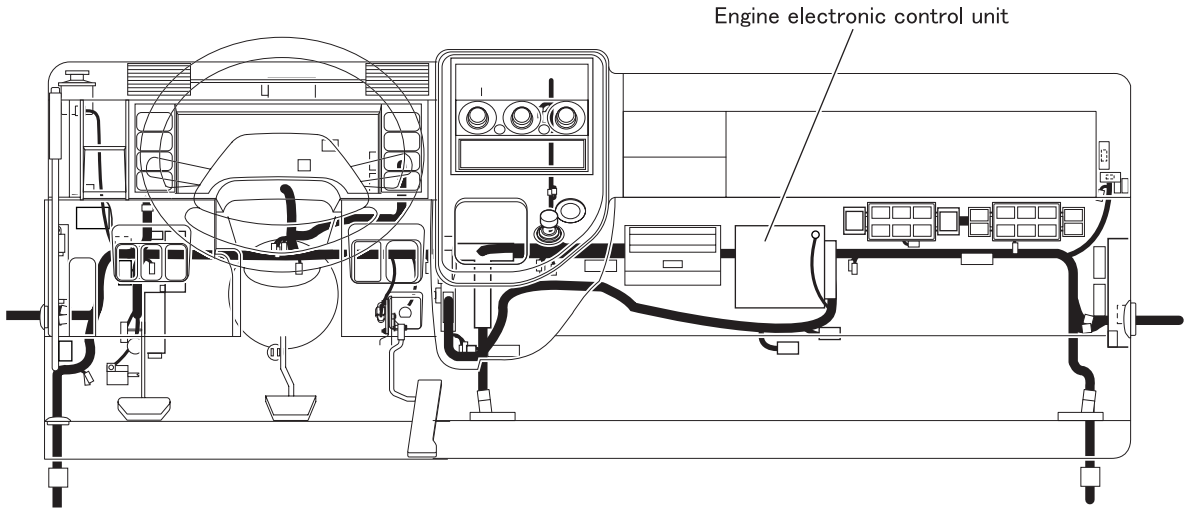
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and boost air temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

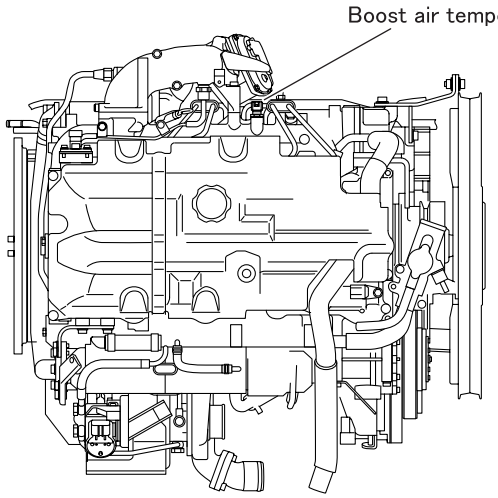
[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



Upper view of engine



P103617E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

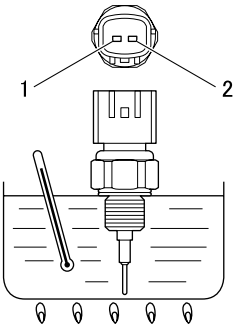
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE58A) terminal No. 29 and 30.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of boost air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of boost air temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put boost air temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 30.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 29.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0098/Flash code: 9
[Monitor]
Failure of boost air temperature sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Boost air temperature sensor output voltage is monitored.

[Code generation condition]
- Output voltage of boost air temperature sensor remains over 4.9 V for 1 second. (sensor temperature: –37°C {–34.6°F} or lower)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation gas temperature is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and boost air temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

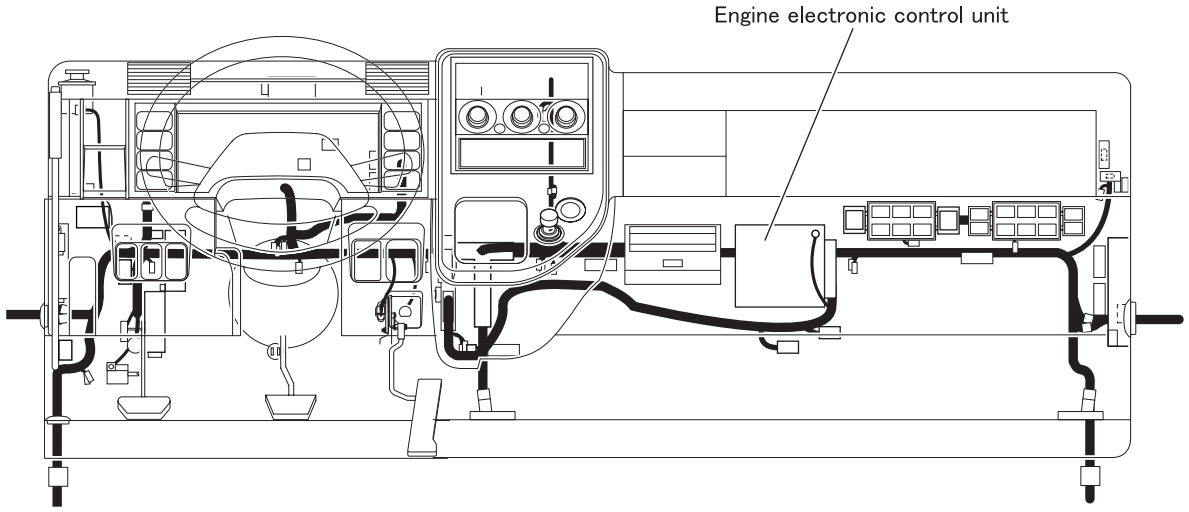
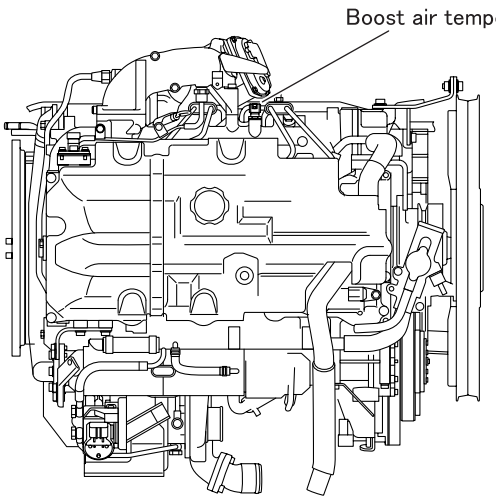
[Parts Identification and Location]



Upper view of engine



P103617E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

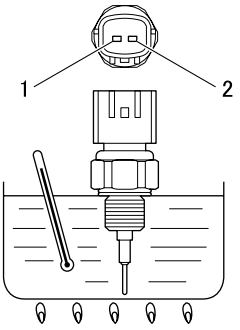
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE58A) terminal No. 29 and 30.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of boost air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of boost air temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put boost air temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 30.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 29.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0101/Flash code: 17
[Monitor]
Characteristic abnormality in air flow sensor
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Intake air flow rate is detected as actual intake air flow rate by air flow sensor and monitored for ratio to target air flow rate for control by engine electronic control unit.

[Code generation condition]
- Difference shows intake air flow rate remains considerably high (1.5 or more) or low (0.6 or less) for 5 seconds. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<When difference in intake air flow rate is abnormally high>
- Engine operating mode: normal (engine in operation)
- Engine speed: 1000 to 3000 rpm
- Fuel injection quantity: less than 100 mg/cyc
- Atmospheric pressure: above 828 mbar {12 psi}
- Boost pressure: less than 2500 mbar {36.25 psi}
- Intake throttle valve opening: 15° to 95°
- Water temperature: 64 to 110°C {147 to 230°F}
- Diesel particulate filter regeneration control: not effected
- Time till above conditions were met: more than 2 seconds
- Air flow sensor: normal in output signal
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Exhaust gas recirculation cooler: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order
- Exhaust shutter 3-way magnetic valve: in order

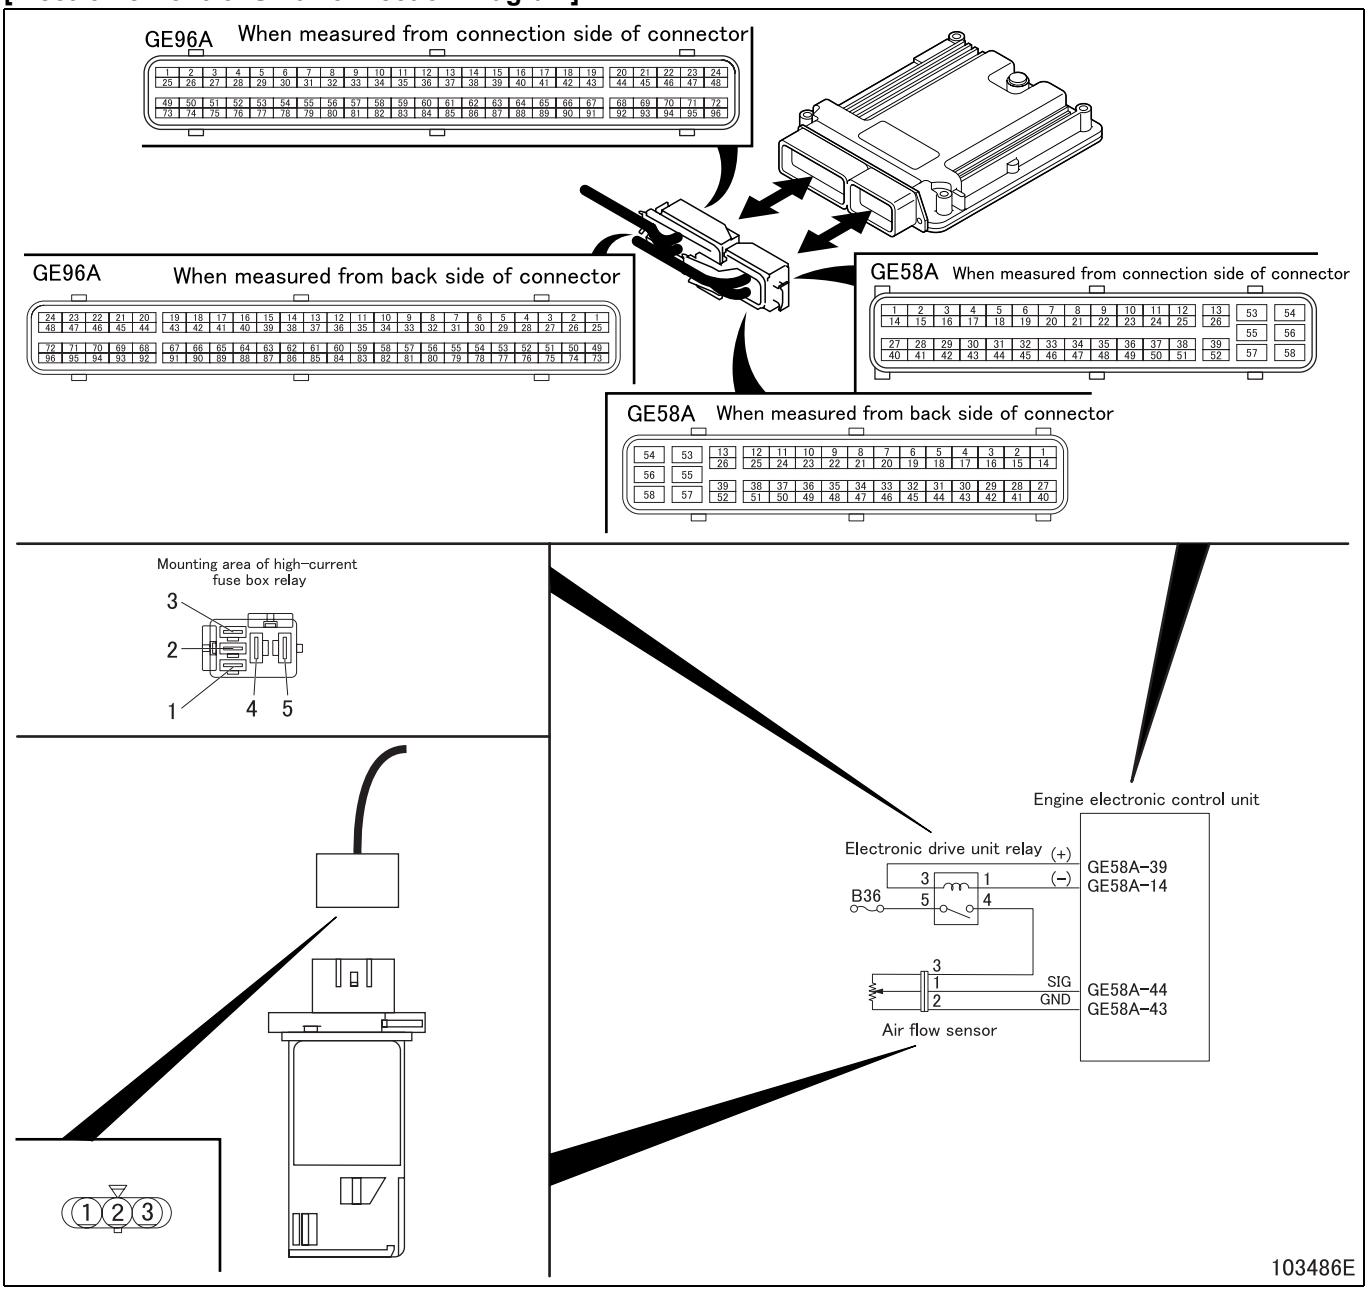
<When difference in intake air flow rate is abnormally low>
- Engine operating mode: normal (engine in operation)
- Engine speed: 1000 to 3000 rpm
- Fuel injection quantity: more than 12 mg/cyc
- Atmospheric pressure: above 828 mbar {12 psi}
- Boost pressure: less than 2500 mbar {36.25 psi}
- Intake throttle valve opening: more than 15°
- Exhaust gas recirculation λ value: 1.2 to 14
- Water temperature: 64 to 110°C {147 to 230°F}
- Diesel particulate filter regeneration control: not effected
- Time till above conditions were met: more than 2 seconds
- Air flow sensor: normal in output signal
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Exhaust gas recirculation cooler: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order
- Exhaust shutter 3-way magnetic valve: in order

[Control effected by electronic control unit during fault]
- Intake air flow rate is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

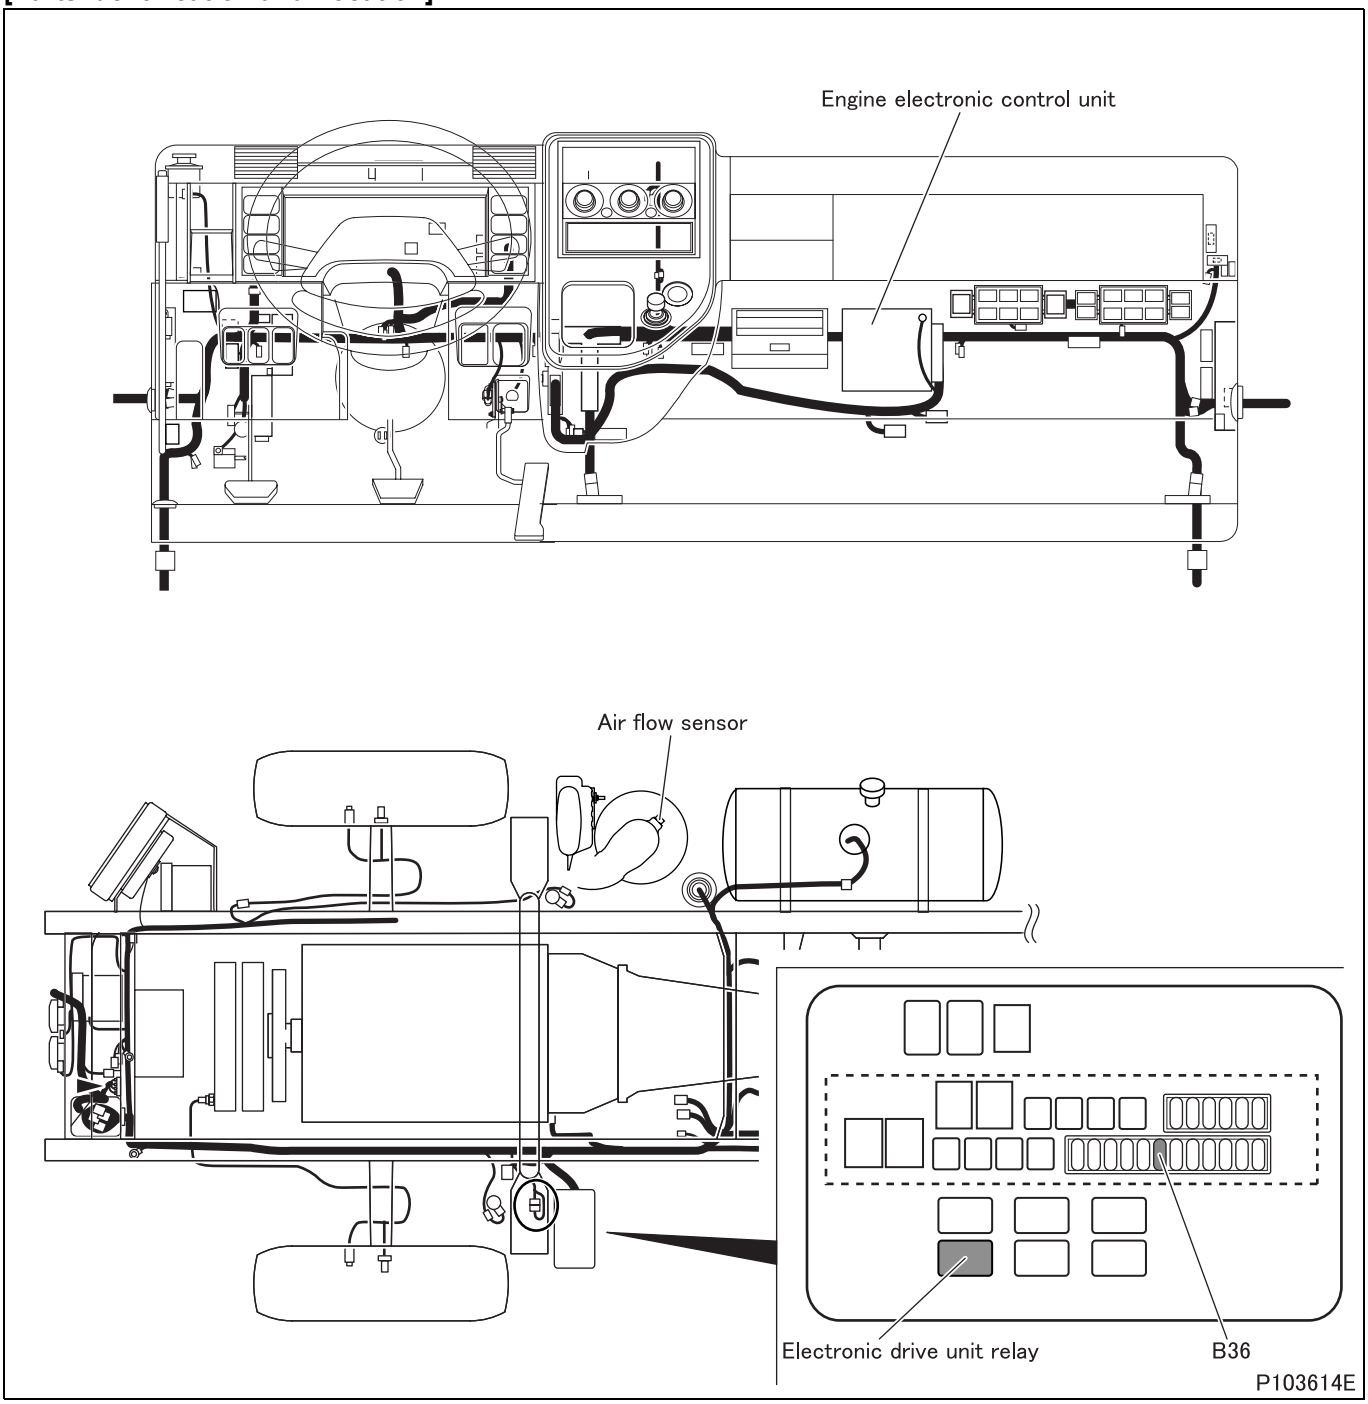
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection by sensor connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection of harness between electronic drive unit relay and sensor (power supply)
	Maintenance item		Check circuit between electronic drive unit relay connector terminal No. 4 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between sensor and electronic control unit (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 43.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between sensor and electronic control unit (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 44.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0102/Flash code: 17
[Monitor]
Failure of air flow sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Air flow sensor output voltage is monitored.

[Code generation condition]
- Air flow output from air flow sensor remains below 1 kg/hr for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

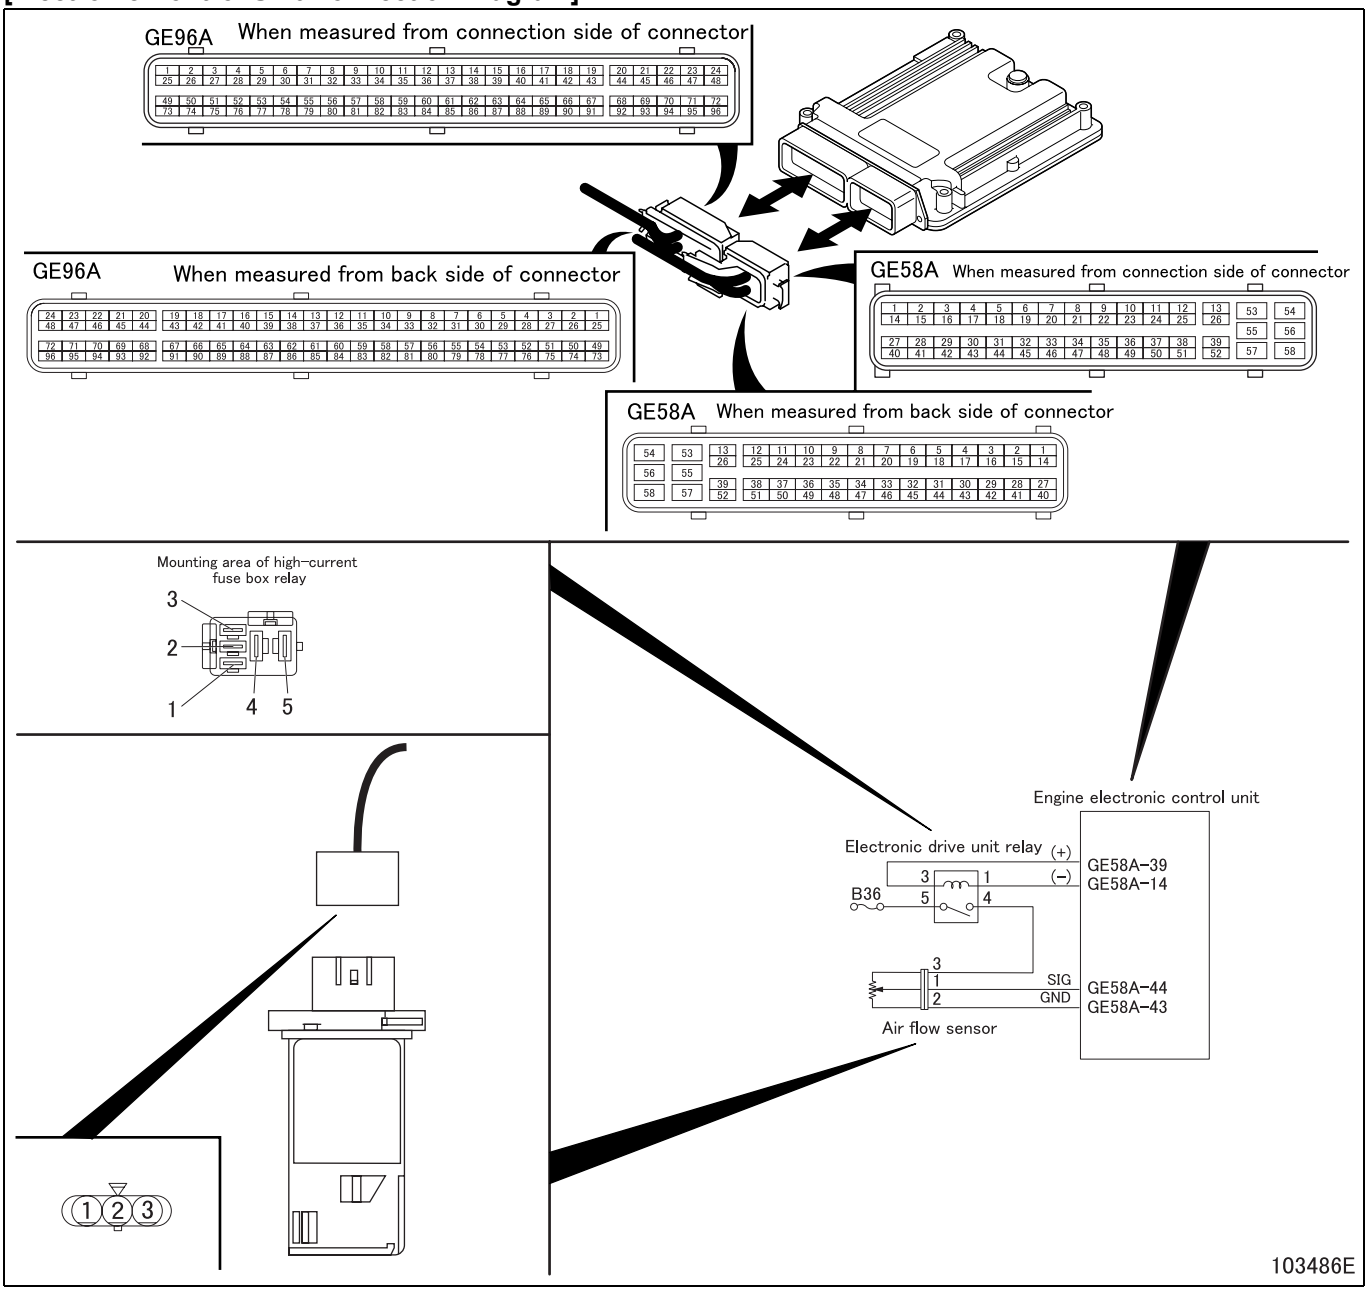
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Intake air flow rate is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

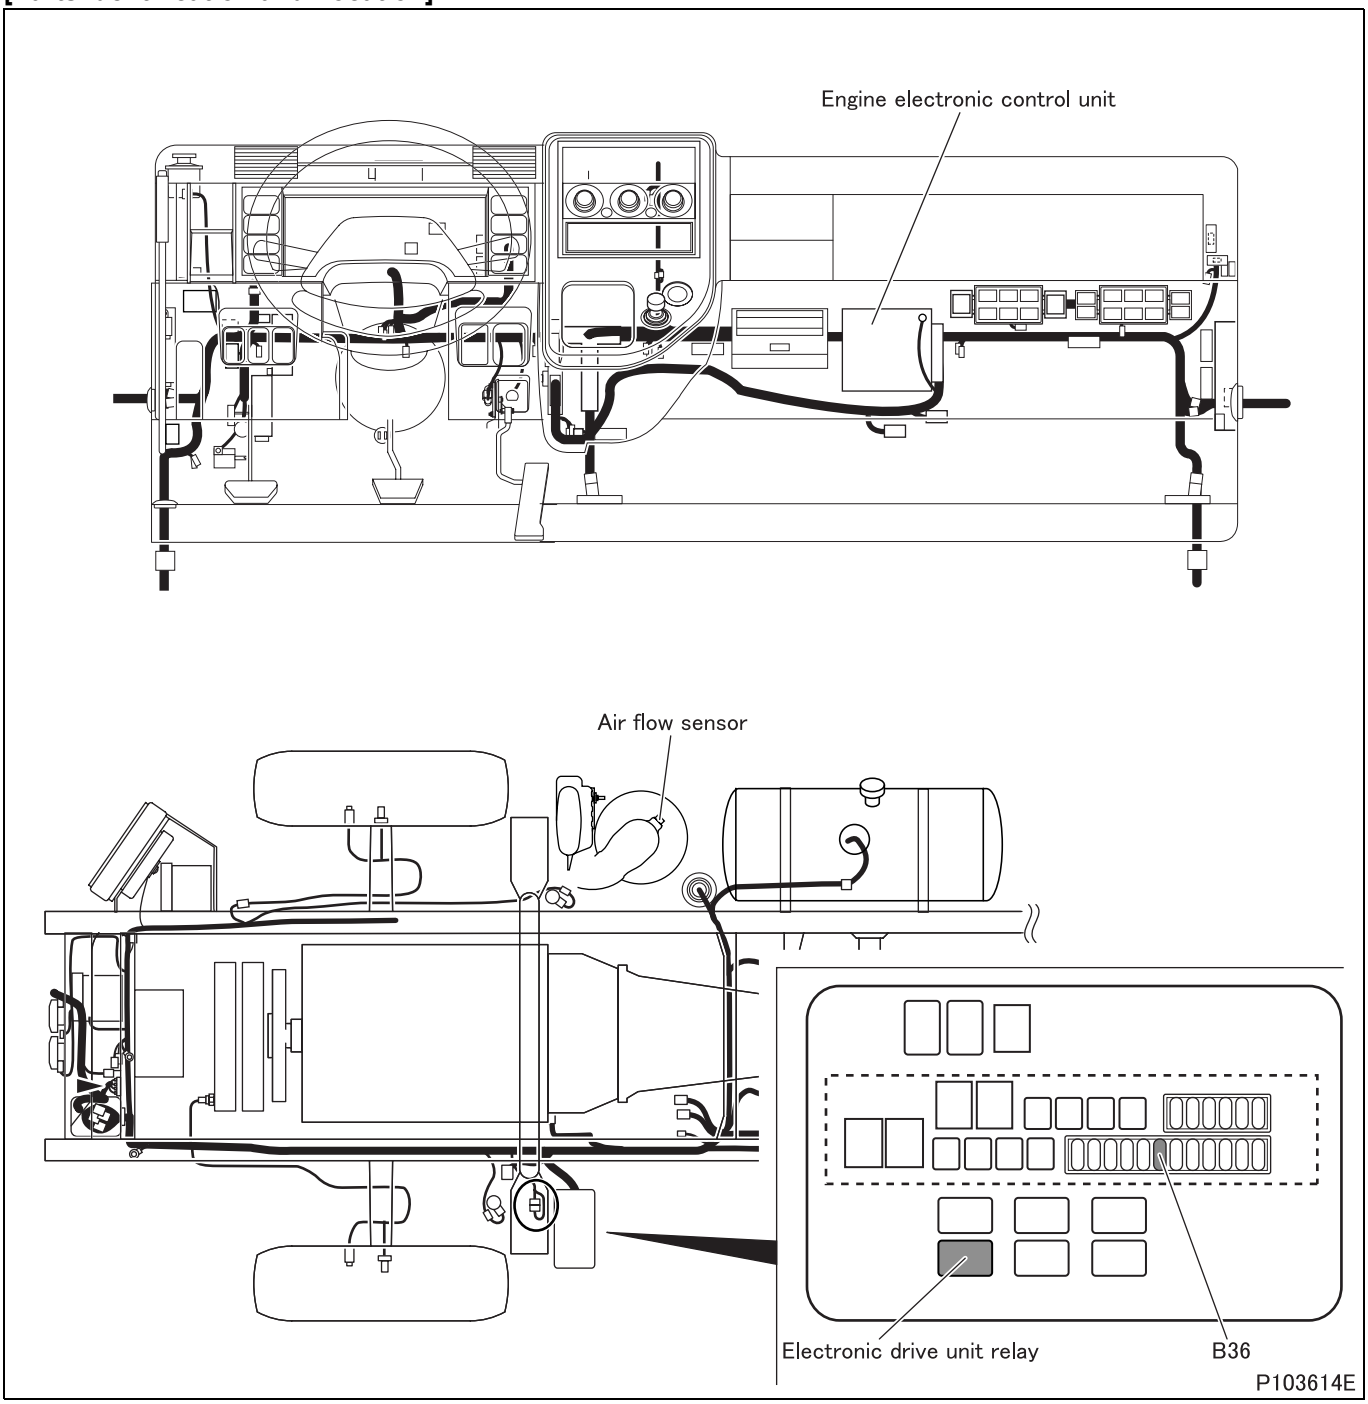
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and relay
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Open-circuit or short-circuit of harness between electronic drive unit and sensor
- Open-circuit or short-circuit of harness between fuse and relay
- Open-circuit or short-circuit of harness between relay and electronic drive unit
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of relay
- Malfunction of electronic drive unit
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of sensor connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection of harness between electronic drive unit relay and sensor (power supply)
	Maintenance item		Check circuit between electronic drive unit relay connector terminal No. 4 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between sensor and electronic control unit (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 43.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between sensor and electronic control unit (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 44.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0103/Flash code: 17
[Monitor]
Failure of air flow sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Air flow sensor output voltage is monitored.

[Code generation condition]
- Air flow output from air flow sensor remains over 970 kg/hr for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

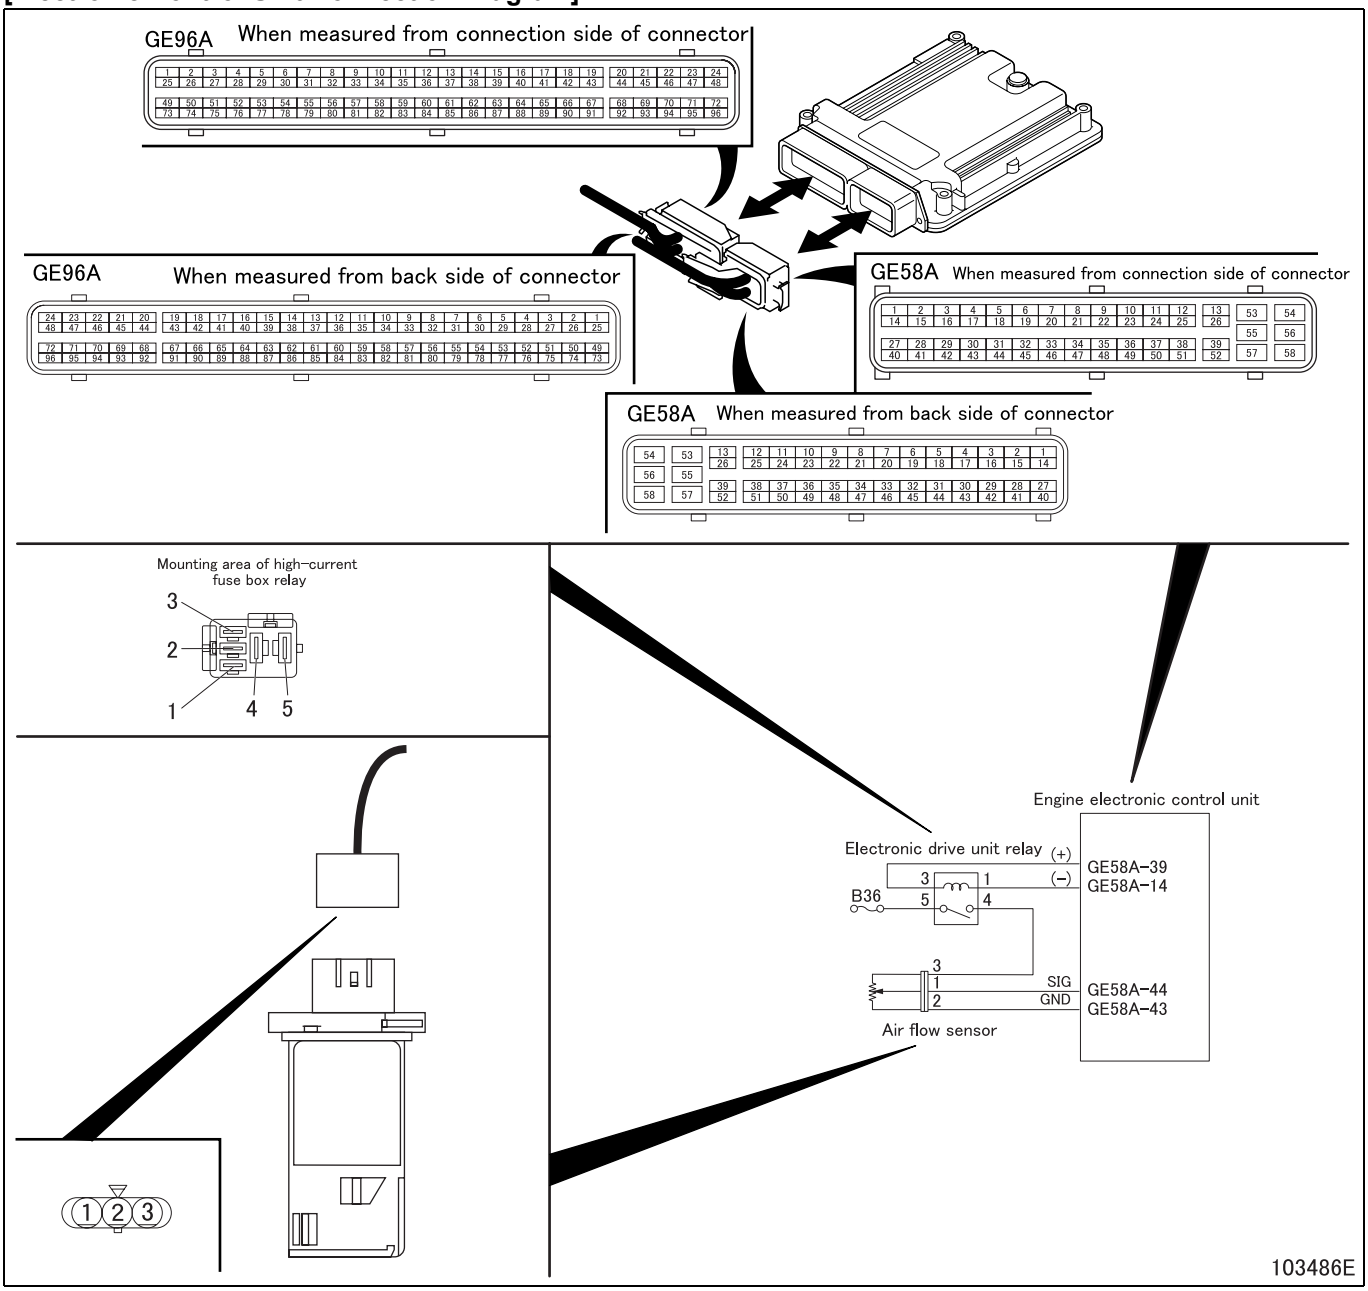
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Intake air flow rate is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

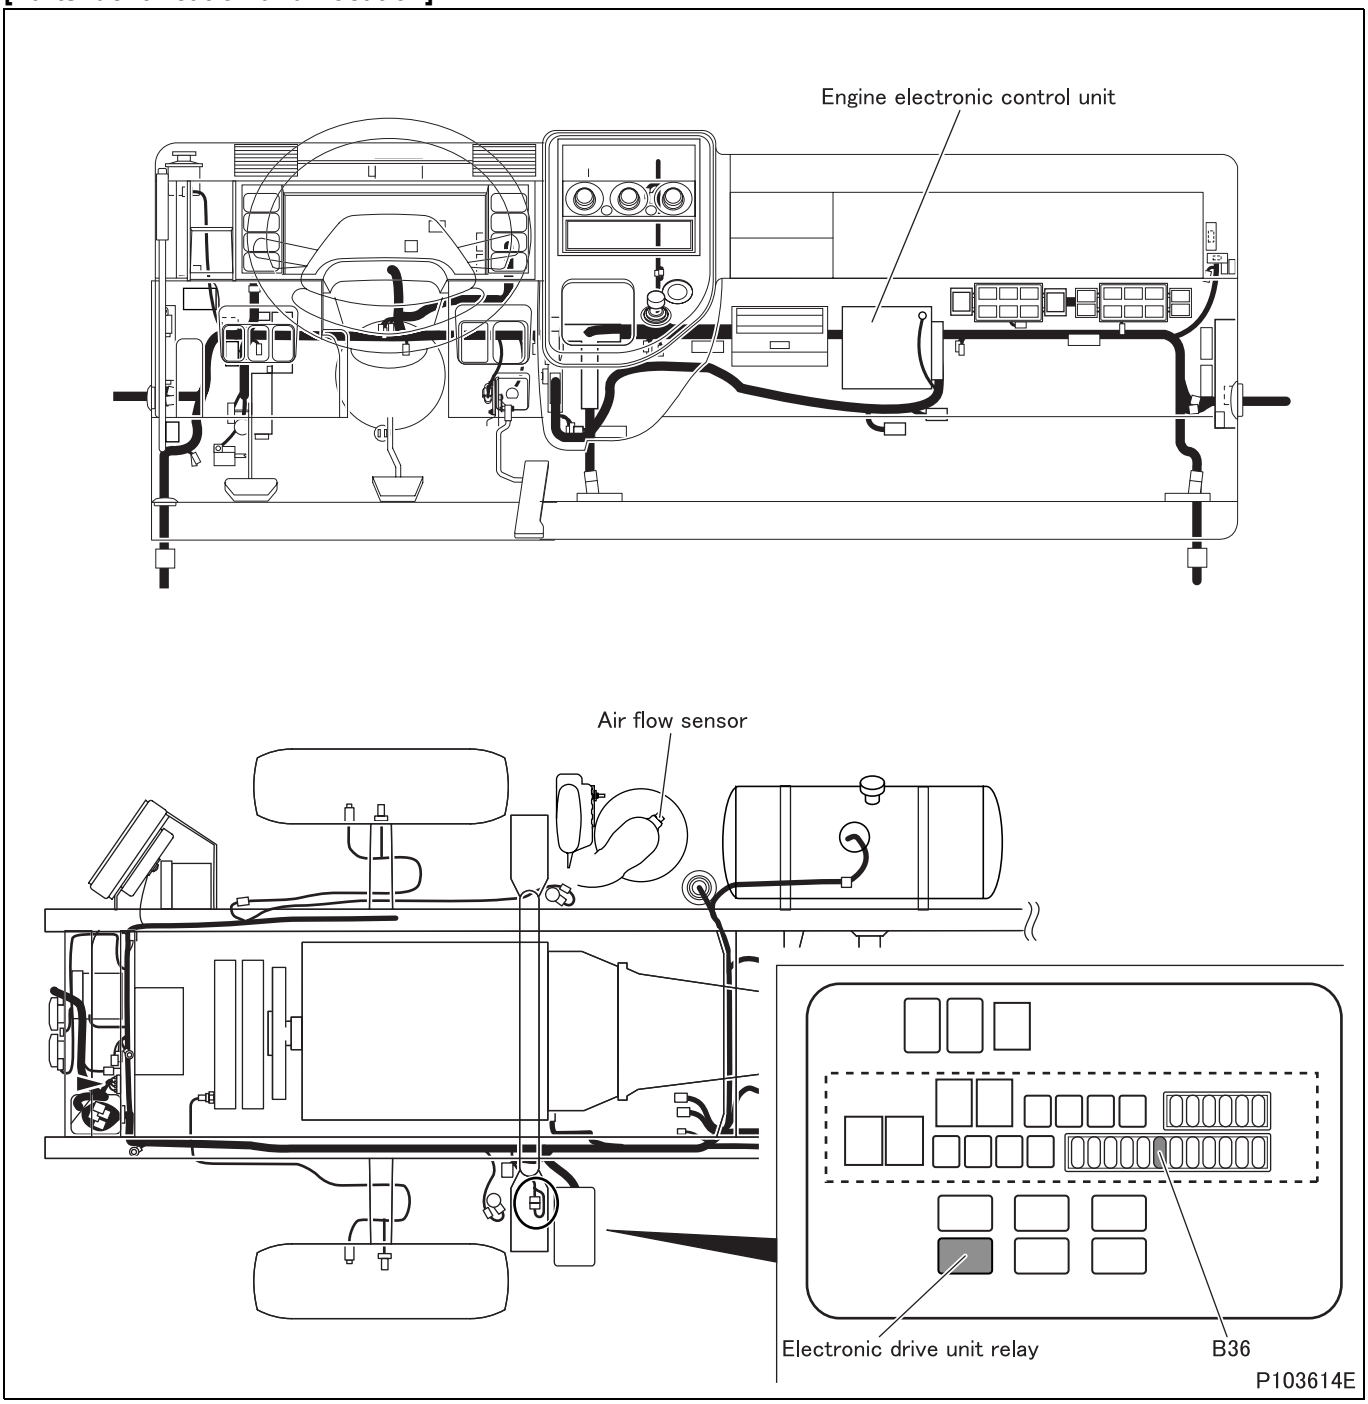
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and relay
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Open-circuit or short-circuit of harness between electronic drive unit and sensor
- Open-circuit or short-circuit of harness between fuse and relay
- Open-circuit or short-circuit of harness between relay and electronic drive unit
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of relay
- Malfunction of electronic drive unit
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection by sensor connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection of harness between electronic drive unit relay and sensor (power supply)
	Maintenance item		Check circuit between electronic drive unit relay connector terminal No. 4 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between sensor and electronic control unit (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 43.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between sensor and electronic control unit (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 44.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 60 “Air mass flow” of Service Data.
	Inspection condition		• Perform actuator test item No. AF “EDU Relay” • Gradually press accelerator pedal.
	Requirements		The numeric value should gradually increase.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0112/Flash code: 44
[Monitor]
Failure of intake air temperature sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Intake air temperature sensor output voltage is monitored.

[Code generation condition]
- Output voltage of intake air temperature sensor remains below 0.2 V for 1 second. (sensor temperature: 198°C {388°F} or higher)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

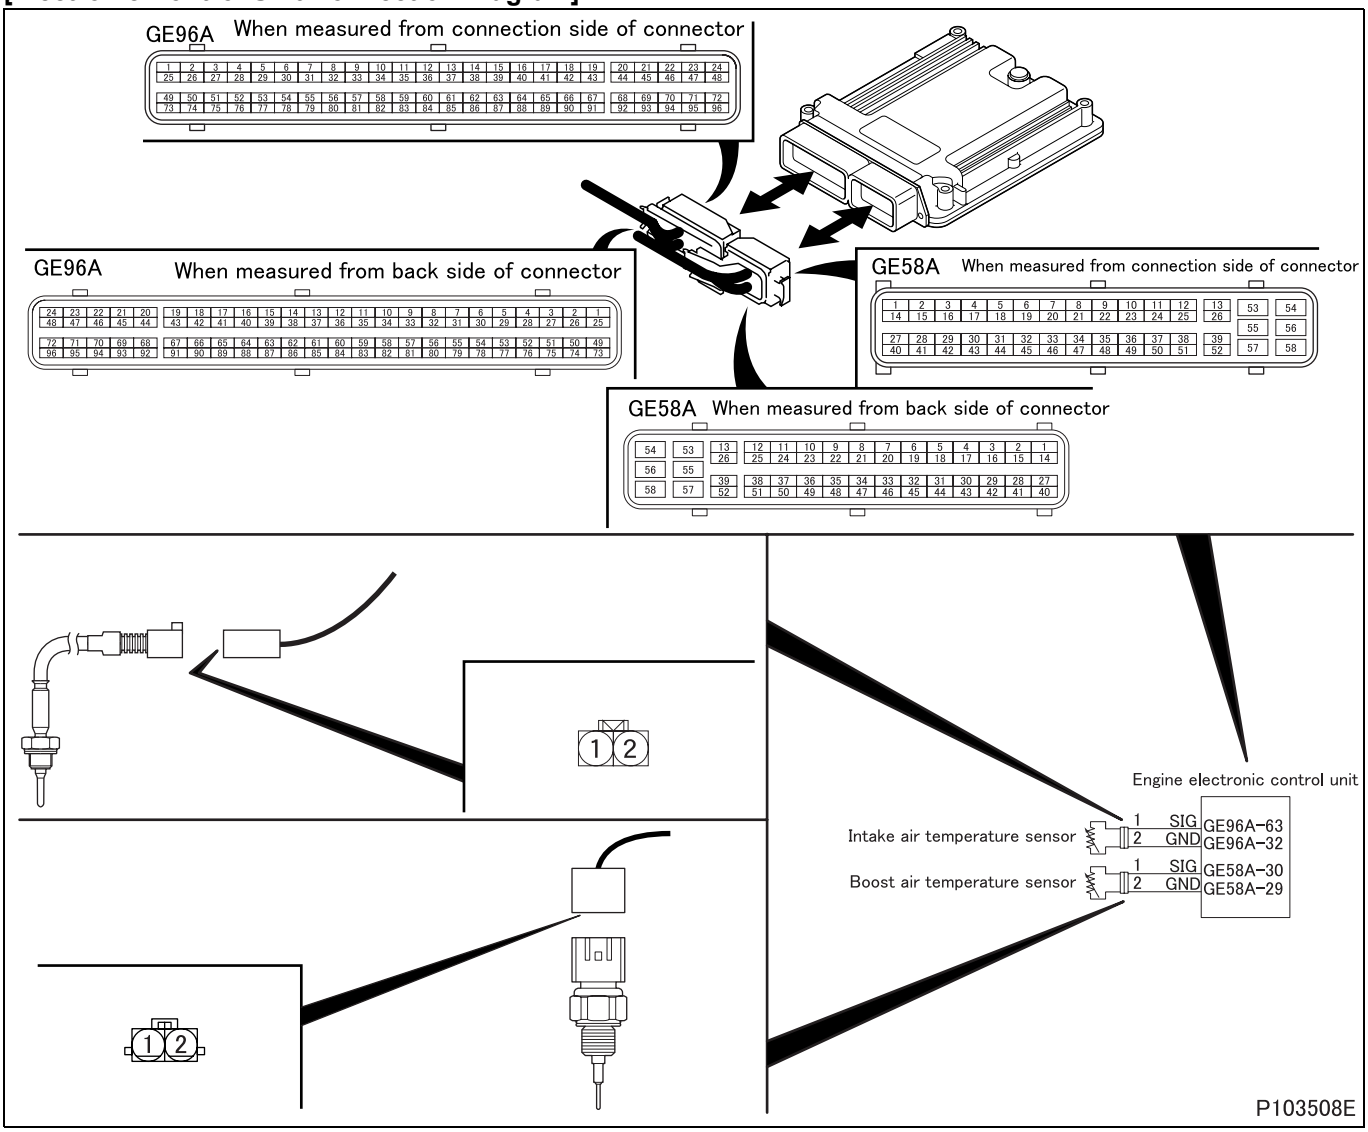
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Intake air flow rate is fixed at backup value.
- Related fault check is stopped.

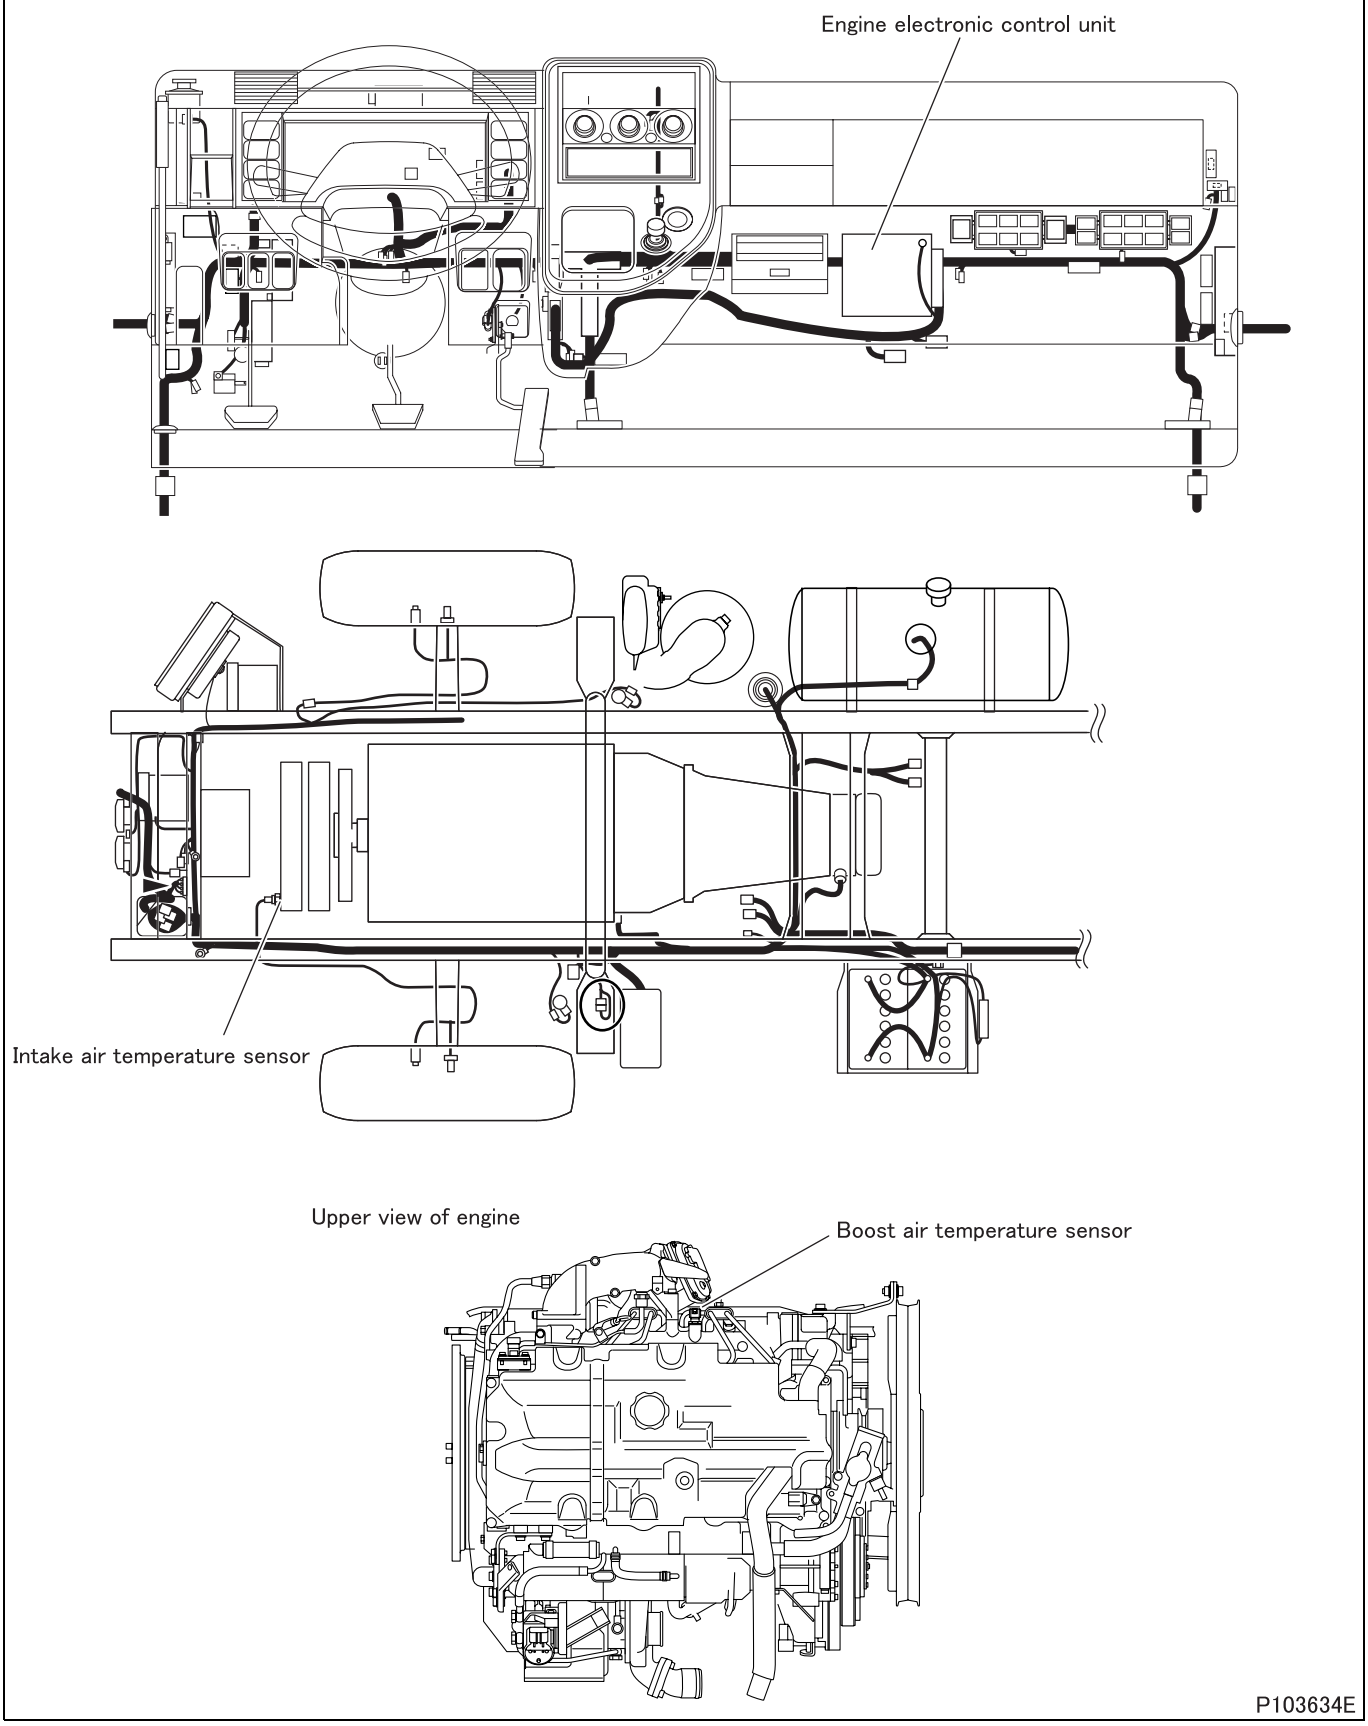
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and intake air temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature” . **<Multi-Use Tester used>** • Measure item No. 30 “Intake Air Temp. (upstream)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

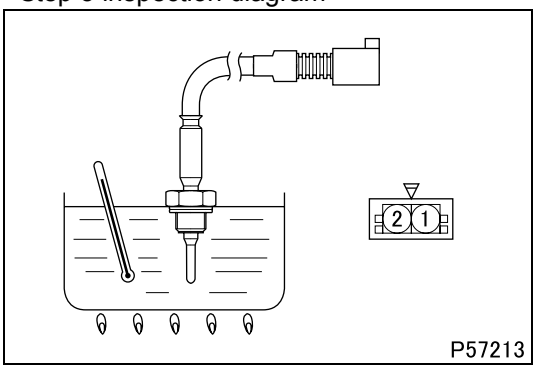
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 32 and 63.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 50°C {122°F}: 2.202 $^{+0.233}_{-0.208}$ kΩ • 100°C {212°F}: 508.1 $^{+41.3}_{-37.7}$ Ω • 150°C {302°F}: 160.4 $^{+10.3}_{-9.6}$ Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of intake air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of intake air temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put intake air temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 50°C {122°F}: 2.202 $^{+0.233}_{-0.208}$ kΩ • 100°C {212°F}: 508.1 $^{+41.3}_{-37.7}$ Ω • 150°C {302°F}: 160.4 $^{+10.3}_{-9.6}$ Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 63.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 32.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 30 “Intake Air Temp. (upstream)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0113/Flash code: 44
[Monitor]
Failure of intake air temperature sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- intake air temperature sensor output voltage is monitored.

[Code generation condition]
- Output voltage of intake air temperature sensor remains above 4.87 V for 1 second. (sensor temperature: –37°C {–34.6°F} or lower)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

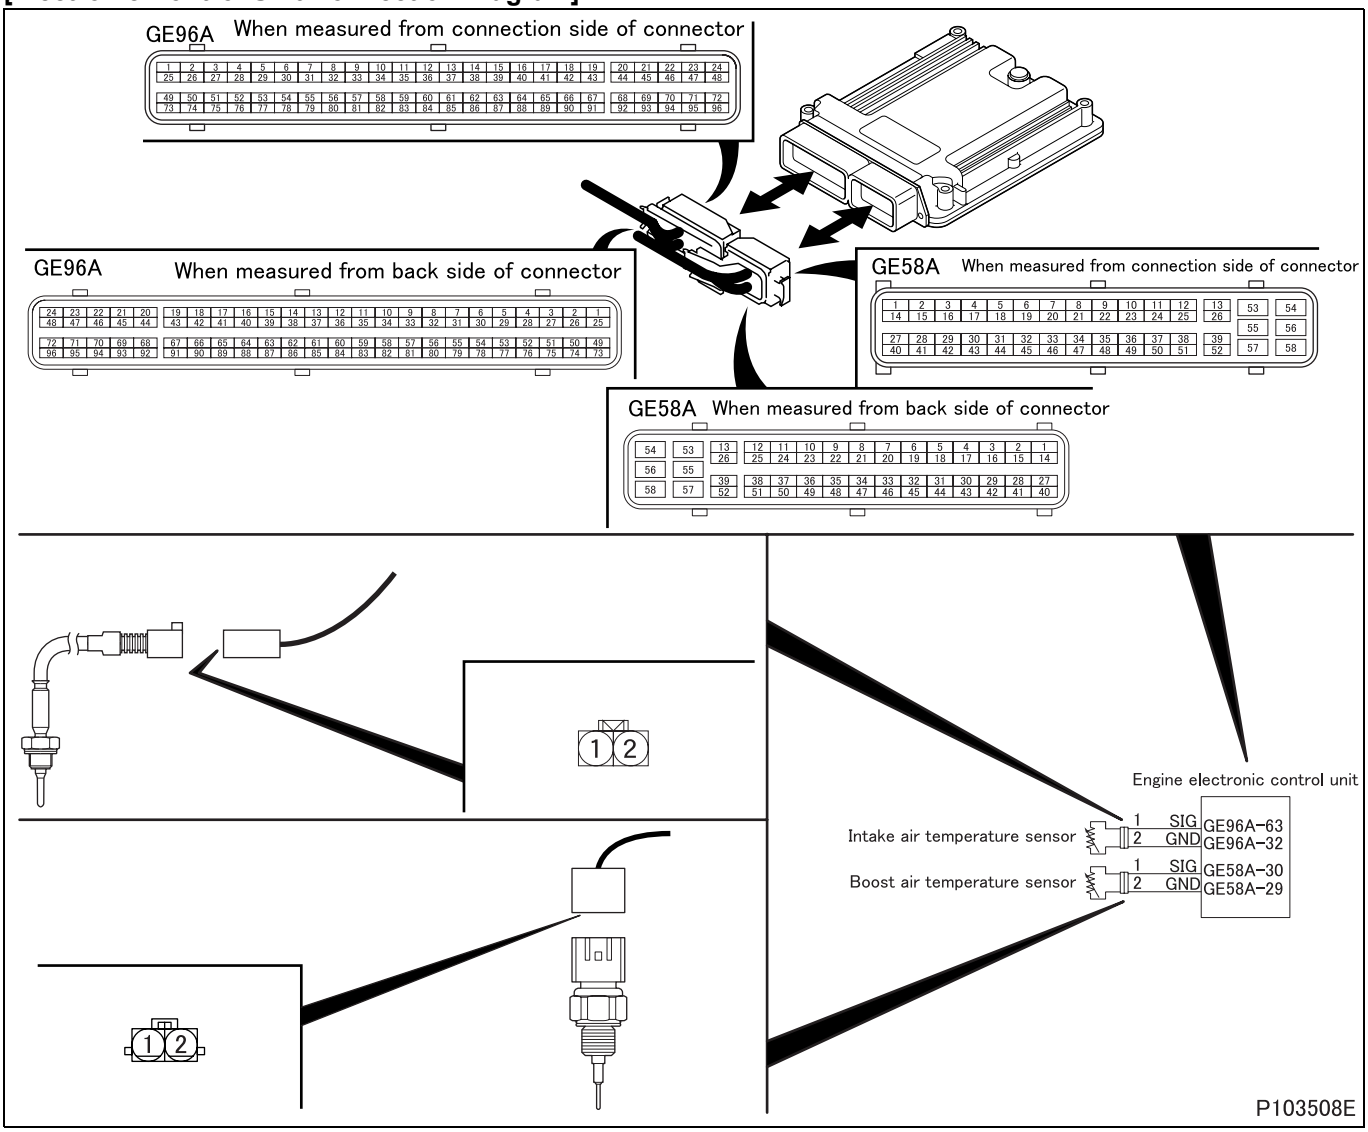
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Intake air flow rate is fixed at backup value.
- Related fault check is stopped.

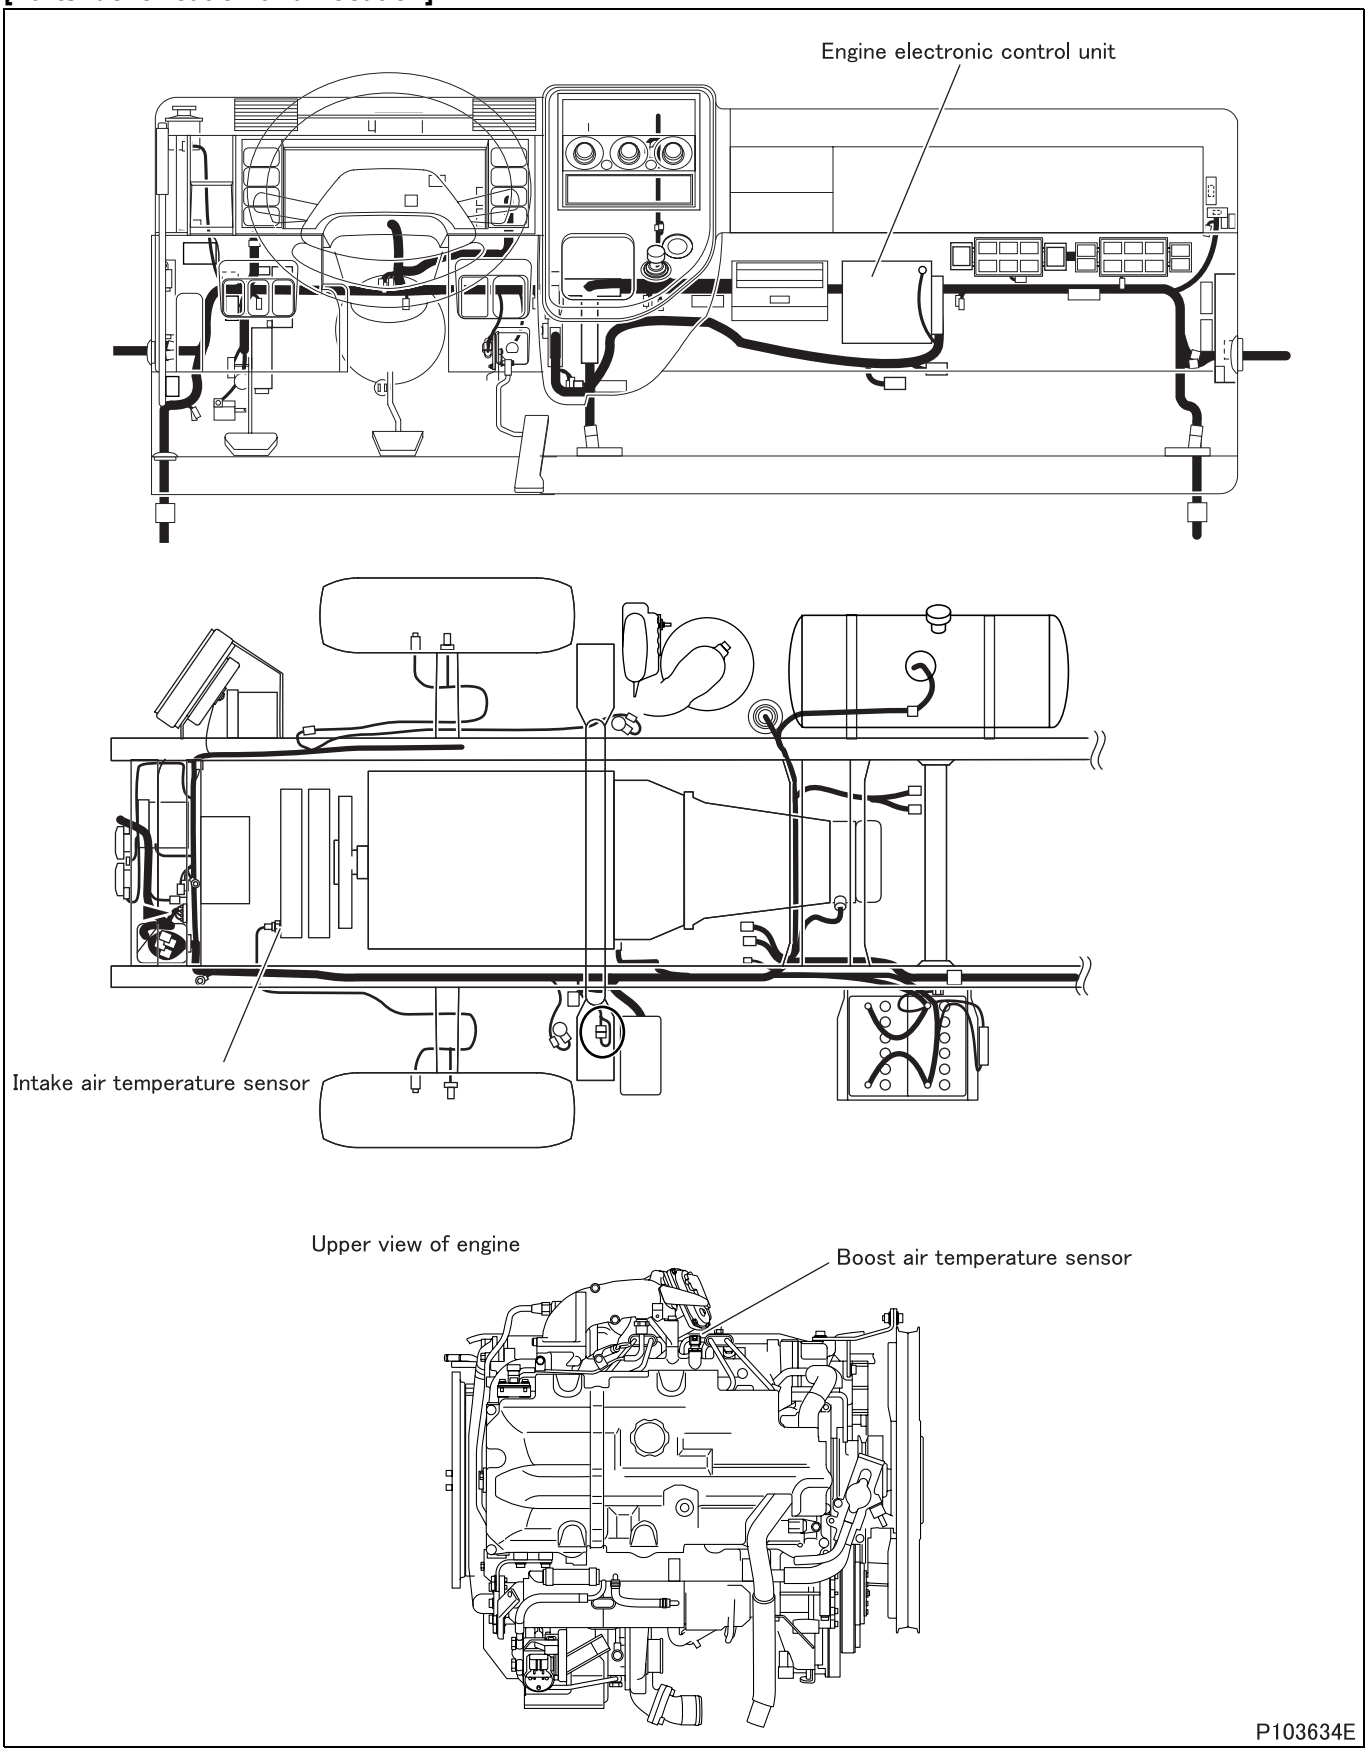
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and intake air temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 30 “Intake Air Temp. (upstream)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

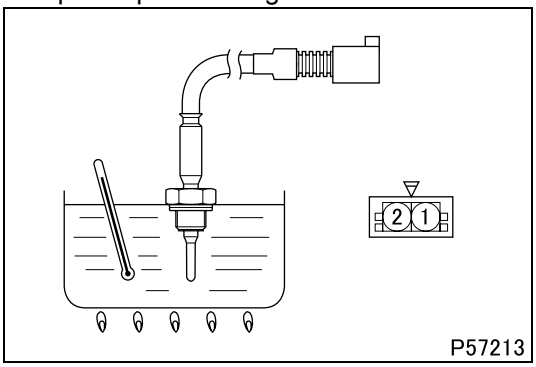
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 32 and 63.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 50°C {122°F}: 2.202 $^{+0.233}_{-0.208}$ kΩ • 100°C {212°F}: 508.1 $^{+41.3}_{-37.7}$ Ω • 150°C {302°F}: 160.4 $^{+10.3}_{-9.6}$ Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of intake air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of intake air temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put intake air temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 50°C {122°F}: 2.202 $^{+0.233}_{-0.208}$ kΩ • 100°C {212°F}: 508.1 $^{+41.3}_{-37.7}$ Ω • 150°C {302°F}: 160.4 $^{+10.3}_{-9.6}$ Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 63.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 32.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 30 “Intake Air Temp. (upstream)” of Service Data.
	Inspection condition		–
	Requirements		When engine is cold: Temperature is equivalent to outside temperature.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0117/Flash code: 21
[Monitor]
Failure of water temperature sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Water temperature sensor 1 output voltage is monitored.

[Code generation condition]
- Output voltage of temperature sensor 1 remains below 0.1 V for 1 second. (sensor temperature: 150°C {302°F} or higher)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

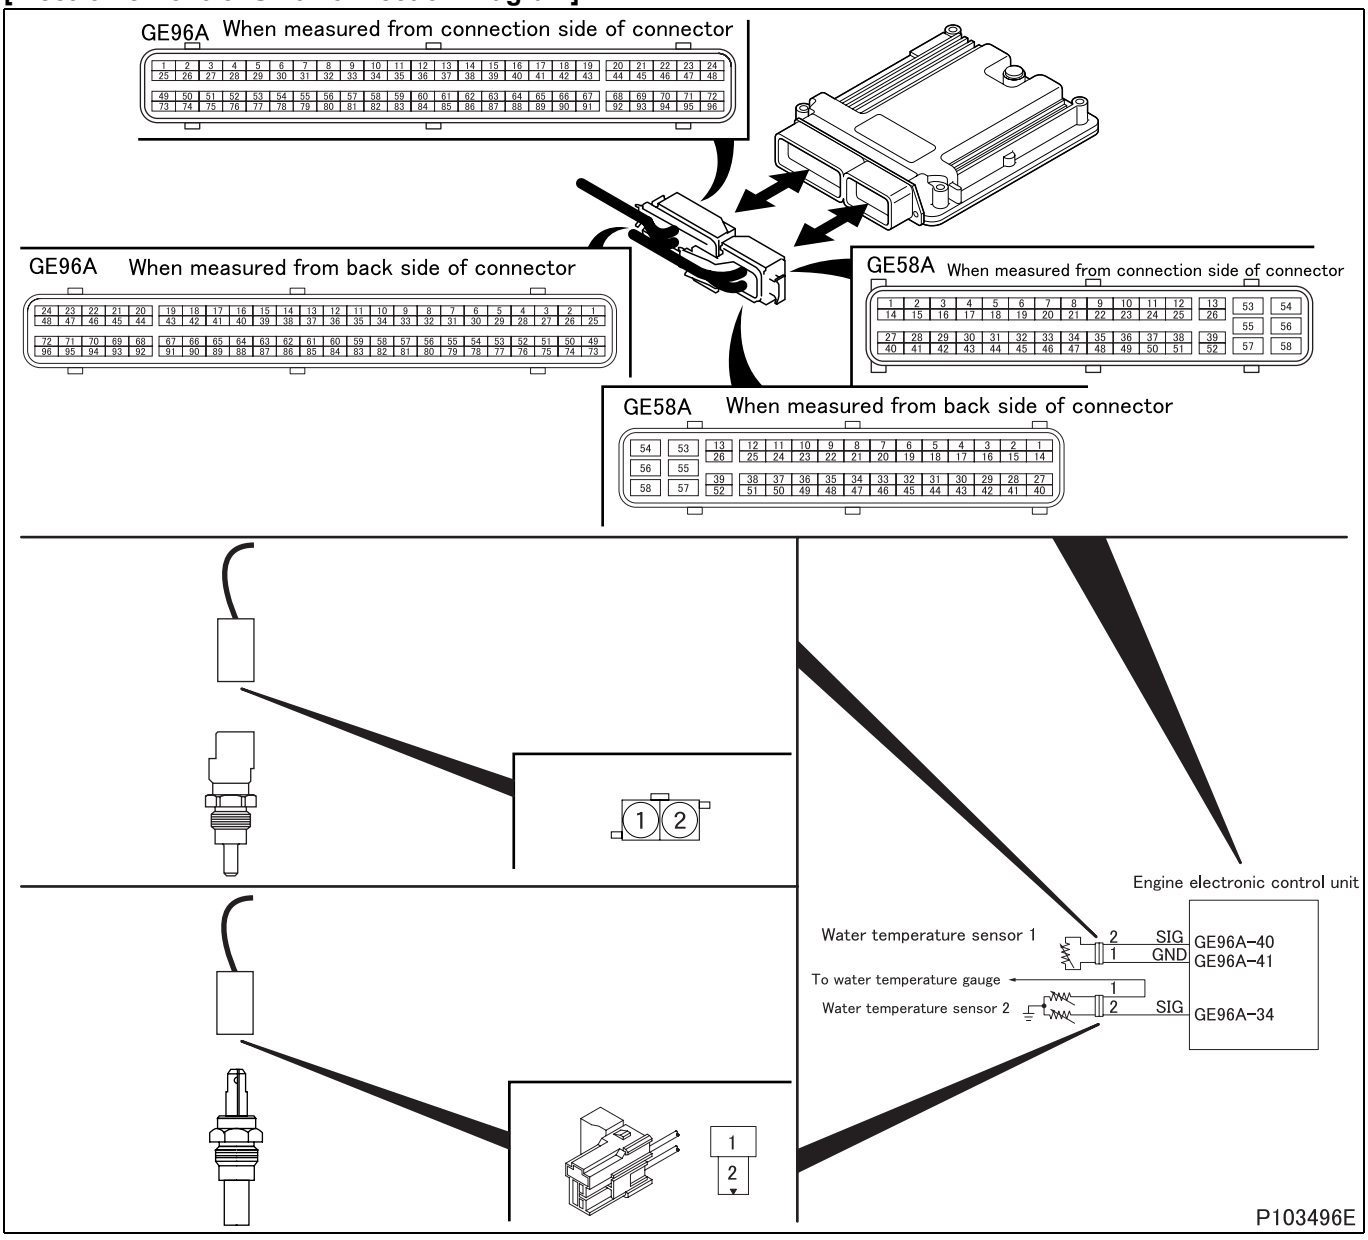
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine coolant temperature is fixed at backup value.
- Fuel system temperature is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Warm-up cycle counter is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

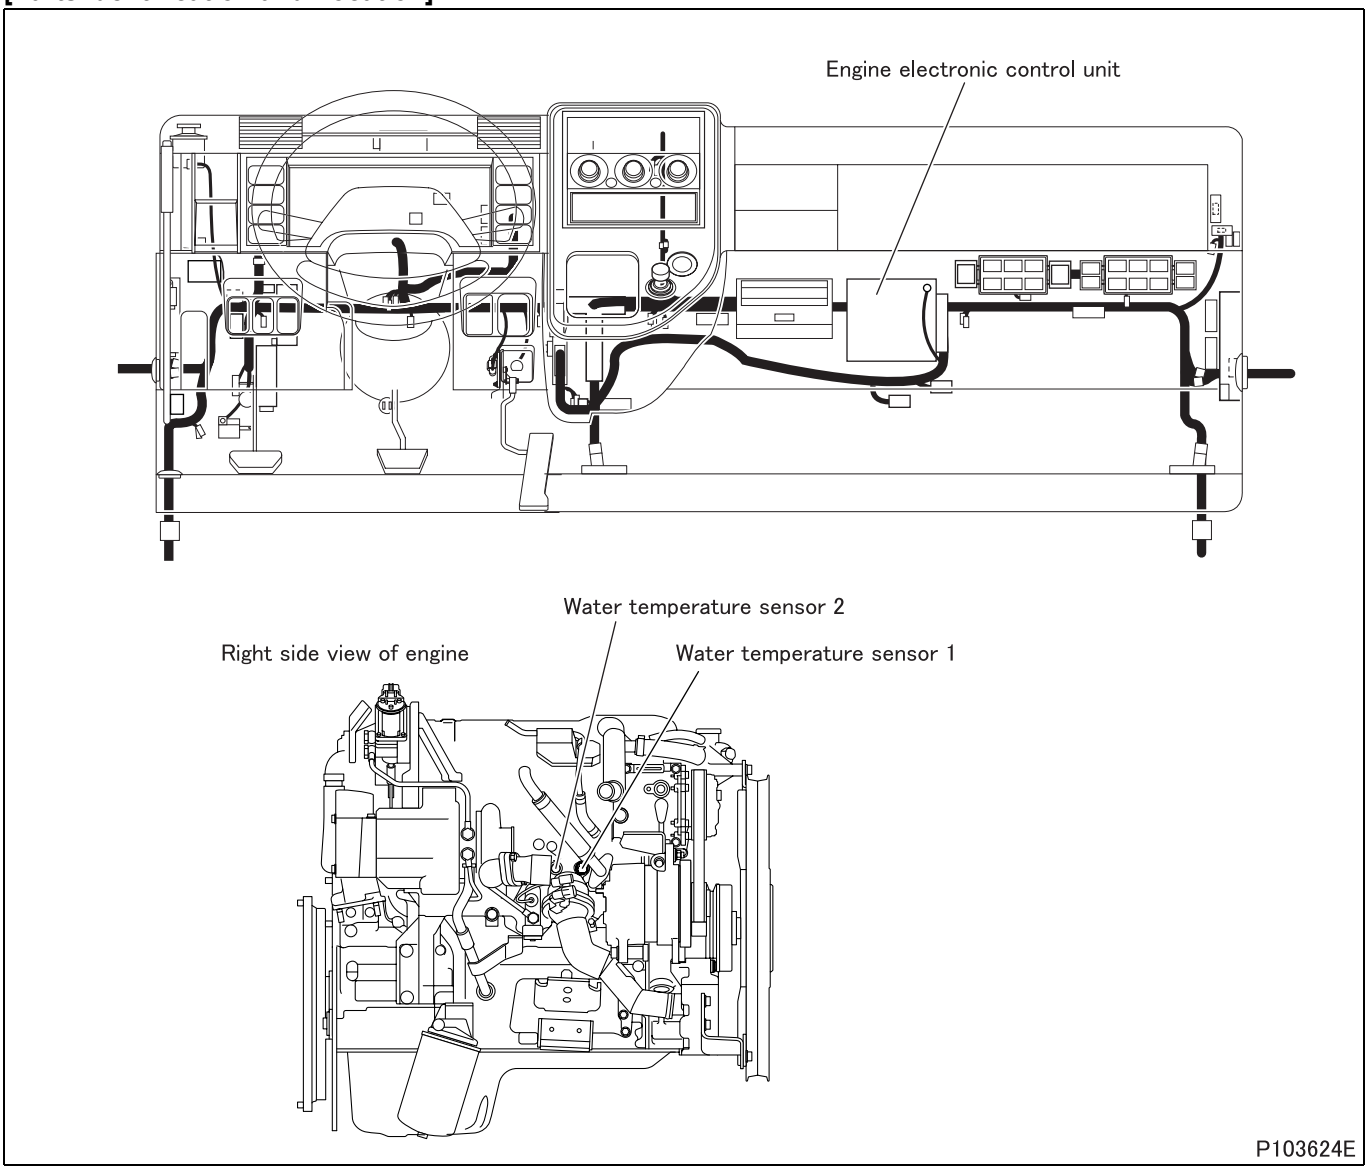
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and water temperature sensor 1
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 31 “Water Temperature” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

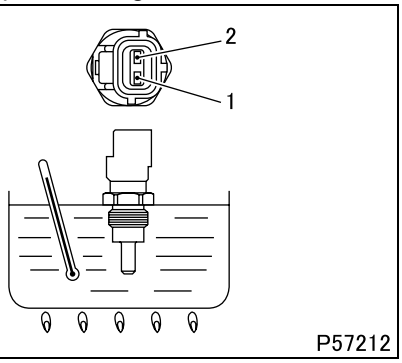
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminals No. 40 and No. 41.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 4	Inspection items		Inspection of water temperature sensor 1 connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of water temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put water temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 40.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 41.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 31 “Water Temperature” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0118/Flash code: 21
[Monitor]
Failure of water temperature sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Water temperature sensor 1 output voltage is monitored.

[Code generation condition]
- Output voltage of temperature sensor 1 remains above 4.8 V for 1 second. (sensor temperature: –45°C {–49°F} or lower)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

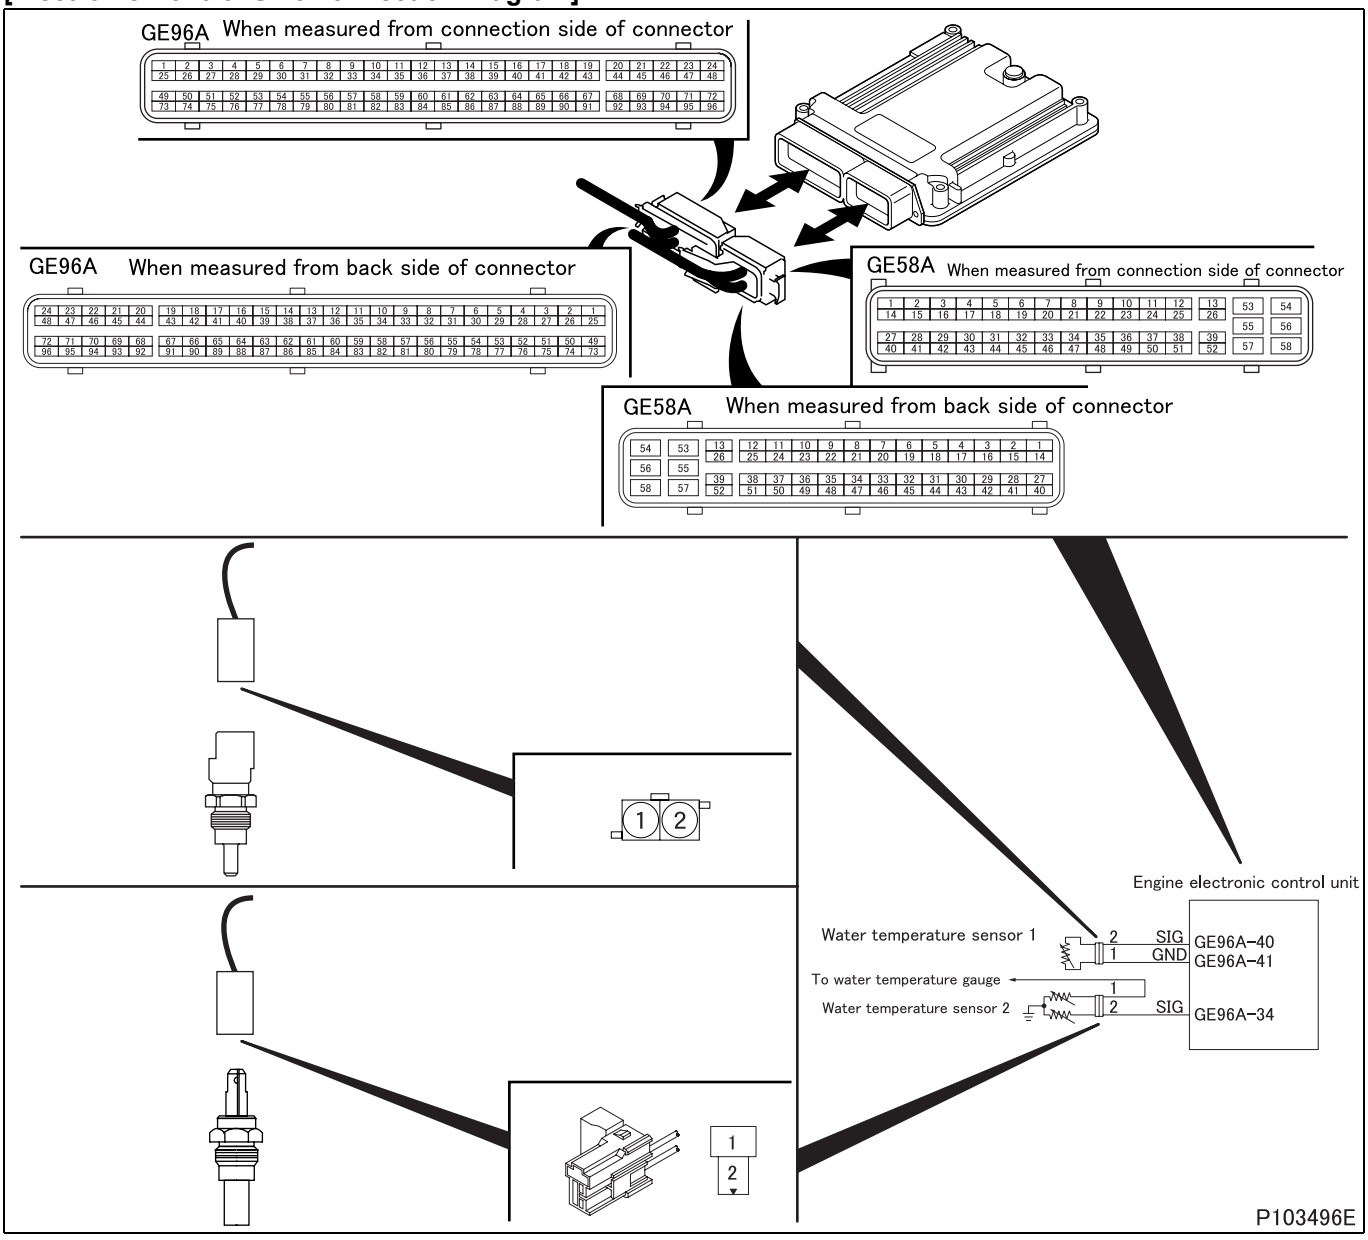
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine coolant temperature is fixed at backup value.
- Fuel system temperature is fixed at backup value.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Warm-up cycle counter is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

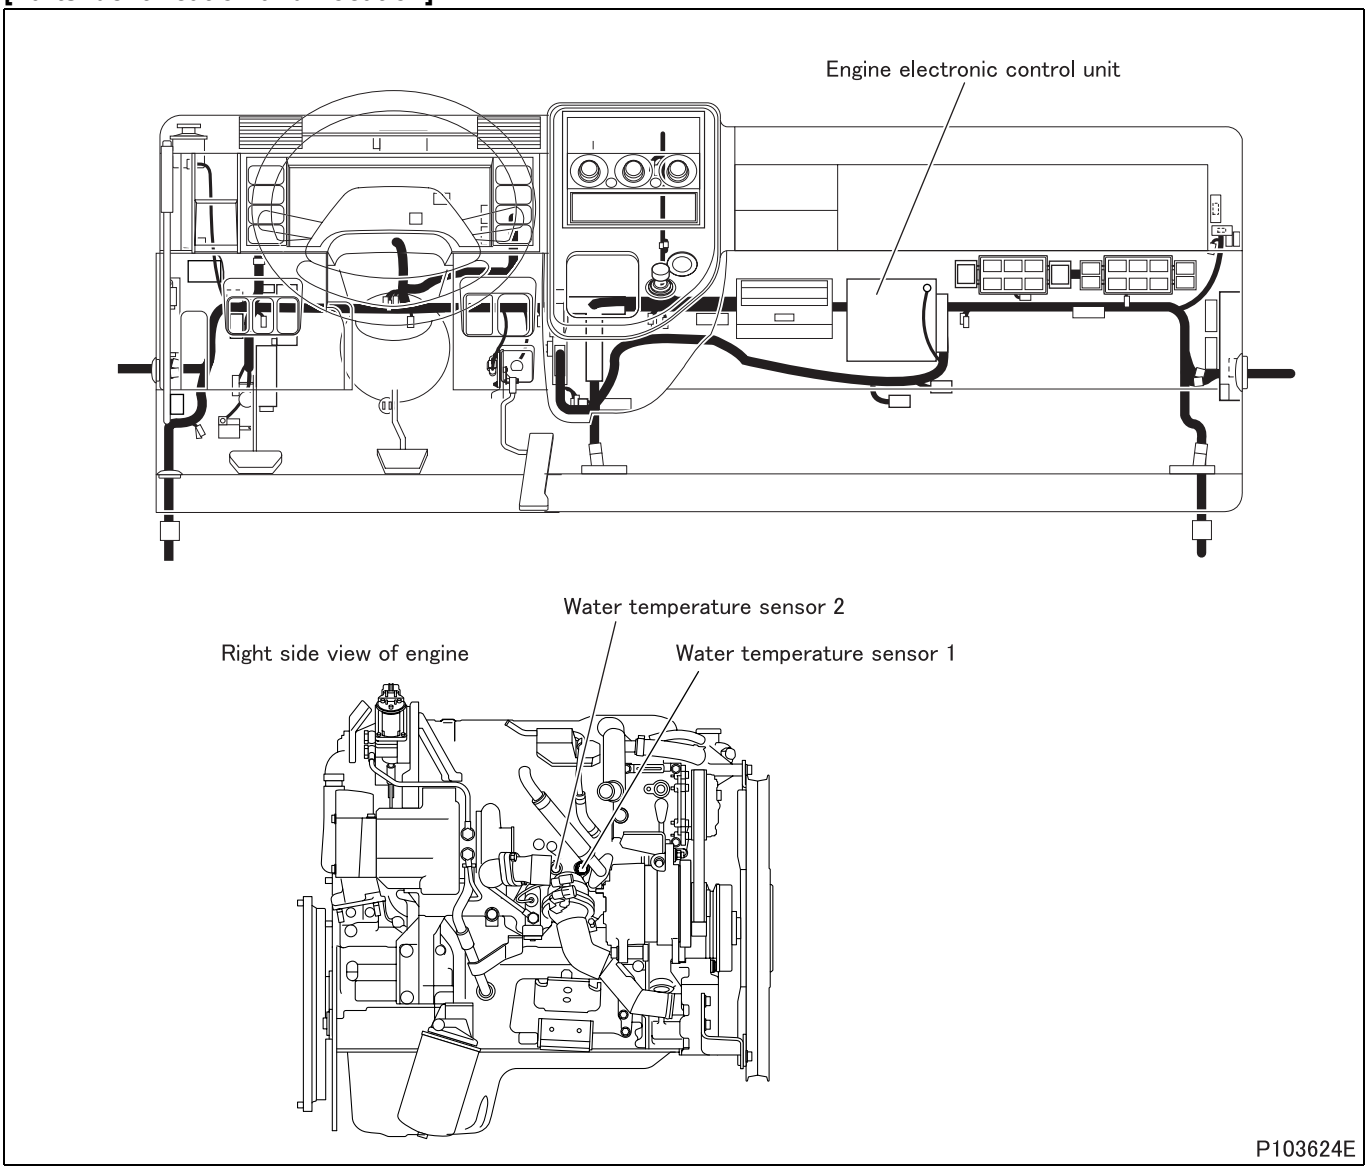
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and water temperature sensor 1
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 31 “Water Temperature” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

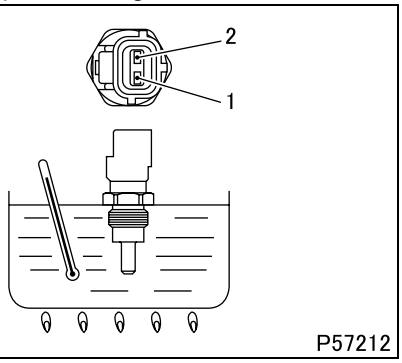
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminals No. 40 and No. 41.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of water temperature sensor 1 connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of water temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put water temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 40.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 41.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 31 “Water Temperature” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P011A/Flash code: 21
[Monitor]
Characteristic abnormality of water temperature sensor
[Fault (outline)]
Gain drift
[Diagnosis check]
- Output temperature data from water temperature sensor 1 and sensor 2 are monitored for difference within specification.

[Code generation condition]
- 30 seconds after starting engine, difference in temperature data between sensor 1 and sensor 2 remains above 14°C {57°F} for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

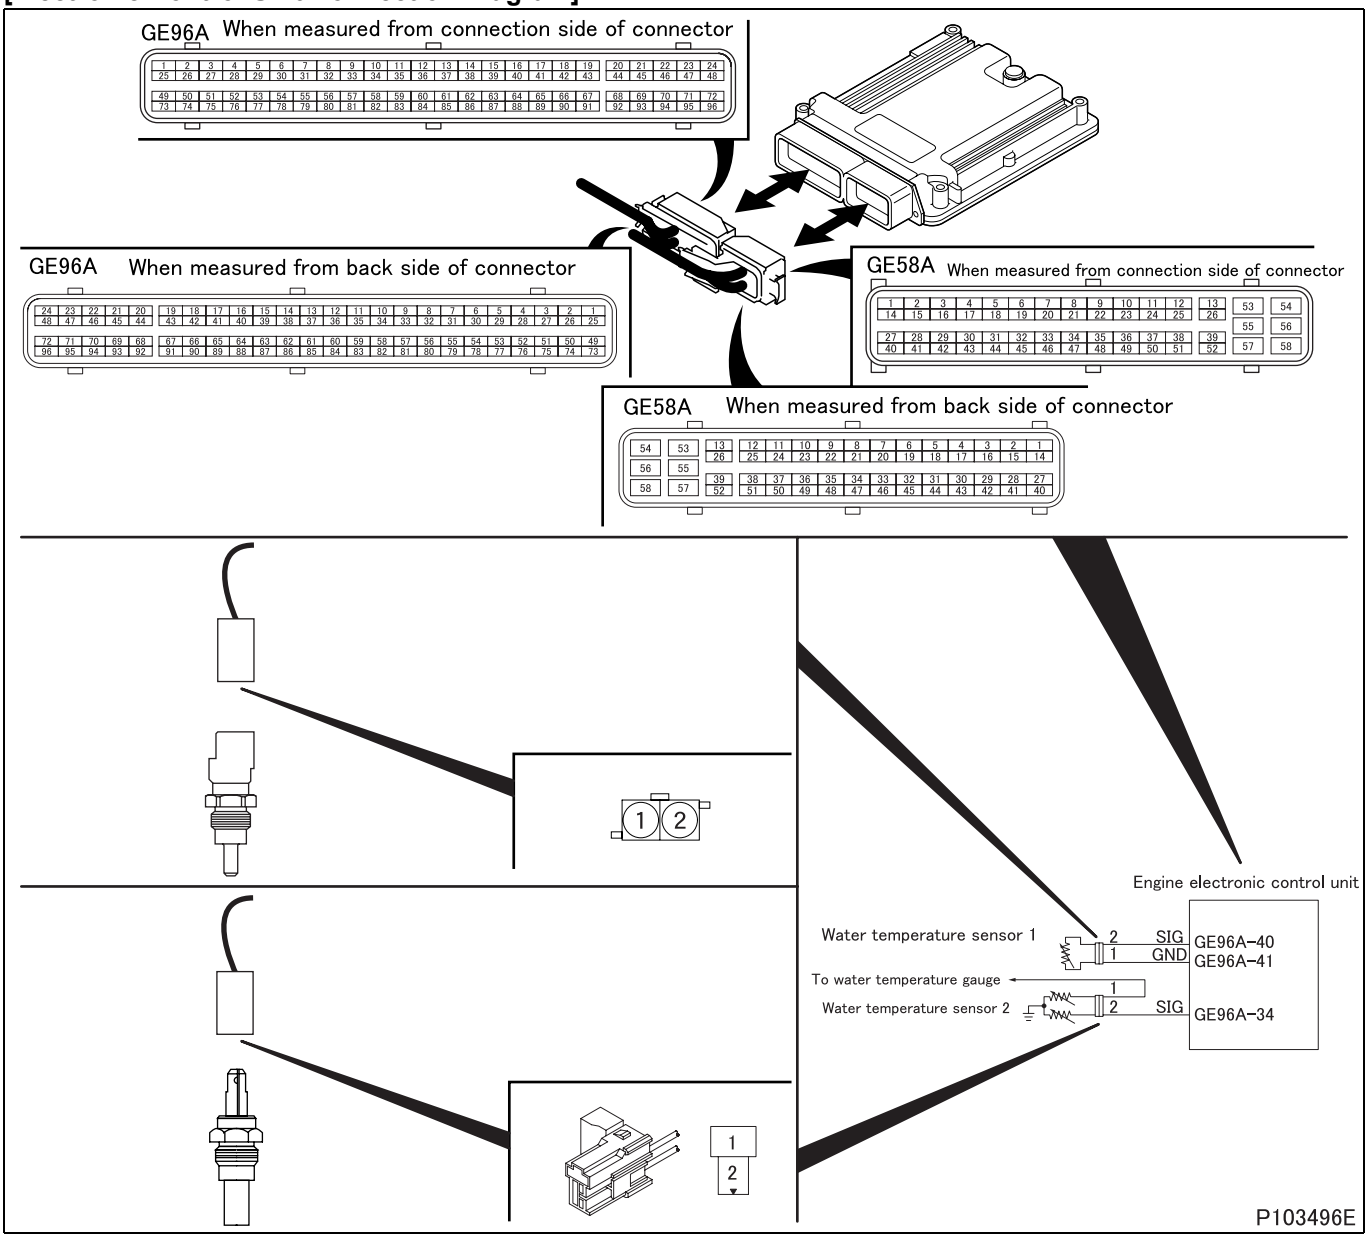
[Diagnostic requirement]
- Engine running time: 30 seconds

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Warm-up cycle counter is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

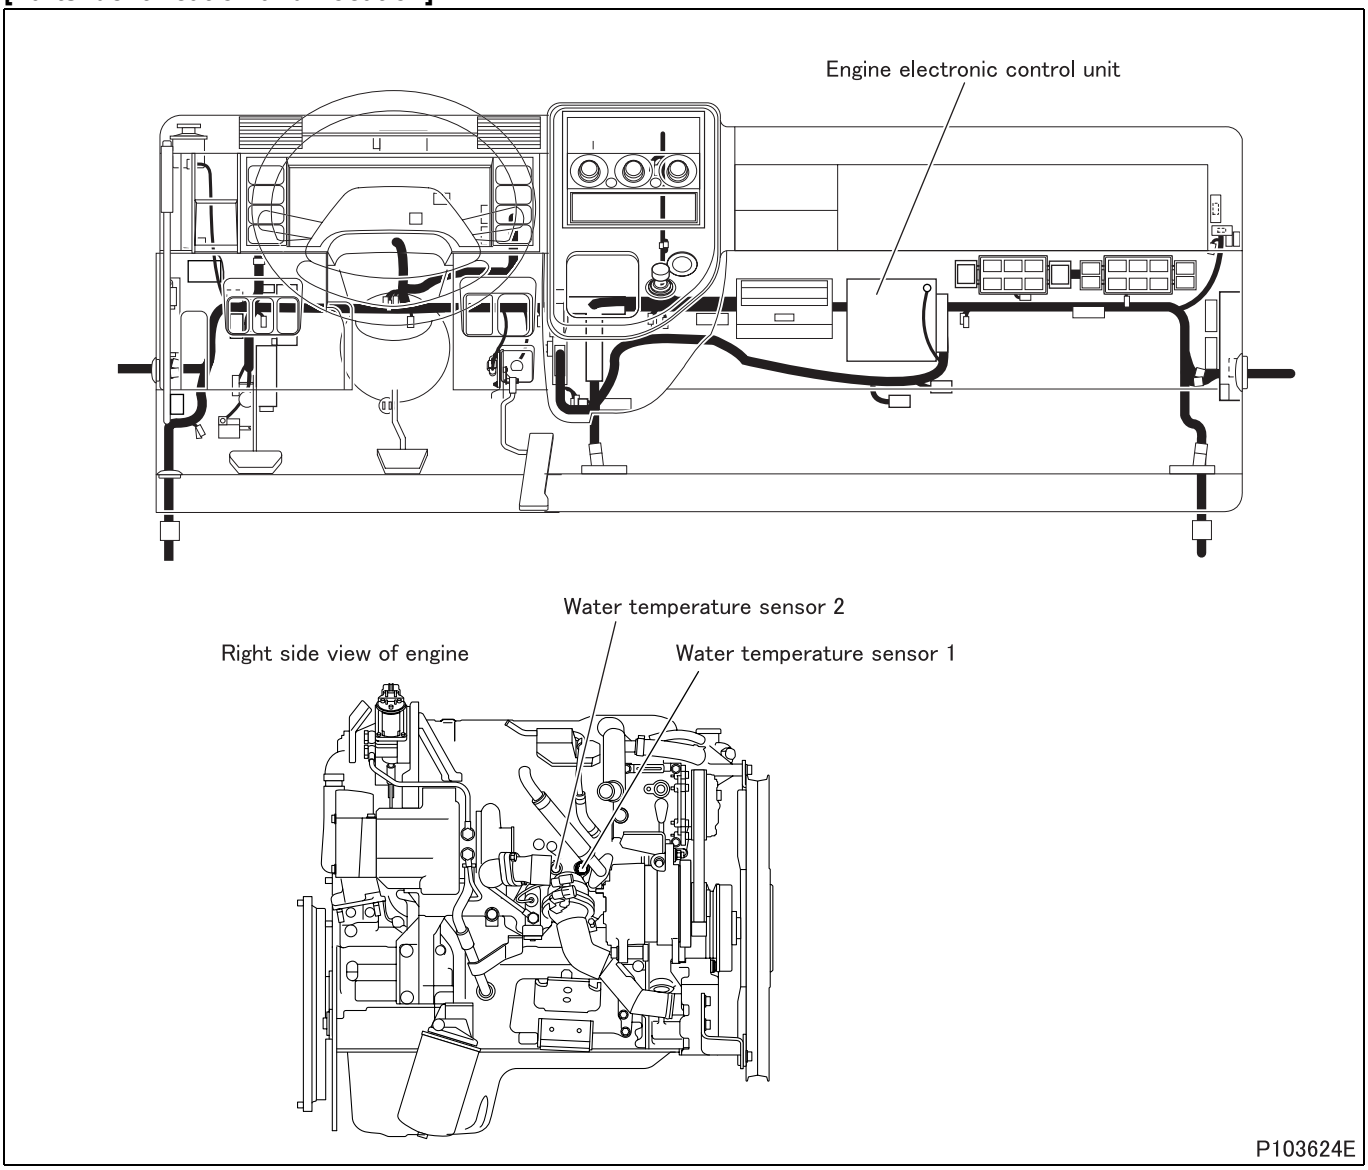
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of following service data • Water temperature sensor 1: Item No. 31 “Water Temperature” • Water temperature sensor 2: Item No. 32 “Water Temperature 2”
	Inspection condition		Engine coolant temperature: 80°C {176°F}
	Requirements		Each service data indicates same temperature
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

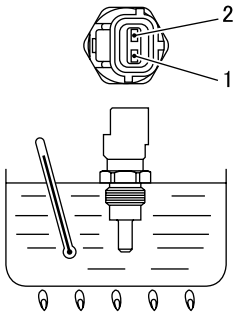
Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of water temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by electronic control unit connector (water temperature sensor 1)
	Maintenance item		Measure value of resistance between connector (GE96A) terminals No. 40 and No. 41.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of water temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put water temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 2.45 ± 0.14 kΩ • 80°C {176°F}: 0.32 kΩ (reference value) • 110°C {230°F}: 141.7 ± 2 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

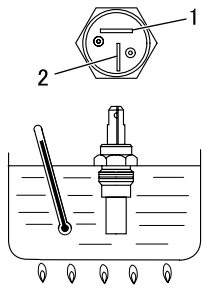
<Step 5 inspection diagram>



Step 6	Inspection items		Inspection by electronic control unit connector (water temperature sensor 2)
	Maintenance item		Measure value of resistance between connector (GE96A) terminals No. 34 and ground.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• –20°C {–4°F}: 24.8 ± 2.5 kΩ • 0°C {32°F}: 8.62 kΩ (reference value) • 20°C {68°F}: 3.25 ± 0.33 kΩ • 60°C {140°F}: 620 kΩ (reference value) • 80°C {176°F}: 300 kΩ (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Go to step 7.

Step 7	Inspection items		Inspection of water temperature sensor 2 unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and body.
	Inspection condition		• Put water temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• –20°C {–4°F}: 24.8 ± 2.5 kΩ • 0°C {32°F}: 8.62 kΩ (reference value) • 20°C {68°F}: 3.25 ± 0.33 kΩ • 60°C {140°F}: 620 kΩ (reference value) • 80°C {176°F}: 300 kΩ (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Replacement of sensor

<Step 7 inspection diagram>



P19463

[Fault code]
Diagnosis code: P0122/Flash code: 24
[Monitor]
Failure of accelerator pedal position sensor 1
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Accelerator pedal position sensor is monitored for output within specification.

[Code generation condition]
- Voltage from accelerator pedal position sensor 1 remains below 0.5 V for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

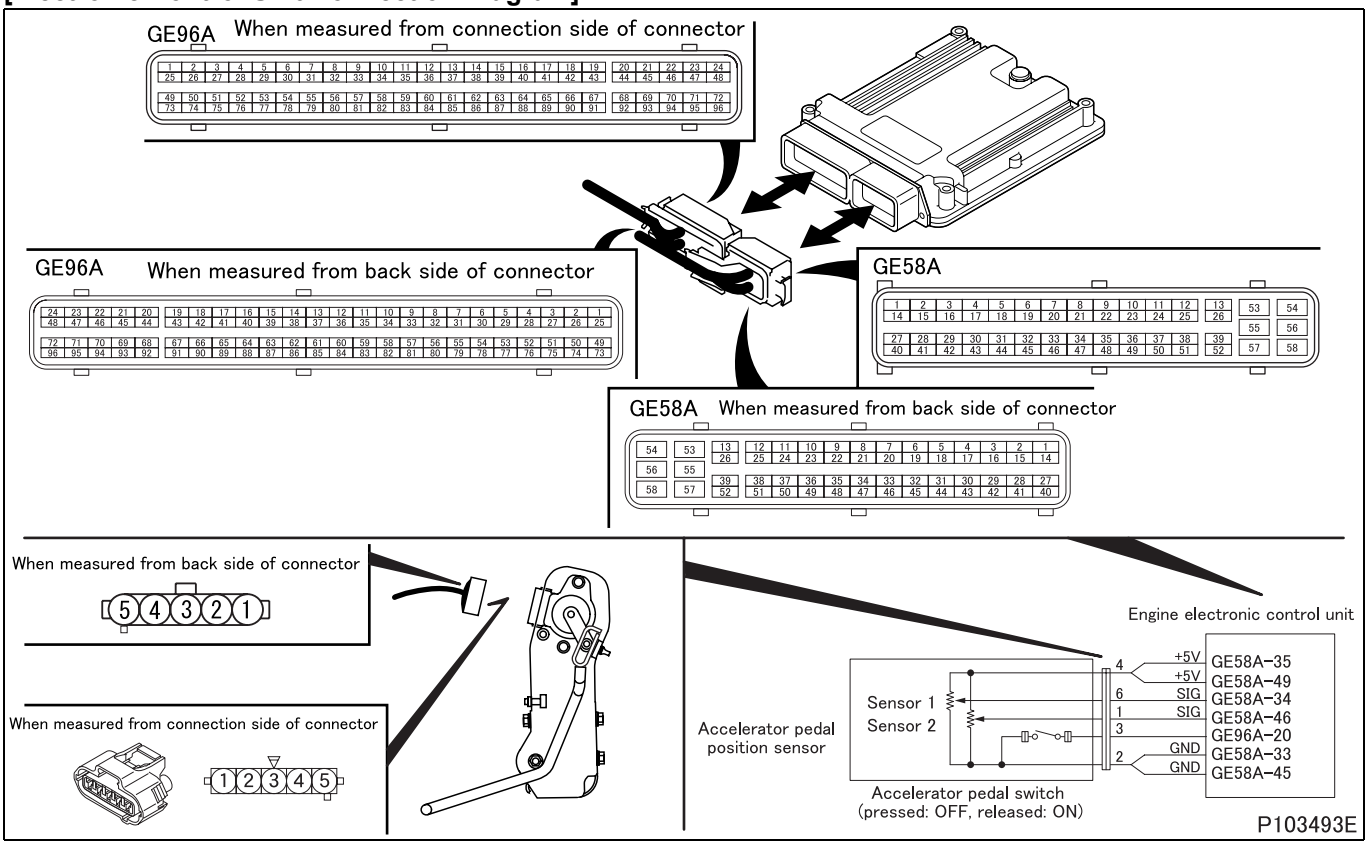
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Accelerator pedal position sensor 2 is computed with accelerator pedal position sensor 1 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

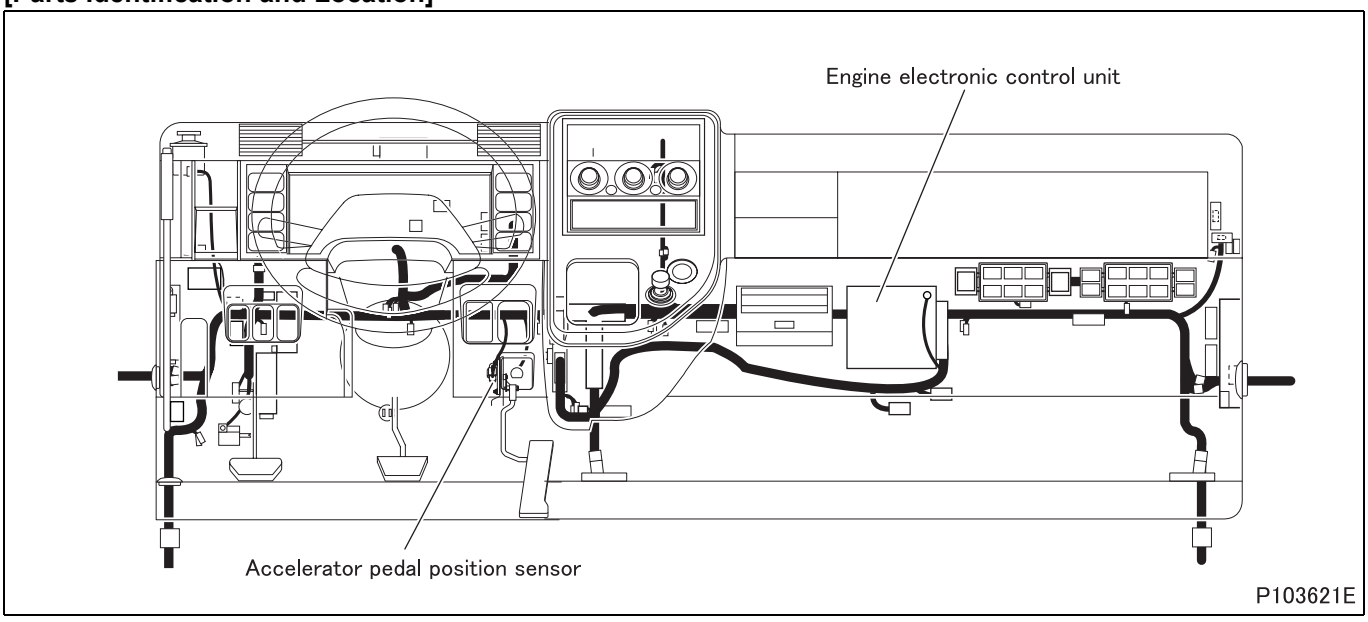
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure “Accelerator Pedal Position 1”. **<Multi-Use Tester used>** • Measure item No. 40 “Accelerator sensor voltage 1” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 34 (+) and No. 33 and No. 45 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		• Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 35 (+) and No. 33 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 33 (+) and No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

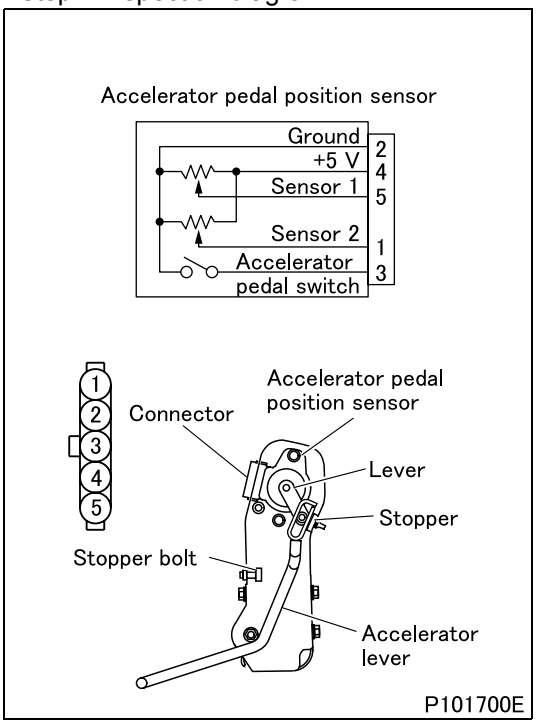
Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

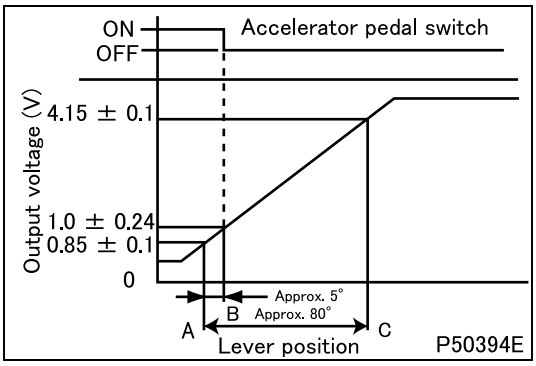
Step 7	Inspection items		Inspection of accelerator pedal position sensor 1 unit
	Maintenance item		Measure value of voltage between connector terminal No. 5 (+) and 2 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 4 (+) and 2 (–).

	Requirements		• Idle position A: 0.85 ± 0.1 V
			• Accelerator switch operating position B: 1.0 ± 0.24 V
			• Full load position C: 4.15 ± 0.1 V
			  • A: When accelerator lever is in contact with stopper
			  • B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3.
			  • C: When lever is in contact with full load stopper bolt

	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor (If the measurement deviates from the standard value after adjustment, replace the sensor.) (See “INSPECTION OF ELECTRICAL PARTS” – “INSPECTION OF ACCELERATOR PEDAL POSITION SENSOR”.)

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 35 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 33 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 34 and sensor connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 1”. **<Multi-Use Tester used>** • Measure item No. 40 “Accelerator sensor voltage 1” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0123/Flash code: 24
[Monitor]
Failure of accelerator pedal position sensor 1
[Fault (outline)]
High signal range check
[Diagnosis check]
- Accelerator pedal position sensor is monitored for output within specification.

[Code generation condition]
- Voltage from accelerator pedal position sensor 1 remains over 4.7 V for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

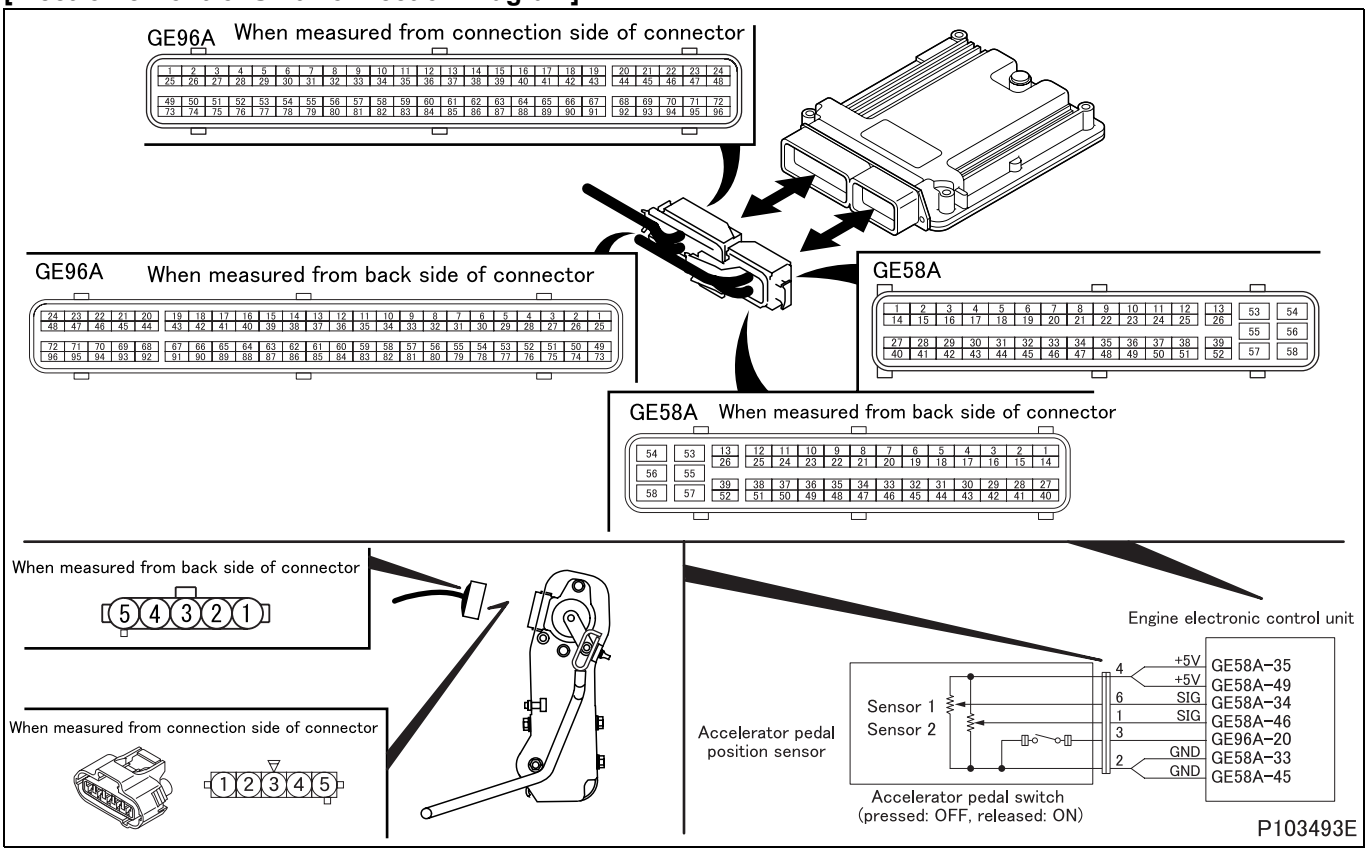
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Accelerator pedal position sensor 2 is computed with accelerator pedal position sensor 1 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

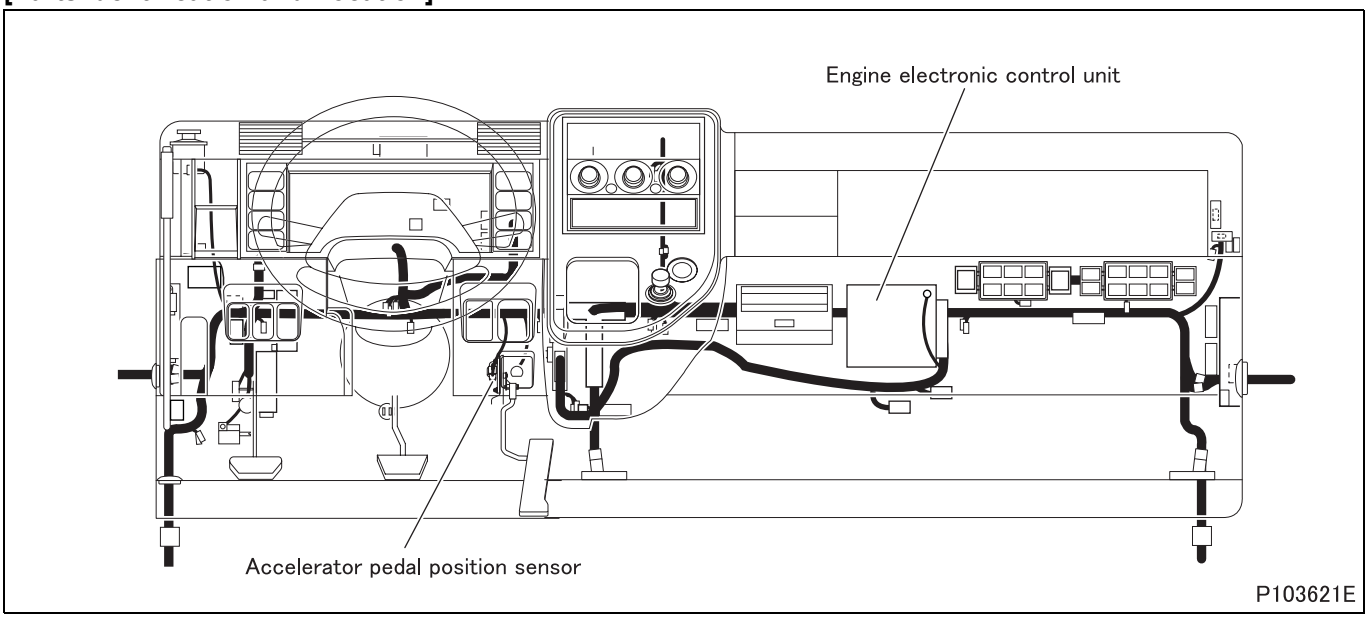
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 1”. **<Multi-Use Tester used>** • Measure item No. 40 “Accelerator sensor voltage 1” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 34 (+) and No. 33 and No. 45 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		• Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 35 (+) and No. 33 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 33 (+) and No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

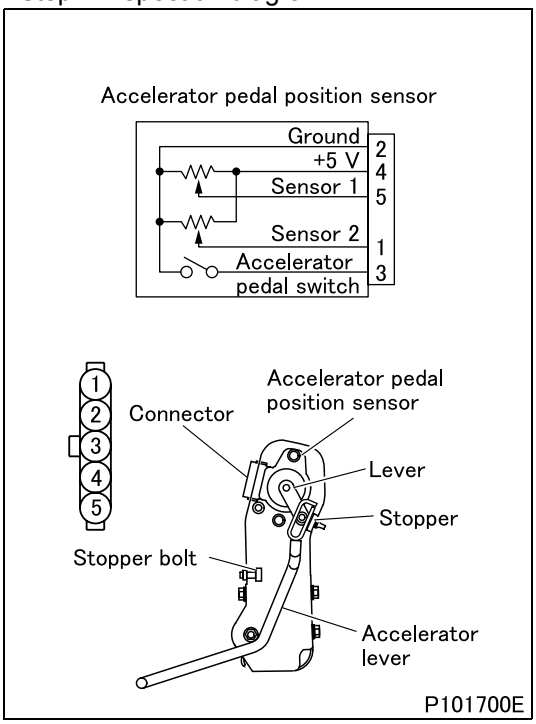
Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

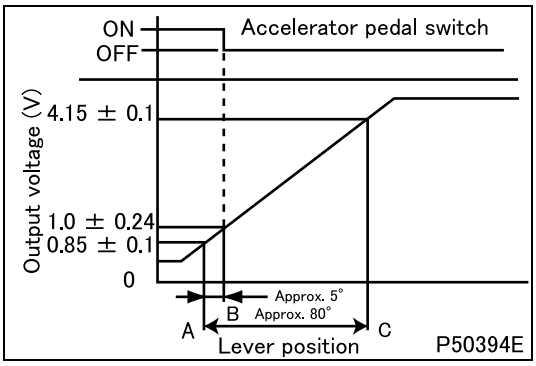
Step 7	Inspection items		Inspection of accelerator pedal position sensor 1 unit
	Maintenance item		Measure value of voltage between connector terminal No. 5 (+) and 2 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 4 (+) and 2 (–).

	Requirements		• Idle position A: 0.85 ± 0.1 V
			• Accelerator switch operating position B: 1.0 ± 0.24 V
			• Full load position C: 4.15 ± 0.1 V
			  • A: When accelerator lever is in contact with stopper
			  • B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3.
			  • C: When lever is in contact with full load stopper bolt

	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor (If the measurement deviates from the standard value after adjustment, replace the sensor.) (See “INSPECTION OF ELECTRICAL PARTS” – “INSPECTION OF ACCELERATOR PEDAL POSITION SENSOR”.)

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 35 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 33 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 34 and sensor connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector. (As connector terminal is too small, use extra fine test lead/probe.)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 1”. **<Multi-Use Tester used>** • Measure item No. 40 “Accelerator sensor voltage 1” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0127/Flash code: 27
[Monitor]
Abnormality of intercooler
[Fault (outline)]
Intercooler failure
[Diagnosis check]
- Intercooler outlet temperature is monitored to determine if it is within specified value.

[Code generation condition]
- Intercooler outlet temperature exceeds predetermined value.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Variation in engine speed: less than 300 rpm/s
- Exhaust shutter: open
- Engine speed: 1400 to 3000 rpm
- Vehicle speed: more than 20 km/h {12.4 MPH}
- Water temperature: 64 to 100°C {147 to 212°F}
- Approximate environment atmospheric temperature: –7 to 60°C {19 to 140°F}
- Engine running time: more than 60 seconds
- Turbocharger actuator: in order
- Controller area network communication of turbocharger electronic drive unit: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Abnormality of intercooler (clogging, leak)
- Malfunction of cooling fan and automatic cooling fan coupling unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0112 “INT Air Temp SNSR (Low)” • P0113 “INT Air Temp SNSR (High)” • P2199 “EGR Temp Sensor (Correlation)”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Inspection of intake air piping and hose for air leak
	Maintenance item		Check for leak.
	Inspection condition		Engine at high idle speed or vehicle running
	Requirements		Free of air leakage or noise
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Clamp is tightened.

Step 3	Inspection items		Inspection of intercooler for leak and clogging
	Maintenance item		Check intercooler for leak.
	Inspection condition		–
	Requirements		Free of air leakage or not clogged.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of intercooler

Step 4	Inspection items		Inspection of turbocharger boost pressure
	Maintenance item		Check of boost pressure
	Inspection condition		For boost pressure measurement and correction data calculation, see Gr15.
	Requirements		Boost pressure is normal.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of turbocharger

[Fault code]
Diagnosis code: P0128/Flash code: 5
[Monitor]
Failure of thermostat
[Fault (outline)]
Below regulating temperature
[Diagnosis check]
- Engine coolant temperature is monitored for rise up to standard level.

[Code generation condition]
- Actual engine coolant temperature is low at the point of predetermined time necessary for engine warm-up having passed.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Water temperature at engine start: –7 to 45°C {19 to 113°F}
- Intake air temperature at engine start: above –7°C {19°F}
- Proportion of engine running time at idle: less than 50%
- When monitoring completed: This diagnosis code has already been cleared.
- Water temperature sensor: in order
- Boost pressure sensor: in order
- Intake air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of thermostat unit (abnormality of valve opening temperature)
- Malfunction of radiator unit
- Malfunction of cooling fan and automatic cooling fan coupling unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0117 “Water Temp SNSR (Low)” • P0118 “Water Temp SNSR (High)” • P011A “Water Temp SNSR”
	Inspection condition		• Starter switch: ON • Engine: started
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Inspection of thermostat
	Maintenance item		Check thermostat for valve opening temperature and valve lift
	Inspection condition		For measurement of thermostat valve opening temperature and valve lift, see shop manual.
	Requirements		Thermostat is in normal condition.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of thermostat

[Fault code]
Diagnosis code: P0148/Flash code: 22
[Monitor]
Abnormality of common rail pressure (pressure: low)
[Fault (outline)]
Plausibility
[Diagnosis check]
- Common rail pressure is monitored.

[Code generation condition]
- Common rail pressure remains below 100 bar for 30 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Malfunction of supply pump
- Malfunction of pressure limiter
- Airtight malfunction of injector
- Plugged fuel system
- Fuel leakage
- Malfunction of common rail pressure sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (At the same time as recovery, warning lamp is extinguished and diagnosis code is cleared.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is no fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 6.

Step 3	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on pipe or hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Correct and replace suction pipe or hose.

Step 4	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 5.

Step 5	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 6.

Step 6	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of supply pump

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel pipe between supply pump and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of fuel pipe

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of rail

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel injection pipes (four) between injector and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of injection pipe

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Replacement of injector

Step 11	Inspection items		Check inside of combustion chamber.
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Replacement of injector of object cylinder

Step 12	Inspection items		Replacement of rail (flow damper and pressure limiter abnormal)
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing rail.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 13.

Step 13	Inspection items		Replacement of supply pump
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Replacement of injectors (four)

[Fault code]
Diagnosis code: P0182/Flash code: 41
[Monitor]
Failure of fuel temperature sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Fuel temperature sensor output voltage is monitored.

[Code generation condition]
- Fuel temperature sensor output voltage remains below 0.15 V for 3 seconds. (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

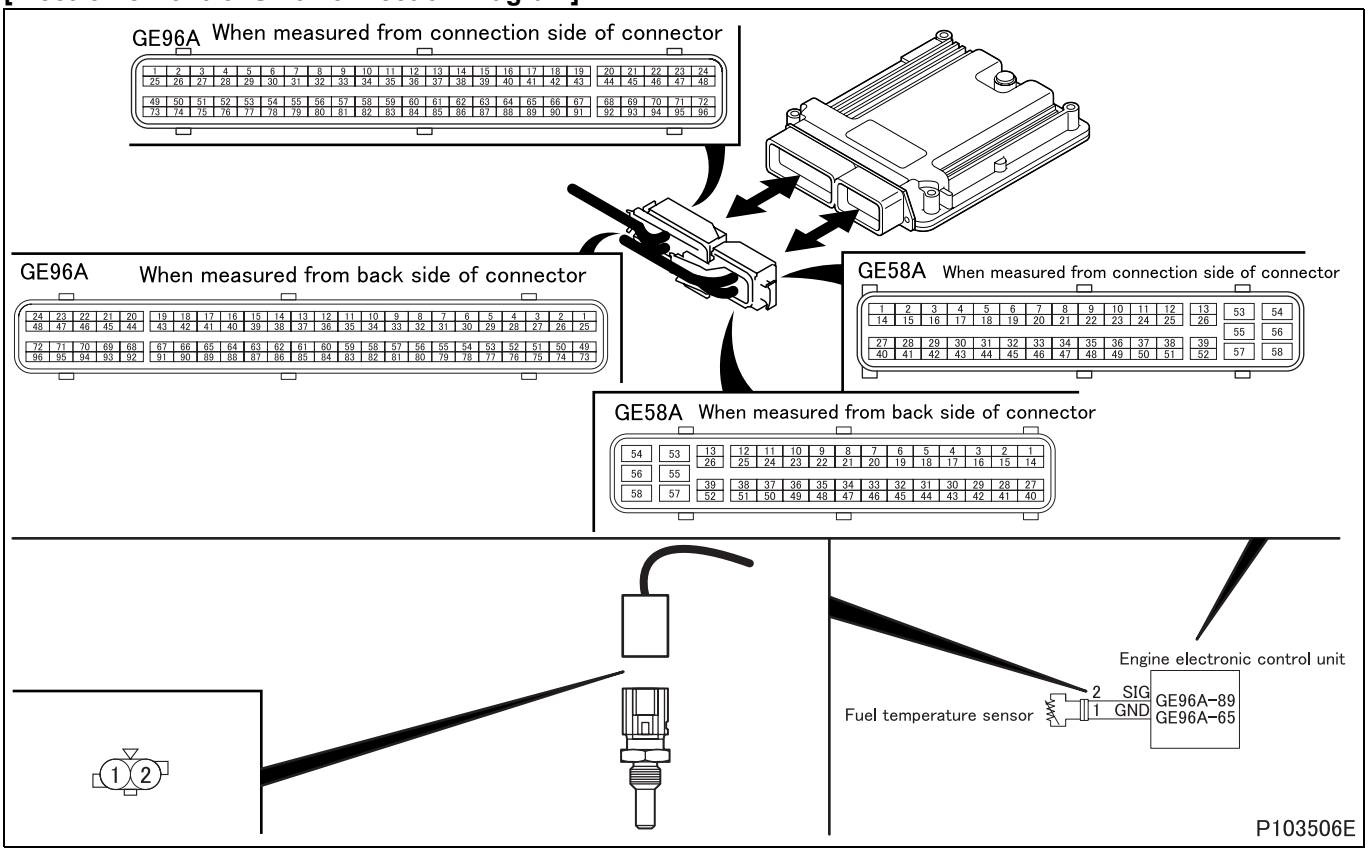
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Fuel temperature is fixed at backup value.
- Fuel system temperature is fixed at backup value.
- Related fault check is stopped.

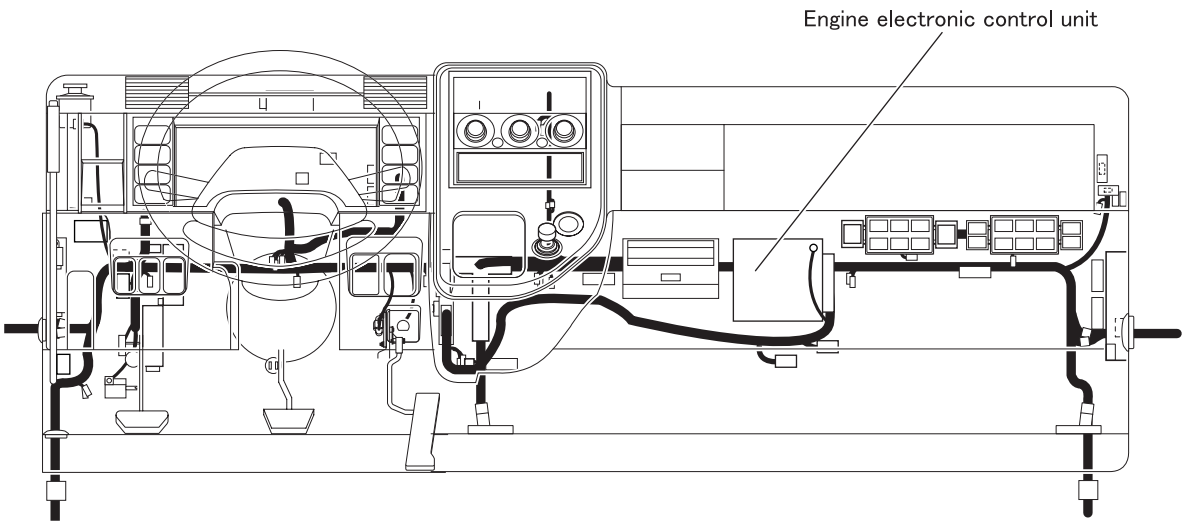
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and fuel temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

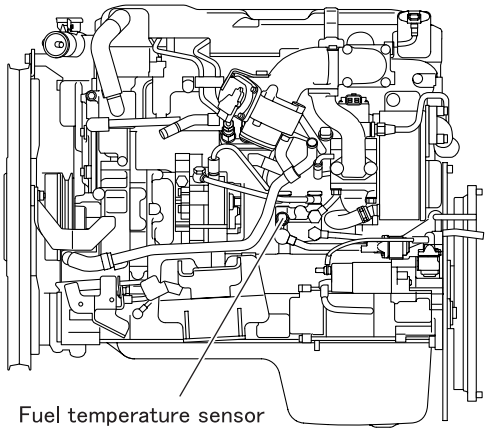
[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



Left side view of engine



P103632E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 33 “Fuel Temperature (inlet)” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature rise up just after engine stopped, then gradually decline.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

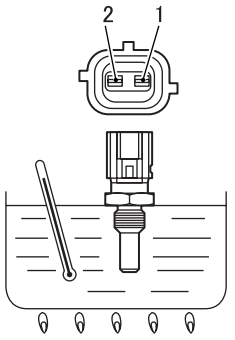
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 65 and 89.
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		• 20°C {68°F}: 2.45 $^{+0.14}_{-0.13}$ kΩ • 80°C {176°F}: 0.318 ± 0.008 kΩ • 110°C {230°F}: 0.1417 ± 0.0018 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of fuel temperature sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 1 and 2.
	Inspection condition		Put sensor in container filled with engine oil.
	Requirements		• 20°C {68°F}: 2.45 $^{+0.14}_{-0.13}$ kΩ • 80°C {176°F}: 0.318 ± 0.008 kΩ • 110°C {230°F}: 0.1417 ± 0.0018 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 89.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 65.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 33 “Fuel Temperature (inlet)” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature rise up just after engine stopped, then gradually decline.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0183/Flash code: 41
[Monitor]
Failure of fuel temperature sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Fuel temperature sensor output voltage is monitored.

[Code generation condition]
- Fuel temperature sensor output voltage remains above 4.8 V for 3 seconds. (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Fuel temperature is fixed at backup value.
- Fuel system temperature is fixed at backup value.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and fuel temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

P103632E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 33 “Fuel Temperature (inlet)” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature rise up just after engine stopped, then gradually decline.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

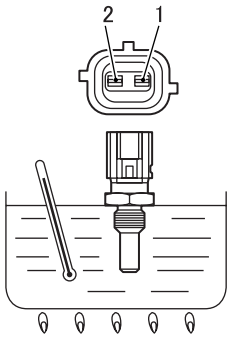
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 65 and 89.
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		• 20°C {68°F}: 2.45 $^{+0.14}_{-0.13}$ kΩ • 80°C {176°F}: 0.318 ± 0.008 kΩ • 110°C {230°F}: 0.1417 ± 0.0018 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of fuel temperature sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 1 and 2.
	Inspection condition		Put sensor in container filled with engine oil.
	Requirements		• 20°C {68°F}: 2.45 $^{+0.14}_{-0.13}$ kΩ • 80°C {176°F}: 0.318 ± 0.008 kΩ • 110°C {230°F}: 0.1417 ± 0.0018 kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 89.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 65.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 33 “Fuel Temperature (inlet)” of Service Data.
	Inspection condition		–
	Requirements		• When engine is cold: Temperature is equivalent to outside temperature. • While engine is warmed up: Temperature gradually increases. • When engine is stopped after warm-up: Temperature rise up just after engine stopped, then gradually decline.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0191/Flash code: 11
[Monitor]
Characteristic abnormality of common rail pressure sensor
[Fault (outline)]
Offset
[Diagnosis check]
- Common rail pressure is monitored at starter switch ON.
- Common rail pressure is always monitored while driving.

[Code generation condition]
- Signal voltage from common rail pressure sensor remains excessively high (above 0.7 V) or low (below 0.3 V) for 3.2 seconds. (common rail pressure: above 100 bar or below –100 bar)
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the starter switch is turned from “stop” to “start” position.

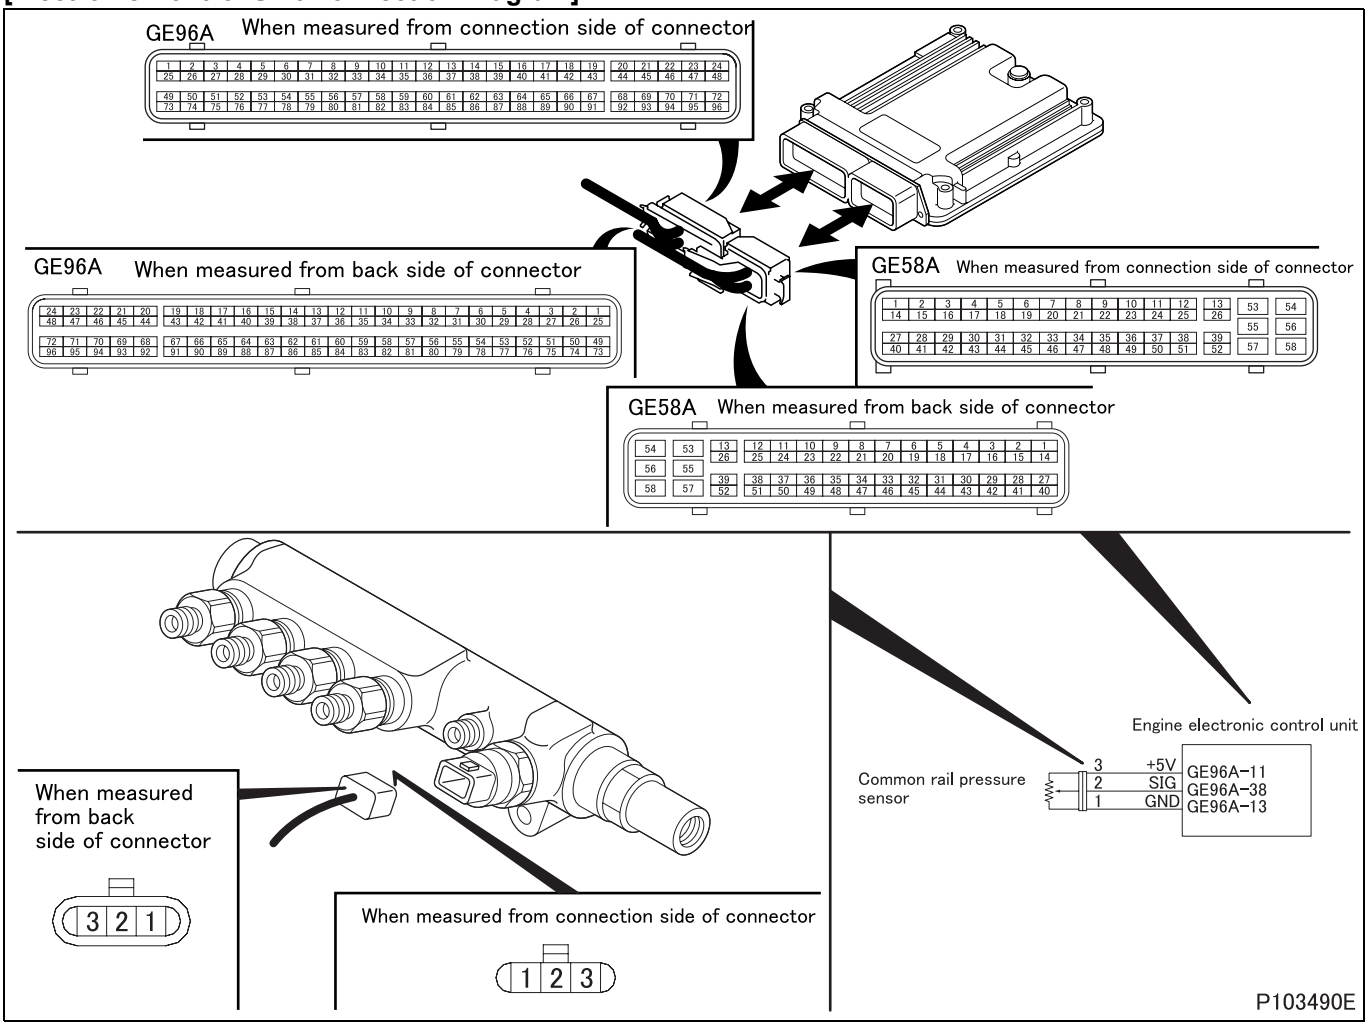
[Diagnostic requirement]
- Status of engine: stop to start
- Water temperature: above 0°C {32°F}
- Delay time after starter switch ON: more than 3.2 seconds

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

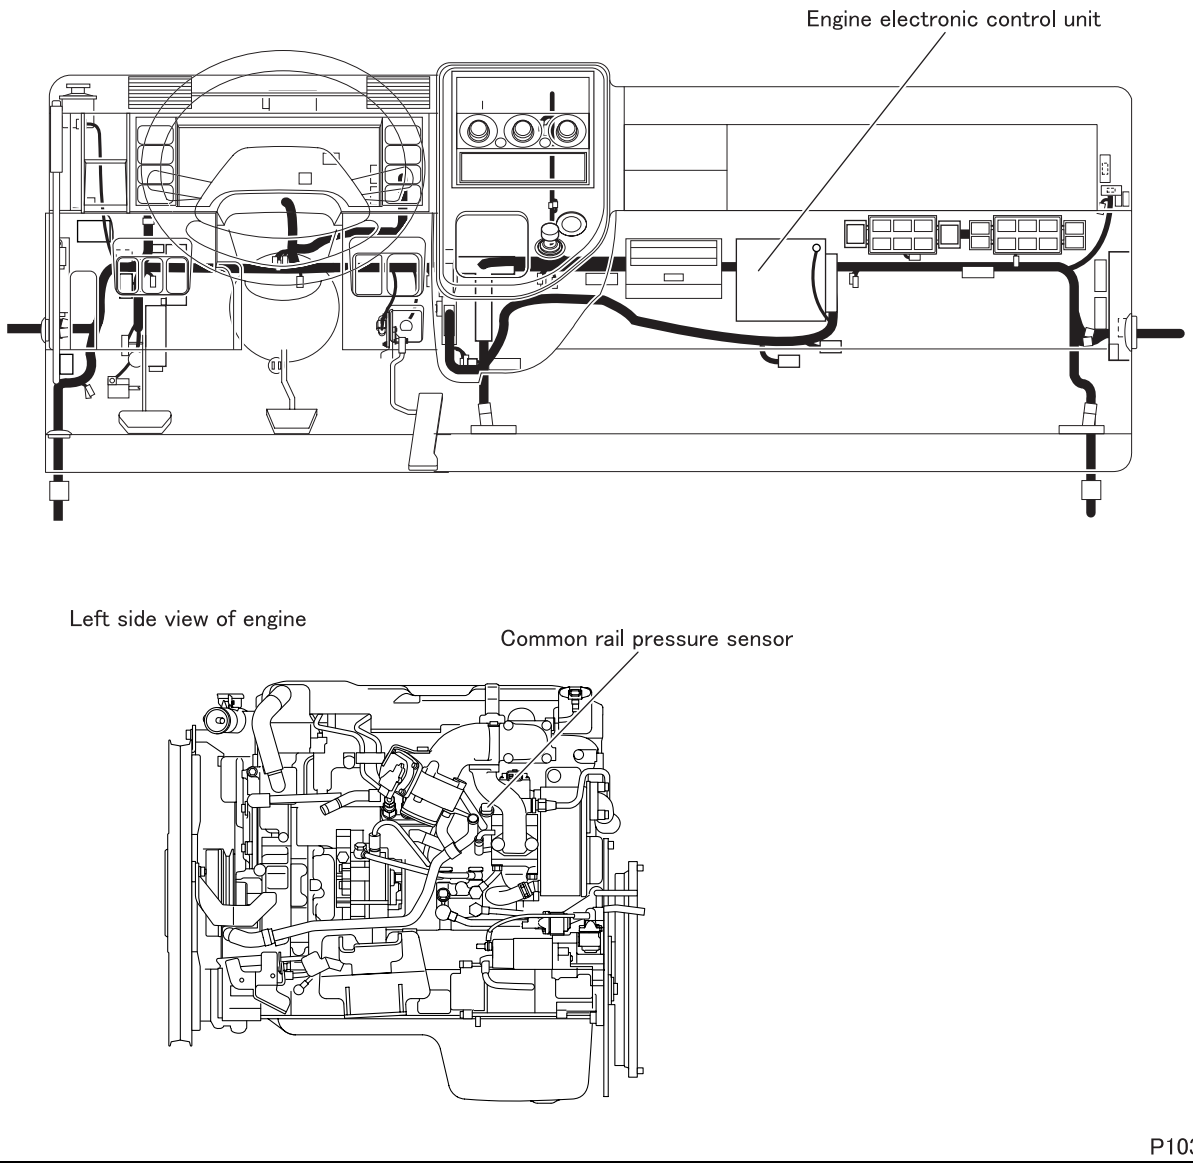
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Malfunction of supply pump (overflow valve)
- Malfunction of pressure limiting valve
- Airtight malfunction of injector
- Plugged fuel system
- Fuel leakage
- Malfunction of common rail pressure sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 1B “Actual Common Rail Pressure 2” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 38 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 11 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 6.

Step 5	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 13 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 38.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of sensor, go to step 12
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 1B “Actual Common Rail Pressure 2” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of rail

Step 13	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is no fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 17.

Step 14	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on pipe or hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 15.
		NO	Correct and replace suction pipe or hose.

Step 15	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 16.

Step 16	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 17.

Step 17	Inspection items		Checking of supply pump
	Maintenance item		Check supply pump for fuel leak.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 18.
		NO	Replacement of supply pump

Step 18	Inspection items		Checking of fuel pipe between supply pump and rail
	Maintenance item		Check fuel pipe between supply pump and rail for fuel leak.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel pipe between supply pump and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 19.
		NO	Replacement of fuel pipe

Step 19	Inspection items		Checking of rail
	Maintenance item		Check rail for fuel leak.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 20.
		NO	Replacement of rail

Step 20	Inspection items		Checking of injection pipes (four) between injector and rail
	Maintenance item		Check injection pipes (four) between injector and rail for fuel leak.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel injection pipes (four) between injector and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 21.
		NO	Replacement of injection pipe

Step 21	Inspection items		Checking of injectors (four)
	Maintenance item		Check injectors (four) for fuel leak.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 22.
		NO	Replacement of injector

Step 22	Inspection items		Check inside of combustion chamber.
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 23.
		NO	Replacement of injector of object cylinder

Step 23	Inspection items		Replacement of rail (common rail pressure sensor, flow damper and pressure limiter abnormal)
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing rail.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 24.

Step 24	Inspection items		Replacement of supply pump
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Replacement of injectors (four)

[Fault code]
Diagnosis code: P0192/Flash code: 11
[Monitor]
Failure of common rail pressure sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Common rail pressure sensor output voltage after engine start is monitored.

[Code generation condition]
- Value of voltage from common rail pressure sensor remains below 0.2 V for 0.25 seconds. (common rail pressure: below –150 bar)
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

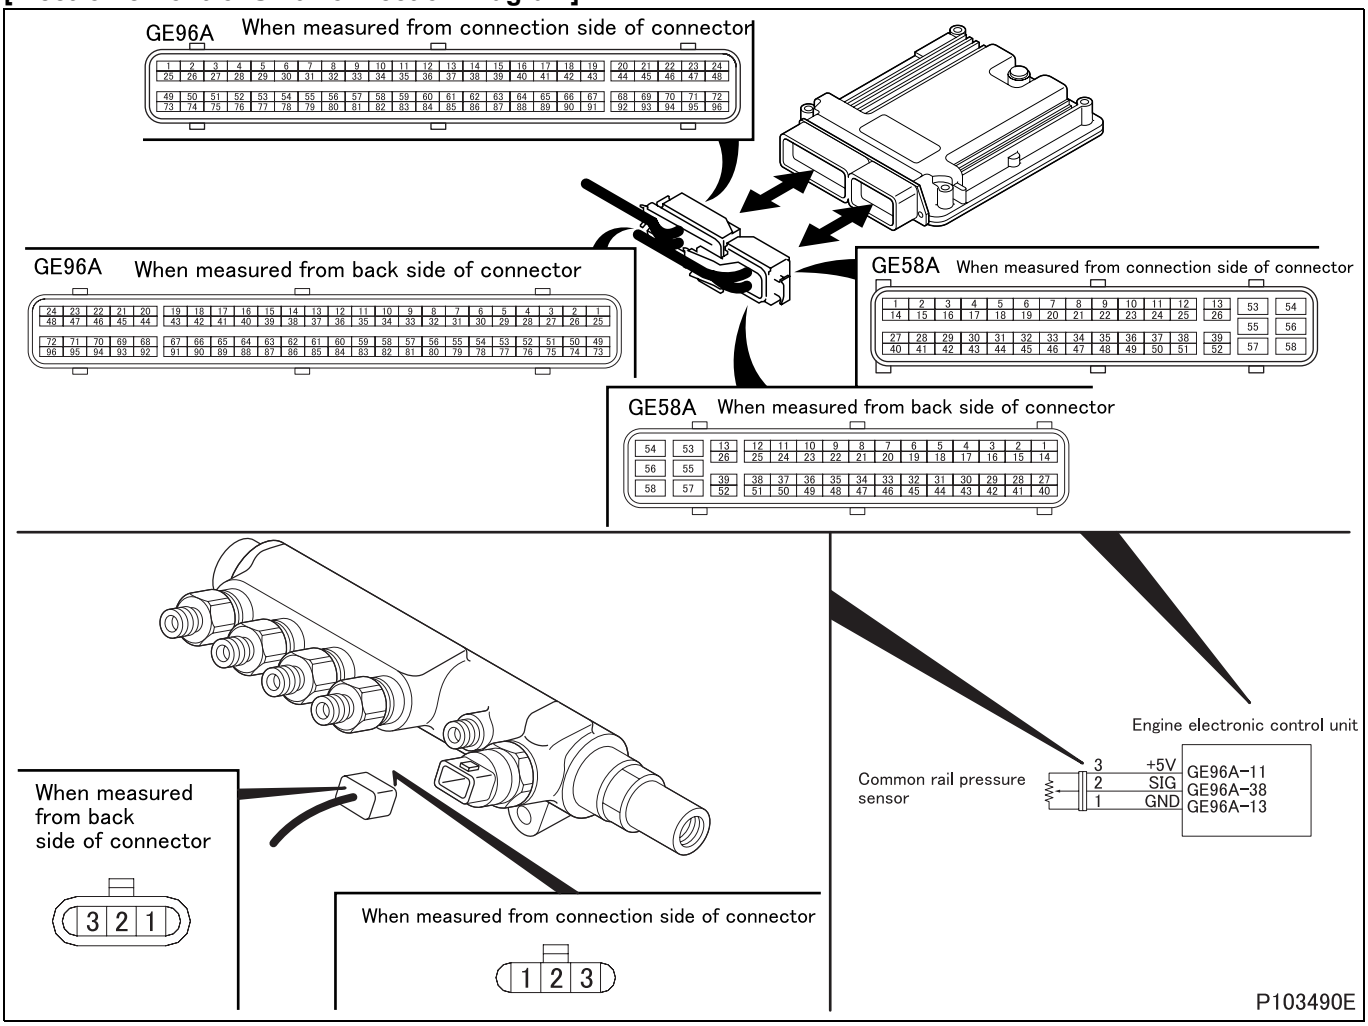
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Common rail pressure control is switched to open loop control mode.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

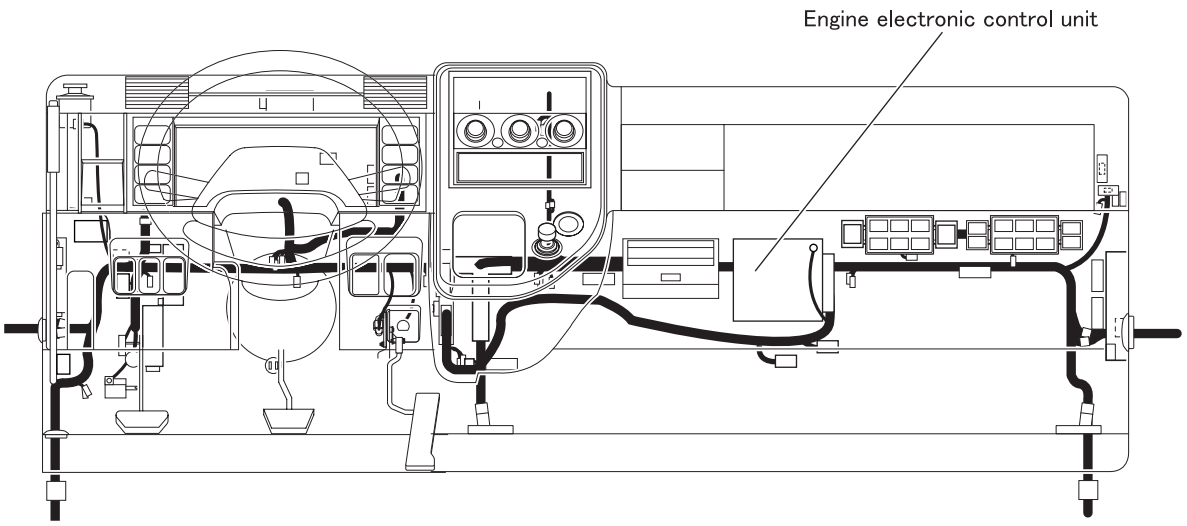
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

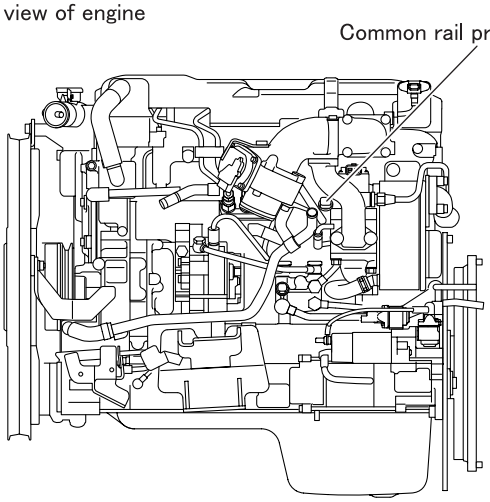
[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



Left side view of engine



P103618E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 0A “Reference Injection Quantity” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 38 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 11 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 13 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Go to step 8.

Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 38.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of sensor, go to step 11
		NO	Modify harness.

Step 11	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 0A “Reference Injection Quantity” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0193/Flash code: 11
[Monitor]
Failure of common rail pressure sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Common rail pressure sensor output voltage after engine start is monitored.

[Code generation condition]
- Value of voltage from common rail pressure sensor remains above 4.8 V for 0.25 seconds. (common rail pressure: above 2300 bar)
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

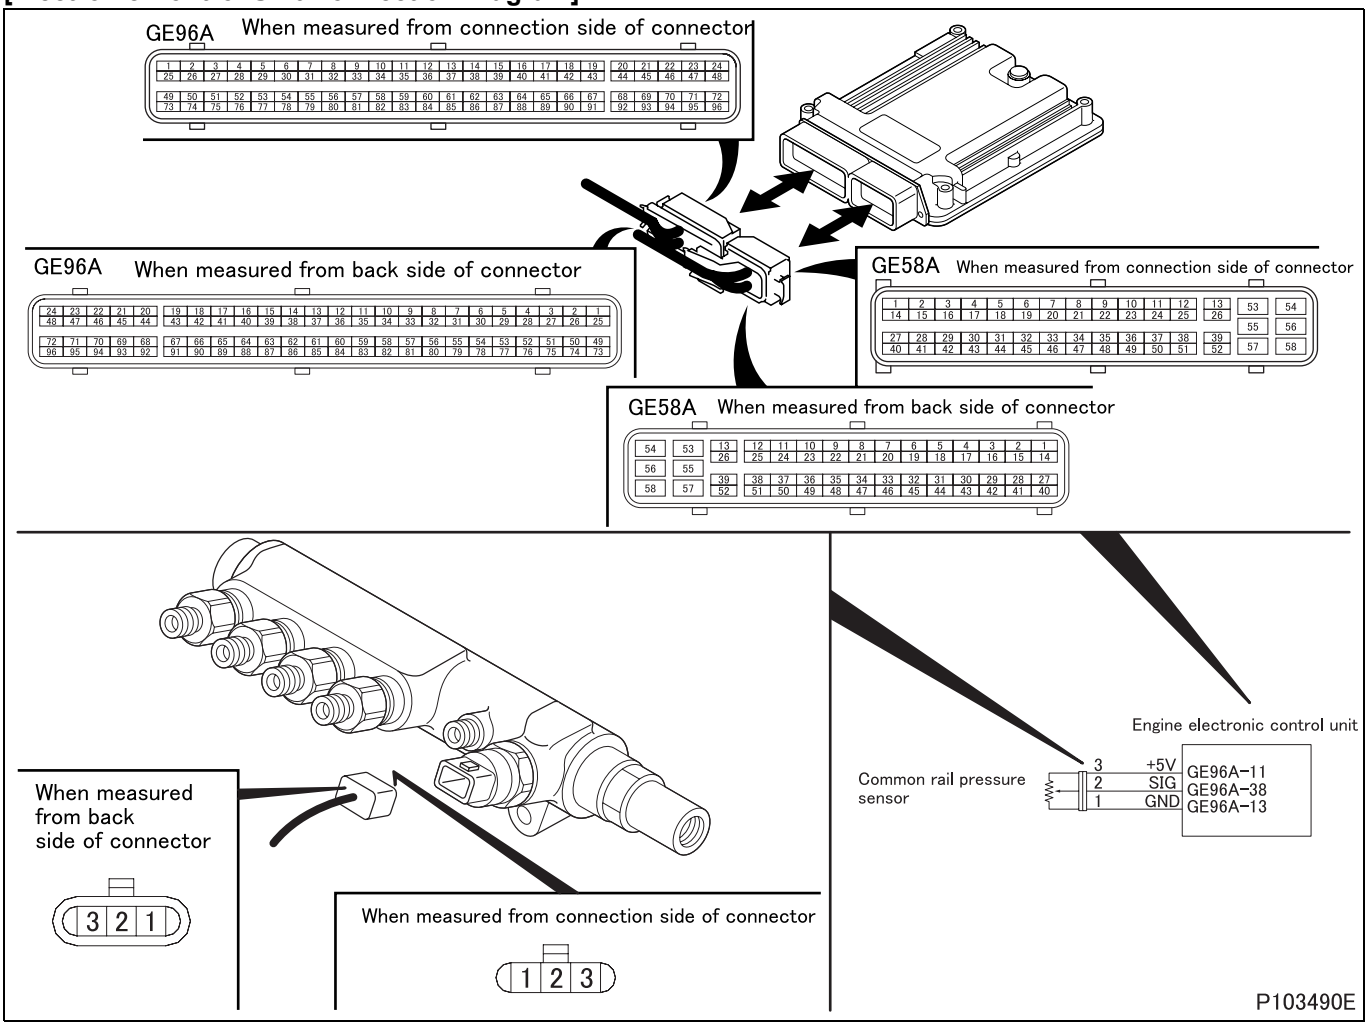
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Common rail pressure control is switched to open loop control mode.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

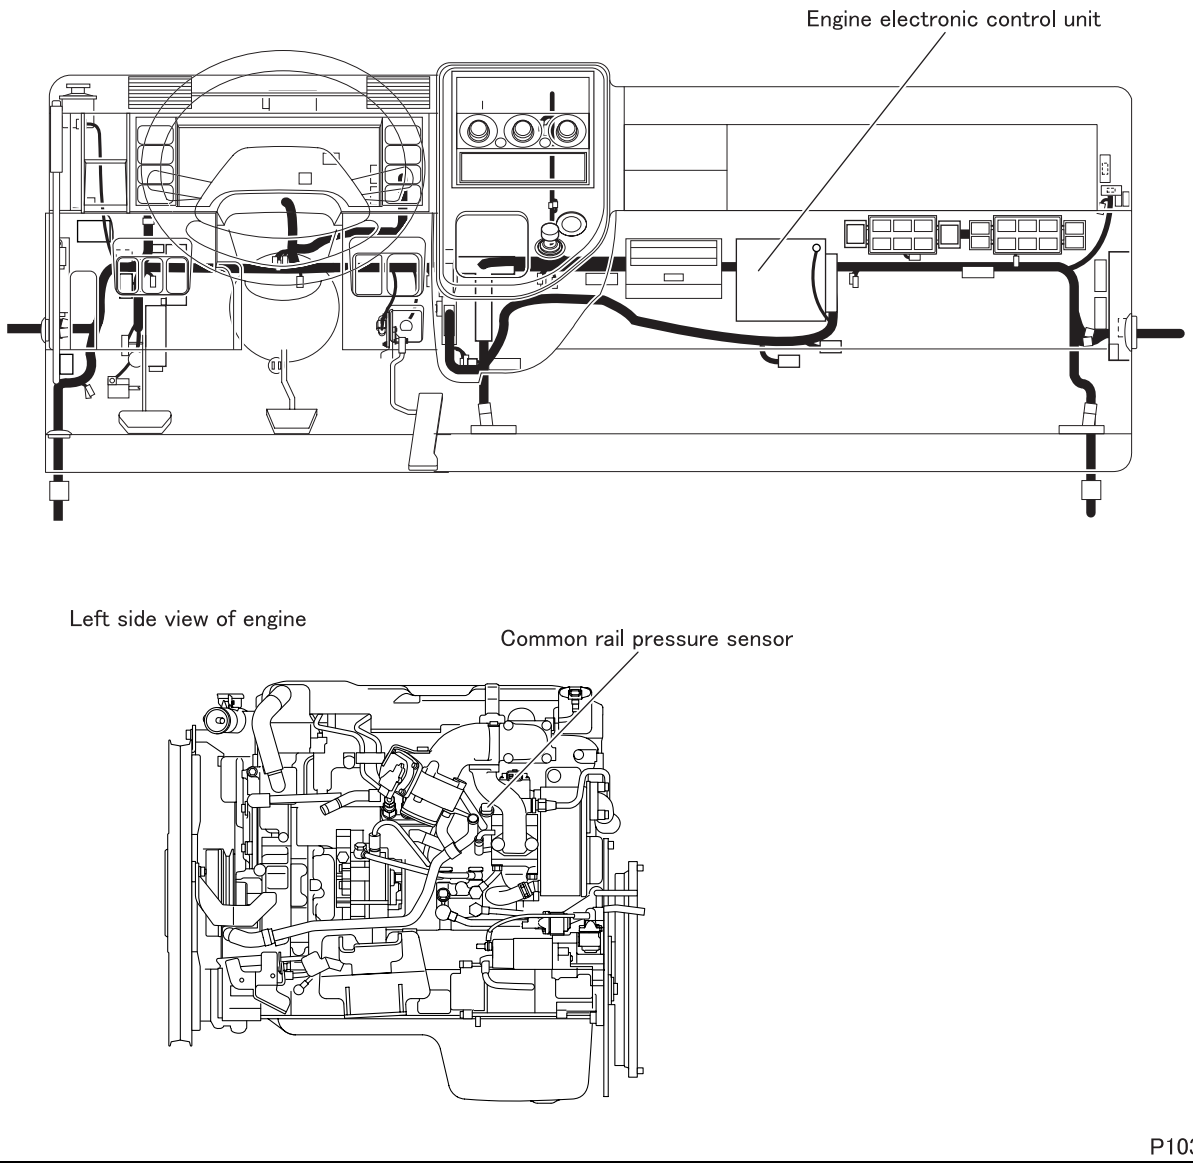
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 0A “Reference Injection Quantity” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 38 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 11 (+) and 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 13 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Go to step 8.

Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 38.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of sensor, go to step 11
		NO	Modify harness.

Step 11	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 0A “Reference Injection Quantity” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		0%
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0201/Flash code: 37
[Monitor]
Failure of injector magnetic valve (No. 1 cylinder)
[Fault (outline)]
Injector open circuit (No. 1 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 1 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 1 cylinder) circuit remains open as detected for 3 cycles.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

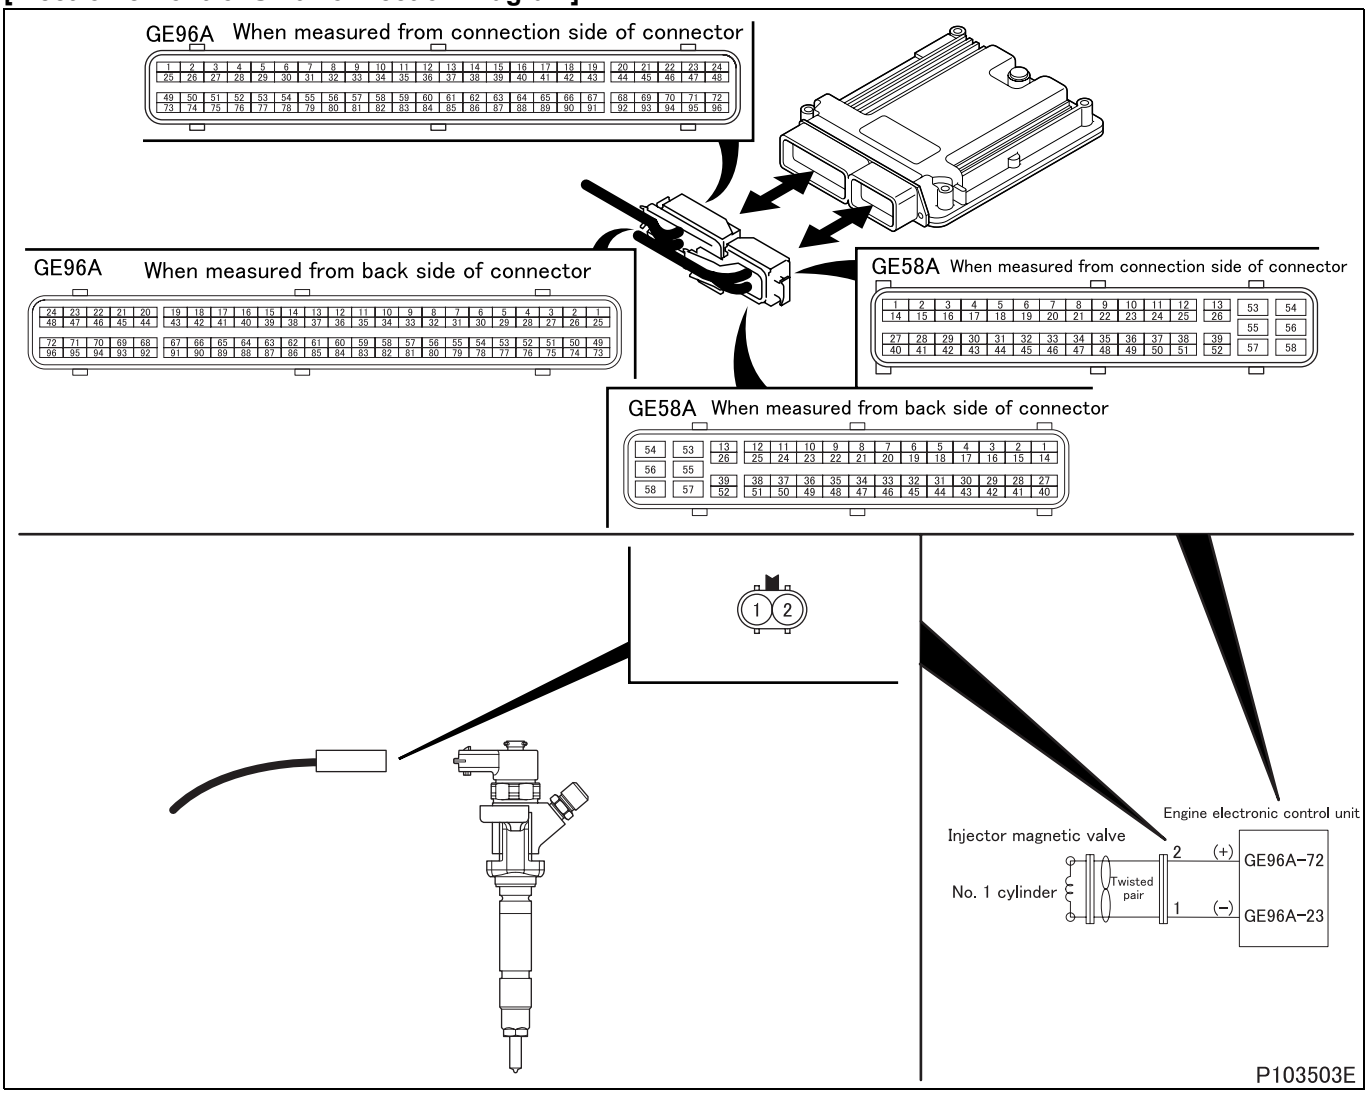
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Short-circuit>
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Controller area network torque output is fixed at backup valve.
- Related fault check is stopped.

<Open-circuit>
- Injector magnetic valve (No. 1 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

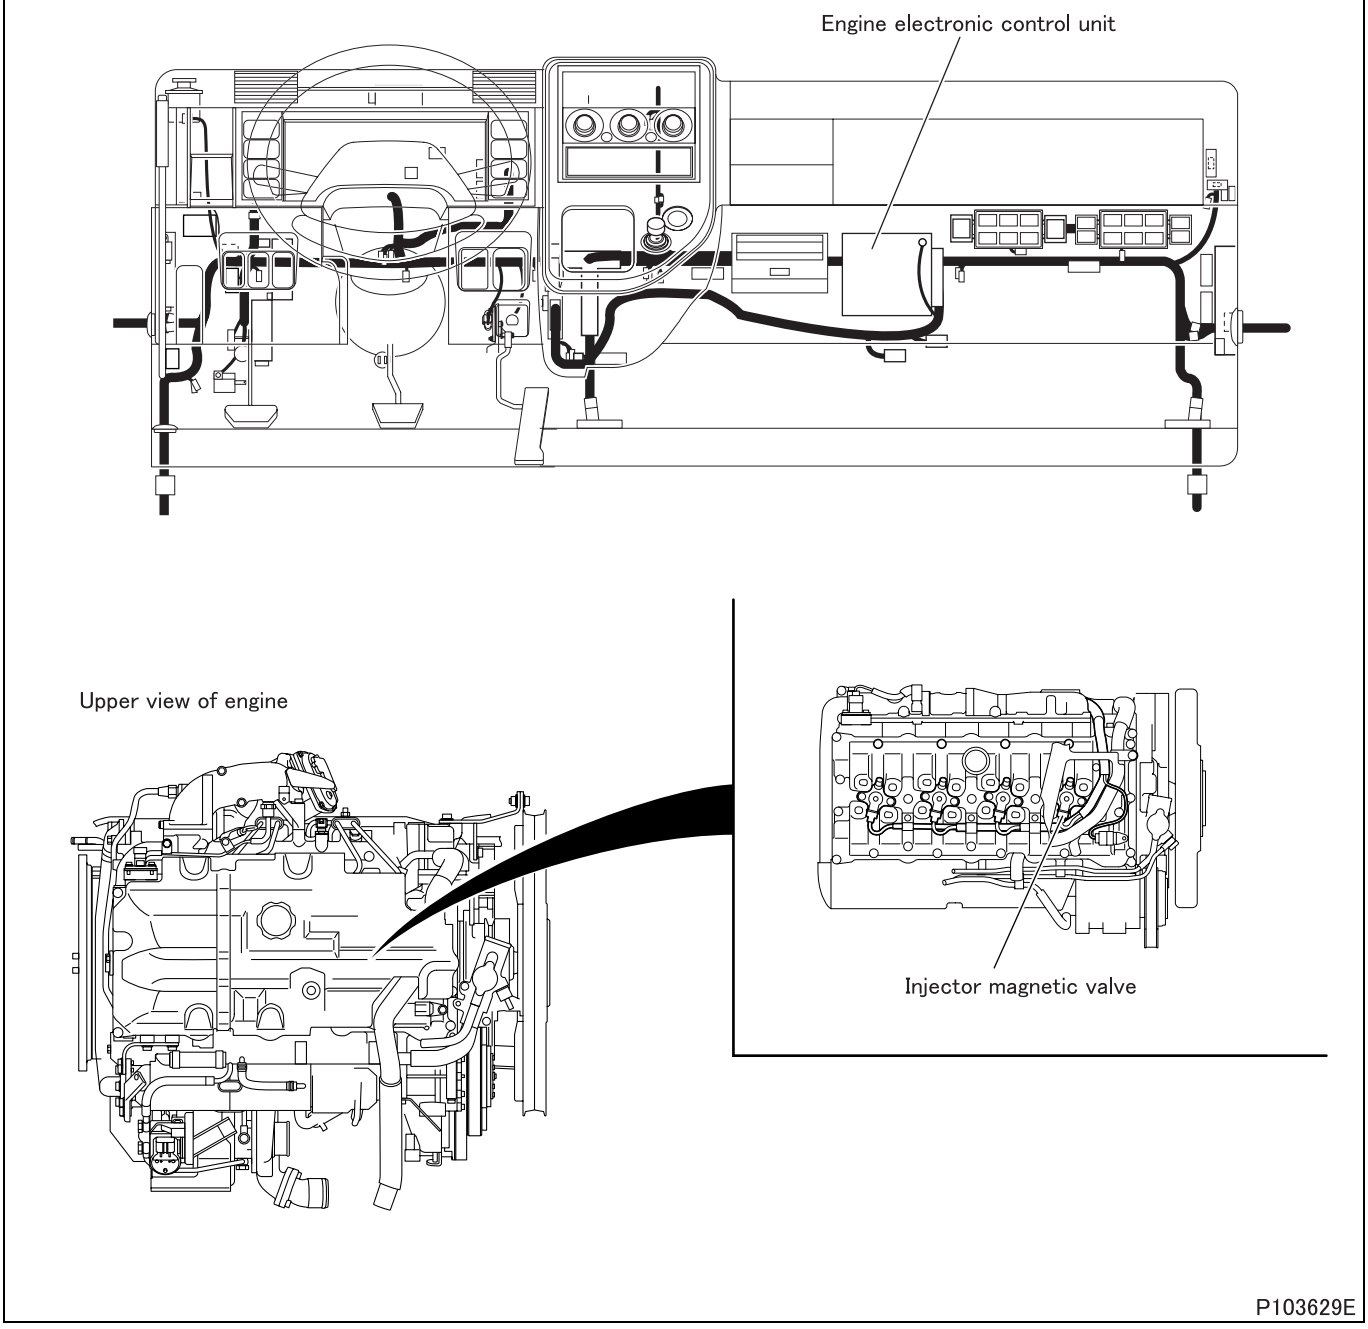
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Short-circuit: System recovers if any valid signal is input when starter switch is turned from OFF to ON (power on again of electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)
- Open-circuit: System recovers if any valid signal is input with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

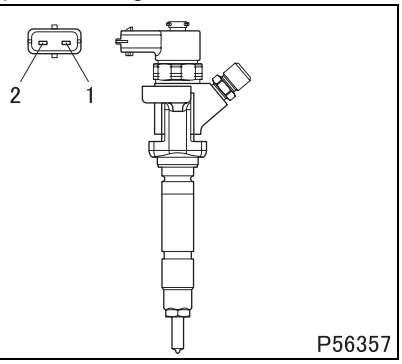
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 23 and 72.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 72.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 23.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0202/Flash code: 8
[Monitor]
Failure of injector magnetic valve (No. 2 cylinder)
[Fault (outline)]
Injector open circuit (No. 2 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 2 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 2 cylinder) circuit remains open as detected for 3 cycles.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

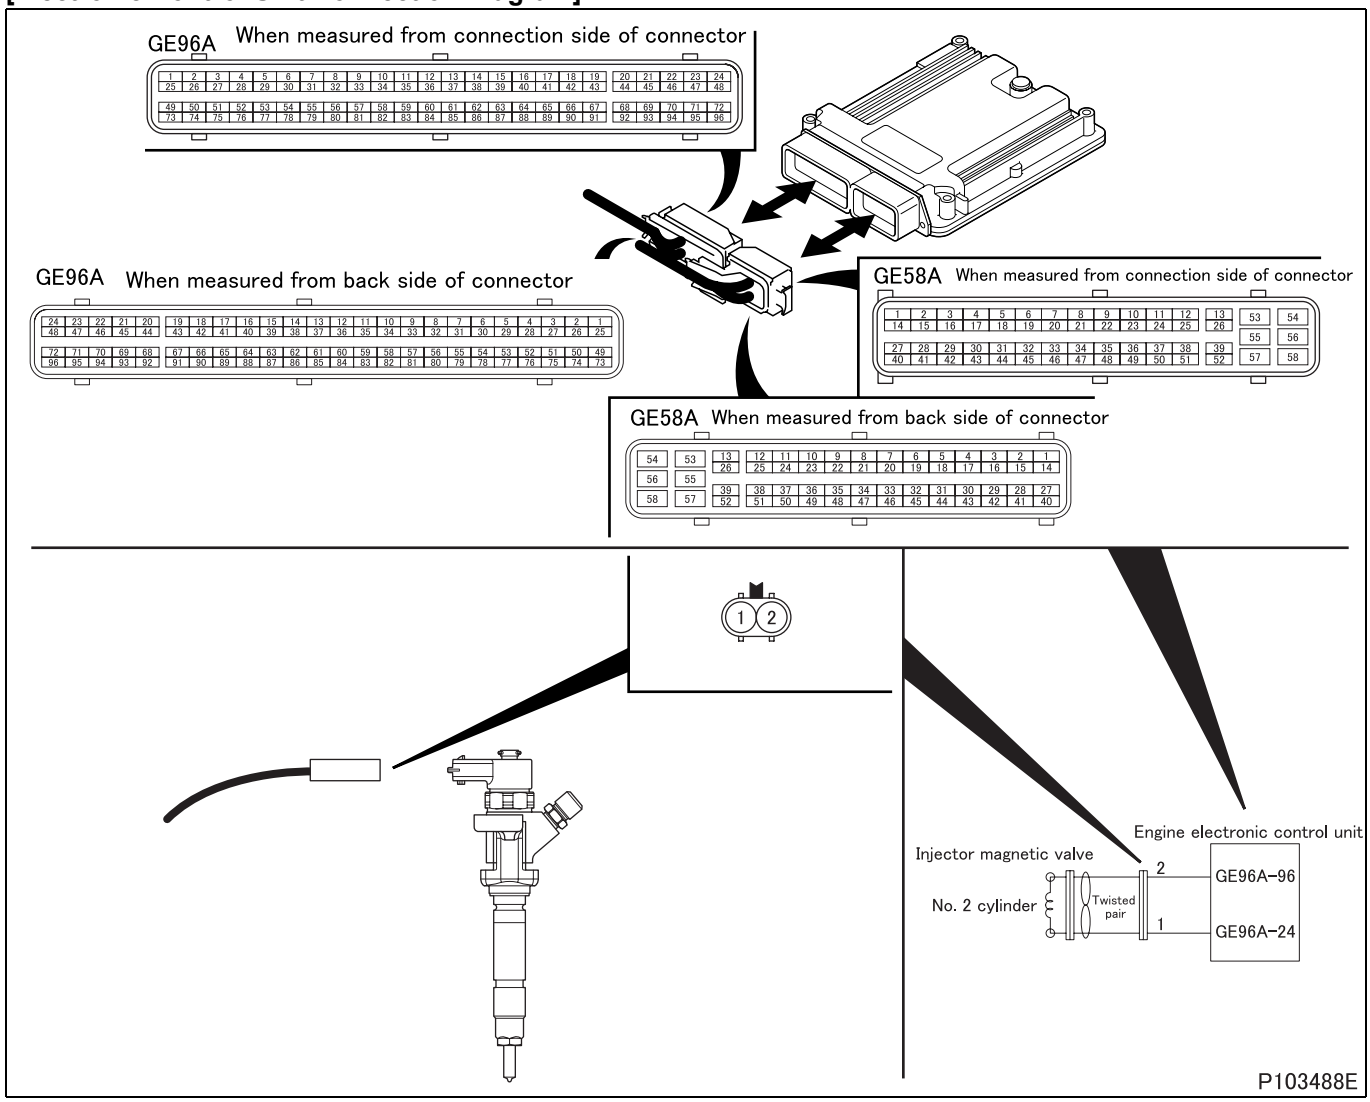
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Short-circuit>
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<Open-circuit>
- Injector magnetic valve (No. 2 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

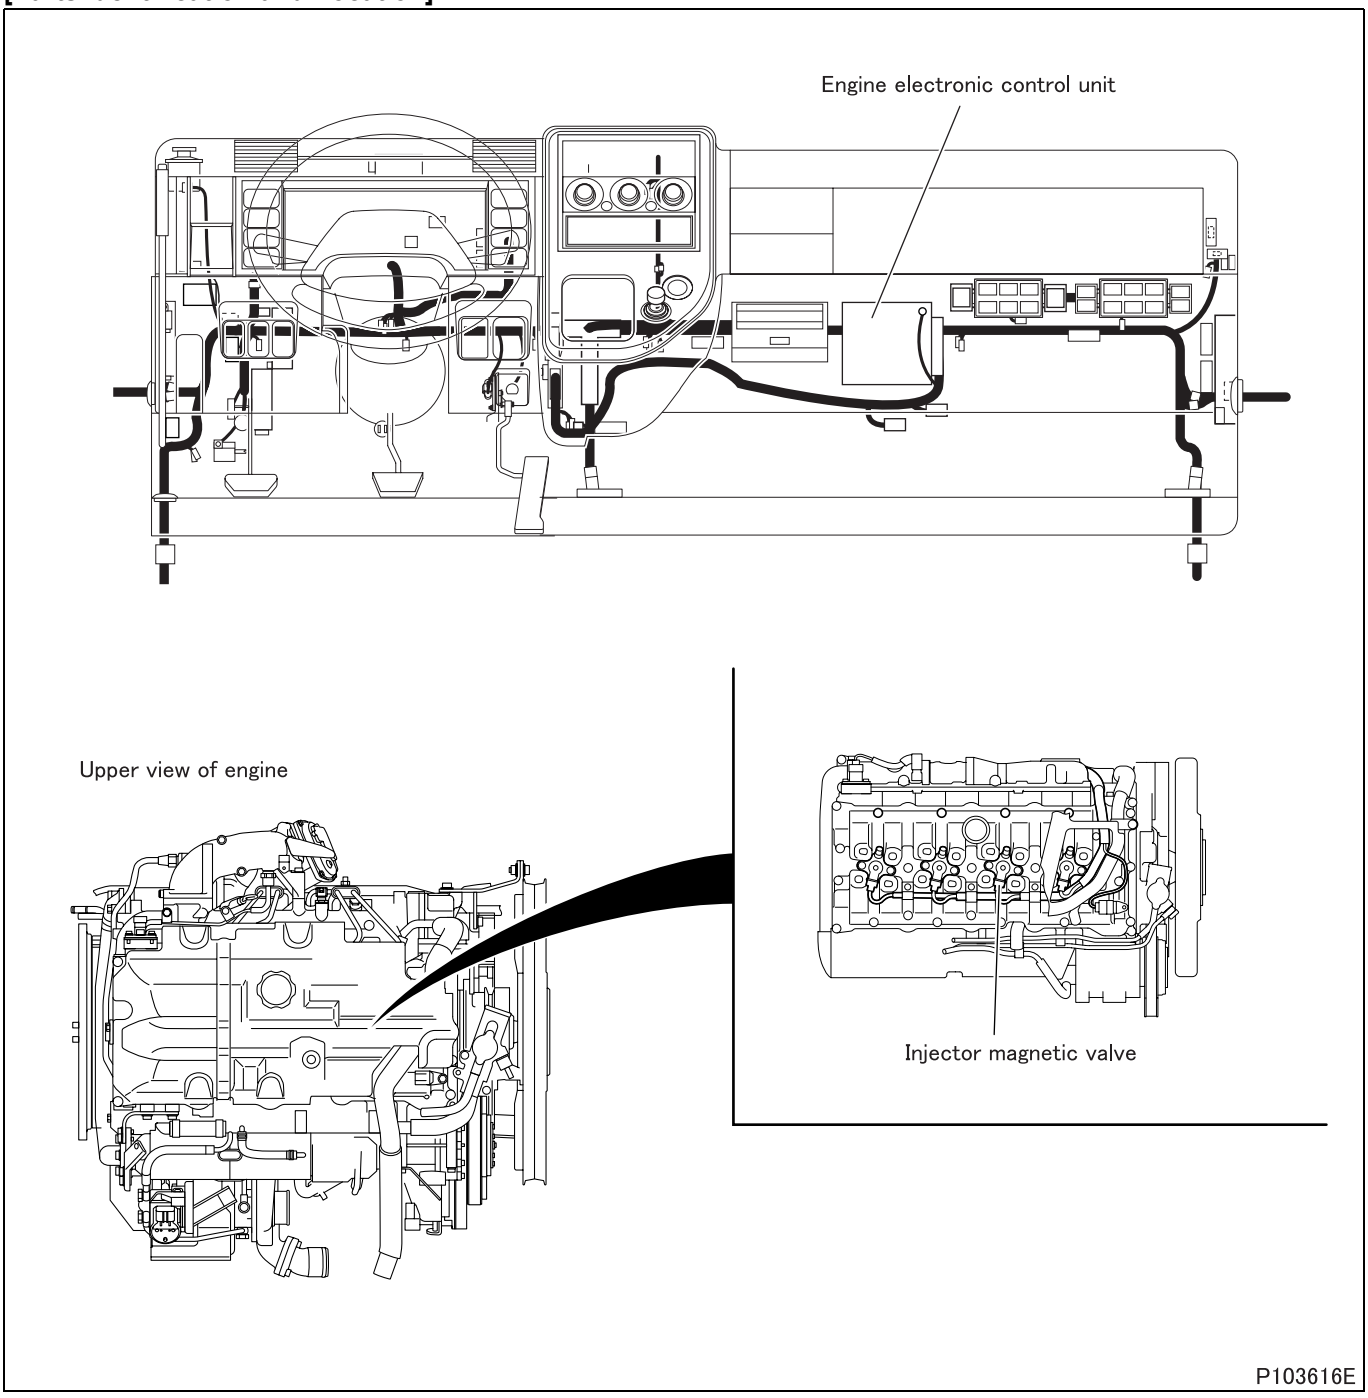
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Short-circuit: System recovers if any valid signal is input when starter switch is turned from OFF to ON (power on again of electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)
- Open-circuit: System recovers if any valid signal is input with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

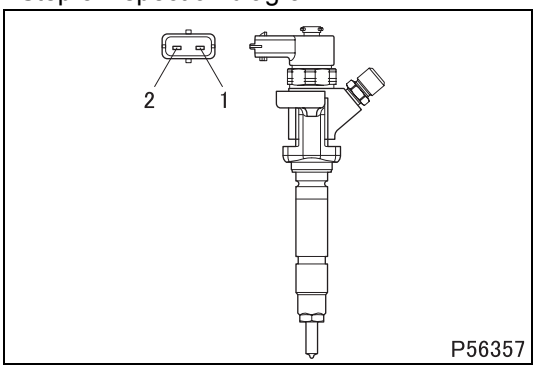
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 24 and 96.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 96.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 24.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0203/Flash code: 38
[Monitor]
Failure of injector magnetic valve (No. 3 cylinder)
[Fault (outline)]
Injector open circuit (No. 3 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 3 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 3 cylinder) circuit remains open as detected for 3 cycles.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

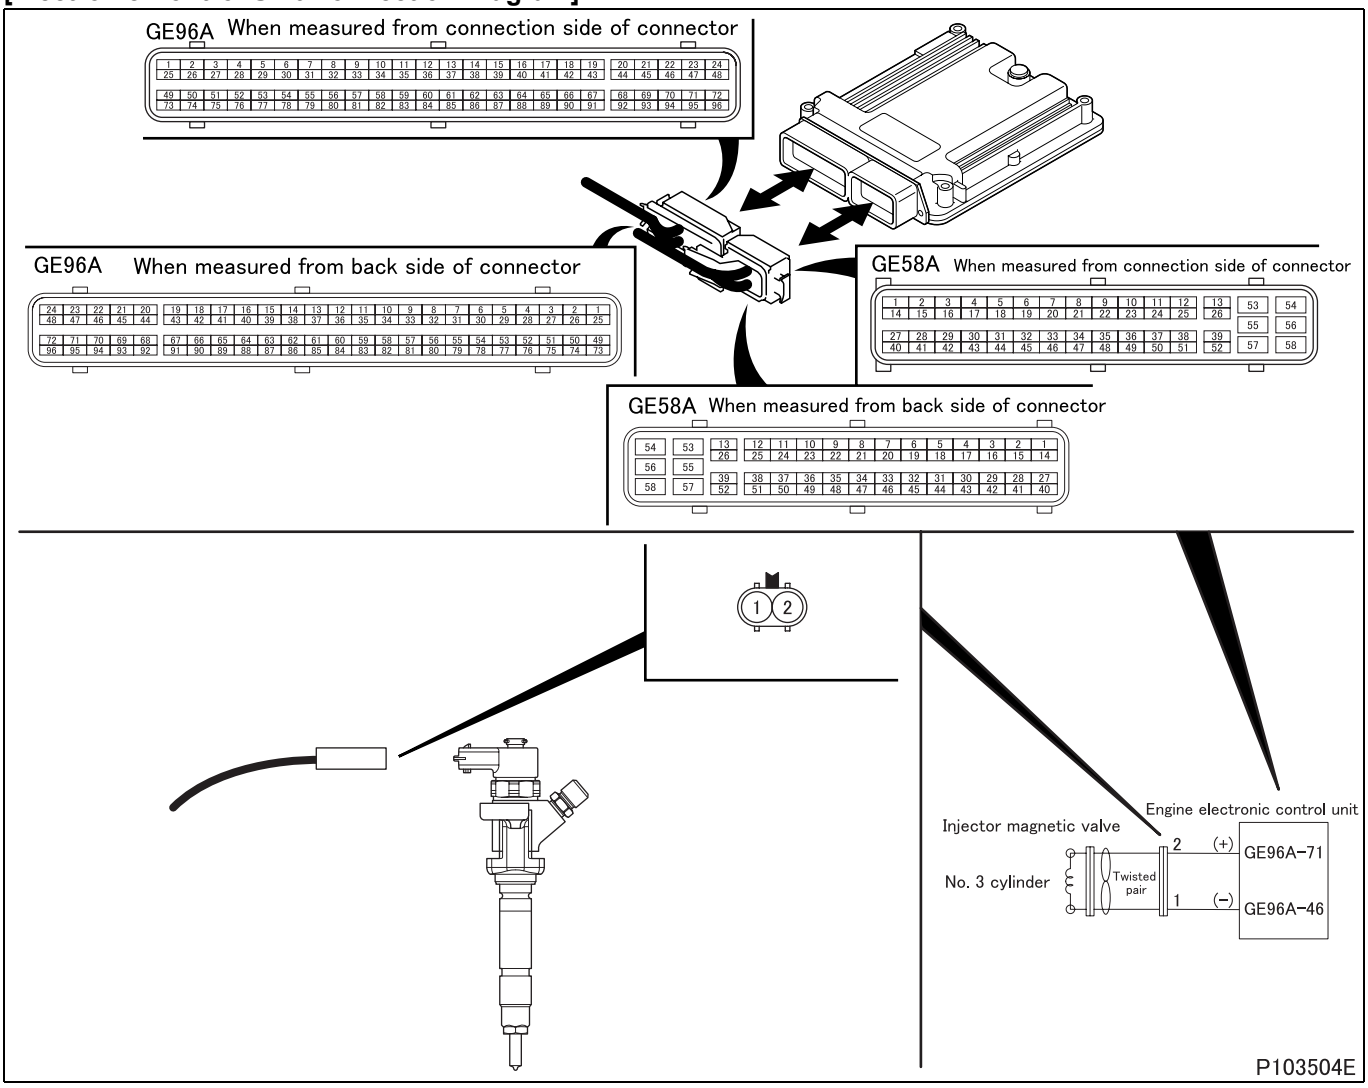
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Short-circuit>
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<Open-circuit>
- Injector magnetic valve (No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

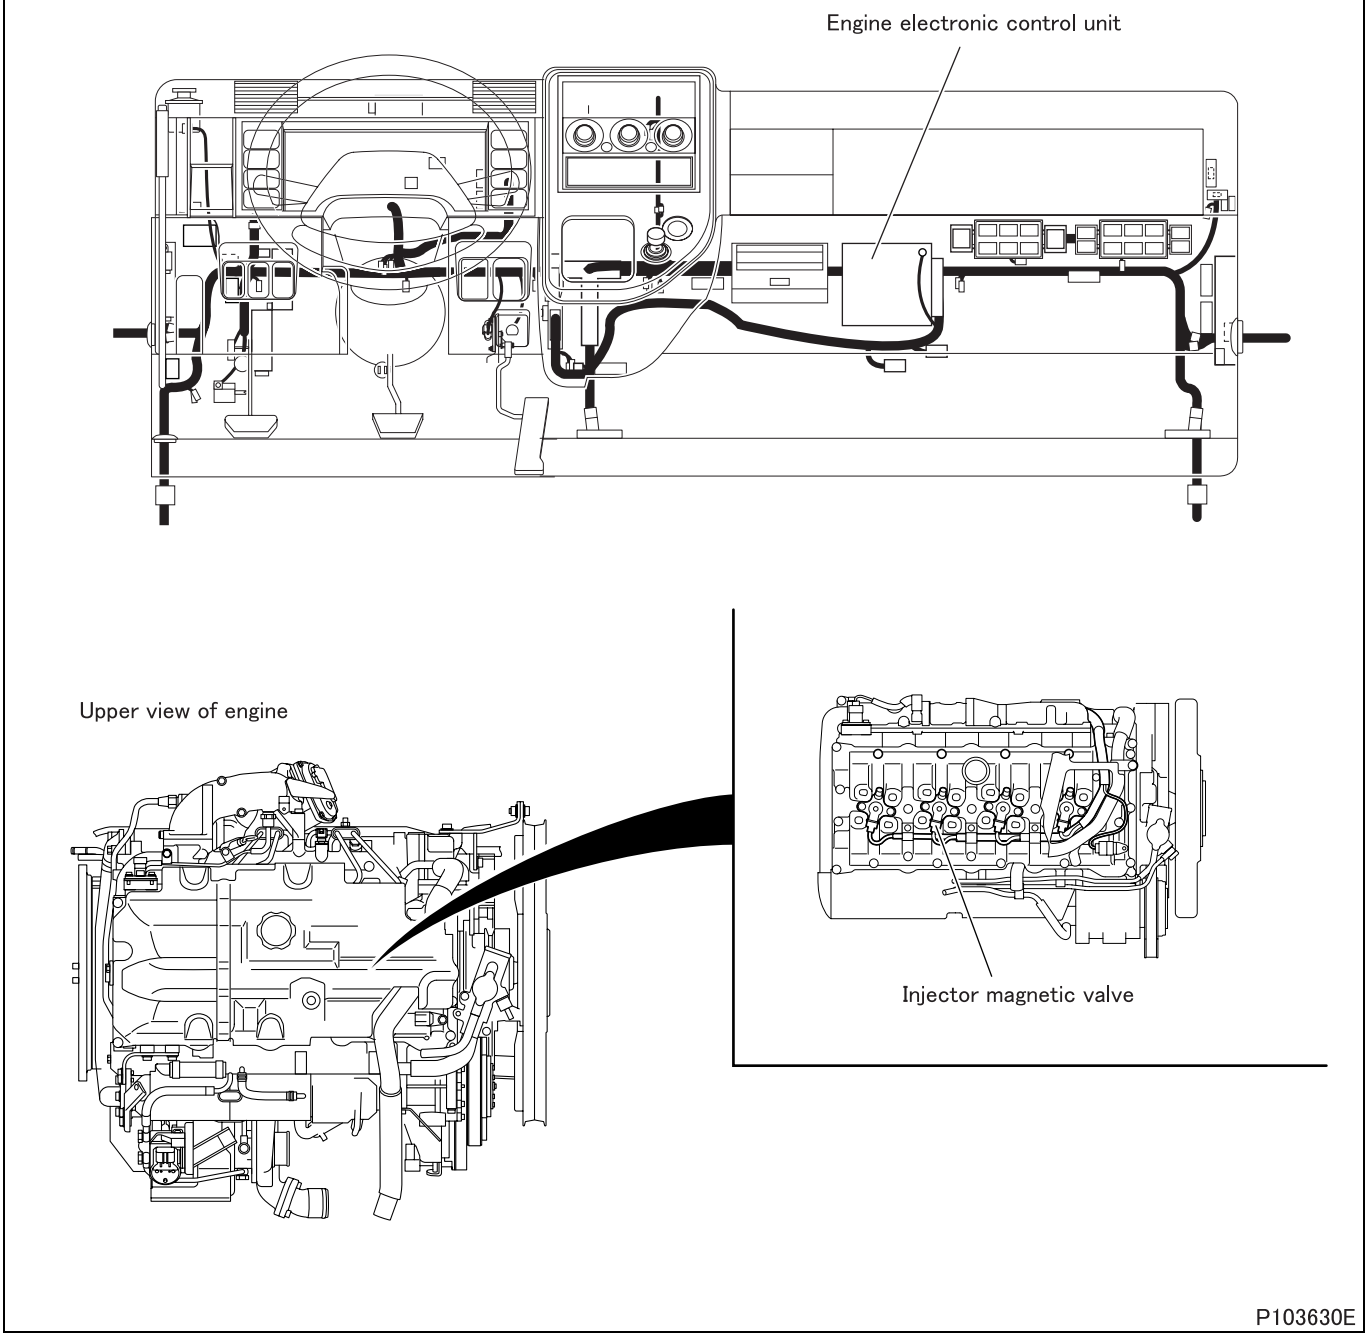
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Short-circuit: System recovers if any valid signal is input when starter switch is turned from OFF to ON (power on again of electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)
- Open-circuit: System recovers if any valid signal is input with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

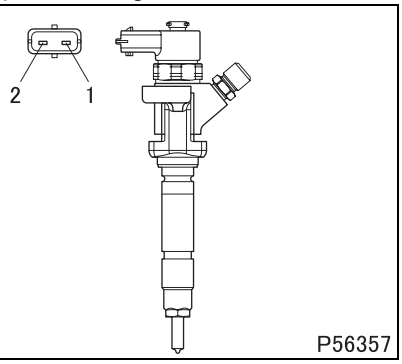
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 46 and 71.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 71.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 46.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0204/Flash code: 39
[Monitor]
Failure of injector magnetic valve (No. 4 cylinder)
[Fault (outline)]
Injector open circuit (No. 4 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 4 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 4 cylinder) circuit remains open as detected for 3 cycles.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

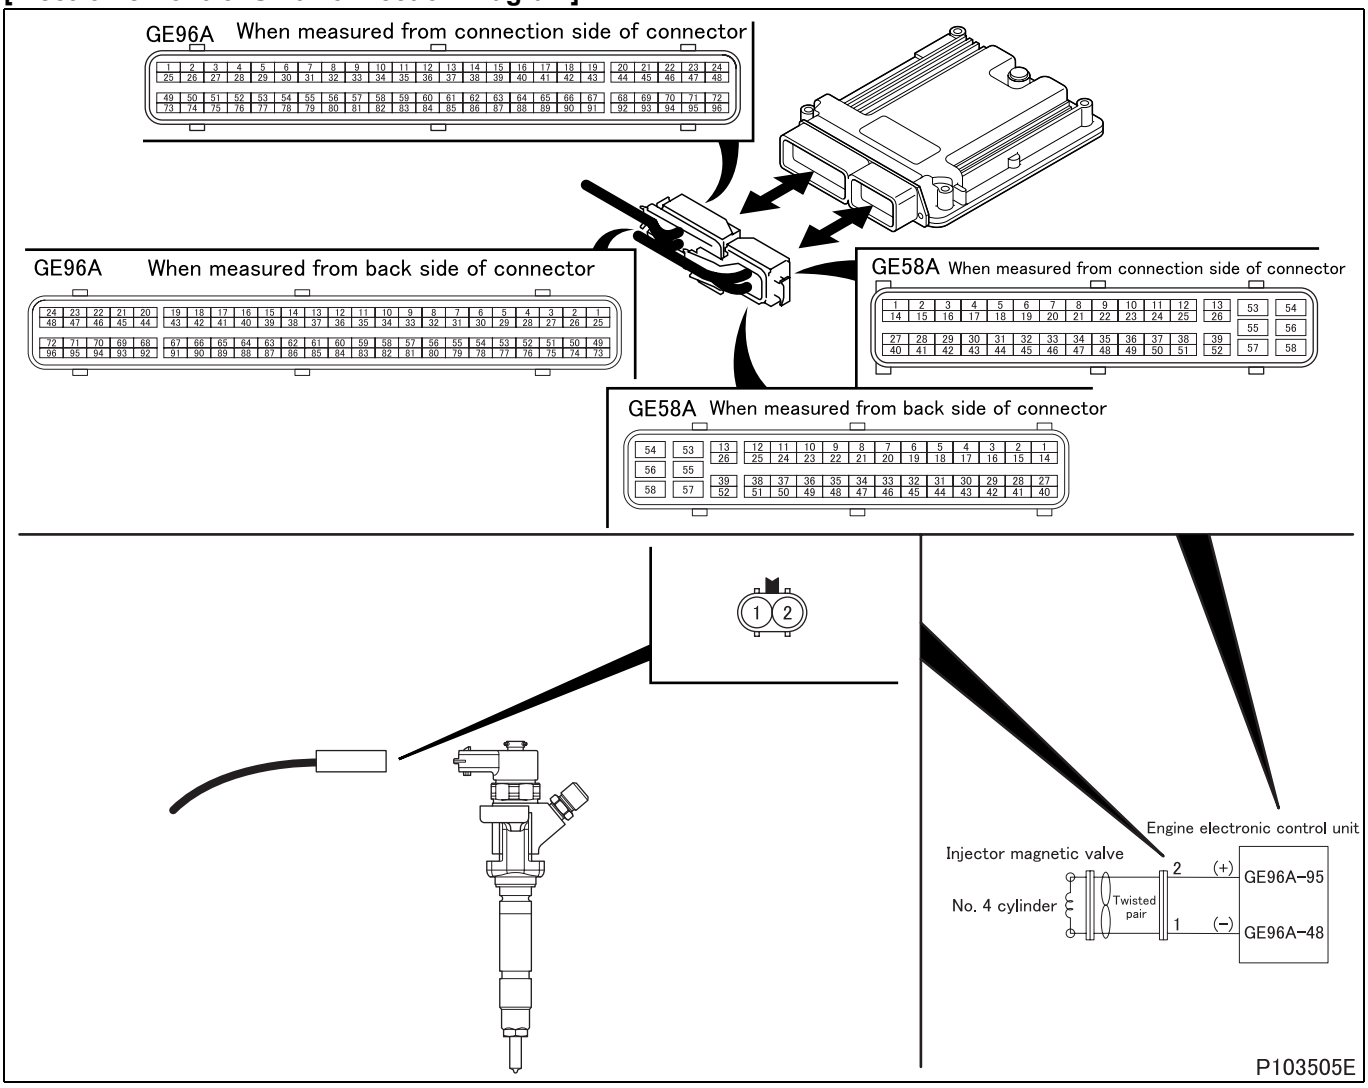
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Short-circuit>
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<Open-circuit>
- Injector magnetic valve (No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

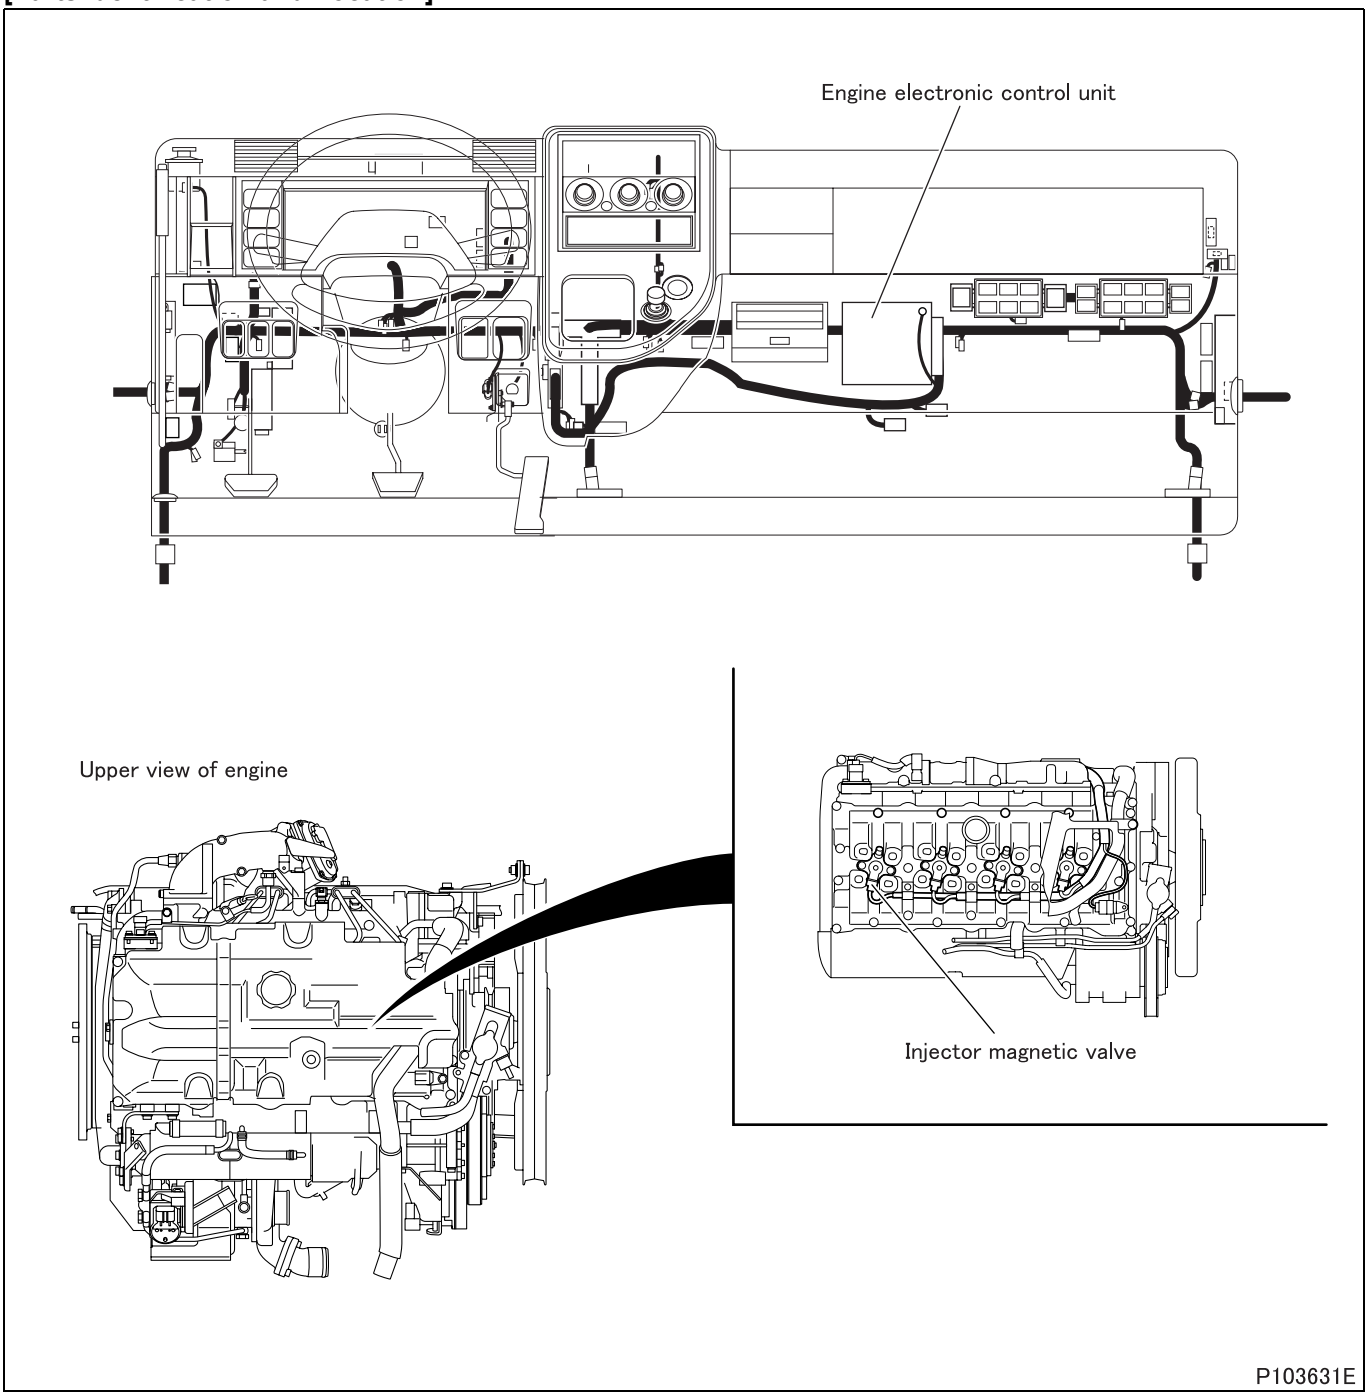
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Short-circuit: System recovers if any valid signal is input when starter switch is turned from OFF to ON (power on again of electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)
- Open-circuit: System recovers if any valid signal is input with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		• Perform actuator test item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

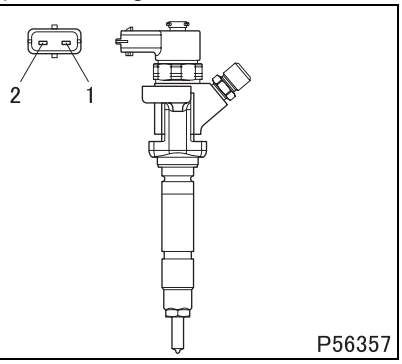
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 48 and 95.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 95.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 48.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0219/Flash code: 7
[Monitor]
Abnormality of engine speed
[Fault (outline)]
High signal range check
[Diagnosis check]
- Engine speed is monitored for abnormal increase.

[Code generation condition]
- Engine speed exceeds 3700 rpm.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Shifting mistake

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if this diagnosis code occurs except in red zone.
	Inspection condition		• Starter switch: ON • Engine start (condition except in red zone)
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	–

[Fault code]
Diagnosis code: P0222/Flash code: 16
[Monitor]
Failure of accelerator pedal position sensor 2
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Accelerator pedal position sensor is monitored for output within specification.

[Code generation condition]
- Voltage from accelerator pedal position sensor 2 remains below 0.5 V for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

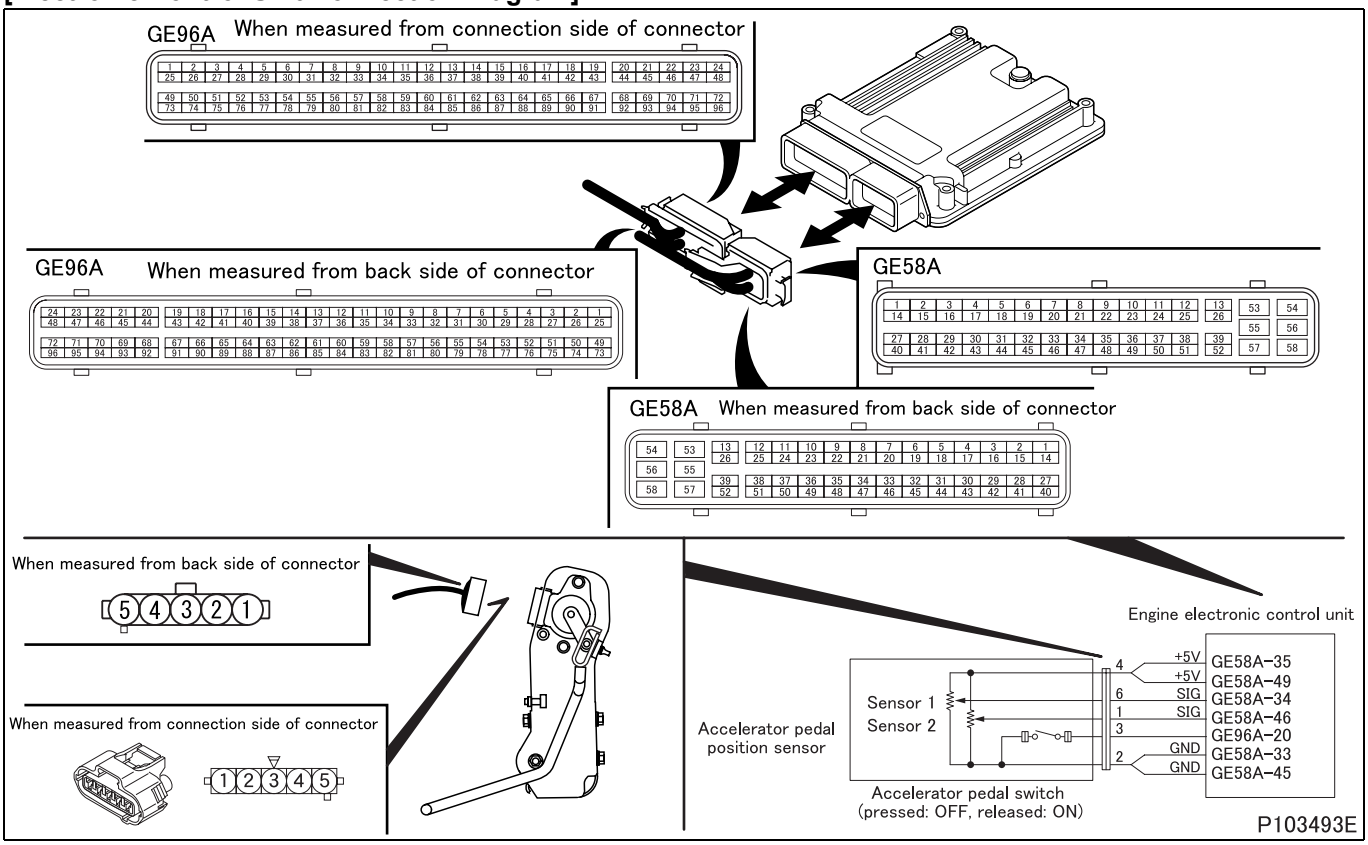
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Accelerator pedal position sensor 1 is computed with accelerator pedal position sensor 2 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

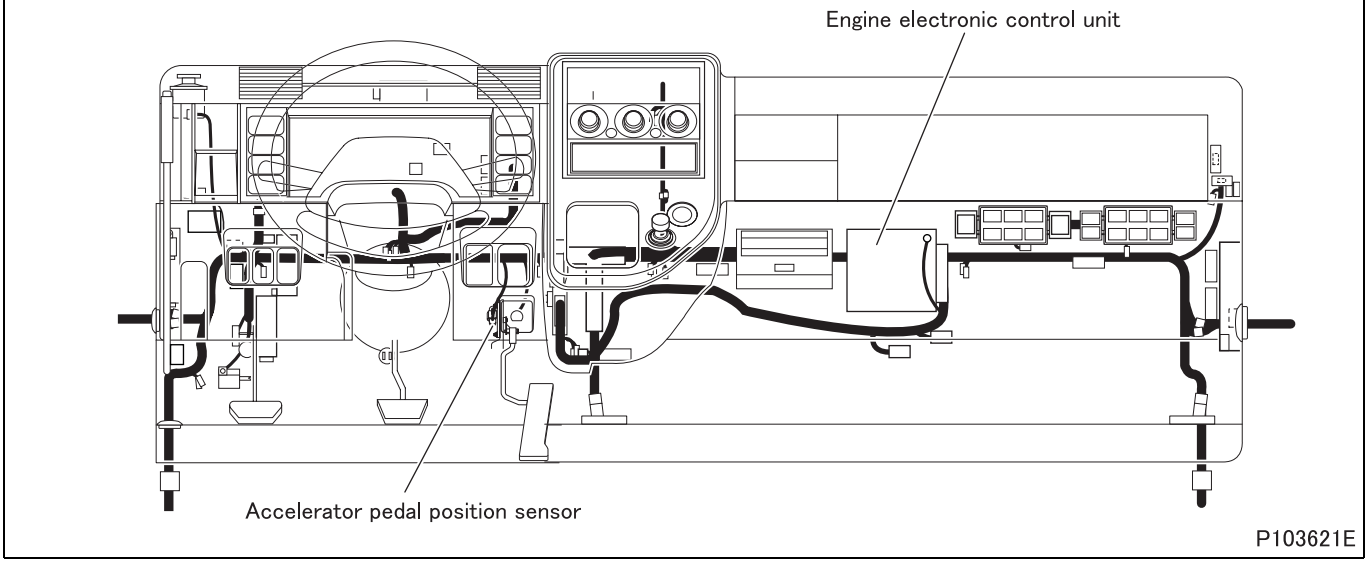
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 2”. **<Multi-Use Tester used>** • Measure item No. 41 “Accelerator sensor voltage 2” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 46 (+) and No. 45 and No. 33 (–).
	Inspection condition		• Starter switch: ON. • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		• Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 49 (+) and No. 45 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 45 (+) and No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

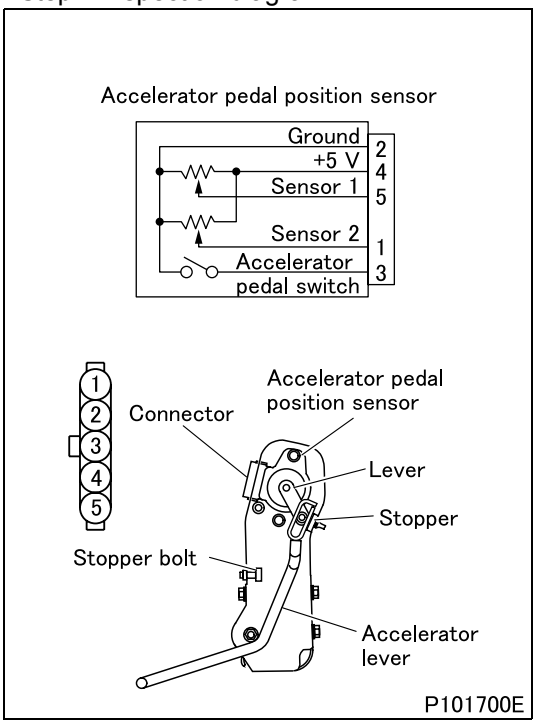
Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

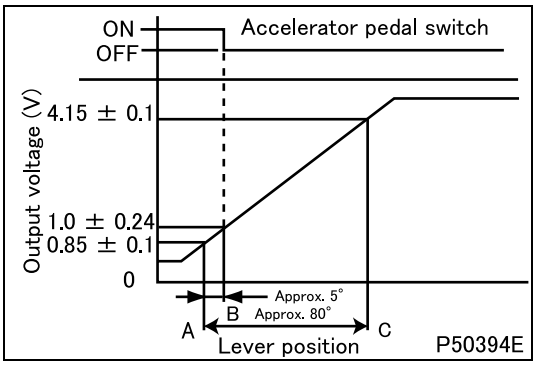
Step 7	Inspection items		Inspection of accelerator pedal position sensor 2 unit
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 2 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 4 (+) and 2 (–).

	Requirements		• Idle position A: 0.85 ± 0.1 V
			• Accelerator switch operating position B: 1.0 ± 0.24 V
			• Full load position C: 4.15 ± 0.1 V
			  • A: When accelerator lever is in contact with stopper
			  • B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3.
			  • C: When lever is in contact with full load stopper bolt

	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor (If the measurement deviates from the standard value after adjustment, replace the sensor.) (See “INSPECTION OF ELECTRICAL PARTS” – “INSPECTION OF ACCELERATOR PEDAL POSITION SENSOR”.)

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 49 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 45 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 46 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 2”. **<Multi-Use Tester used>** • Measure item No. 41 “Accelerator sensor voltage 2” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0223/Flash code: 16
[Monitor]
Failure of accelerator pedal position sensor 2
[Fault (outline)]
High signal range check
[Diagnosis check]
- Accelerator pedal position sensor is monitored for output within specification.

[Code generation condition]
- Voltage from accelerator pedal position sensor 2 remains over 4.7 V for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

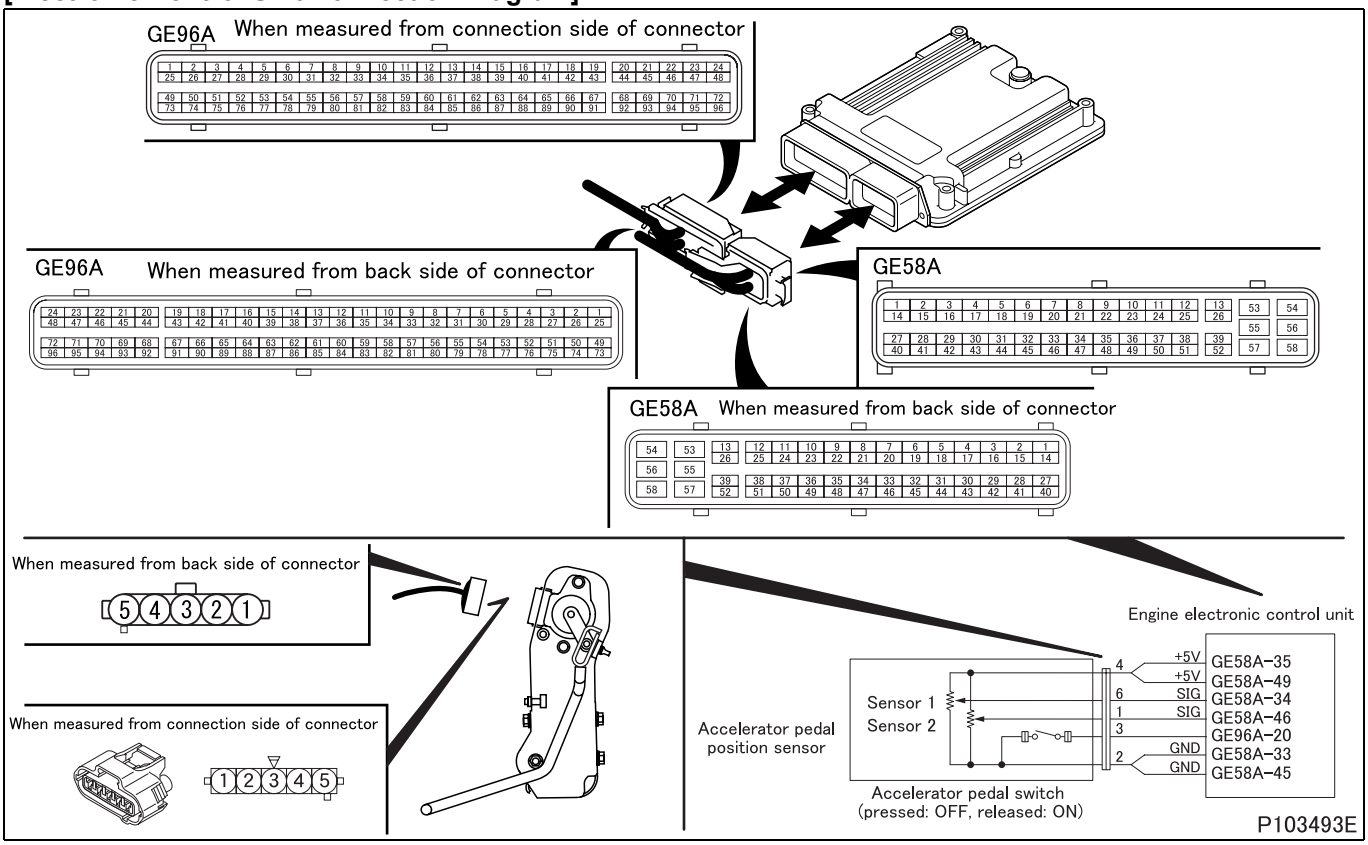
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Accelerator pedal position sensor 1 is computed with accelerator pedal position sensor 2 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

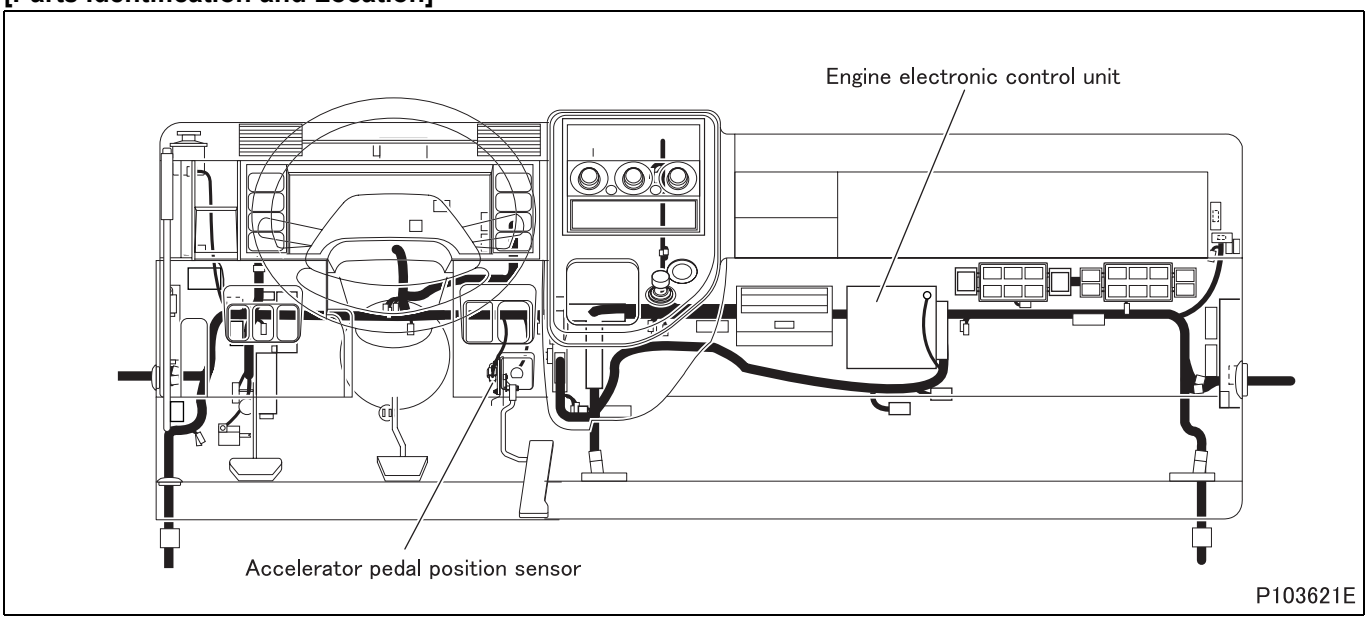
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 2”. **<Multi-Use Tester used>** • Measure item No. 41 “Accelerator sensor voltage 2” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 46 (+) and No. 45 and No. 33 (–).
	Inspection condition		• Starter switch: ON. • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		• Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 49 (+) and No. 45 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 45 (+) and No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Inspection of connector

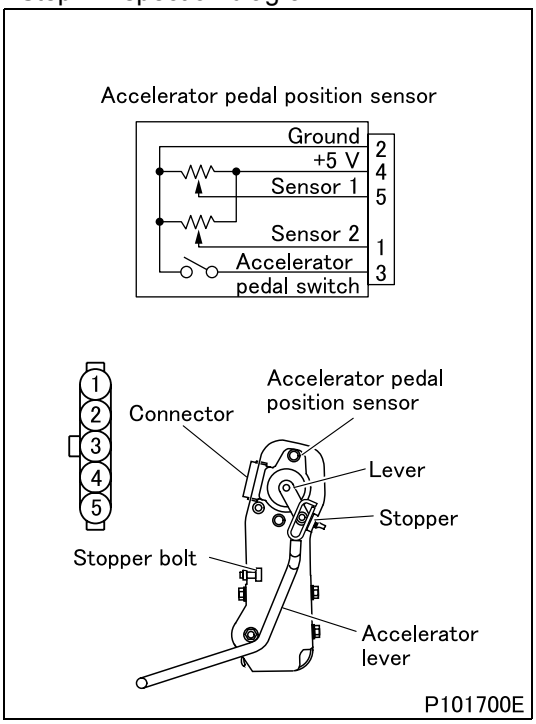
Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Inspection of connector

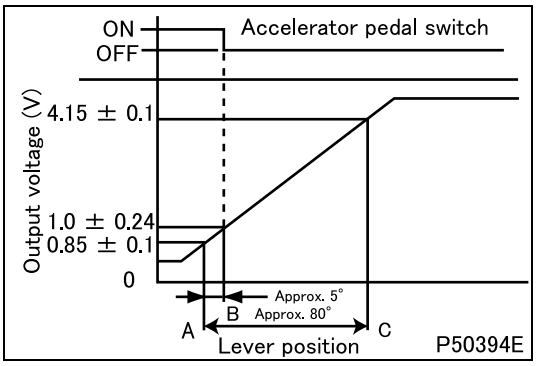
Step 7	Inspection items		Inspection of accelerator pedal position sensor 2 unit
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 2 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 4 (+) and 2 (–).

	Requirements		• Idle position A: 0.85 ± 0.1 V
			• Accelerator switch operating position B: 1.0 ± 0.24 V
			• Full load position C: 4.15 ± 0.1 V
			  • A: When accelerator lever is in contact with stopper
			  • B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3.
			  • C: When lever is in contact with full load stopper bolt

	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor (If the measurement deviates from the standard value after adjustment, replace the sensor.) (See “INSPECTION OF ELECTRICAL PARTS” – “INSPECTION OF ACCELERATOR PEDAL POSITION SENSOR”.)

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Starter switch: ON • Engine is stopped. • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 49 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 45 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 46 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Accelerator Pedal Position 2”. **<Multi-Use Tester used>** • Measure item No. 41 “Accelerator sensor voltage 2” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal not pressed: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal not pressed: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0226/Flash code: 28
[Monitor]
Failure of intake throttle
[Fault (outline)]
- Signal range check
- Ref voltage

[Diagnosis check]
- Throttle electronic drive unit monitors intake throttle internal circuit for fault (through throttle position sensor).

[Code generation condition]
- Diagnosis code is generated under either of the following conditions.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
- Position sensor output voltage remains out of specification (open: above 4.7 V, close: below 0.2 V) for 1 second.
- Position sensor power voltage remains below 4.1 V for 1 second.

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

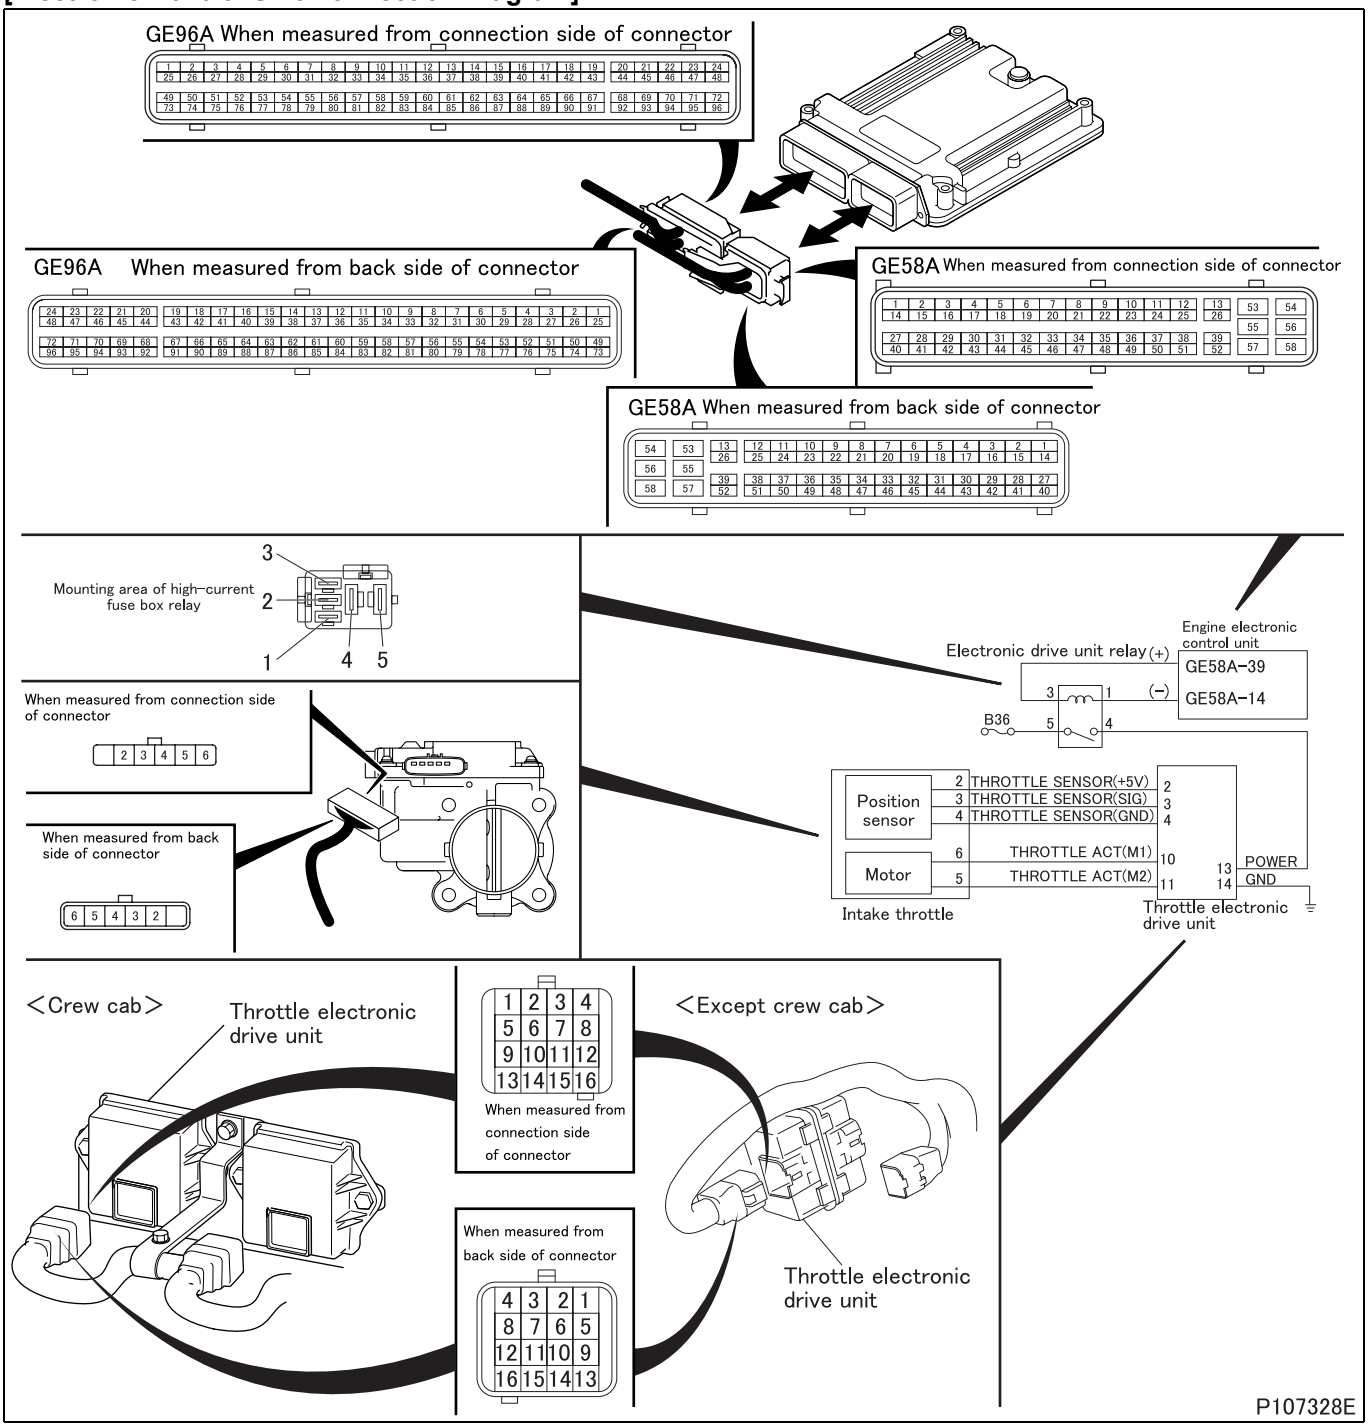
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Intake throttle actuator test is inhibited.
- Related fault check is stopped.

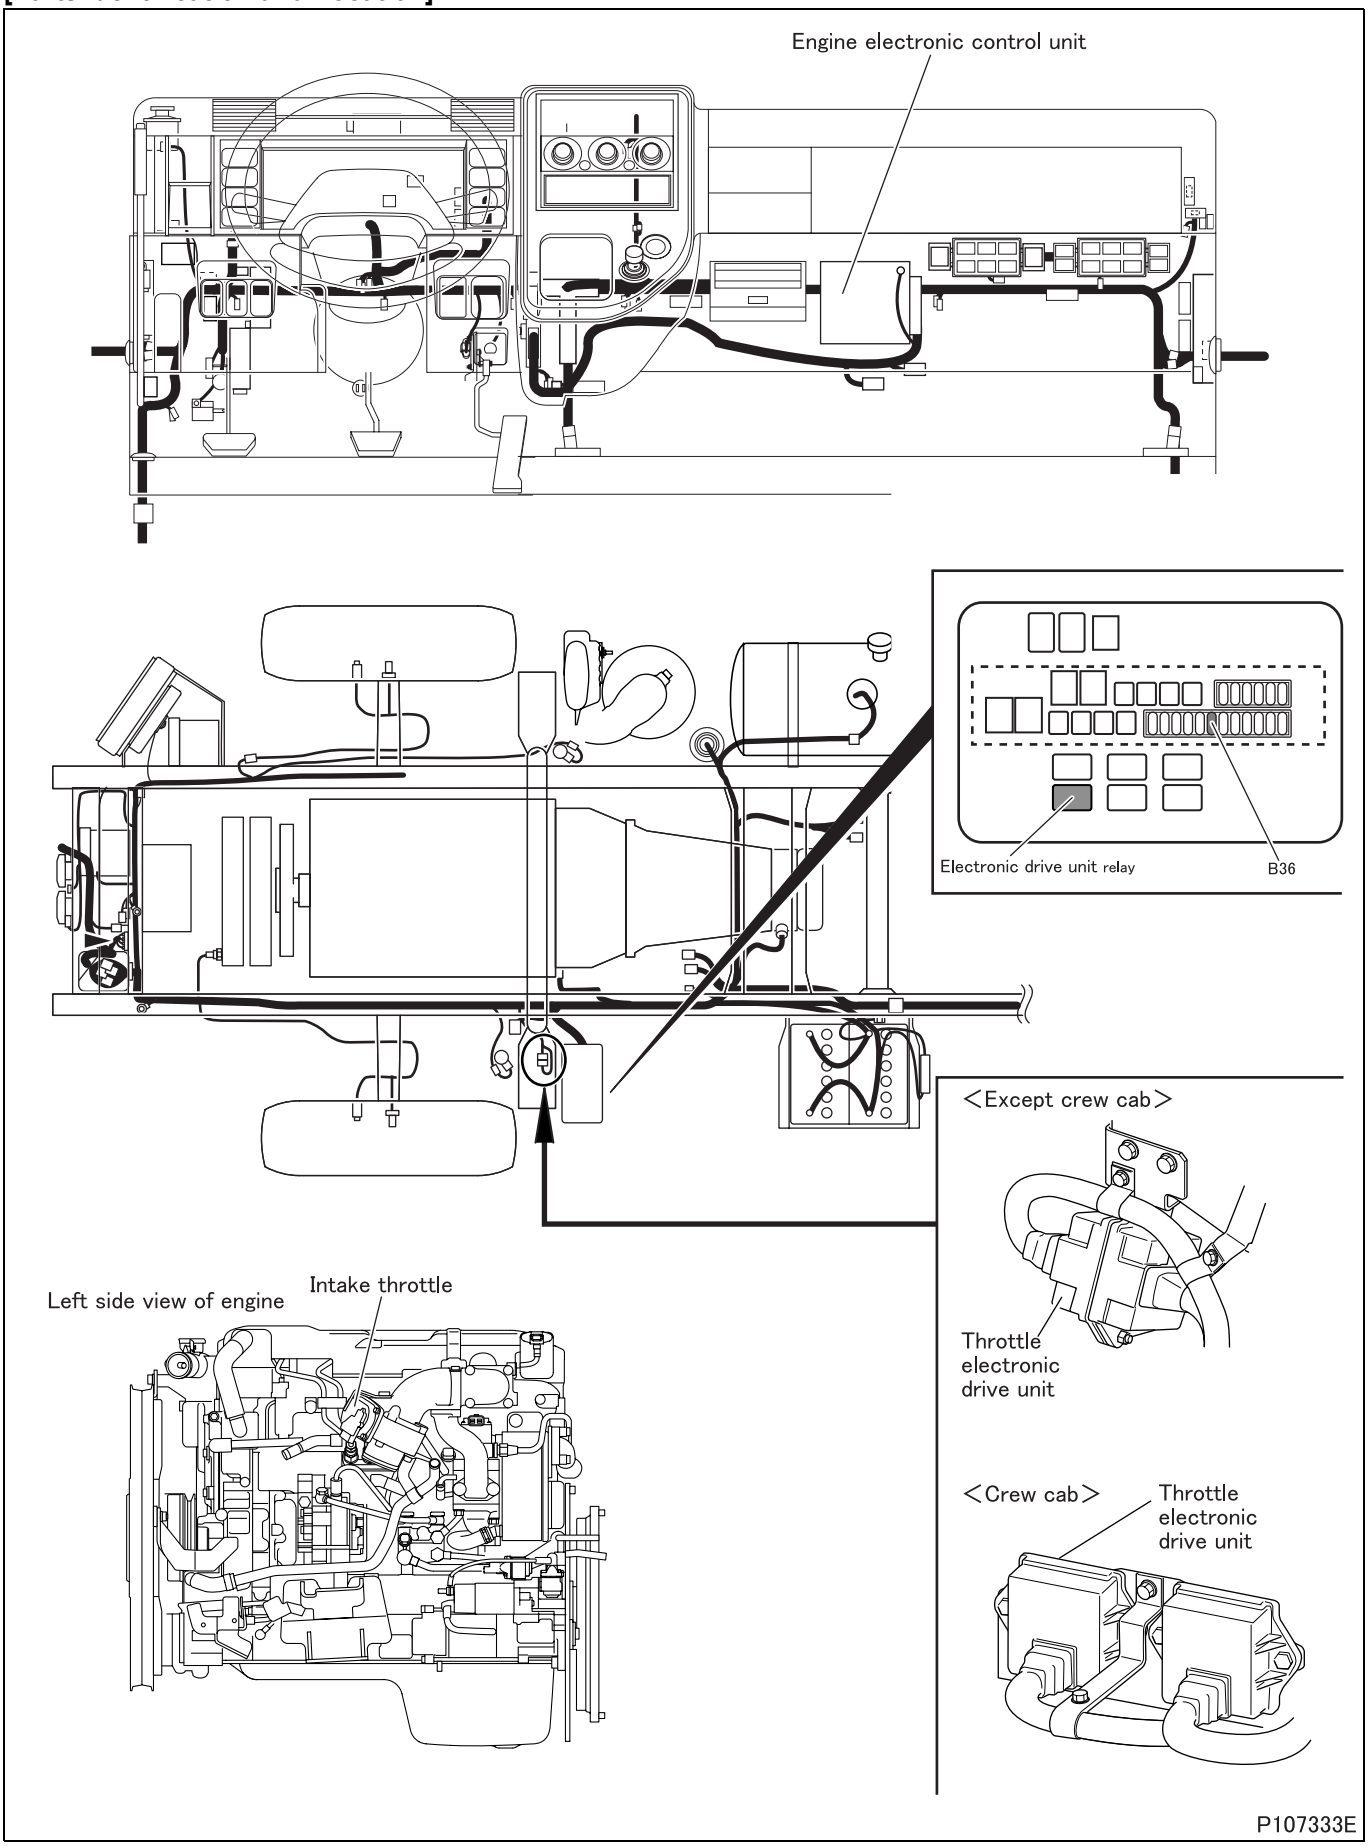
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and throttle actuator
- Malfunction of each connector
- Malfunction of throttle motor (built in throttle actuator)
- Malfunction of throttle position sensor (built in throttle actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “53: Actual Intake Throttle Position”)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of throttle actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connecter terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of relay, go to step 9.
		NO	Modify harness.

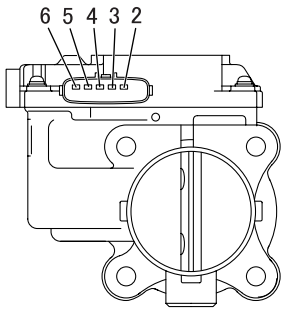
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 10 and 11.
	Inspection condition		Remove connector and measure from harness side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (1) : electronic drive unit connector terminal No. 10 - throttle actuator connector terminal No. 6 • Motor (2) : electronic drive unit connector terminal No. 11 - throttle actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle actuator unit (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 5 and 6.
	Inspection condition		• Keep throttle actuator installed on vehicle. • Remove connector, and measure throttle actuator side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of throttle actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of throttle actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 4 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 4 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A3 “Intake Throttle 1”
	Requirements		• Valve fully closed: 0.5 V • Valve fully opened: 4.375 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.back side

Step 15	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 2 - throttle actuator connector terminal No. 2 • Sensor (signal): electronic drive unit connector terminal No. 3 - throttle actuator connector terminal No. 3 • Sensor (ground): electronic drive unit connector terminal No. 4 - throttle actuator connector terminal No. 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of throttle actuator, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “53: Actual Intake Throttle Position”)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0234/Flash code: 32, 54
[Monitor]
Overboost
[Fault (outline)]
Overboost
[Diagnosis check]
Either of the following is monitored.
<Condition (1)>
- Actual boost pressure is detected by boost pressure sensor and compared with standard pressure recorded in engine electronic control unit.

<Condition (2), (3)>
- Actual boost pressure is detected by boost pressure sensor and compared with permissible pressure recorded in engine electronic control unit (engine protection).

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Difference between target boost pressure and actual boost pressure remains more than specified for 10 seconds (overboost status). (Warning lamp (orange) is lit and diagnosis code is displayed on third establishment of code generation condition.)

<Condition (2)>
- The remaining of actual boost pressure higher than permissible pressure recorded in engine electronic control unit for 10 seconds is repeated five times (pre-diagnosis). (Diagnosis code is displayed on first establishment of code generation condition.)

<Condition (3)>
- Status of condition (2) remaining for another 10 seconds is repeated 5 times (final diagnosis). (Warning lamp (red) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 60°C {19 to 140°F}
- Engine speed: 600 to 3000 rpm
- Variation in engine speed: less than 300 rpm/s
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust shutter: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order

[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Overboost>
- Engine torque is limited.
- Turbocharger is controlled to open side.

<Deviation in boost pressure>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

[Probable cause of trouble]
- Boost pressure incorrectly adjusted
- Mechanical failure of turbocharger unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

<Condition (2)>
- Diagnosis code is cleared simultaneously with recovery.

<Condition (3)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Acutuator (Open)” • P0046 “VGT Acutuator (Performance)” • P0047 “VGT Acutuator (Low)” • P0069 “Boost Press SNSR (Correlation)” • P0236 “Boost Press SNSR (Plausi)” • P0237 “Boost Press SNSR (Low)” • P0238 “Boost Press SNSR (High)” • P0401 “EGR Flow (Insufficient)” • P0402 “EGR Flow (Excessive)” • P0403 “EGR1 (Acutuator Circuit)” • P0404 “EGR System” • P0409 “EGR1 (Position Sensor)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0600 “CAN Communication” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P2002 “DPF MFF” • P2228 “Atm Press SNSR (Low)” • P2229 “Atm Press SNSR (High)” • P2263 “VGT System” • P2413 “EGR System” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF” • P2457 “EGR Cooler Performance”
	Inspection condition		Starter switch: ON Do not start engine.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Check of exhaust system
	Maintenance item		Front pipe, diesel particulate filter, tail pipe
	Inspection condition		Starter switch: OFF
	Requirements		Blocked
	Inspection result (Is the judging standard satisfied?)	YES	Clean or replace parts.
		NO	Go to step 3.

Step 3	Inspection items		Check of turbocharger appearance
	Maintenance item		Appearance of turbocharger
	Inspection condition		Starter switch: OFF
	Requirements		Air cylinder binds.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of turbocharger
		NO	Go to step 4.

Step 4	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		For boost pressure measurement and correction data calculation, see Gr15.
	Requirements		Boost pressure is normal.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of turbocharger

[Fault code]
Diagnosis code: P0236/Flash code: 32
[Monitor]
Characteristic abnormality of boost pressure sensor
[Fault (outline)]
- Offset and gain drift (High)
- Offset and gain drift (Low)

[Diagnosis check]
Boost pressure is monitored with engine in the following conditions.
<Low speed operation>
- Engine speed: 800 rpm
- Intake throttle opening: 14% or more

<High speed operation>
- Engine speed: 2100 rpm
- Intake throttle opening: 60% or more
- Turbocharger opening: 50% or more

[Code generation condition]
<Low speed operation>
- Boost pressure: Remains at 1125 mbar {16.31 psi} or higher for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

<High speed operation>
- Boost pressure: Remains at 1300 mbar {18.85 psi} or lower for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<High speed operation>
- Engine operating mode: normal (engine in operation)
- Engine speed: less than 800 rpm
- Fuel injection quantity: below 25 mg/cyc
- Intake throttle valve opening: more than 14%
- Air flow sensor: in order
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Atmospheric pressure sensor: normal in output signal
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Exhaust gas recirculation cooler: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order
- Exhaust shutter 3-way magnetic valve: in order

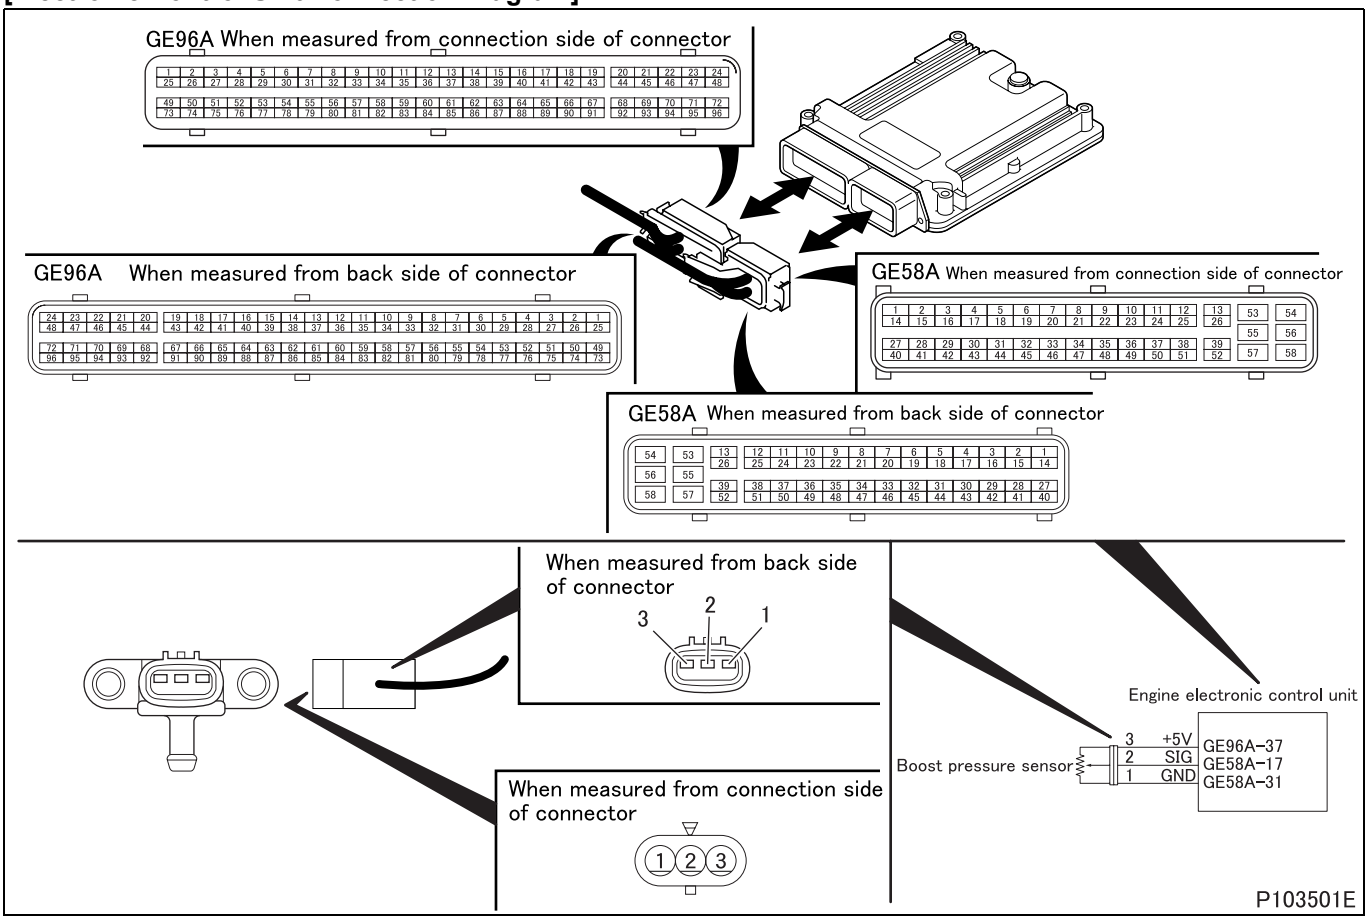
<Low speed operation>
- Engine operating mode: normal (engine in operation)
- Engine speed: more than 2100 rpm
- Fuel injection quantity: above 67 mg/cyc
- Intake throttle valve opening: more than 60%
- Turbocharger position: more than 40%
- Air flow sensor: in order
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: normal in output signal
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Exhaust gas recirculation cooler: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order
- Exhaust shutter 3-way magnetic valve: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

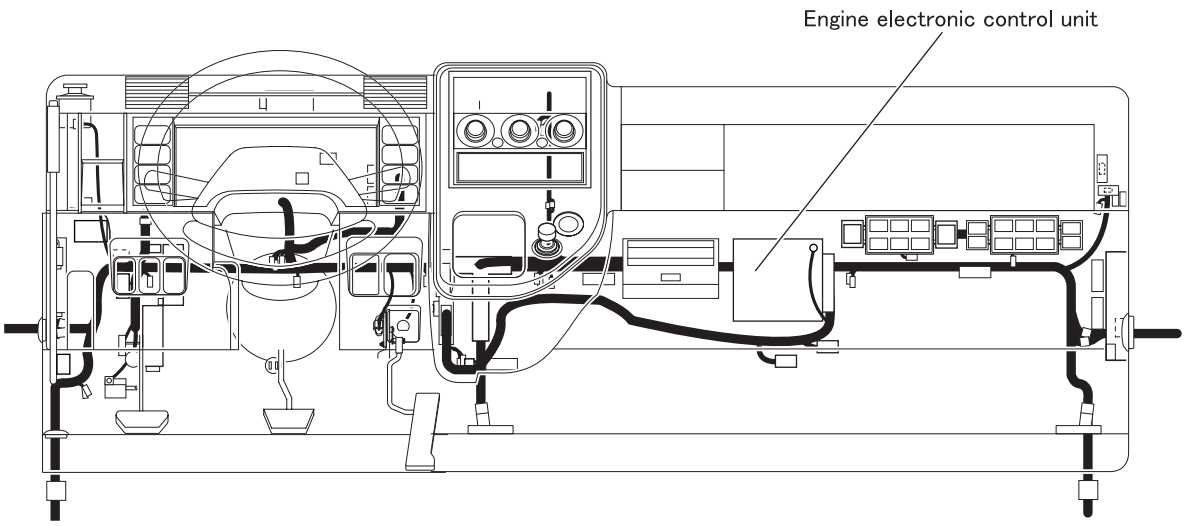
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

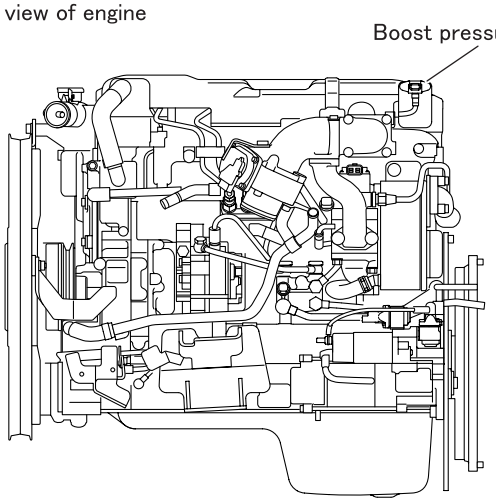
[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



Left side view of engine



P103628E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 34 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Engine started
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 37 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

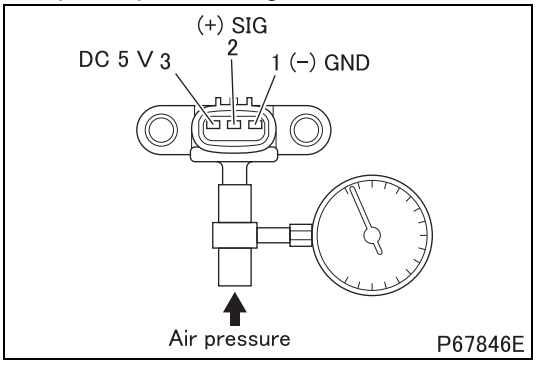
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 14 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure voltage developing across connector terminal No. 2 (+) and 1 (–) when air pressure (gauge pressure) is gradually applied.
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–).
	Requirements		• 99 kPa {14 psi, 1.0 kgf/cm^2}: Approx. 2.5 V • 232.3 kPa {34 psi, 2.4 kgf/cm^2}: Approx. 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 37.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 14.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 34.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0237/Flash code: 32
[Monitor]
Failure of boost pressure sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Boost sensor output voltage is monitored.

[Code generation condition]
- Boost sensor output voltage remains below 0.098 V for 1 second. (sensor pressure: 400 mbar {5.8 psi} or less)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
- Fault diagnosis starts when one of the following requirements are met (The diagnosis does not start when both requirements are simultaneously met.).
  - Engine speed: less than 500 rpm
  - Fuel injection quantity: below 5 mg/cyc

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Particulate matter deposit computation is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 34 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Engine started
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 37 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

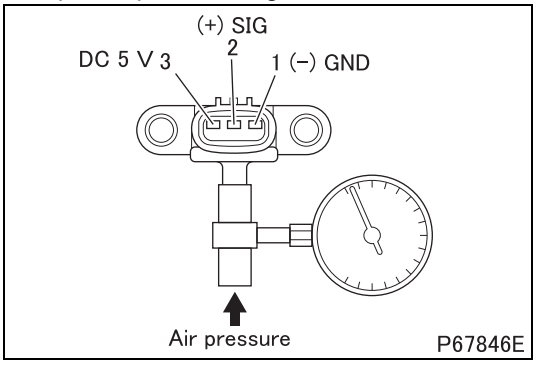
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 14 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure voltage developing across connector terminal No. 2 (+) and 1 (–) when air pressure (gauge pressure) is gradually applied.
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–).
	Requirements		• 99 kPa {14 psi, 1.0 kgf/cm^2}: Approx. 2.5 V • 232.3 kPa {34 psi, 2.4 kgf/cm^2}: Approx. 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 37.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 14.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 34.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0238/Flash code: 32
[Monitor]
Failure of boost pressure sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Boost sensor output voltage is monitored.

[Code generation condition]
- Boost sensor output voltage remains over 4.87 V for 1 second. (sensor pressure: 3533 mbar {51.23 psi} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Particulate matter deposit computation is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 34 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Engine started
	Requirements		0.5 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 37 (+) and 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

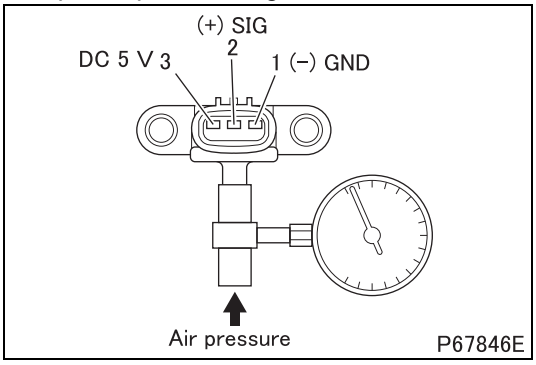
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 14 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure voltage developing across connector terminal No. 2 (+) and 1 (–) when air pressure (gauge pressure) is gradually applied.
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–).
	Requirements		• 99 kPa {14 psi, 1.0 kgf/cm^2}: Approx. 2.5 V • 232.3 kPa {34 psi, 2.4 kgf/cm^2}: Approx. 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 37.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 14.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 34.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		Starter switch ON (engine stationary) → After engine has started, press accelerator pedal.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0251/Flash code: 36
[Monitor]
Valve opening of common rail safety valve (DBV)
[Fault (outline)]
Common rail pressure (maximum)
[Diagnosis check]
- Safety valve (DBV) was activated after abnormal rise in common rail pressure.

[Code generation condition]
- Common rail pressure exceeded 190 MPa {27560 psi, 1937 kgf/cm^2} once, then dropped and stabilized at a level near a safety valve (DBV) operating pressure of 80 MPa {11604 psi, 816 kgf/cm^2}.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Airtight malfunction of injector
- Malfunction of supply pump
- Plugged fuel system
- Malfunction of pressure limiter
- Malfunction of common rail pressure sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (At the same time as recovery, warning lamp is extinguished and diagnosis code is cleared.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0253 “Common Rail Pressure Defect” • P0605 “ECU System (Hardware)” • P0607 “ECU System”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 6.

Step 3	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Correct and replace suction pipe or hose.

Step 4	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 5.

Step 5	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 6.

Step 6	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Rail pressure is increased for a certain period of time (6 seconds). • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		There is no leak from supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of supply pump

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Rail pressure is increased for a certain period of time (6 seconds). • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		There is no leak from fuel pipe between supply pump and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of fuel pipe

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Rail pressure is increased for a certain period of time (6 seconds). • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		There is no leak from rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of rail

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Rail pressure is increased for a certain period of time (6 seconds). • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		There is no leak from fuel injection pipes (four) between injector and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of injection pipe

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”
	Inspection condition		Rail pressure is increased for a certain period of time (6 seconds). • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Replacement of injector

Step 11	Inspection items		Check inside of combustion chamber.
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Replacement of injector of object cylinder

Step 12	Inspection items		Replacement of rail (flow damper and pressure limiter abnormal)
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	–

Step 13	Inspection items		Replacement of supply pump
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Replacement of injectors (four)

[Fault code]
Diagnosis code: P0253/Flash code: 22
[Monitor]
Rail pressure is abnormal (to low) during opening of safety valve (DBV).
[Fault (outline)]
Common rail pressure (minimum)
[Diagnosis check]
- Safety valve (DBV) is monitored for abnormal drop in operating pressure during opening of DBV (diagnosis code P0251).

[Code generation condition]
- Common rail pressure remains below 50 MPa {7253 psi, 510 kgf/cm^2} for 100 consecutive seconds. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the limp mode control is activated.

[Diagnostic requirement]
- After diagnosis code P0191, P0192, P0193 occurs.

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Malfunction of safety valve (DBV)

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (At the same time as recovery, warning lamp is extinguished and diagnosis code is cleared.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0251 “Common Rail Pressure Defect”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Replacement of rail

[Fault code]
Diagnosis code: P0254/Flash code: 23
[Monitor]
Rail pressure is abnormal (to high) during opening of safety valve (DBV).
[Fault (outline)]
- Pressure shock
- Not open
- Common rail pressure (maximum)

[Diagnosis check]
- Safety valve (DBV) is monitored for abnormal drop in operating pressure during opening of DBV (diagnosis code P0251).

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Actual common rail pressure remains over 195 MPa {28286 psi, 1988 kgf/cm^2} for 2 consecutive seconds. (Diagnosis code is displayed on first establishment of code generation condition.)

<Condition (2)>
- Actual common rail pressure remains over 195 MPa {28286 psi, 1988 kgf/cm^2} for 10 consecutive seconds. (Warning lamp (red) is lit and diagnosis code is displayed on first establishment of code generation condition.)

<Condition (3)>
- Common rail pressure remains at 126 MPa {18277 psi, 1285 kgf/cm^2} or higher for 100 consecutive seconds. (Warning lamp (red) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
<Condition (1), (2)>
- Fault diagnosis is performed only once during the driving cycle.

<Condition (3)>
- Fault diagnosis is performed each time when the limp mode control is activated.

[Diagnostic requirement]
<When common rail pressure exceeds 195 MPa {28286 psi, 1988 kgf/cm^2}>
–
<When common rail pressure exceeds 126 MPa {18277 psi, 1285 kgf/cm^2}>
- After diagnosis code P0191, P0192, P0193 occurs.

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the status of warning lamp.
<Warning lamp (red) lit>
- Engine stopped

<Warning lamp extinguished (diagnosis code only)>
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Malfunction of safety valve (DBV)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>
- Diagnosis code is cleared simultaneously with recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

<Condition (3)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0251 “Common Rail Pressure Defect”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Replacement of rail

[Fault code]
Diagnosis code: P0261/Flash code: 37
[Monitor]
Failure of injector magnetic valve (No. 1 cylinder)
[Fault (outline)]
Injector short circuit (No. 1 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 1 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 1 cylinder) circuit remains shorted to ground as detected for 3 consecutive cycles. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

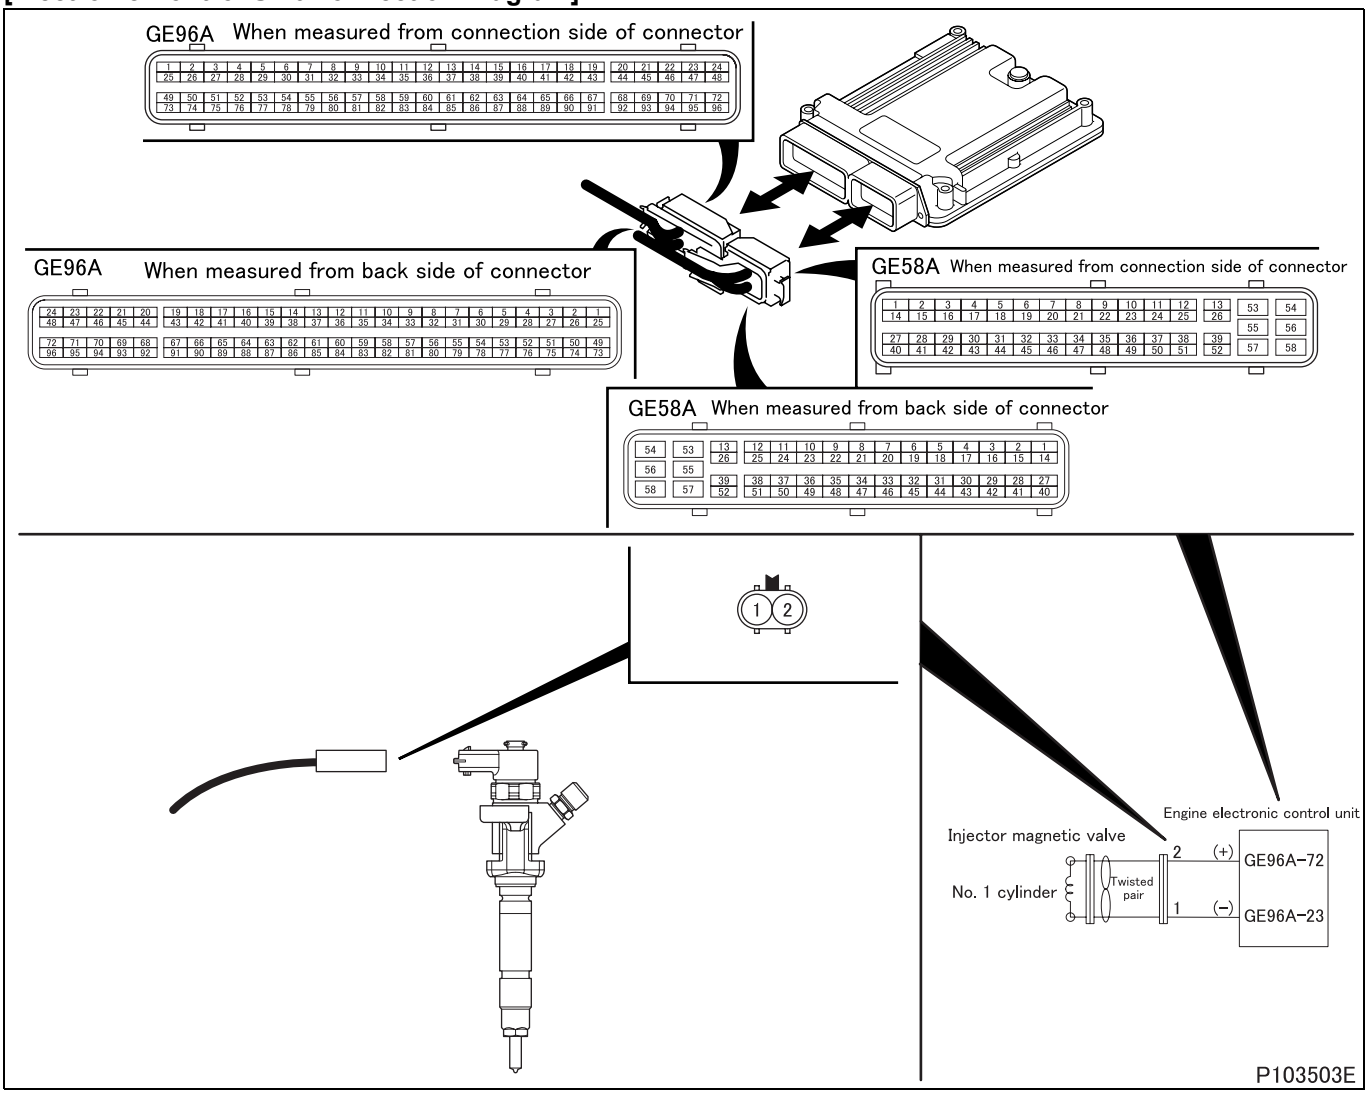
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

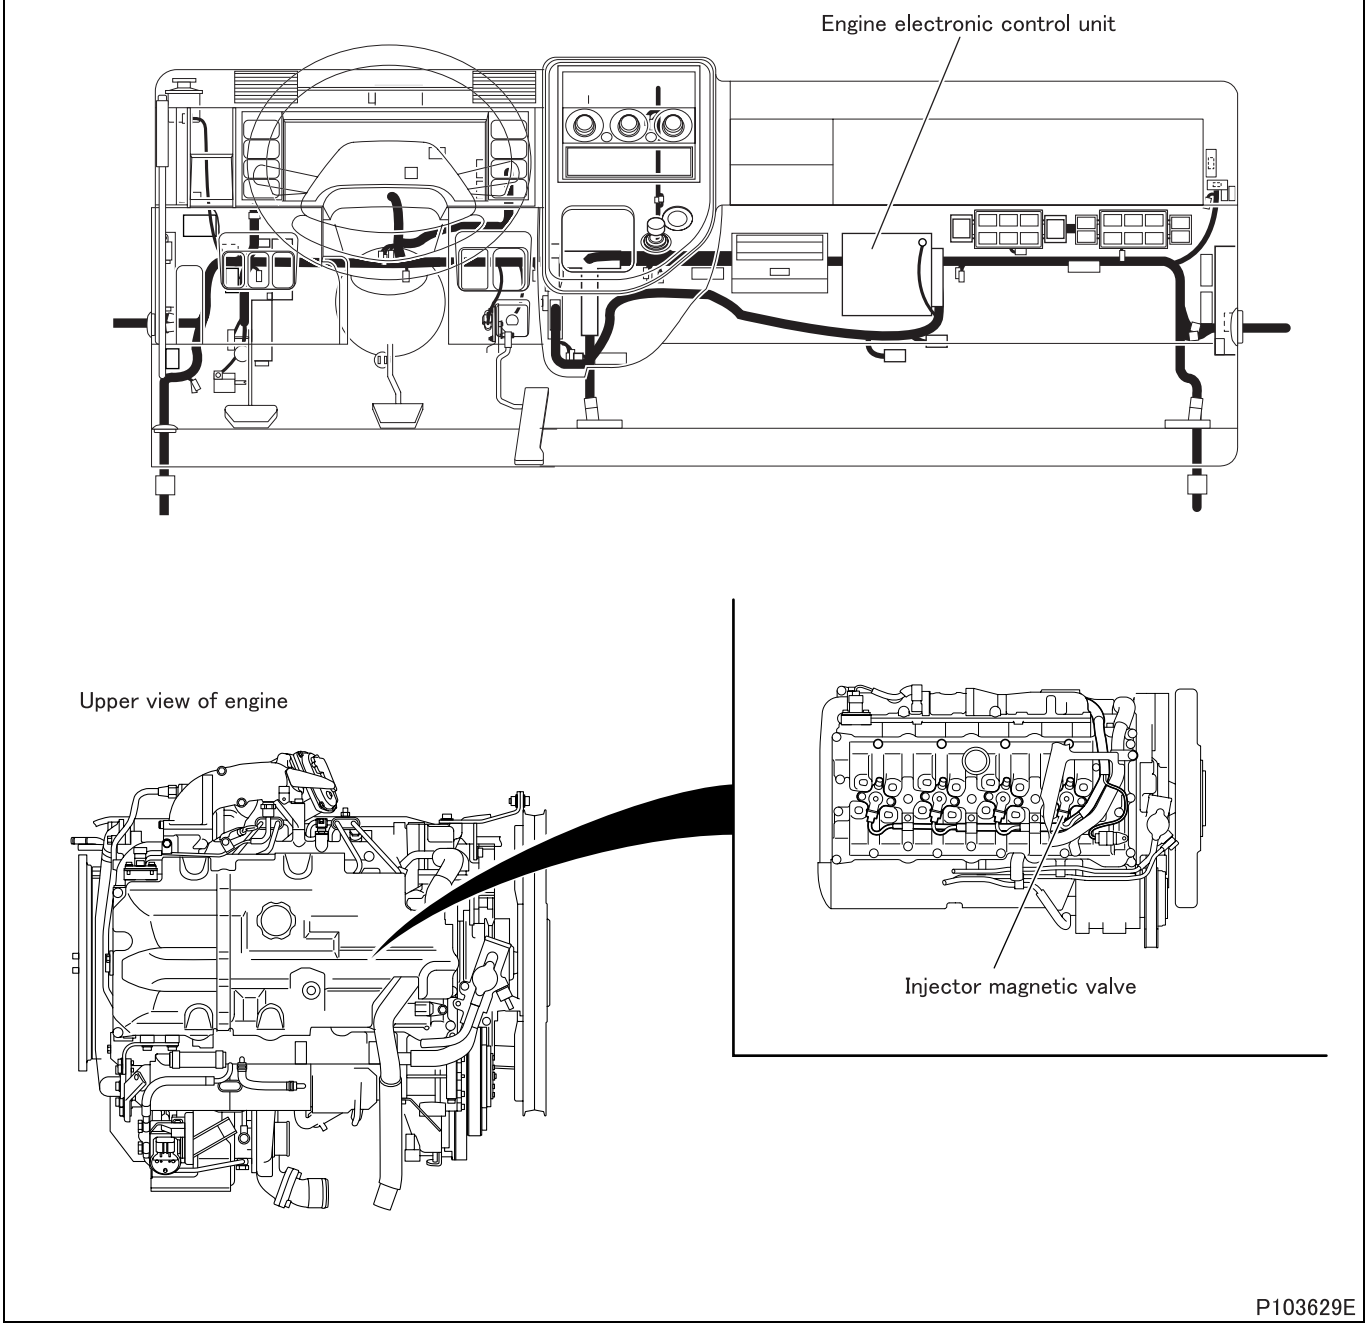
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

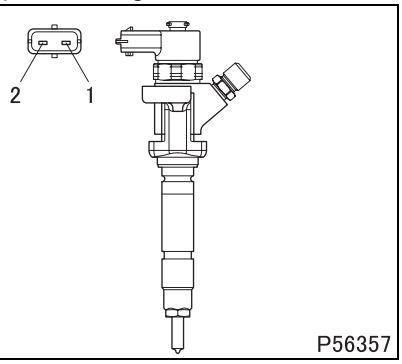
Step 2	Inspection items		Inspection by electronic drive unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 23 and 72.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 72.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 23.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0262/Flash code: 37
[Monitor]
Failure of injector magnetic valve (No. 1 cylinder)
[Fault (outline)]
Injector short circuit (No. 1 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 1 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 1 cylinder) circuit remains shorted to power supply as detected for 3 consecutive cycles. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

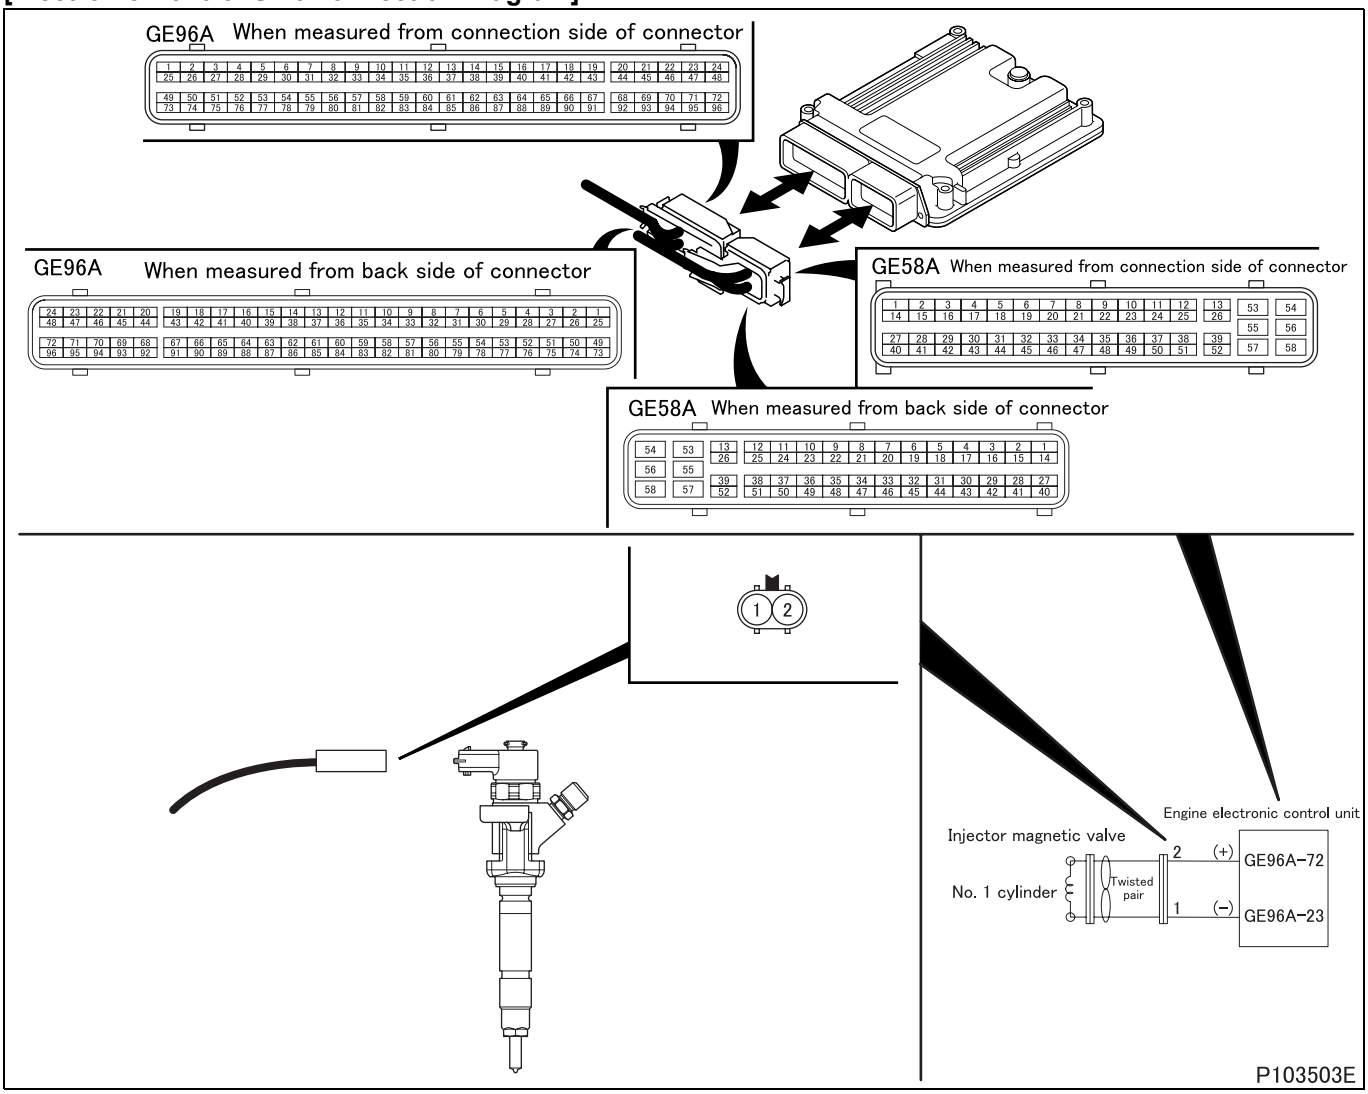
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

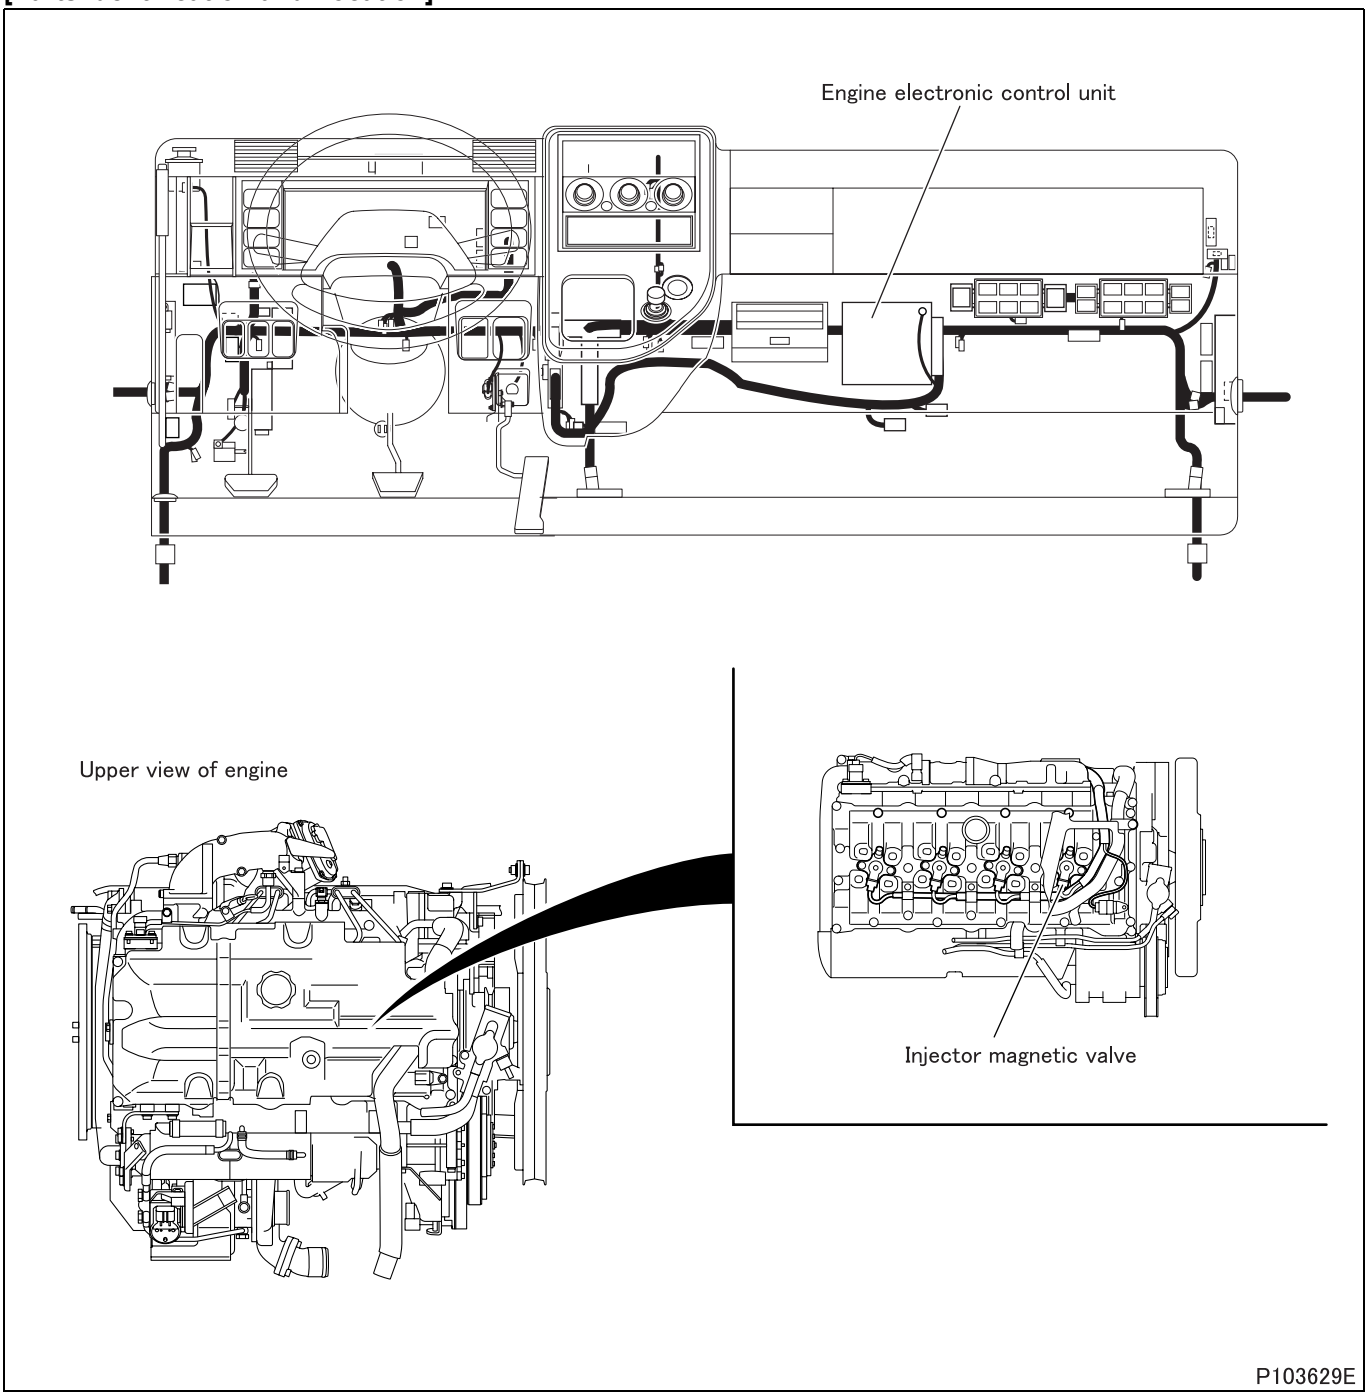
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

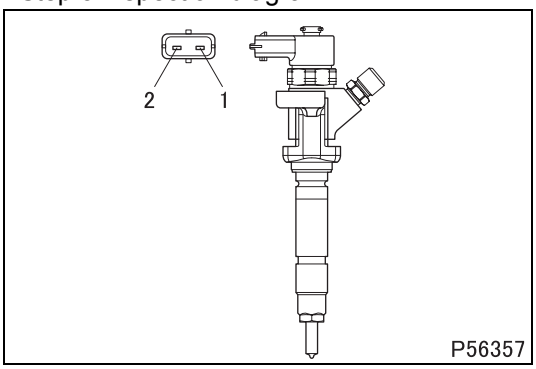
Step 2	Inspection items		Inspection by electronic drive unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 23 and 72.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 72.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 23.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BB “Injector Test 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0263/Flash code: 53
[Monitor]
Abnormality in cylinder balance correction
[Fault (outline)]
Cylinder balancing out of range
[Diagnosis check]
- Check is made to determine if variation to correct in injection quantity between cylinders is excessive.

[Code generation condition]
- Corrected fuel injection quantity remains 5 mg/cycle or more for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Water temperature: above 65°C {149°F}
- PTO status: OFF
- Cylinder balance: closed loop control

<Under closed loop control>
  - Engine speed: 630 to 820 rpm
  - Fuel injection quantity: 2 to 99 mg/cyc
- Engine operating mode: normal (engine in operation)
- Time till above conditions were met: more than 10 seconds
- The fuel balancing compensation (FBC) value for a cylinder deviates by 5 mg/cyc larger than that for any other cylinders.
- Fuel Balancing Compensation (FBC) monitor: in order
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)”
	Inspection condition		• Starter switch: ON • Engine: started
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of injector (No. 1 cylinder)
		NO	Inspect diagnosis code that is occurring.

[Fault code]
Diagnosis code: P0264/Flash code: 8
[Monitor]
Failure of injector magnetic valve (No. 2 cylinder)
[Fault (outline)]
Injector short circuit (No. 2 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 2 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 2 cylinder) circuit remains shorted to ground as detected for 3 consecutive cycles. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

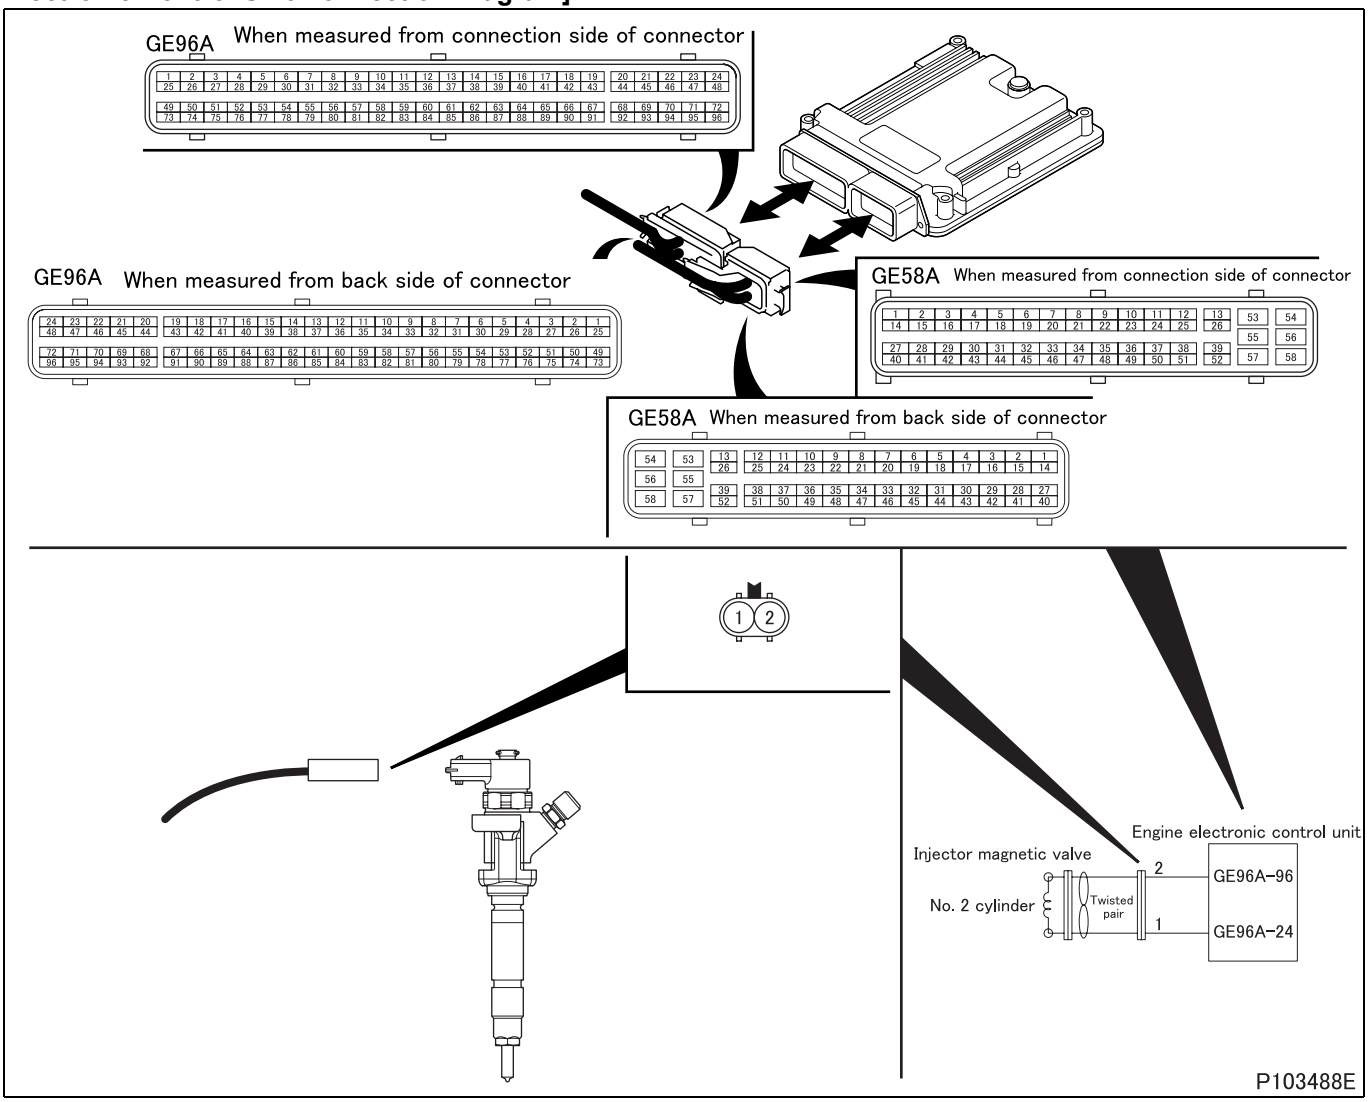
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

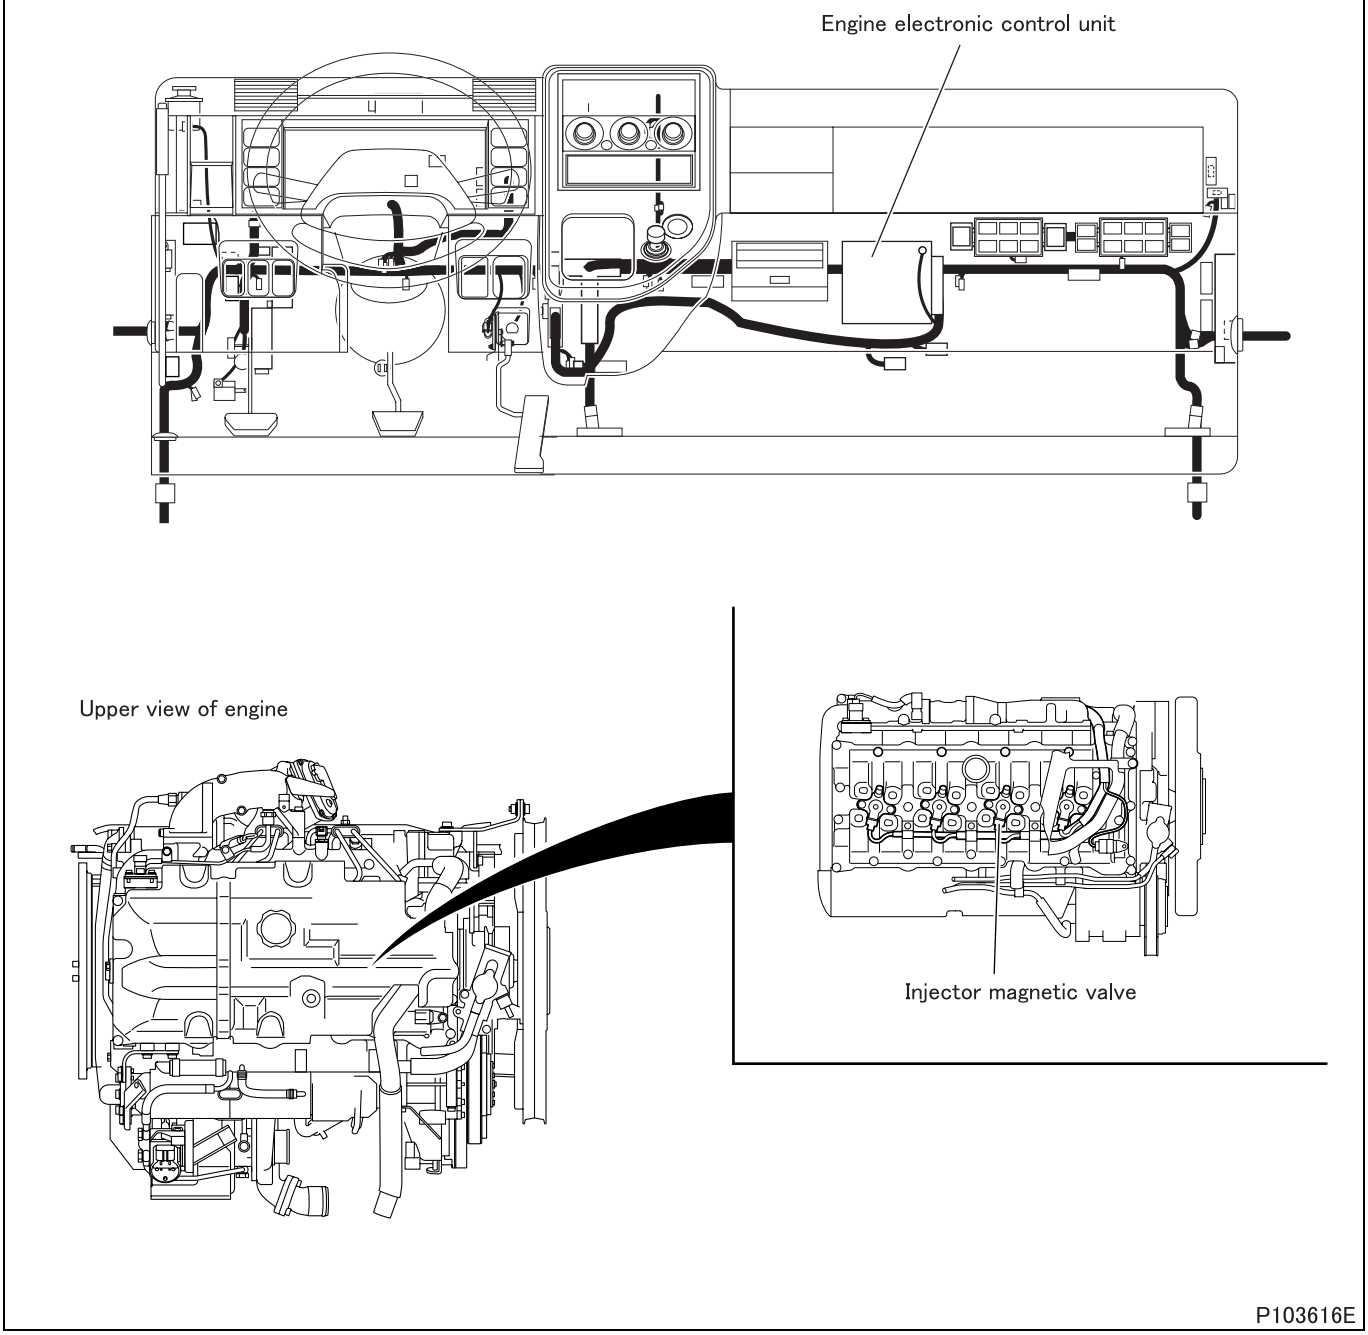
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

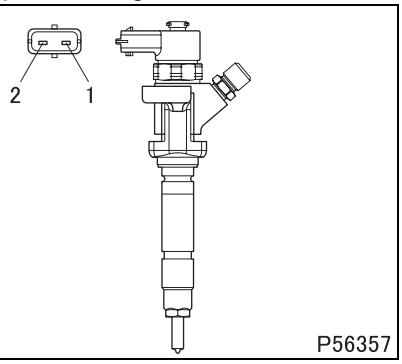
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 24 and 96.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 96.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 24.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0265/Flash code: 8
[Monitor]
Failure of injector magnetic valve (No. 2 cylinder)
[Fault (outline)]
Injector short circuit (No. 2 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 2 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 2 cylinder) circuit remains shorted to power supply as detected for 3 consecutive cycles.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

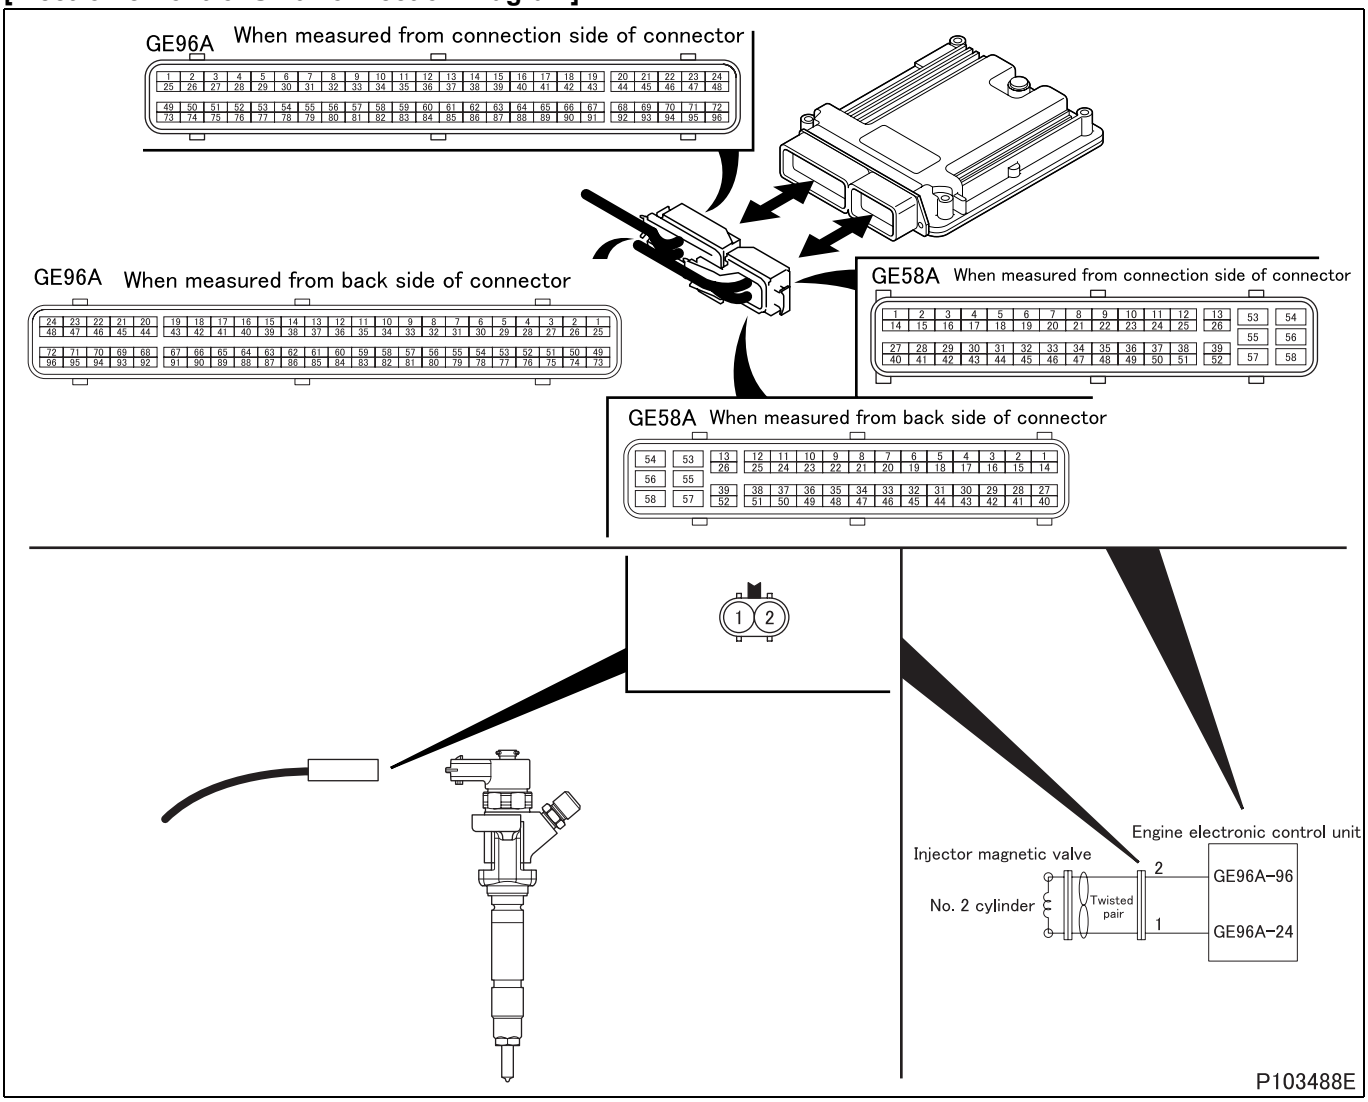
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

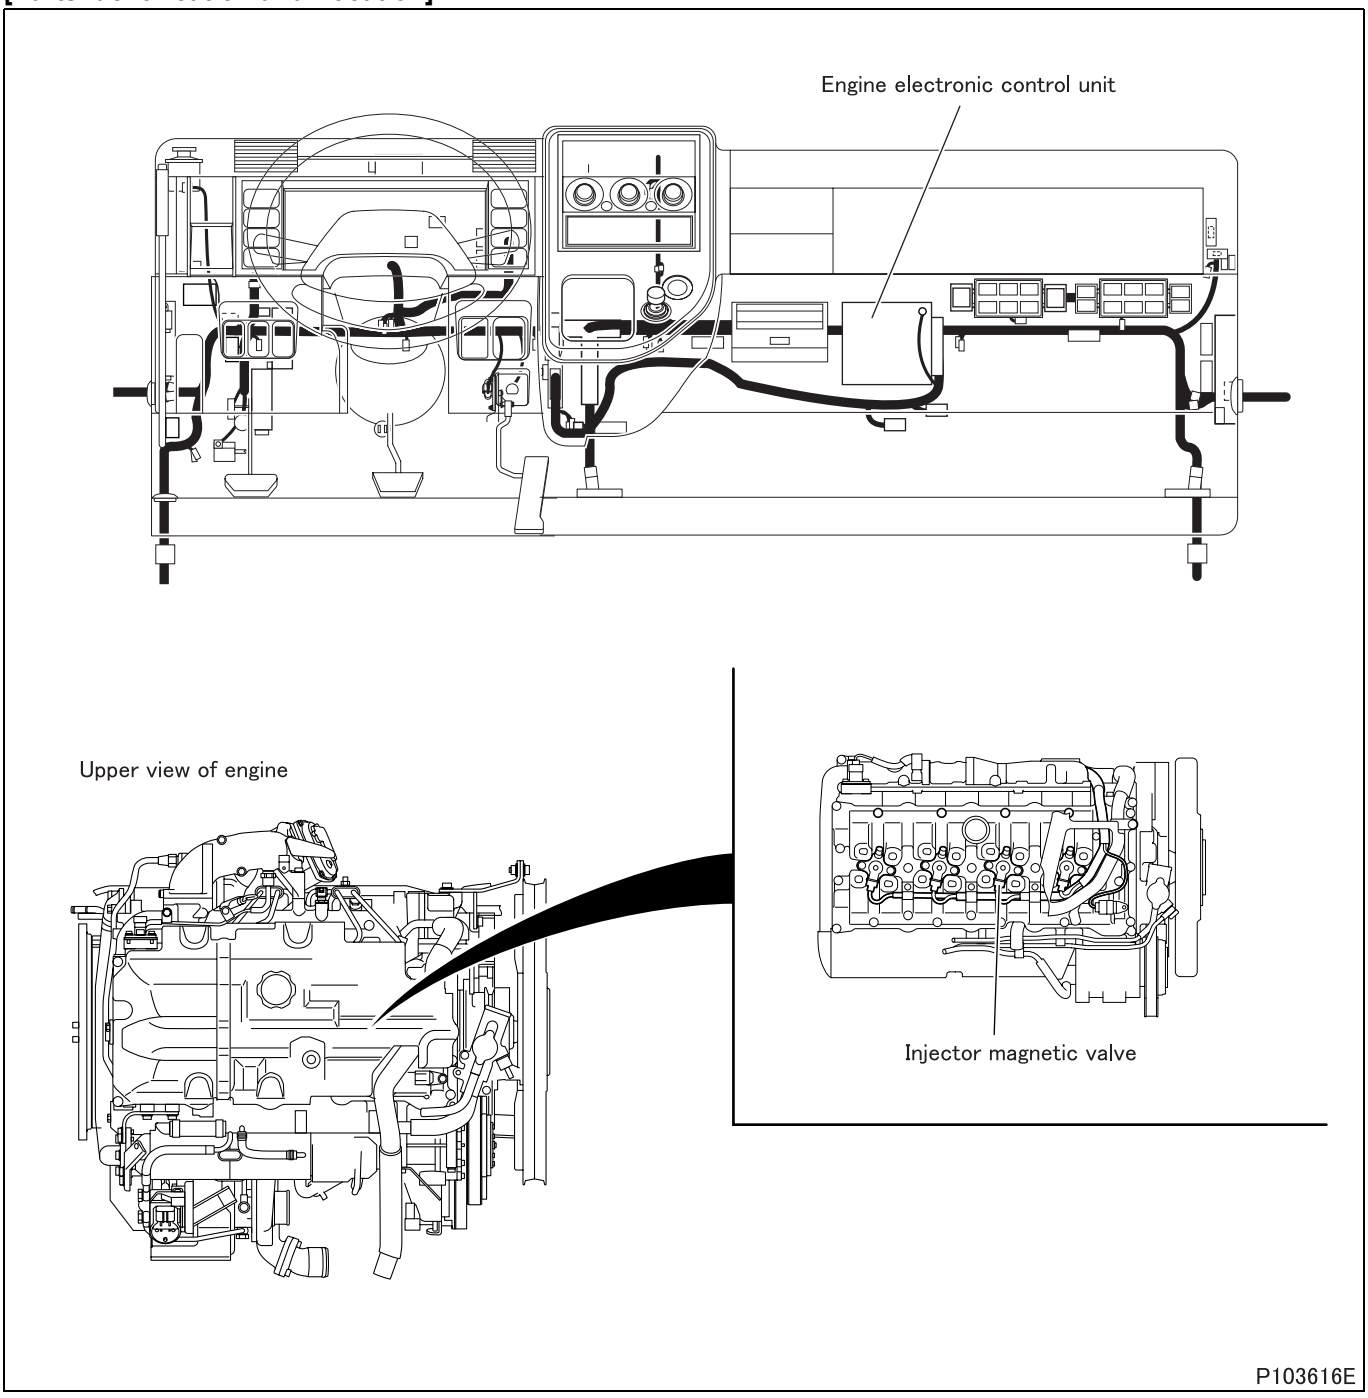
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

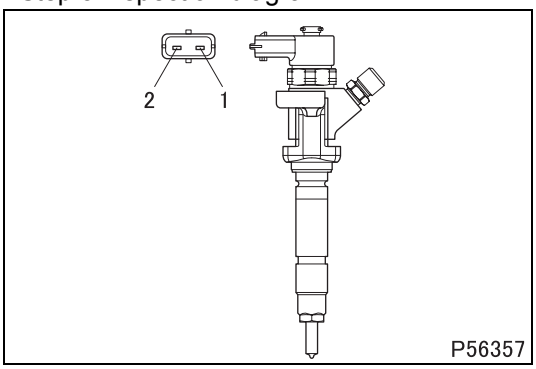
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 24 and 96.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 96.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 24.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BD “Injector Test 3”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0266/Flash code: 53
[Monitor]
Abnormality in cylinder balance correction
[Fault (outline)]
- Cylinder balancing out of range
- Sensor signal range check
- Ref voltage

[Diagnosis check]
- Check is made to determine if variation to correct in injection quantity between cylinders is excessive.

[Code generation condition]
- Corrected fuel injection quantity remains 5 mg/cycle or more for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Water temperature: above 65°C {149°F}
- PTO status: OFF
- Cylinder balance: closed loop control

<Under closed loop control>
  - Engine speed: 630 to 820 rpm
  - Fuel injection quantity: 2 to 99 mg/cyc
- Engine operating mode: normal (engine in operation)
- Time till above conditions were met: more than 10 seconds
- The fuel balancing compensation (FBC) value for a cylinder deviates by 5 mg/cyc larger than that for any other cylinders.
- Fuel Balancing Compensation (FBC) monitor: in order
- Injector ignition: in order
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)”
	Inspection condition		• Starter switch: ON • Engine: started
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of injector (No. 2 cylinder)
		NO	Inspect diagnosis code that is occurring.

[Fault code]
Diagnosis code: P0267/Flash code: 38
[Monitor]
Failure of injector magnetic valve (No. 3 cylinder)
[Fault (outline)]
Injector short circuit (No. 3 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 3 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 3 cylinder) circuit remains shorted to ground as detected for 3 consecutive cycles. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

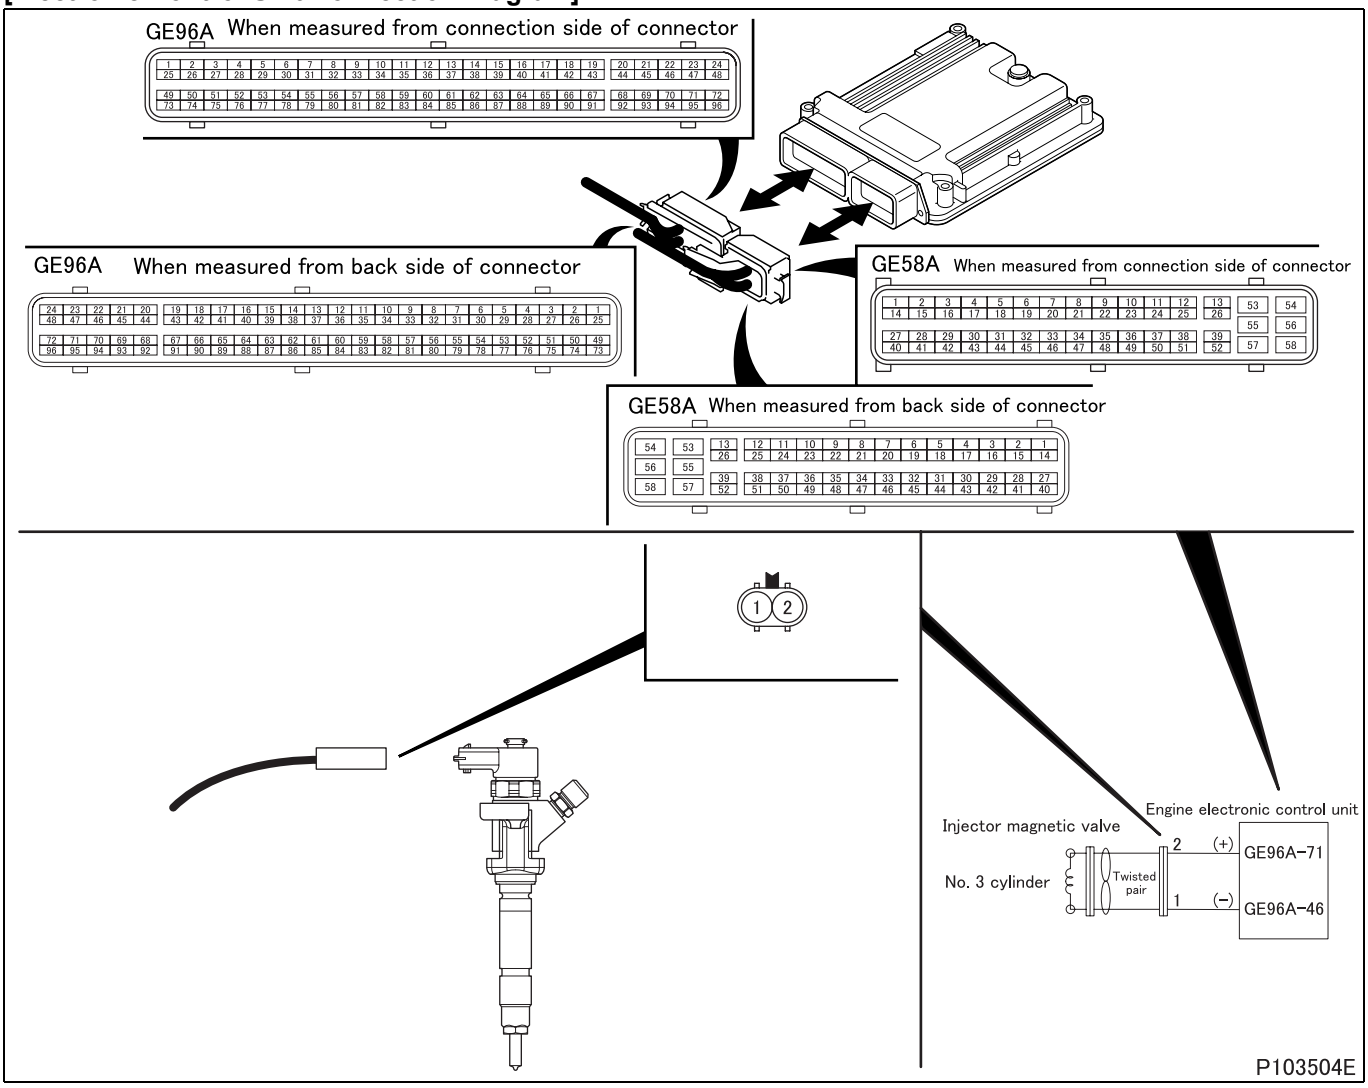
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

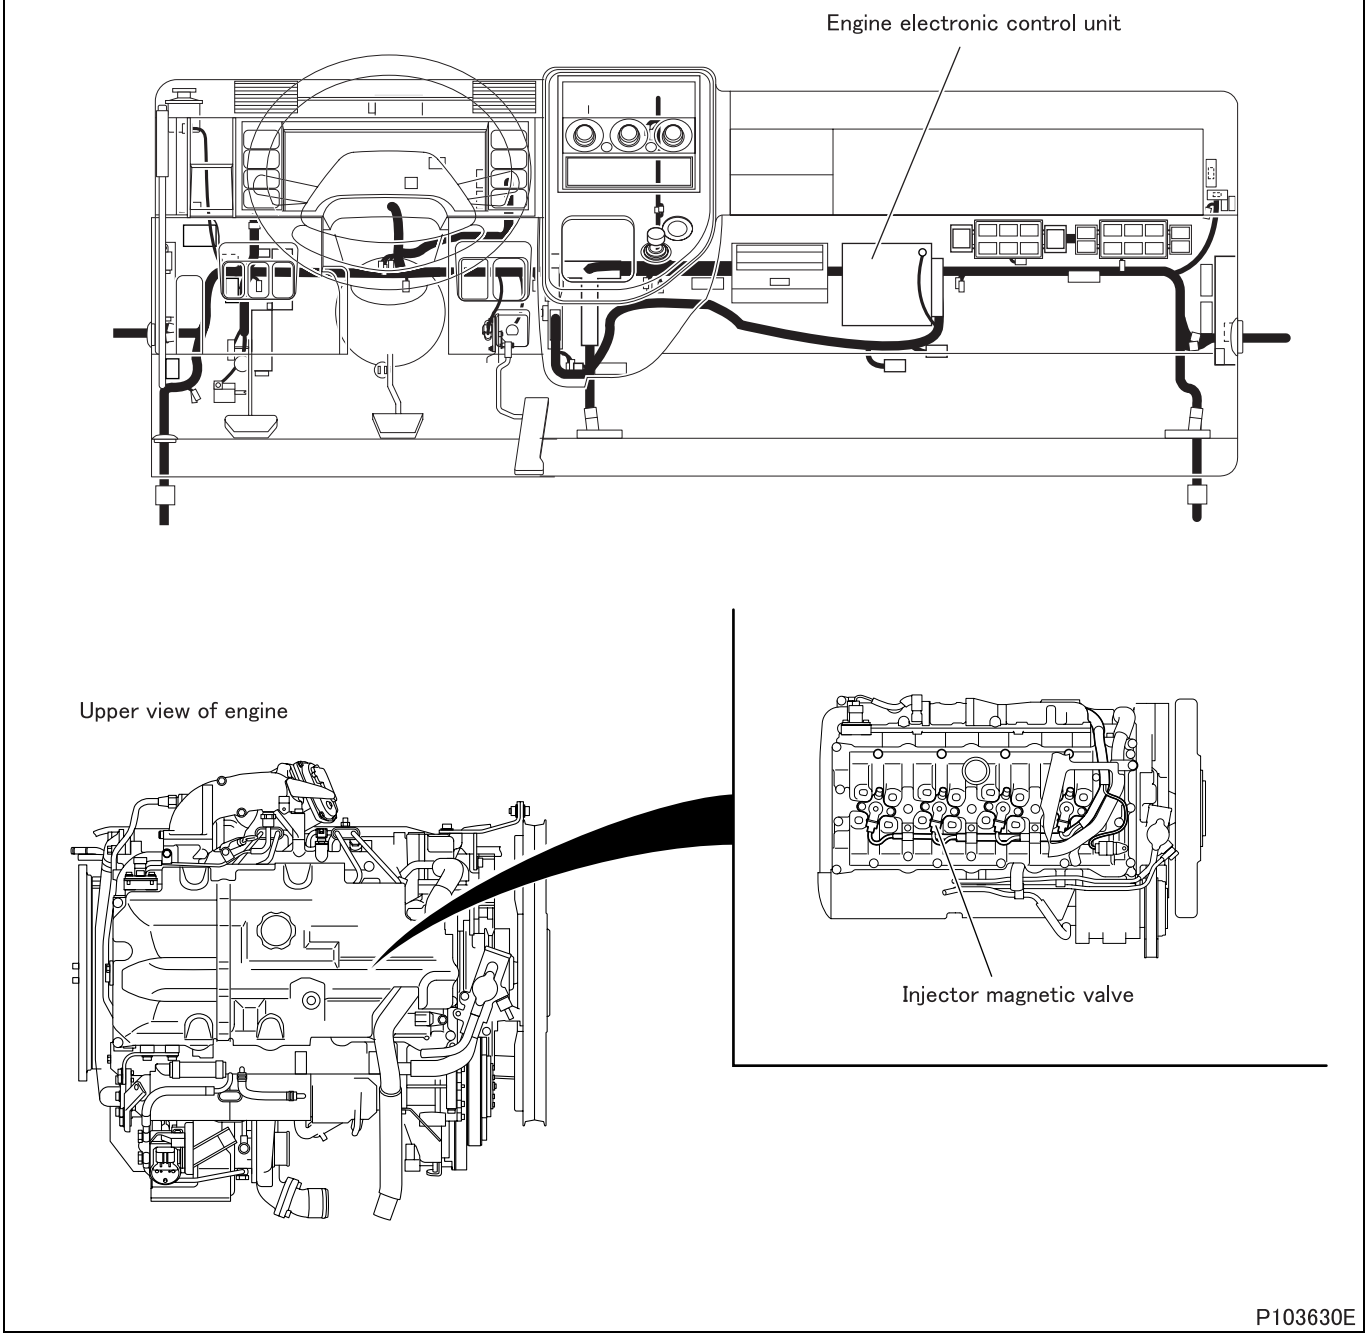
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

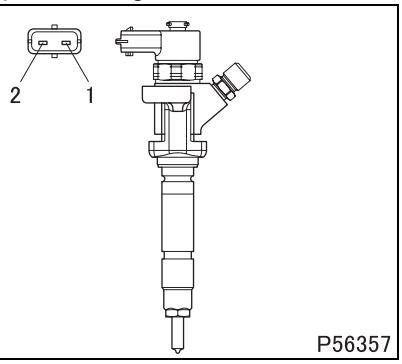
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 46 and 71.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 71.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 46.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0268/Flash code: 38
[Monitor]
Failure of injector magnetic valve (No. 3 cylinder)
[Fault (outline)]
Injector short circuit (No. 3 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 3 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 3 cylinder) circuit remains shorted to power supply as detected for 3 consecutive cycles.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

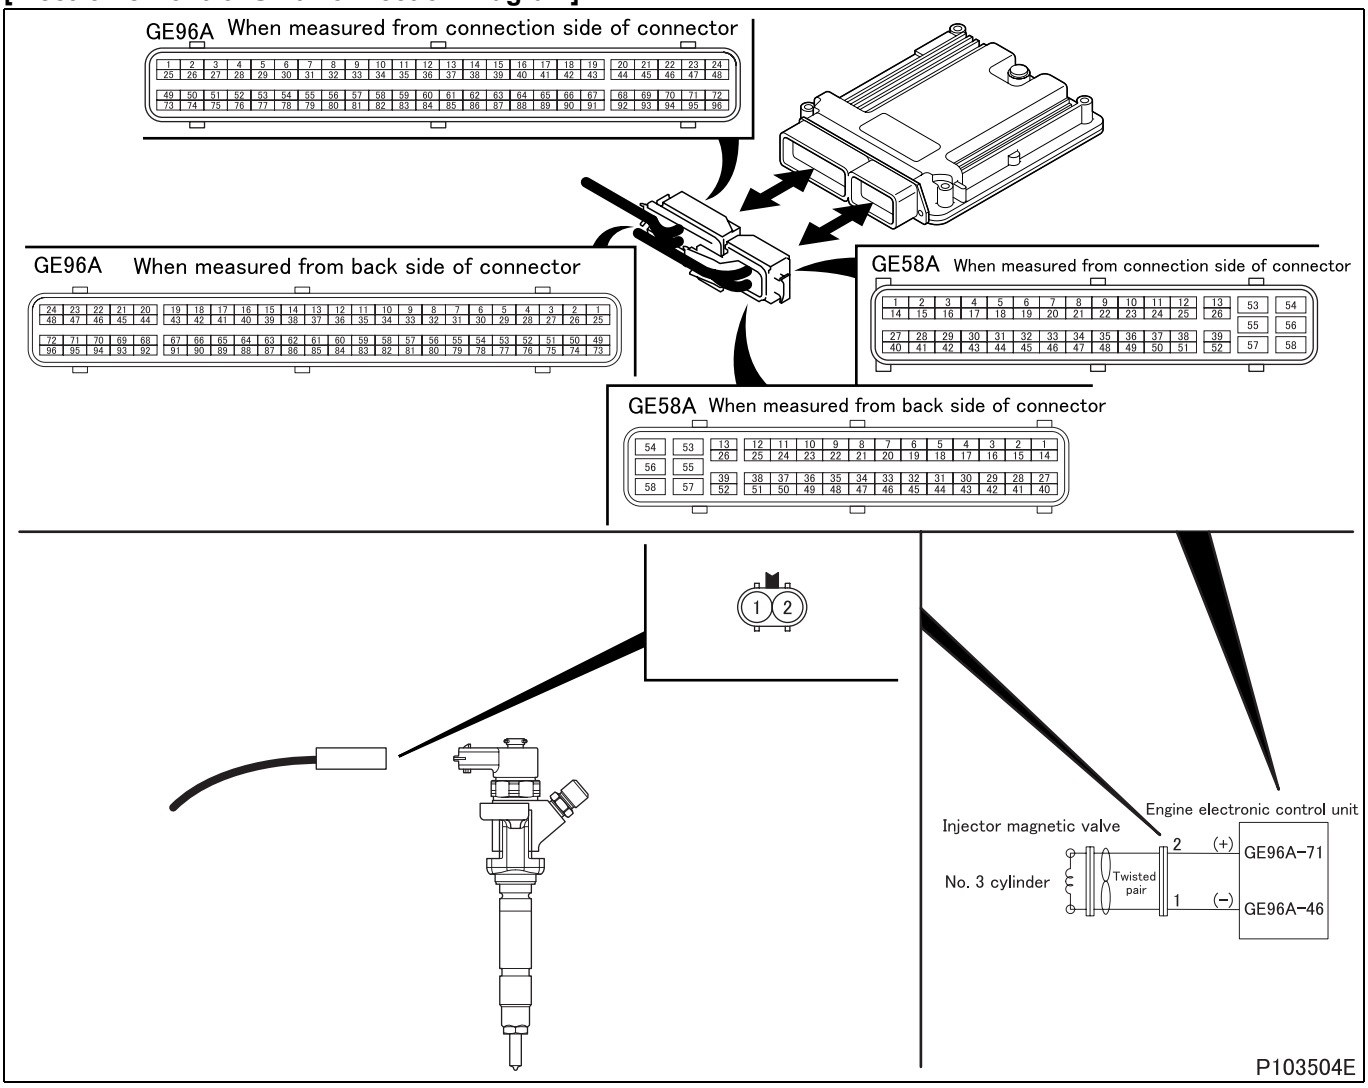
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

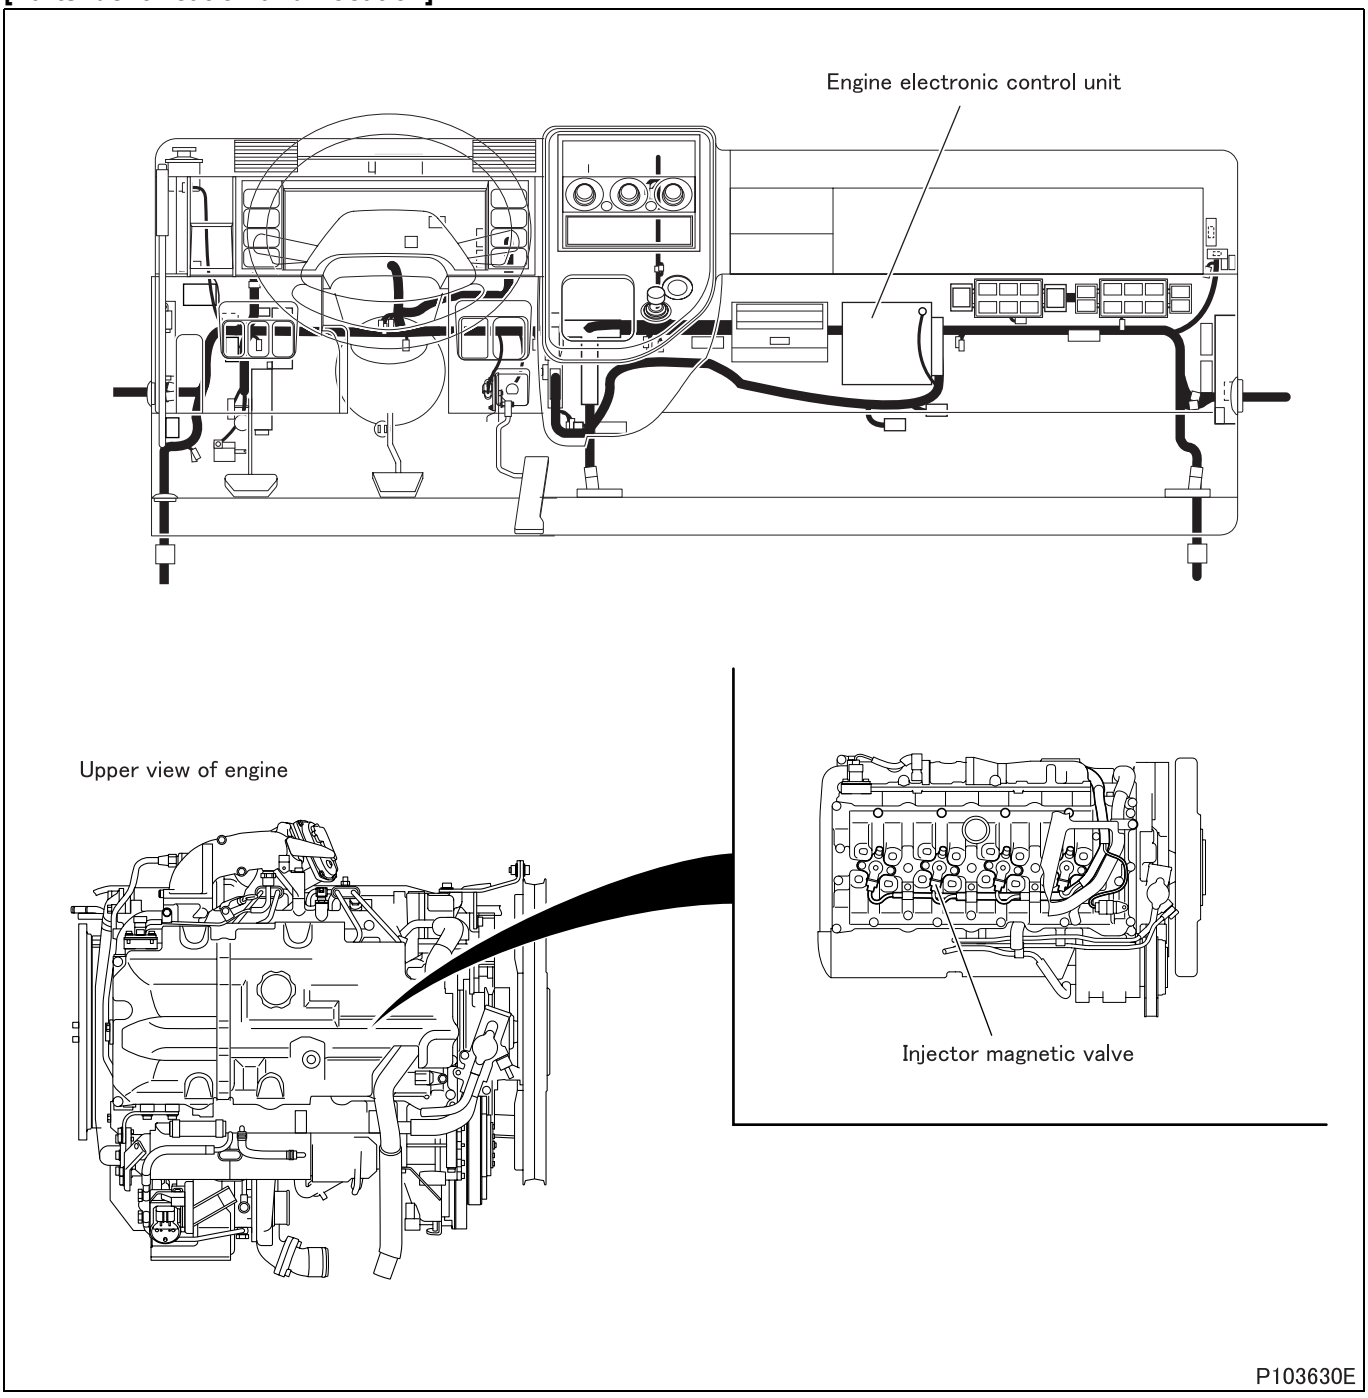
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

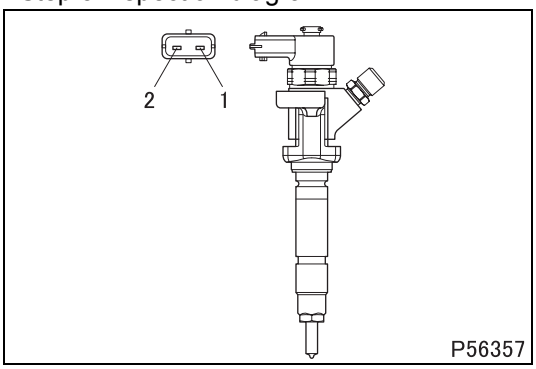
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 46 and 71.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 71.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 46.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BE “Injector Test 4”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0269/Flash code: 53
[Monitor]
Abnormality in cylinder balance correction
[Fault (outline)]
Cylinder balancing out of range
[Diagnosis check]
- Check is made to determine if variation to correct in injection quantity between cylinders is excessive.

[Code generation condition]
- Corrected fuel injection quantity remains 5 mg/cycle or more for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Water temperature: above 65°C {149°F}
- PTO status: OFF
- Cylinder balance: closed loop control

<Under closed loop control>
  - Engine speed: 630 to 820 rpm
  - Fuel injection quantity: 2 to 99 mg/cyc
- Engine operating mode: normal (engine in operation)
- Time till above conditions were met: more than 10 seconds
- The fuel balancing compensation (FBC) value for a cylinder deviates by 5 mg/cyc larger than that for any other cylinders.
- Fuel Balancing Compensation (FBC) monitor: in order
- Injector ignition: in order
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)”
	Inspection condition		• Starter switch: ON • Engine: started
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of injector (No. 3 cylinder)
		NO	Inspect diagnosis code that is occurring.

[Fault code]
Diagnosis code: P0270/Flash code: 39
[Monitor]
Failure of injector magnetic valve (No. 4 cylinder)
[Fault (outline)]
Injector short circuit (No. 4 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 4 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 4 cylinder) circuit remains shorted to ground as detected for 3 consecutive cycles. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

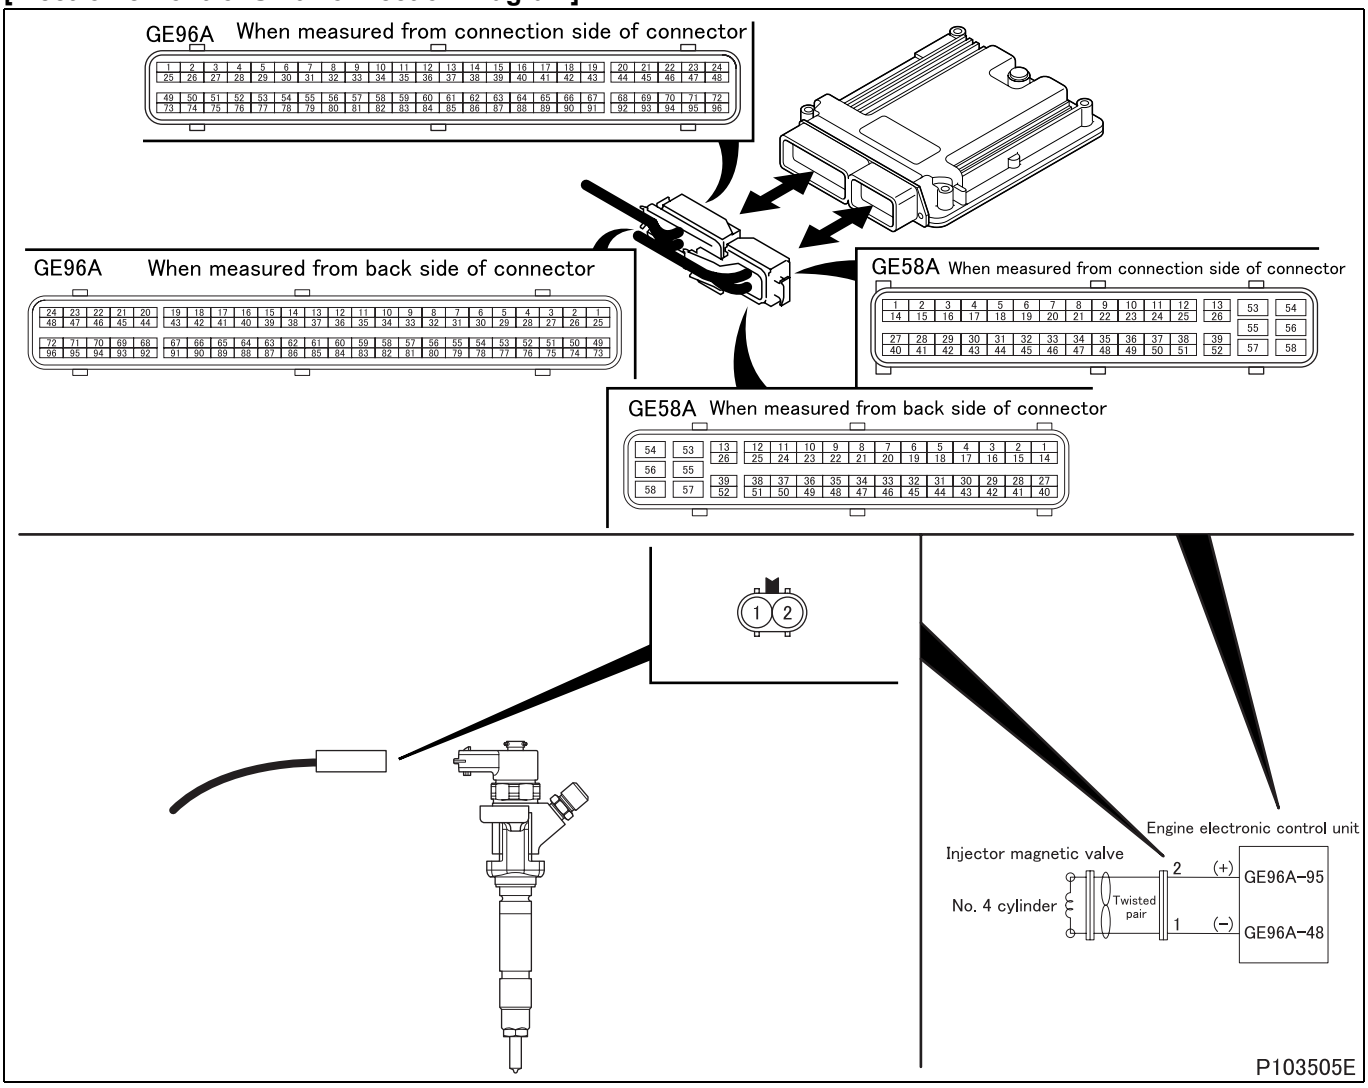
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

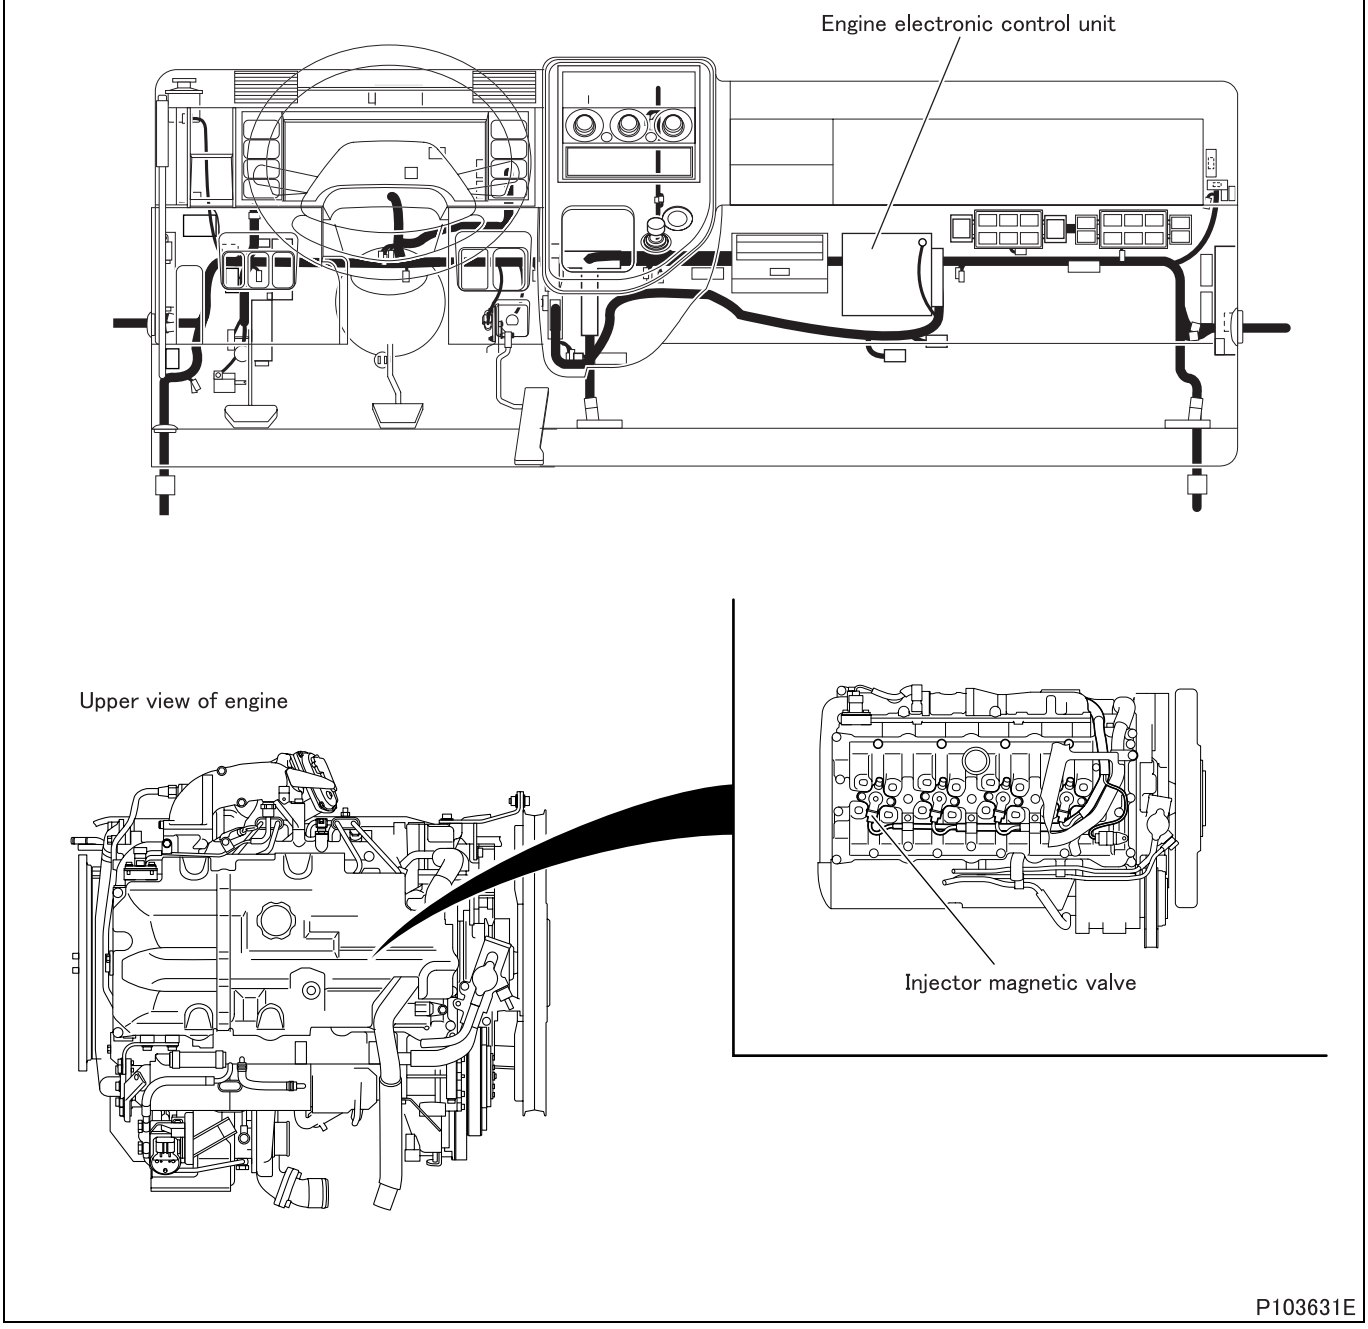
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BC “Injector Test 2”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

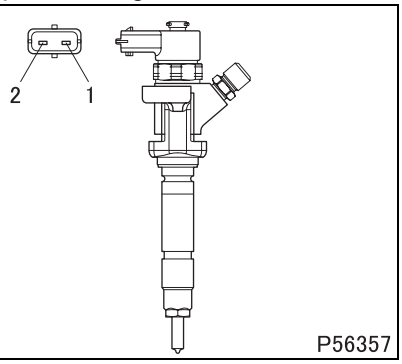
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 48 and 95.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 95.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 48.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BC “Injector Test 2”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0271/Flash code: 39
[Monitor]
Failure of injector magnetic valve (No. 4 cylinder)
[Fault (outline)]
Injector short circuit (No. 4 cylinder)
[Diagnosis check]
- Injector magnetic valve (No. 4 cylinder) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 4 cylinder) circuit remains shorted to power supply as detected for 3 consecutive cycles.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

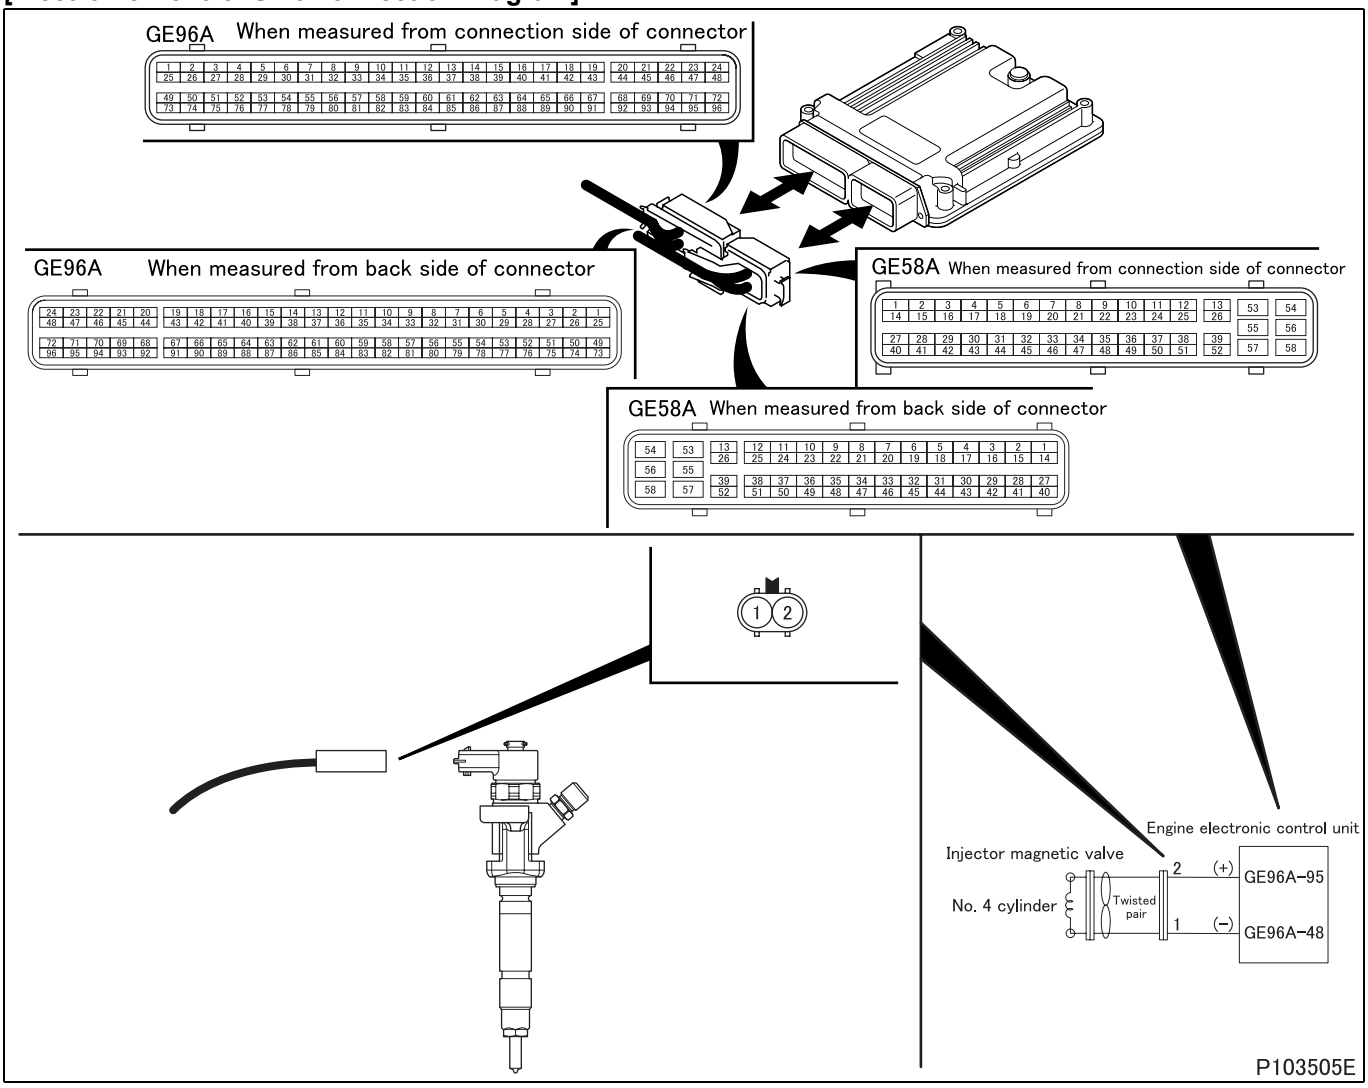
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

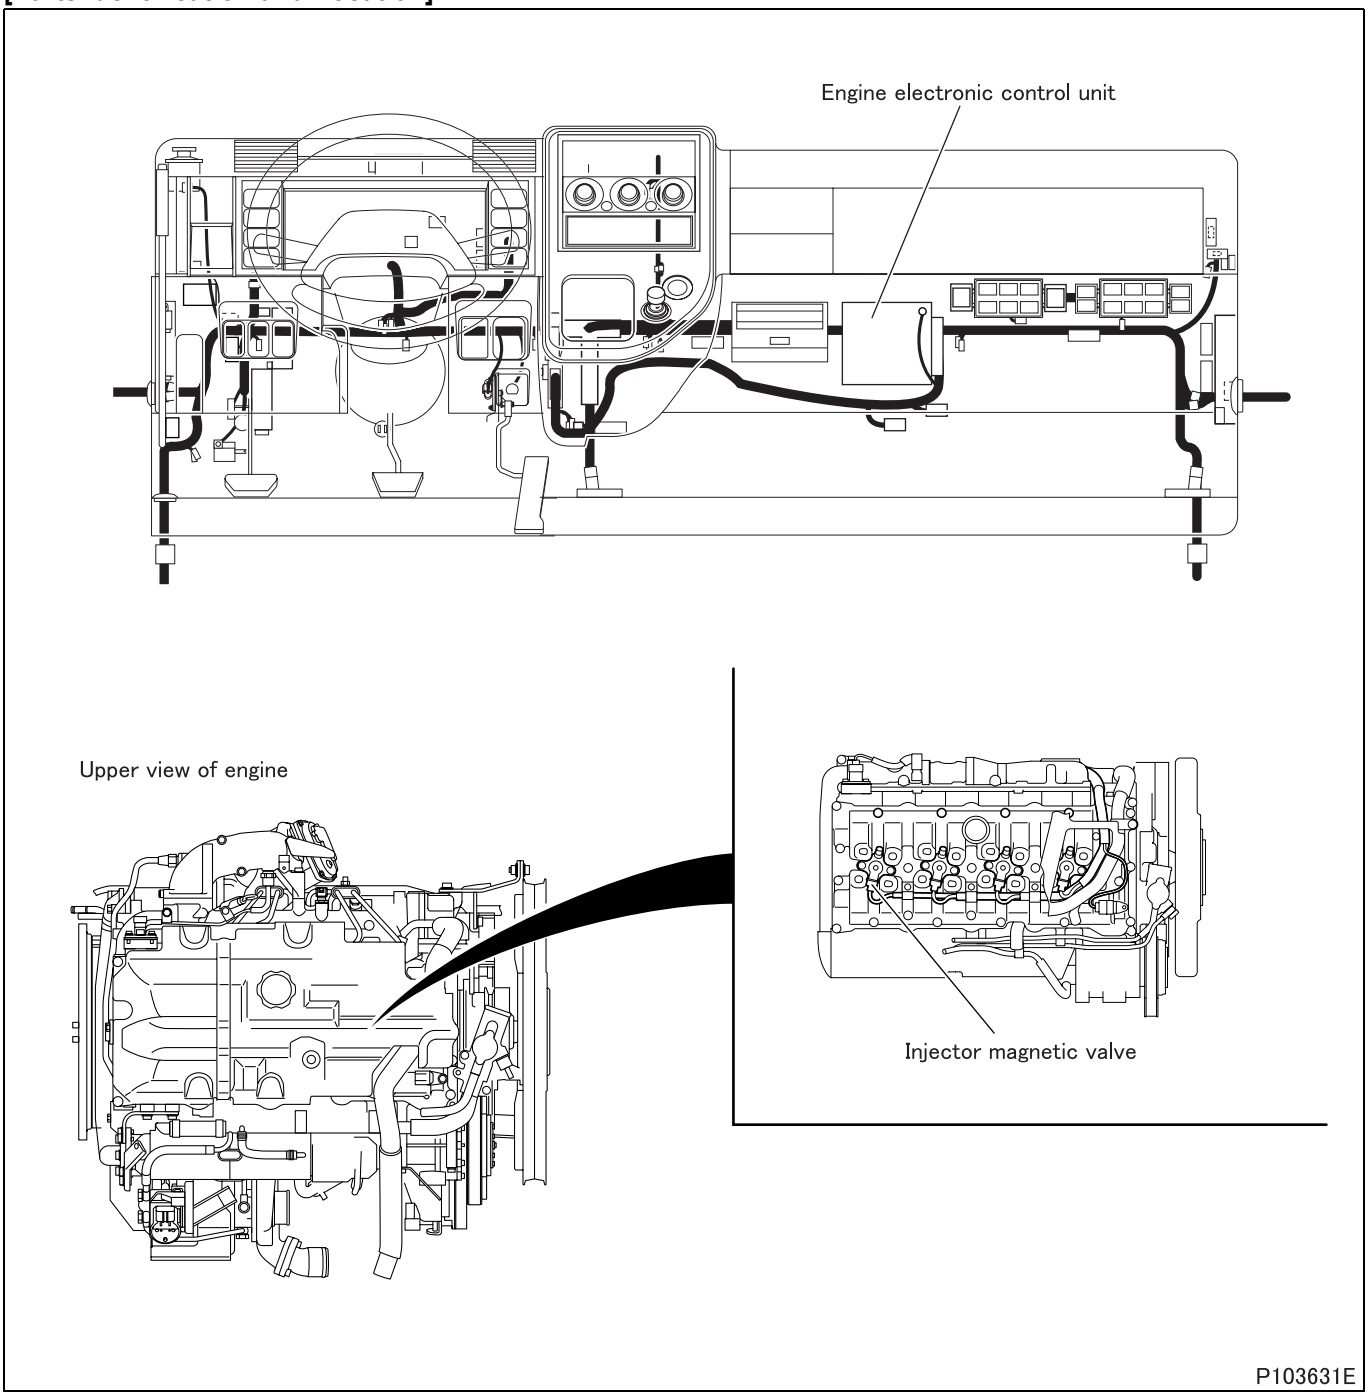
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BC “Injector Test 2”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

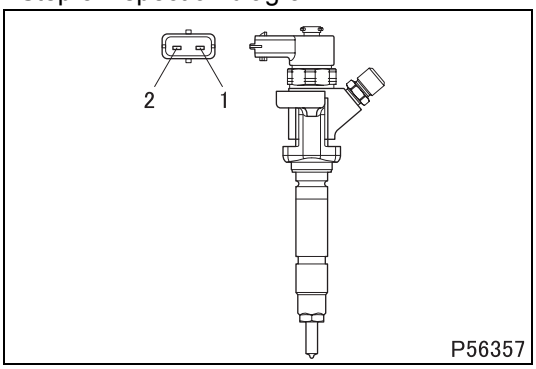
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 48 and 95.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 95.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between injector magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 48.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. BC “Injector Test 2”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0272/Flash code: 53
[Monitor]
Abnormality in cylinder balance correction
[Fault (outline)]
Cylinder balancing out of range
[Diagnosis check]
- Check is made to determine if variation to correct in injection quantity between cylinders is excessive.

[Code generation condition]
- Corrected fuel injection quantity remains 5 mg/cycle or more for 10 consecutive seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Water temperature: above 65°C {149°F}
- PTO status: OFF
- Cylinder balance: closed loop control

<Under closed loop control>
  - Engine speed: 630 to 820 rpm
  - Fuel injection quantity: 2 to 99 mg/cyc

- Engine operating mode: normal (engine in operation)
- Time till above conditions were met: more than 10 seconds
- The fuel balancing compensation (FBC) value for a cylinder deviates by 5 mg/cyc larger than that for any other cylinders.
- Fuel Balancing Compensation (FBC) monitor: in order
- Injector ignition: in order
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)”
	Inspection condition		• Starter switch: ON • Engine: started
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of injector (No. 4 cylinder)
		NO	Inspect diagnosis code that is occurring.

[Fault code]
Diagnosis code: P0299/Flash code: 32
[Monitor]
Underboost
[Fault (outline)]
Underboost
[Diagnosis check]
- Actual boost pressure is detected by boost pressure sensor and compared with standard pressure recorded in engine electronic control unit.

[Code generation condition]
- Difference between target boost pressure and actual boost pressure remains less than specified for 10 seconds (underboost status)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 60°C {19 to 140°F}
- Engine speed: 600 to 3000 rpm
- Variation in engine speed: less than 300 rpm/s
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust shutter: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

[Probable cause of trouble]
- Boost pressure incorrectly adjusted
- Mechanical failure of turbocharger unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Acutuator (Open)” • P0046 “VGT Acutuator (Performance)” • P0047 “VGT Acutuator (Low)” • P0069 “Boost Press SNSR (Correlation)” • P0237 “Boost Press SNSR (Low)” • P0238 “Boost Press SNSR (High)” • P0401 “EGR Flow (Insufficient)” • P0402 “EGR Flow (Excessive)” • P0403 “EGR1 (Acutuator Circuit)” • P0409 “EGR1 (Position Sensor)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0600 “CAN Communication” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P2002 “DPF MFF” • P2228 “Atm Press SNSR (Low)” • P2229 “Atm Press SNSR (High)” • P2263 “VGT System” • P2413 “EGR System” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF” • P2457 “EGR Cooler Performance”
	Inspection condition		• Starter switch: ON • Do not start engine.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Check of exhaust system
	Maintenance item		Front pipe, diesel particulate filter, tail pipe (See Gr15.)
	Inspection condition		Starter switch: OFF
	Requirements		Blocked
	Inspection result (Is the judging standard satisfied?)	YES	Clean or replace parts.
		NO	Go to step 3.

Step 3	Inspection items		Check of turbocharger appearance
	Maintenance item		Appearance of turbocharger (See Gr15.)
	Inspection condition		Starter switch: OFF
	Requirements		Turbine vane binds.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of turbocharger
		NO	Go to step 4.

Step 4	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake MAP”. **<Multi-Use Tester used>** • Measure item No. 21 “Boost Pressure” of Service Data.
	Inspection condition		For boost pressure measurement and correction data calculation, see Gr15.
	Requirements		Coincides with atmospheric pressure → Gradually increases
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of turbocharger

[Fault code]
Diagnosis code: P0300/Flash code: 45
[Monitor]
Cylinder misfire (multiple cylinders)
[Fault (outline)]
Misfire multiple cylinders
[Diagnosis check]
- Misfire is detected at two or more cylinders

[Code generation condition]
- Misfire in one cylinder is detected after another.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Misfire in one cylinder

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector
- Malfunction of electronic control unit
- Malfunction of fuel
- Malfunction of engine compression pressure

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0301/Flash code: 45
[Monitor]
Cylinder misfire (individual cylinders)
[Fault (outline)]
Misfire individual cylinder 1
[Diagnosis check]
- Misfire at No. 1 cylinder is detected.

[Code generation condition]
- Misfire has been detected for a total of 250 times.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 600 to 900 rpm
- Fuel injection quantity: 3 to 25 mg/cyc
- Water temperature: above 64°C {147°F}
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Engine operating mode: normal (engine in operation)
- PTO status: OFF
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Vehicle speed sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector
- Malfunction of electronic control unit
- Malfunction of fuel
- Malfunction of engine compression pressure

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0302/Flash code: 45
[Monitor]
Cylinder misfire (individual cylinders)
[Fault (outline)]
Misfire individual cylinder 2
[Diagnosis check]
- Misfire at No. 2 cylinder is detected.

[Code generation condition]
- Misfire has been detected for a total of 250 times. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 600 to 900 rpm
- Fuel injection quantity: 3 to 25 mg/cyc
- Water temperature: above 64°C {147°F}
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Engine operating mode: normal (engine in operation)
- PTO status: OFF
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Vehicle speed sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector
- Malfunction of electronic control unit
- Malfunction of fuel
- Malfunction of engine compression pressure

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0303/Flash code: 45
[Monitor]
Cylinder misfire (individual cylinders)
[Fault (outline)]
Misfire individual cylinder 3
[Diagnosis check]
- Misfire at No. 3 cylinder is detected.

[Code generation condition]
- Misfire has been detected for a total of 250 times. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 600 to 900 rpm
- Fuel injection quantity: 3 to 25 mg/cyc
- Water temperature: above 64°C {147°F}
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Engine operating mode: normal (engine in operation)
- PTO status: OFF
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Vehicle speed sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector
- Malfunction of electronic control unit
- Malfunction of fuel
- Malfunction of engine compression pressure

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0304/Flash code: 45
[Monitor]
Cylinder misfire (individual cylinders)
[Fault (outline)]
Misfire individual cylinder 4
[Diagnosis check]
- Misfire at No. 4 cylinder is detected.

[Code generation condition]
- Misfire has been detected for a total of 250 times. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 600 to 900 rpm
- Fuel injection quantity: 3 to 25 mg/cyc
- Water temperature: above 64°C {147°F}
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Engine operating mode: normal (engine in operation)
- PTO status: OFF
- Water temperature sensor: in order
- Engine speed sensor: in order
- Cylinder recognition sensor: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Vehicle speed sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector
- Malfunction of electronic control unit
- Malfunction of fuel
- Malfunction of engine compression pressure

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0335/Flash code: 15
[Monitor]
Failure of engine speed sensor
[Fault (outline)]
No pulse check
[Diagnosis check]
- Engine speed sensor output signal during engine operation is monitored.

[Code generation condition]
- No signal is received from engine speed sensor during engine operation.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

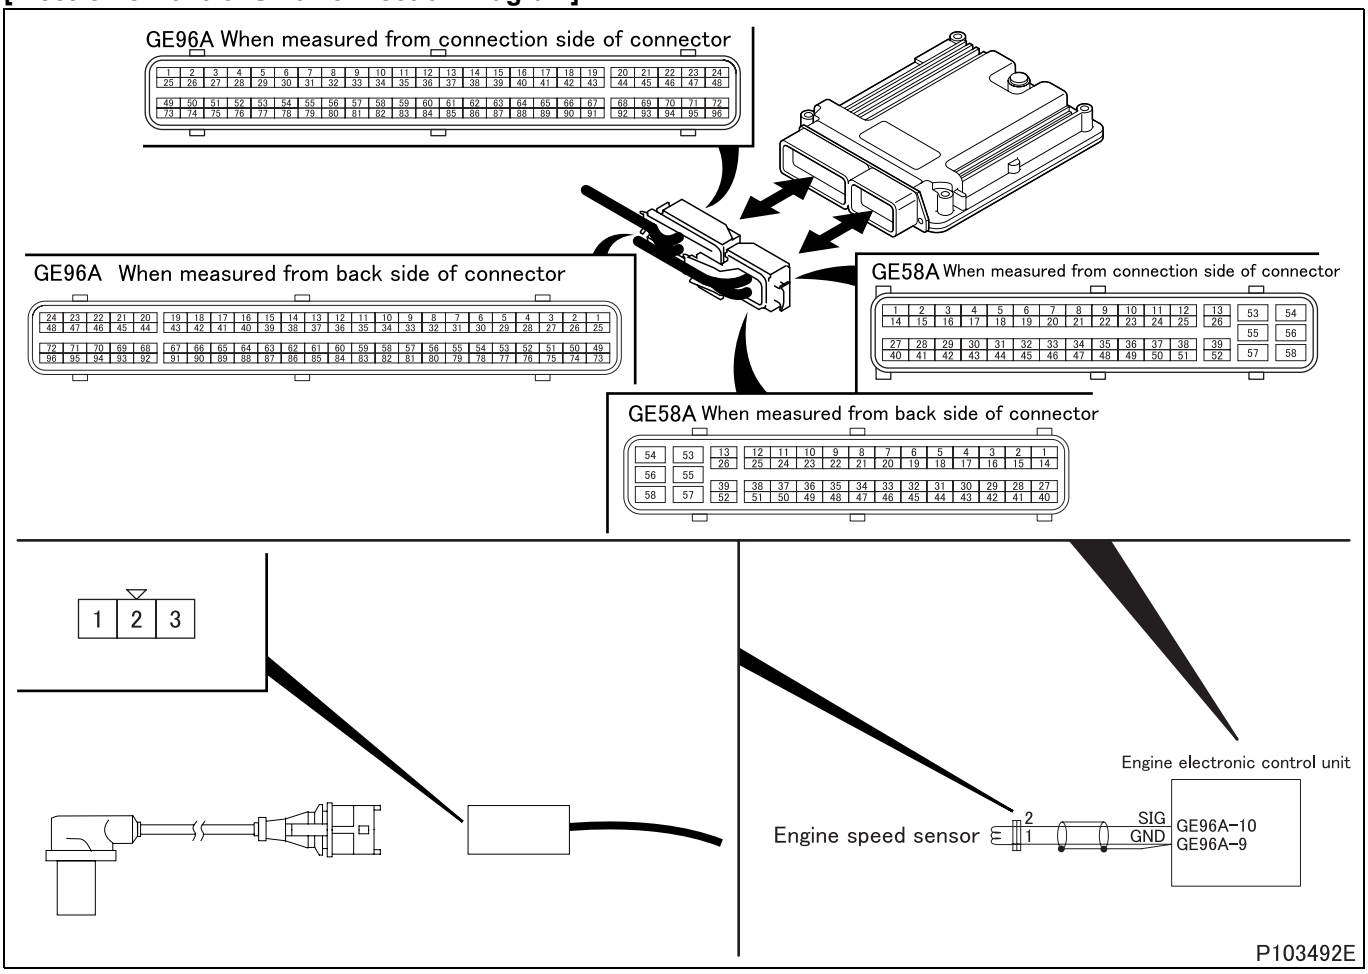
[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)

[Control effected by electronic control unit during fault]
- Control is effected using cylinder recognition sensor only.
- Misfire detection is stopped.
- Engine torque is limited.
- Auto cruise control stopped
- Related fault check is stopped.

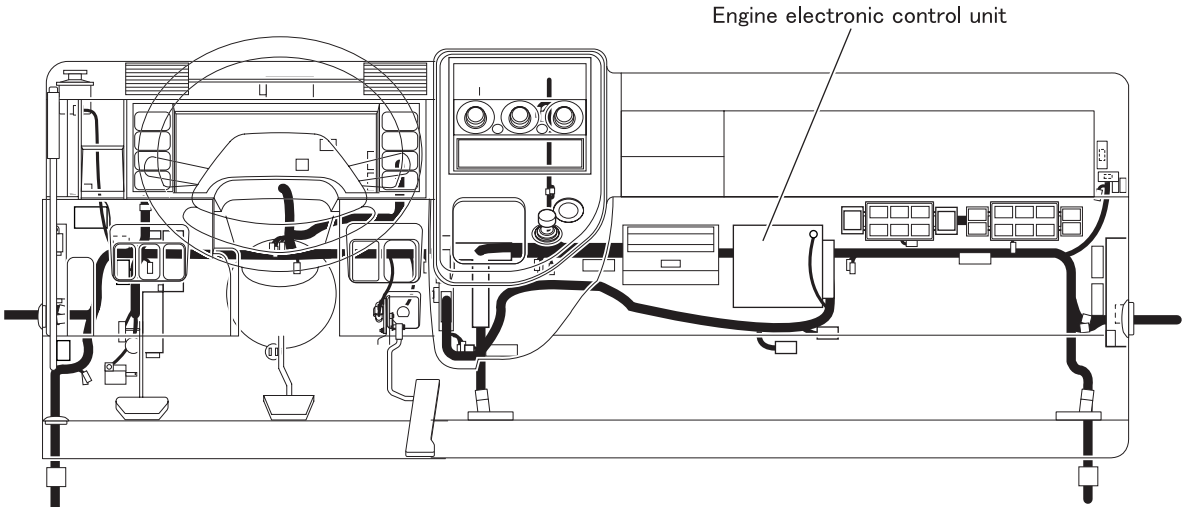
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and engine speed sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

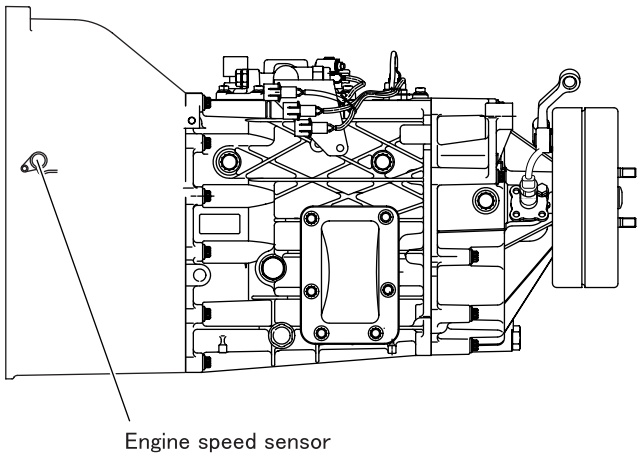
[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



Left side view of transmission



P103620E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne” . **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

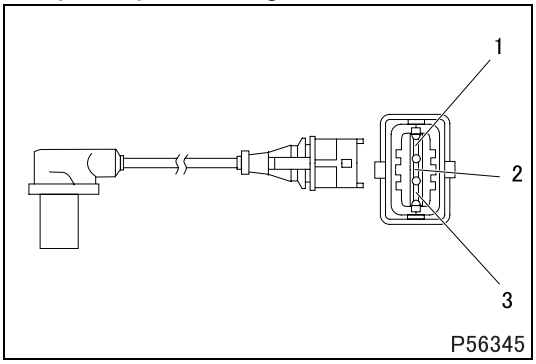
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 9 and 10.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		860 ± 86 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of engine speed sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of engine speed sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		860 ± 86 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 10.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 9.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0339/Flash code: 15
[Monitor]
Failure of engine speed sensor
[Fault (outline)]
Abnormality of pulse count
[Diagnosis check]
- Output pulses from engine speed sensor during engine operation are counted on basis of output signal from normal cylinder recognition sensor.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Engine speed output from engine speed sensor remains over 6000 rpm for 10 seconds.
  (Warning lamp (red) is lit and diagnosis code is displayed on first establishment of code generation condition.)

<Condition (2)>
- Engine speed remains below 300 rpm for 6 seconds during backup.
  (Warning lamp (orange) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: starting
- Engine speed: more than 500 rpm
- Engine speed: less than 400 rpm

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the color of warning lamp.
<Warning lamp: Orange>
- Effects no special control.

<Warning lamp: Red>
- Control is effected using cylinder recognition sensor only.
- Misfire detection is stopped.
- Engine torque is limited.
- Auto cruise control stopped
- Related fault check is stopped.

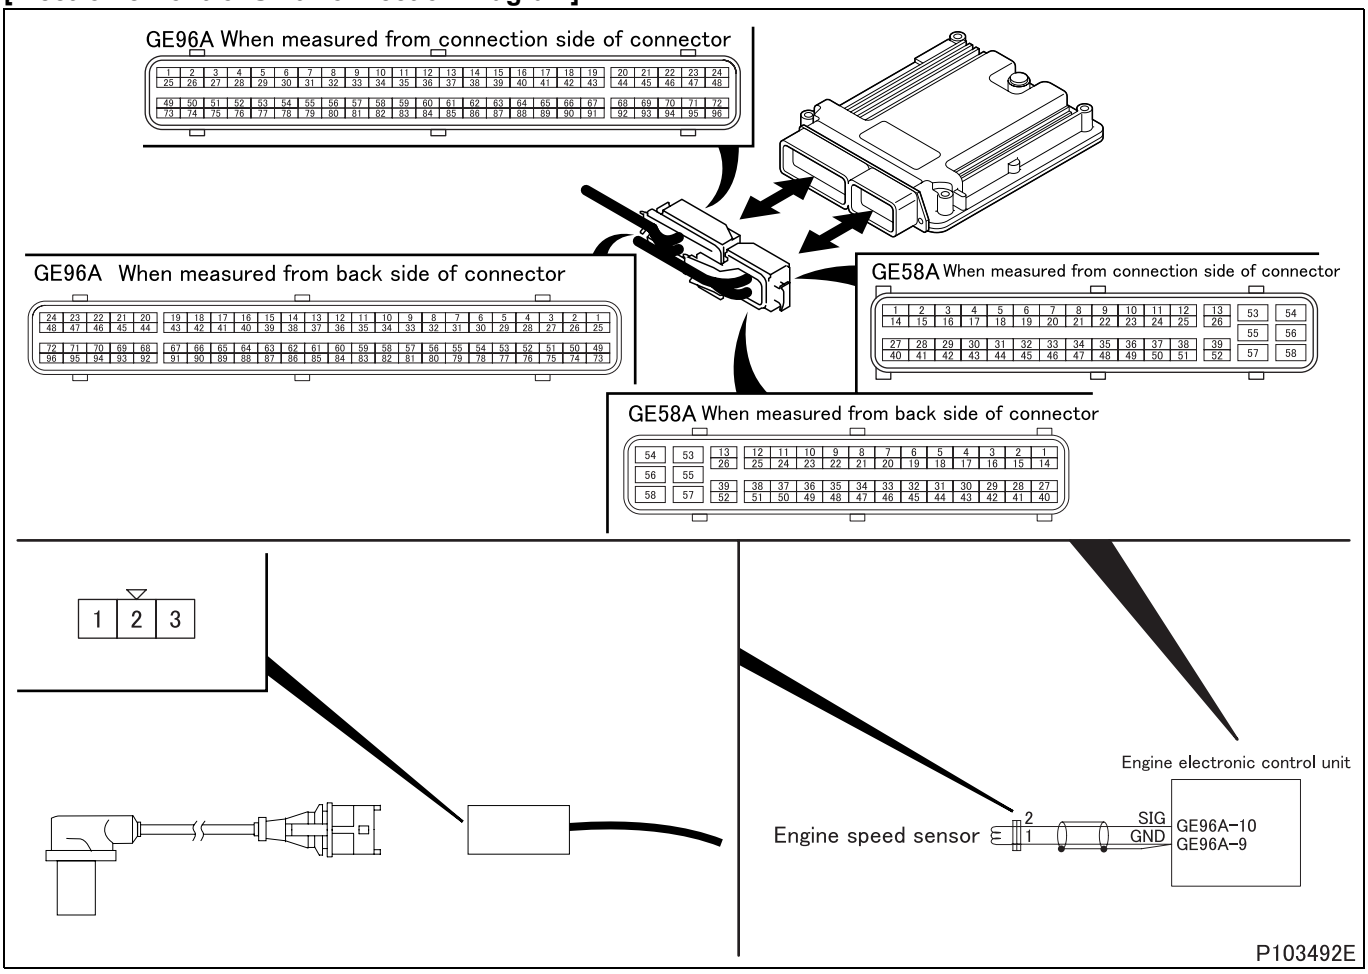
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and engine speed sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

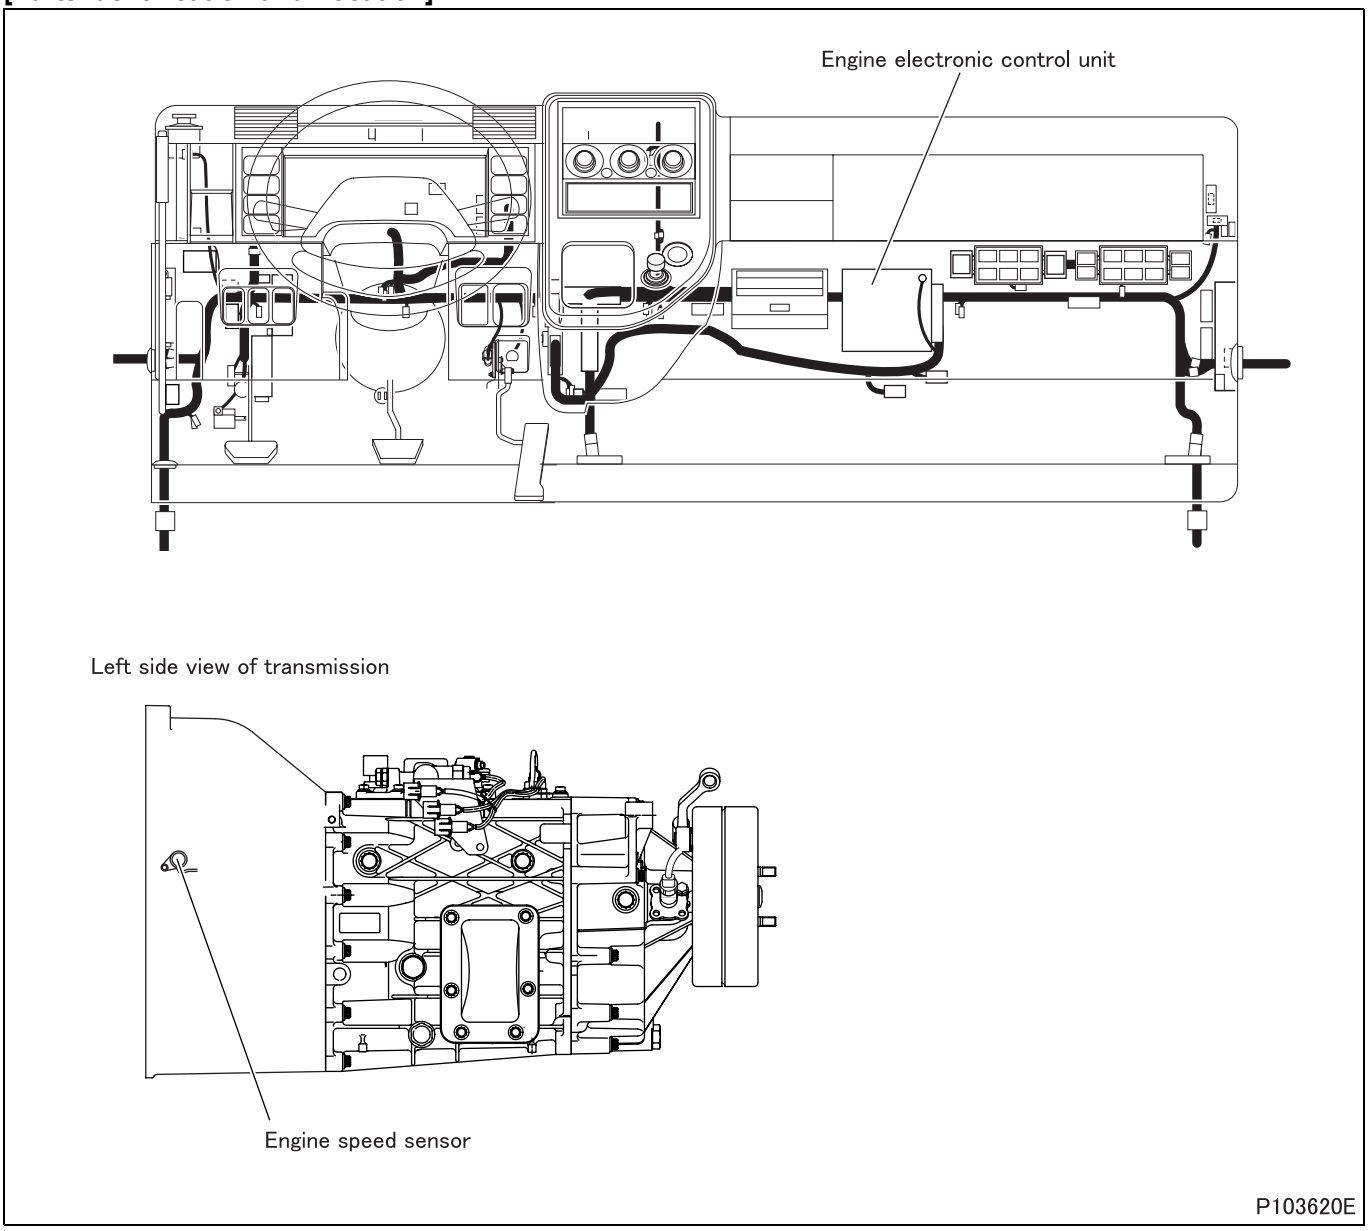
<Condition (1)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

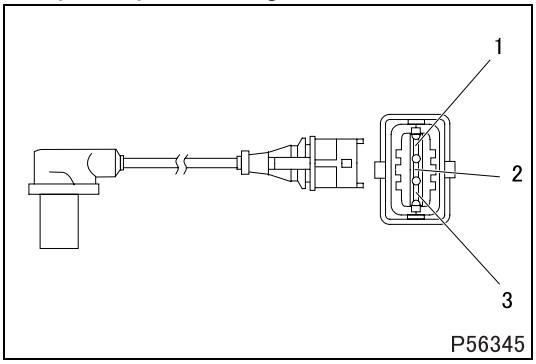
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 9 and 10.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		860 ± 86 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of engine speed sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of engine speed sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		860 ± 86 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 10.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 9.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0340/Flash code: 12
[Monitor]
Failure of cylinder recognition sensor
[Fault (outline)]
No pulse check
[Diagnosis check]
- Output pulses from engine speed sensor are counted to check pulse output from cylinder recognition sensor during engine operation.

[Code generation condition]
- No pulse is output from cylinder recognition sensor despite more than 132 pulses from engine speed sensor at engine start. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

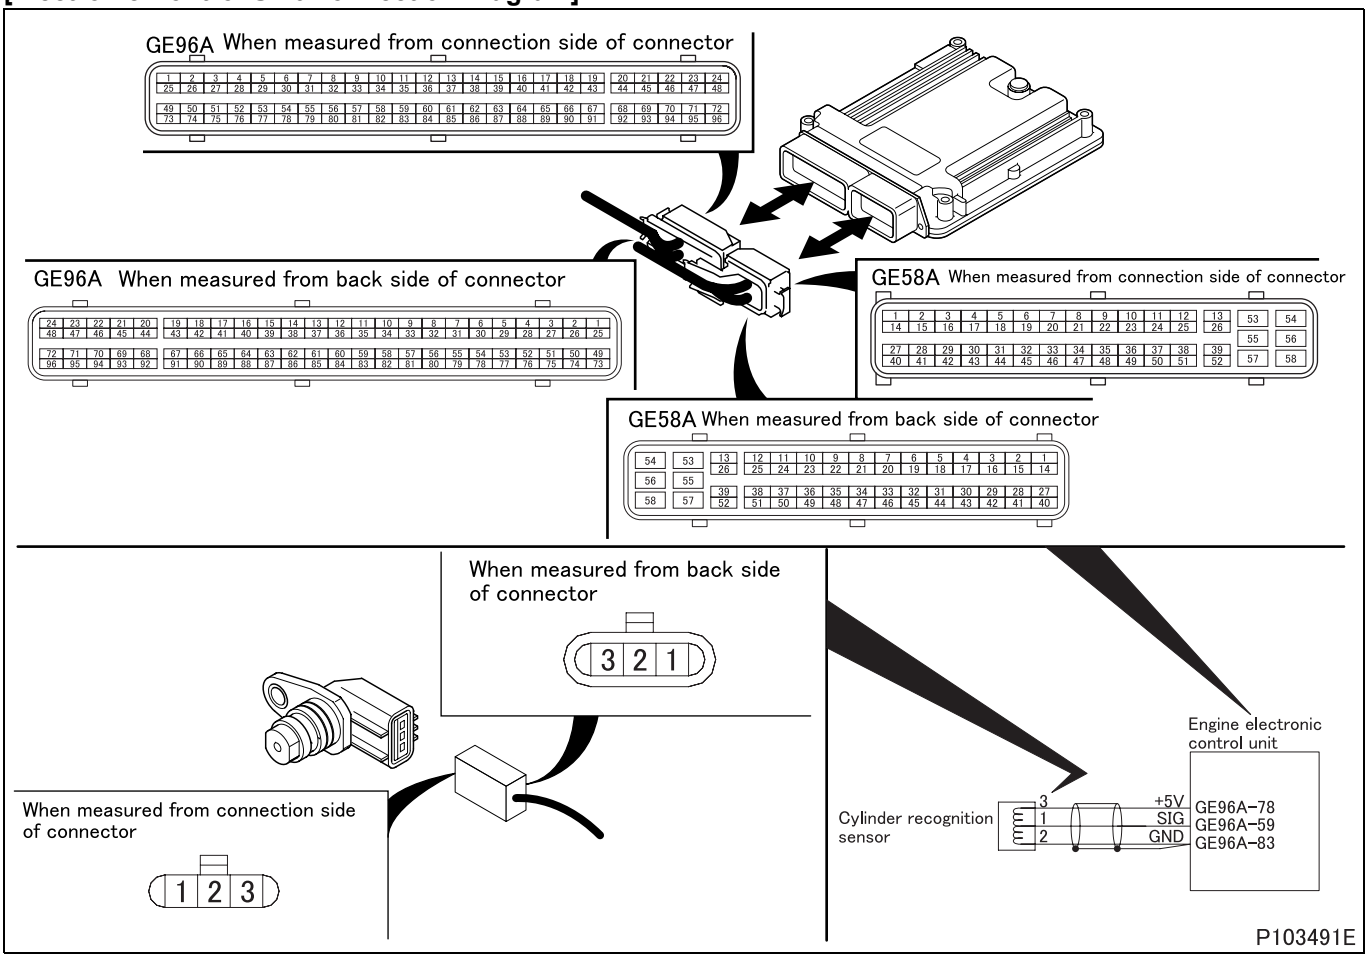
[Diagnostic requirement]
- Starter switch: ON
- Engine speed: more than 20 rpm

[Control effected by electronic control unit during fault]
- Control is effected with engine speed sensor only.
- Misfire detection is stopped.
- Auto cruise control stopped
- Related fault check is stopped.

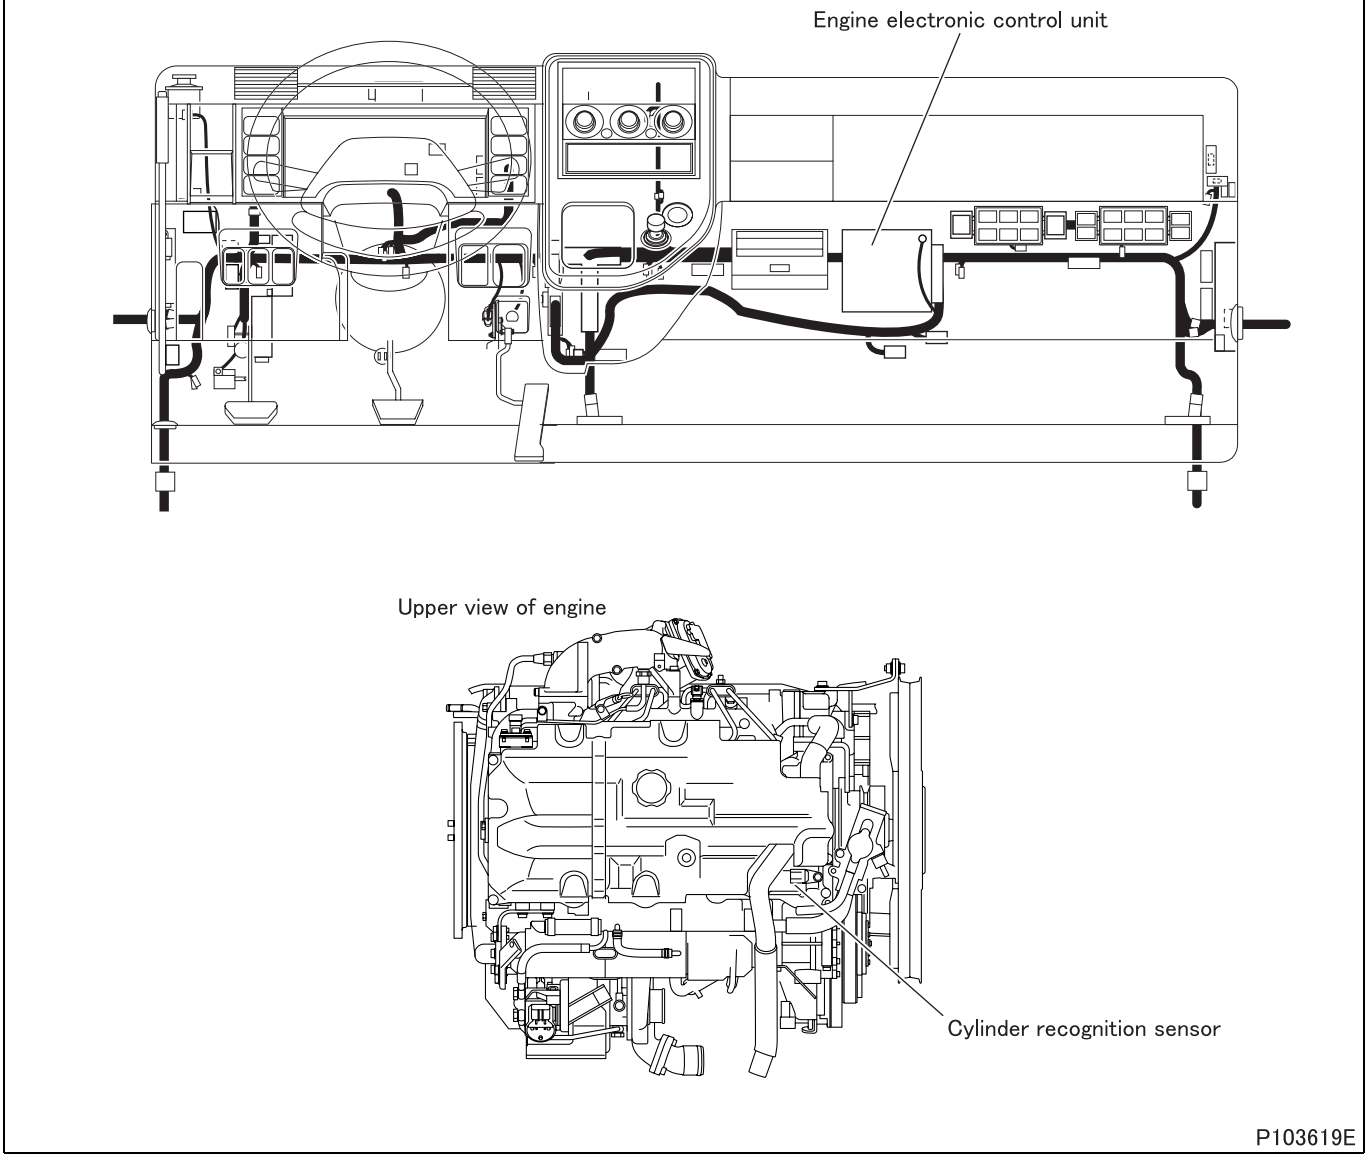
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and engine speed sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 59 (+) and 83 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		1 V or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 78 (+) and 83 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

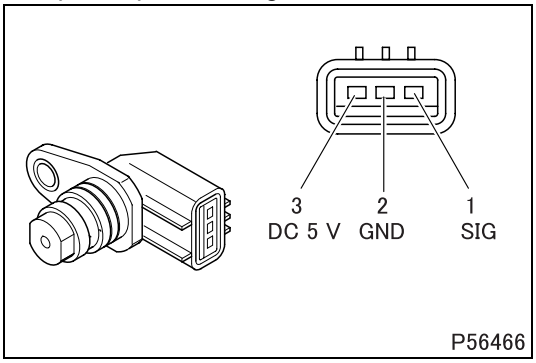
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 83 (+) and 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and 3.
	Inspection condition		–
	Requirements		200 to 1800 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between sensor connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 78.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 83.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 59.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0344/Flash code: 12
[Monitor]
Failure of cylinder recognition sensor
[Fault (outline)]
Abnormality of pulse count
[Diagnosis check]
- Output pulses from cylinder recognition sensor during engine operation are counted.

[Code generation condition]
- Number of output pulses from cylinder recognition sensor at engine start exceeds 240.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

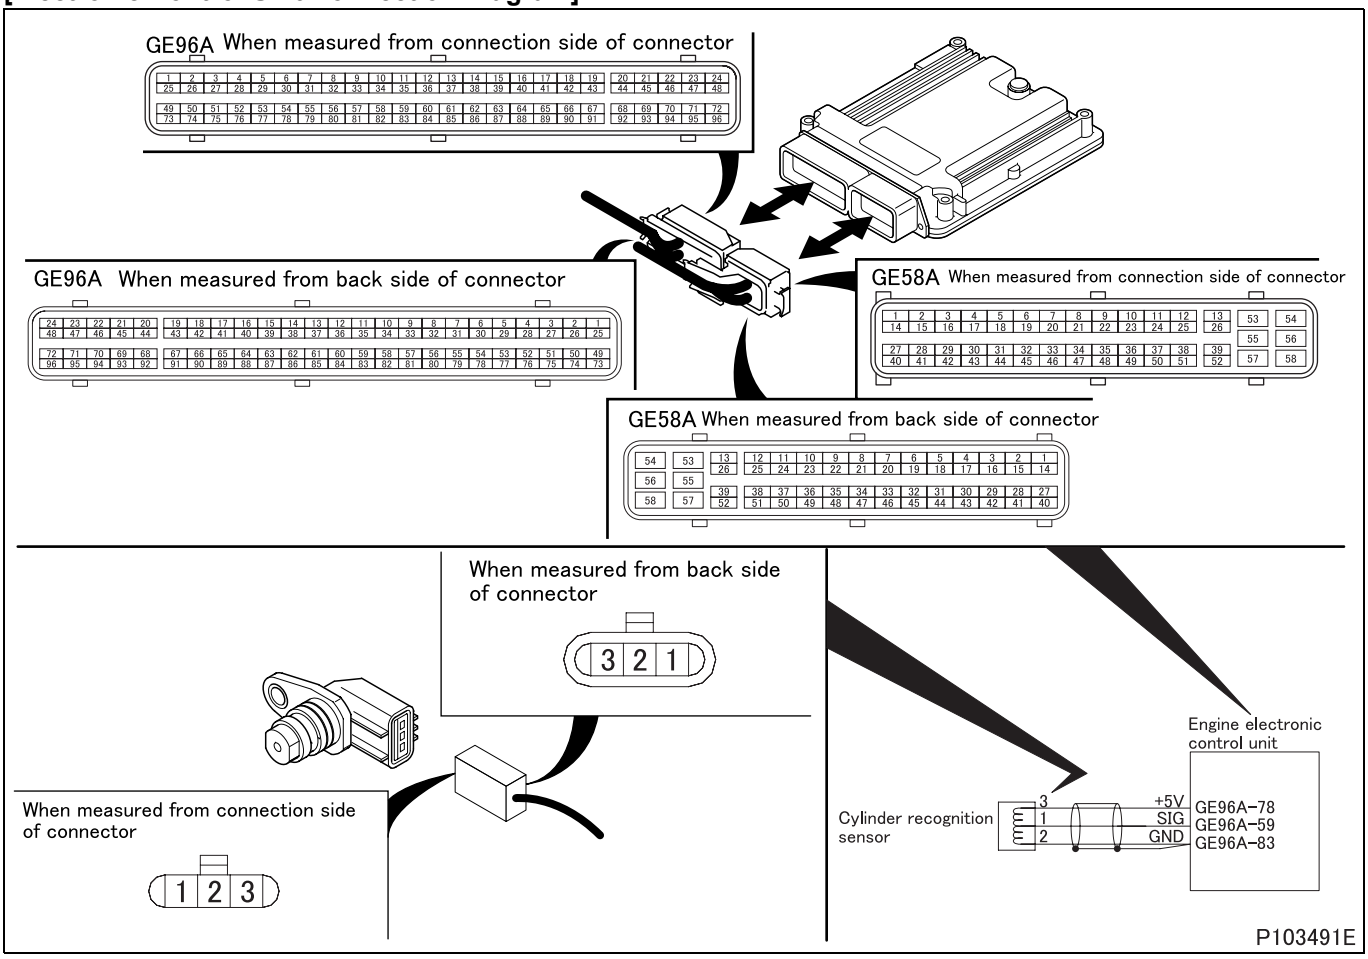
[Diagnostic requirement]
- Starter switch: ON
- Engine speed: more than 20 rpm

[Control effected by electronic control unit during fault]
- Control is effected with engine speed sensor only.
- Misfire detection is stopped.
- Auto cruise control stopped
- Related fault check is stopped.

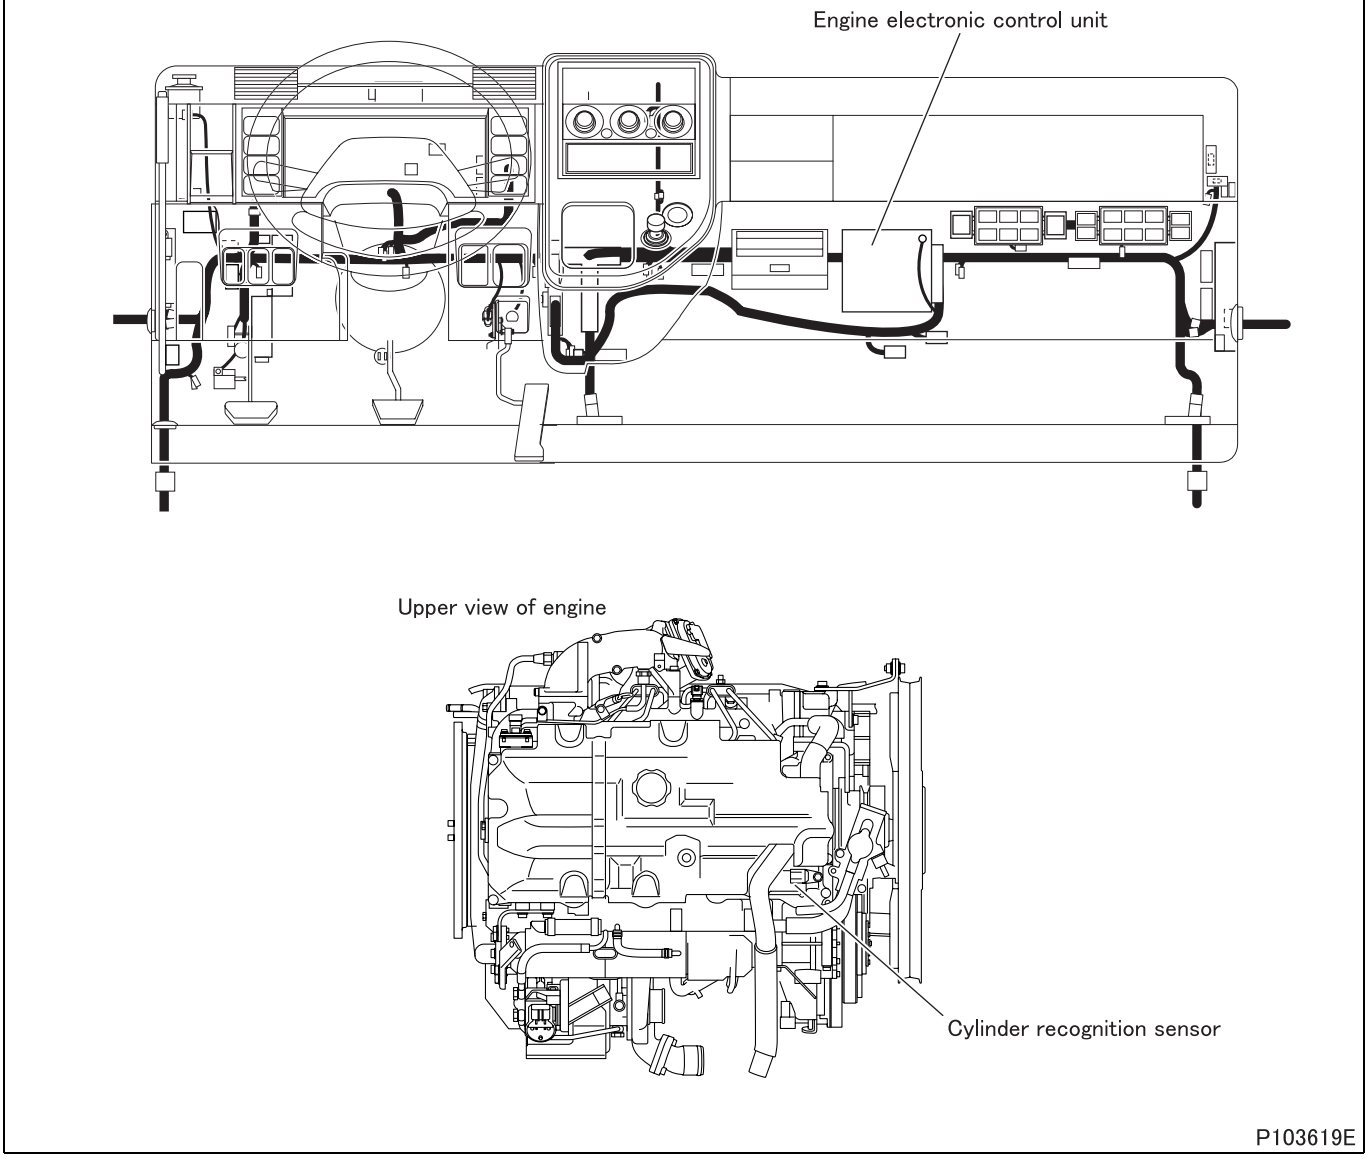
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 59 (+) and 83 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		1 V or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 78 (+) and 83 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

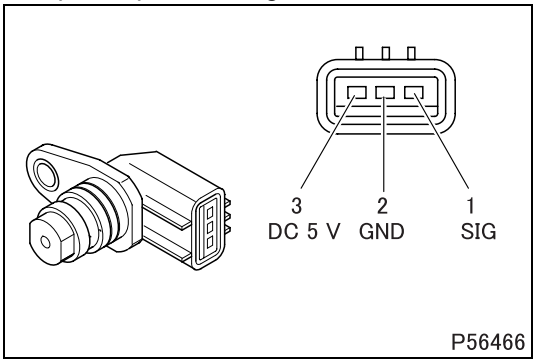
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 83 (+) and 53 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and 3.
	Inspection condition		–
	Requirements		200 to 1800 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between sensor connector terminal No. 3 (+) and 2 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 78.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 83.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 59.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Ne”. **<Multi-Use Tester used>** • Measure item No. 01 “Engine Revolution” of Service Data.
	Inspection condition		–
	Requirements		Same indication as tachometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0381/Flash code: 26
[Monitor]
Failure of preheating indicator lamp
[Fault (outline)]
- Short circuit battery
- Short circuit ground
- Open circuit
- Overload

[Diagnosis check]
- Preheating indicator lamp circuit is monitored for fault.

[Code generation condition]
- Preheating indicator lamp circuit remains open, shorted or overcurrent as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.
- Fault diagnosis is performed each time when the control is halted.

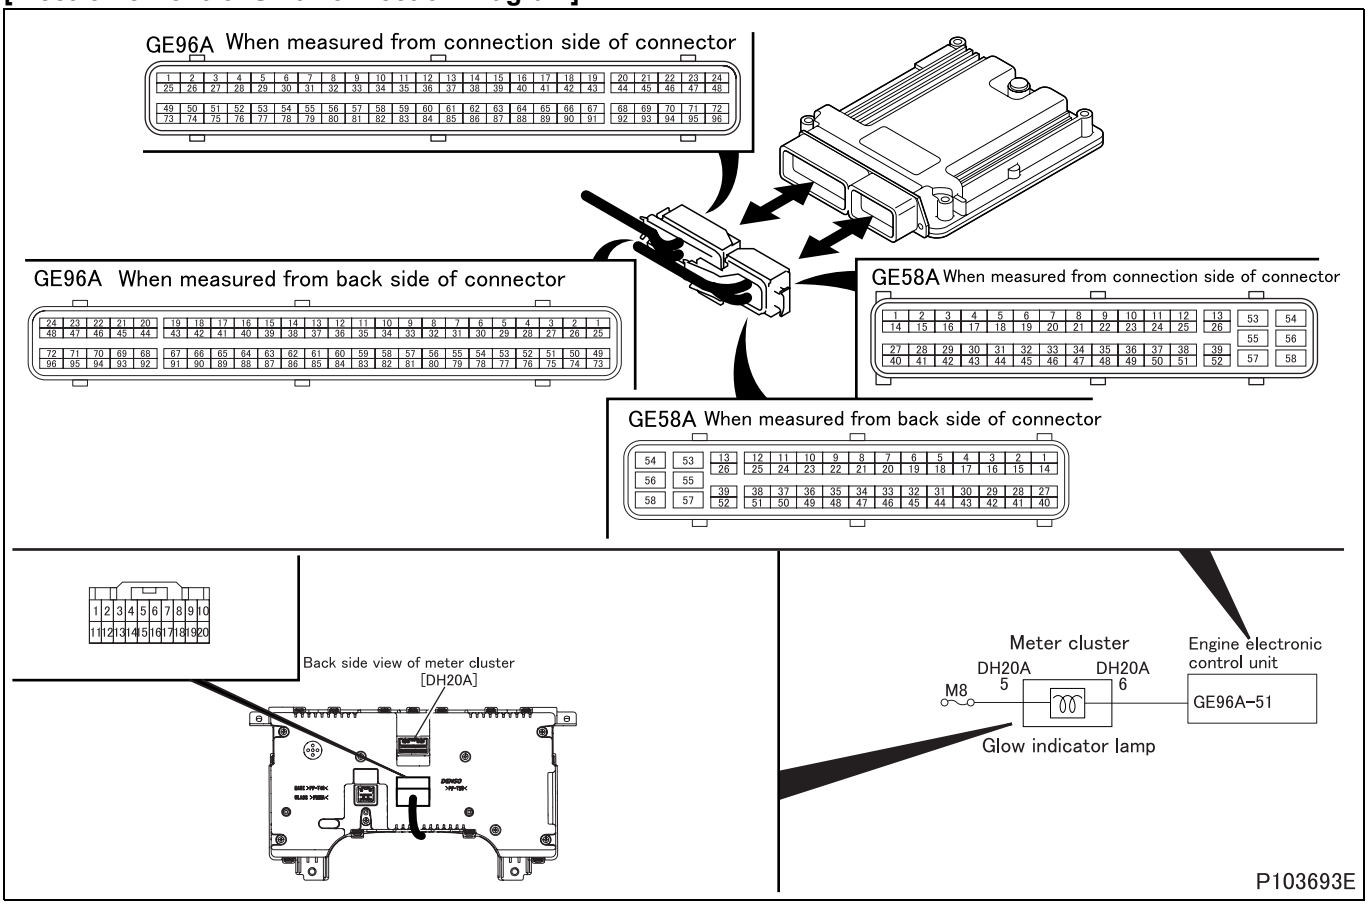
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

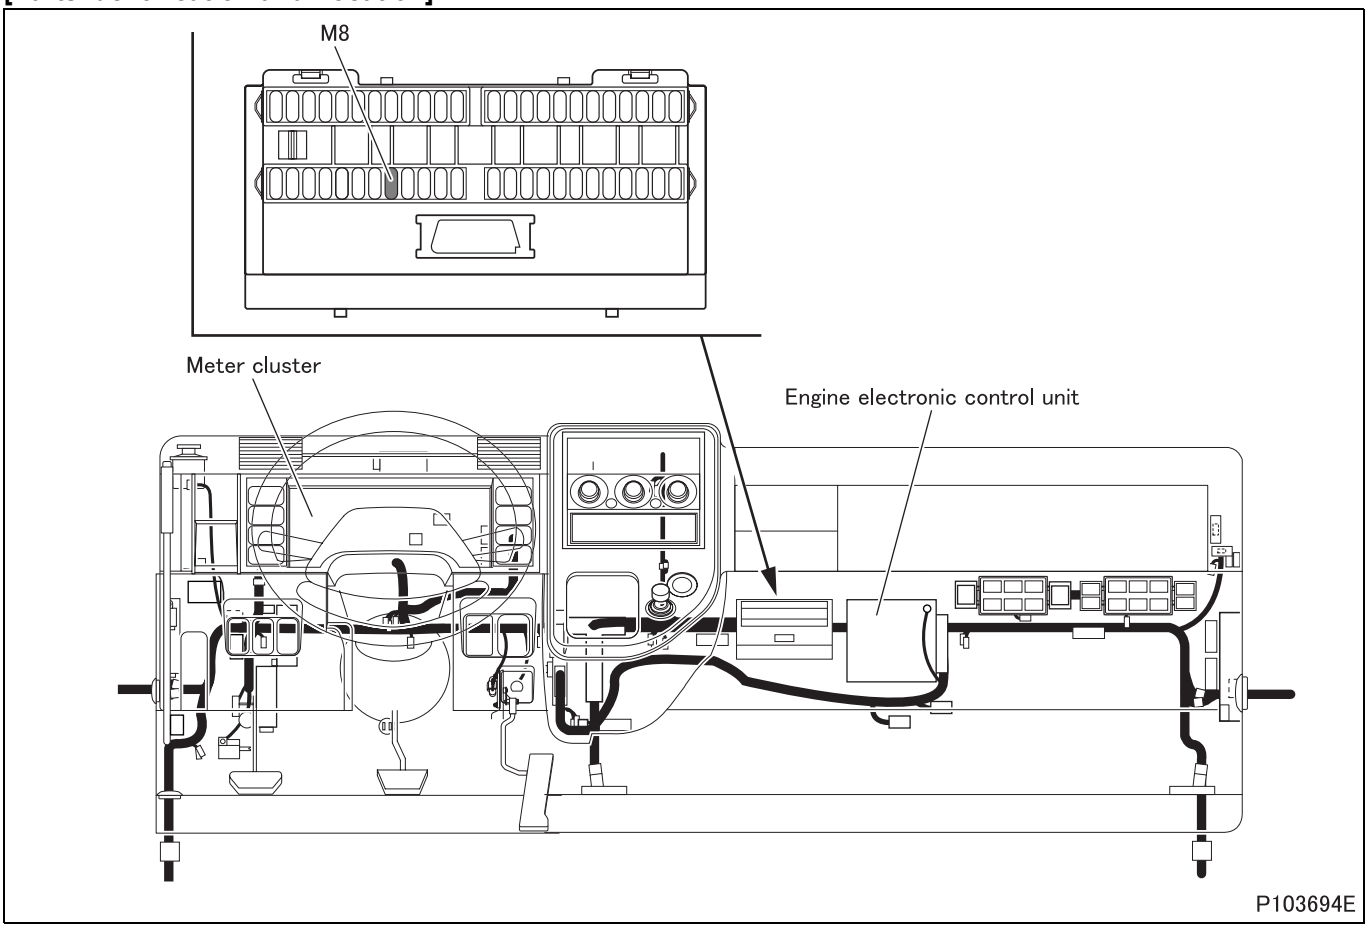
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and meter cluster (preheating indicator lamp)
- Malfunction of each connector
- Malfunction of meter cluster (preheating indicator lamp)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform item No. AD “Glow Indicator Lamp” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		Lamp illuminates for six seconds.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Ground connector (GE96A) terminal No. 51.
	Inspection condition		Measure from back side of connector of harness with harness connected
	Requirements		Lamp illuminates.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between fuse and meter cluster
	Maintenance item		Check circuit between fuse M8 and meter cluster connector (DH20A) terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between meter cluster and electronic control unit
	Maintenance item		Check circuit between meter cluster connector (DH20A) terminal No. 6 and electronic control unit connector (GE96A) terminal No. 51
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of meter cluster
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of meter cluster or lamp
		NO	Modify connector.

[Fault code]
Diagnosis code: P0383/Flash code: 26
<FE83>
[Monitor]
Failure of preheating control
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- Diesel particulate filter indicator lamp circuit is monitored for preheater in operation.

[Code generation condition]
- Preheating control circuit remains shorted to ground as detected for 0.2 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

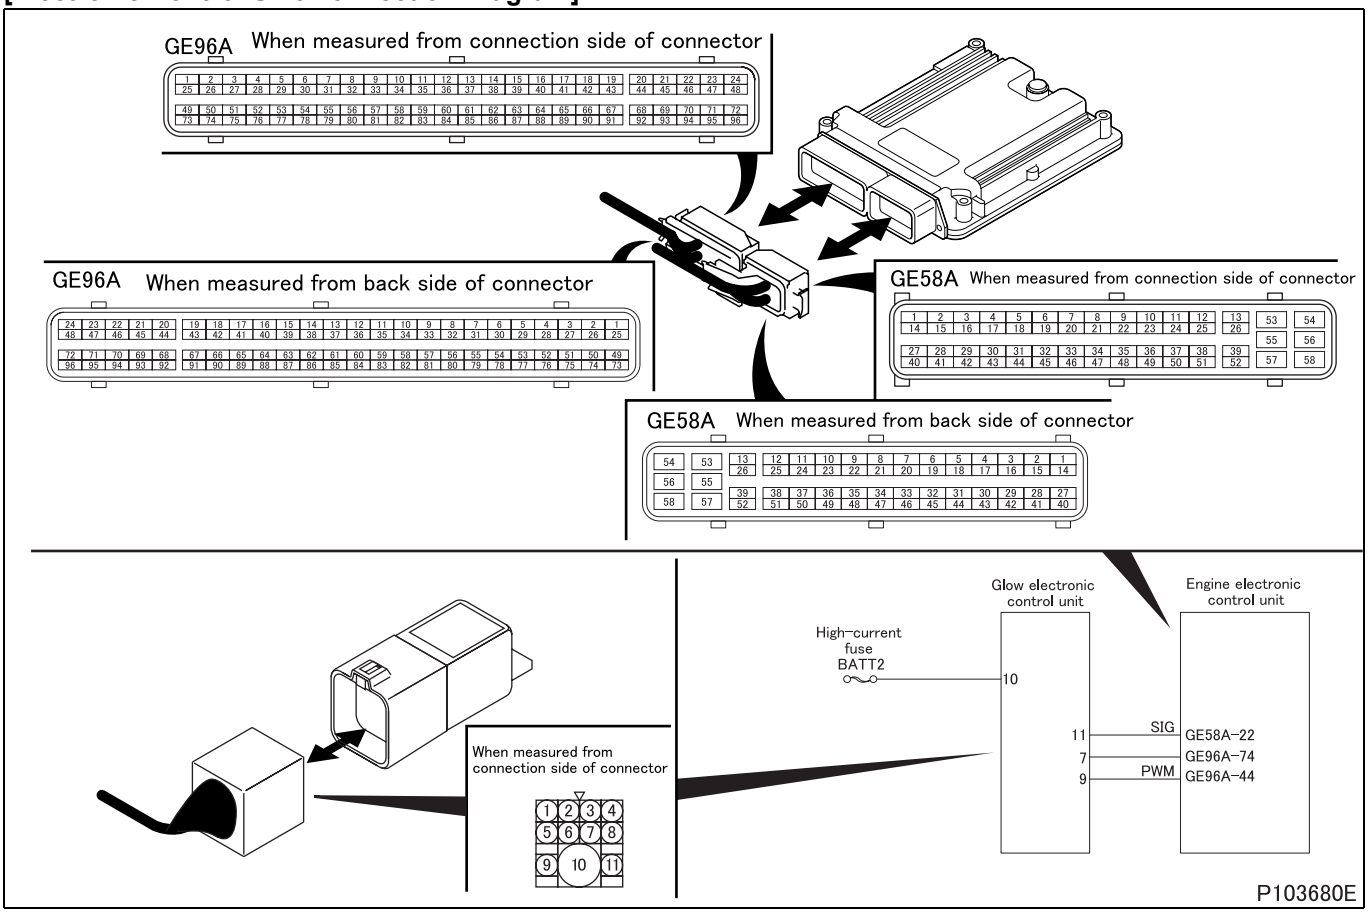
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

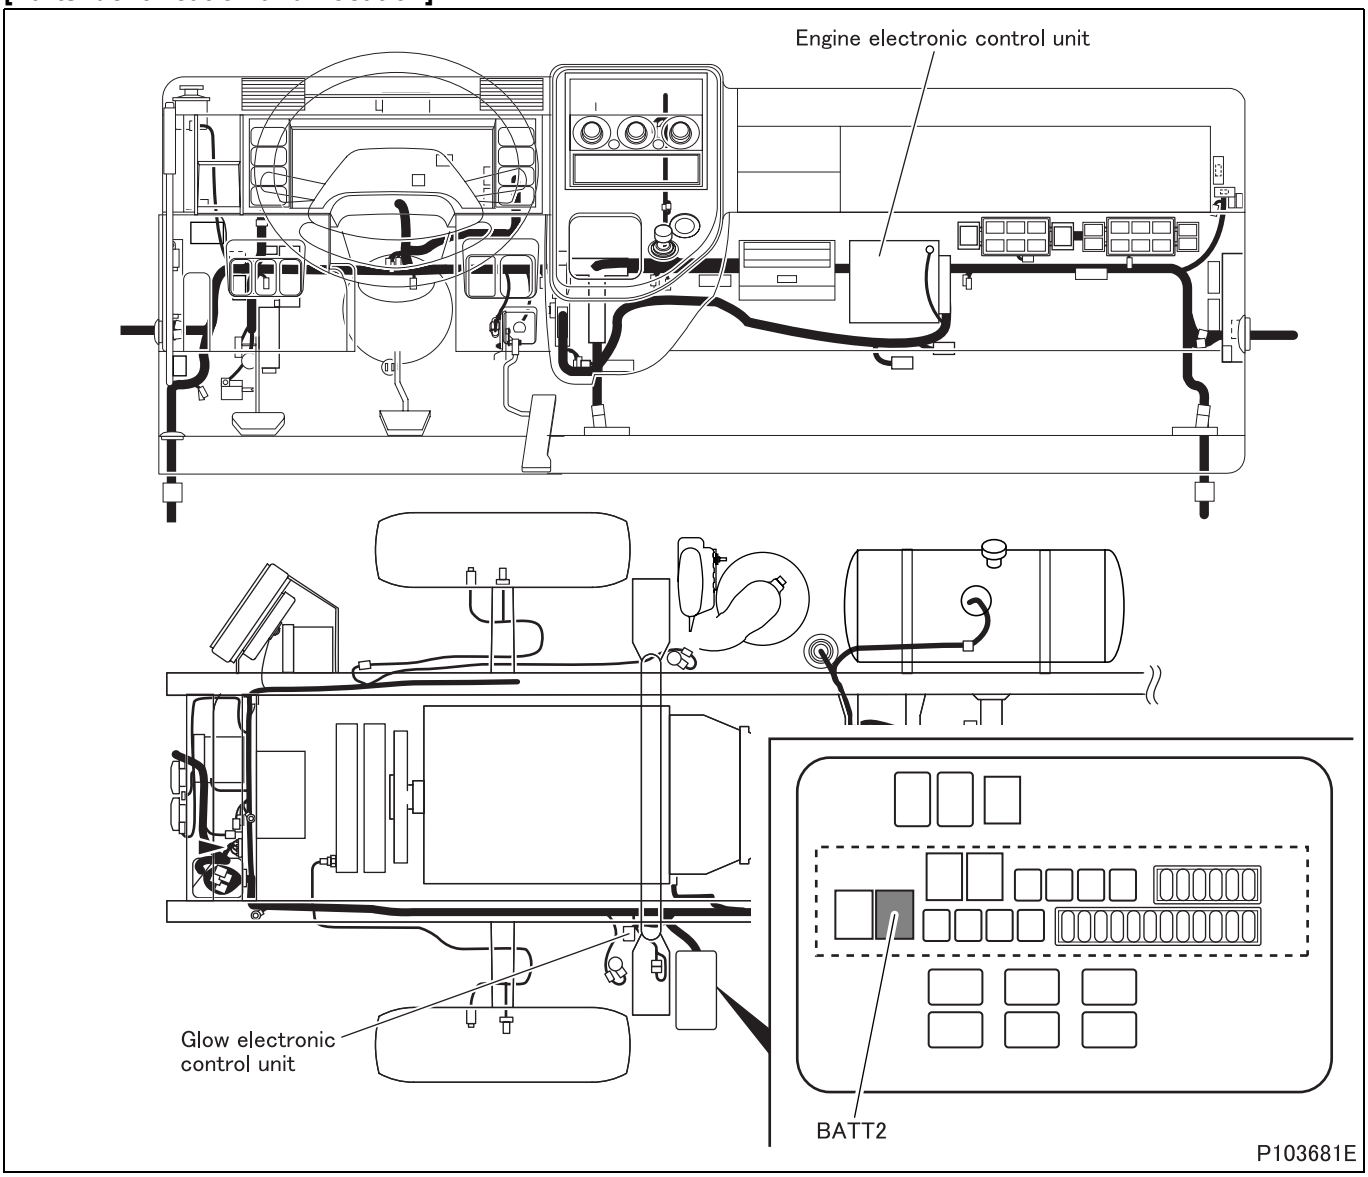
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and glow electronic control unit
- Malfunction of each connector
- Malfunction of glow electronic control unit
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

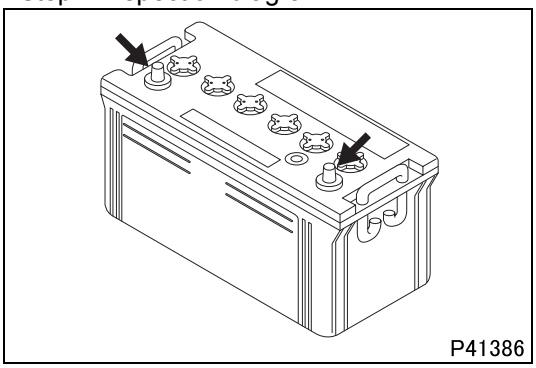
Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B5 “GCU (GLOW PLUG)”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0MPH}) • Starter switch: ON • Engine: stopped
	Requirements		Power ON to glow plug
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of high-current fuse (BATT2)
	Maintenance item		Check open circuit of high-current fuse (BATT2)
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Replacement of fuse

Step 3	Inspection items		Inspection of harness between glow electronic control unit and high-current fuse (BATT2)
	Maintenance item		Check circuit between glow electronic control unit connector terminal No. 10 and high-current fuse (BATT2).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify harness.

Step 4	Inspection items		Inspection of battery
	Maintenance item		Measure value of voltage between battery terminals (+) and (–).
	Inspection condition		–
	Requirements		8 to 16 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspection of battery (See Gr54.)

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

<Except FE83>
[Monitor]
Failure of preheating control
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- Glow drive relay circuit is monitored for fault when glow drive relay is operated.

[Code generation condition]
- Glow drive relay circuit remains shorted to ground as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

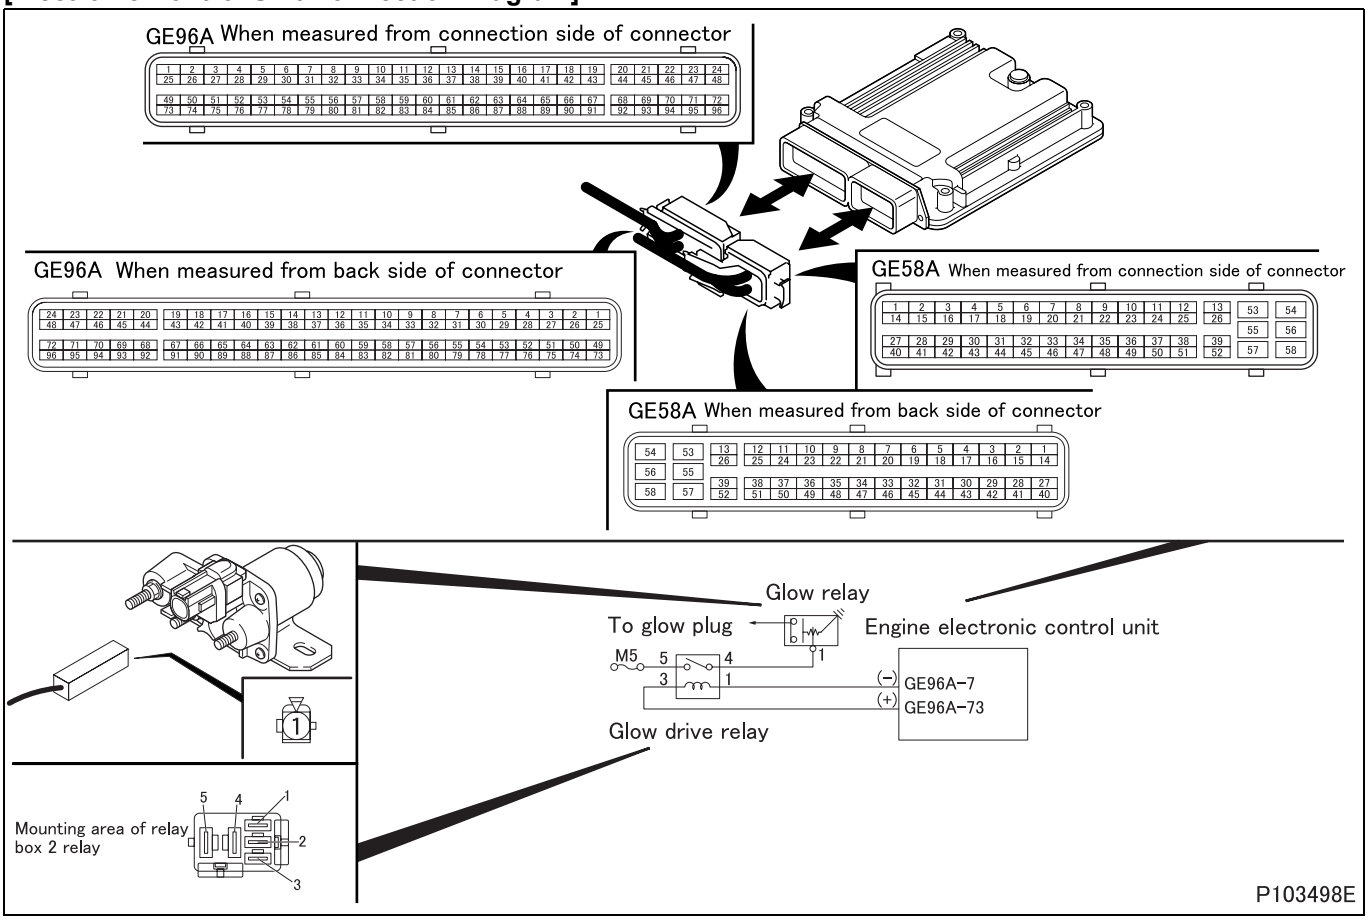
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

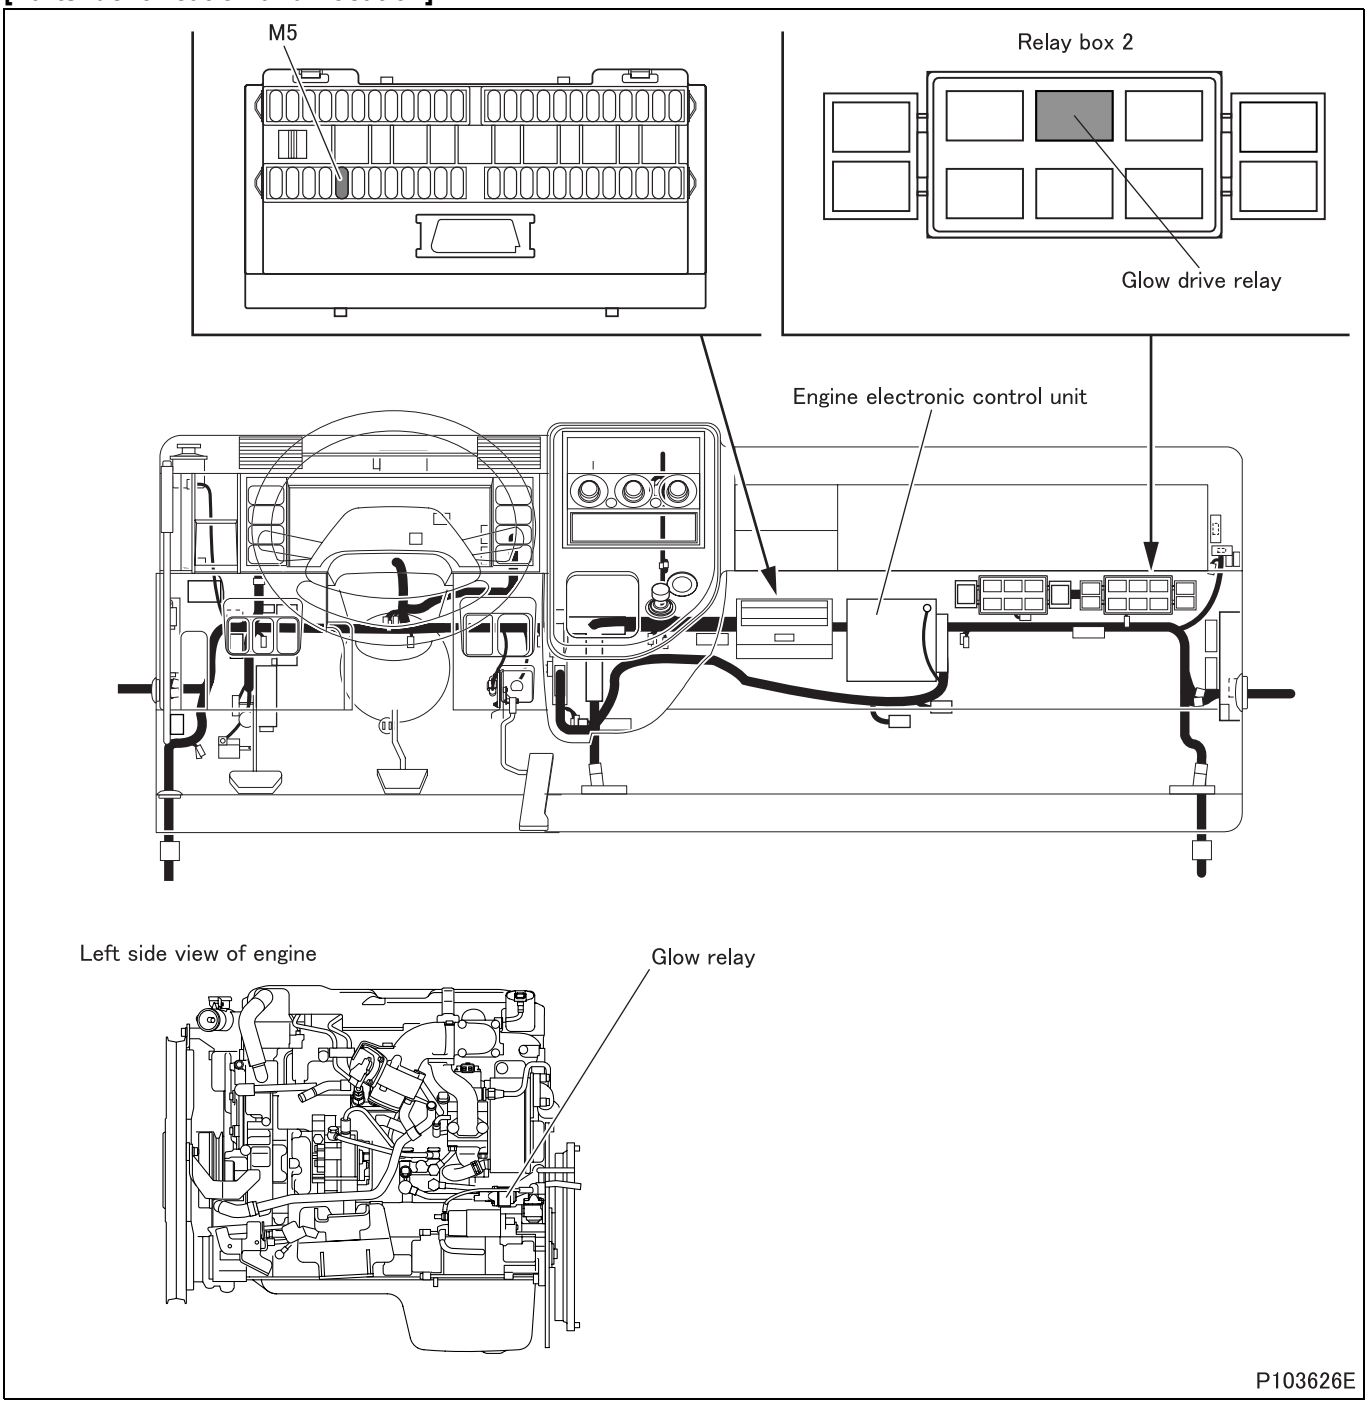
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and glow drive relay
- Malfunction of each connector
- Malfunction of glow drive relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AC “Relay for Glow Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

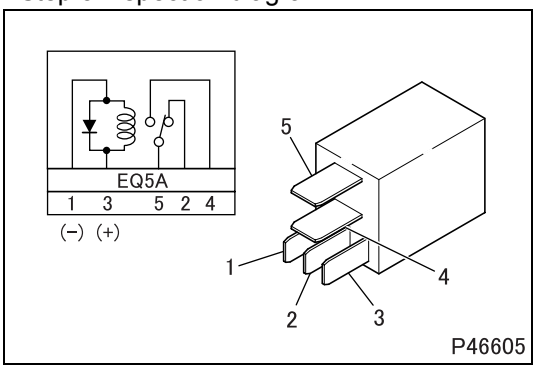
Step 2	Inspection items		Inspection of electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 73 (+) and 7 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AC “Relay for Glow Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across terminals No. 3 (+) and 1 (–)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 73.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 7.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AC “Relay for Glow Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0384/Flash code: 26
<FE83>
[Monitor]
Failure of preheating control
[Fault (outline)]
Short circuit battery
[Diagnosis check]
- Diesel particulate filter indicator lamp circuit is monitored for preheater in operation.

[Code generation condition]
- Preheating control circuit remains shorted to power supply as detected for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

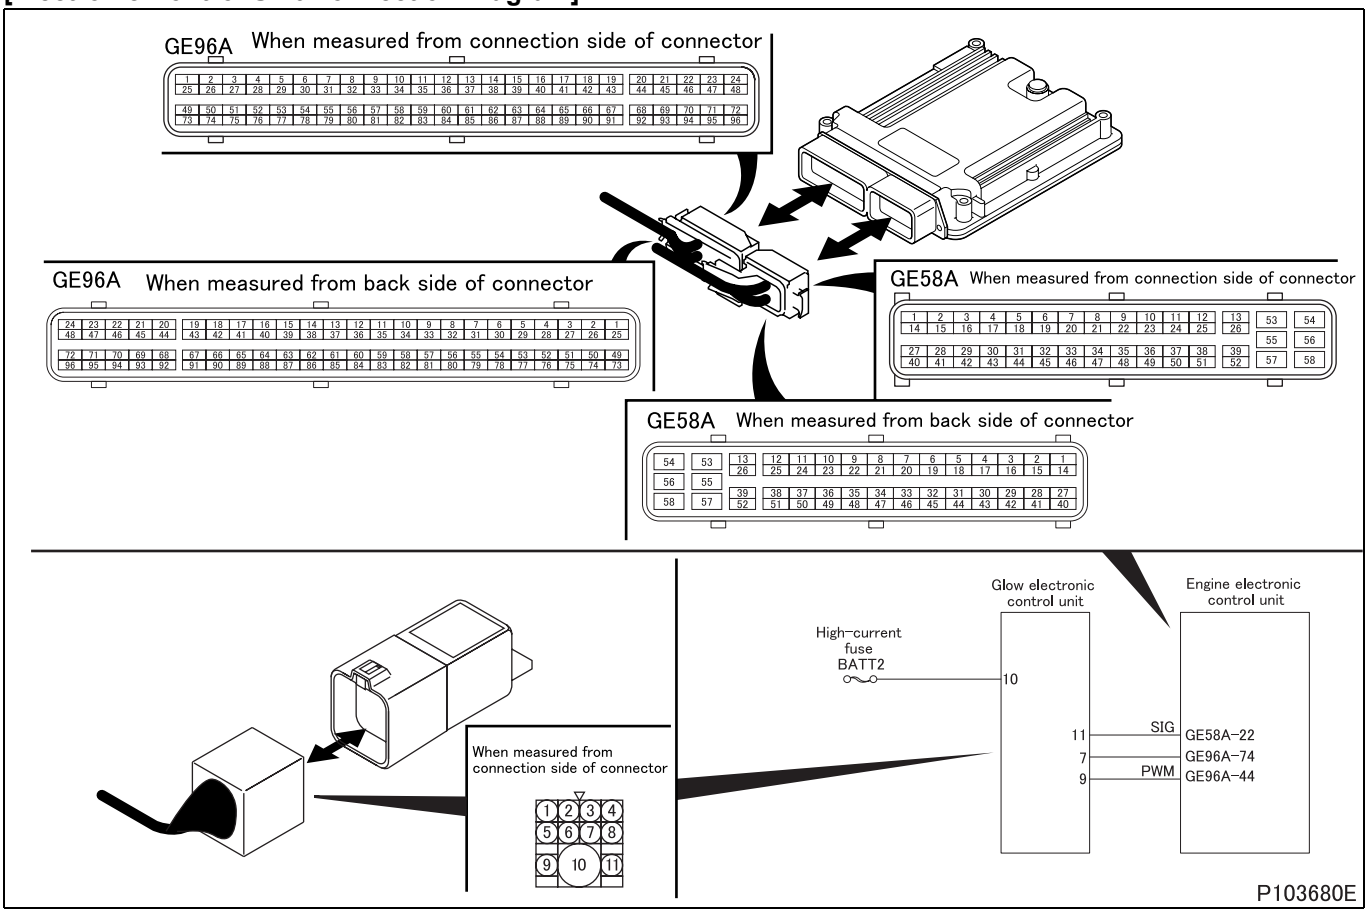
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

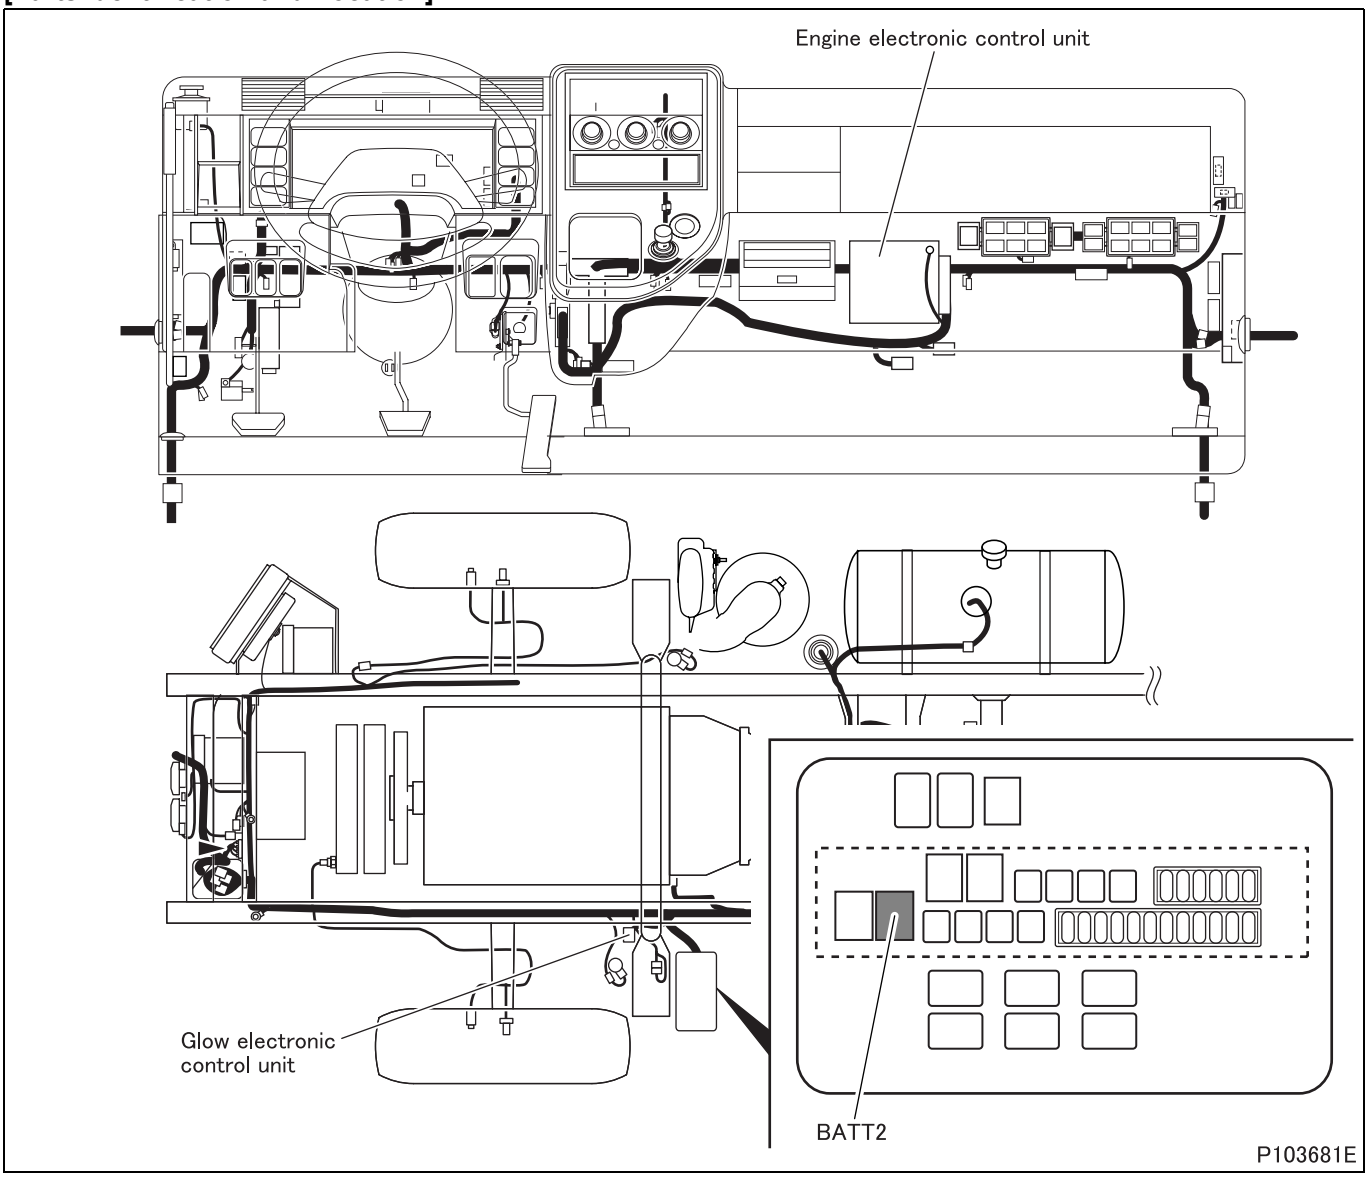
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and glow electronic control unit
- Malfunction of each connector
- Malfunction of glow electronic control unit
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

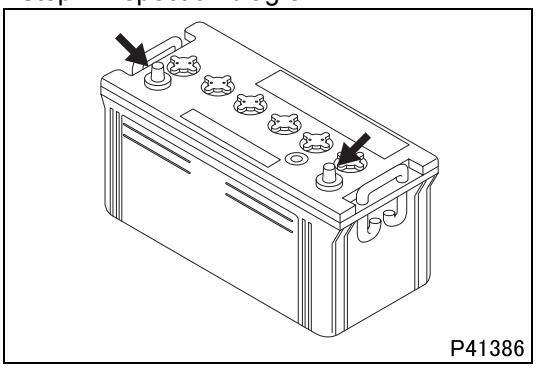
Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B5 “GCU (GLOW PLUG)”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0MPH}) • Starter switch: ON • Engine: stopped
	Requirements		Power ON to glow plug
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of high-current fuse (BATT2)
	Maintenance item		Check open circuit of high-current fuse (BATT2)
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Replacement of fuse

Step 3	Inspection items		Inspection of harness between glow electronic control unit and high-current fuse (BATT2)
	Maintenance item		Check circuit between glow electronic control unit connector terminal No. 10 and high-current fuse (BATT2).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify harness.

Step 4	Inspection items		Inspection of battery
	Maintenance item		Measure value of voltage between battery terminals (+) and (–).
	Inspection condition		–
	Requirements		8 to 16 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspection of battery (See Gr54.).

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

<Except FE83>
[Monitor]
Failure of preheating control
[Fault (outline)]
Short circuit battery
[Diagnosis check]
- Glow drive relay circuit is monitored for fault when glow drive relay is operated.

[Code generation condition]
- Glow drive relay circuit remains shorted to power supply as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

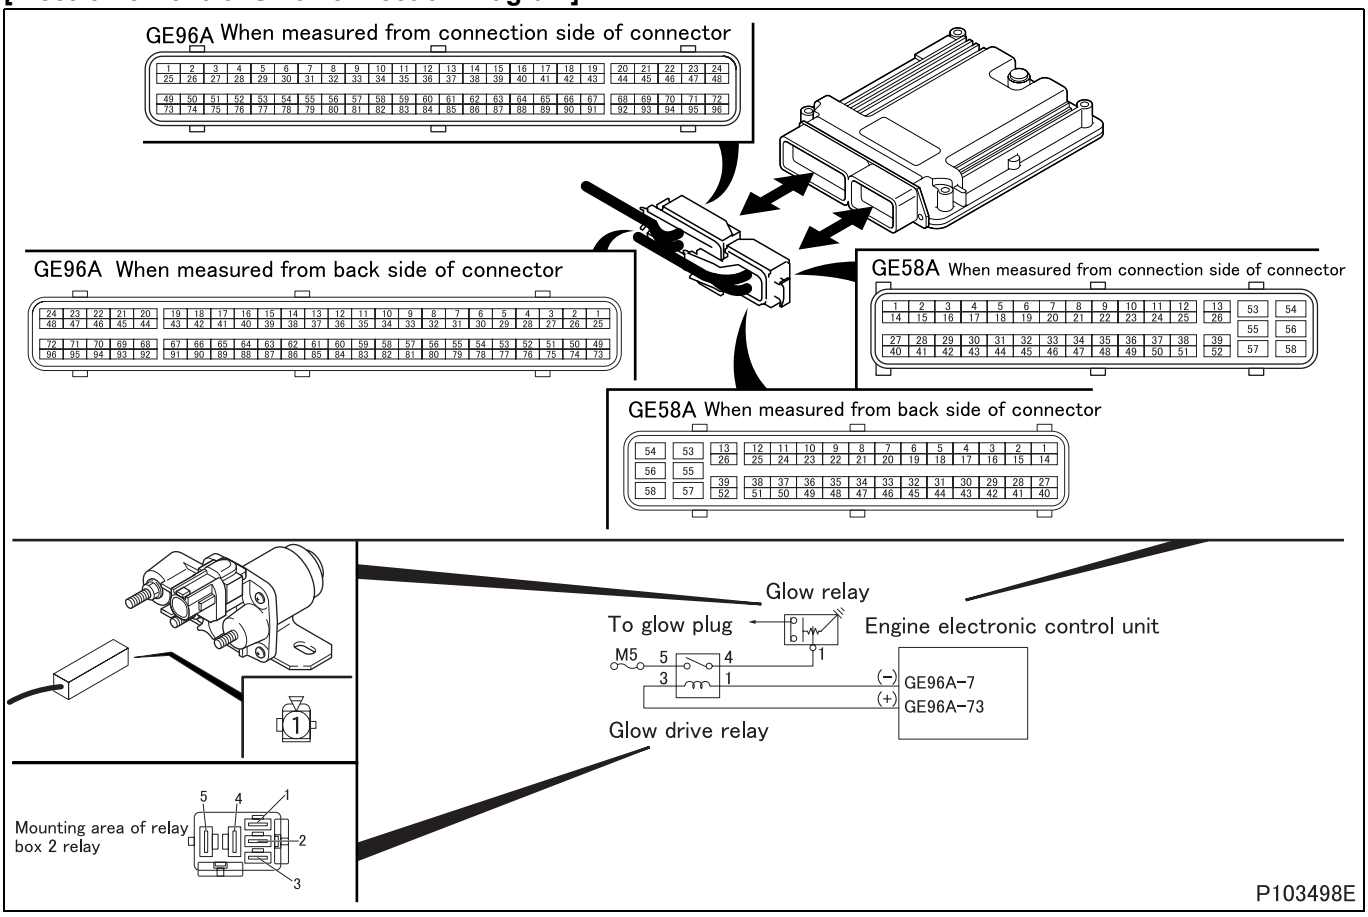
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

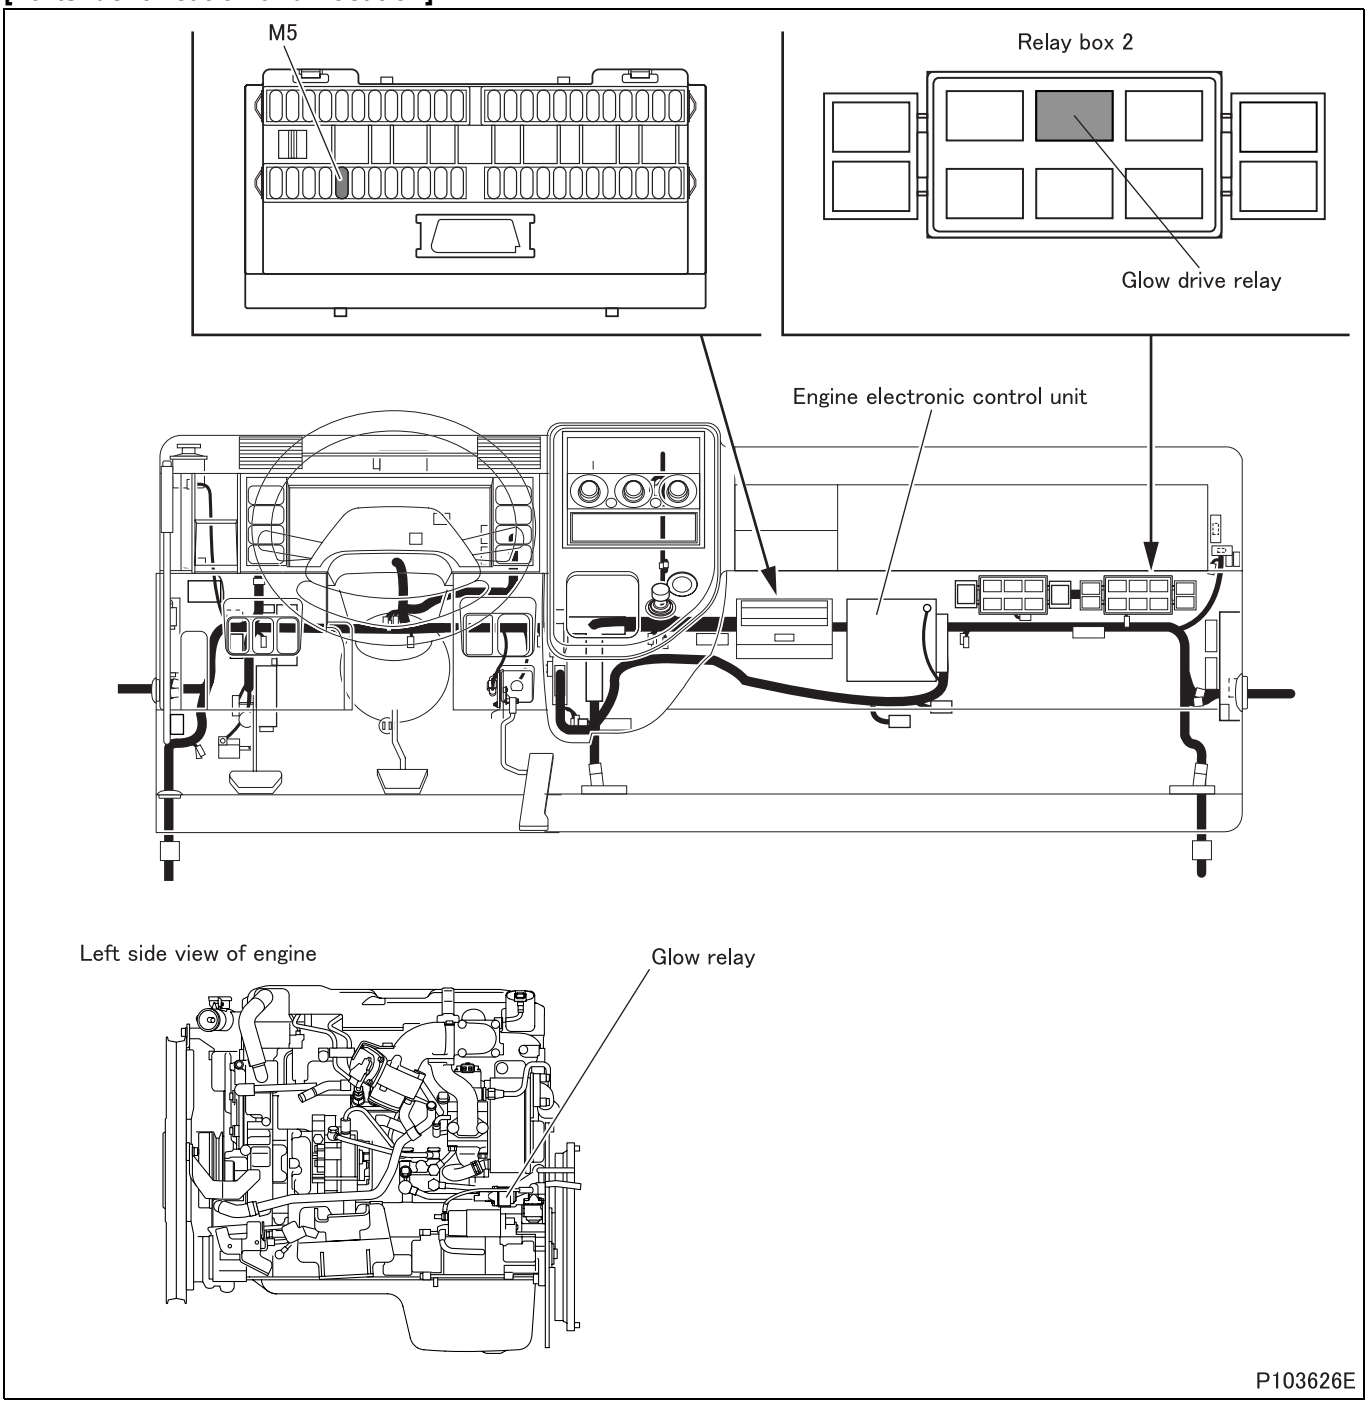
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and glow drive relay
- Malfunction of each connector
- Malfunction of glow drive relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AC “Relay for Glow Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

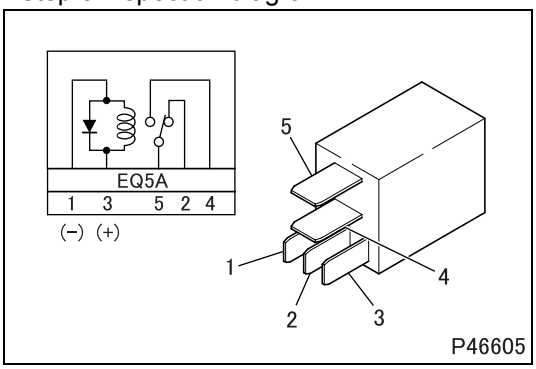
Step 2	Inspection items		Inspection of electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 73 (+) and 7 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AC “Relay for Glow Relay “
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across terminals No. 3 (+) and 1 (–)
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 73.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 7.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AC “Relay for Glow Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0401/Flash code: 2
[Monitor]
Insufficient air flow rate in exhaust gas recirculation system
[Fault (outline)]
- Exhaust gas recirculation system insufficient flow
- Exhaust gas recirculation mass flow too low

[Diagnosis check]
Either of the following is monitored.
<Condition (1)>
- λ value computed by engine electronic control unit is compared with pre-mapped specified valve.

<Condition (2)>
- Exhaust gas recirculation flow rate (rate at which gas flows through exhaust gas recirculation valve) calculated by engine electronic control unit is compared with pre-mapped specified value.

[Code generation condition]
When either of the following is determined (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.).
<Condition (1)>
- Difference between target λ value and computed λ value remains less than specified for 4 seconds.

<Condition (2)>
- Computed exhaust gas recirculation flow rate remains below specified value for 10 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<Condition (1)>
- Exhaust gas recirculation control: closed loop
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 65°C {19 to 149°F}
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order
- Fuel feed when engine is idling: in order

<Condition (2)>
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 65°C {19 to 149°F}
- Exhaust gas recirculation valve: closed
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order
- Fuel feed when engine is idling: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

[Probable cause of trouble]
- Exhaust gas recirculation valve stuck (remains fully closed)
- Plugged exhaust gas recirculation pipe and hose
- Plugged exhaust gas recirculation cooler

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0403 “EGR1 (Actuator Circuit)” • P0409 “EGR1 (Position Sensor)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0600 “CAN Communication” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P2413 “EGR System”
	Inspection condition		• Starter switch: ON • Do not start engine
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve)

[Fault code]
Diagnosis code: P0402/Flash code: 2
[Monitor]
Excessive air flow rate in exhaust gas recirculation system
[Fault (outline)]
- Exhaust gas recirculation system excessive flow
- Exhaust gas recirculation mass flow too high

[Diagnosis check]
Either of the following is monitored.
<Condition (1)>
- λ value computed by engine electronic control unit is compared with pre-mapped specified valve.

<Condition (2)>
- Exhaust gas recirculation flow rate (rate at which gas flows through exhaust gas recirculation valve) calculated by engine electronic control unit is compared with pre-mapped specified value.

[Code generation condition]
When either of the following is determined (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.).
<Condition (1)>
- Difference between target λ value and computed λ value remains more than specified for 4 seconds.

<Condition (2)>
- Computed exhaust gas recirculation flow rate remains more than specified value for 10 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<Condition (1)>
- Exhaust gas recirculation control: closed loop
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 65°C {19 to 149°F}
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order
- Fuel feed when engine is idling: in order

<Condition (2)>
- Water temperature: 65 to 120°C {149 to 248°F}
- Atmospheric pressure: 828 to 1100 mbar {12 to 15.95 psi}
- Intake air temperature: –7 to 65°C {19 to 149°F}
- Exhaust gas recirculation valve: closed
- Diesel particulate filter regeneration control: not effected
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Boost air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Exhaust gas recirculation cooler: in order
- Starter switch circuit: in order
- Fuel feed when engine is idling: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

[Probable cause of trouble]
- Exhaust gas recirculation valve stuck (remains fully open)
- Exhaust gas recirculation pipe and hose broken
- Exhaust gas recirculation cooler broken

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0403 “EGR1 (Actuator Circuit)” • P0409 “EGR1 (Position Sensor)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0600 “CAN Communication” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P2413 “EGR System”
	Inspection condition		• Starter switch: ON • Do not start engine
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve)

[Fault code]
Diagnosis code: P0403/Flash code: 2, 67
[Monitor]
Failure of exhaust gas recirculation system
[Fault (outline)]
- Circuit
- Plausibility

[Diagnosis check]
- Exhaust gas recirculation electronic drive unit monitors built-in motor of exhaust gas recirculation valve for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Monitoring by exhaust gas recirculation electronic drive unit is performed from initial operational status of motor at starter switch ON.

[Code generation condition]
When either of the following is determined (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)
- Motor circuit remains open or shorted as detected by electronic drive unit for 2 seconds.
- Exhaust gas recirculation valve keeps operating 95% or more for 3 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

[Diagnostic requirement]
- Controller area network communication in order

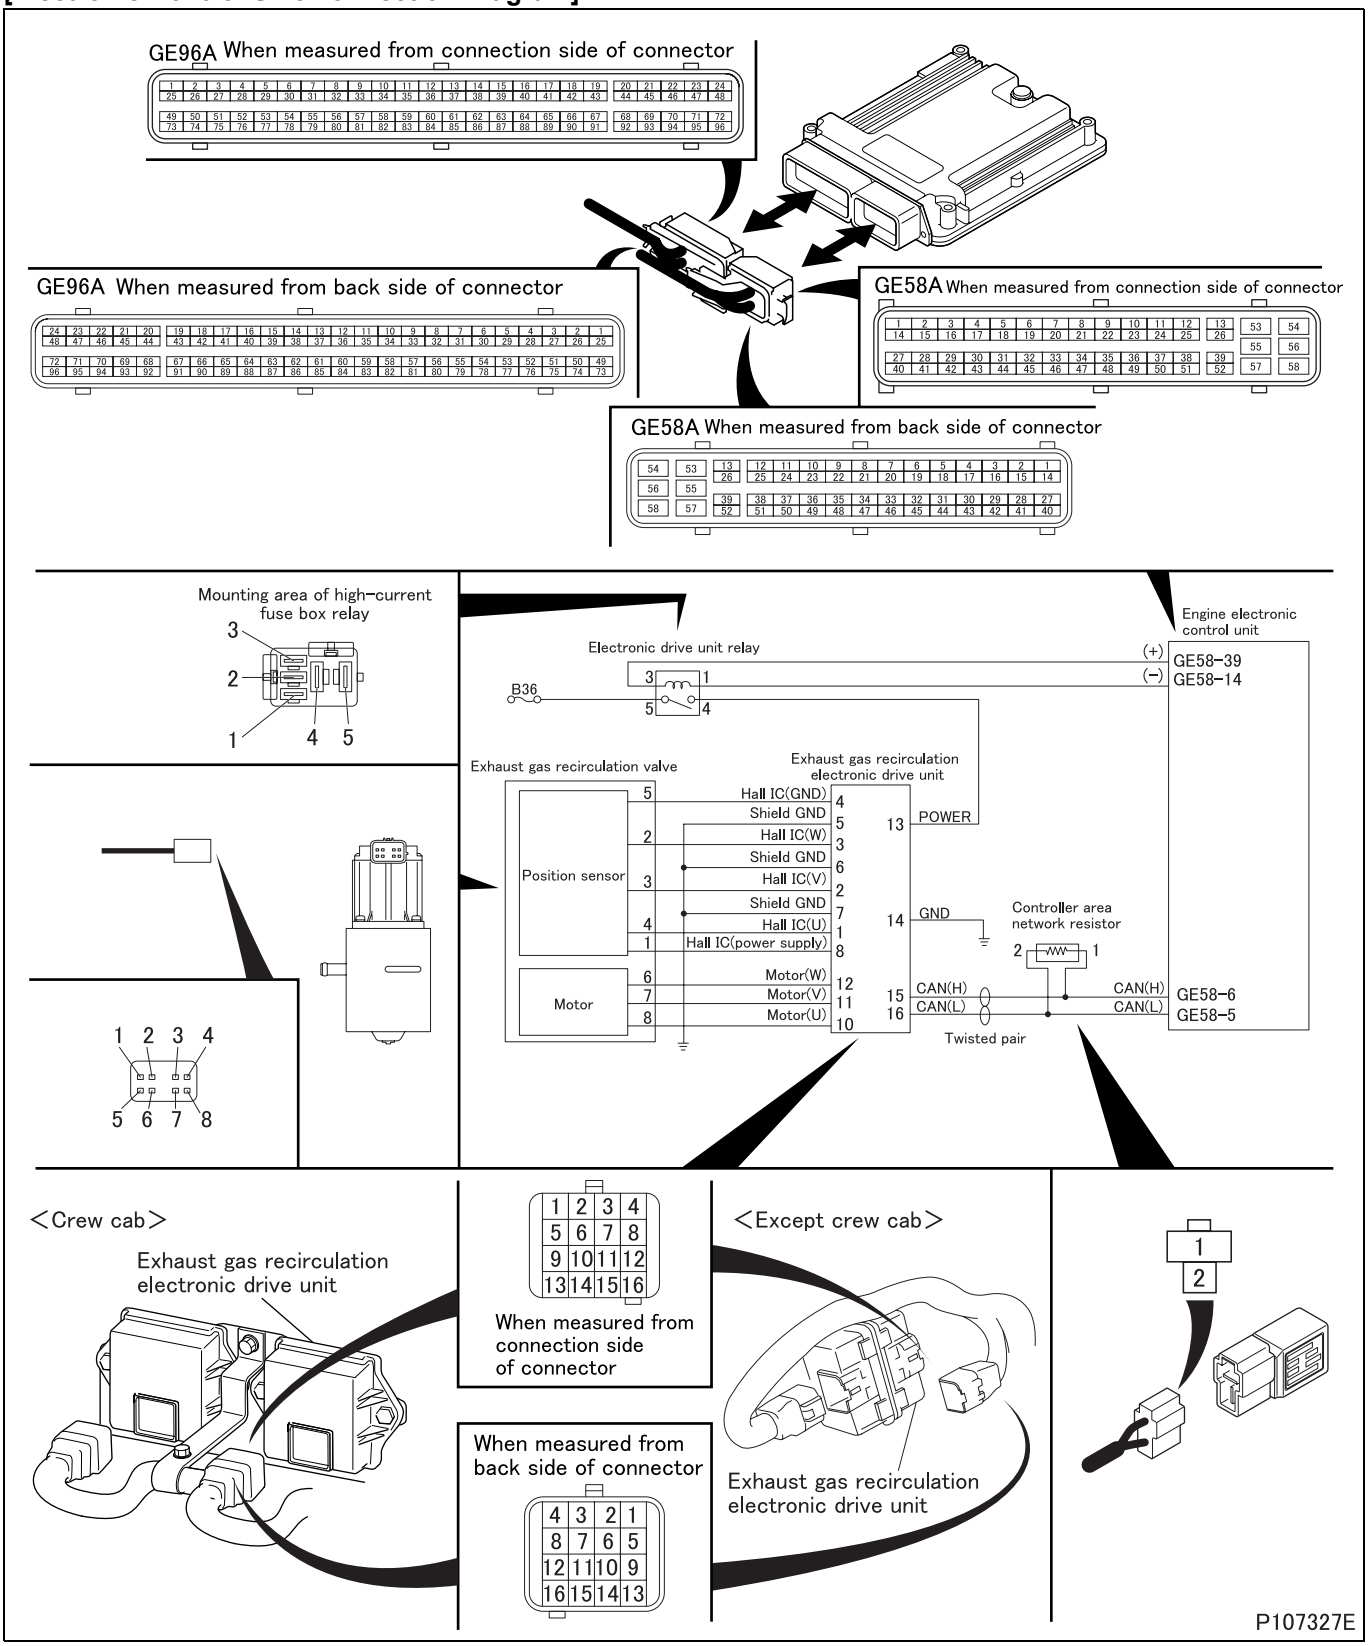
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Power supply circuit>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

<Motor circuit>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

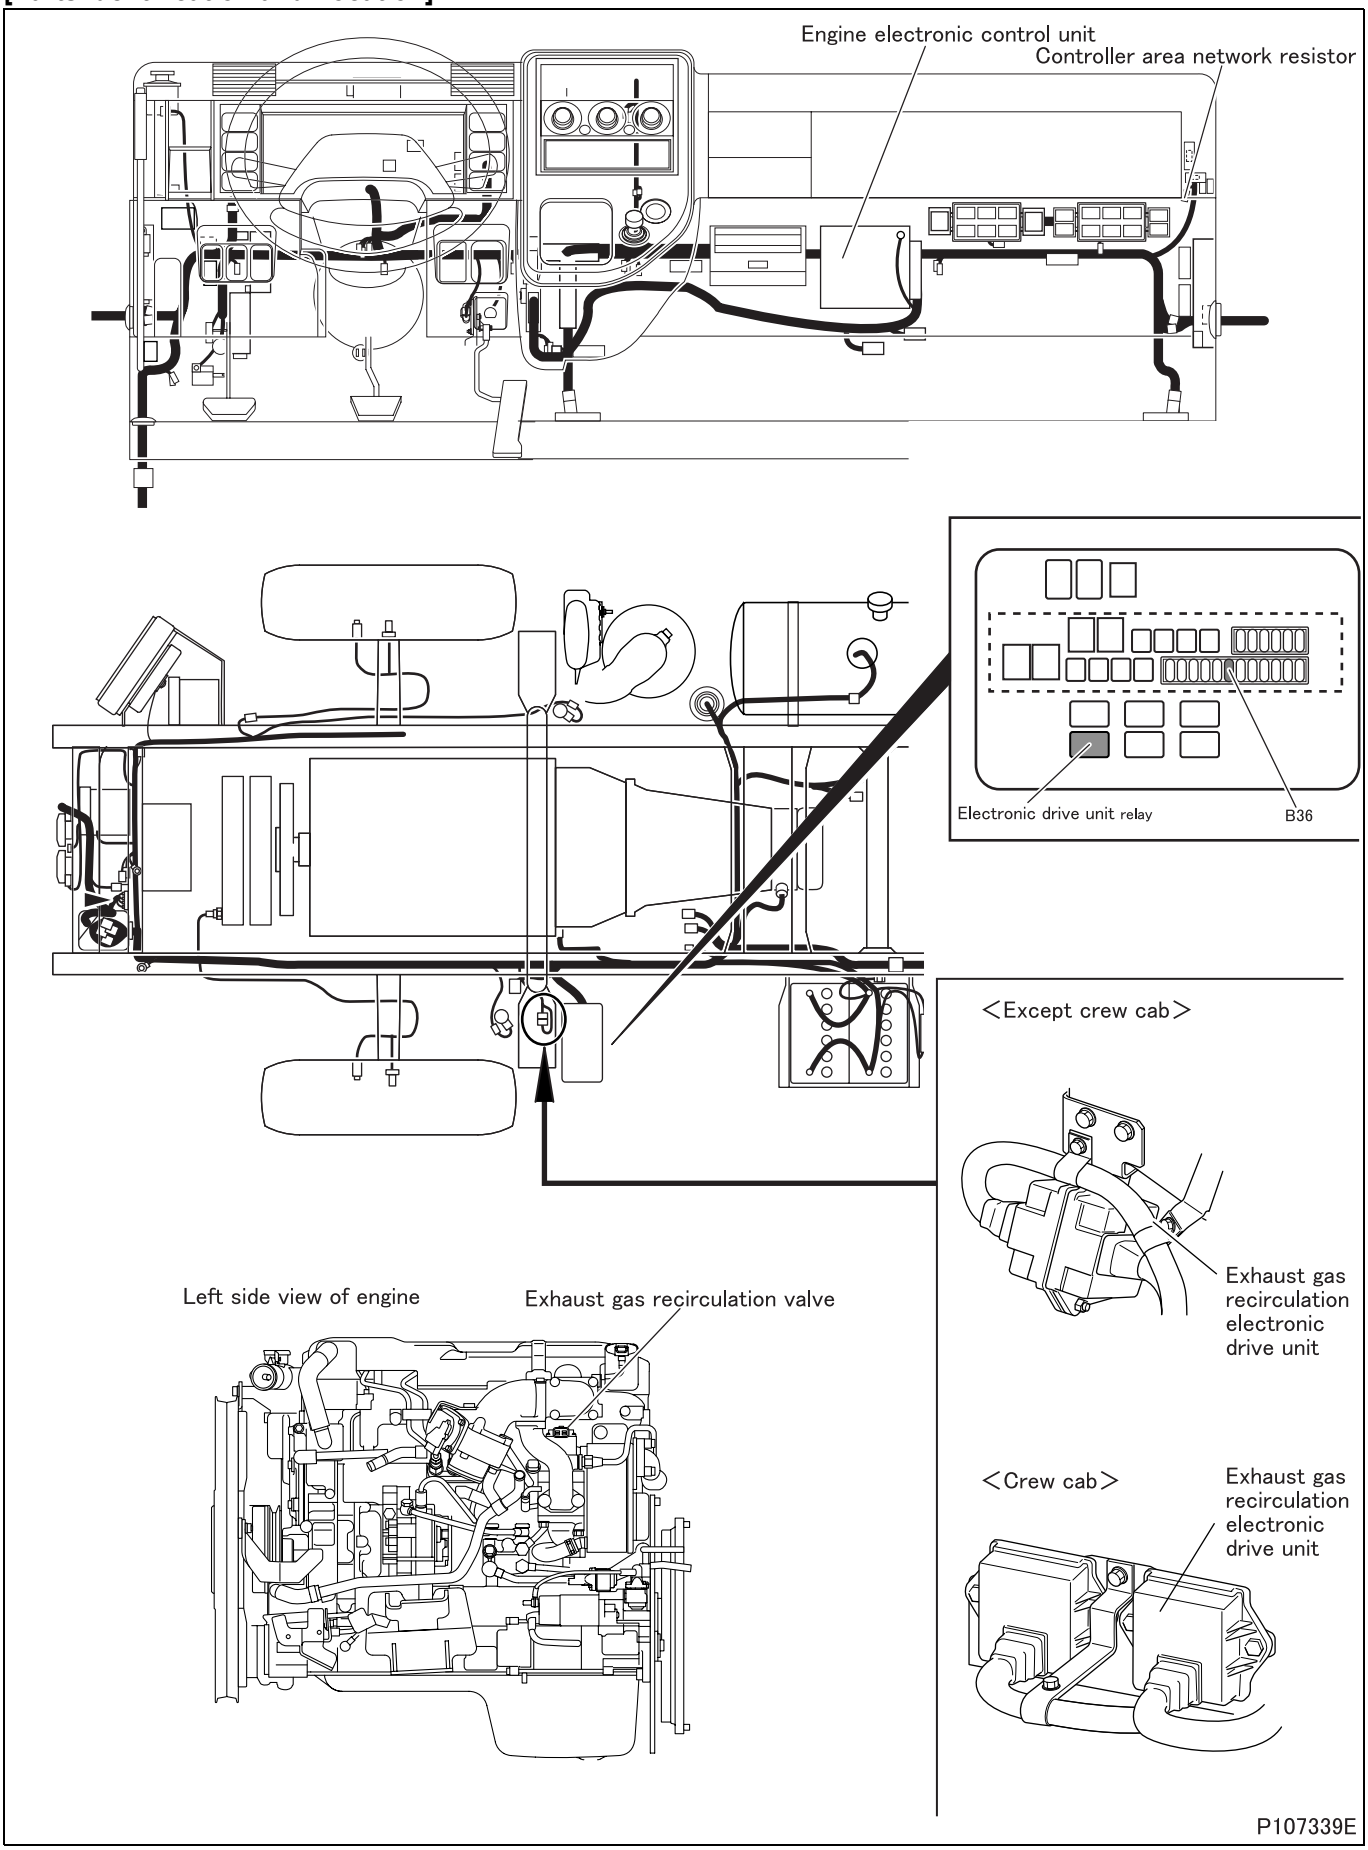
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and exhaust gas recirculation valve
- Malfunction of each connector
- Malfunction of exhaust gas recirculation motor (built in exhaust gas recirculation valve)
- Malfunction of exhaust gas recirculation position sensor (built in exhaust gas recirculation valve)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A0 “EGR 1”
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “51: Actual EGR Valve Position”) **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of exhaust gas recirculation valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9
		NO	Modify harness.

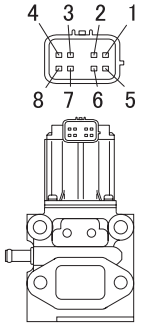
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals. • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and exhaust gas recirculation valve (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - exhaust gas recirculation valve connector terminal No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - exhaust gas recirculation valve connector terminal No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - exhaust gas recirculation valve connector terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of exhaust gas recirculation valve unit (motor)
	Maintenance item		Measure value of resistance between following exhaust gas recirculation valve connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		• Keep exhaust gas recirculation valve installed on vehicle. • Remove harness connector, and measure exhaust gas recirculation valve side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of exhaust gas recirculation valve

<Step 12 inspection diagram>



P68994

Step 13	Inspection items		Inspection of exhaust gas recirculation valve connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between following electronic drive unit connector terminals • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A0 “EGR 1”
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and exhaust gas recirculation valve (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - exhaust gas recirculation valve connector terminal No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - exhaust gas recirculation valve connector terminal No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - exhaust gas recirculation valve connector terminal No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - exhaust gas recirculation valve connector terminal No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - exhaust gas recirculation valve connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of exhaust gas recirculation valve, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A0 “EGR 1” **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “51: Actual EGR Valve Position”)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0404/Flash code: 67
[Monitor]
Failure of exhaust gas recirculation valve
[Fault (outline)]
- Circuit
- Open valve

[Diagnosis check]
- Exhaust gas recirculation electronic drive unit monitors for sticking of built-in motor and opening status by exhaust gas recirculation valve for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Exhaust gas recirculation electronic drive unit determines valve condition according to valve position detected through position sensor.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)
- Motor circuit remains stuck as detected by electronic drive unit for 2 seconds.
- Actual valve position remains 10 mm {0.39 in.} or more apart from target full opening position for 10 seconds.

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Power supply circuit>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

<Valve opening>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

[Probable cause of trouble]
- Failure of exhaust gas recirculation system

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0403 “EGR1 (Actuator Circuit)” • P0404 “EGR System” • P0605 “ECU System (Hardware)” • P0607 “ECU System” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P1632 “CAN (EGR1 Time out)” • U0001 “High Speed CAN Communication” • U0002 “High Speed CAN Communication”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Replacement of exhaust gas recirculation valve

[Fault code]
Diagnosis code: P0409/Flash code: 67
[Monitor]
Failure of exhaust gas recirculation valve
[Fault (outline)]
- Low signal range check
- High signal range check

[Diagnosis check]
- Exhaust gas recirculation electronic drive unit monitors exhaust gas recirculation valve internal circuit for fault (through throttle position sensor).

[Code generation condition]
- Position sensor output voltage remains 0 V (low pulse) or 8 to 11 V (high pulse) for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

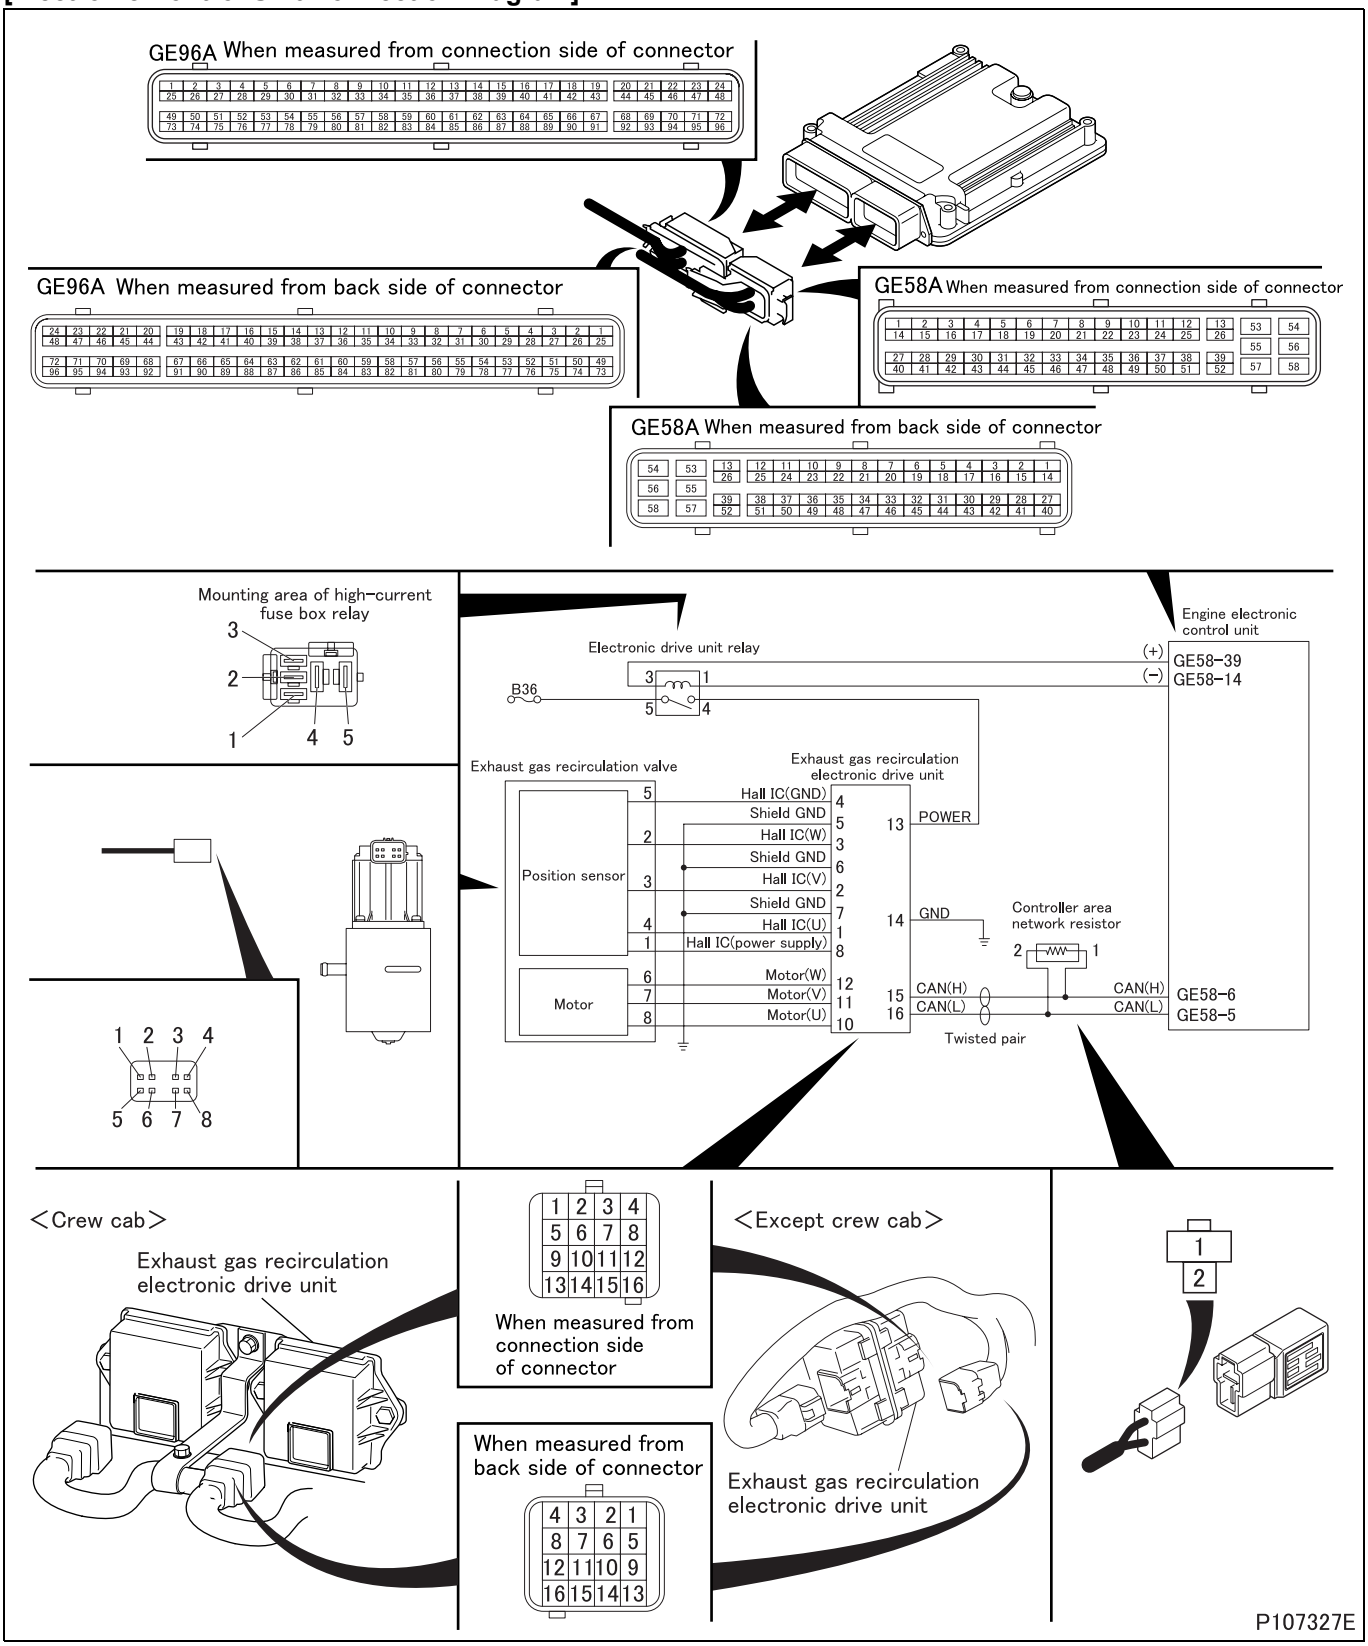
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

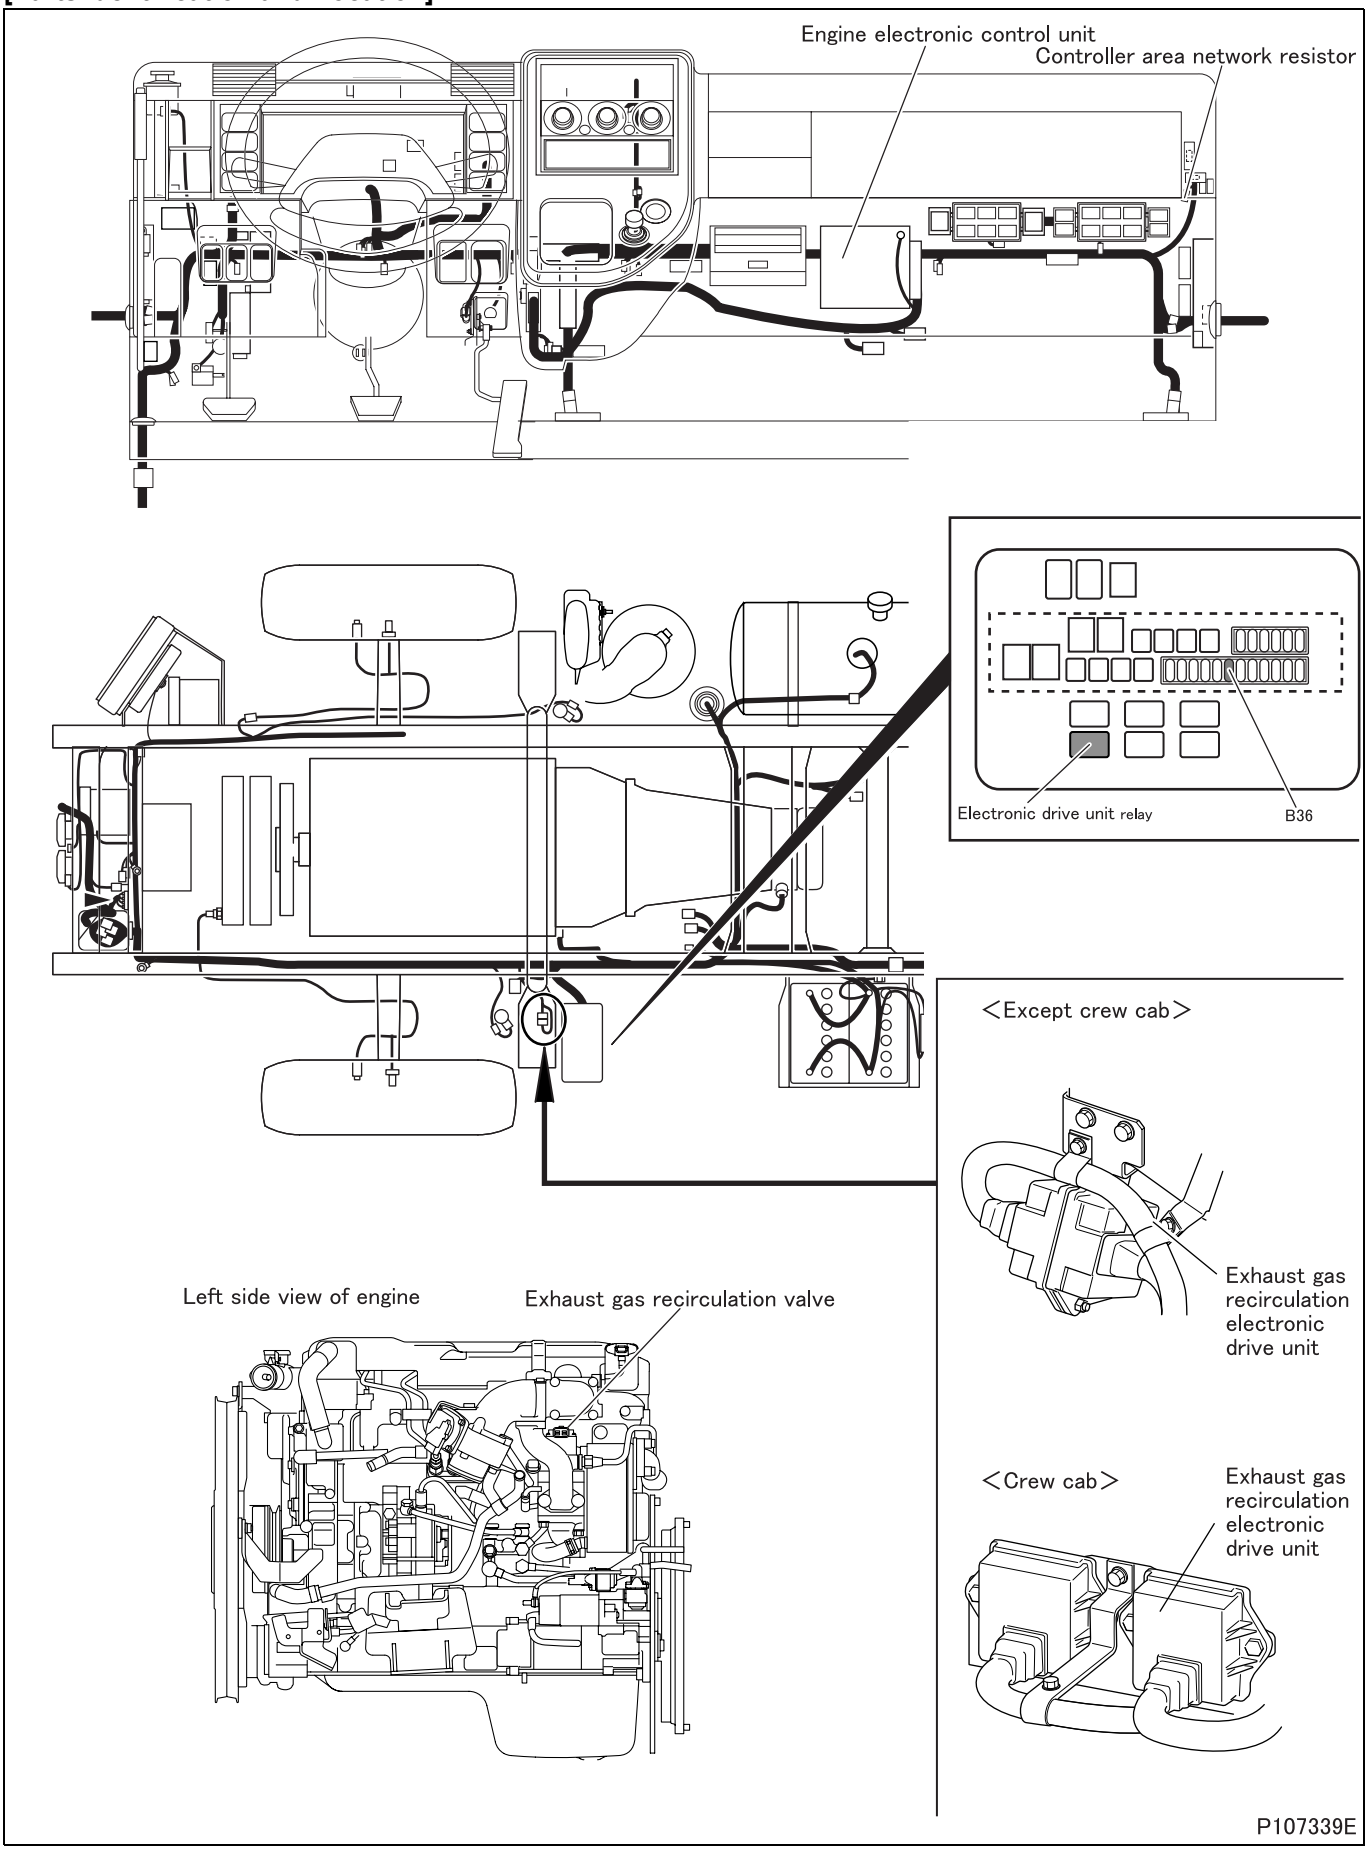
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and exhaust gas recirculation valve (position sensor)
- Malfunction of each connector
- Malfunction of electronic drive unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A0 “EGR 1” **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “51: Actual EGR Valve Position”)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of exhaust gas recirculation valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Remove connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9
		NO	Modify harness.

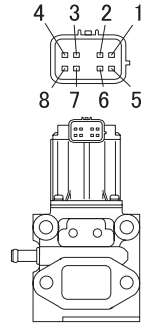
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals. • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and exhaust gas recirculation valve (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - exhaust gas recirculation valve connector terminal No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - exhaust gas recirculation valve connector terminal No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - exhaust gas recirculation valve connector terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of exhaust gas recirculation valve unit (motor)
	Maintenance item		Measure value of resistance between following exhaust gas recirculation valve connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		• Keep exhaust gas recirculation valve installed on vehicle. • Remove harness connector, and measure exhaust gas recirculation valve side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of exhaust gas recirculation valve

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of exhaust gas recirculation valve connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between following electronic drive unit connector terminals • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Perform Multi-Use Tester actuator test item No. A0 “EGR 1”
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and exhaust gas recirculation valve (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - exhaust gas recirculation valve connector terminal No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - exhaust gas recirculation valve connector terminal No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - exhaust gas recirculation valve connector terminal No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - exhaust gas recirculation valve connector terminal No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - exhaust gas recirculation valve connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of exhaust gas recirculation valve, go to step 16.
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A0 “EGR 1” **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester. (check with service data “51: Actual EGR Valve Position”)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P0426/Flash code: 42
[Monitor]
Characteristic abnormality of catalytic temperature sensor
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Catalytic temperature sensor and DPF temperature sensor 1 are compared.

[Code generation condition]
- Difference in temperature output remains excessively high (over 150°C {302°F}) or low (below –150°C {–238°F}) for 10 seconds <Relative check> and 20 seconds <Separate check>. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Diesel particulate filter regeneration control: not effected
- Engine running time: more than 300 seconds
- Time after diesel particulate filter regeneration control was effected: more than 1500 seconds
- Engine speed and load: logical output is 1
- Time till above conditions were met: more than 30 seconds
- Catalytic temperature sensor: normal in output signal
- DPF temperature sensor 1: normal in output signal
- DPF temperature sensor 2: normal in output signal
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of catalytic temperature sensor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0427/Flash code: 42
[Monitor]
Failure of catalytic temperature sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Catalytic temperature sensor output voltage is monitored.

[Code generation condition]
- Catalytic temperature sensor output voltage remains below 0.36 V for 3 seconds. (sensor temperature: 1000°C {1832°F} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

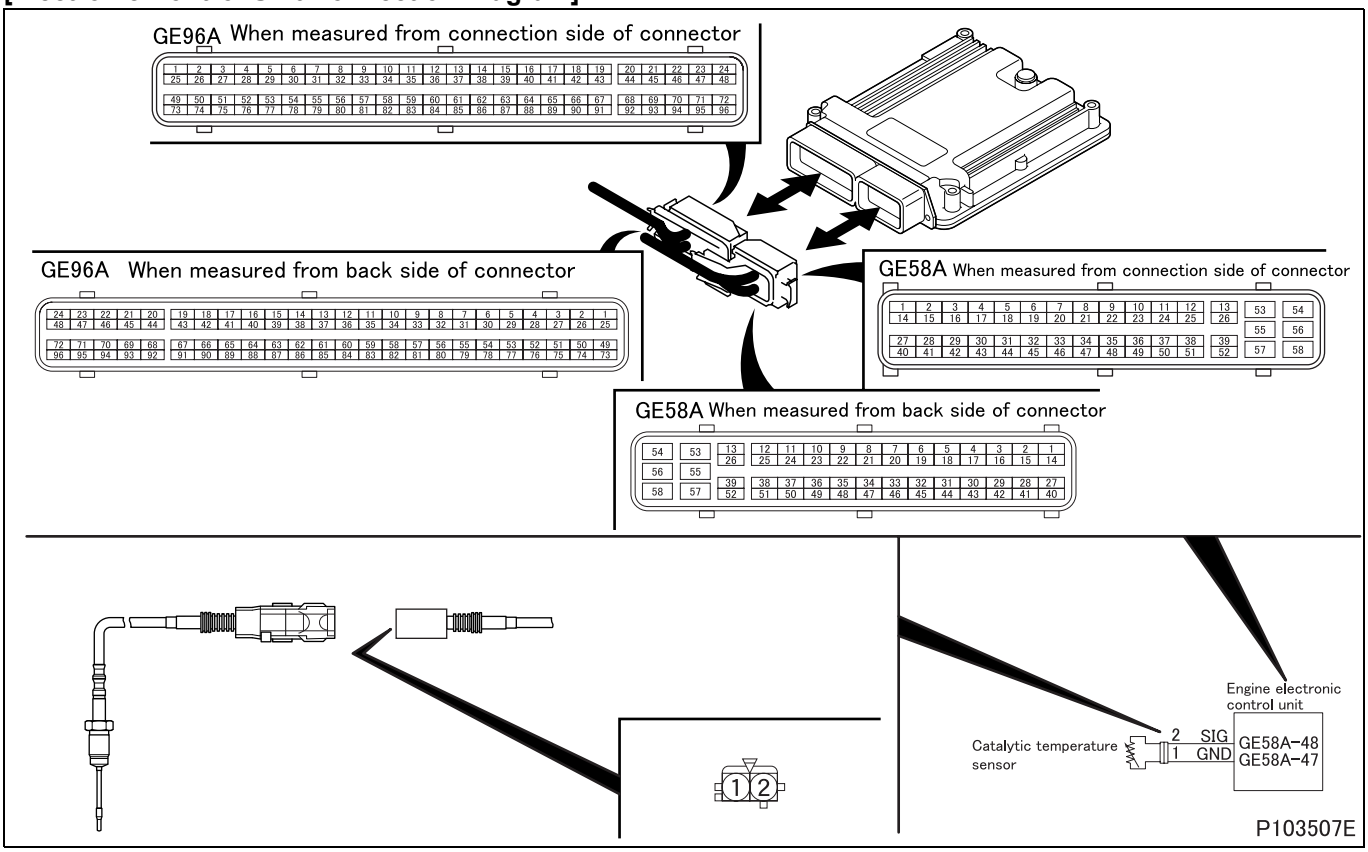
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

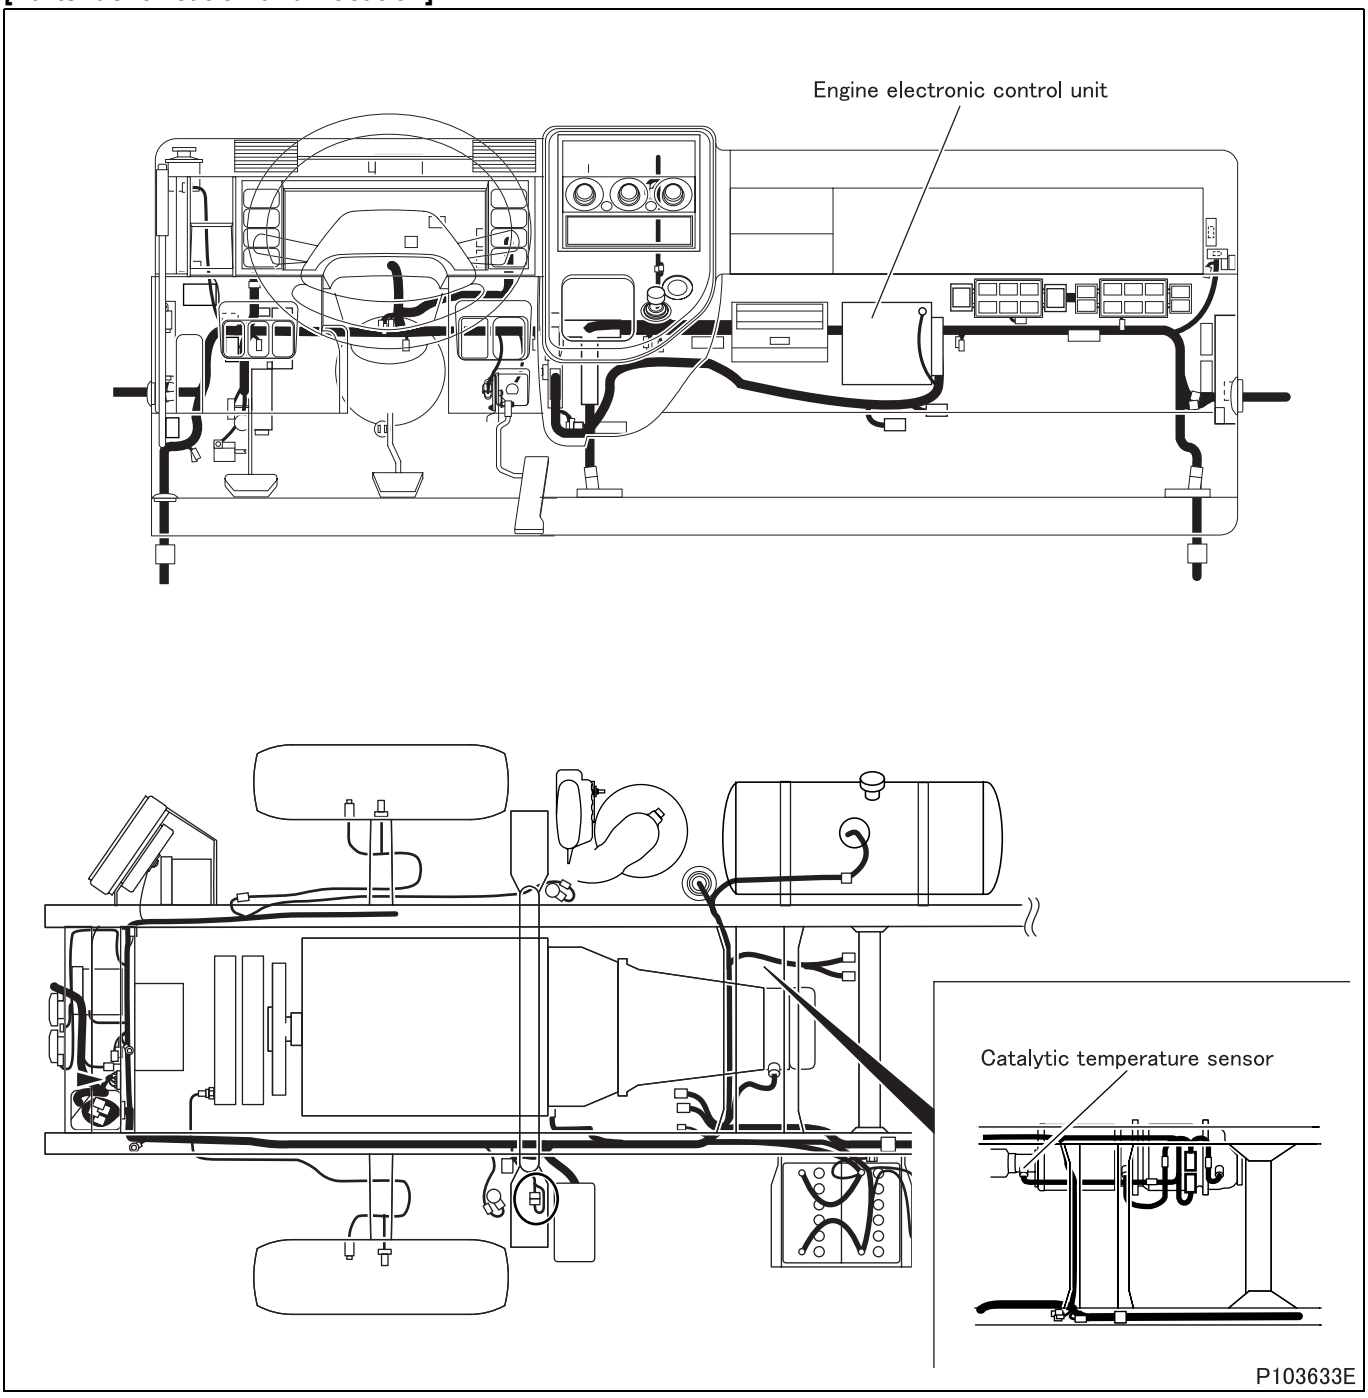
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Malfunction of catalytic temperature sensor

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “OXI CAT Temperature”. **<Multi-Use Tester used>** • Measure item No. 24 “OXI CAT Temperature” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

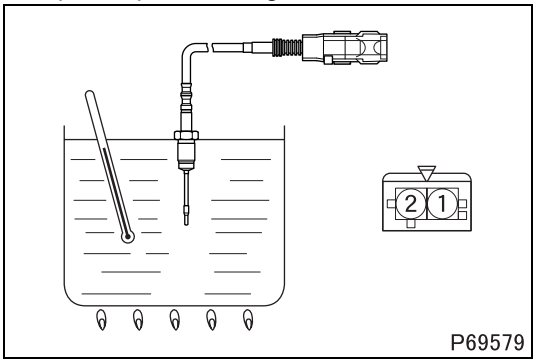
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE58A) terminal No. 48 and 47.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle-side connector half.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of catalytic temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put catalytic temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 39 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 68 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “OXI CAT Temperature”. **<Multi-Use Tester used>** • Measure item No. 24 “OXI CAT Temperature” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0428/Flash code: 42
[Monitor]
Failure of catalytic temperature sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Catalytic temperature sensor output voltage is monitored.

[Code generation condition]
- Catalytic temperature sensor output voltage remains over 4.93 V for 30 seconds when engine speed is set at 1000 to 5000 rpm. (sensor temperature: 40°C {118°F} or less) (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

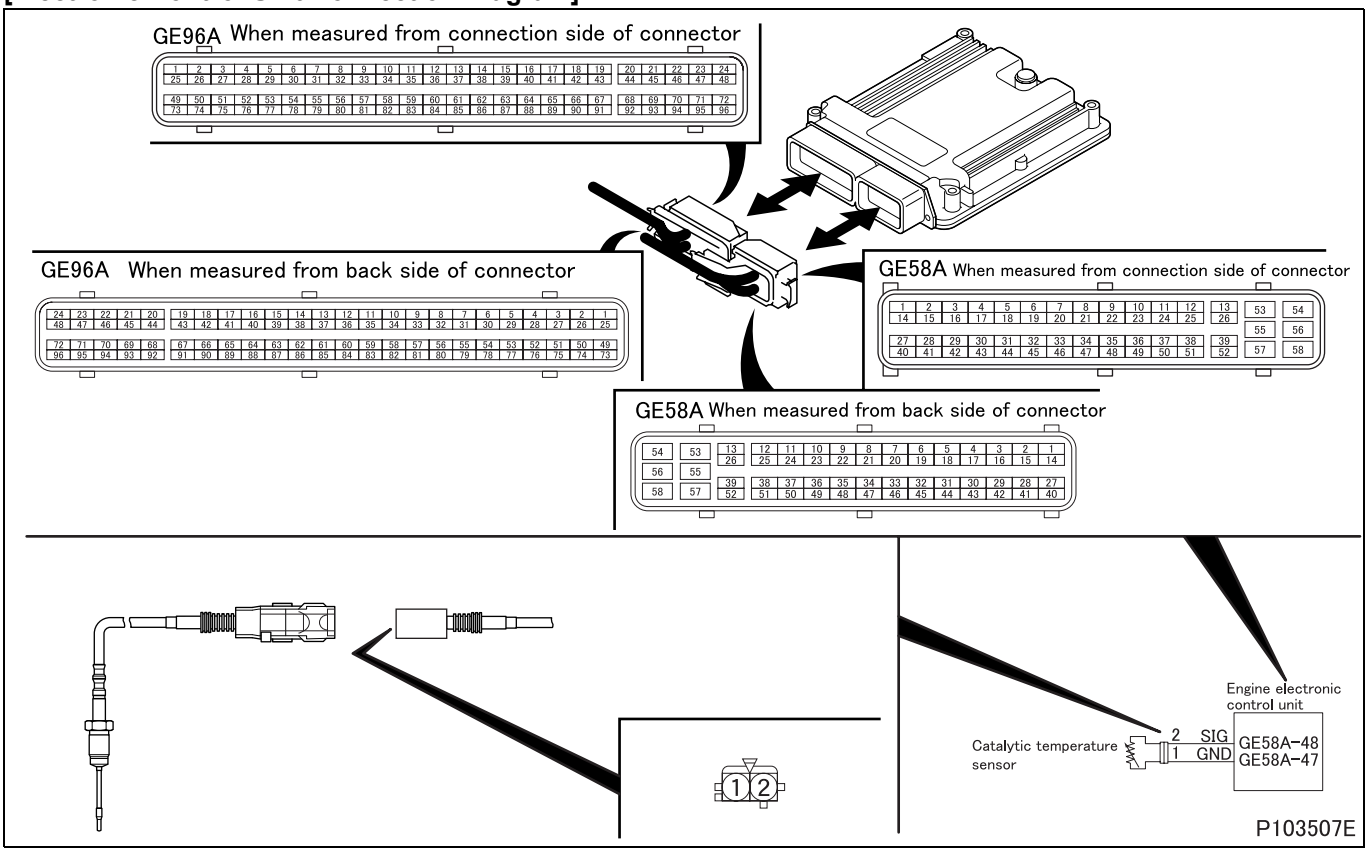
[Diagnostic requirement]
- Engine speed: 1000 to 5000 rpm
- Fuel injection quantity: 30 to 200 mg/cyc
- Water temperature: above –7°C {19°F}

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

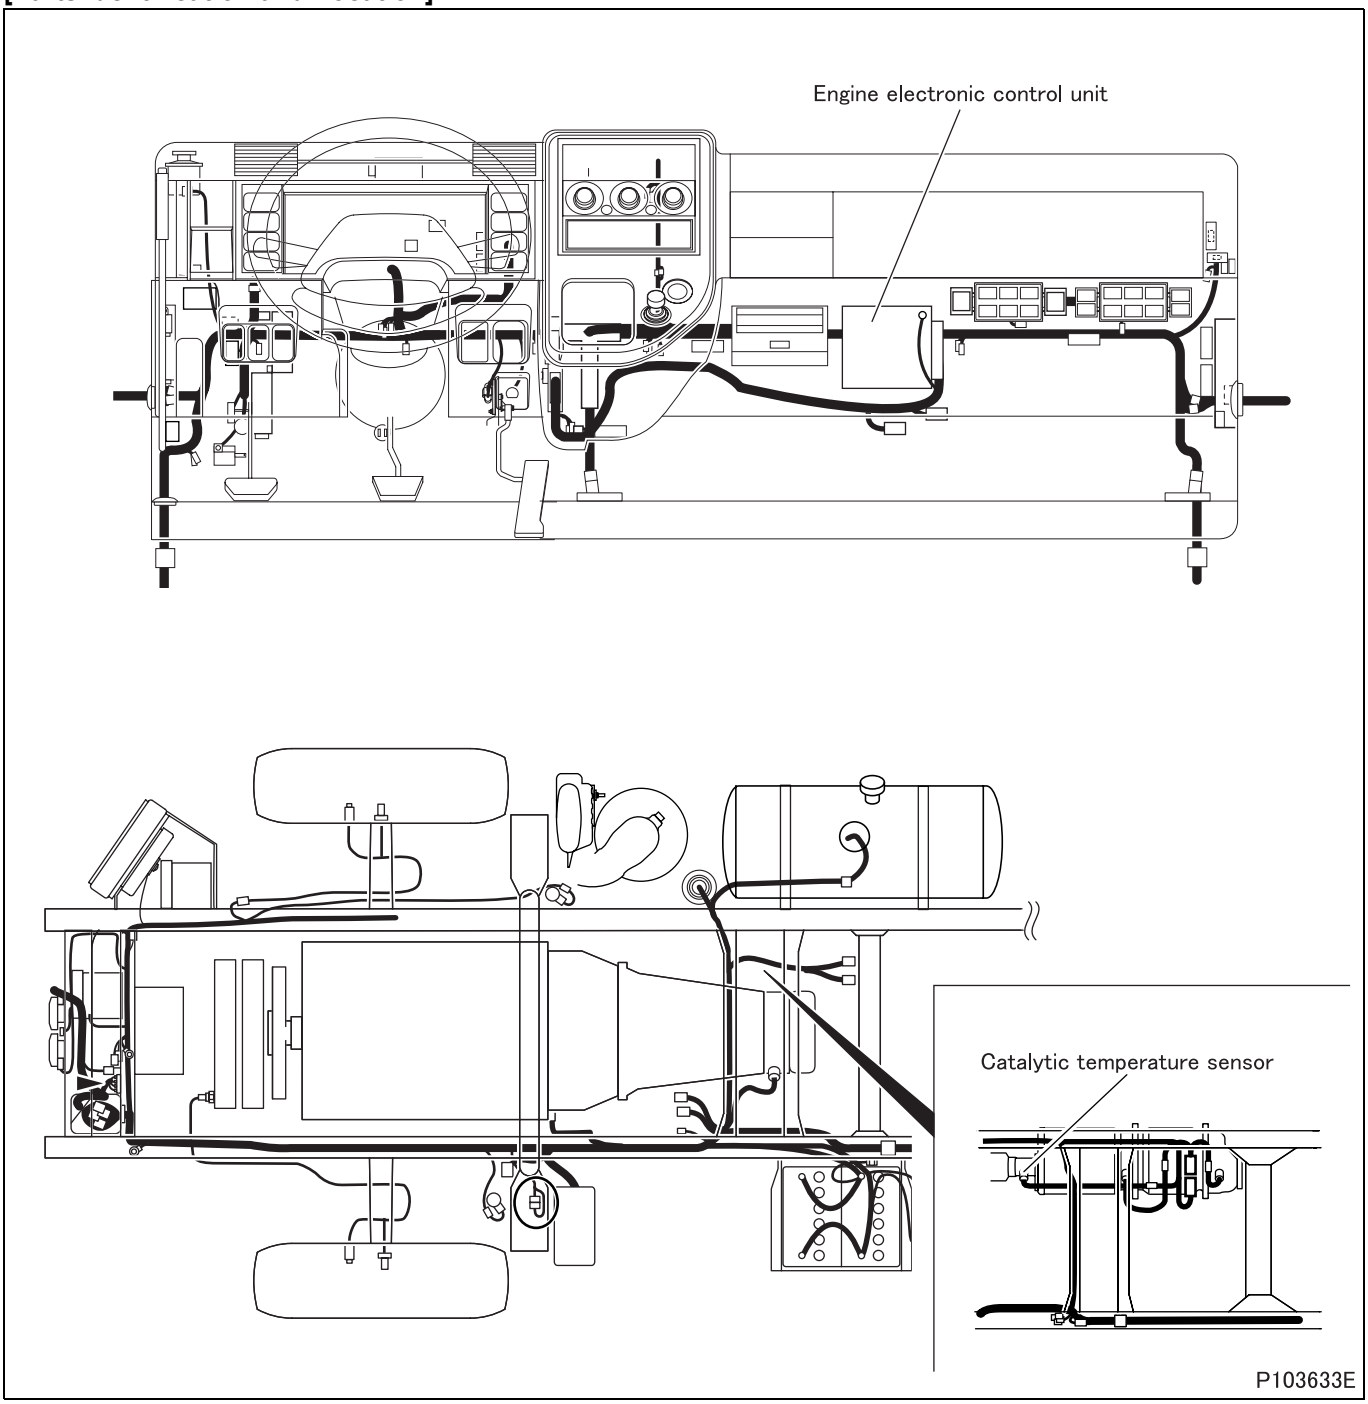
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Malfunction of catalytic temperature sensor

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “OXI CAT Temperature”. **<Multi-Use Tester used>** • Measure item No. 24 “OXI CAT Temperature” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

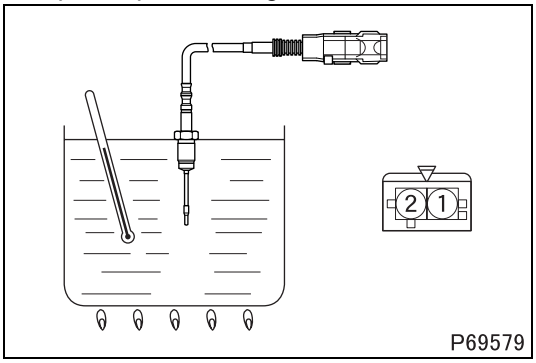
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE58A) terminal No. 48 and 47.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle-side connector half.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of catalytic temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put catalytic temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 39 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 68 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “OXI CAT Temperature”. **<Multi-Use Tester used>** • Measure item No. 24 “OXI CAT Temperature” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0470/Flash code: 92
[Monitor]
Characteristic abnormality of DPF absolute pressure sensor and DPF pressure sensor (DIFF)
[Fault (outline)]
- Gain drift
- Offset and gain drift

[Diagnosis check]
- Relative check of DPF absolute pressure sensor and DPF pressure sensor (DIFF)

[Code generation condition]
- Difference in output between DPF pressure sensor (DIFF) and DPF absolute pressure sensor remains more than specified for 10 seconds. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 500 to 3000 rpm
- Air flow rate: 80 to 650 kg/hr
- Water temperature: 0 to 110°C {32 to 230°F}
- Fuel injection quantity: 15 to 100 mg/cyc
- Atmospheric pressure: 900 to 1050 mbar {13.05 to 15.22 psi}
- Intake air temperature: 0 to 60°C {32 to 140°F}
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- DPF absolute pressure sensor: normal in output signal
- DPF pressure sensor (DIFF): normal in output signal
- DPF temperature sensor 1: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Relative check of DPF absolute pressure sensor

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of DPF absolute pressure sensor and DPF pressure sensor (DIFF)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0471/Flash code: 98
[Monitor]
Failure of DPF absolute pressure sensor
[Fault (outline)]
Offset drift
[Diagnosis check]
- Difference in pressure output between atmospheric pressure sensor and DPF absolute pressure sensor is monitored for deviation from specified value after engine start.

[Code generation condition]
- Difference in pressure output between atmospheric pressure sensor and DPF absolute pressure sensor exceeds 10 kPa {1.5 psi, 0.1 kgf/cm^2} after engine run.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

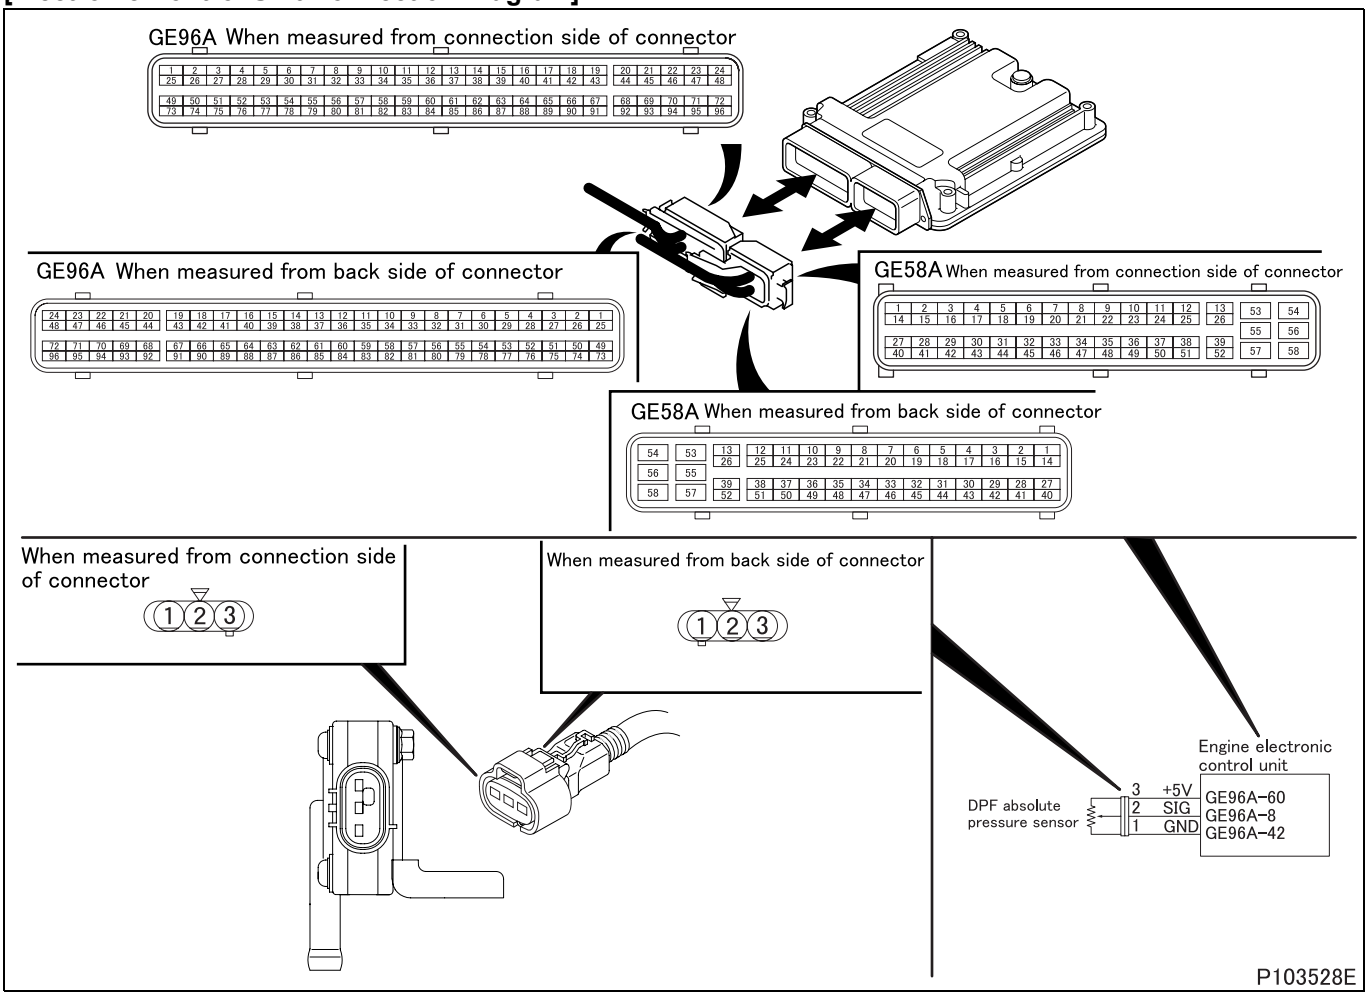
[Diagnostic requirement]
- Engine status: after-run

[Control effected by electronic control unit during fault]
- Pressure before ceramic diesel particulate filter is fixed at backup value.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.
- Malfunction of DPF absolute pressure sensor

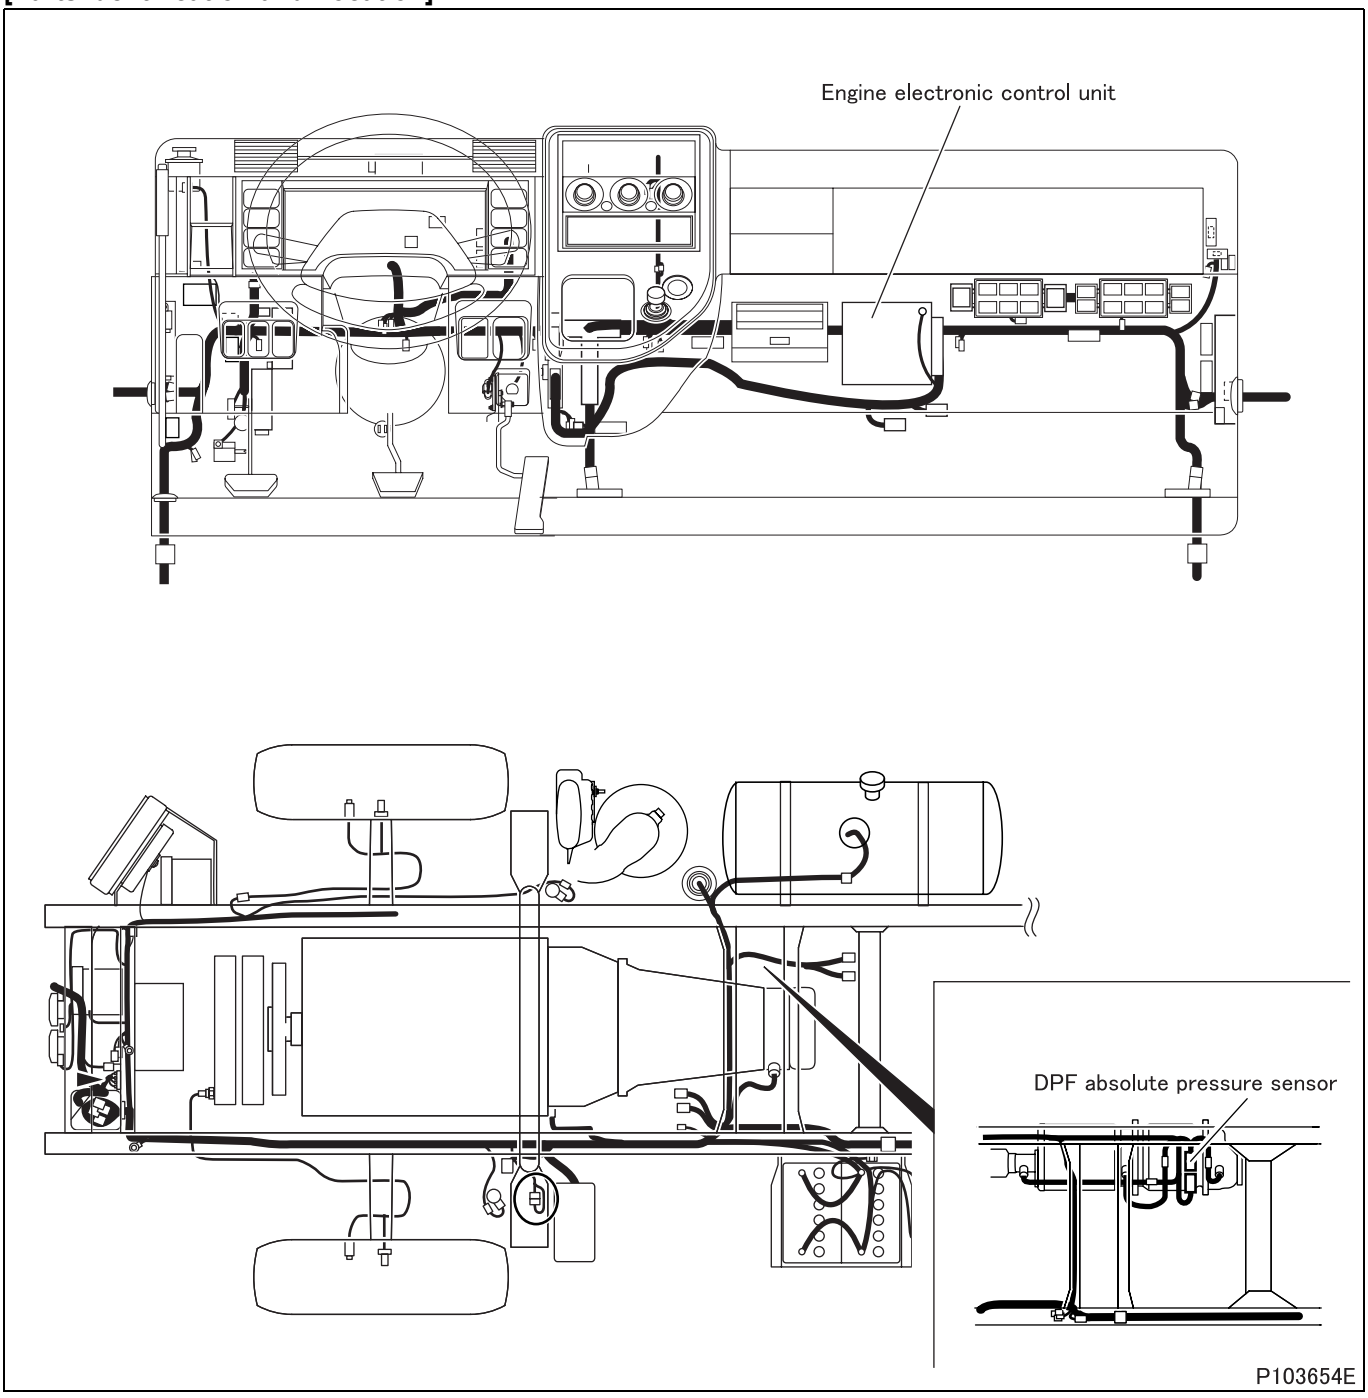
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- High pressure side (upper stream) pressure hose slipped off or clogged
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Starter switch: ON Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 8 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		1.875 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 60 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 6.

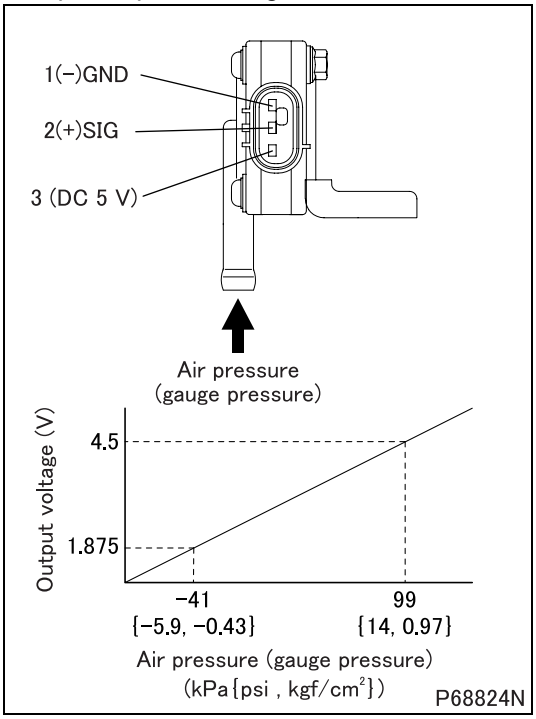
Step 5	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 42 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 8	Inspection items		Inspection of DPF absolute pressure sensor unit
	Maintenance item		Measure value of voltage between terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 41 ± 3.2 kPa {5.9 ± 0.5 psi, 0.43 ± 0.03 kgf/cm^2}: 1.875 V • 99 ± 3.2 kPa {14 ± 0.5 psi, 1.0 ± 0.03 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between terminal No. 3 (+) and 1 (–)
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Go to step 10.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 60 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 42 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 8 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 13	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0472/Flash code: 98
[Monitor]
Failure of DPF absolute pressure sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of DPF absolute pressure sensor is monitored.

[Code generation condition]
- Output voltage of DPF absolute pressure sensor remains below 0.2 V for 1 second. (sensor pressure: –29 kPa {–4.2 psi, –0.3 kgf/cm^2} or less)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

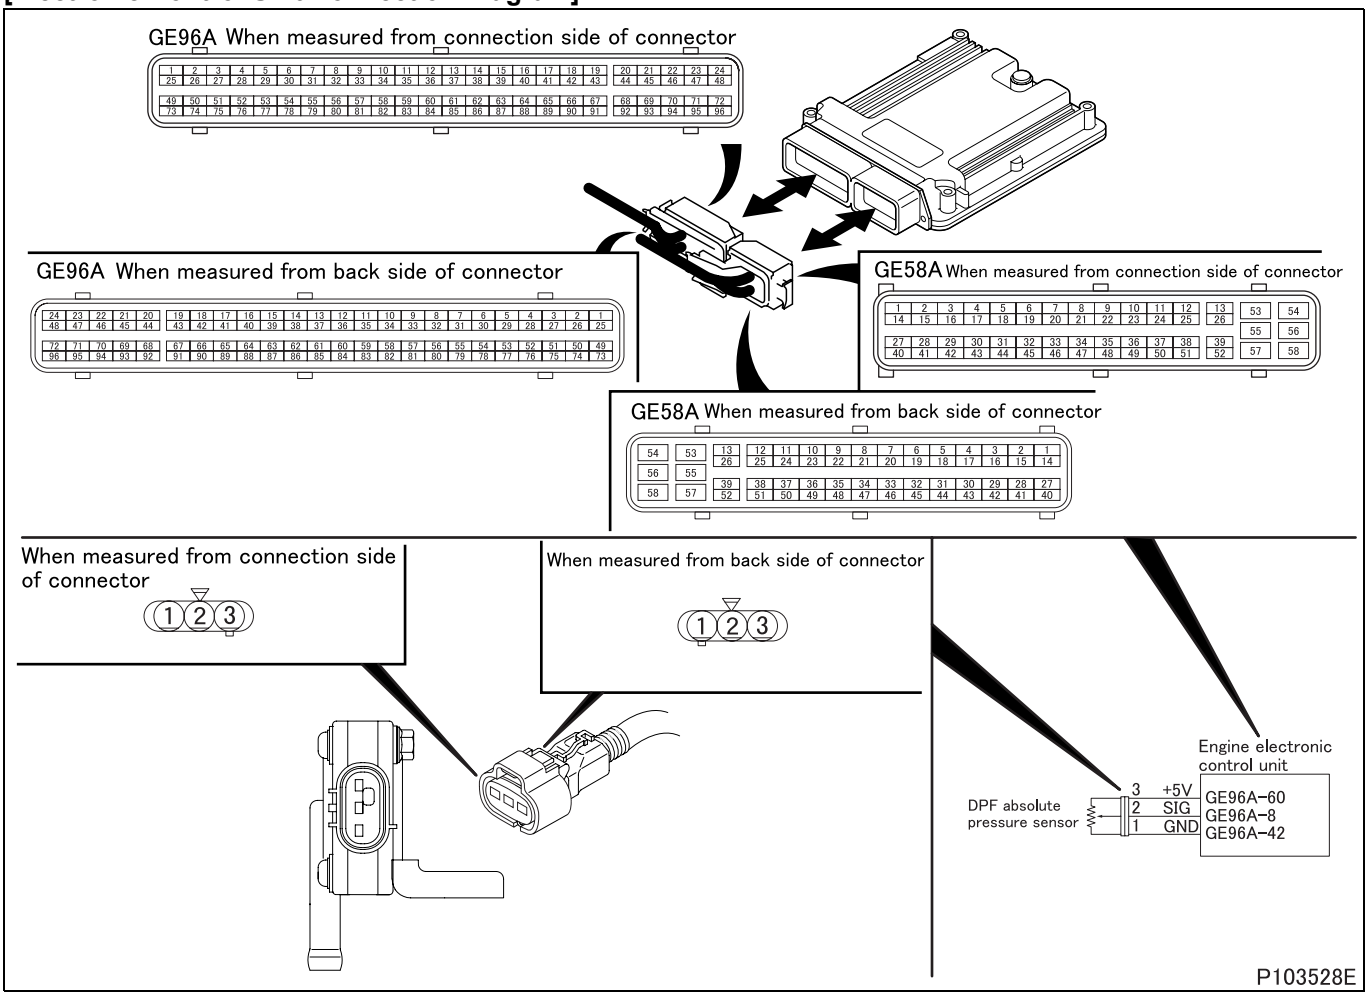
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Pressure before ceramic diesel particulate filter is fixed at backup value.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

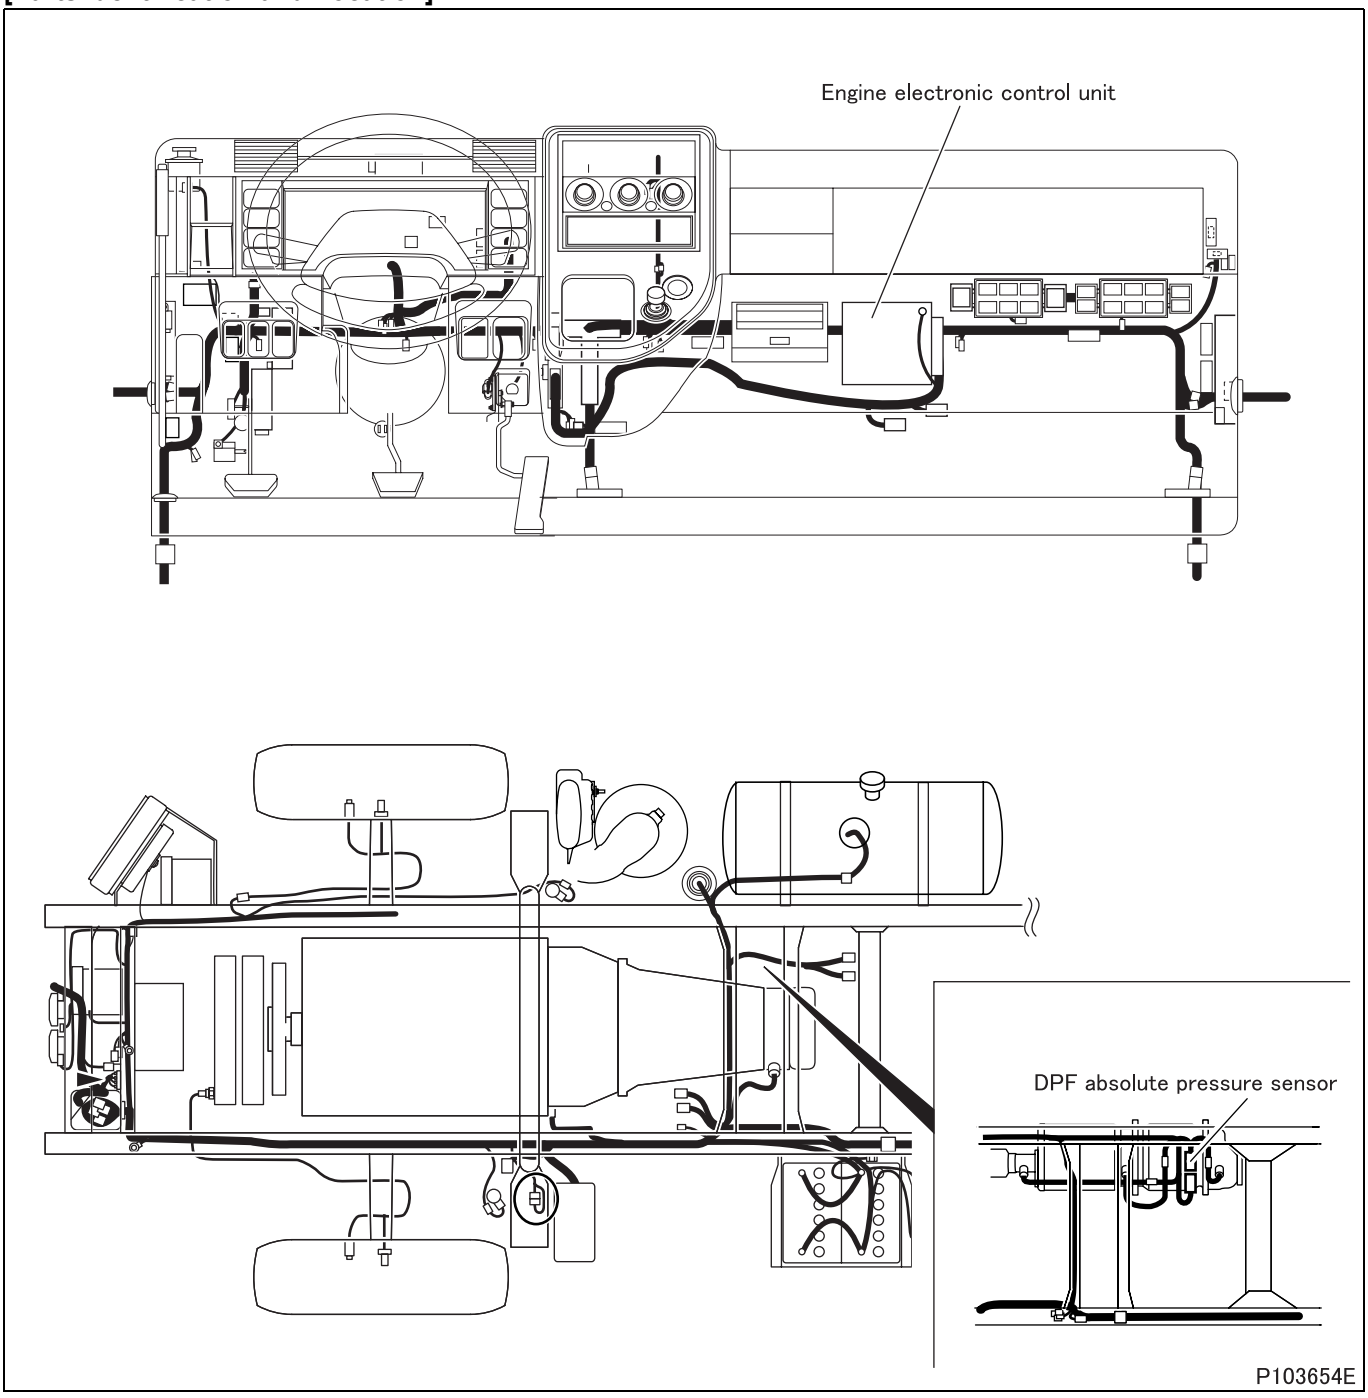
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Starter switch: ON Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 8 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		1.875 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 60 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 6.

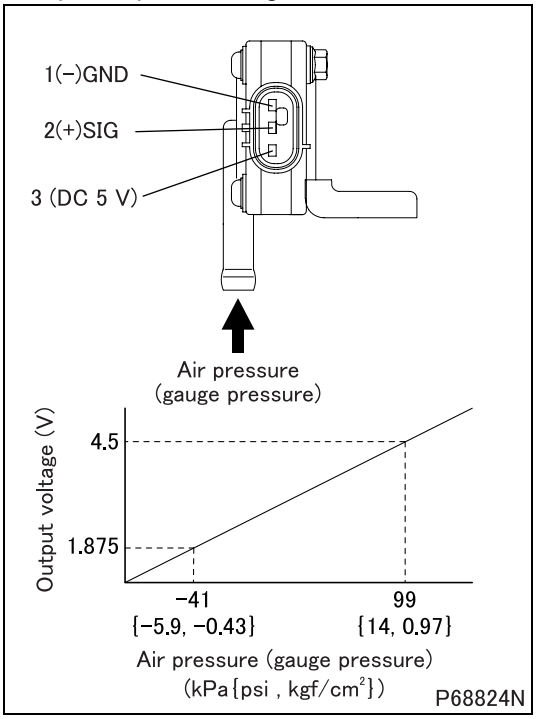
Step 5	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 42 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 8	Inspection items		Inspection of DPF absolute pressure sensor unit
	Maintenance item		Measure value of voltage between terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 41 ± 3.2 kPa {5.9 ± 0.5 psi, 0.43 ± 0.03 kgf/cm^2}: 1.875 V • 99 ± 3.2 kPa {14 ± 0.5 psi, 1.0 ± 0.03 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between terminal No. 3 (+) and 1 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Go to step 10.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 60 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 42 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 8 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 13	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0473/Flash code: 98
[Monitor]
Failure of DPF absolute pressure sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of DPF absolute pressure sensor is monitored.

[Code generation condition]
- Output voltage of DPF absolute pressure sensor remains over 4.8 V for 1 second. (sensor pressure: 216 kPa {31 psi, 2.2 kgf/cm^2} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

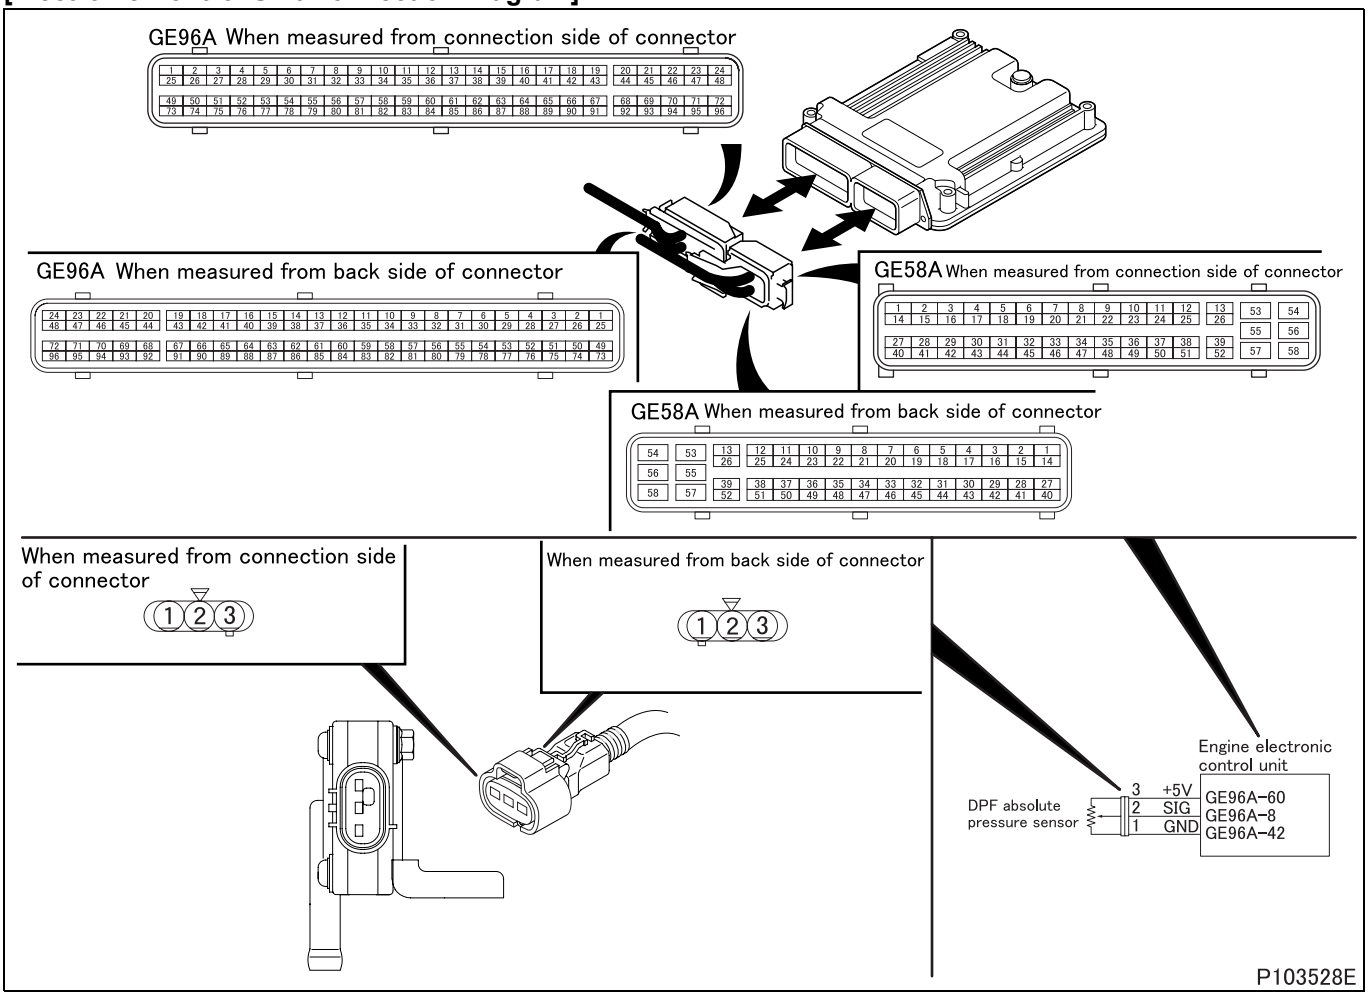
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Pressure before ceramic diesel particulate filter is fixed at backup value.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

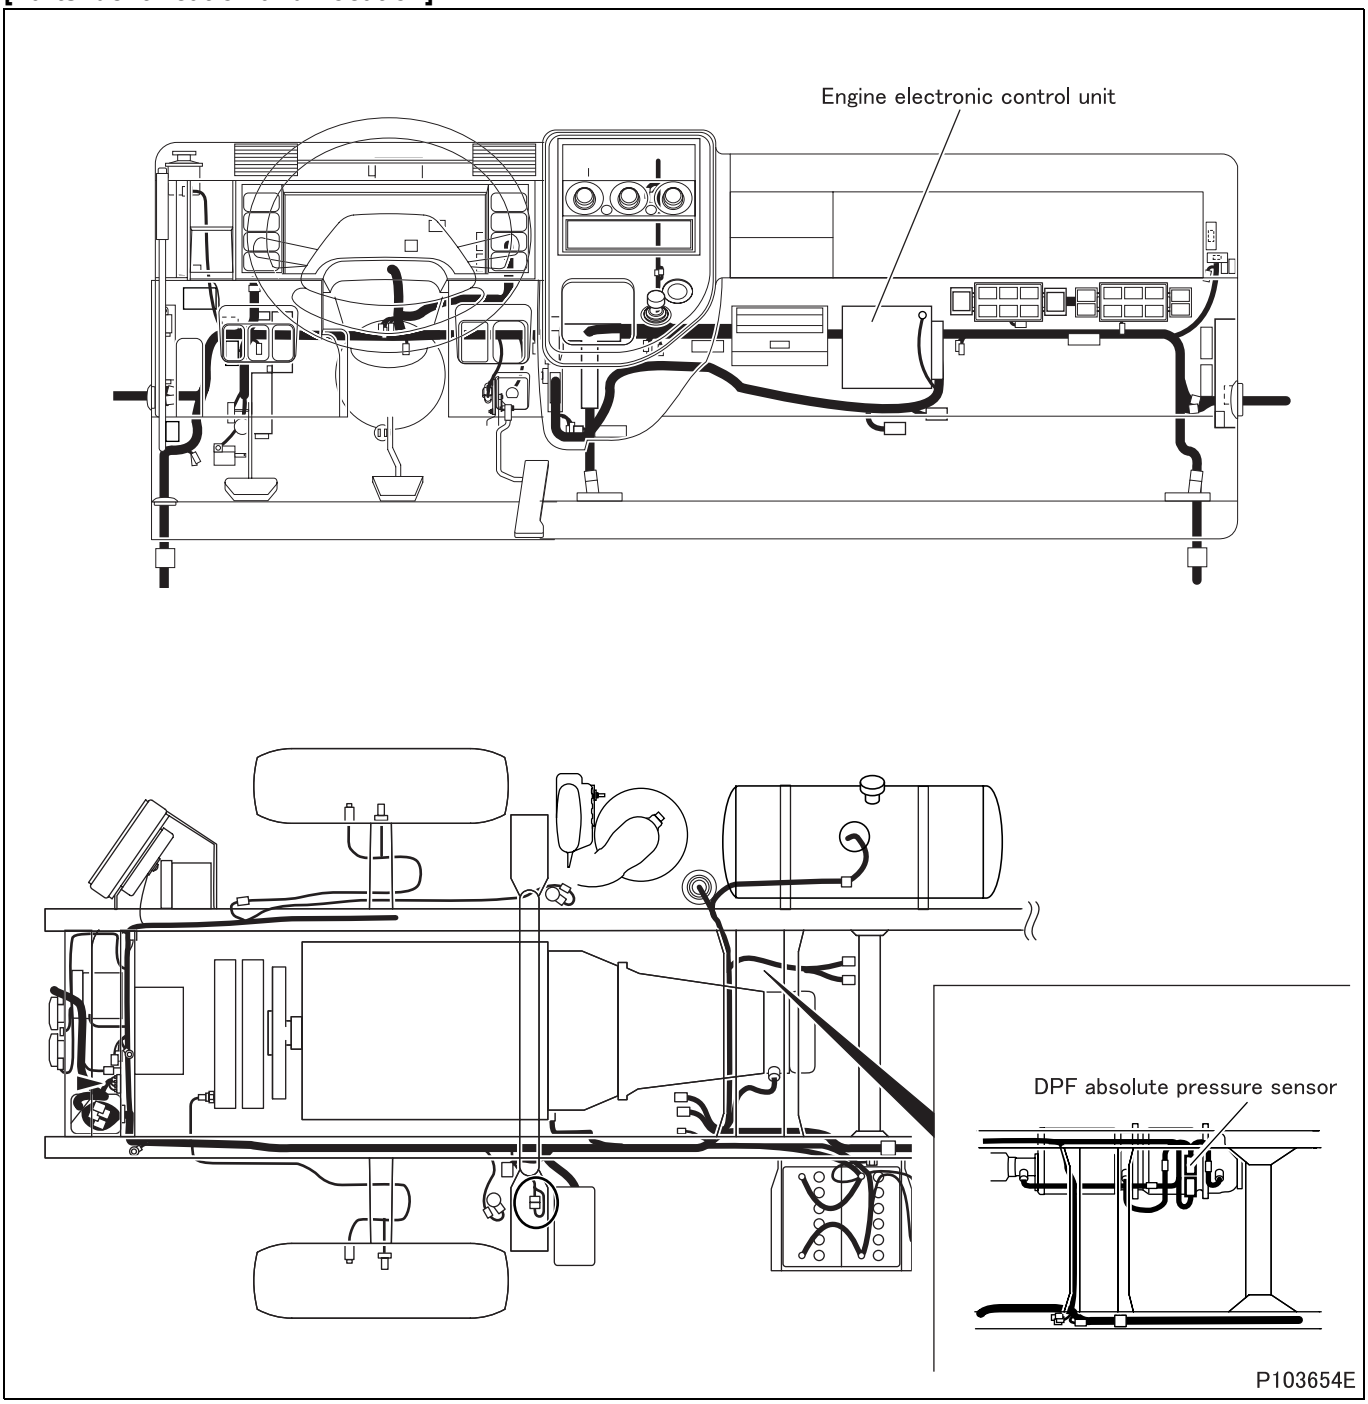
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Starter switch: ON Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 8 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		1.875 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 4.

Step 4	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 60 (+) and 42 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 6.

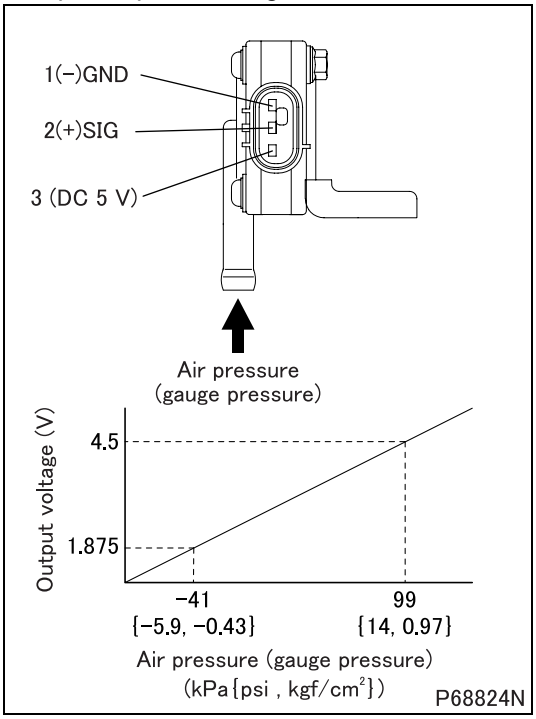
Step 5	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 42 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 8	Inspection items		Inspection of DPF absolute pressure sensor unit
	Maintenance item		Measure value of voltage between terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 41 ± 3.2 kPa {5.9 ± 0.5 psi, 0.43 ± 0.03 kgf/cm^2}: 1.875 V • 99 ± 3.2 kPa {14 ± 0.5 psi, 1.0 ± 0.03 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between terminal No. 3 (+) and 1 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Go to step 10.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 60 and sensor connector terminal No. 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 42 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 8 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify harness.

Step 13	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 23 “Exhaust gas pressure” of Service Data.
	Inspection condition		–
	Requirements		0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0476/Flash code: 93
[Monitor]
Failure of exhaust brake
[Fault (outline)]
Valve stuck open/shut
[Diagnosis check]
- Air flow sensor output (intake air flow rate) is monitored for valve being stuck in that state when commanded to open or close by engine electronic control unit.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)
<When valve is commanded to open>
- Intake air flow rate remains less than specified for 5 seconds.

<When valve is commanded to close>
- Intake air flow rate remains more than specified for 5 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

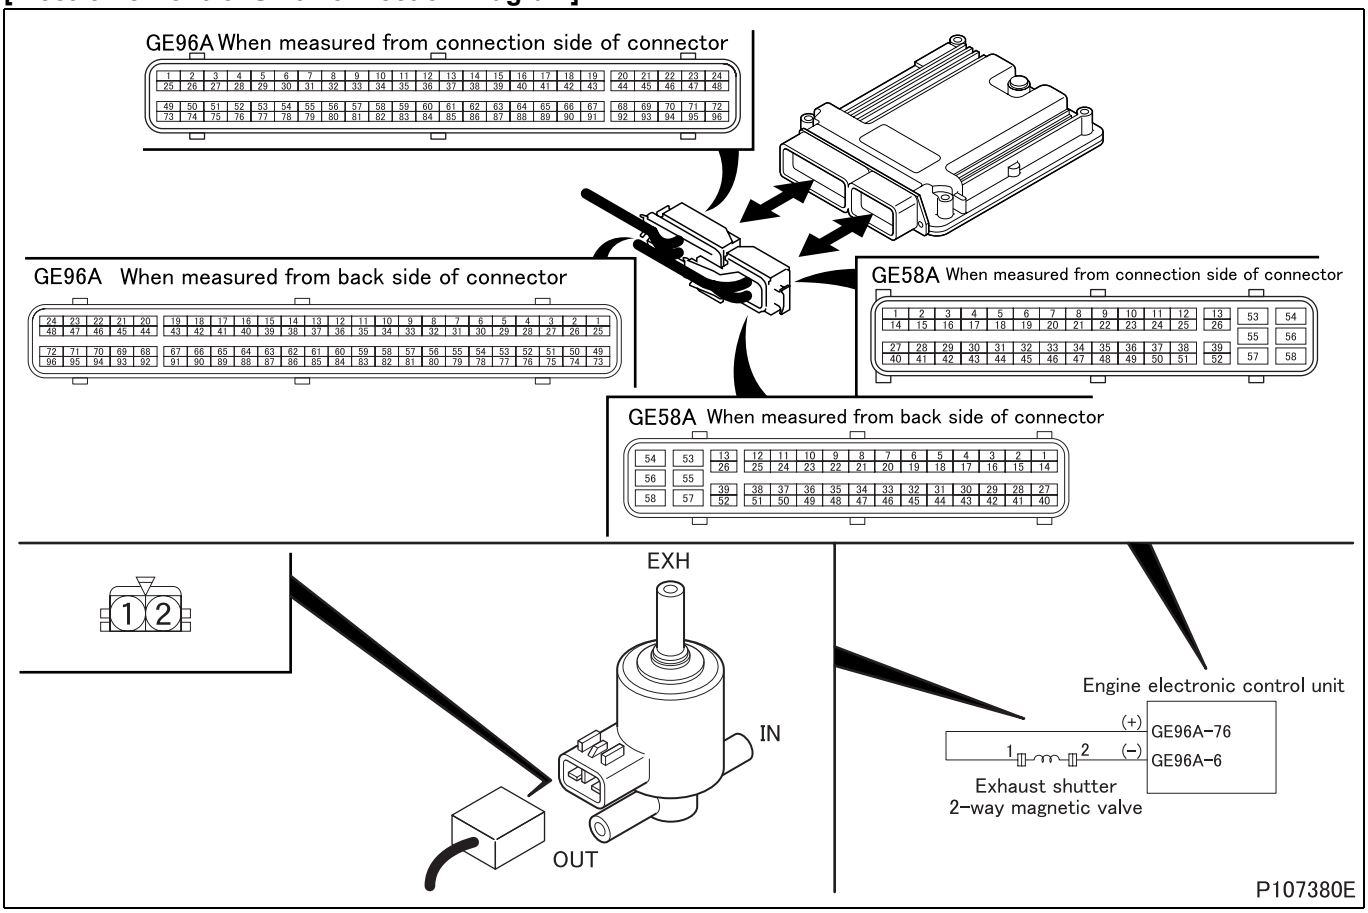
[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Engine speed: 1250 to 2750 rpm
- Accelerator pedal position: less than 2%
- Water temperature: 64 to 100°C {147 to 212°F}
- Intake air temperature: –7 to 60°C {19 to 140°F}
- Boost pressure: more than 750 rpm
- Exhaust gas recirculation valve position: 0 to 2 mm {0 to 0.079 in.}
- Air flow sensor: in order
- Accelerator pedal position sensor: in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Exhaust gas recirculation valve position sensor: in order
- Battery voltage: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Exhaust shutter 2-way magnetic valve: in order
- Intake air temperature sensor: in order
- Sensor 5 V power supply: in order

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

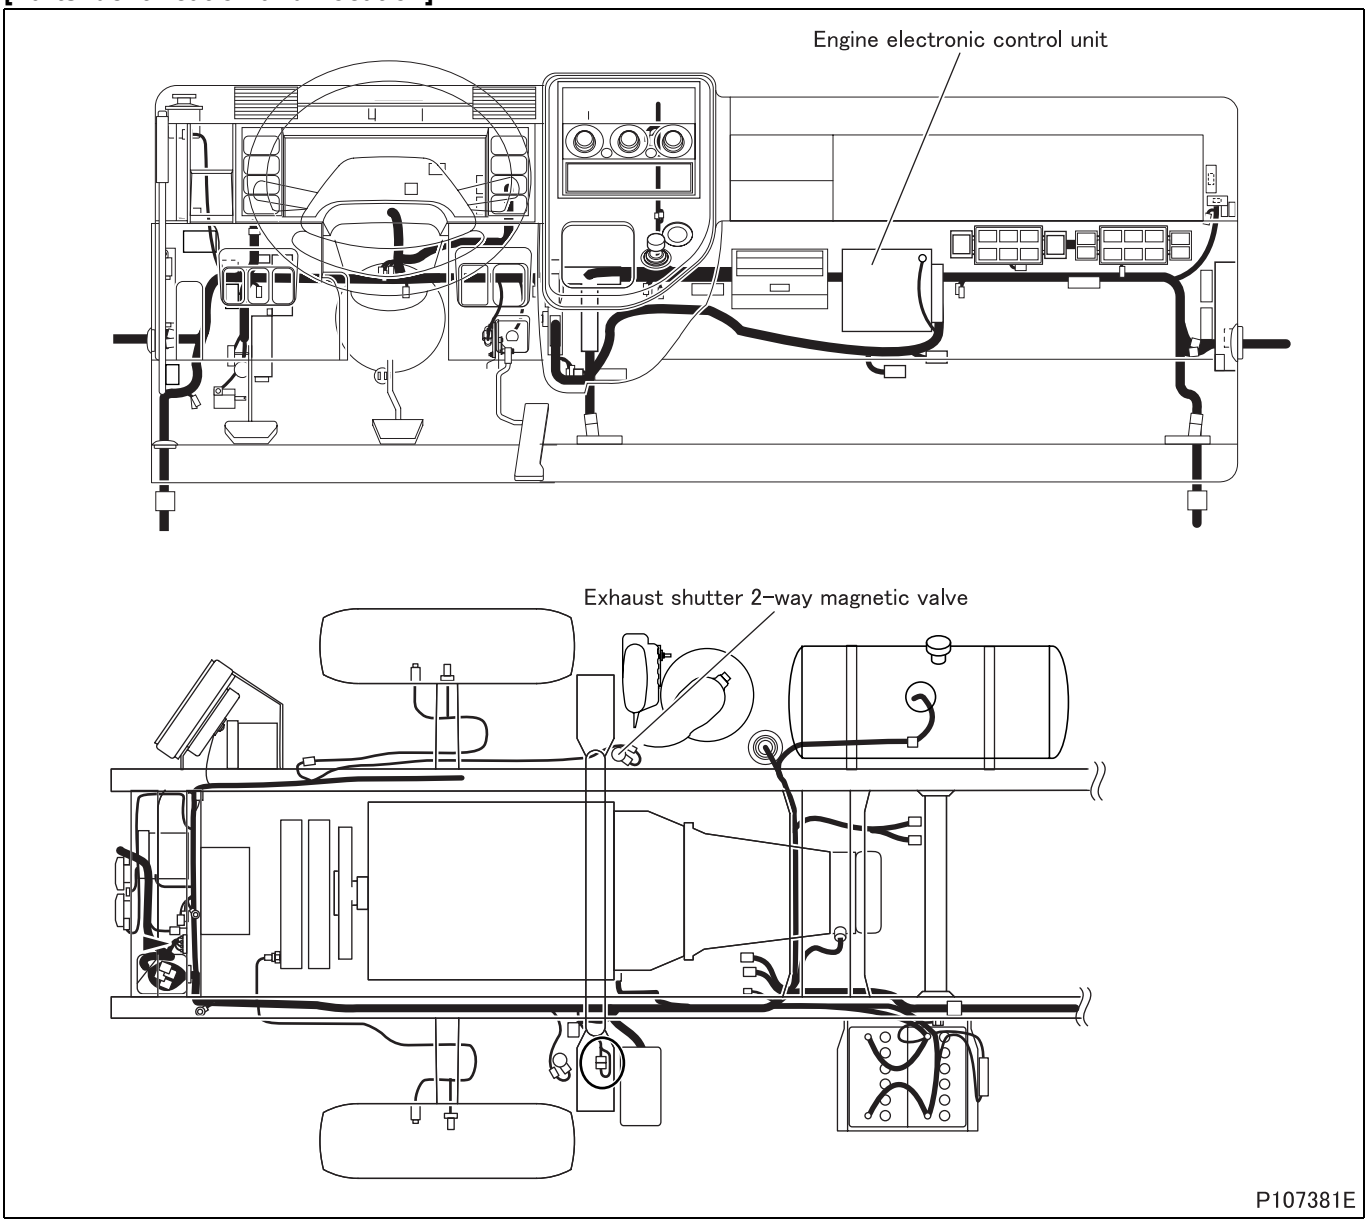
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and exhaust shutter 2-way magnetic valve
- Malfunction of each connector
- Malfunction of exhaust shutter 2-way magnetic valve
- Malfunction of electronic control unit
- Malfunction of exhaust shutter unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

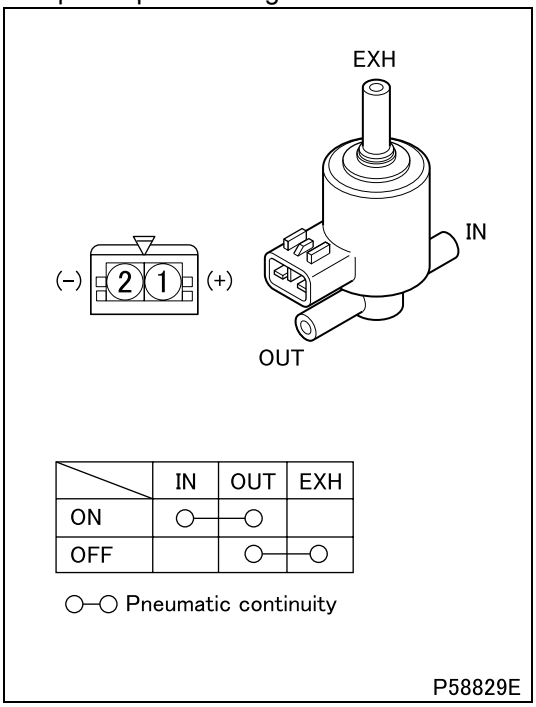
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 6 and 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		48 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of exhaust shutter 2-way magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of exhaust shutter 2-way magnetic valve unit
	Maintenance item		Measure minimum operating voltage when 2-way magnetic valve operates (judge by operation sound).
	Inspection condition		Gradually increase from zero the voltage applied to terminals No. 1 (+) and 2 (–).
	Requirements		11 V or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of 2-way magnetic valve

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 6.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AA “Auxiliary Brake M/V 1”
	Inspection condition		Starter switch: ON
	Requirements		2-way magnetic valve operation sound is noted.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0489/Flash code: 67
[Monitor]
Failure of exhaust gas recirculation system
[Fault (outline)]
Power out of range
[Diagnosis check]
- Exhaust gas recirculation electronic drive unit monitors power supply voltage of electronic drive unit and sends fault information to engine electronic control unit through controller area network communication.

[Code generation condition]
- Voltage of exhaust gas recirculation electronic drive unit remains below 7 V for 13 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

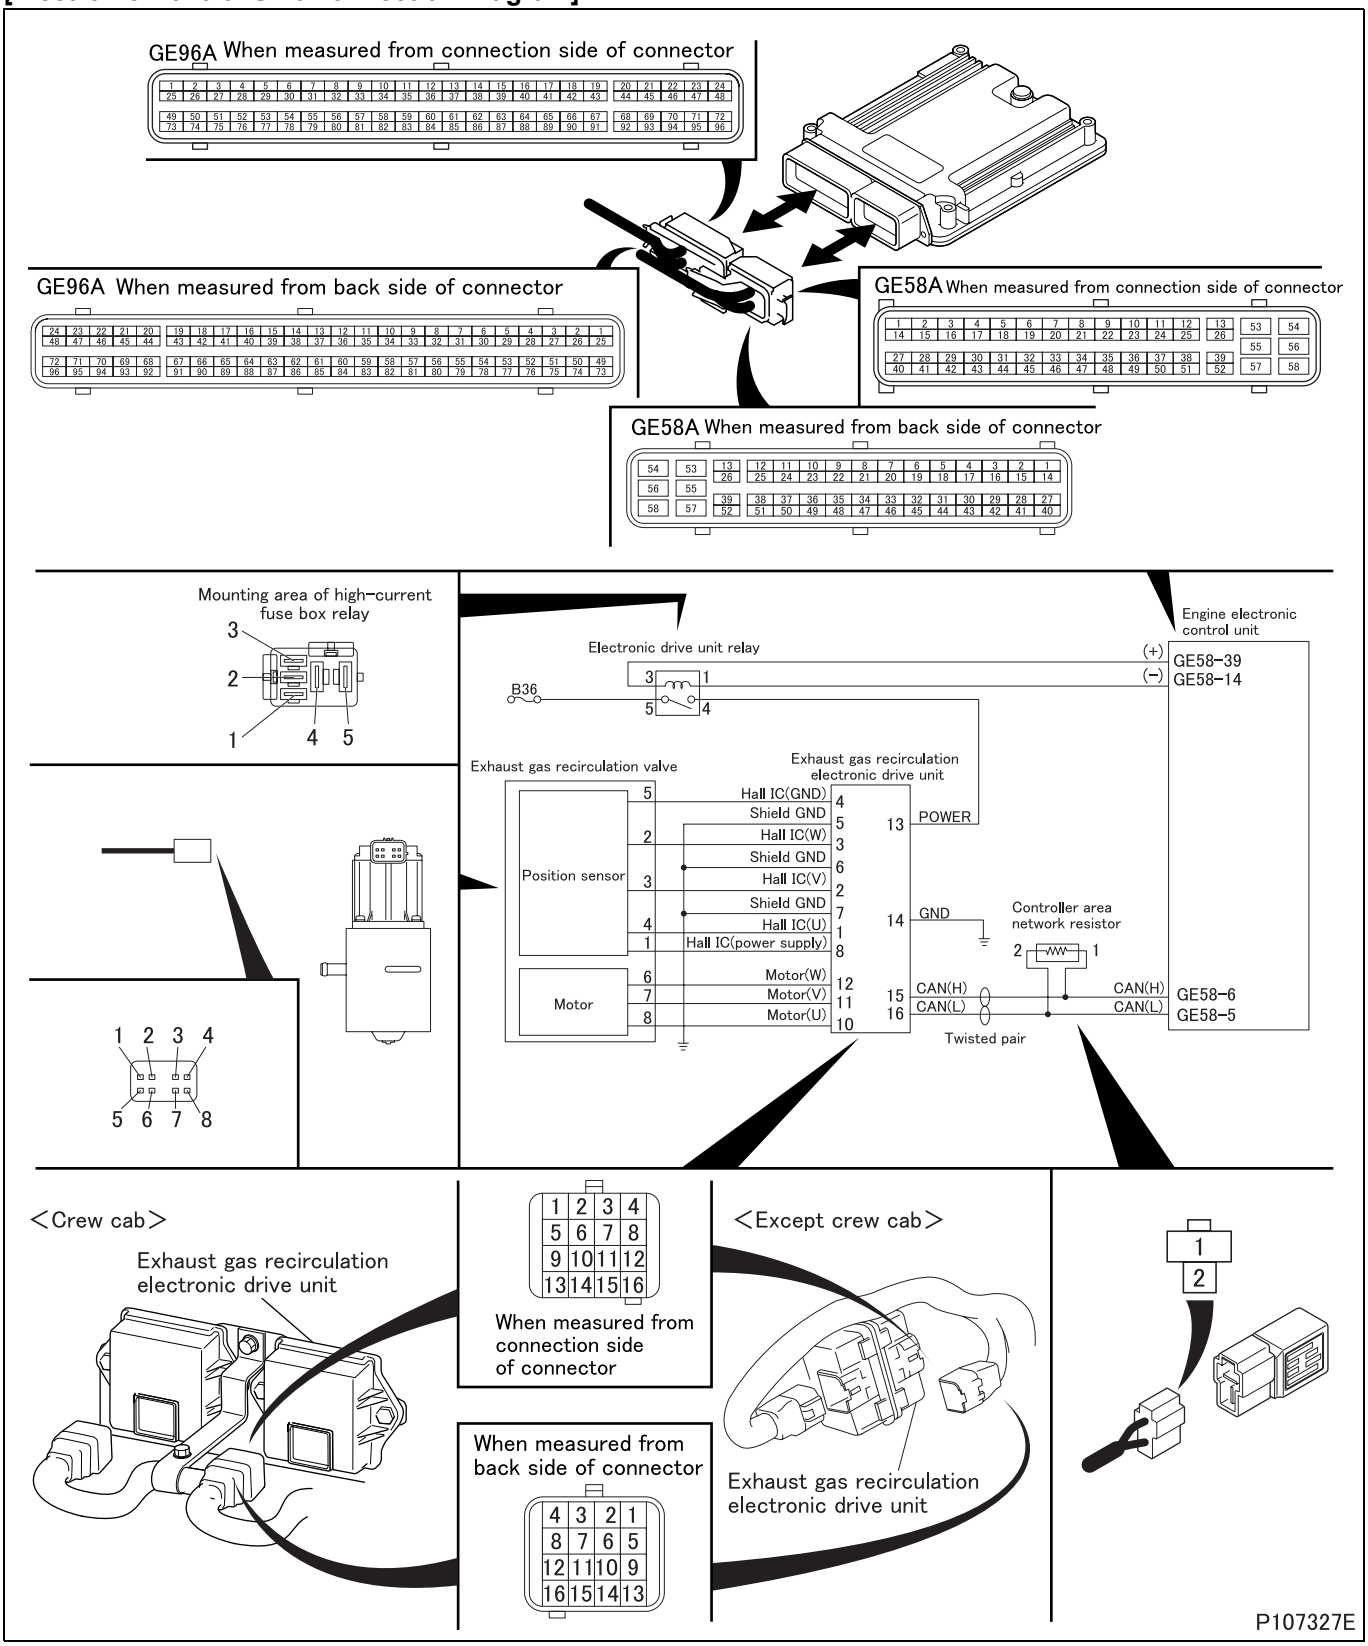
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

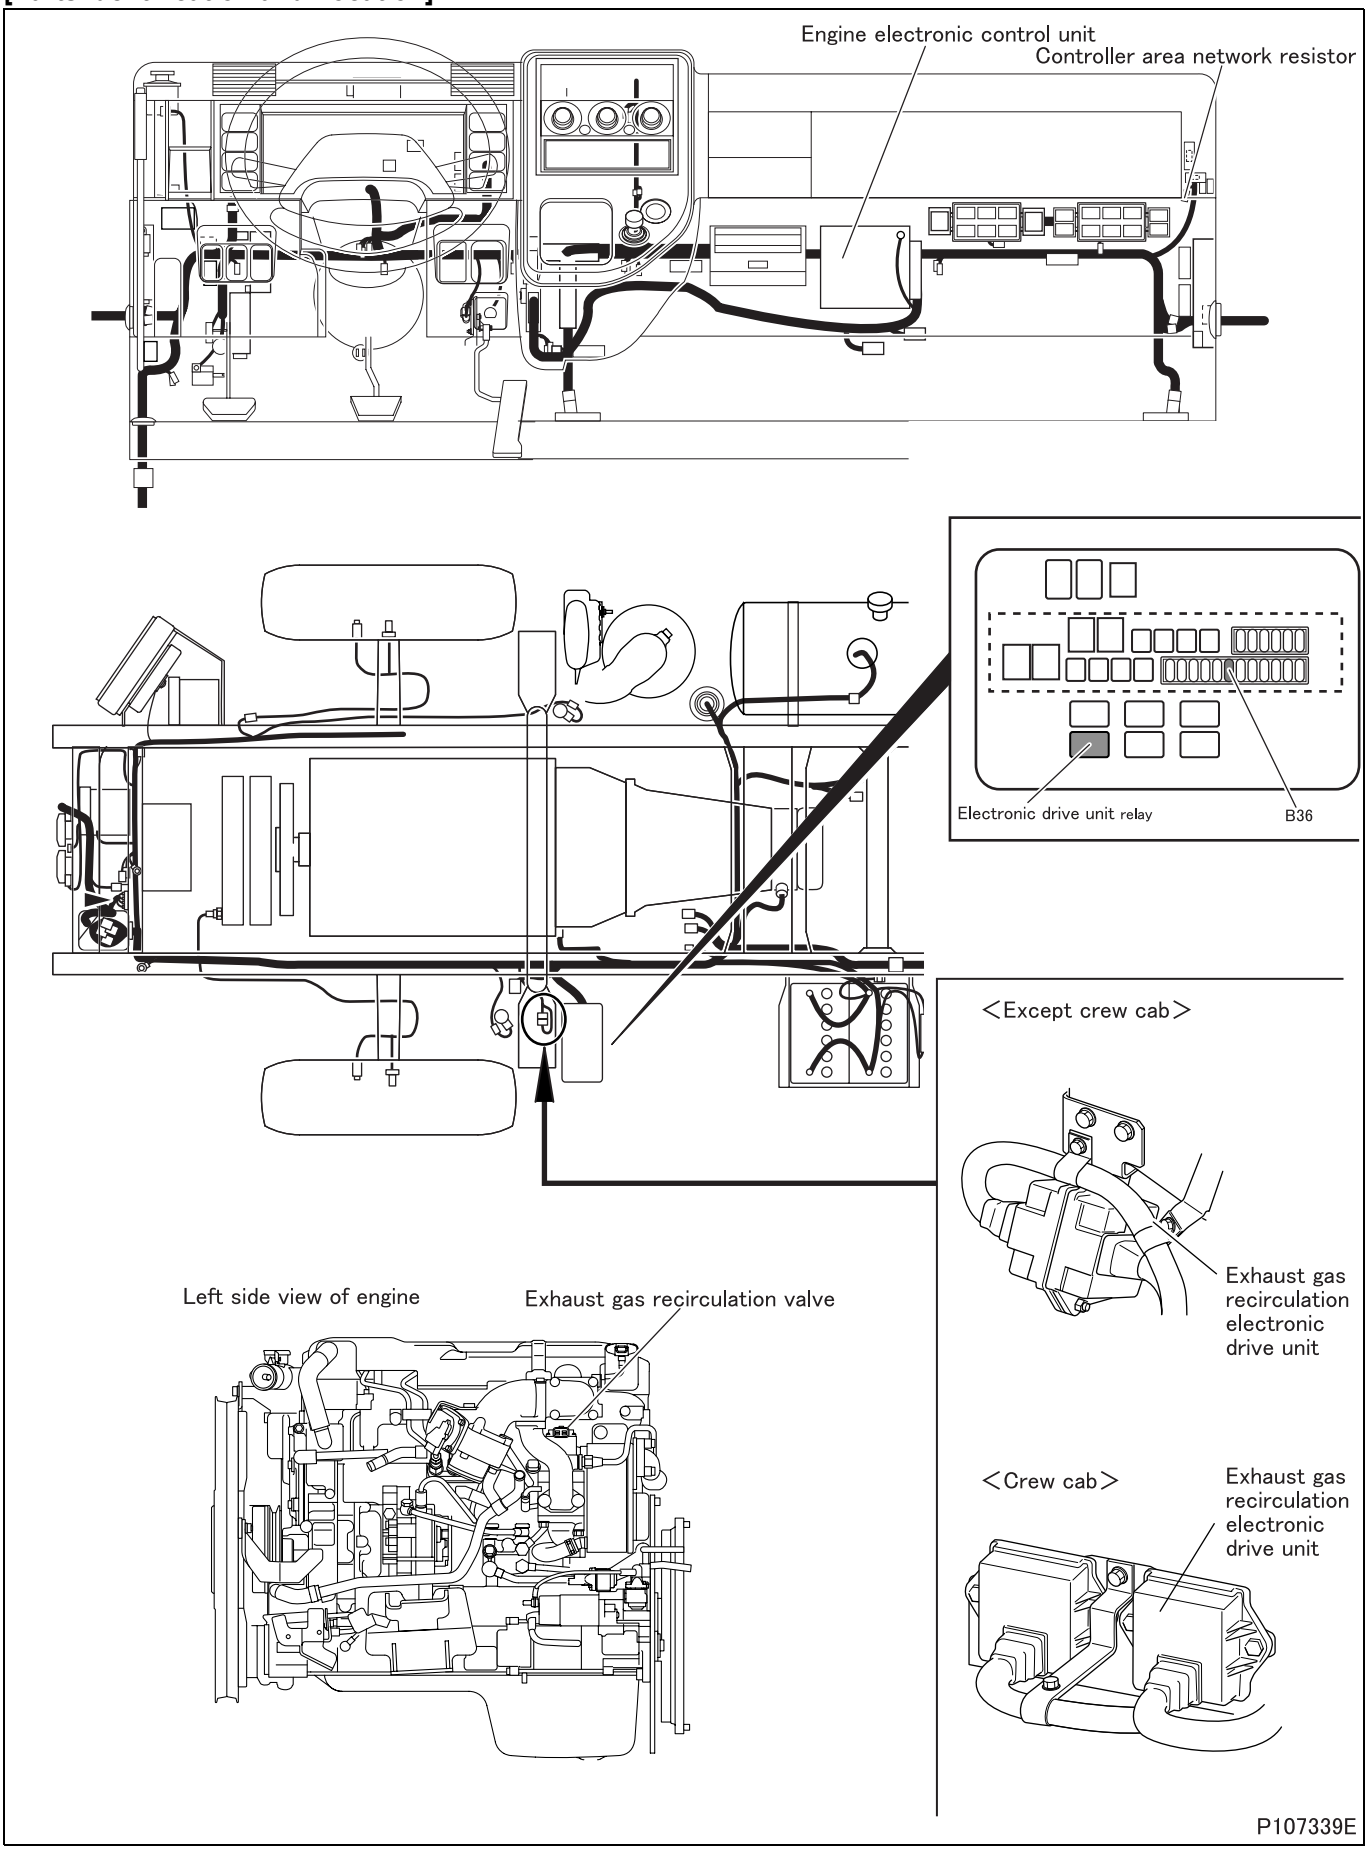
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and battery
- Malfunction of each connector
- Malfunction of battery
- Malfunction of electronic drive unit relay
- Malfunction of electronic drive unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P0688 “EDU Relay (Over Load)”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Remove connector and measure from harness side. • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 4.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B36 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 7
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between electronic drive unit connector terminal No. 14 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic drive unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0490/Flash code: 67
[Monitor]
Failure of exhaust gas recirculation system
[Fault (outline)]
Power out of range
[Diagnosis check]
- Exhaust gas recirculation electronic drive unit monitors power supply voltage of electronic control drive unit and sends fault information to engine electronic control unit through controller area network communication.

[Code generation condition]
- Voltage of exhaust gas recirculation electronic drive unit remains over 19 V for 5 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

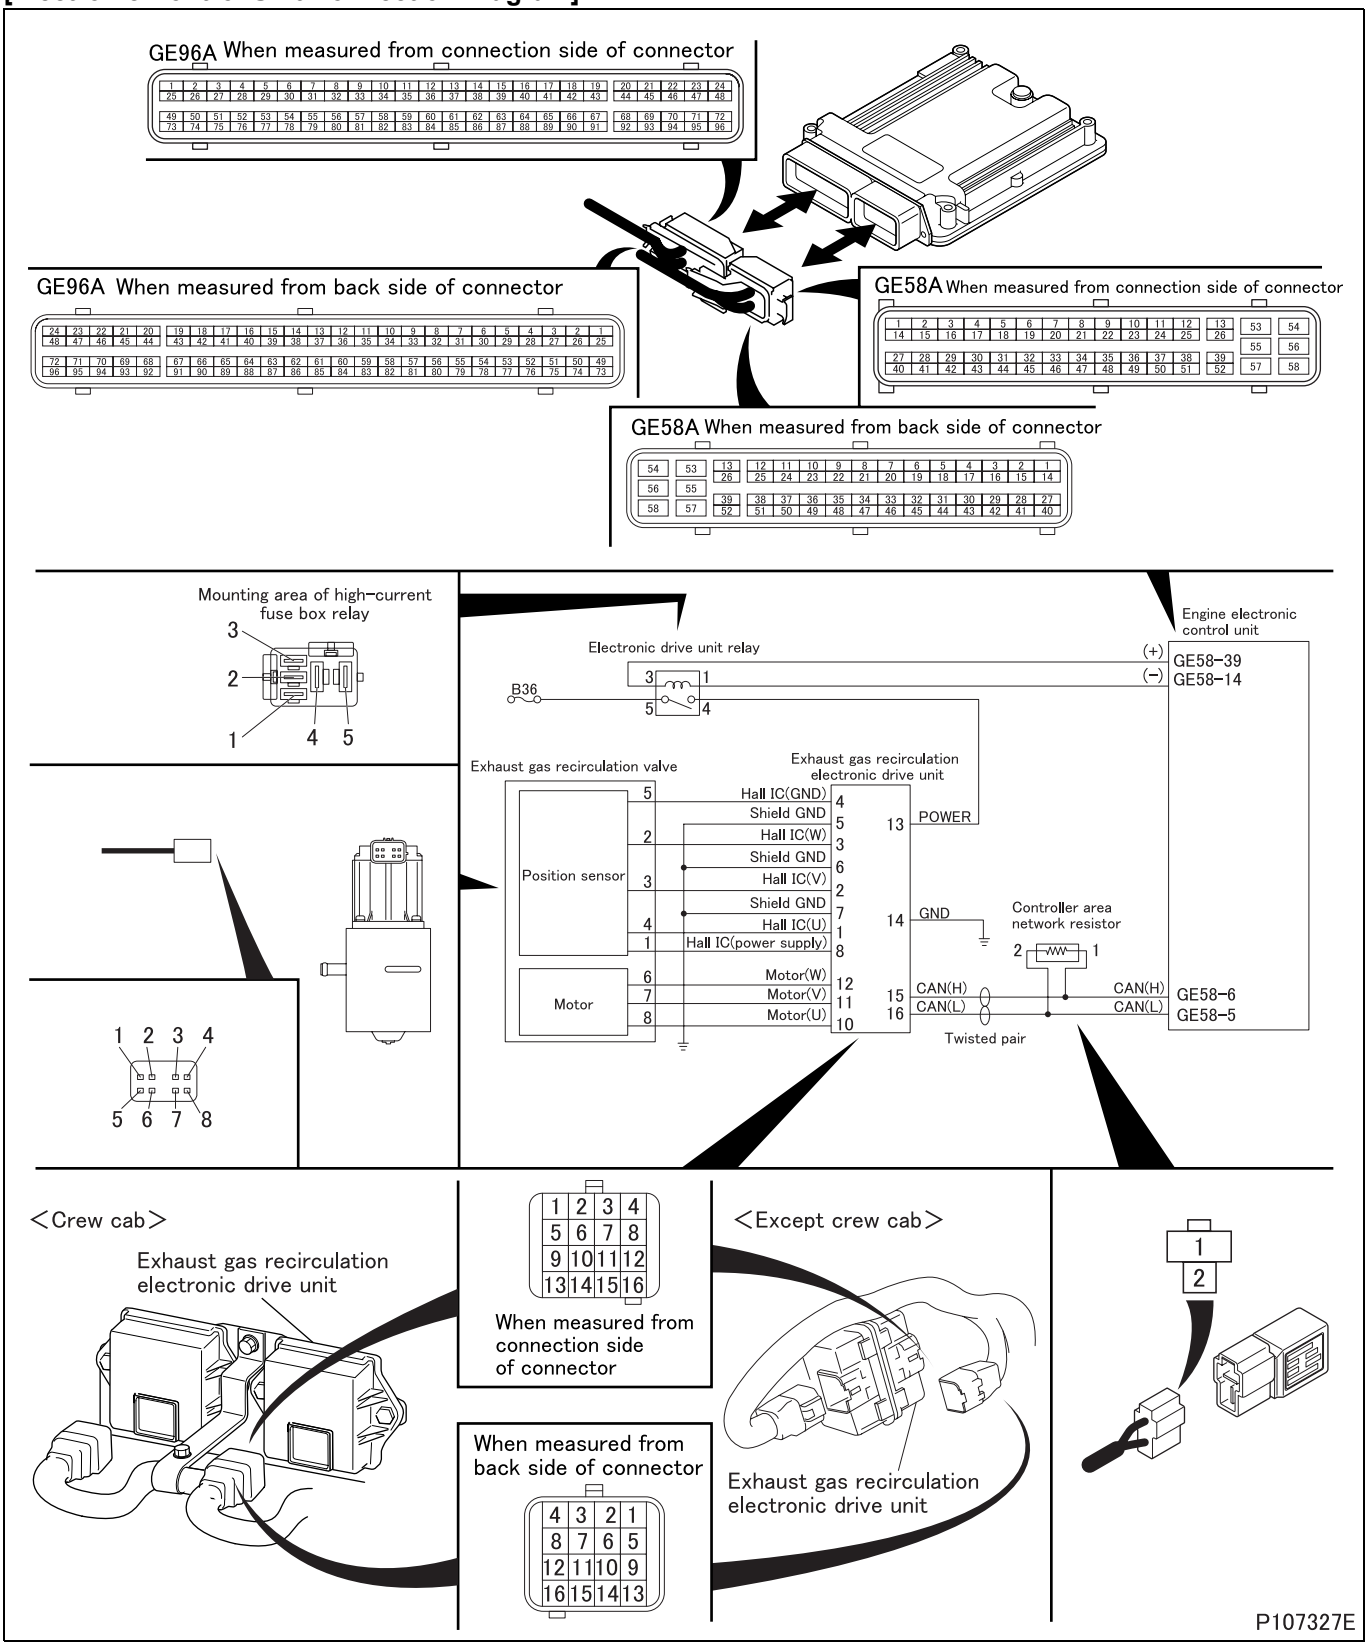
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Related fault check is stopped.

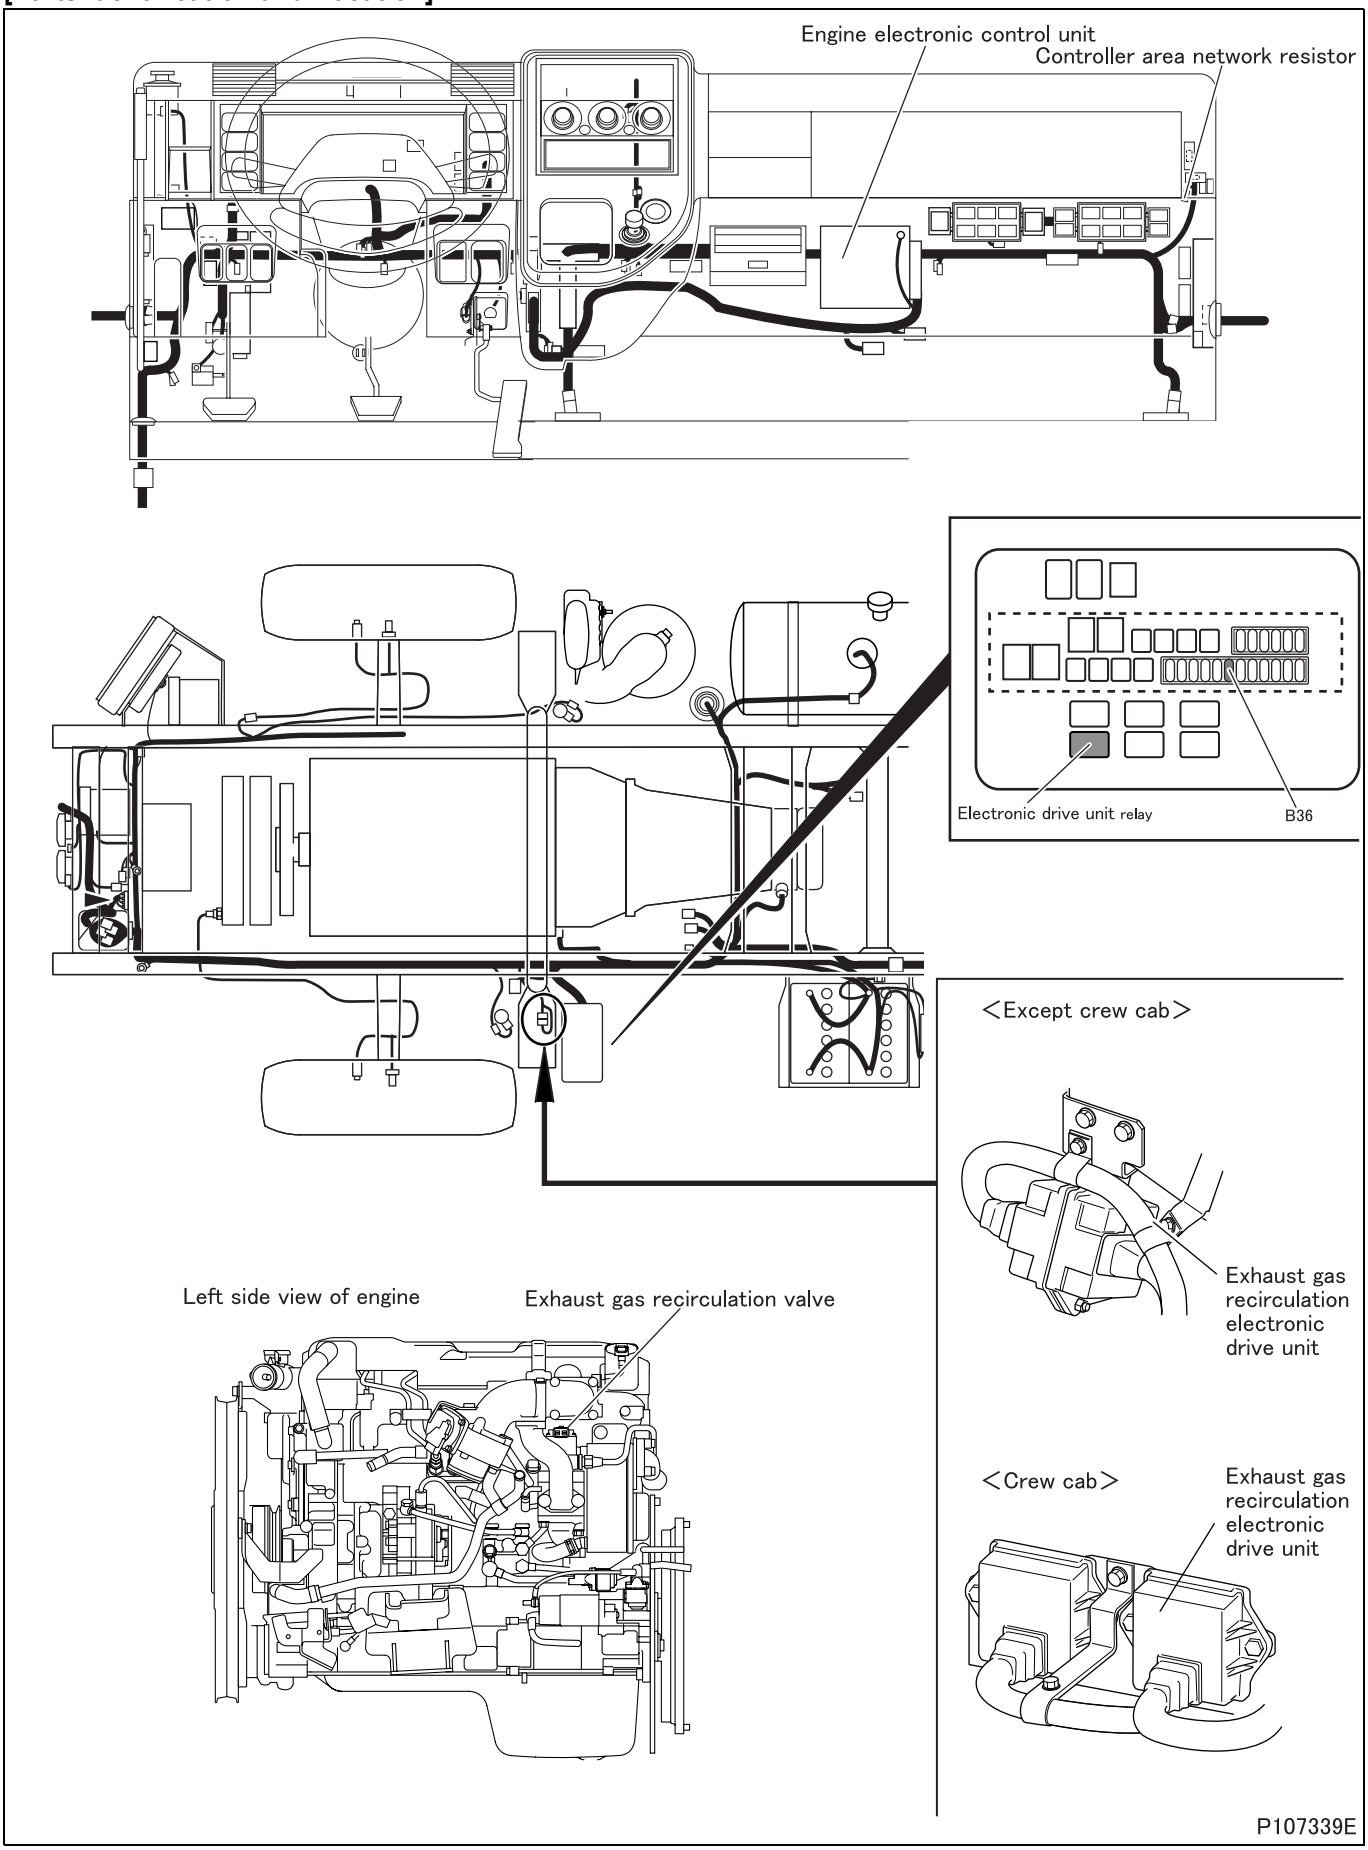
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and battery
- Malfunction of each connector
- Malfunction of battery
- Malfunction of electronic drive unit relay
- Malfunction of electronic drive unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P0688 “EDU Relay (Over Load)”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Remove connector and measure from harness side. • Perform actuator test item No. AF “EDU Relay”
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 4.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B36 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between electronic drive unit connector terminal No. 14 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic drive unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0500/Flash code: 25
[Monitor]
Failure of vehicle speed sensor
[Fault (outline)]
Signal
[Diagnosis check]
- Vehicle speed sensor output signal is monitored. (no pulse)

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Error in vehicle speed processing function in engine electronic control unit occurs and remains for 0.1 second. (Warning lamp (red) is lit and diagnosis code is displayed on third establishment of code generation condition.)

<Condition (2)>
- Vehicle speed remains below 2 km/h {1.24 MPH} as detected for 20 or 60 seconds when engine speed is 1000 rpm and transmission is in neutral.
  (Warning lamp (orange) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
<Condition (1)>
- Fault diagnosis is performed only once during the driving cycle.

<Condition (2)>
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the color of warning lamp.
<Warning lamp: Orange>
- Vehicle speed is fixed at backup value.
- Misfire detection is stopped.
- In-use performance counter is stopped.
- Auto cruise control stopped
- Speed limitation device control is stopped.
- Idle up is stopped.
- Related fault check is stopped.

<Warning lamp: Red>
- Vehicle speed is fixed at backup value.
- Auto cruise control stopped
- Speed limitation device control is stopped.
- Traveled distance computation is stopped.
- Related fault check is stopped.

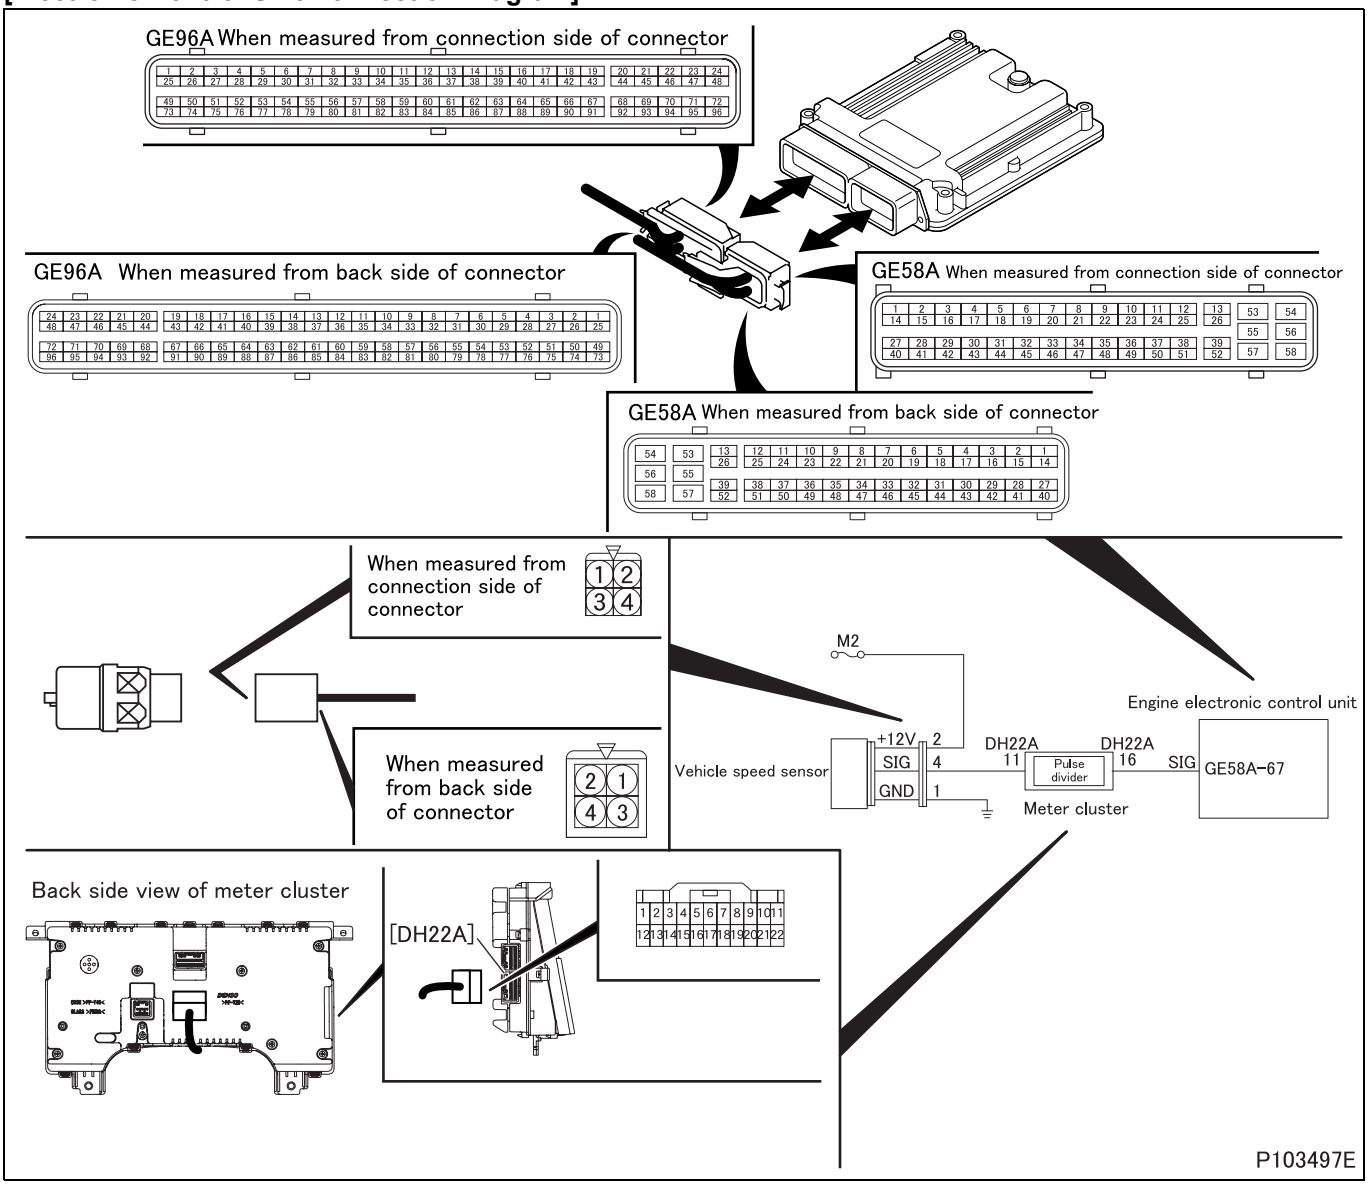
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and pulse divider (built in meter cluster)
- Malfunction of each connector
- Malfunction of pulse divider (built in meter cluster)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

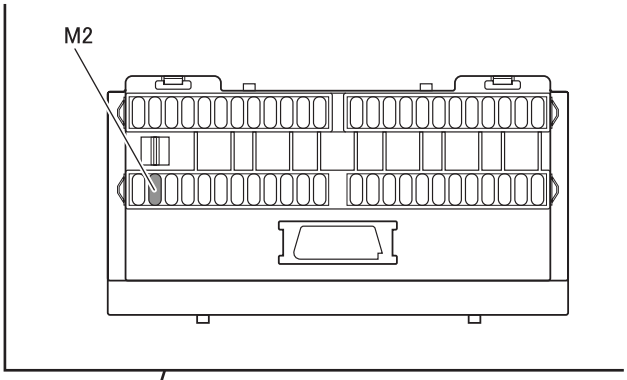
<Condition (1)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

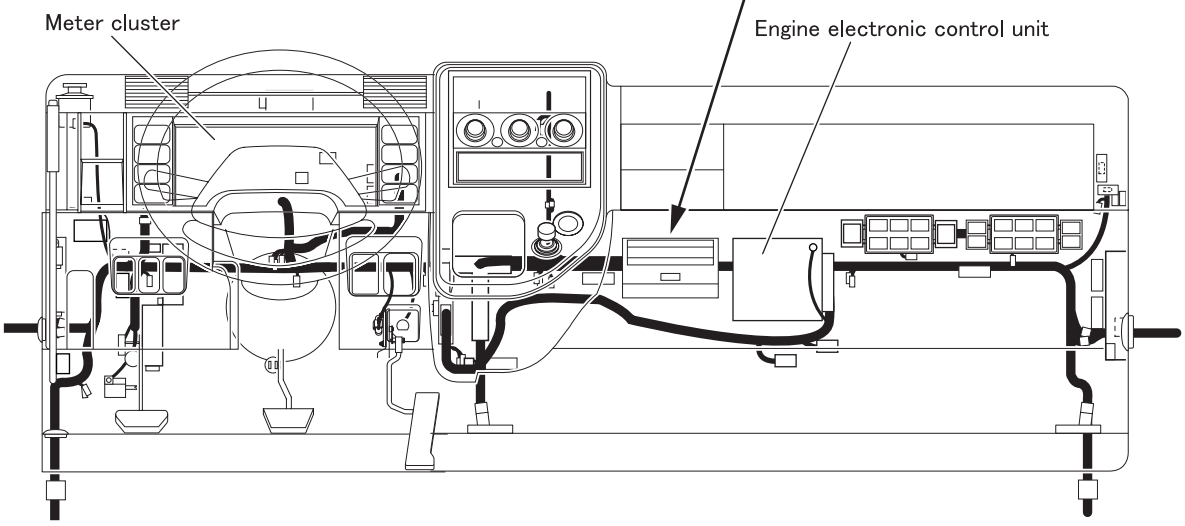
<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Electronic Control Unit Connection Diagram]

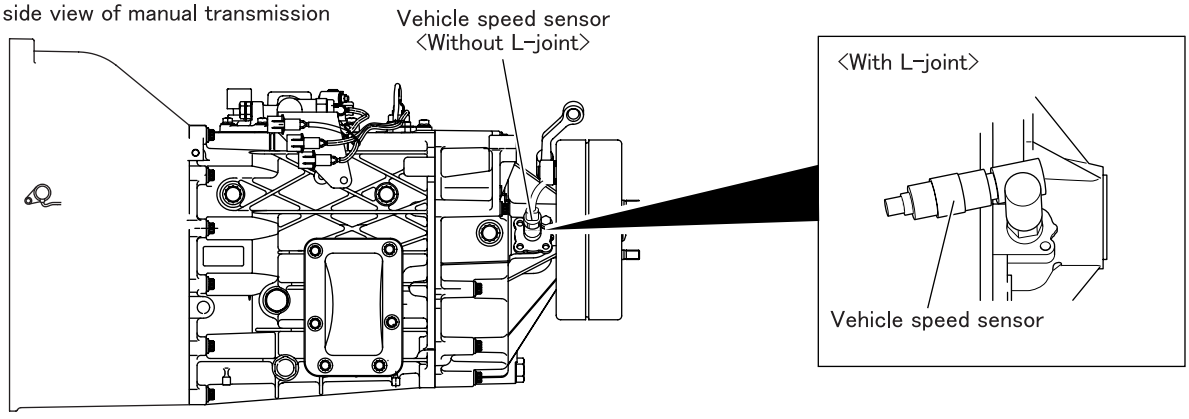


[Parts Identification and Location]

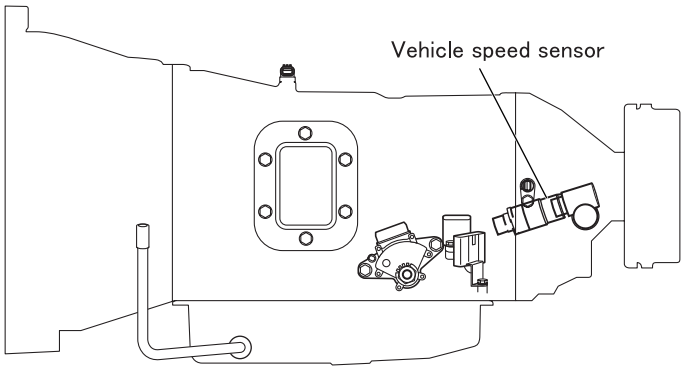




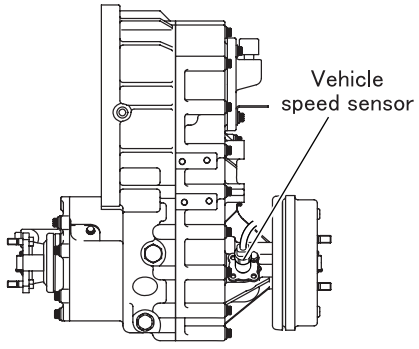
Left side view of manual transmission



Left side view of automatic transmission



Transfer (FG)



P107332E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

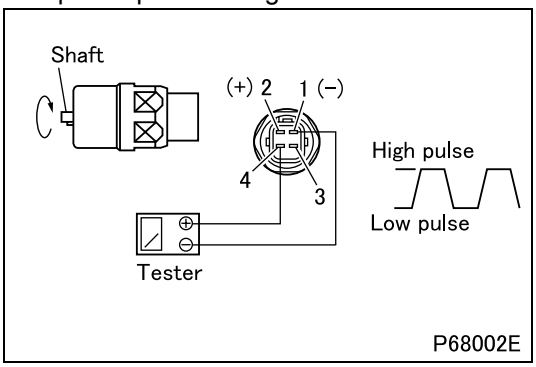
Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 67 (+) and chassis ground.
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness. • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and pulse divider
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 67 and meter cluster connector (DH22A) terminal No. 18.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of vehicle speed sensor
	Maintenance item		Measure maximum value A (high pulse voltage) and minimum value B (low pulse voltage) of voltage generated between connector terminals No. 4 (+) and 1 (–).
	Inspection condition		Slowly turn sensor shaft with voltage DC 12 V applied between terminals No. 2 (+) and No. 1 (–).
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor harness (power supply)
	Maintenance item		Check circuit between connector terminal No. 2 and fuse (M2).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor harness (ground)
	Maintenance item		Check circuit between connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of sensor harness (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 4 and meter cluster connector (DH22A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection by pulse divider connector (meter cluster)
	Maintenance item		Measure value of voltage between connector (DH22A) terminal No. 16 (+) and No. 6 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of pulse divider (meter cluster)

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0502/Flash code: 25
[Monitor]
Failure of vehicle speed sensor
[Fault (outline)]
Too low
[Diagnosis check]
- Vehicle speed sensor output signal is monitored. (too low)

[Code generation condition]
- Vehicle speed output from vehicle speed sensor remains less than 1 km/h {0.62 MPH} for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

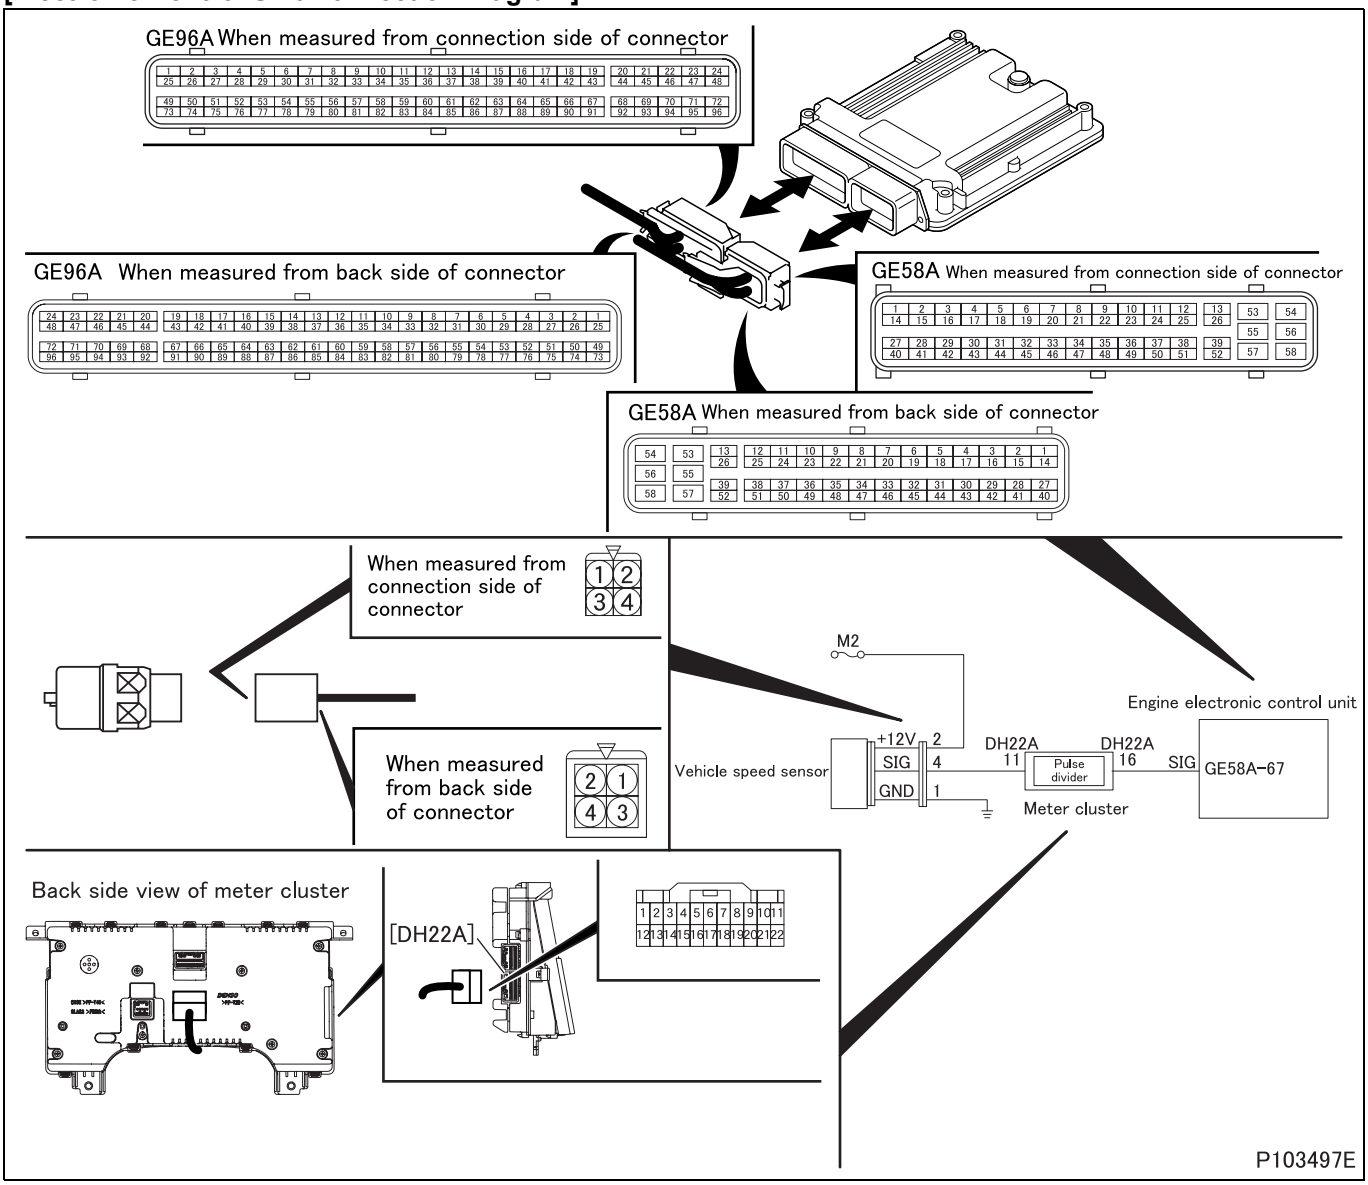
[Diagnostic requirement]
- Engine speed: more than 2000 rpm
- Fuel injection quantity: above 50 mg/cyc
- Time till above conditions were met: more than 2 seconds
- Battery voltage: in order
- MPROP (rail pressure control valve): in order

[Control effected by electronic control unit during fault]
- Vehicle speed is fixed at backup value.
- Misfire detection is stopped.
- In-use performance counter is stopped.
- Auto cruise control stopped
- Speed limitation device control is stopped.
- Idle up is stopped.
- Related fault check is stopped.

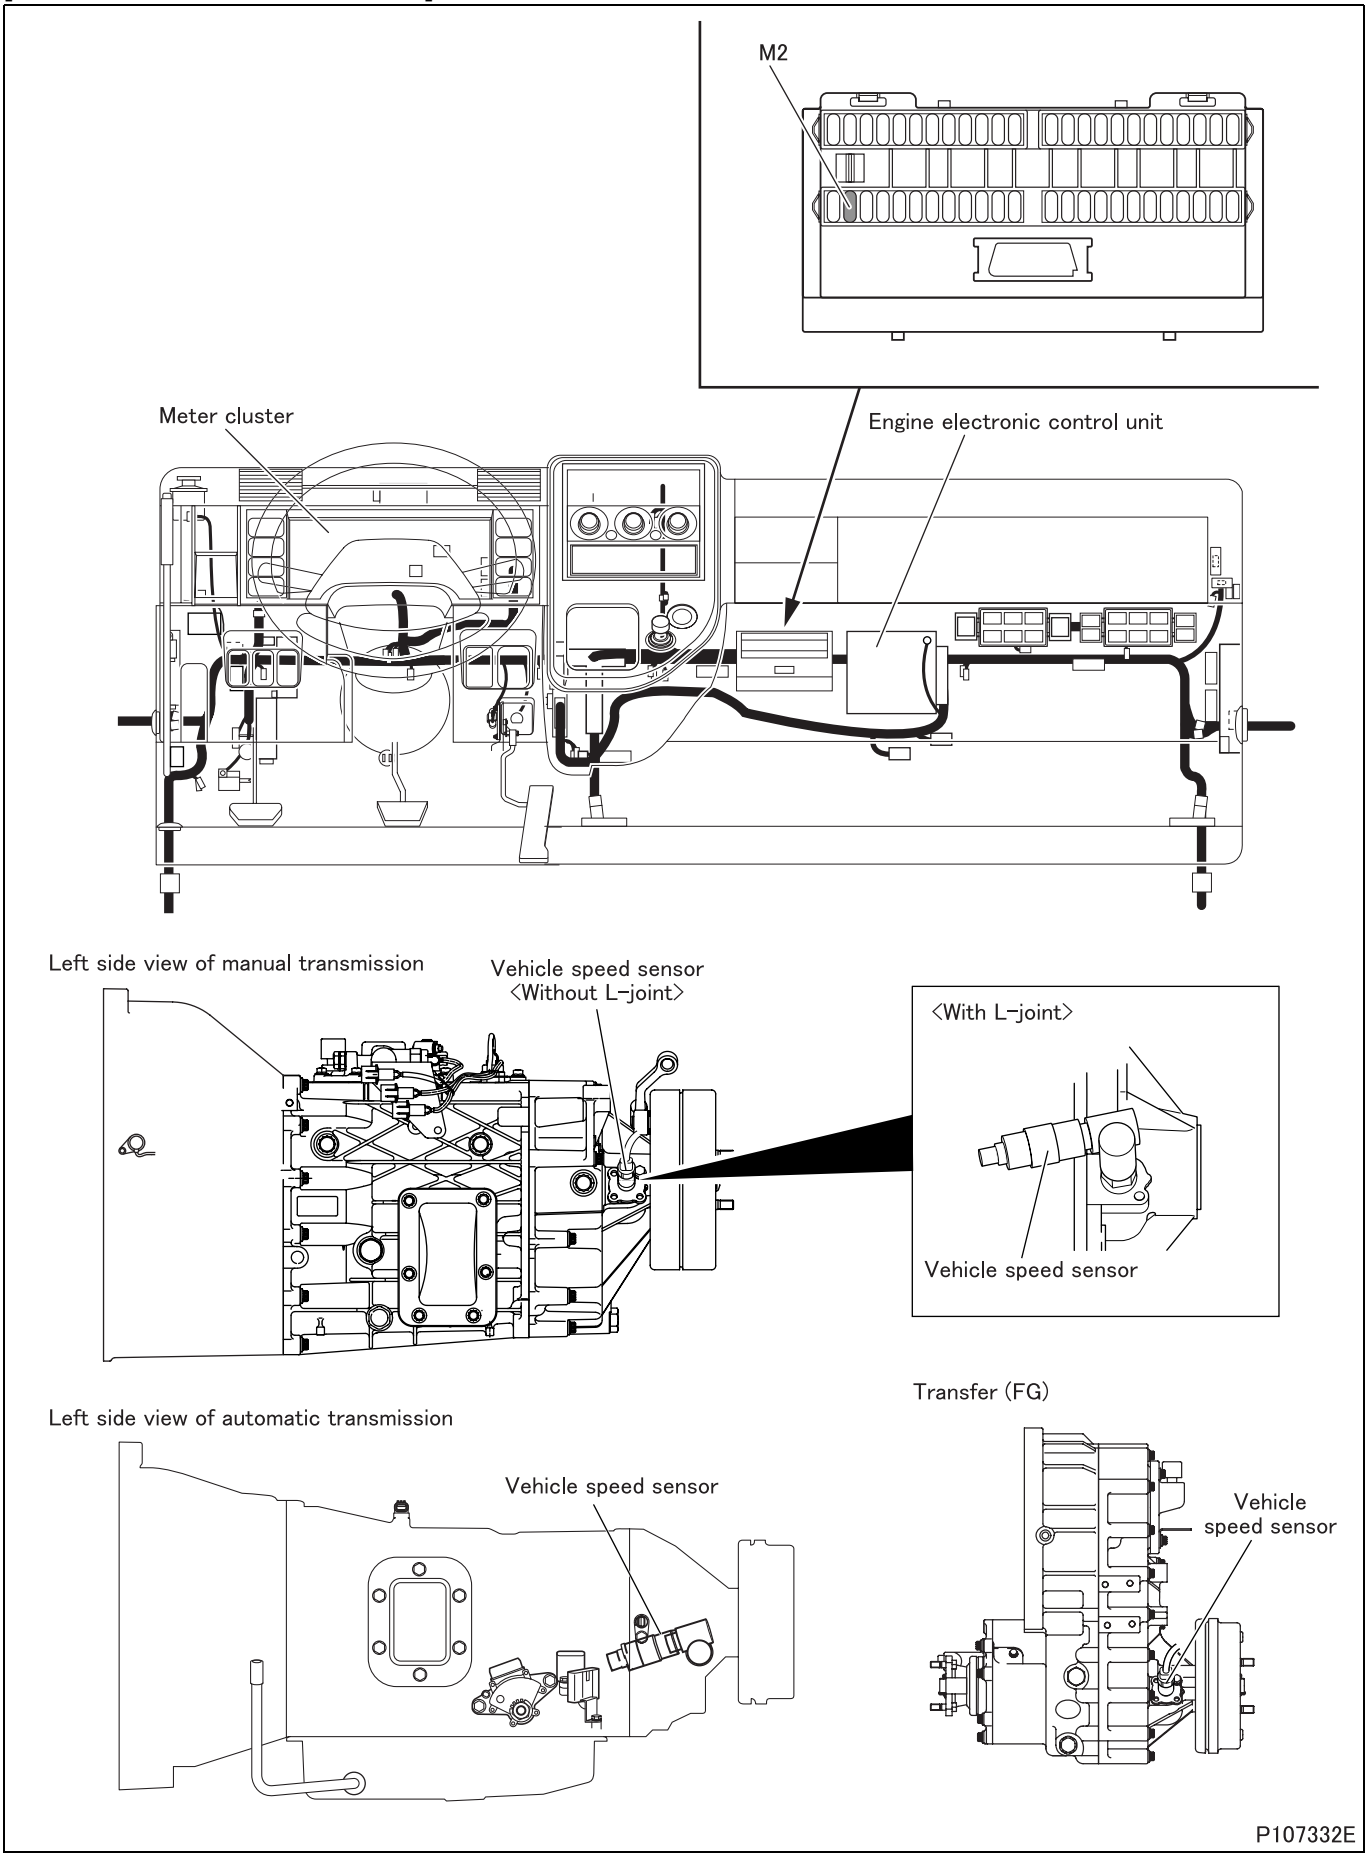
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and pulse divider (built in meter cluster)
- Malfunction of each connector
- Malfunction of pulse divider (built in meter cluster)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



P107332E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

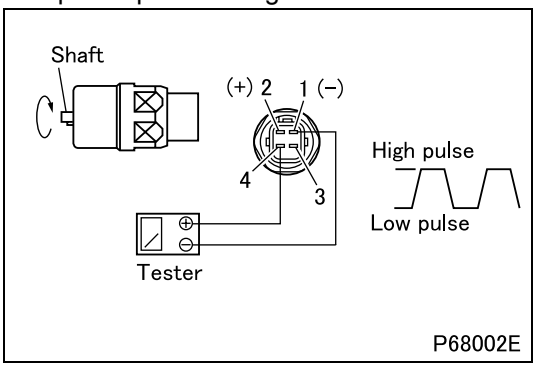
Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 67 (+) and chassis ground.
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness. • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and pulse divider
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 67 and meter cluster connector (DH22A) terminal No. 18.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of vehicle speed sensor
	Maintenance item		Measure maximum value A (high pulse voltage) and minimum value B (low pulse voltage) of voltage generated between connector terminals No. 4 (+) and 1 (–).
	Inspection condition		Slowly turn sensor shaft with voltage DC 12 V applied between terminals No. 2 (+) and No. 1 (–).
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor harness (power supply)
	Maintenance item		Check circuit between connector terminal No. 2 and fuse (M2).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor harness (ground)
	Maintenance item		Check circuit between connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of sensor harness (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 4 and meter cluster connector (DH22A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection by pulse divider connector (meter cluster)
	Maintenance item		Measure value of voltage between connector (DH22A) terminal No. 16 (+) and No. 6 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of pulse divider (meter cluster)

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0503/Flash code: 25
[Monitor]
Failure of vehicle speed sensor
[Fault (outline)]
Too high
[Diagnosis check]
- Vehicle speed sensor output signal is monitored. (too high)

[Code generation condition]
- Vehicle speed output from vehicle speed sensor remains more than 70 km/h {43.5 MPH} for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 600 to 1500 rpm
- Fuel injection quantity: above 35 mg/cyc
- Time till above conditions were met: more than 2 seconds
- Battery voltage: in order
- MPROP (rail pressure control valve): in order

[Control effected by electronic control unit during fault]
- Vehicle speed is fixed at backup value.
- Misfire detection is stopped.
- In-use performance counter is stopped.
- Auto cruise control stopped
- Speed limitation device control is stopped.
- Idle up is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and pulse divider (built in meter cluster)
- Malfunction of each connector
- Malfunction of pulse divider (built in meter cluster)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

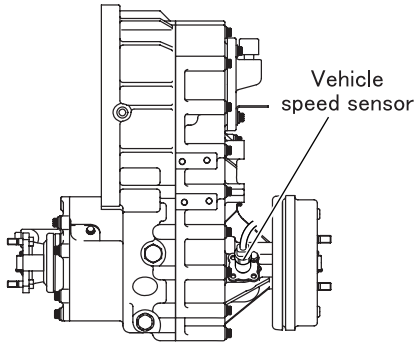
Transfer (FG)



P107332E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

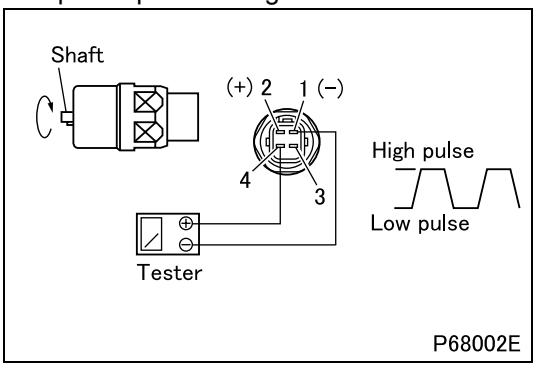
Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 67 (+) and chassis ground.
	Inspection condition		• Starter switch: ON • Engine: stopped • Measure from back side of connector of harness with each device connected to harness. • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and pulse divider
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 67 and meter cluster connector (DH22A) terminal No. 18.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of vehicle speed sensor
	Maintenance item		Measure maximum value A (high pulse voltage) and minimum value B (low pulse voltage) of voltage generated between connector terminals No. 4 (+) and 1 (–).
	Inspection condition		Slowly turn sensor shaft with voltage DC 12 V applied between terminals No. 2 (+) and No. 1 (–).
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor harness (power supply)
	Maintenance item		Check circuit between connector terminal No. 2 and fuse (M2).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of sensor harness (ground)
	Maintenance item		Check circuit between connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of sensor harness (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 4 and meter cluster connector (DH22A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection by pulse divider connector (meter cluster)
	Maintenance item		Measure value of voltage between connector (DH22A) terminal No. 16 (+) and No. 6 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON • Remove sensor and slowly turn sensor shaft.
	Requirements		• Low pulse: 0.5 V or less • High pulse: 8 ± 1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of pulse divider (meter cluster)

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Vehicle Speed Sensor”. **<Multi-Use Tester used>** • Measure item No. 90 “Vehicle Speed” of Service Data.
	Inspection condition		During vehicle operation
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0506/Flash code: 52
[Monitor]
Abnormality in idling control (idling speed is too low)
[Fault (outline)]
Idle speed too low
[Diagnosis check]
- Idling speed of vehicle at a stop (in parked condition) is detected by engine speed sensor as actual engine speed and compared with target engine speed for control by engine electronic control unit.

[Code generation condition]
- Actual engine speed remains –100 rpm or less below target engine speed (short of target) for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine status: normal (engine in operation)
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Accelerator pedal position: less than 1%
- Brake is not applied.
- Accelerator pedal position sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Vehicle speed sensor: in order
- Water temperature sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0507/Flash code: 52
[Monitor]
Abnormality in idling control (idling speed is too high)
[Fault (outline)]
Idle speed too high
[Diagnosis check]
- Idling speed of vehicle at a stop (in parked condition) is detected by engine speed sensor as actual engine speed and compared with target engine speed for control by engine electronic control unit.

[Code generation condition]
- Actual engine speed remains 200 rpm or more above target engine speed (over target value at a large margin) for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine status: normal (engine in operation)
- Vehicle speed: less than 2 km/h {1.24 MPH}
- Accelerator pedal position: less than 1%
- Brake is not applied.
- Accelerator pedal position sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Vehicle speed sensor: in order
- Water temperature sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0544/Flash code: 87
[Monitor]
Characteristic abnormality of DPF temperature sensor 1
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Difference in voltage output (temperature) between catalytic temperature sensor and DPF temperature sensor 1 is monitored for clogging of front oxidation catalyst.

[Code generation condition]
- Difference in temperature output remains excessively high (over 150°C {302°F}) or low (below –150°C {–238°F}) for 10 seconds <Relative check> and 20 seconds <Separate check>. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- When catalytic temperature sensor and DPF temperature sensor 2 are the same in output.

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of DPF temperature sensor 1

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0545/Flash code: 87
[Monitor]
Failure of DPF temperature sensor 1
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of DPF temperature sensor 1 is monitored.

[Code generation condition]
- Output voltage of DPF temperature sensor 1 remains below 0.36 V for 3 seconds. (sensor temperature: 1000°C {1832°F} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

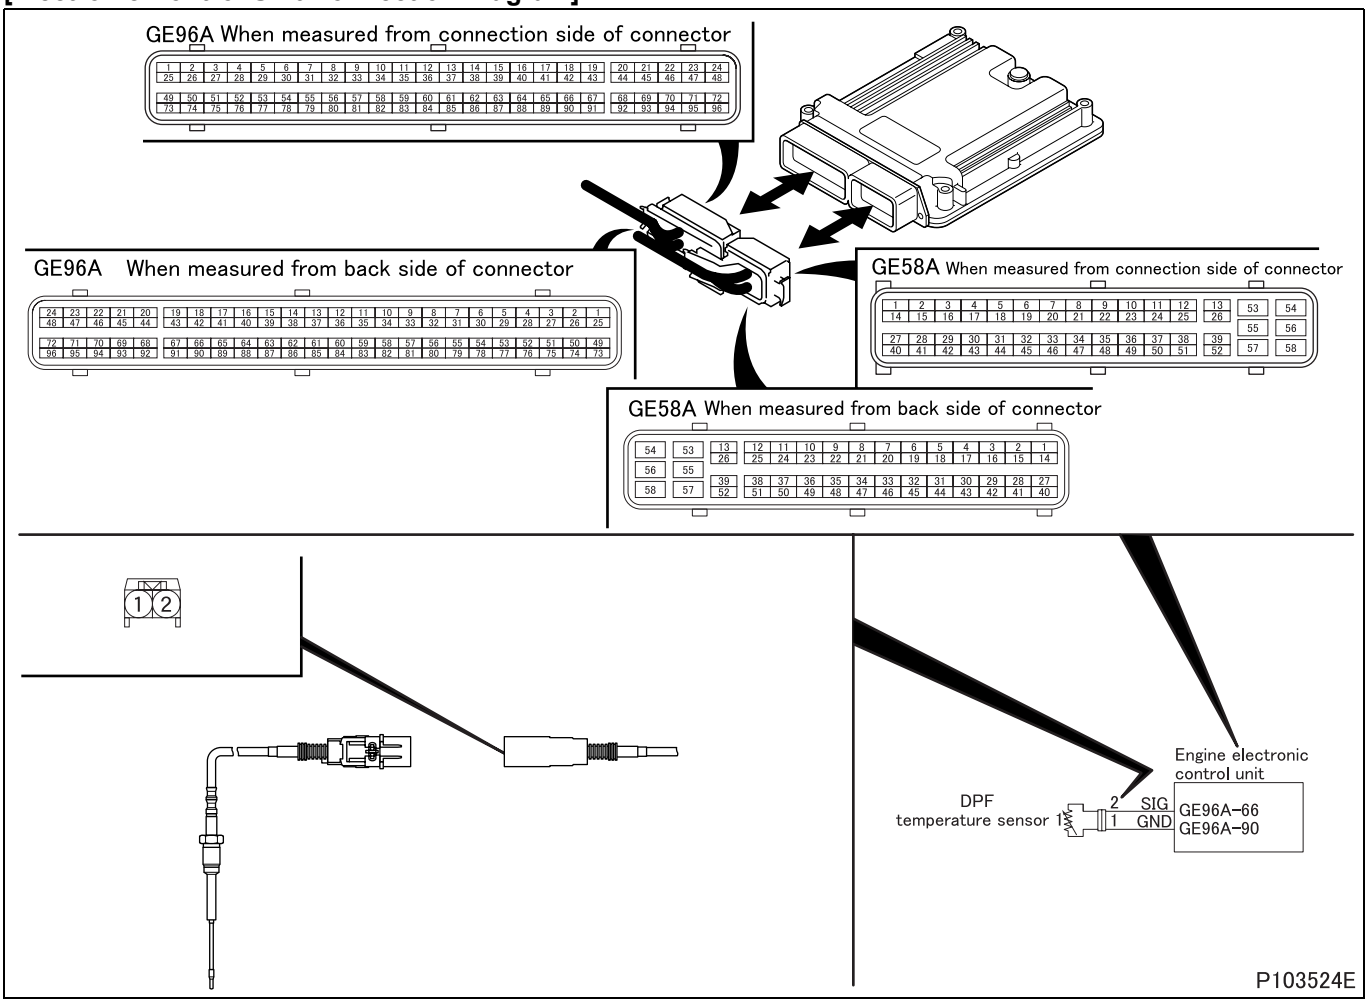
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Pressure before ceramic diesel particulate filter is fixed at backup value.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

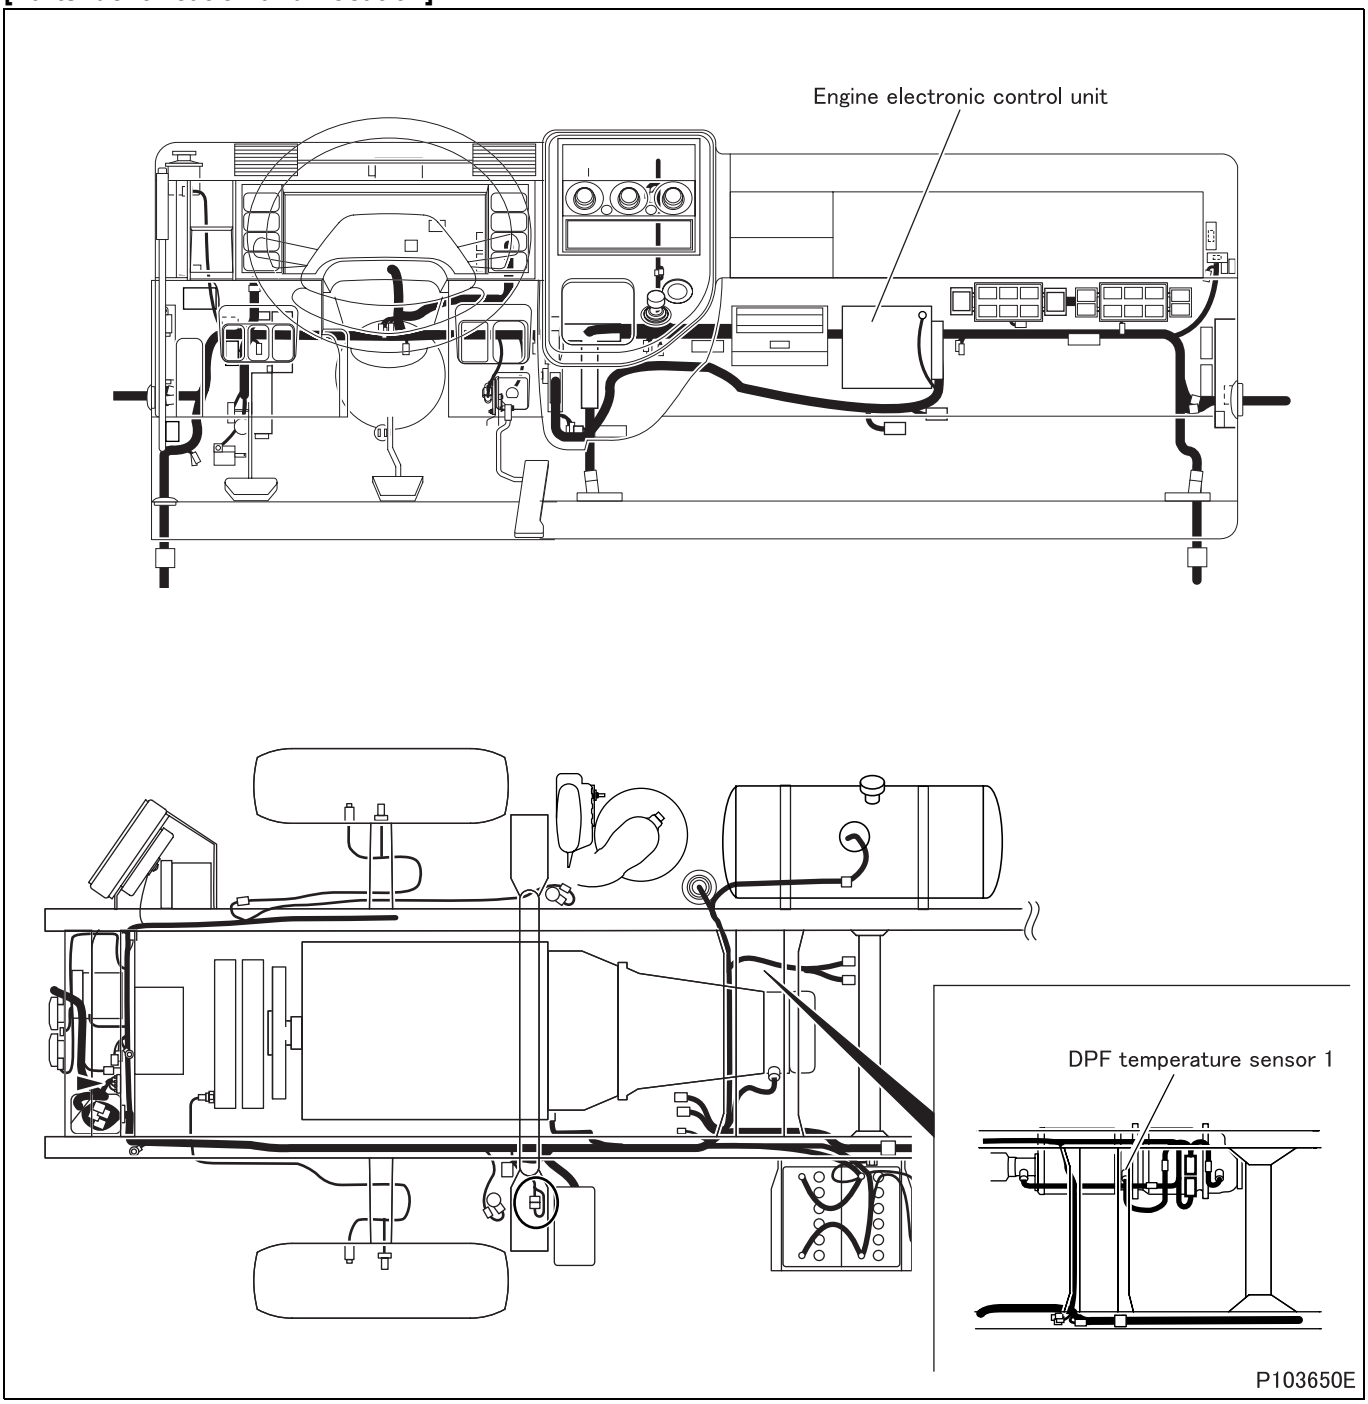
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Malfunction of DPF temperature sensor 1

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 25 “DPF Temperature (UpStream)” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

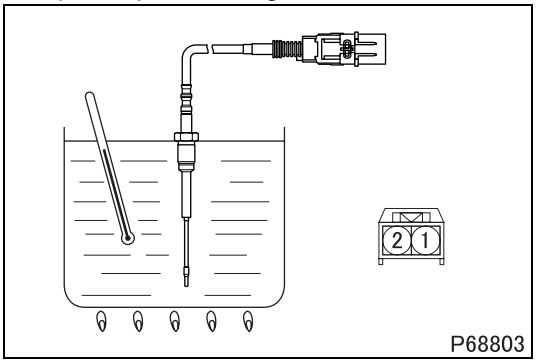
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 66 and 90.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle-side connector half.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 241.8 kΩ • 50°C {122°F}: 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F}: 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F}: 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F}: 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 66 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 90 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 25 “DPF Temperature (UpStream)” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0546/Flash code: 87
[Monitor]
Failure of DPF temperature sensor 1
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of DPF temperature sensor 1 is monitored.

[Code generation condition]
- Output voltage of DPF temperature sensor 1 remains over 4.93 V for 30 seconds when engine speed is set at 1200 to 5000 rpm. (sensor temperature: 40°C {118°F} or less)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation conditions.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

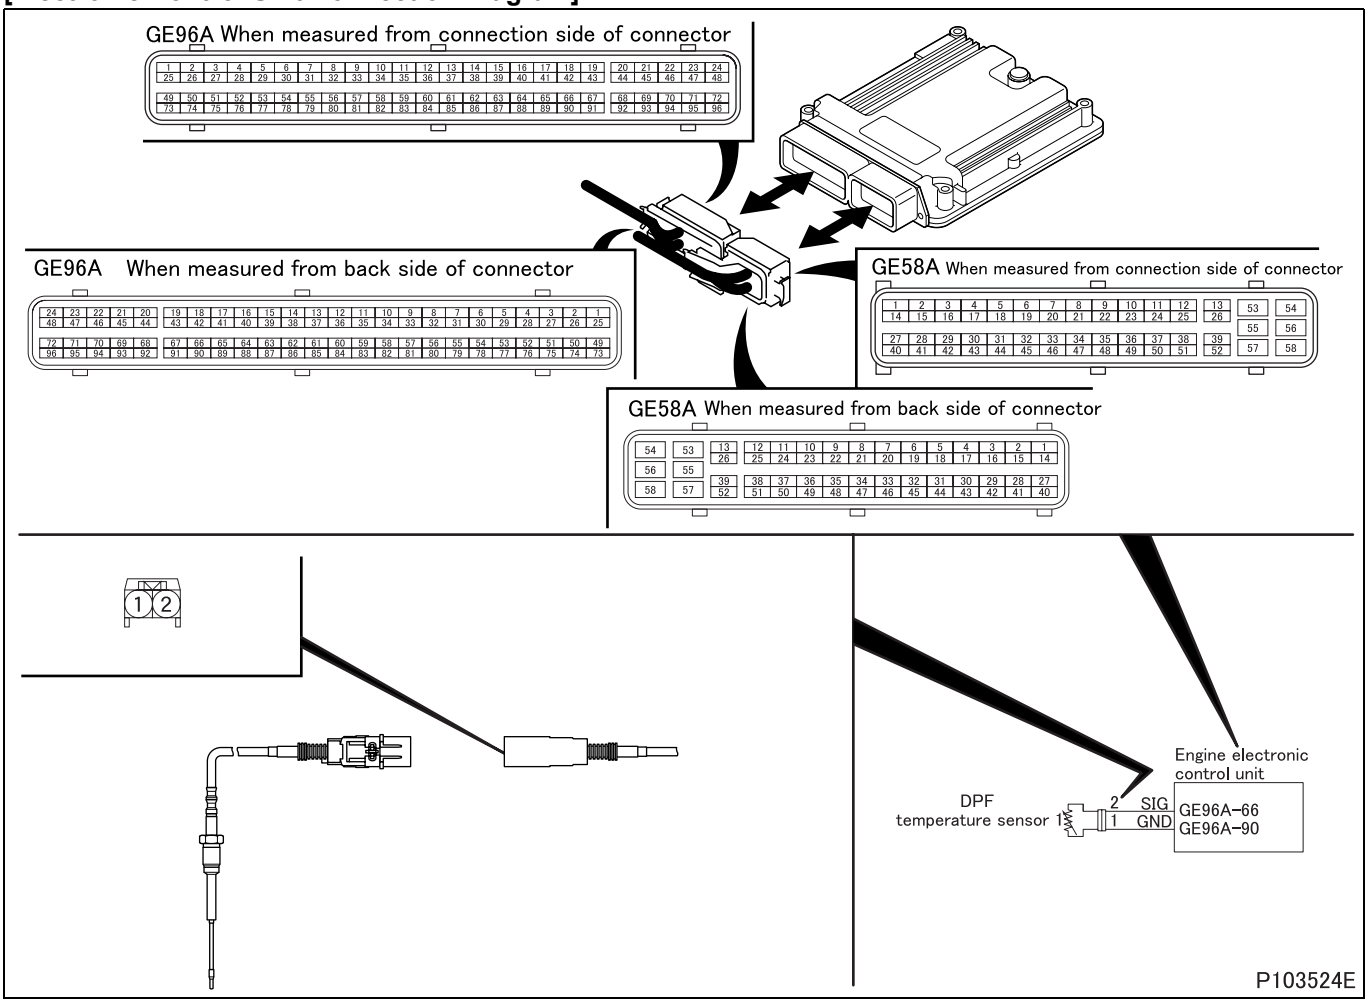
[Diagnostic requirement]
- Engine speed: 1200 to 5000 rpm
- Fuel injection quantity: 32 to 200 mg/cyc
- Water temperature: above –7°C {19°F}

[Control effected by electronic control unit during fault]
- Pressure before ceramic diesel particulate filter is fixed at backup value.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

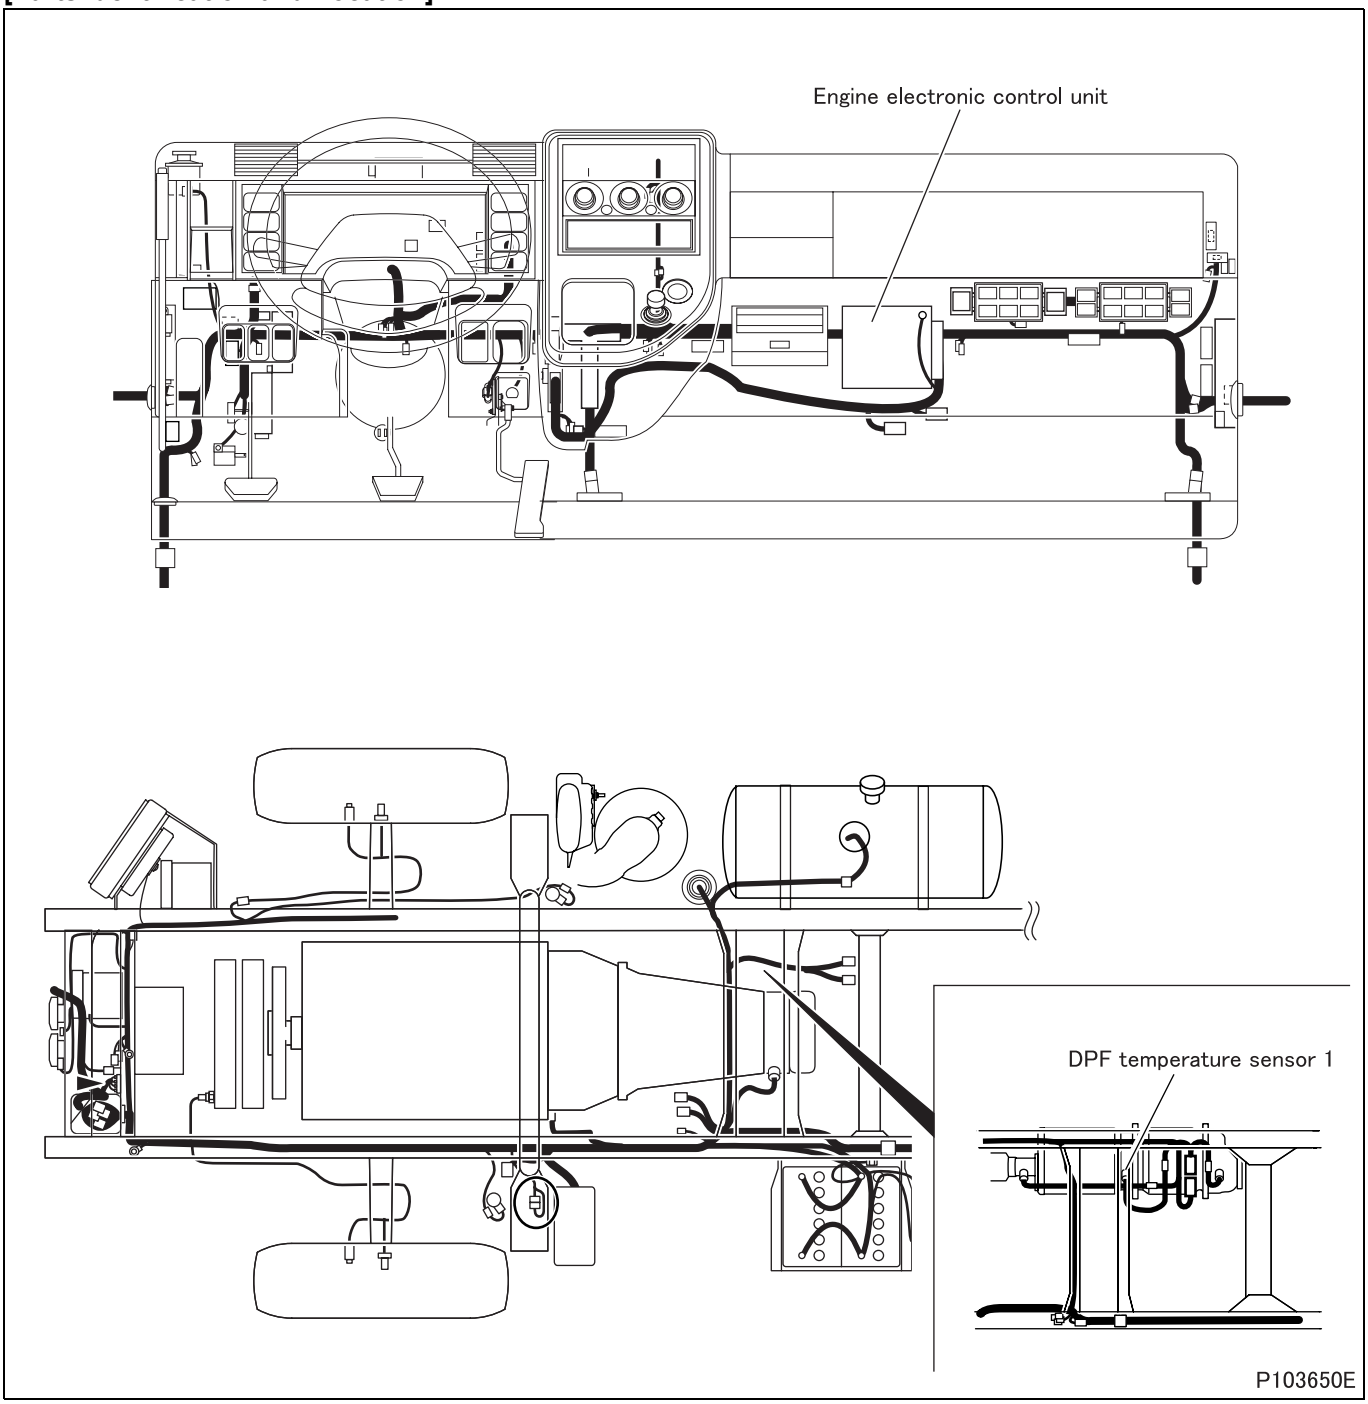
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Malfunction of DPF temperature sensor 1

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 25 “DPF Temperature (UpStream)” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

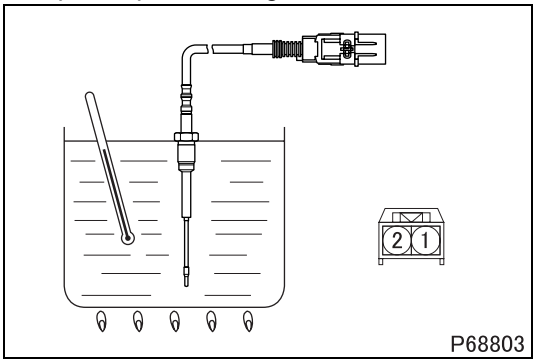
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 66 and 90.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle-side connector half.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 241.8 kΩ • 50°C {122°F}: 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F}: 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F}: 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F}: 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 66 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 90 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 25 “DPF Temperature (UpStream)” of Service Data.
	Inspection condition		While engine is warmed up
	Requirements		Temperature gradually increases.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0562/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Power supply voltage in engine electronic control unit at engine stop is monitored.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Power supply voltage monitoring function in engine electronic control unit remains below 0 V for 3 seconds. (Warning lamp (red) is lit and diagnosis code is displayed on third establishment of code generation condition.)

<Condition (2)>
- Error flag (low limit) indicating power voltage in engine electronic control unit remains for 0.1 second. (Warning lamp (orange) is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
<Condition (1)>
- Fault diagnosis is continuously performed during the driving cycle.

<Condition (2)>
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine cranking: not controlled

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the color of warning lamp.
<Warning lamp: Orange>
- Turbocharger initialization is stopped.
- Intake throttle initialization is inhibited.
- Misfire detection is stopped.
- Related fault check is stopped.

<Warning lamp: Red>
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Fault code]
Diagnosis code: P0563/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
High signal range check
[Diagnosis check]
- Power supply voltage in engine electronic control unit at engine stop is monitored.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Power supply voltage monitoring function in engine electronic control unit remains over 2.3 V for 3 seconds. (Warning lamp (red) is lit and diagnosis code is displayed on third establishment of code generation condition.)

<Condition (2)>
- Error flag (high limit) indicating power voltage in engine electronic control unit remains for 0.1 second (Warning lamp (orange) is lit and diagnosis code is displayed on third establishment of code generation condition).

[Diagnosis check timing]
<Condition (1)>
- Fault diagnosis is continuously performed during the driving cycle.

<Condition (2)>
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine cranking: not controlled

[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the color of warning lamp.
<Warning lamp: Orange>
- Turbocharger initialization is stopped.
- Intake throttle initialization is inhibited.
- Misfire detection is stopped.
- Related fault check is stopped.

<Warning lamp: Red>
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

[Fault code]
Diagnosis code: P0600/Flash code: 64, 76
[Monitor]
Abnormality of speed limitation device system
[Fault (outline)]
- Controller area network
- Message timeout

[Diagnosis check]
- Controller area network communication between engine electronic control unit and multifunction vehicle control unit is monitored for abnormality.

[Code generation condition]
- No controller area network signal is received from multifunction vehicle control unit within specified time after engine start (time out).
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

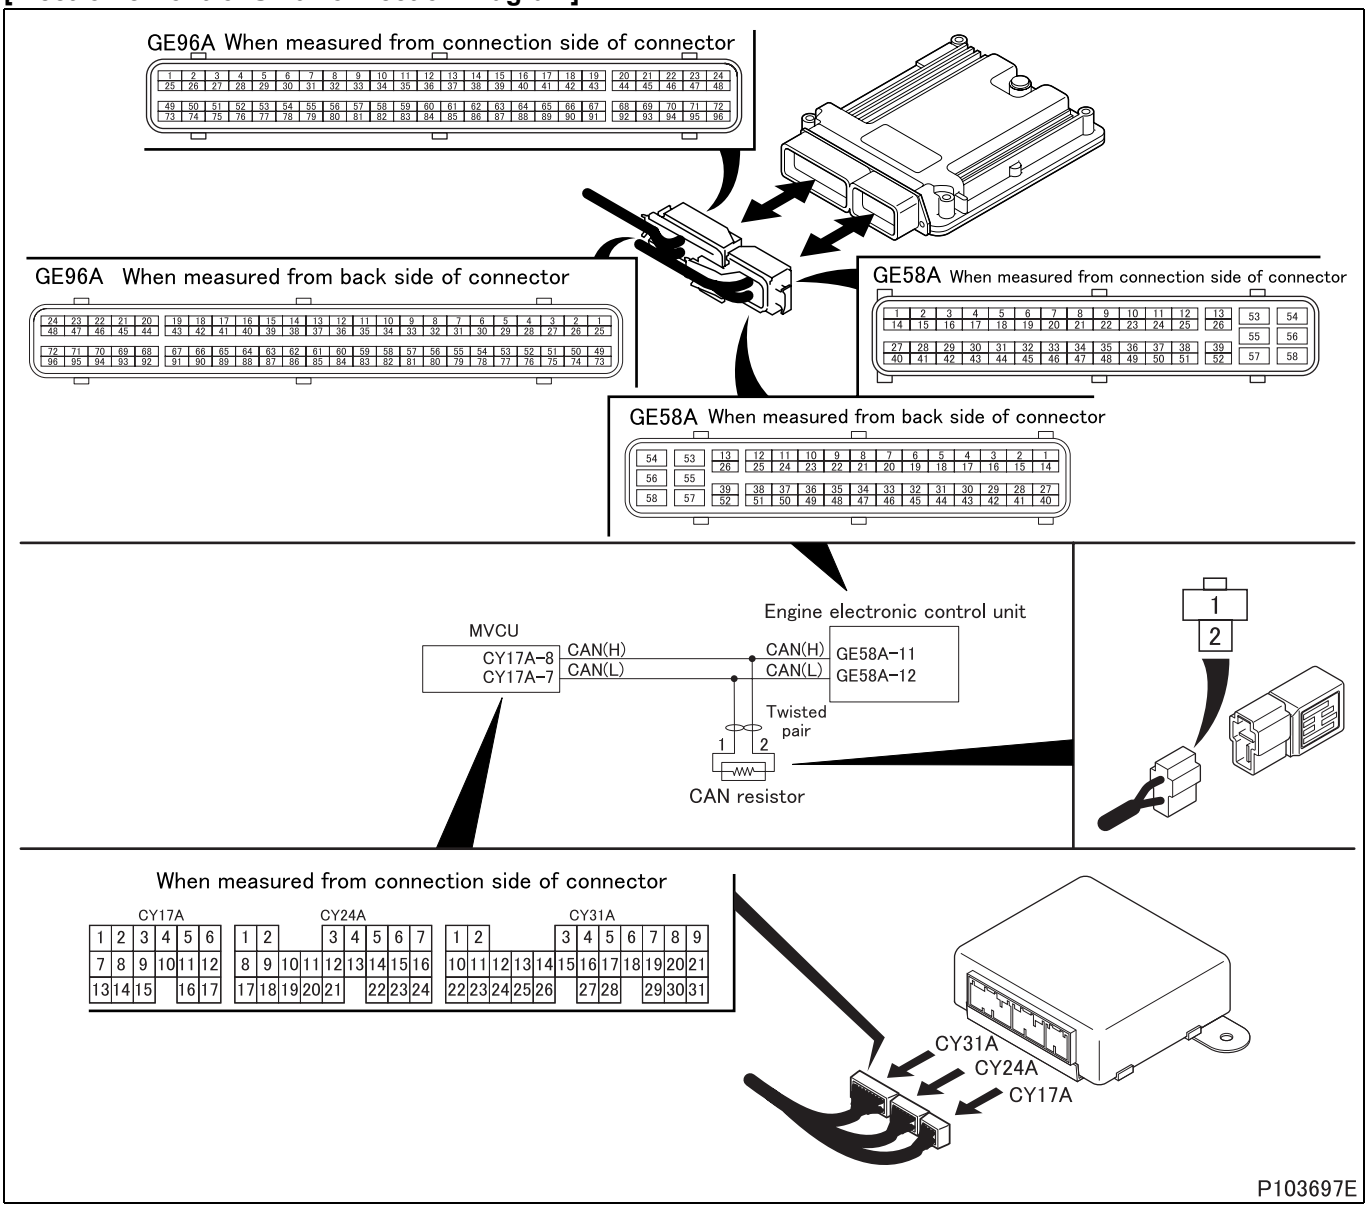
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Speed limitation device control is stopped.

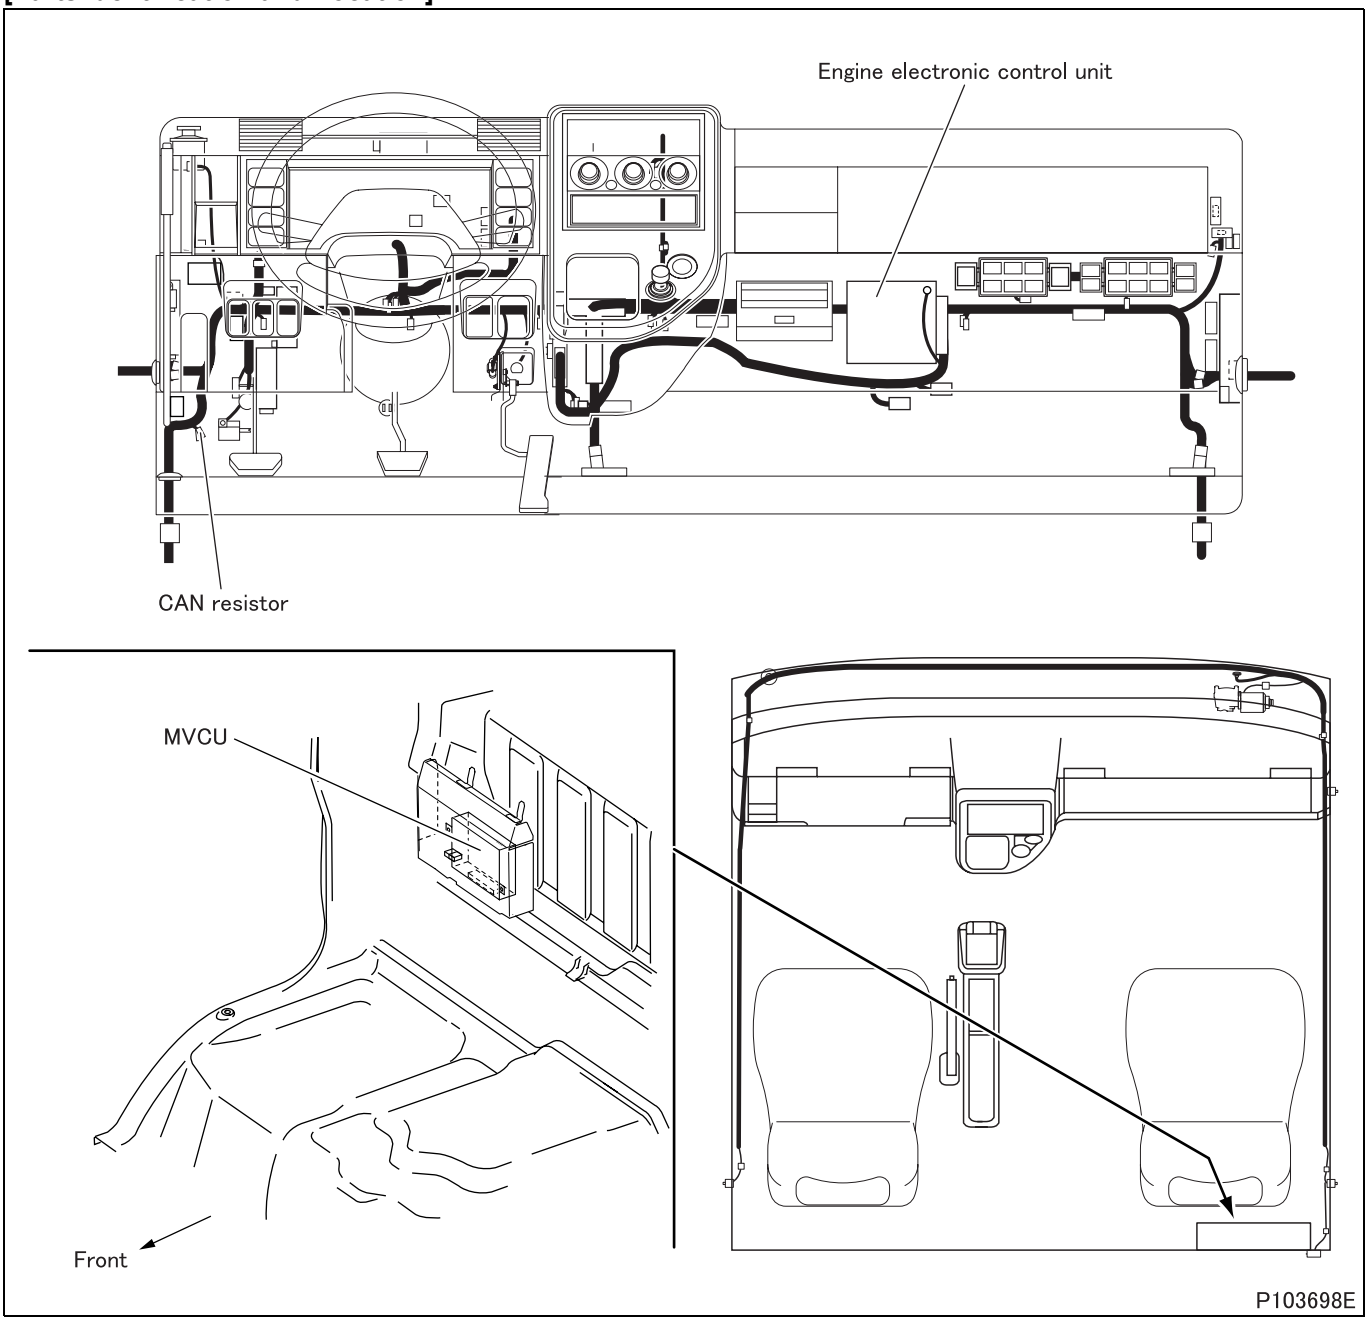
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and multifunction vehicle control unit
- Malfunction of each connector
- Malfunction of electronic control unit
- Malfunction of multifunction vehicle control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

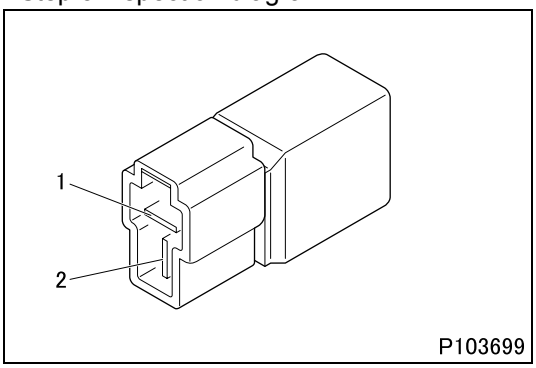
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 11 and 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		Remove connector and measure resistance.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and multifunction vehicle control unit connector (CY17A) terminal No. 8.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and multifunction vehicle control unit connector (CY17A) terminal No. 7.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of multifunction vehicle control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of multifunction vehicle control unit.
		NO	Modify connector.

[Fault code]
Diagnosis code: P0605/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
Electronic control unit
[Diagnosis check]
- Program involving data processing function in engine electronic control unit is monitored for abnormality.

[Code generation condition]
- Abnormality occurred during access to EEPOM (write device in electronic control unit).
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position, or no recovery is made unless the diagnosis code is erased.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P0607/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
Injector driver circuit
[Diagnosis check]
- Program involving injector drive circuit in engine electronic control unit is monitored for abnormality.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
(Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
- Internal reset
- Initialization error
- Sum check error
- Program flow error
- Signal timeout error

[Diagnosis check timing]
- Fault diagnosis is performed each time when the starter switch is turned from “stop” to “start” position.
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- When output signal returns to normal with the starter switch set to ON from OFF (power supply to the electronic control unit resumed), a reset is made.
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

<Condition (1)>
- Code is cleared simultaneously with recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared simultaneously with recovery.

<Condition (3)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

[Fault code]
Diagnosis code: P060B/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
A/D Converter fault
[Diagnosis check]
- Analog-to-digital signal conversion circuit in engine electronic control unit is monitored for abnormality.

[Code generation condition]
- Circuit remains abnormal as detected for 0.15 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P0611/Flash code: 47
[Monitor]
Injector adjustment data
[Fault (outline)]
Electronic control unit
[Diagnosis check]
- Availability of stored injector adjustment data in engine electronic control unit is monitored.

[Code generation condition]
- Injector adjustment data are found missing.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine stopped

[Probable cause of trouble]
- No injection correction data stored in engine electronic control unit
  (For data alteration/registration and data write operation, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P0615/Flash code: 48
[Monitor]
Failure of safety relay
[Fault (outline)]
Overload
[Diagnosis check]
- Engine electronic control unit internal function monitors safety relay circuit for overcurrent.

[Code generation condition]
- Overcurrent remains as detected by engine electronic control unit internal function for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Short-circuited harness between electronic control unit and safety relay
- Malfunction of each connector
- Malfunction of safety relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]

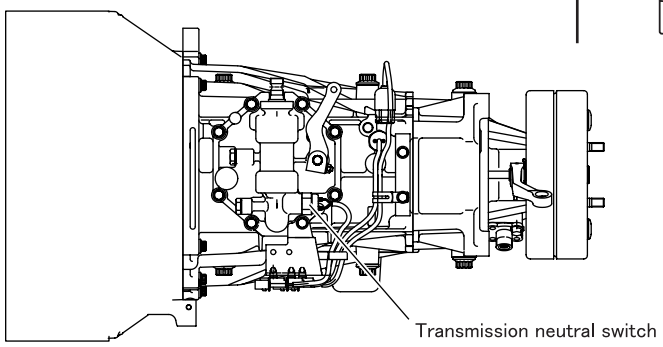
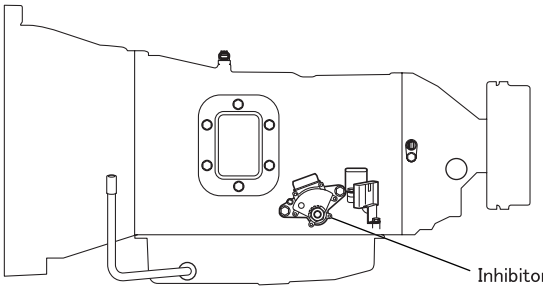
Upper view of manual transmission



Left view of automatic transmission



P103636E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

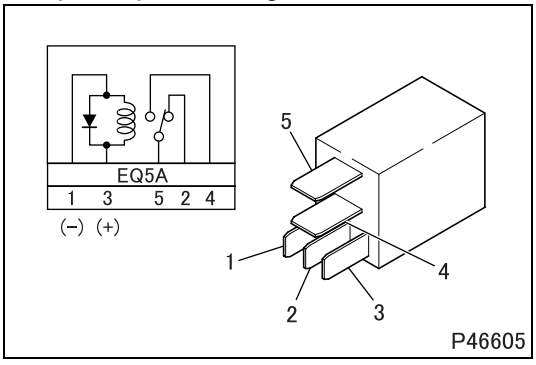
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Check circuit between connector (GE96A) terminal No. 81 (+) and No. 49 (–).
	Inspection condition		Measure from back side of connector of harness with each device connected to harness.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Go to step 3.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 3	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 2 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–)
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of relay

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 81.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 49.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AE “Starter Safety Relay”
	Inspection condition		–
	Requirements		This diagnosis code is not displayed again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0616/Flash code: 48
[Monitor]
Failure of safety relay
[Fault (outline)]
- Short circuit ground
- Open circuit

[Diagnosis check]
- Engine electronic control unit internal function monitors safety relay for short or open circuit to ground.

[Code generation condition]
- Safety relay circuit remains short or open circuited to ground as detected by engine electronic control unit internal function for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

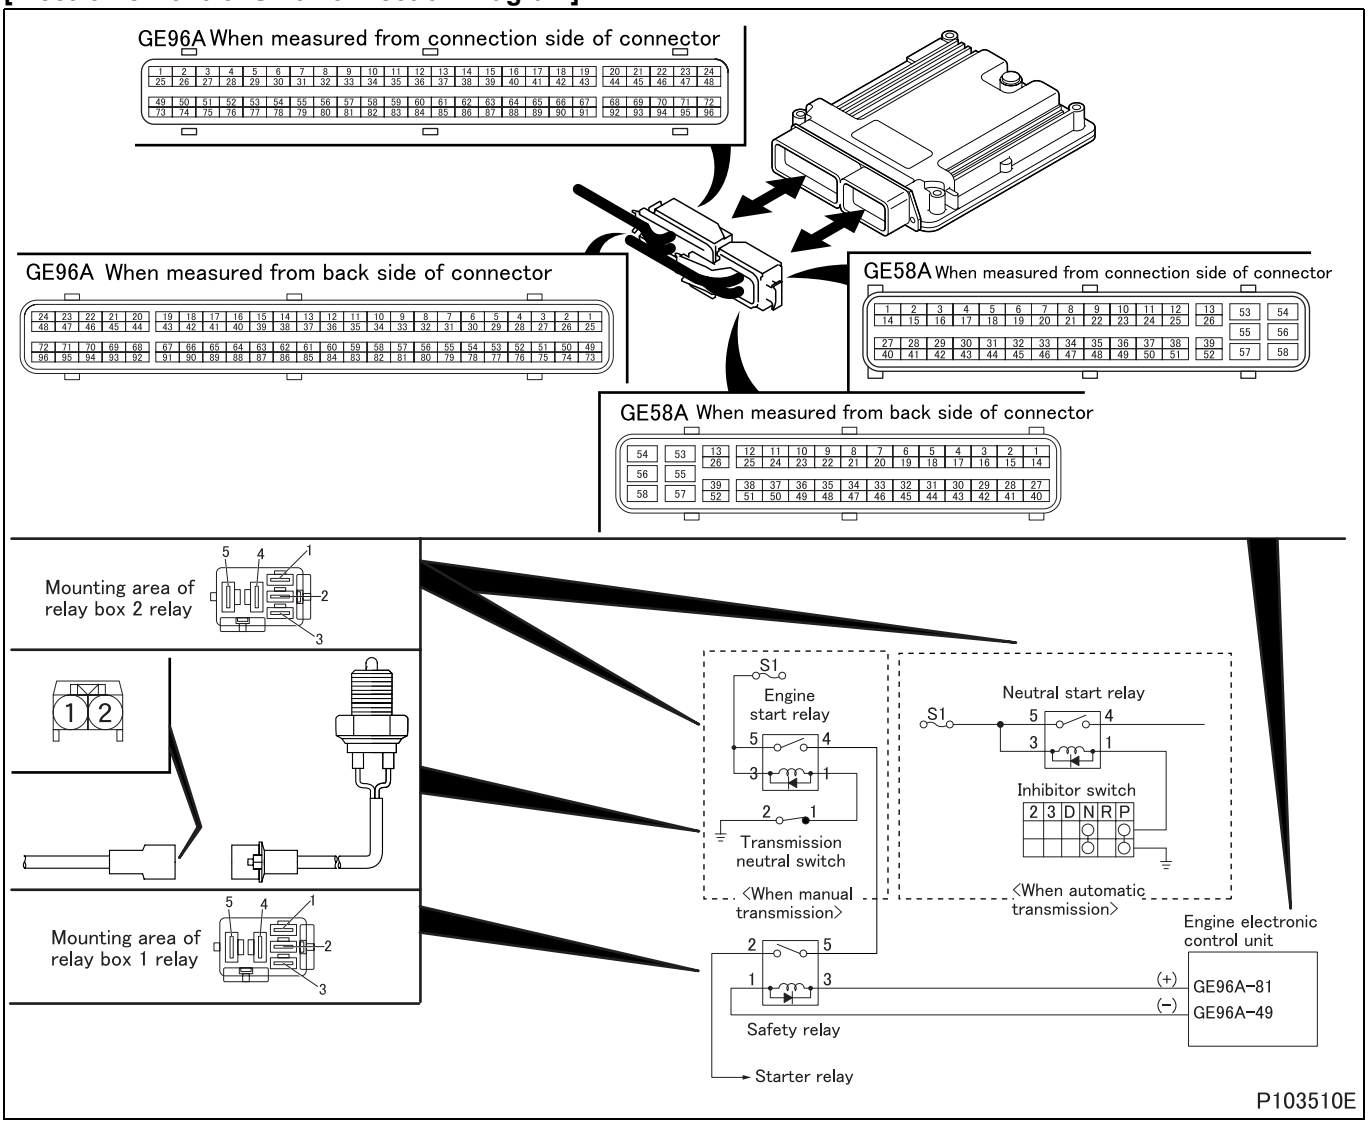
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

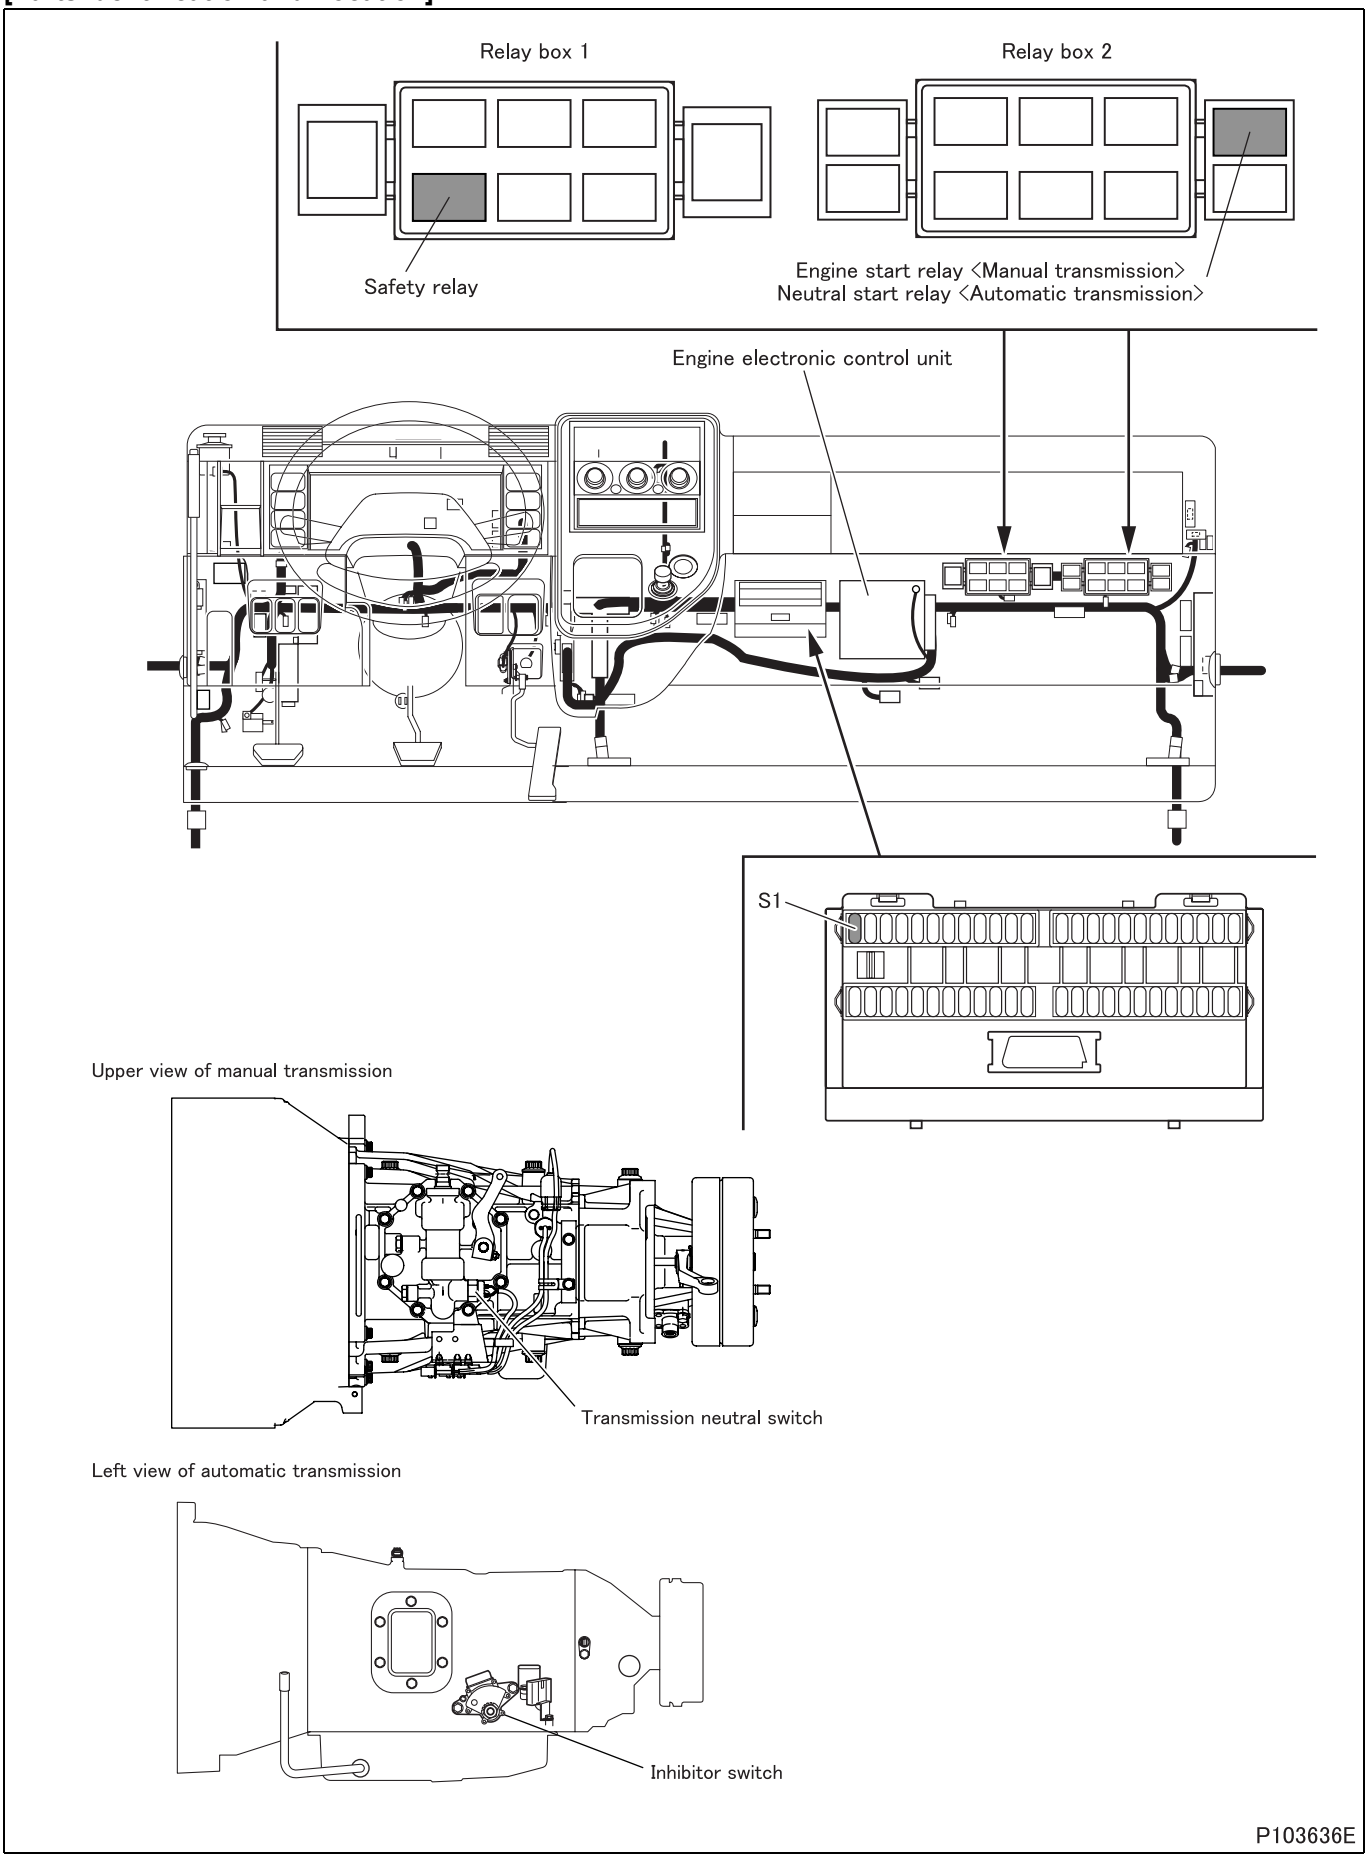
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and safety relay
- Malfunction of each connector
- Malfunction of safety relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AE “Starter Safety Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

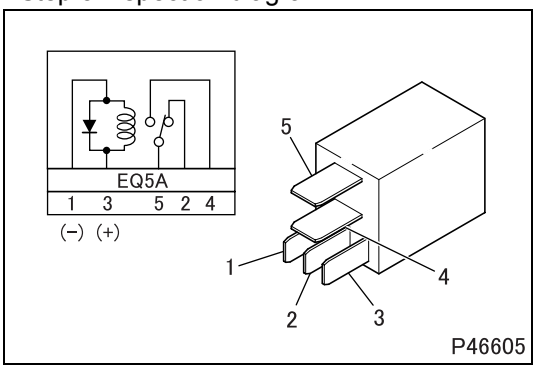
Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 81 (+) and 49 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AE “Starter Safety Relay”
	Requirements		Same as battery voltage (automatic reset after six seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 2 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–)
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 81.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 49.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AE “Starter Safety Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0617/Flash code: 48
[Monitor]
Failure of safety relay
[Fault (outline)]
Short circuit battery
[Diagnosis check]
- Engine electronic control unit internal function monitors safety relay for short circuit to power supply.

[Code generation condition]
- Safety relay circuit remains shorted to power supply as detected by engine electronic control unit internal function for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and relay
- Malfunction of each connector
- Malfunction of safety relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]

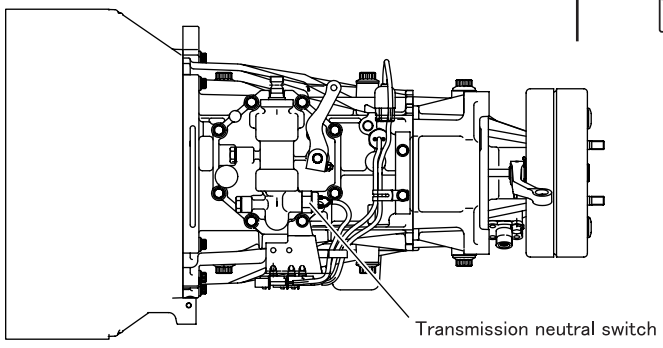
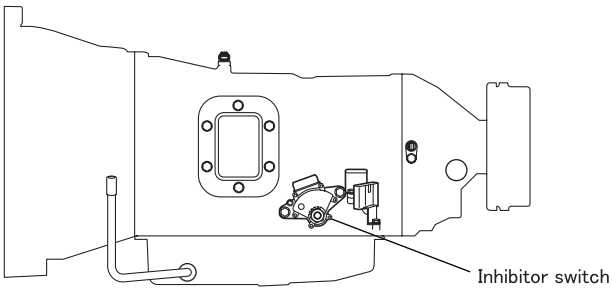
Upper view of manual transmission



Left view of automatic transmission



P103636E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

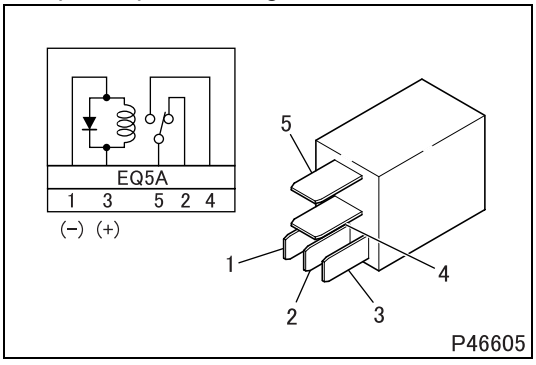
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 49 and 81.
	Inspection condition		–
	Requirements		343 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 2 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of relay

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 81
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and cab ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 49
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AE “Starter Safety Relay”
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P061B/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
Plausibility
[Diagnosis check]
- Injecting quantity computing function in engine electronic control unit is monitored.

[Code generation condition]
- Abnormal condition has occurred in injection quantity arithmetic processing inside engine electronic control unit. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P061C/Flash code: 33
[Monitor]
Failure inside engine electronic control unit
[Fault (outline)]
Plausibility
[Diagnosis check]
- Engine speed computing function in engine electronic control unit is monitored.

[Code generation condition]
- Abnormal condition has occurred in engine speed processing inside engine electronic control unit. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P062D/Flash code: 82
[Monitor]
Failure of injector circuit inside engine electronic control unit
[Fault (outline)]
Injector driver circuit (No. 1 and 3 cylinders)
[Diagnosis check]
- Failure of injector circuit inside engine electronic control unit

[Code generation condition]
- Injector (No. 1, No. 3 cylinder) power supply voltage in engine electronic control unit remains over 61.8 V or below 43.2 V for 3 consecutive cycles (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

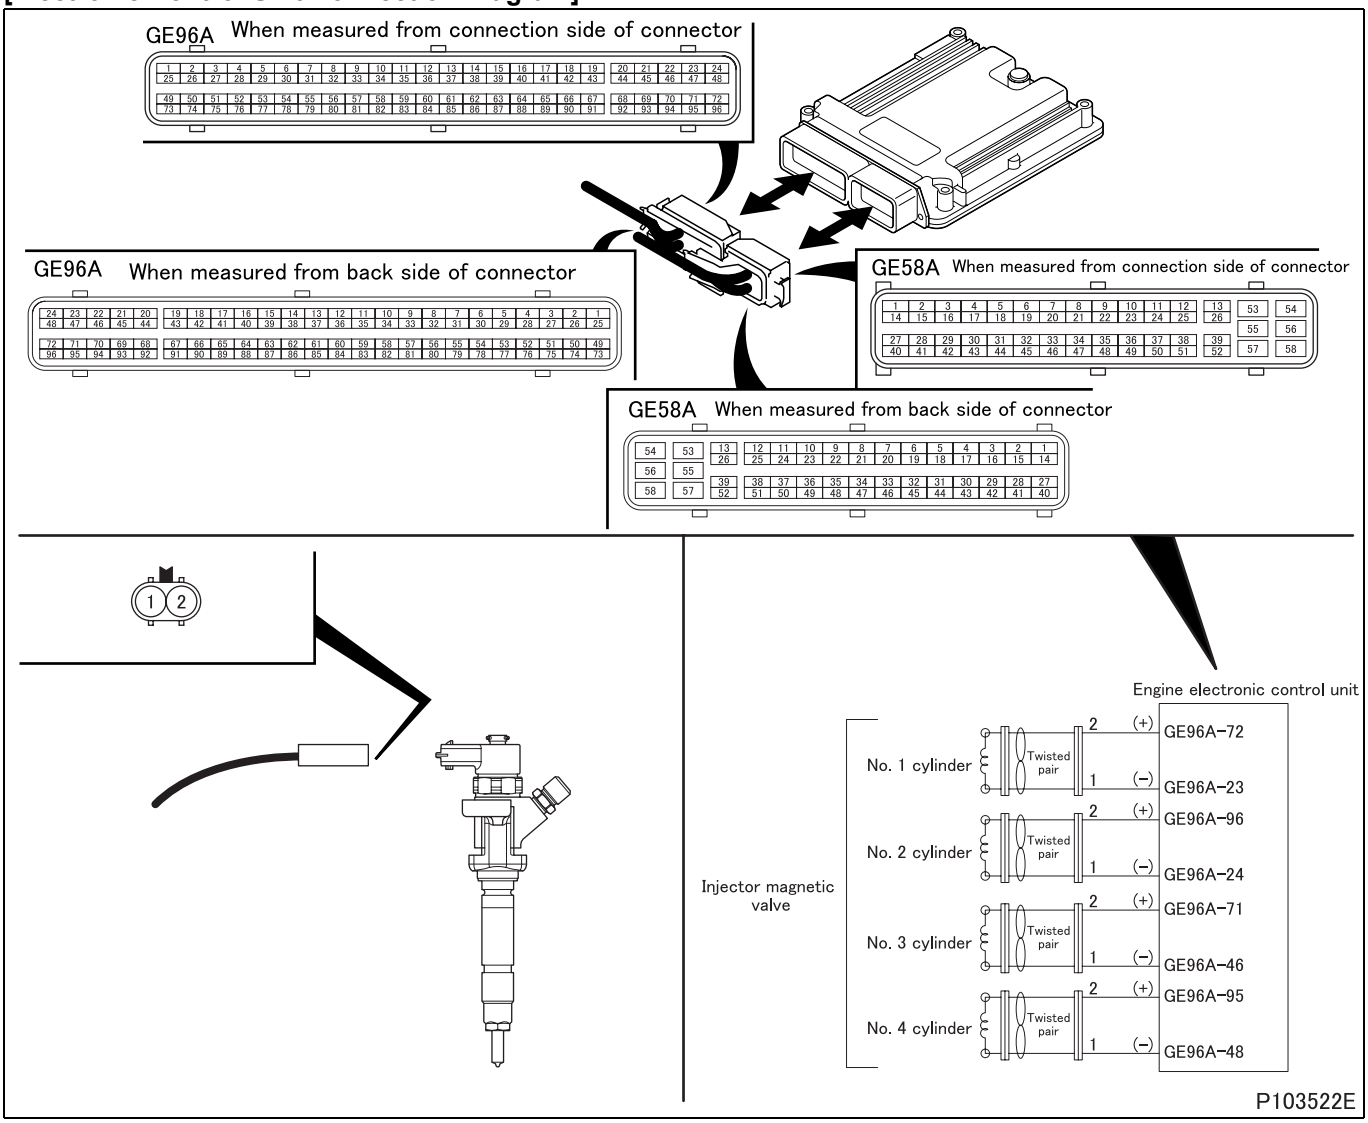
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

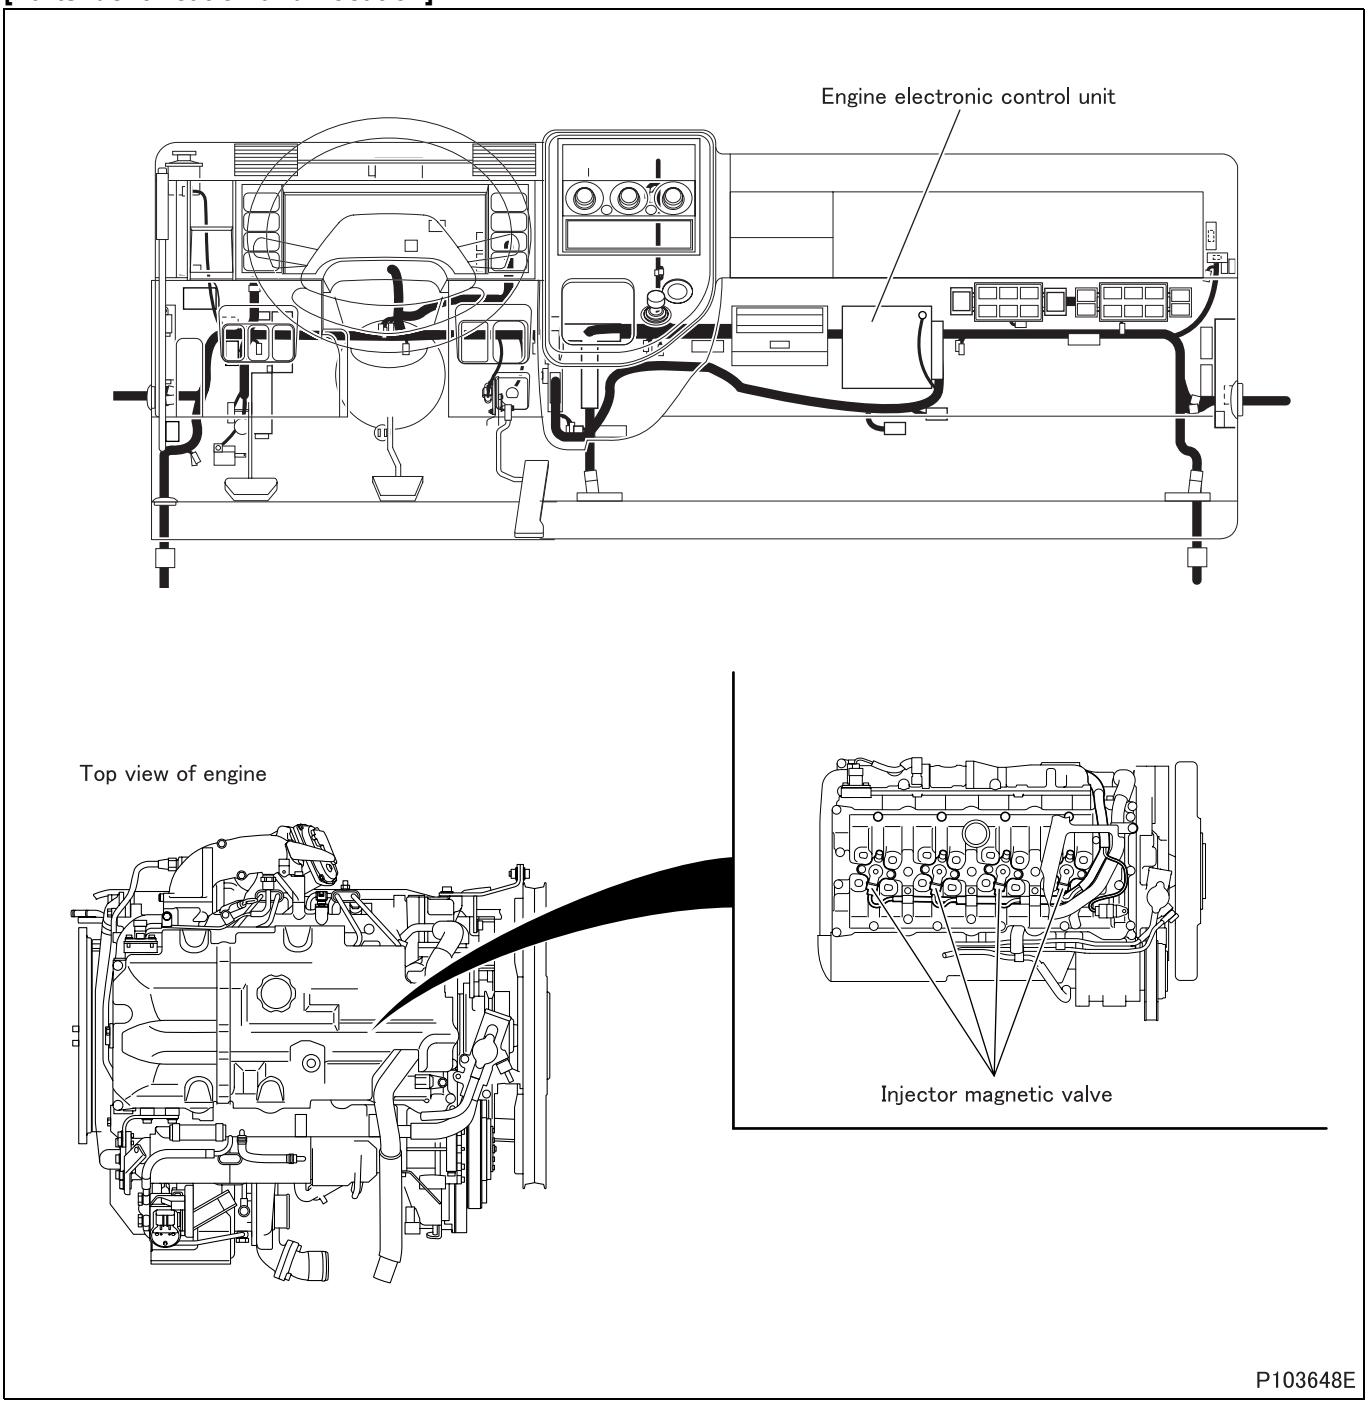
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valves
- Malfunction of each connector
- Malfunction of injector magnetic valves
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform the following actuator tests. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 3 cylinder): Perform item No. BE “Injector Test 4”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

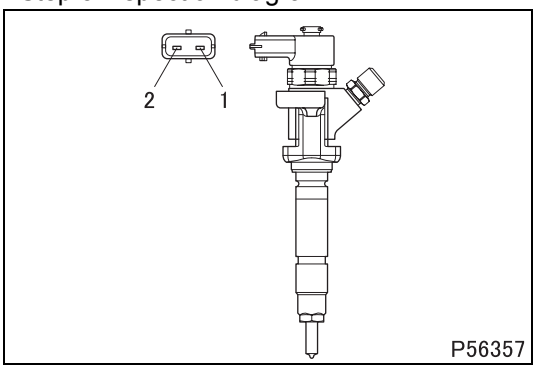
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between following connector (GE96A) terminals. • Injector magnetic valve (No. 1 cylinder): 72 (+) and 23 (–) • Injector magnetic valve (No. 3 cylinder): 71 (+) and 46 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 72 • Injector magnetic valve (No. 3 cylinder): magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 71
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 23 • Injector magnetic valve (No. 3 cylinder): magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 46
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform the following actuator tests. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 3 cylinder): Perform item No. BE “Injector Test 4”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P062E/Flash code: 82
[Monitor]
Failure of injector circuit inside engine electronic control unit
[Fault (outline)]
Injector driver circuit (No. 2 and 4 cylinders)
[Diagnosis check]
- Injector power supply voltage in engine electronic control unit is monitored.

[Code generation condition]
- Injector (No. 2, No. 4 cylinder) power supply voltage in engine electronic control unit remains over 61.8 V or below 43.2 V for 3 consecutive cycles (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

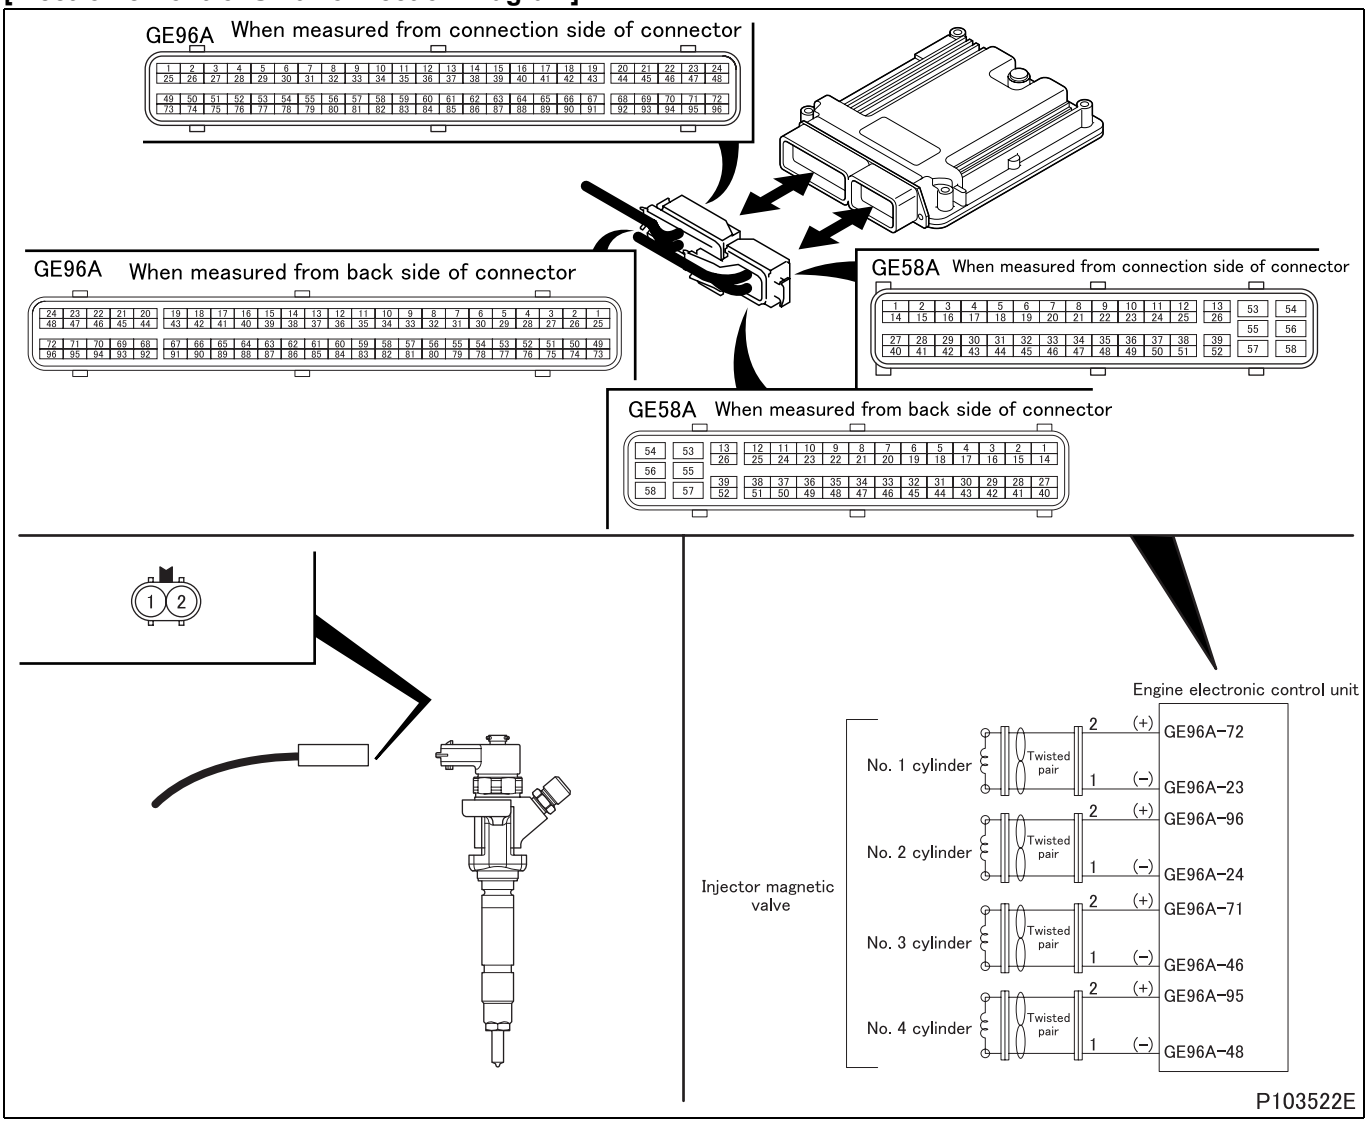
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

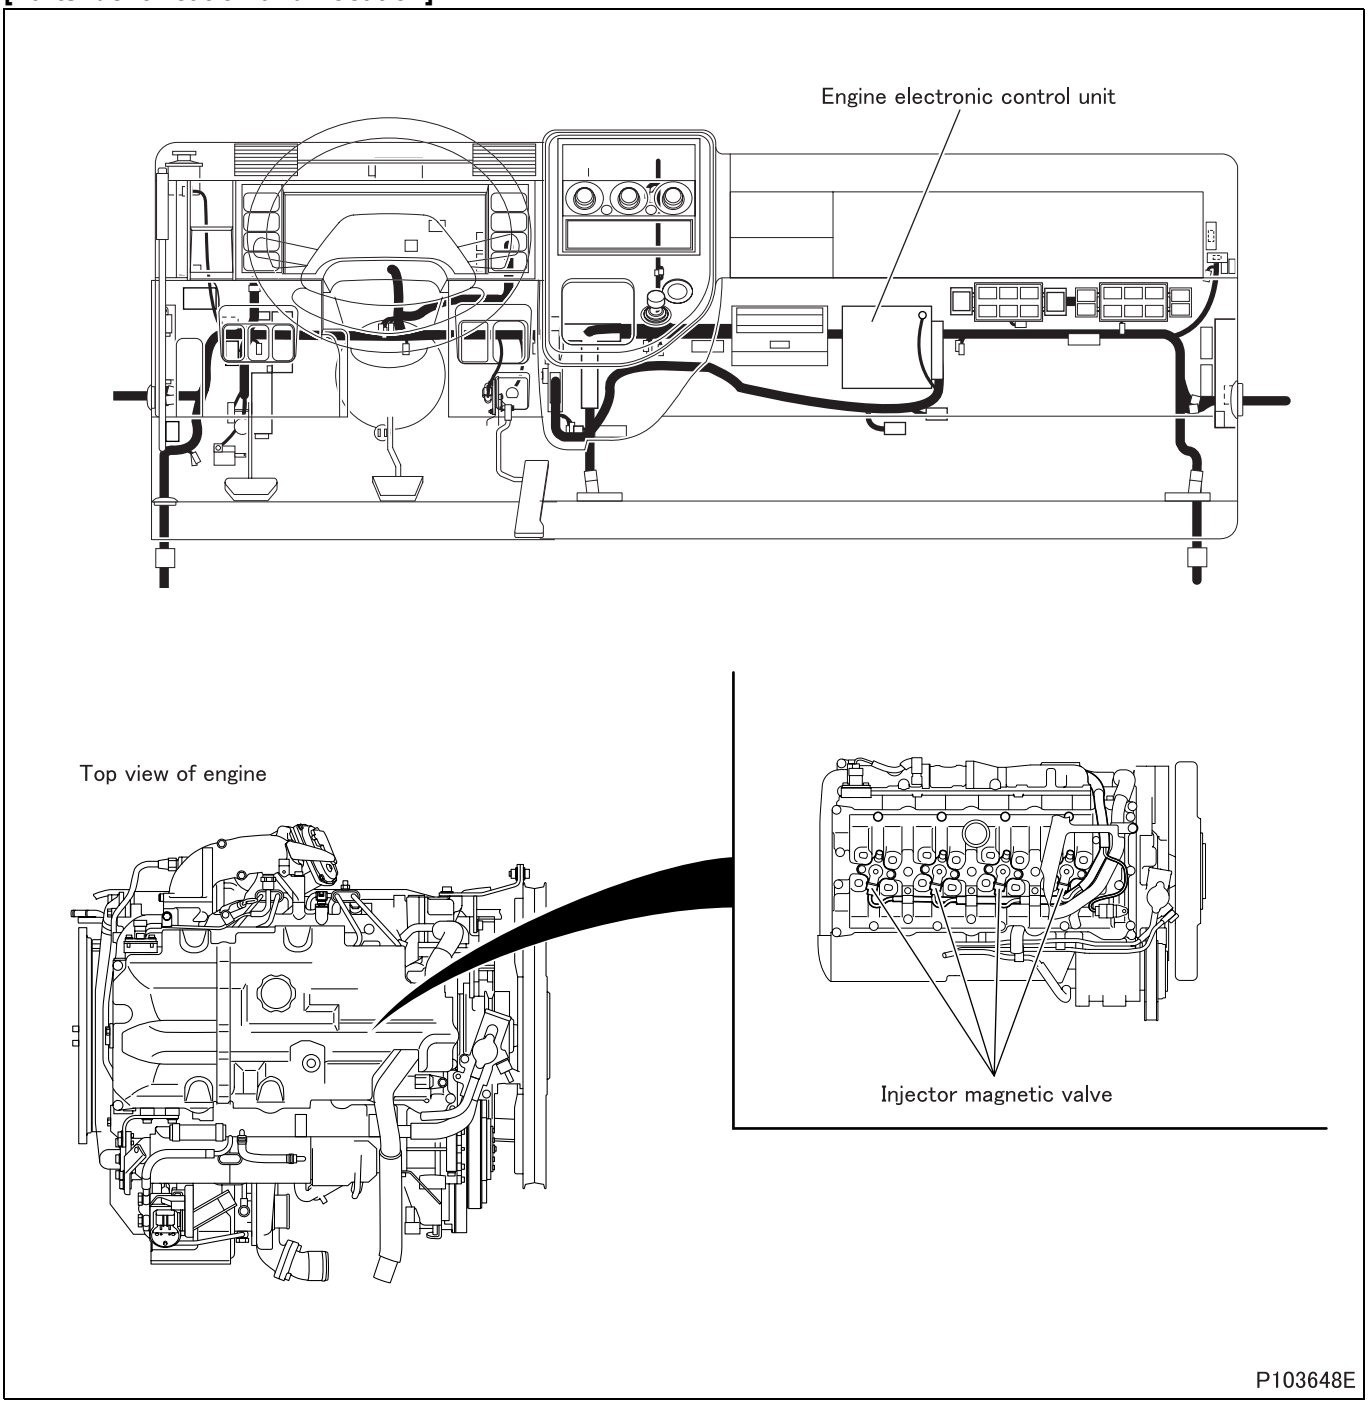
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valves
- Malfunction of each connector
- Malfunction of injector magnetic valves
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform the following actuator tests. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

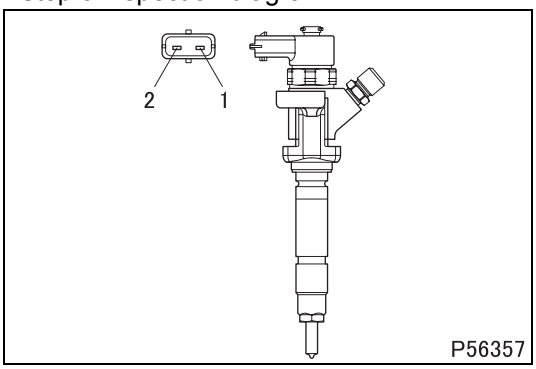
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between following connector (GE96A) terminals. • Injector magnetic valve (No. 2 cylinder): 96 (+) and 24 (–) • Injector magnetic valve (No. 4 cylinder): 95 (+) and 48 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 96 • Injector magnetic valve (No. 4 cylinder): magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 95
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 24 • Injector magnetic valve (No. 4 cylinder): magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 48
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform the following actuator tests. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0642/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Sensor supply voltage 1 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 1
- Accelerator pedal position sensor (sensor 1)
- Intake air temperature sensor

[Code generation condition]
- Supply voltage to units remain below 4.7 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

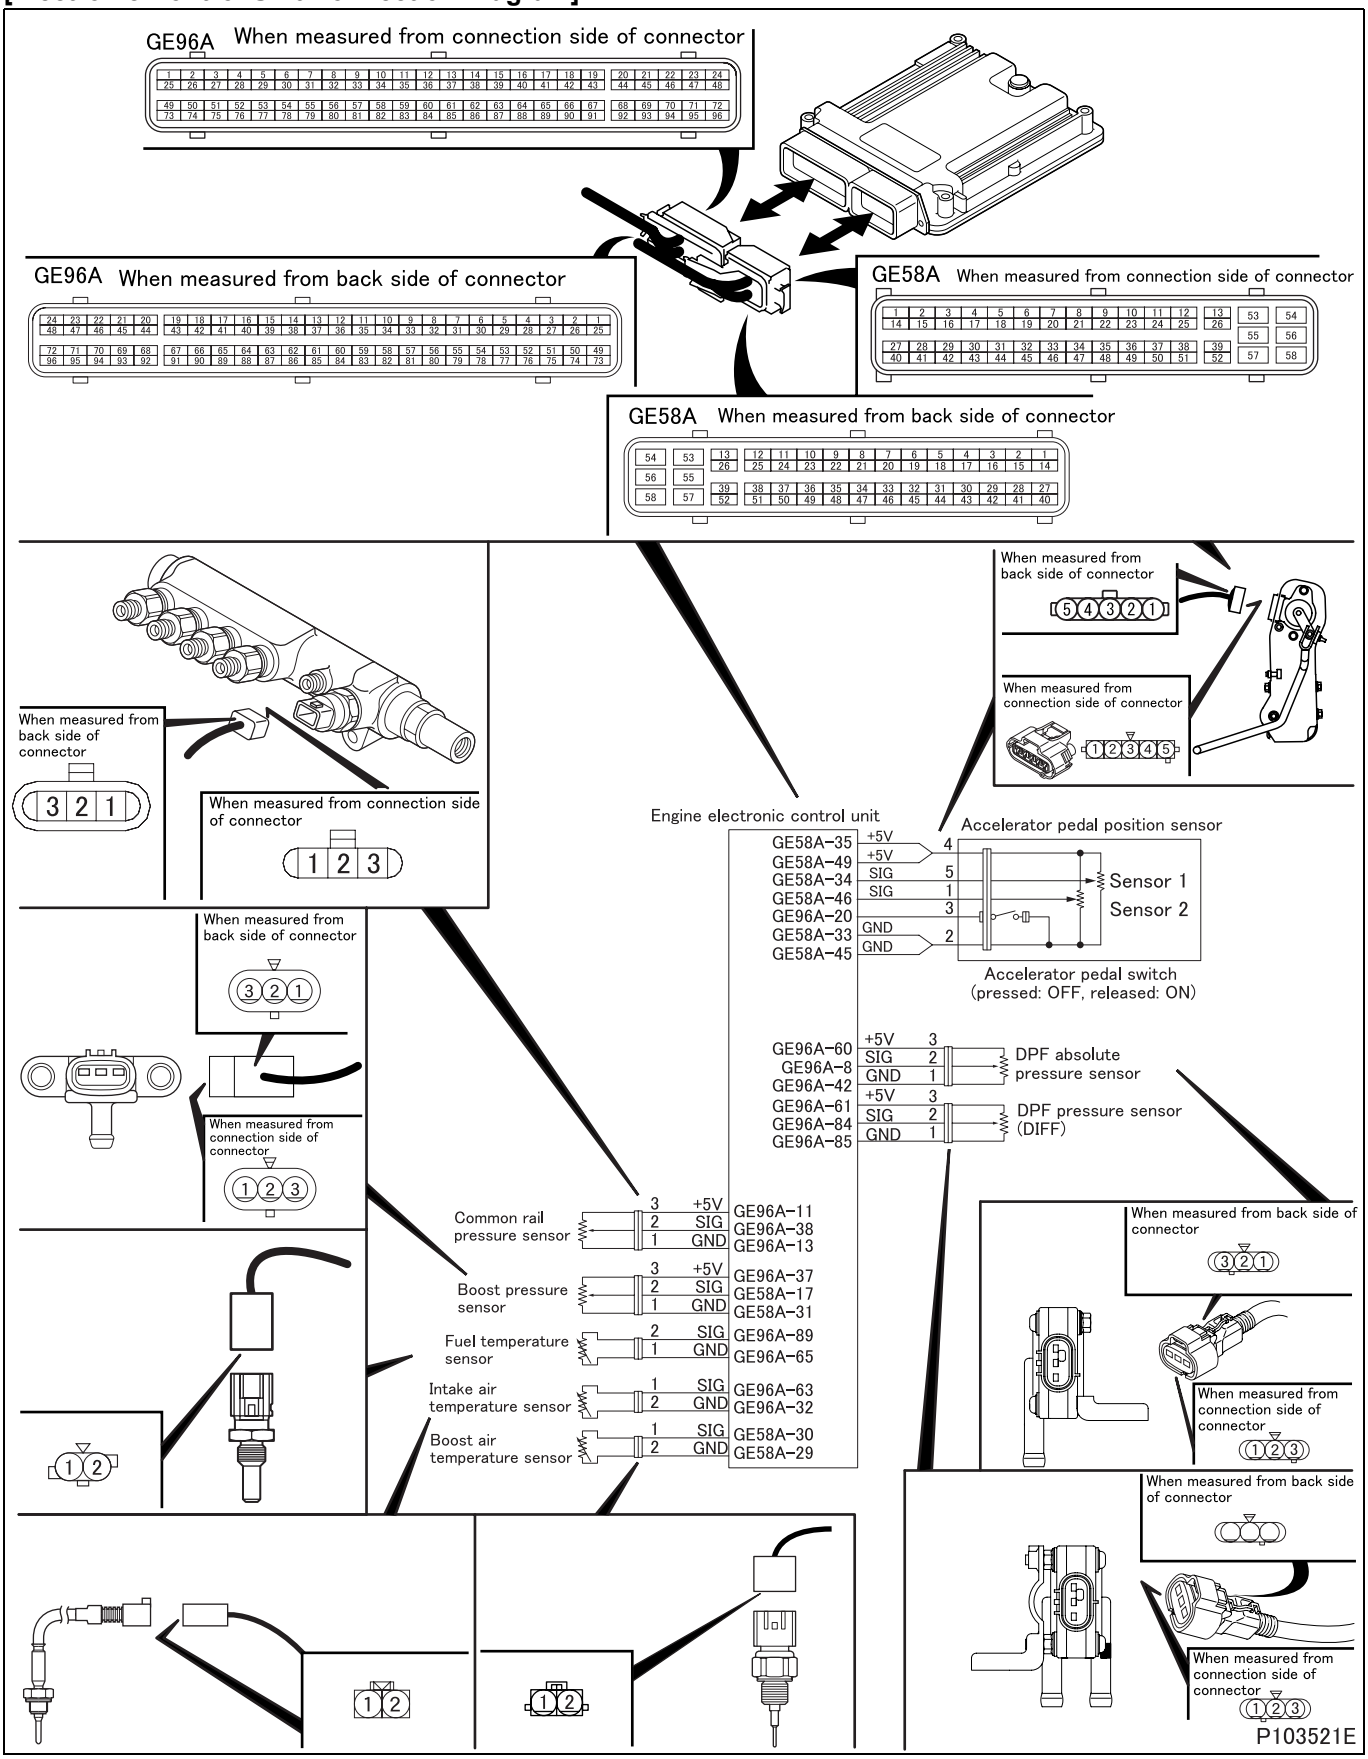
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

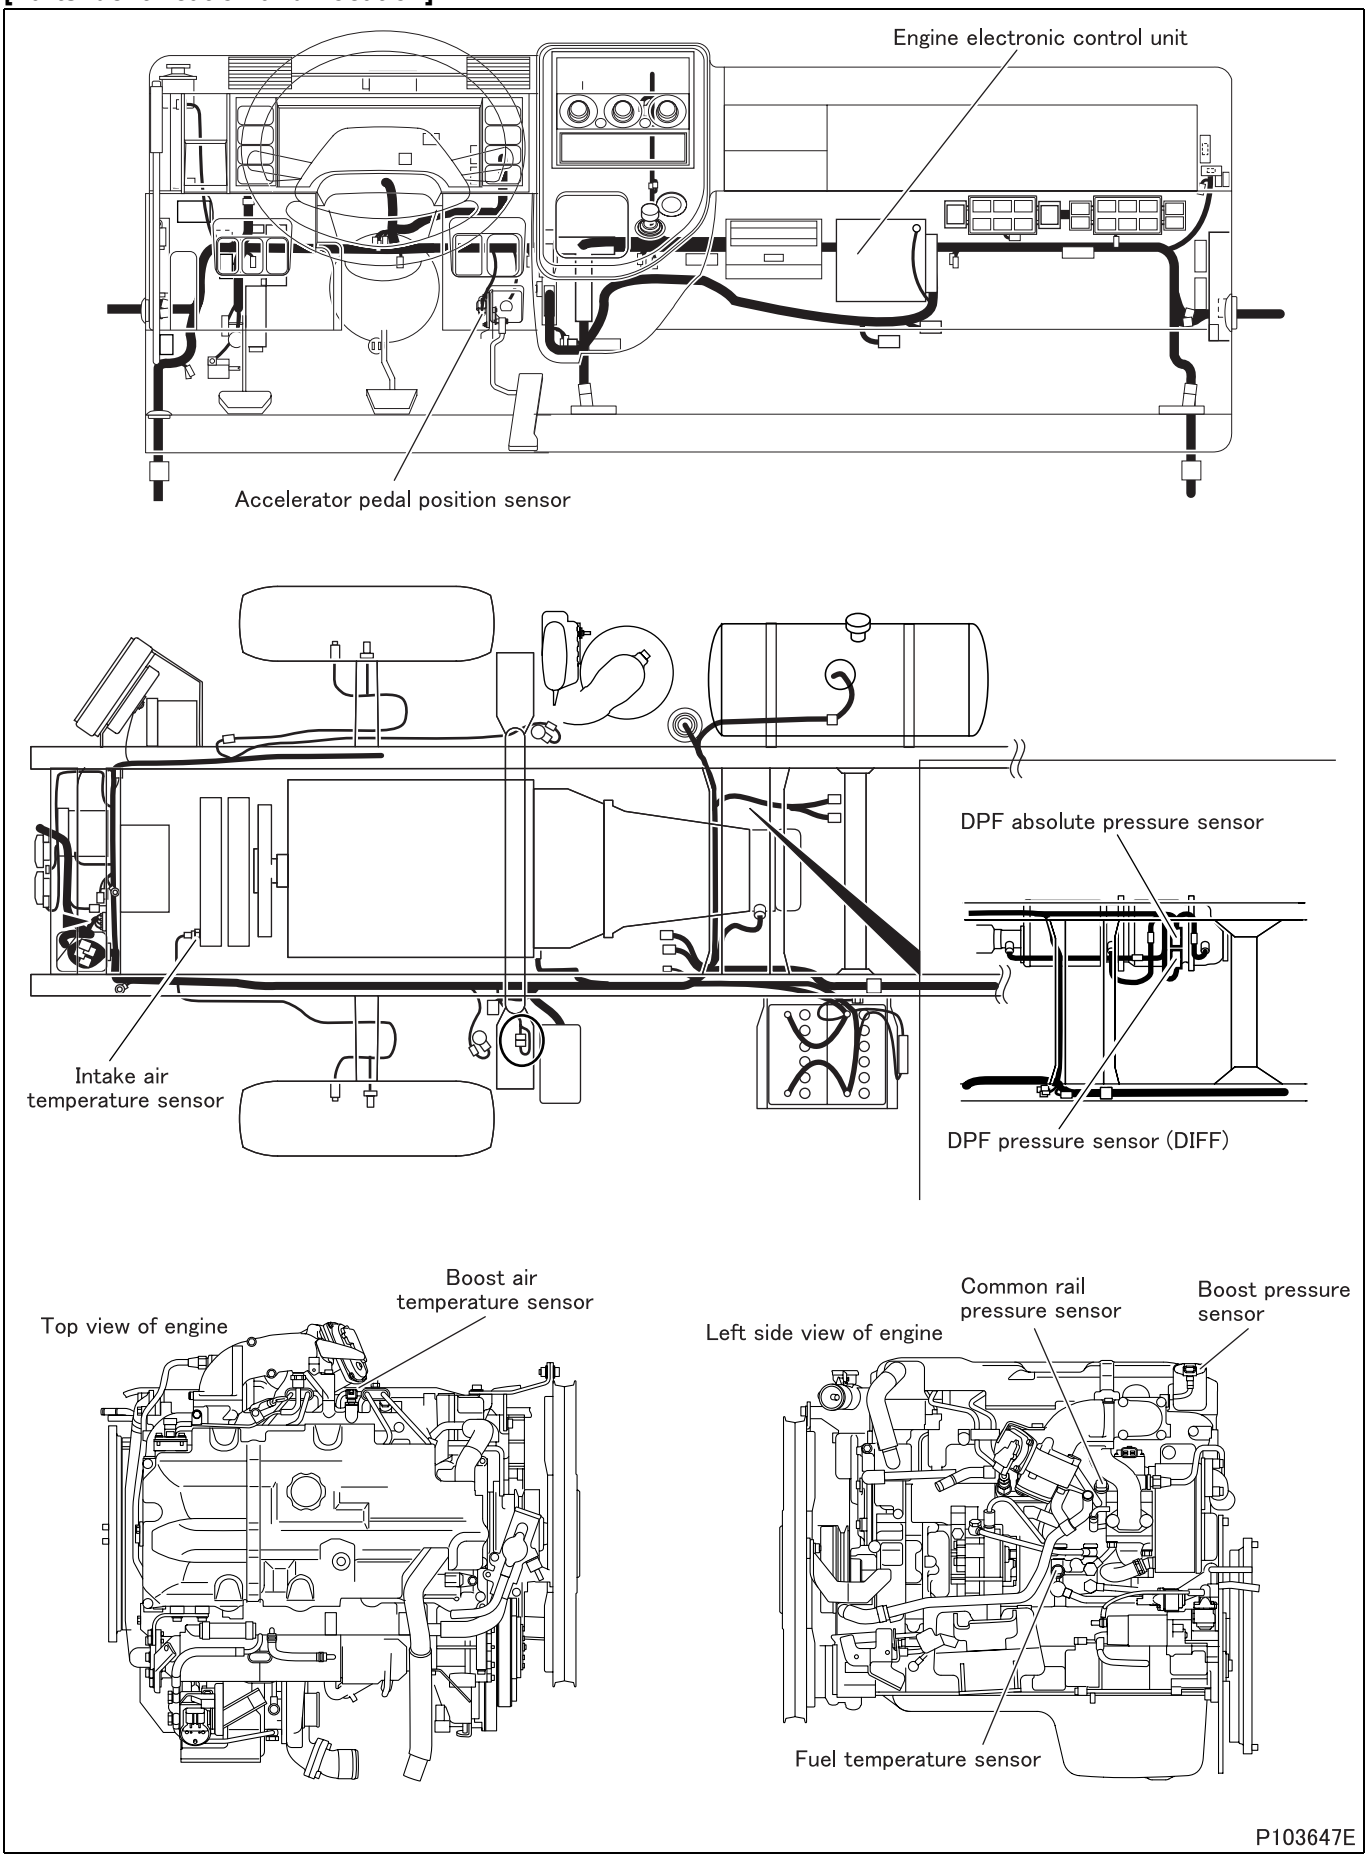
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): accelerator pedal position sensor (sensor 1)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 35 (+) and No. 33 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of accelerator pedal position sensor (sensor 1) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and accelerator pedal position sensor (sensor 1) (power supply)
	Maintenance item		Check circuit between accelerator pedal position sensor (sensor 1) connector terminal No. 4 and electronic control unit connector (GE58A) terminal No. 35.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector: intake air temperature sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 63 (+) and No. 32 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 6.

Step 6	Inspection items		Inspection of intake air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and intake air temperature sensor (power supply)
	Maintenance item		Check circuit between intake air temperature sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 63
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0643/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
High signal range check
[Diagnosis check]
- Sensor supply voltage 1 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 1
- Accelerator pedal position sensor (sensor 1)
- Intake air temperature sensor

[Code generation condition]
- Supply voltage to units remain over 5.3 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

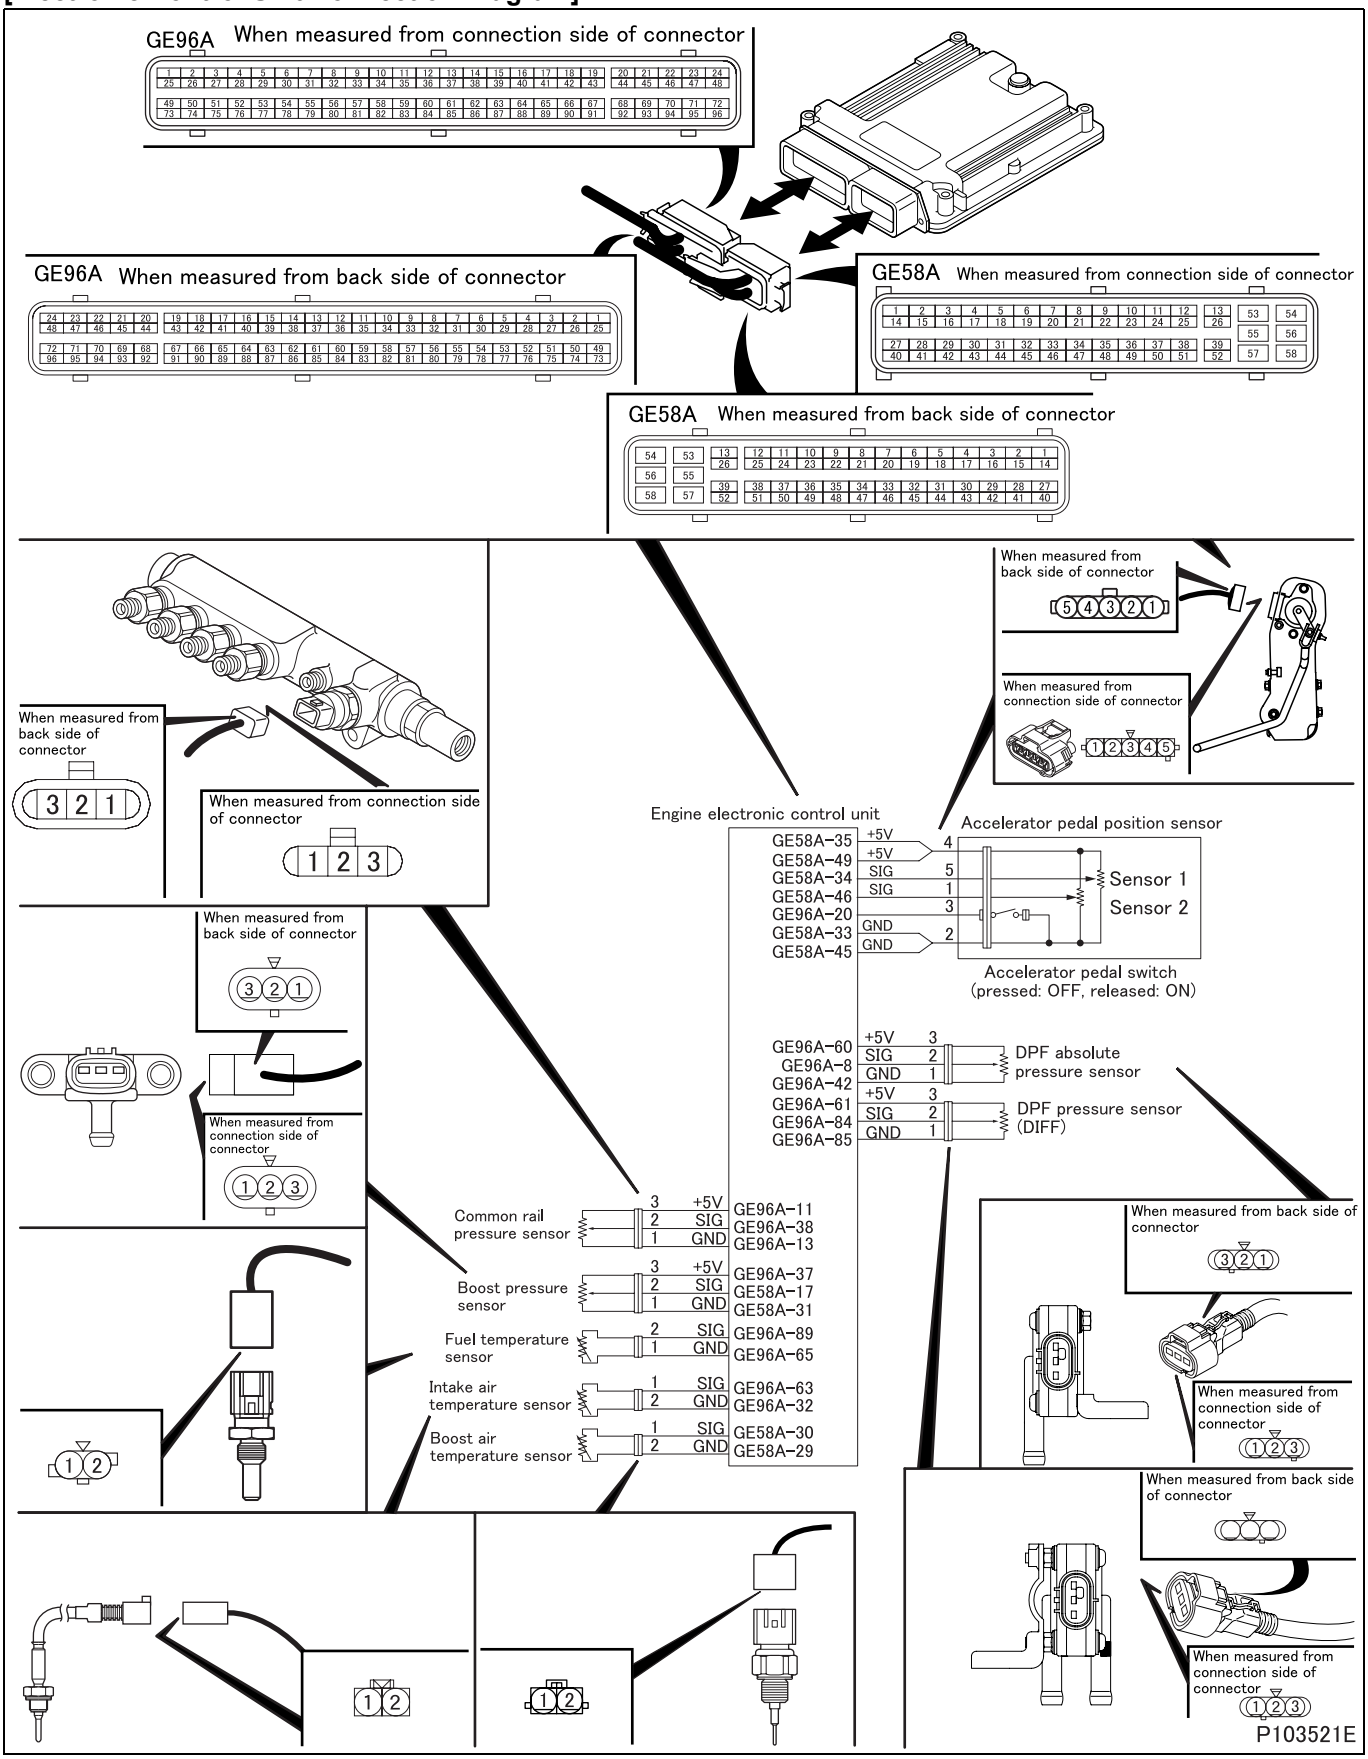
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

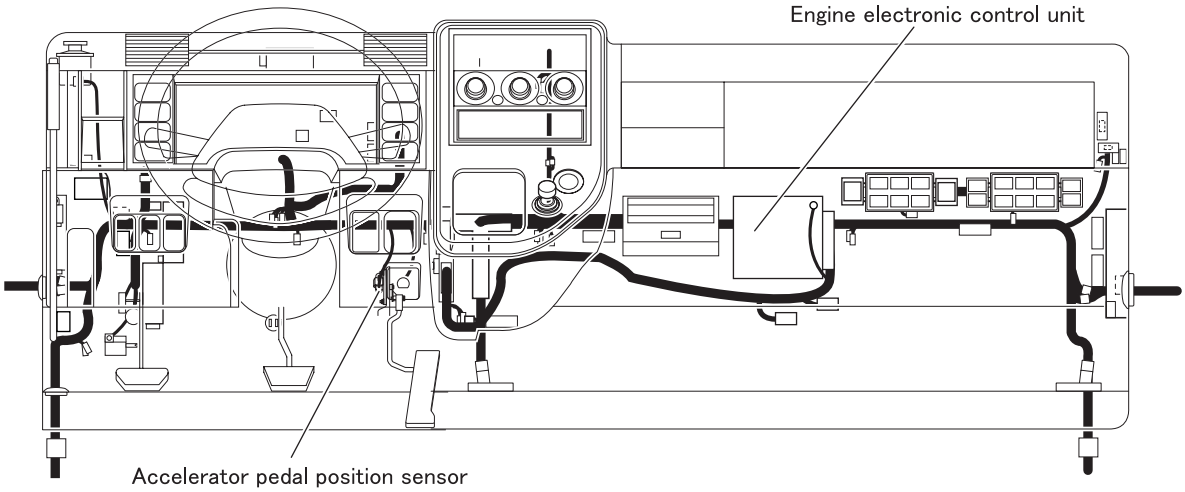
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

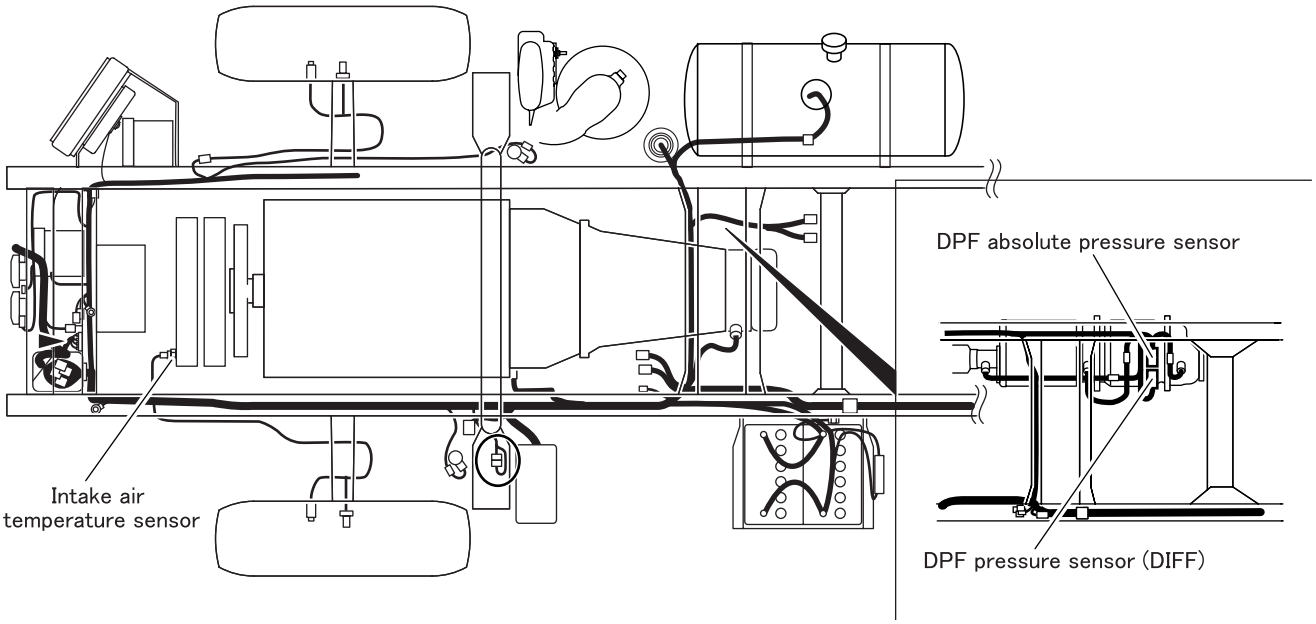
[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

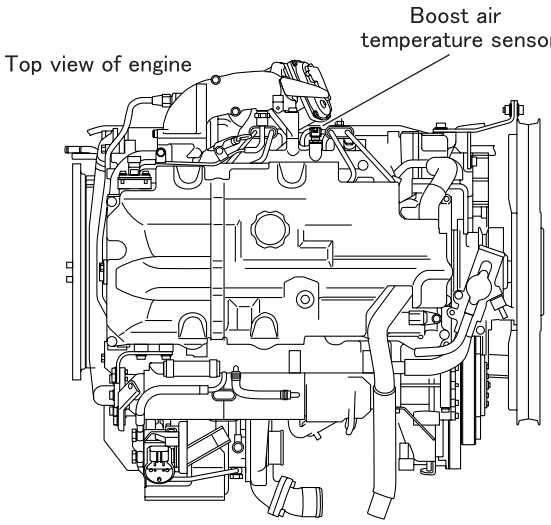
[Electronic Control Unit Connection Diagram]

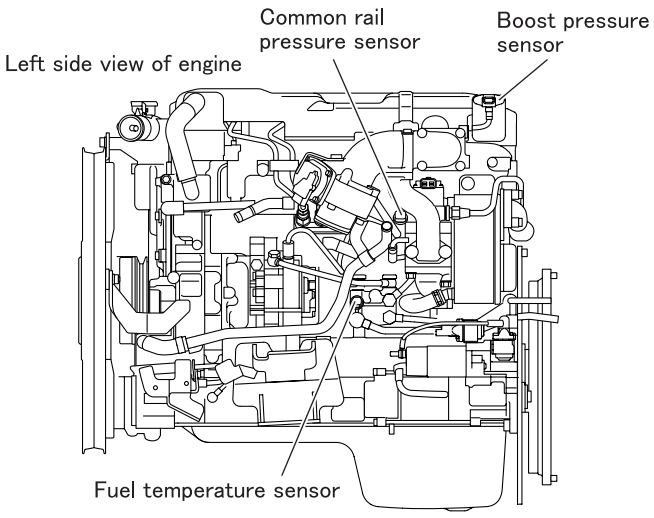


[Parts Identification and Location]









P103647E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): accelerator pedal position sensor (sensor 1)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 35 (+) and No. 33 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of accelerator pedal position sensor (sensor 1) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and accelerator pedal position sensor (sensor 1) (power supply)
	Maintenance item		Check circuit between accelerator pedal position sensor (sensor 1) connector terminal No. 4 and electronic control unit connector (GE58A) terminal No. 35.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector: intake air temperature sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 63 (+) and No. 32 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 6.

Step 6	Inspection items		Inspection of intake air temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and intake air temperature sensor (power supply)
	Maintenance item		Check circuit between intake air temperature sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 63
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0650/Flash code: 3
[Monitor]
Failure of engine warning lamp (orange)
[Fault (outline)]
- Short circuit battery
- Short circuit ground
- Open circuit
- Overload

[Diagnosis check]
- Engine warning lamp (orange) circuit is monitored for fault.

[Code generation condition]
- Engine warning lamp (orange) circuit remains open, shorted or overcurrent as detected for 5 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.
- Fault diagnosis is performed each time when the control is halted.

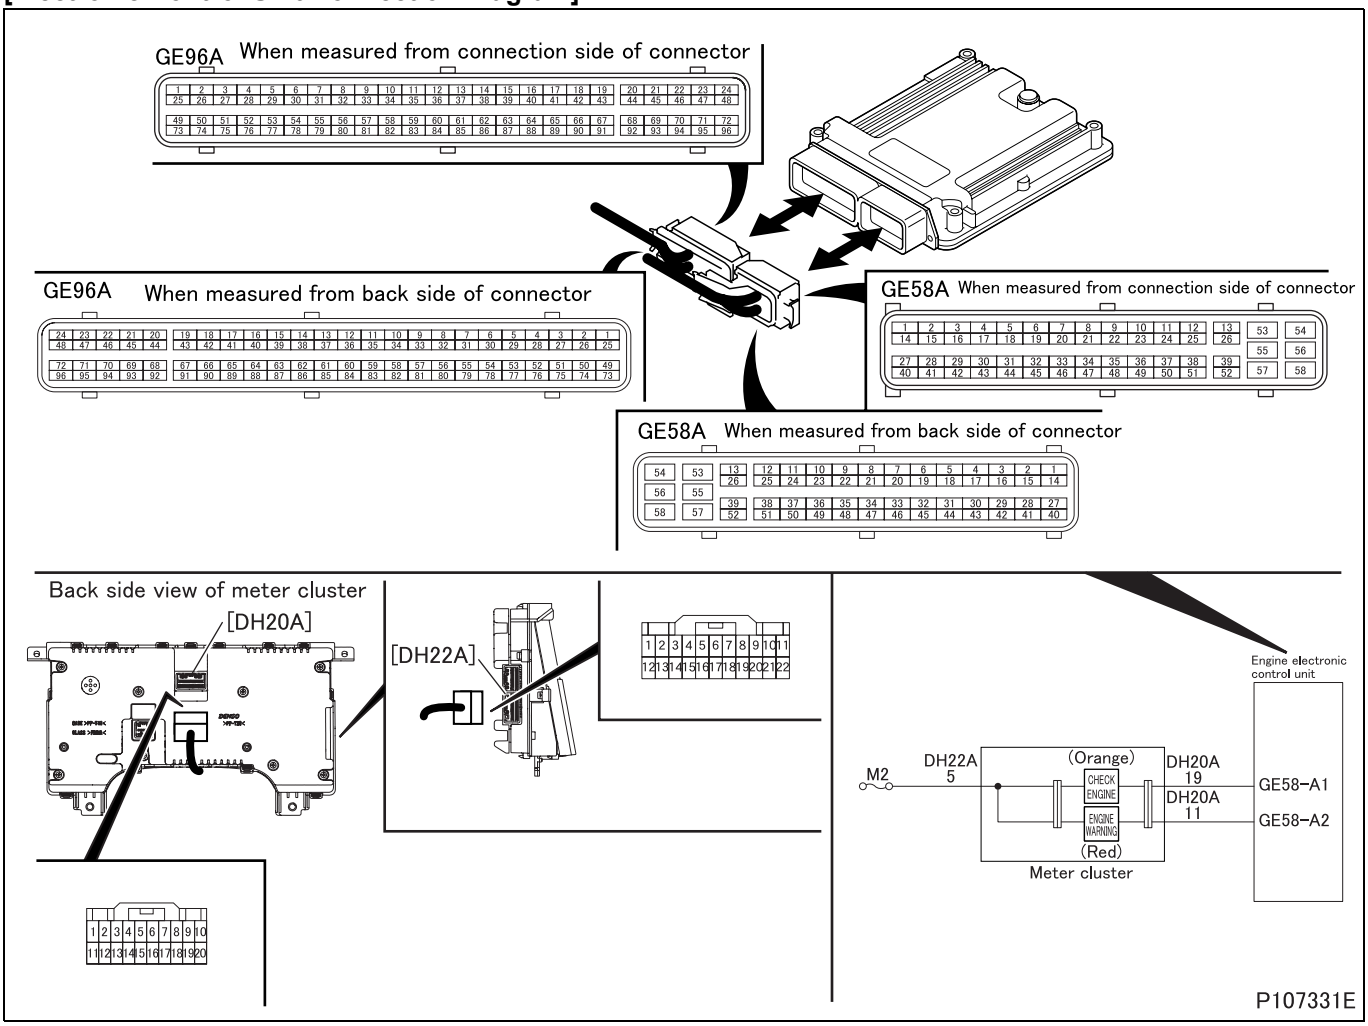
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

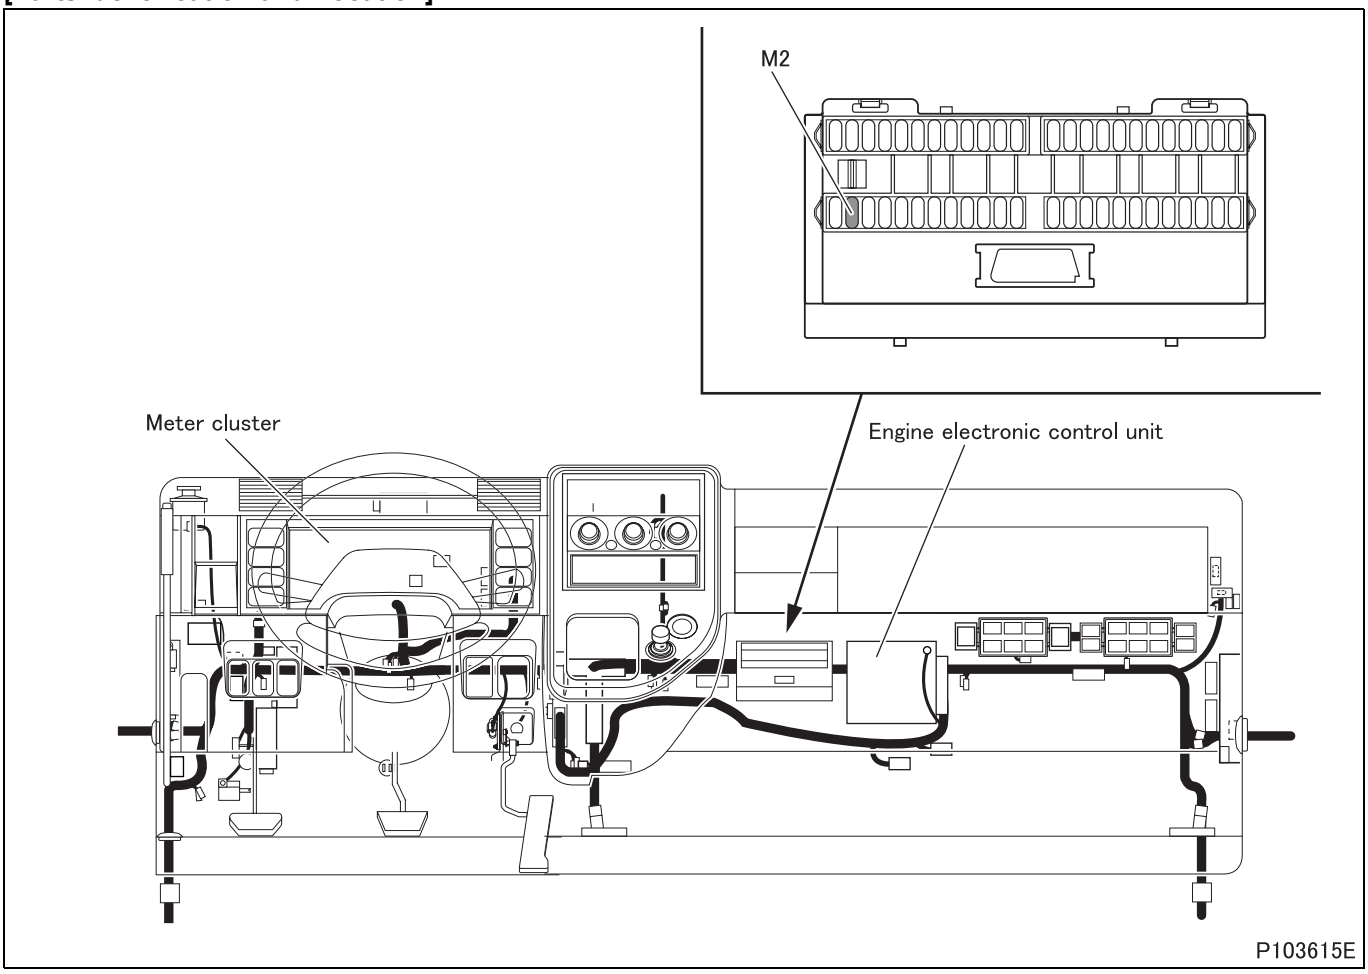
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and meter cluster (engine warning lamp (orange))
- Malfunction of each connector
- Malfunction of meter cluster (engine warning lamp (orange))
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B0 “MIL”.
	Inspection condition		Starter switch: ON
	Requirements		Lamp illuminates for six seconds.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Ground connector (GE58A) terminal No. 1.
	Inspection condition		It wires for the ground harness from the other side of the connector.
	Requirements		Lamp illuminates.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between fuse and meter cluster
	Maintenance item		Check circuit between fuse (M2) and meter cluster connector (DH22A) terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between meter cluster and electronic control unit
	Maintenance item		Check circuit between meter cluster connector (DH20A) terminal No. 19 and electronic control unit connector (GE58A) terminal No. 1
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of meter cluster
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of meter cluster or lamp
		NO	Modify connector.

[Fault code]
Diagnosis code: P0652/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Sensor supply voltage 2 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 2
- Boost pressure sensor
- Accelerator pedal position sensor (sensor 2)
- Fuel temperature sensor

[Code generation condition]
- Supply voltage to units remain below 4.7 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

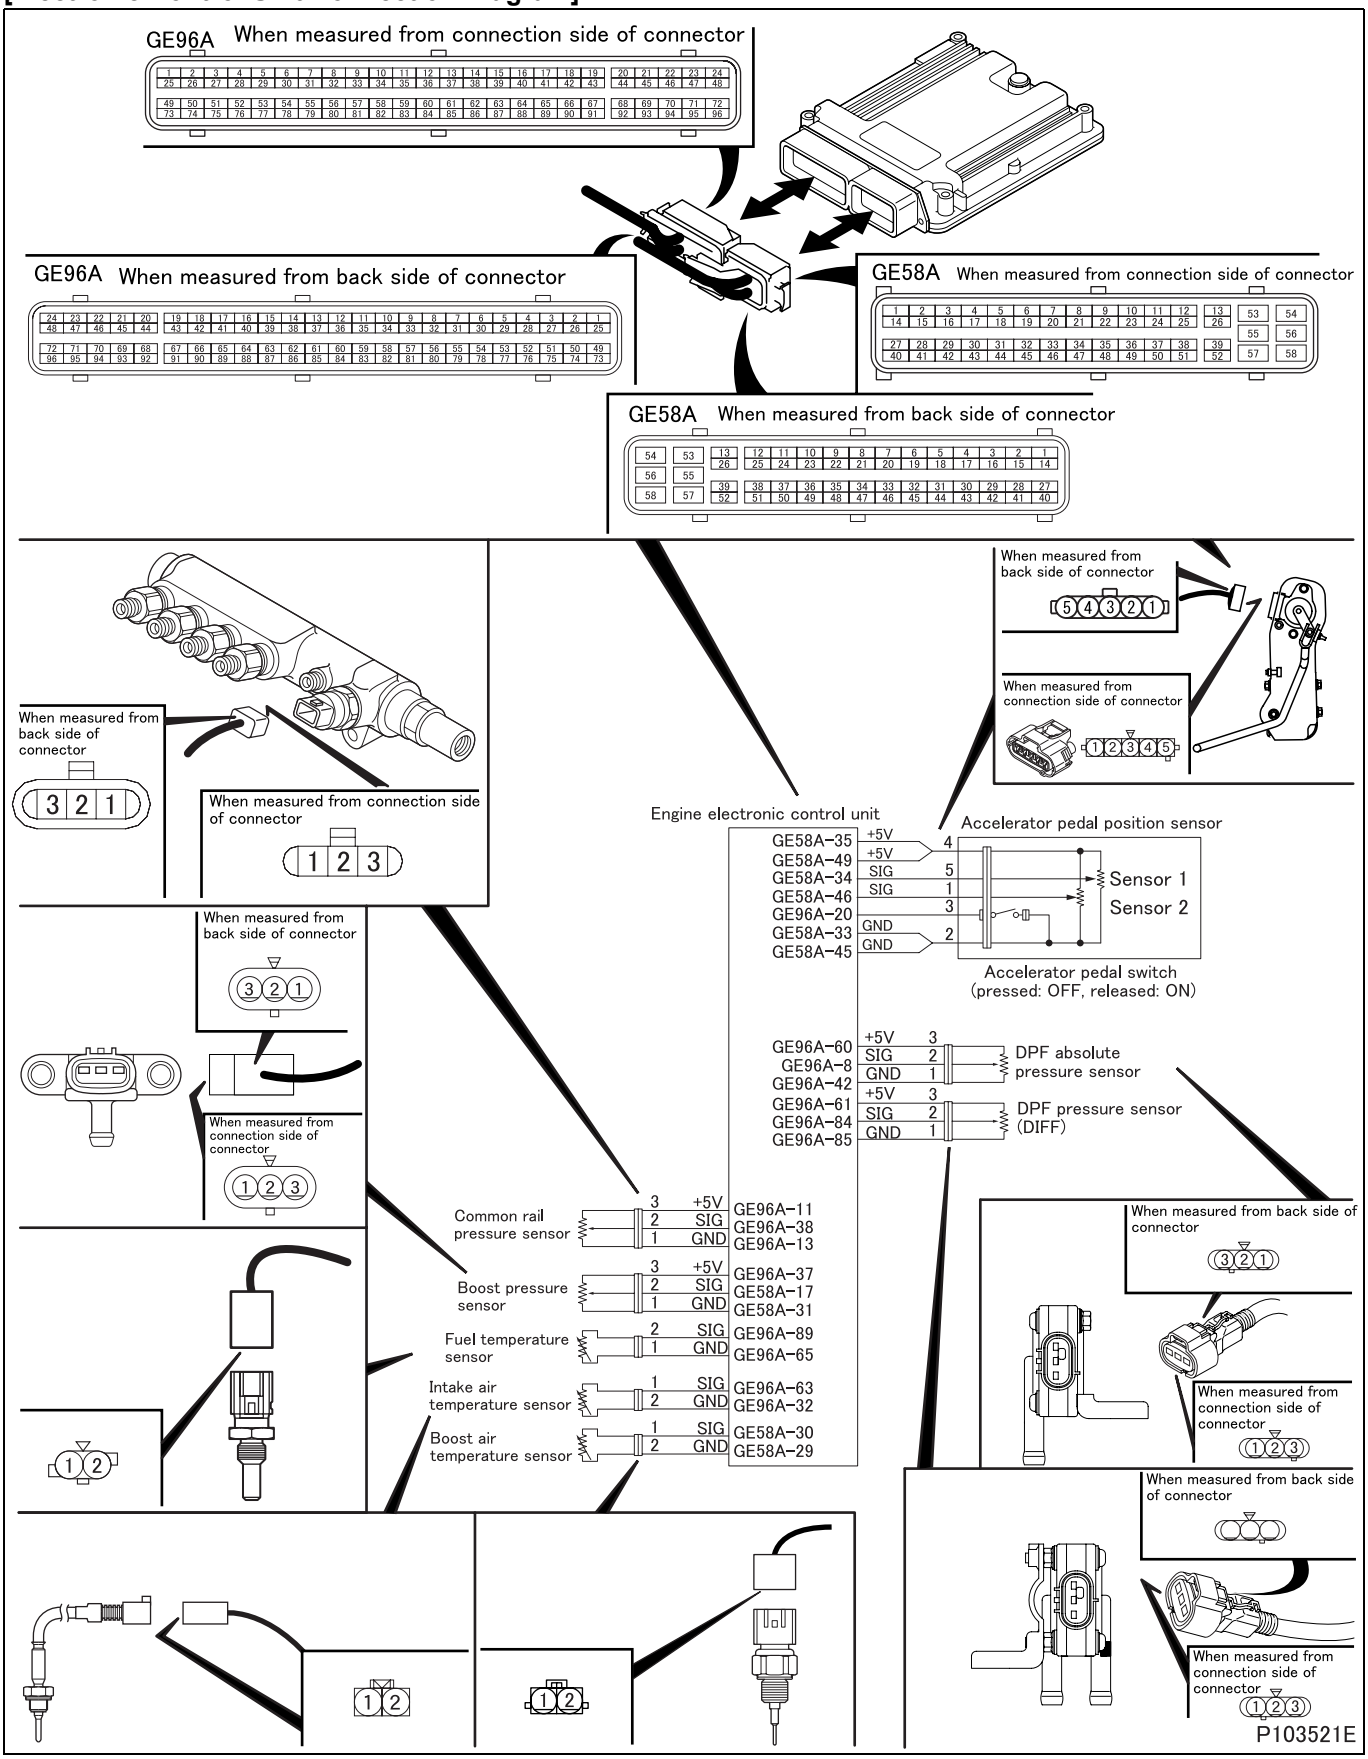
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

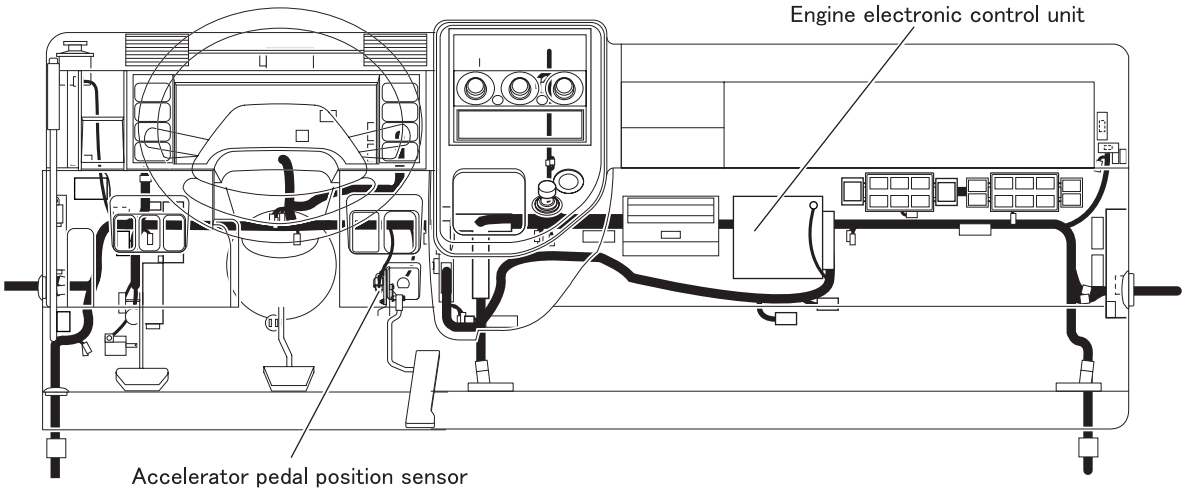
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

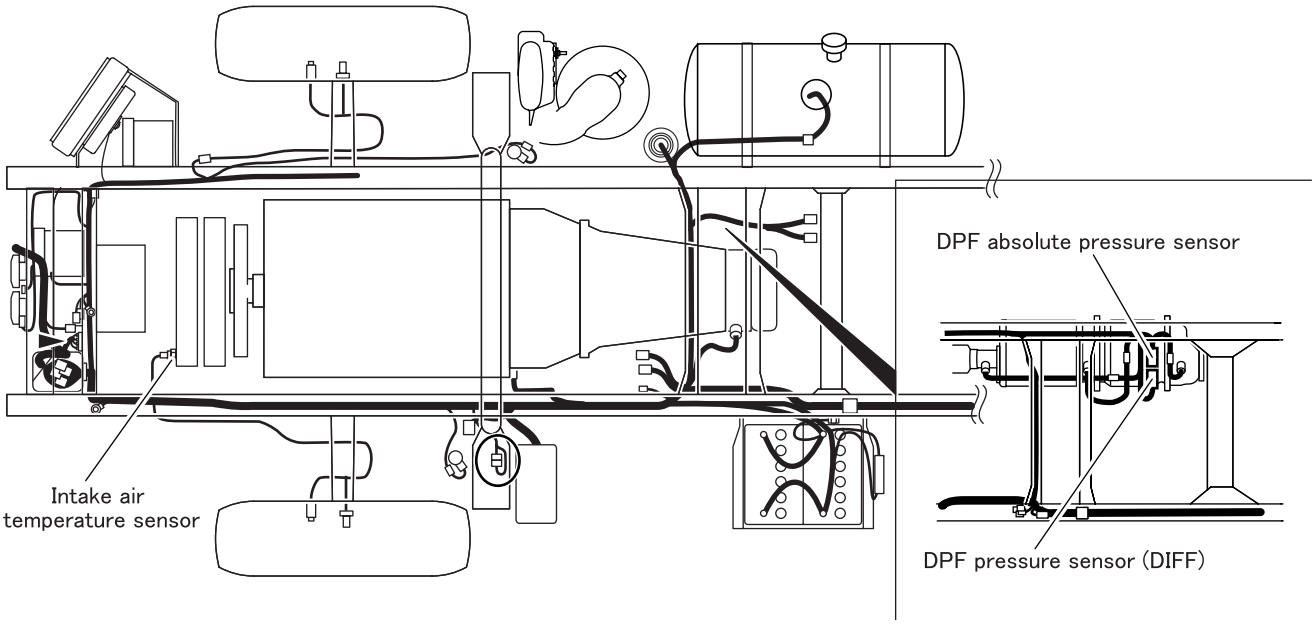
[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

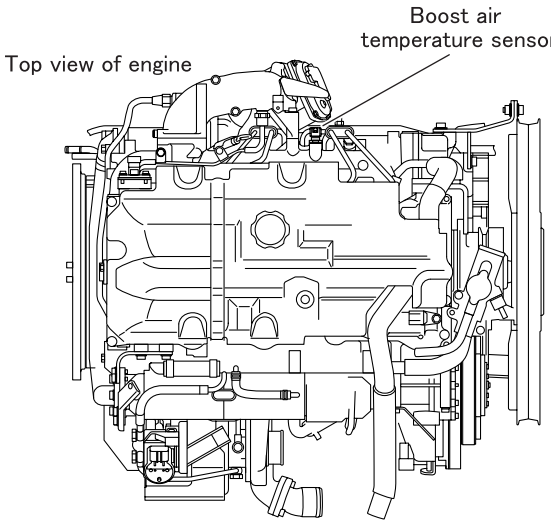
[Electronic Control Unit Connection Diagram]

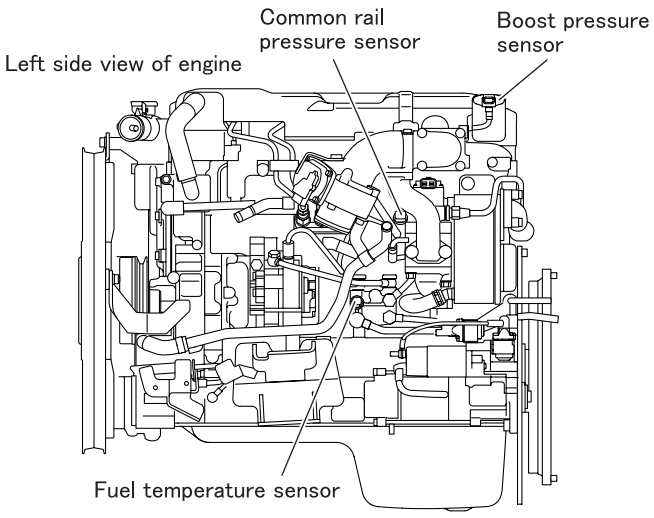


[Parts Identification and Location]









P103647E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): boost pressure sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 37 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of boost pressure sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and boost pressure sensor (power supply)
	Maintenance item		Check circuit between boost pressure sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 37.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector (power supply): accelerator pedal position sensor (sensor 2)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 49 (+) and No. 45 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of accelerator pedal position sensor (sensor 2) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and accelerator pedal position sensor (sensor 2) (power supply)
	Maintenance item		Check circuit between accelerator pedal position sensor (sensor 2) connector terminal No. 4 and electronic control unit connector (GE58A) terminal No. 49
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by electronic control unit connector: fuel temperature sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 89 (+) and No. 65 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 9.

Step 9	Inspection items		Inspection of fuel temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between electronic control unit and fuel temperature sensor (power supply)
	Maintenance item		Check circuit between fuel temperature sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 89
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0653/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
High signal range check
[Diagnosis check]
- Sensor supply voltage 2 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 2
- Boost pressure sensor

[Code generation condition]
- Supply voltage to units remain over 5.3 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

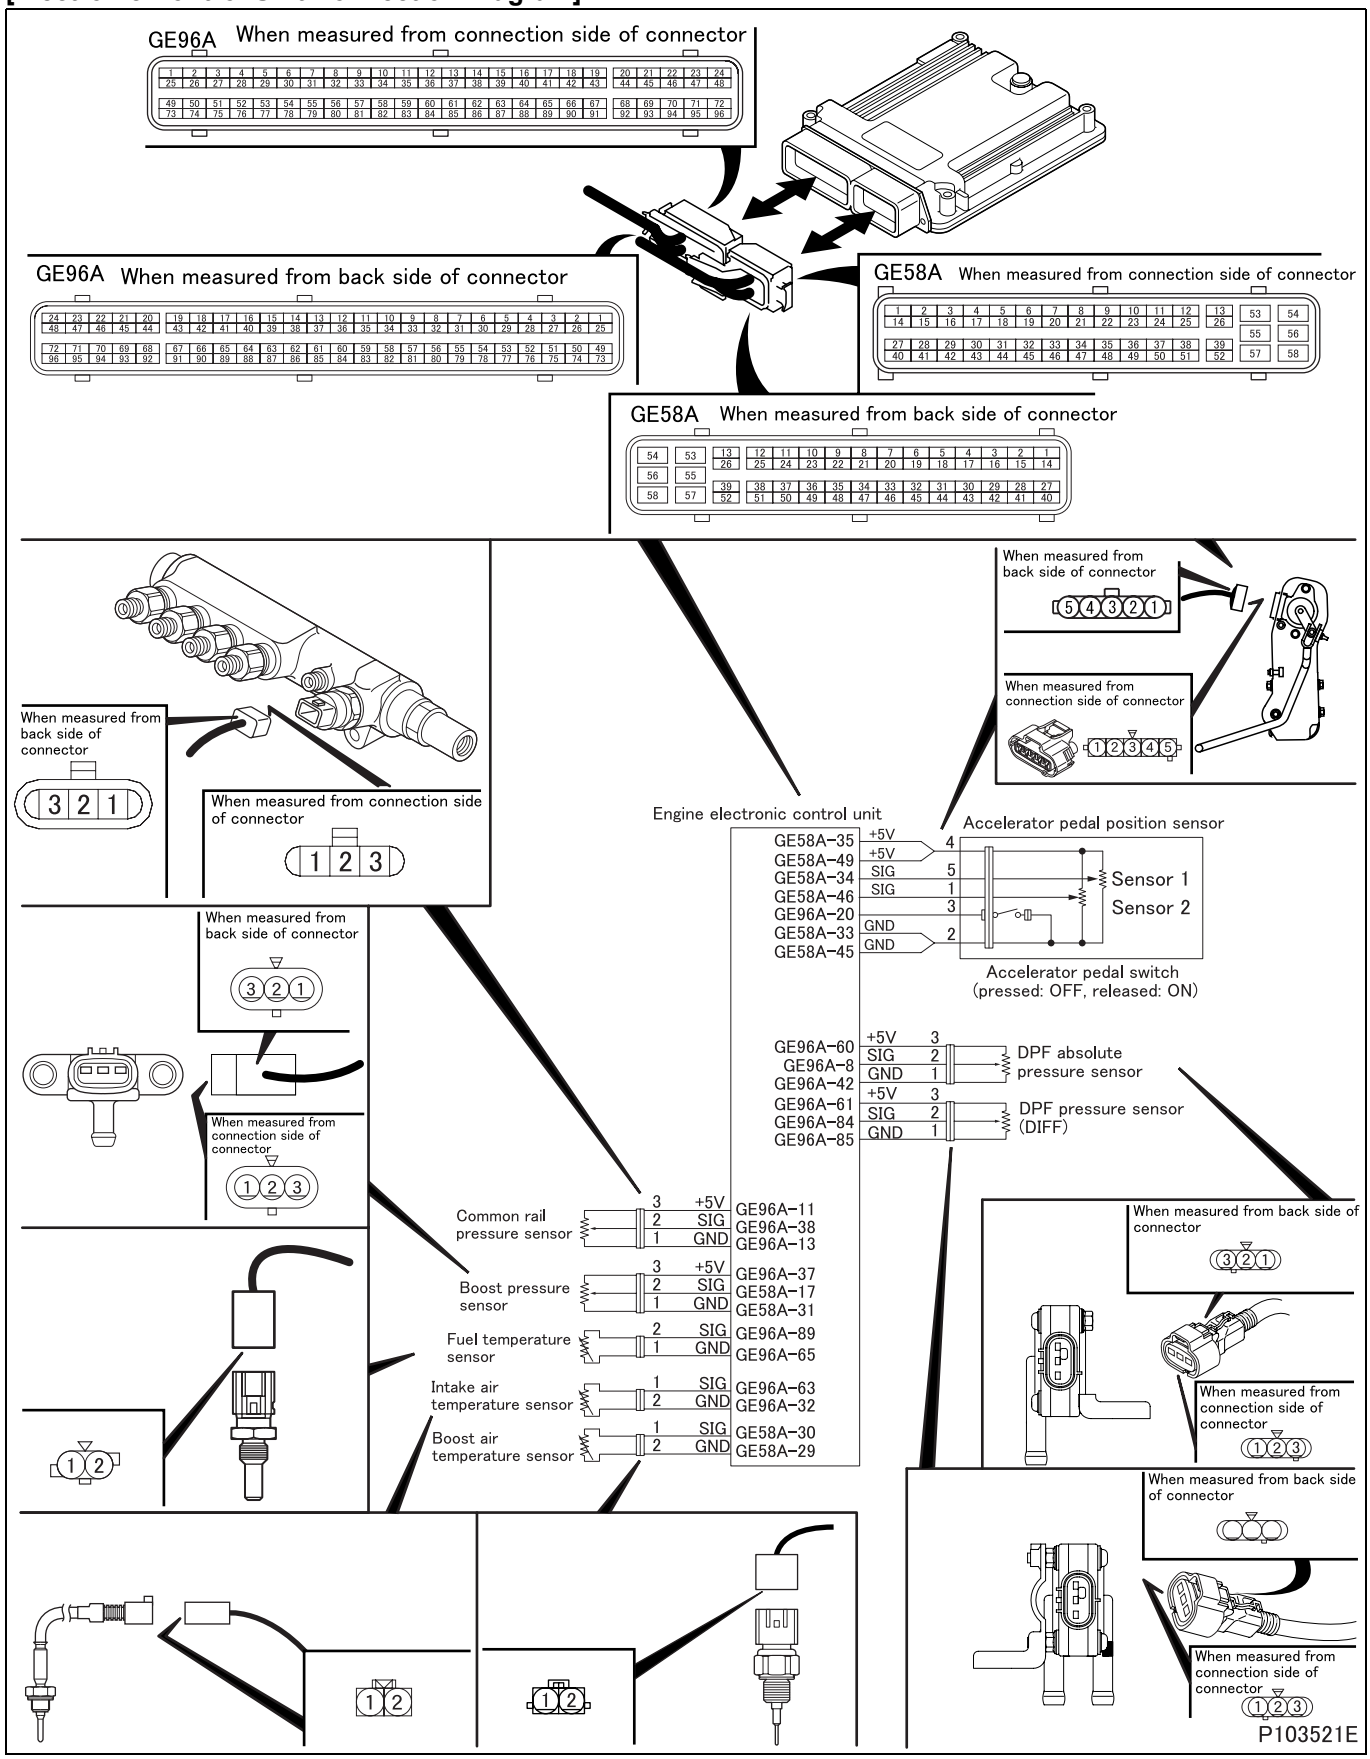
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

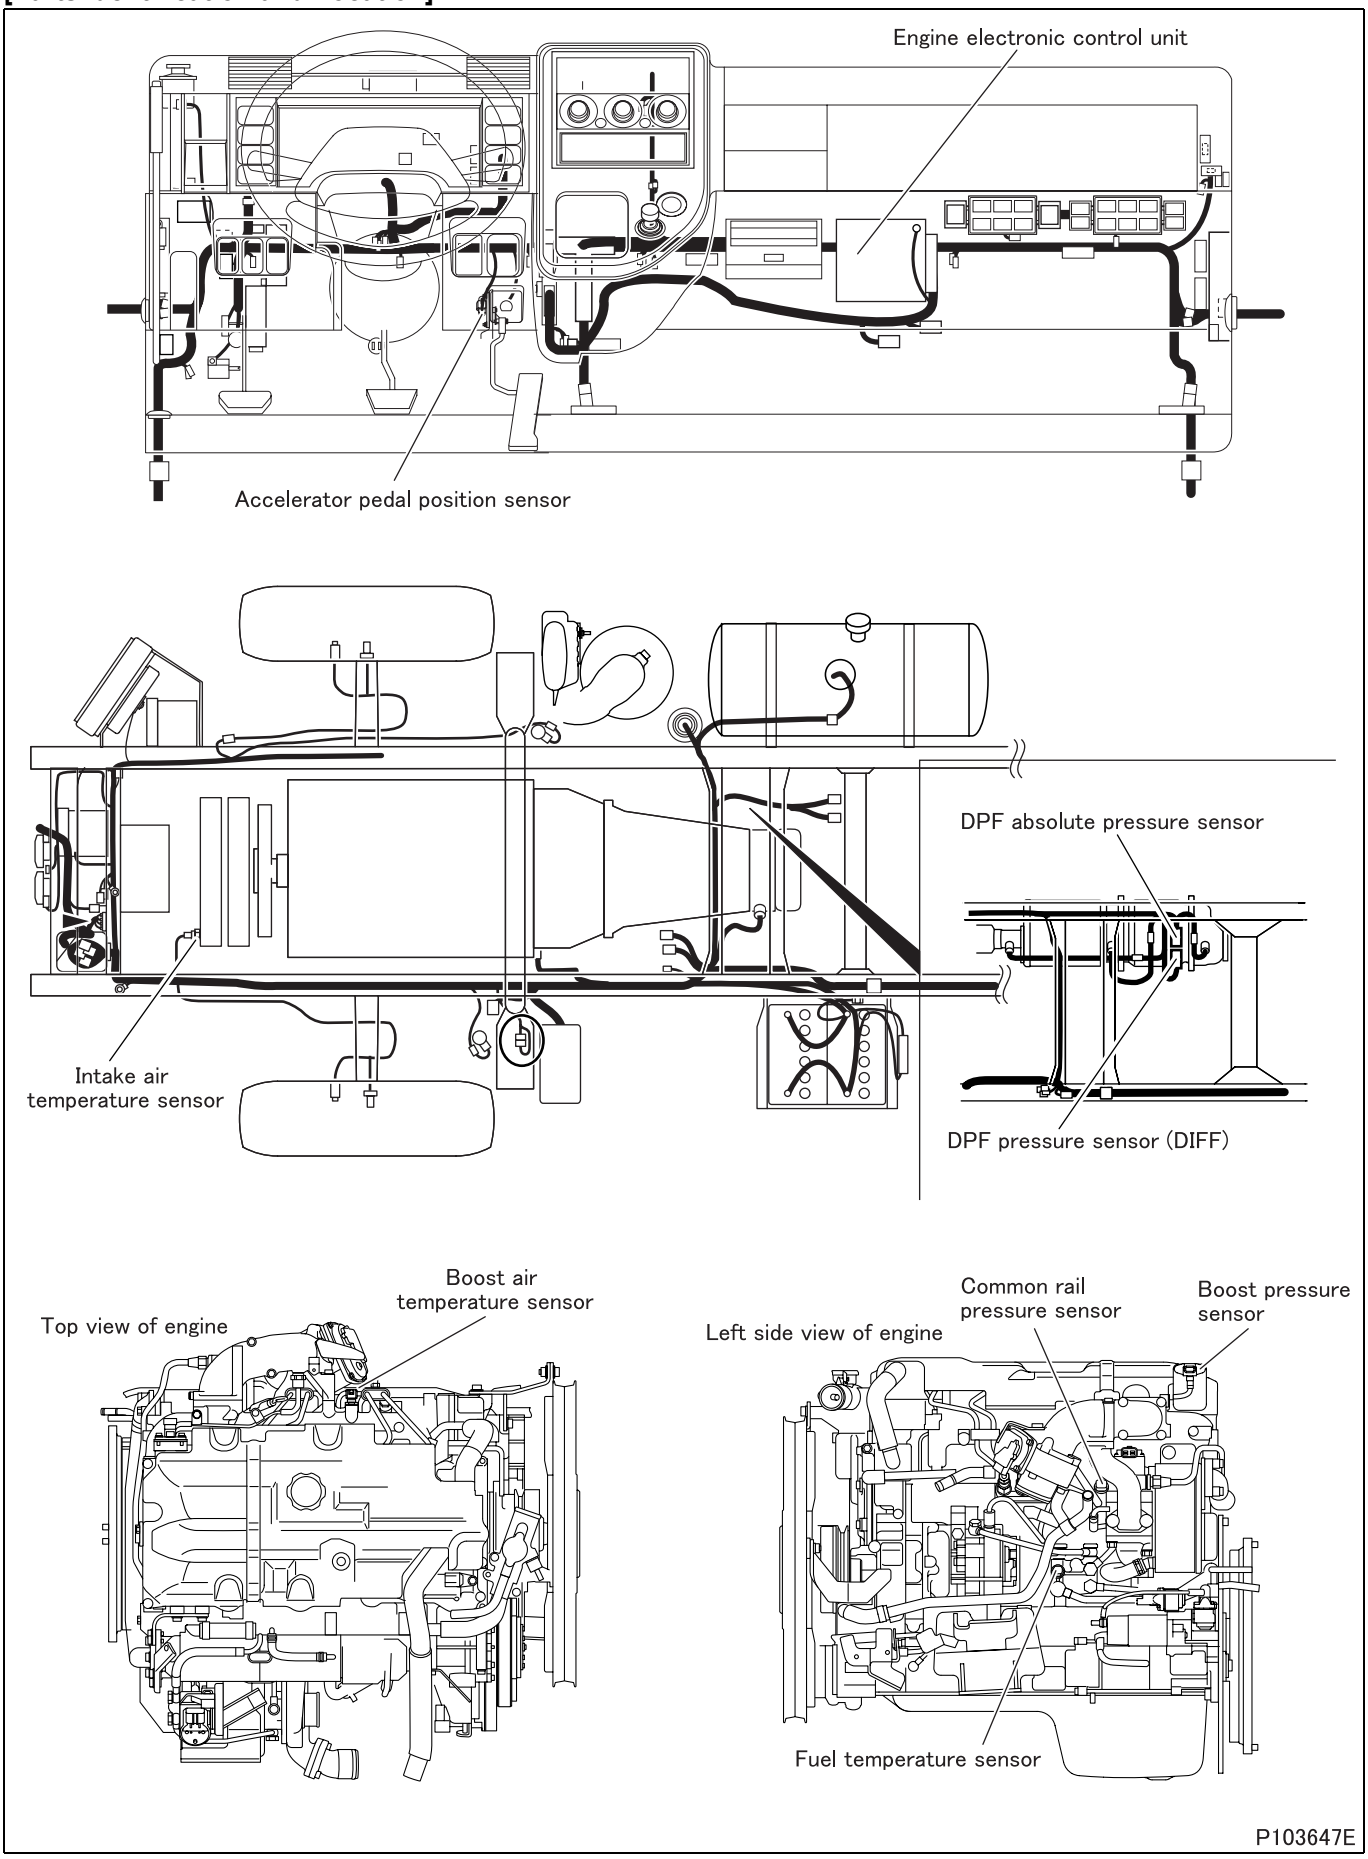
[Probable cause of trouble]
- Open-circuit or short-circuited harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): boost pressure sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 37 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of boost pressure sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and boost pressure sensor (power supply)
	Maintenance item		Check circuit between boost pressure sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 37.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector (power supply): accelerator pedal position sensor (sensor 2)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 49 (+) and No. 45 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of accelerator pedal position sensor (sensor 2) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and accelerator pedal position sensor (sensor 2) (power supply)
	Maintenance item		Check circuit between accelerator pedal position sensor (sensor 2) connector terminal No. 4 and electronic control unit connector (GE58A) terminal No. 49
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by electronic control unit connector: fuel temperature sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 89 (+) and No. 65 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 9.

Step 9	Inspection items		Inspection of fuel temperature sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between electronic control unit and fuel temperature sensor (power supply)
	Maintenance item		Check circuit between fuel temperature sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 89
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0657/Flash code: 79
[Monitor]
Abnormality of magnetic valve power supply
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- Exhaust shutter 2-way magnetic valve circuit is monitored for fault.

[Code generation condition]
- Exhaust shutter 2-way magnetic valve circuit remains shorted to ground as detected for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

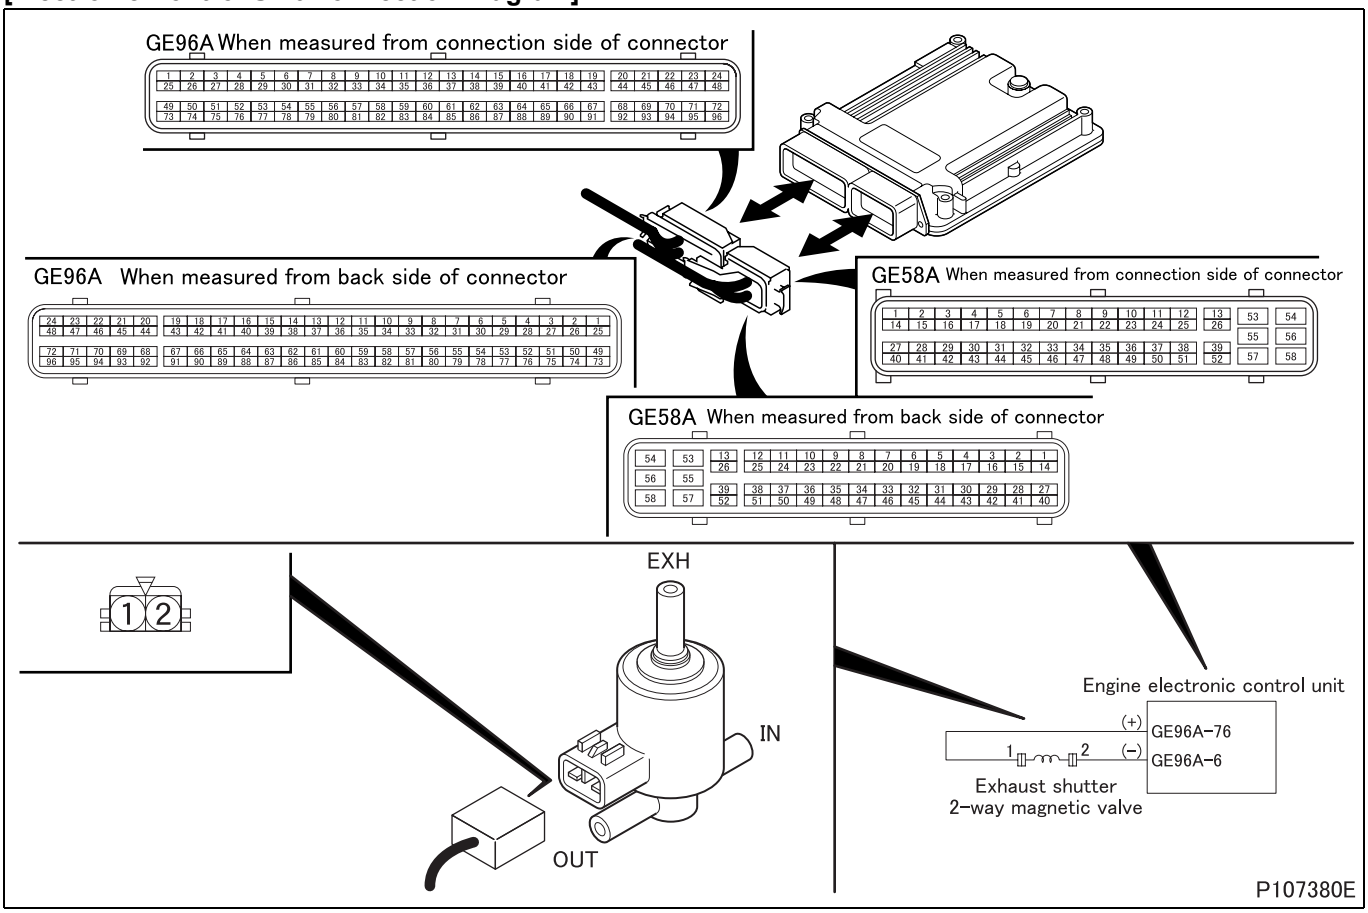
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust shutter 2-way magnetic valve is turned off.

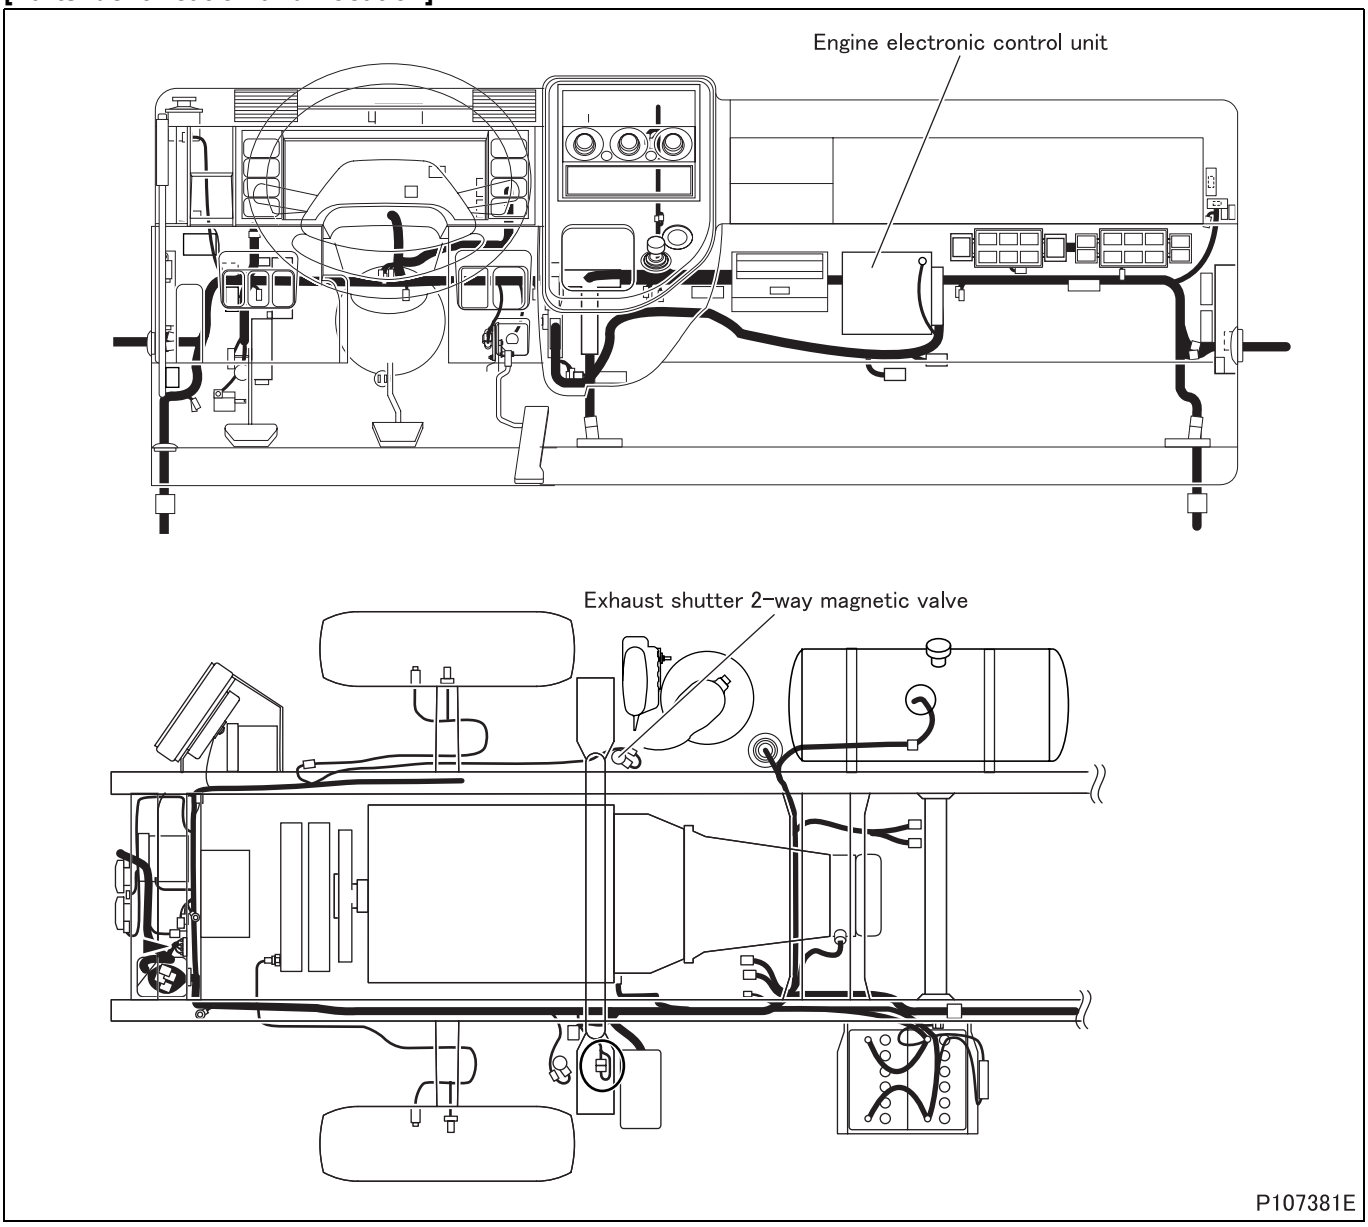
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and exhaust shutter 2-way magnetic valve
- Malfunction of each connector
- Malfunction of exhaust shutter 2-way magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

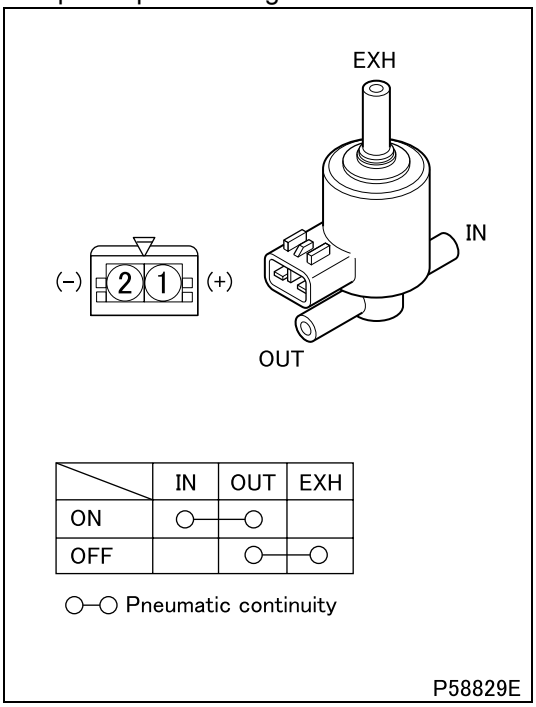
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 6 and 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		48 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of 2-way magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of 2-way magnetic valve unit
	Maintenance item		Measure minimum operating voltage when 2-way magnetic valve operates (judge by operation sound).
	Inspection condition		Gradually increase from zero the voltage applied to terminals No. 1 (+) and 2 (–).
	Requirements		11 V or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of 2-way magnetic valve

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 76.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and chassis ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AA “Auxiliary Brake M/V 1”.
	Inspection condition		Starter switch: ON
	Requirements		2-way magnetic valve operation sound is noted
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0670/Flash code: 26
[Monitor]
Failure of preheating control system
[Fault (outline)]
- Open circuit
- Overload
- GCU communication error

[Diagnosis check]
- Engine electronic control unit receives fault information from glow electronic control unit.
- Glow electronic control unit monitors condition of electronic control unit.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
- Glow electronic control unit power supply circuit remains open as detected for 0.2 second.
- Power supply temperature in glow electronic control unit remains at 100°C {212°F} for 0.2 second.
- High current fuse (BATT2) directly connected to battery remains blown for 2.3 seconds.
- Glow plug drive terminal voltage remains below 8 V or over 18.5 V for 2.3 seconds when engine requires no warming-up.
- Upper limit temperature remains over 135°C {275°F} for 2.3 seconds.

[Diagnosis check timing]
<Fault diagnosis for PWM (Pulse Width Modulation)>
- Fault diagnosis is performed each time when the control is initiated.
- Fault diagnosis is performed each time when the control is halted.

<Fault diagnosis for other than those above>
- Fault diagnosis is continuously performed.

[Diagnostic requirement]
<Fault diagnosis for PWM (Pulse Width Modulation)>
- Preheating control: stopped
- Preheating control: being effected
- Water temperature: below 65°C {149°F}
- Preheating control: no other error occurs

<Fault diagnosis for other than those above>
- Not applicable.

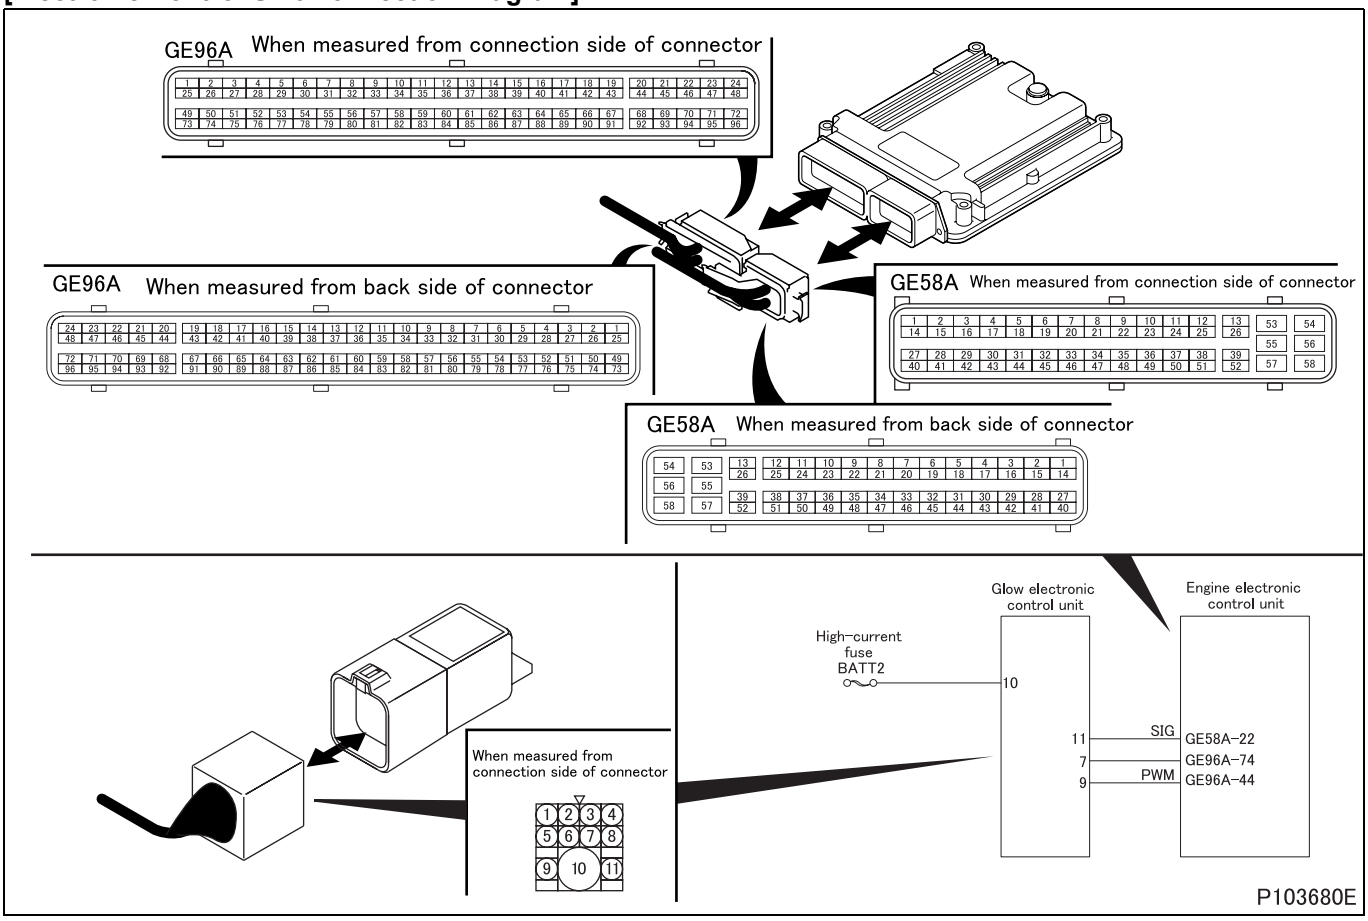
[Control effected by electronic control unit during fault]
Electronic control unit varies in the way of control by the status of warning lamp.
<Warning lamp (orange) lit>
- Effects no special control.

<Warning lamp extinguished (diagnosis code only)>
- Related fault check is stopped.

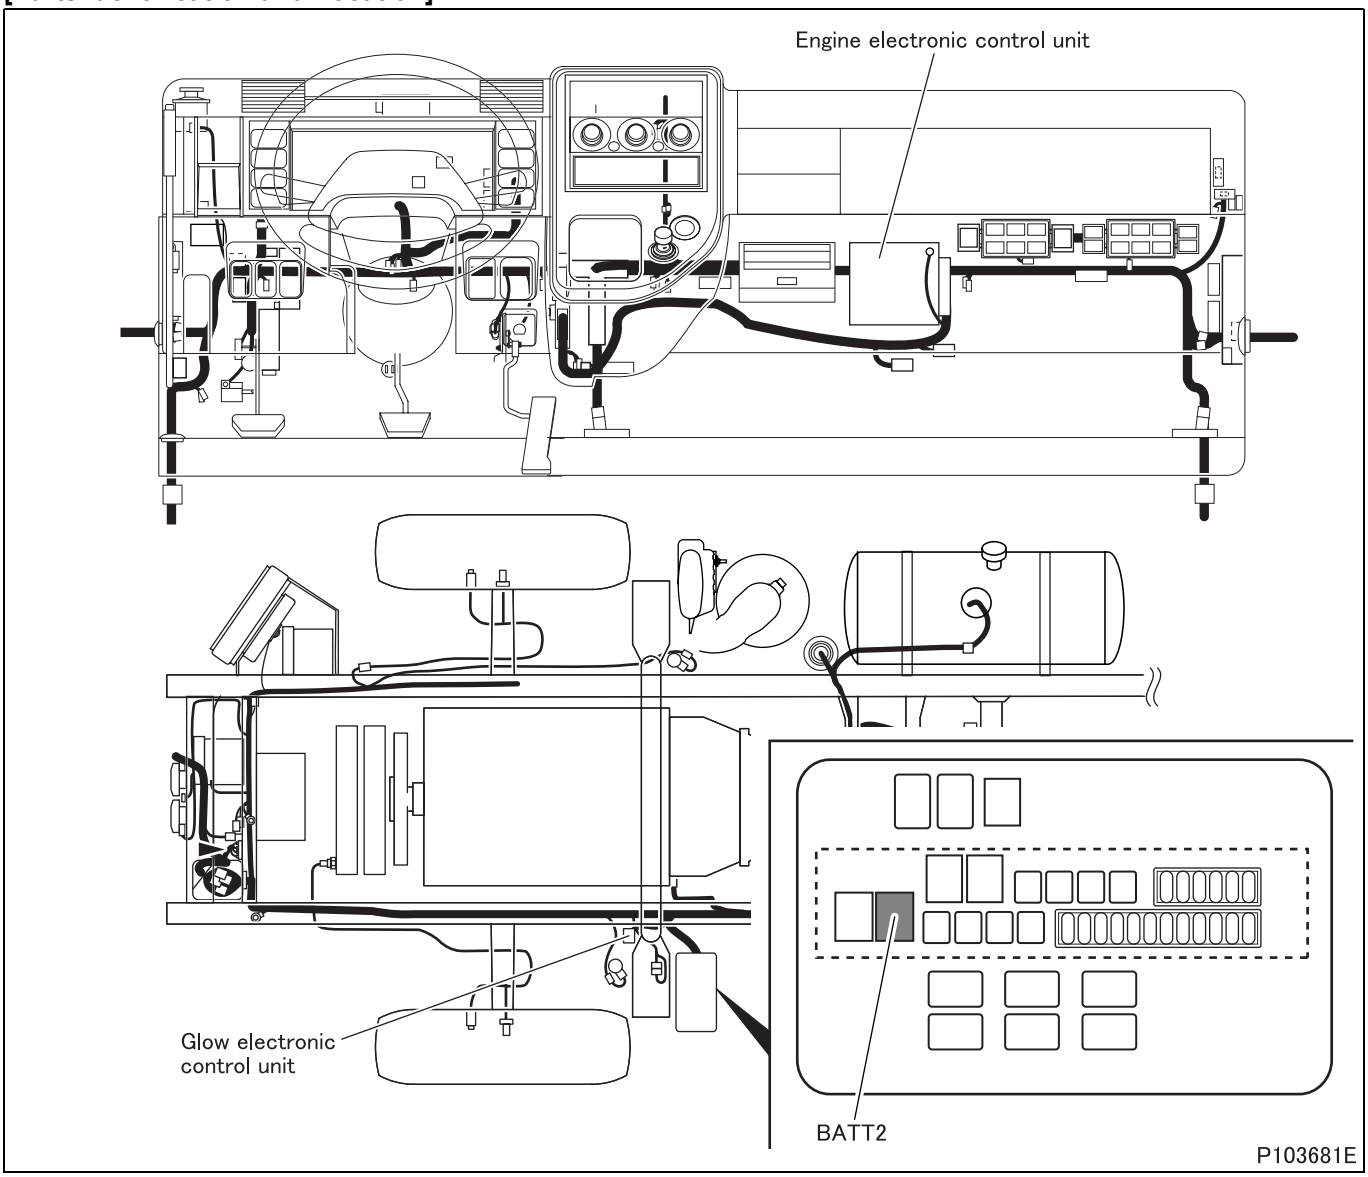
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and high-current fuse (BATT2)
- Blown high-current fuse (BATT2)
- Malfunction of each connector
- Malfunction of glow electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

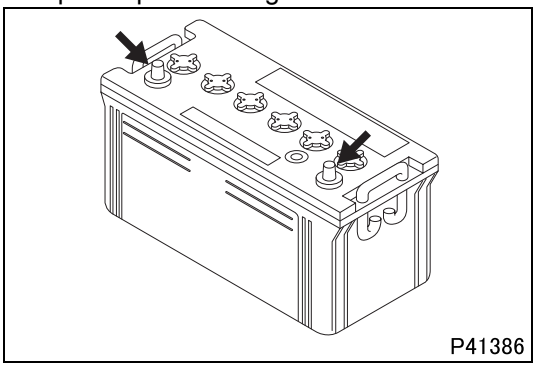
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of high-current fuse (BATT2)
	Maintenance item		Check open circuit of high-current fuse (BATT2)
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Replacement of fuse

Step 2	Inspection items		Inspection of harness between glow electronic control unit and high-current fuse (BATT2)
	Maintenance item		Check circuit between glow electronic control unit terminal No. 10 and high-current fuse (BATT2) terminal.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify harness.

Step 3	Inspection items		Inspection of battery
	Maintenance item		Measure value of voltage between battery terminal (+) and (–)
	Inspection condition		–
	Requirements		8 to 16 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Inspection of battery (See Gr54.)

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 6
		NO	Modify connector.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0671/Flash code: 26
[Monitor]
Failure of preheating control system
[Fault (outline)]
No. 1 cylinder fault
[Diagnosis check]
- Engine electronic control unit receives fault information from glow electronic control unit.
- Glow electronic control unit monitors current in No. 1 cylinder glow plug circuit for open or short circuit failure.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Open-circuit>
- Current remains below 1.9 A for 2.3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

<Short-circuit>
- Current remains over 21 A for 2.3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

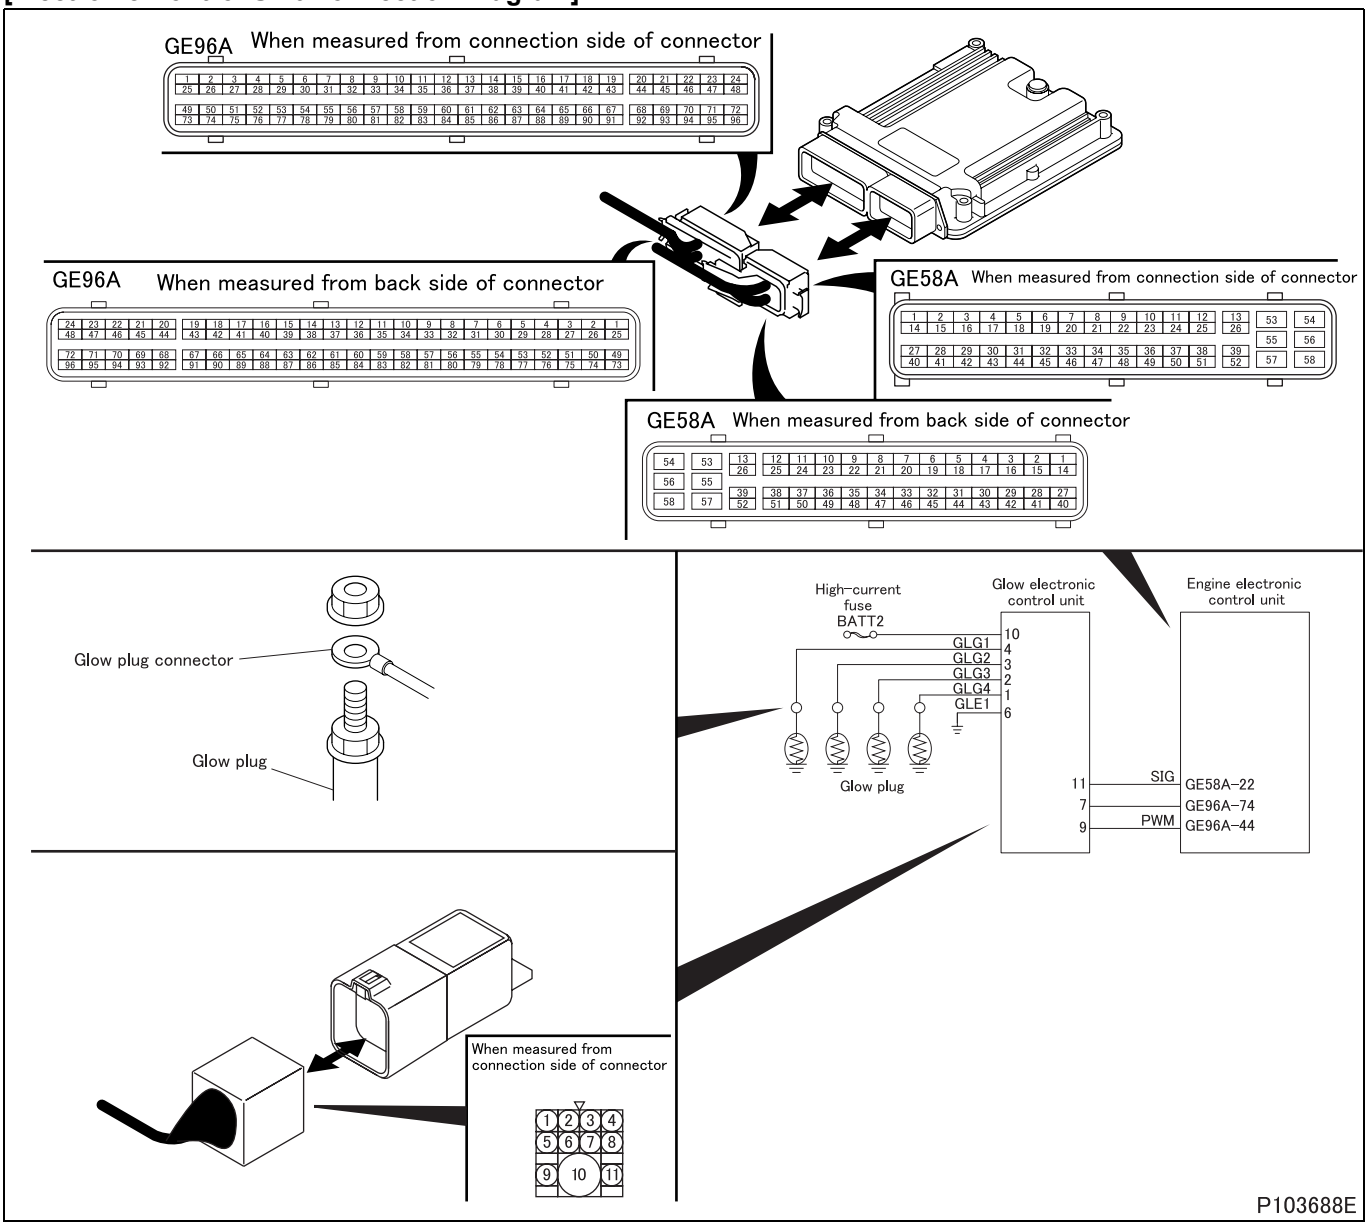
[Diagnostic requirement]
- Glow electronic control unit operating voltage: higher than 8 V

[Control effected by electronic control unit during fault]
- Effects no special control.

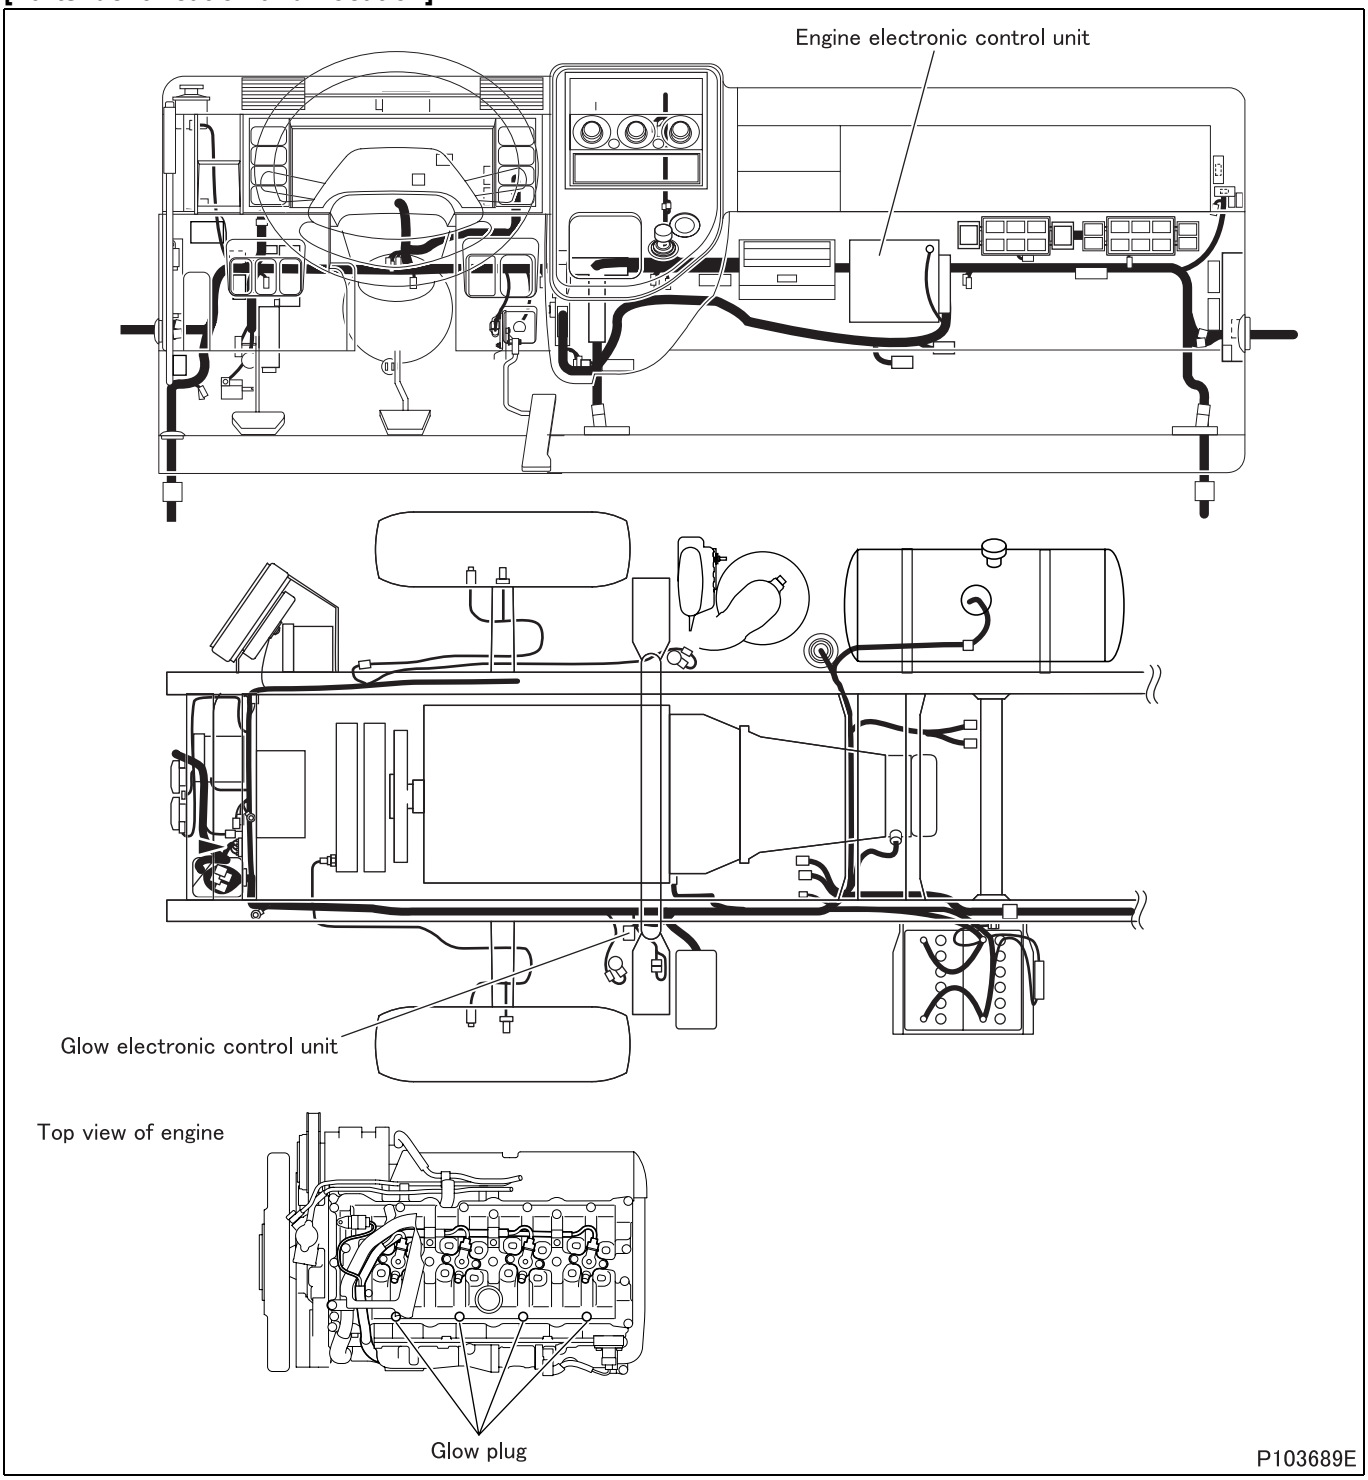
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and glow plug
- Malfunction of each connector
- Malfunction of glow plug
- Malfunction of glow electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

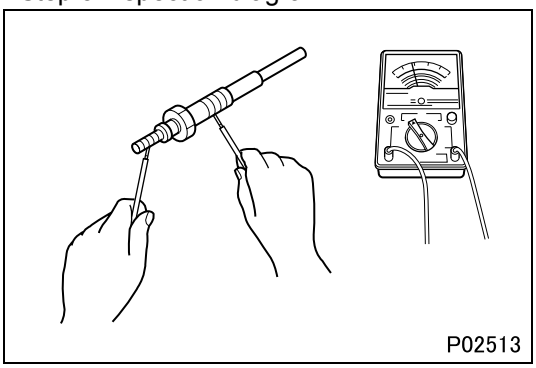
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of harness between glow electronic control unit and chassis ground
	Maintenance item		Check circuit between glow electronic control unit terminal No. 4 and chassis ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of harness between glow electronic control unit and glow plug
	Maintenance item		Check circuit between glow electronic control unit terminal No. 4 and glow plug connector (for No. 1 cylinder)
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify harness.

Step 3	Inspection items		Inspection of glow plug unit
	Maintenance item		Measure value of resistance of glow plug as shown in inspection diagram.
	Inspection condition		–
	Requirements		1 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of glow plug

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 6
		NO	Modify connector.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0672/Flash code: 26
[Monitor]
Failure of preheating control system
[Fault (outline)]
No. 2 cylinder fault
[Diagnosis check]
- Engine electronic control unit receives fault information from glow electronic control unit.
- Glow electronic control unit monitors current in No. 2 cylinder glow plug circuit for open or short circuit failure.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
<Open-circuit>
- Current remains below 1.9 A for 2.3 seconds.

<Short-circuit>
- Current remains over 21 A for 2.3 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

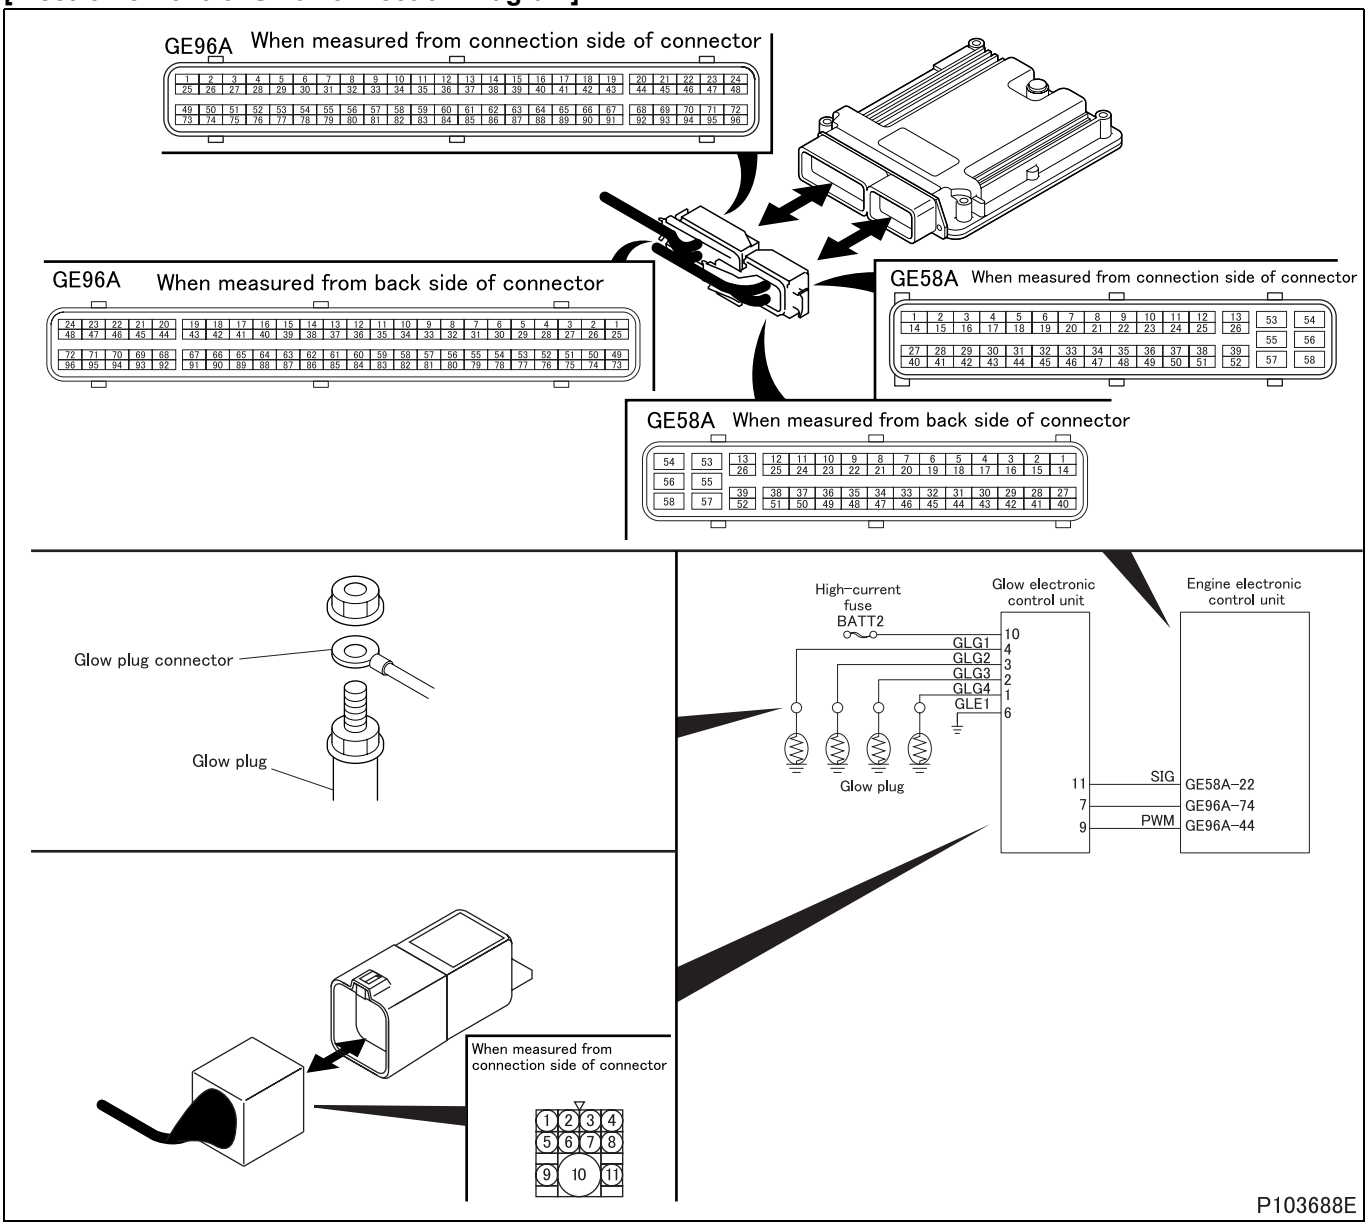
[Diagnostic requirement]
- Glow electronic control unit operating voltage: higher than 8 V

[Control effected by electronic control unit during fault]
- Effects no special control.

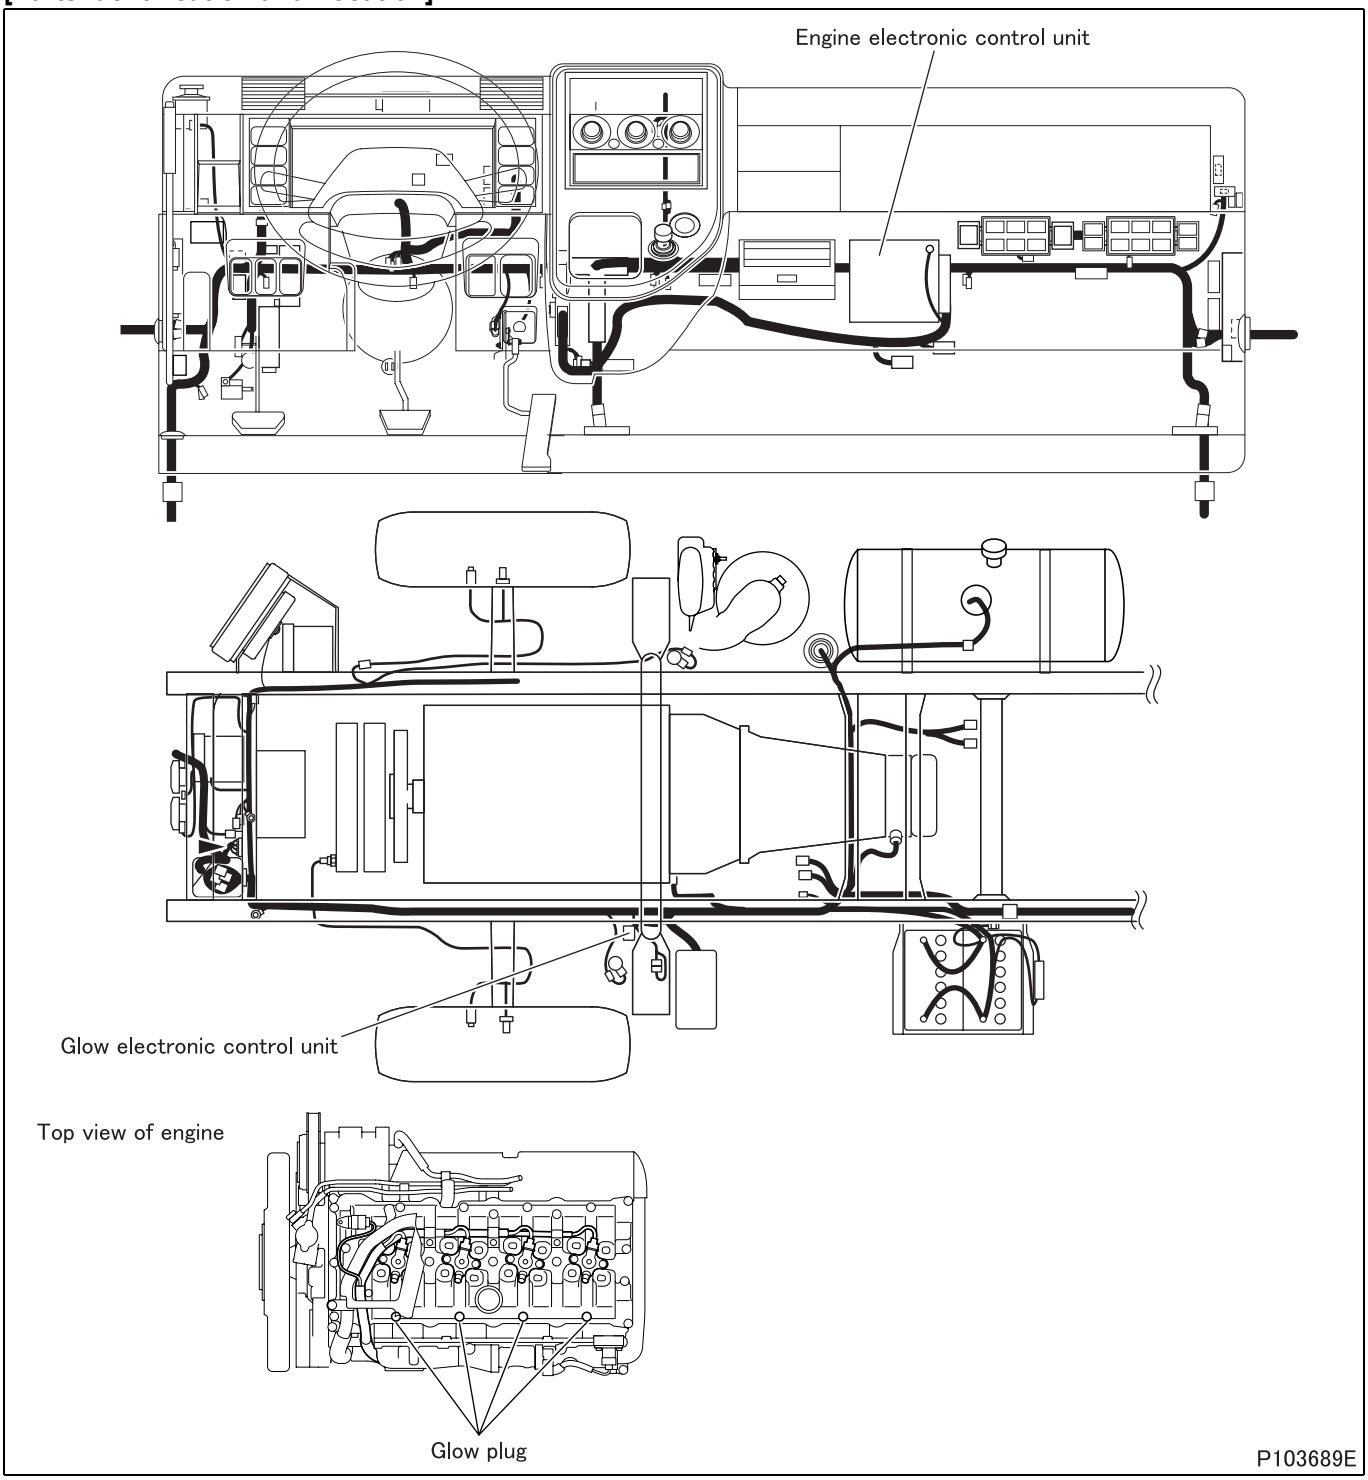
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and glow plug
- Malfunction of each connector
- Malfunction of glow plug
- Malfunction of glow electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

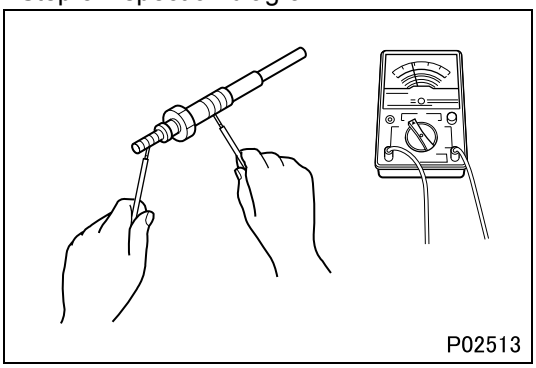
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of harness between glow electronic control unit and chassis ground
	Maintenance item		Check circuit between glow electronic control unit terminal No. 3 and chassis ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of harness between glow electronic control unit and glow plug
	Maintenance item		Check circuit between glow electronic control unit terminal No. 3 and glow plug connector (for No. 2 cylinder)
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify harness.

Step 3	Inspection items		Inspection of glow plug unit
	Maintenance item		Measure value of resistance of glow plug as shown in inspection diagram.
	Inspection condition		–
	Requirements		1 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of glow plug

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 6
		NO	Modify connector.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0673/Flash code: 26
[Monitor]
Failure of preheating control system
[Fault (outline)]
No. 3 cylinder fault
[Diagnosis check]
- Engine electronic control unit receives fault information from glow electronic control unit.
- Glow electronic control unit monitors current in No. 3 cylinder glow plug circuit for open or short circuit failure.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
<Open-circuit>
- Current remains below 1.9 A for 2.3 seconds.

<Short-circuit>
- Current remains over 21 A for 2.3 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

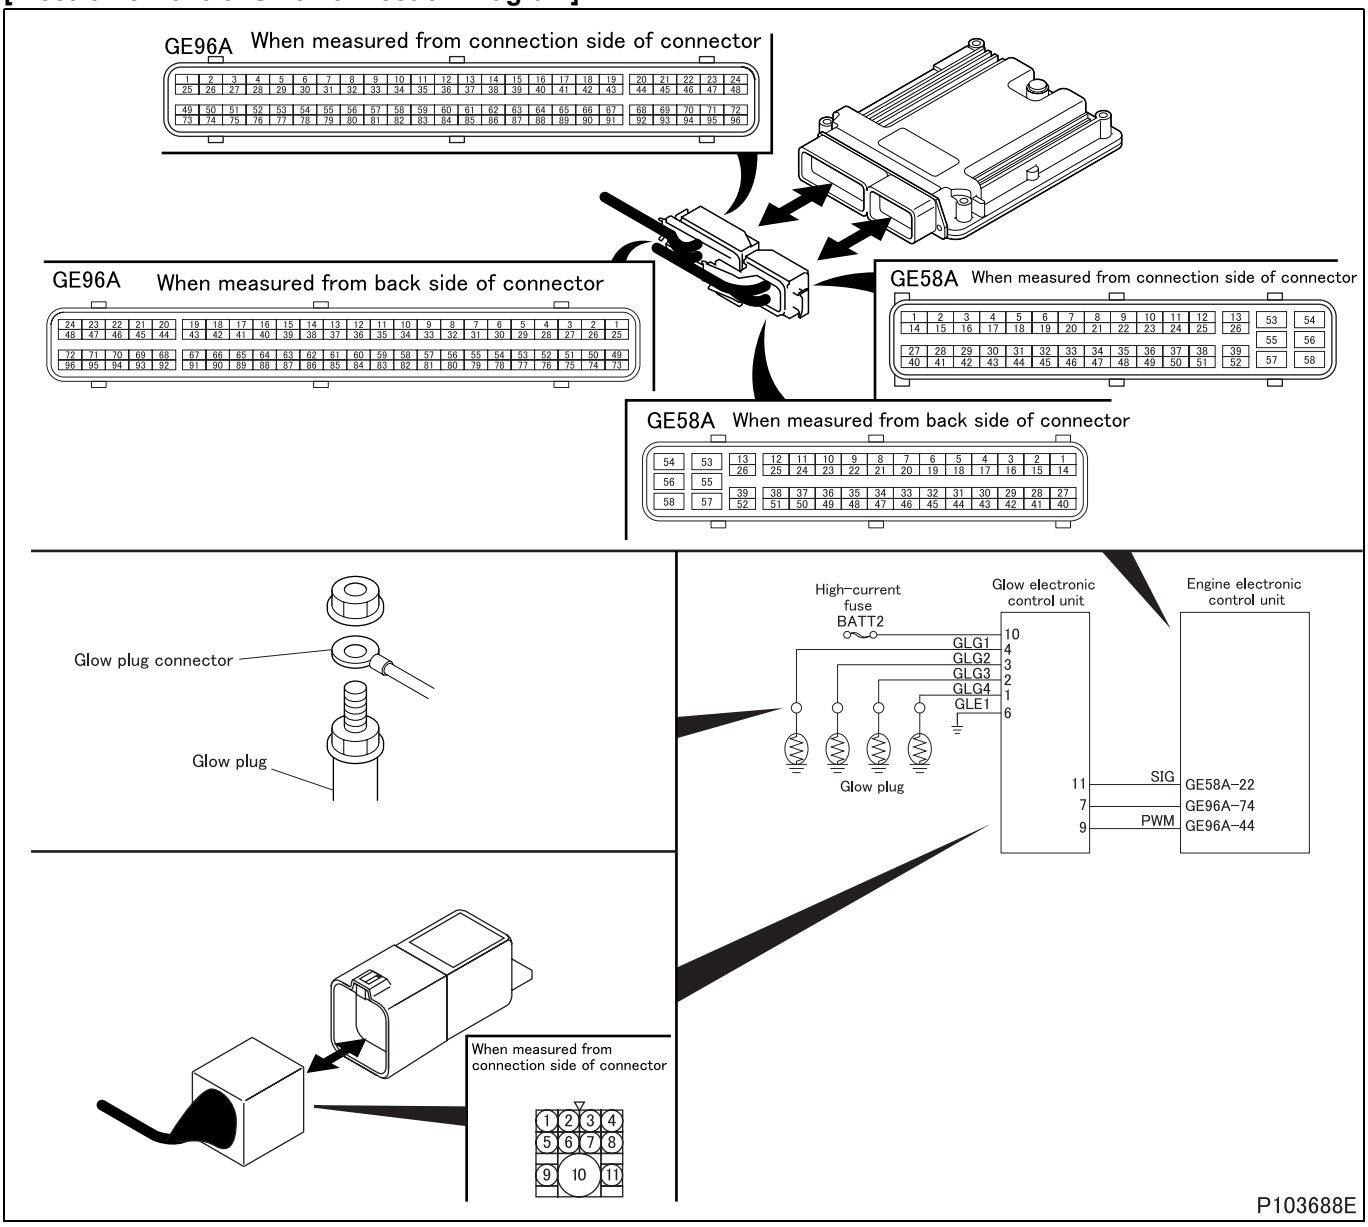
[Diagnostic requirement]
- Glow electronic control unit operating voltage: higher than 8 V

[Control effected by electronic control unit during fault]
- Effects no special control.

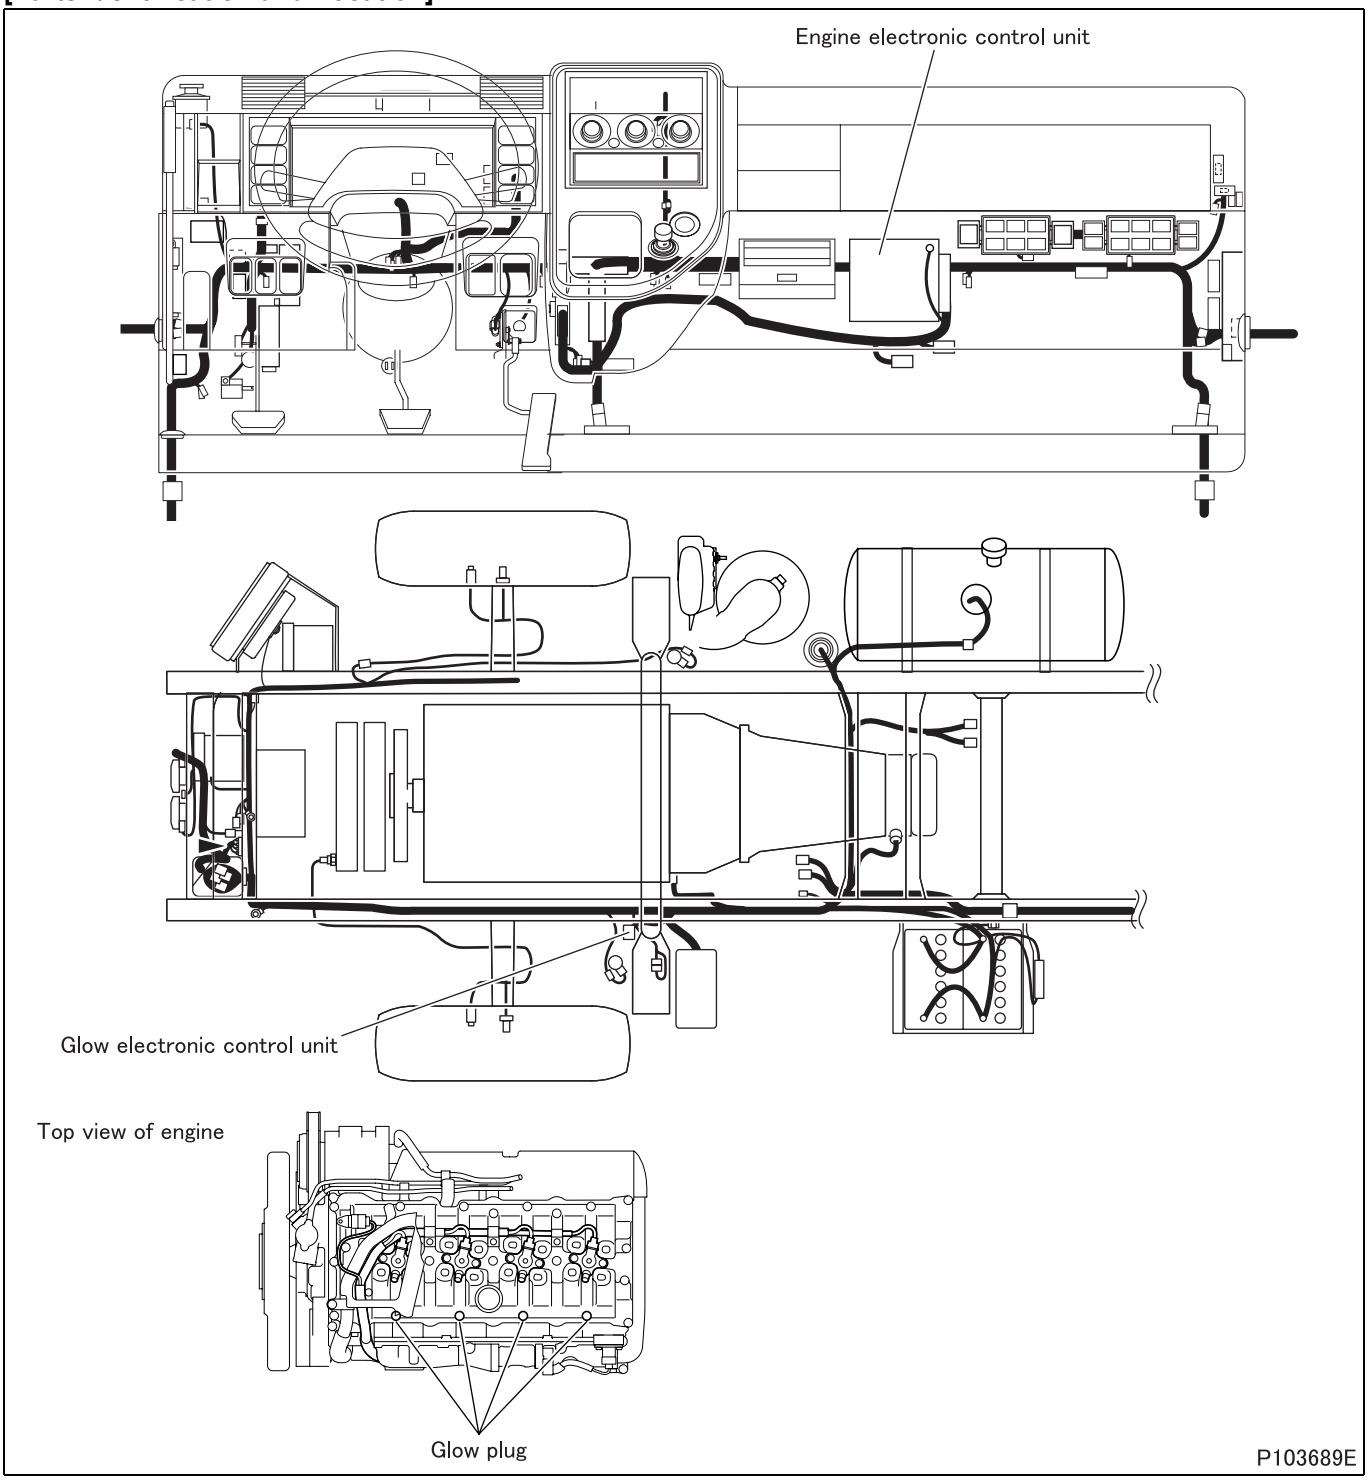
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and glow plug
- Malfunction of each connector
- Malfunction of glow plug
- Malfunction of glow electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

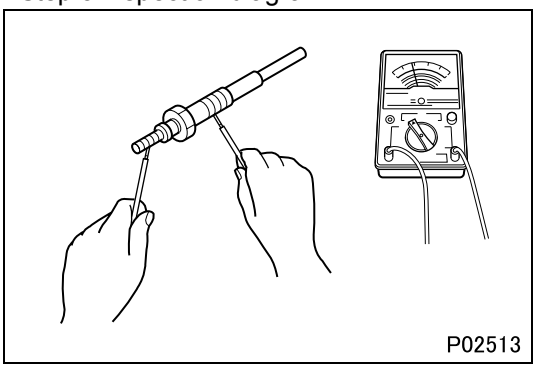
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of harness between glow electronic control unit and chassis ground
	Maintenance item		Check circuit between glow electronic control unit terminal No. 2 and chassis ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of harness between glow electronic control unit and glow plug
	Maintenance item		Check circuit between glow electronic control unit terminal No. 2 and glow plug connector (for No. 3 cylinder)
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify harness.

Step 3	Inspection items		Inspection of glow plug unit
	Maintenance item		Measure value of resistance of glow plug as shown in inspection diagram.
	Inspection condition		–
	Requirements		1 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of glow plug

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 6
		NO	Modify connector.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0674/Flash code: 26
[Monitor]
Failure of preheating control system
[Fault (outline)]
No. 4 cylinder fault
[Diagnosis check]
- Engine electronic control unit receives fault information from glow electronic control unit.
- Glow electronic control unit monitors current in No. 4 cylinder glow plug circuit for open or short circuit failure.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
<Open-circuit>
- Current remains below 1.9 A for 2.3 seconds.

<Short-circuit>
- Current remains over 21 A for 2.3 seconds.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

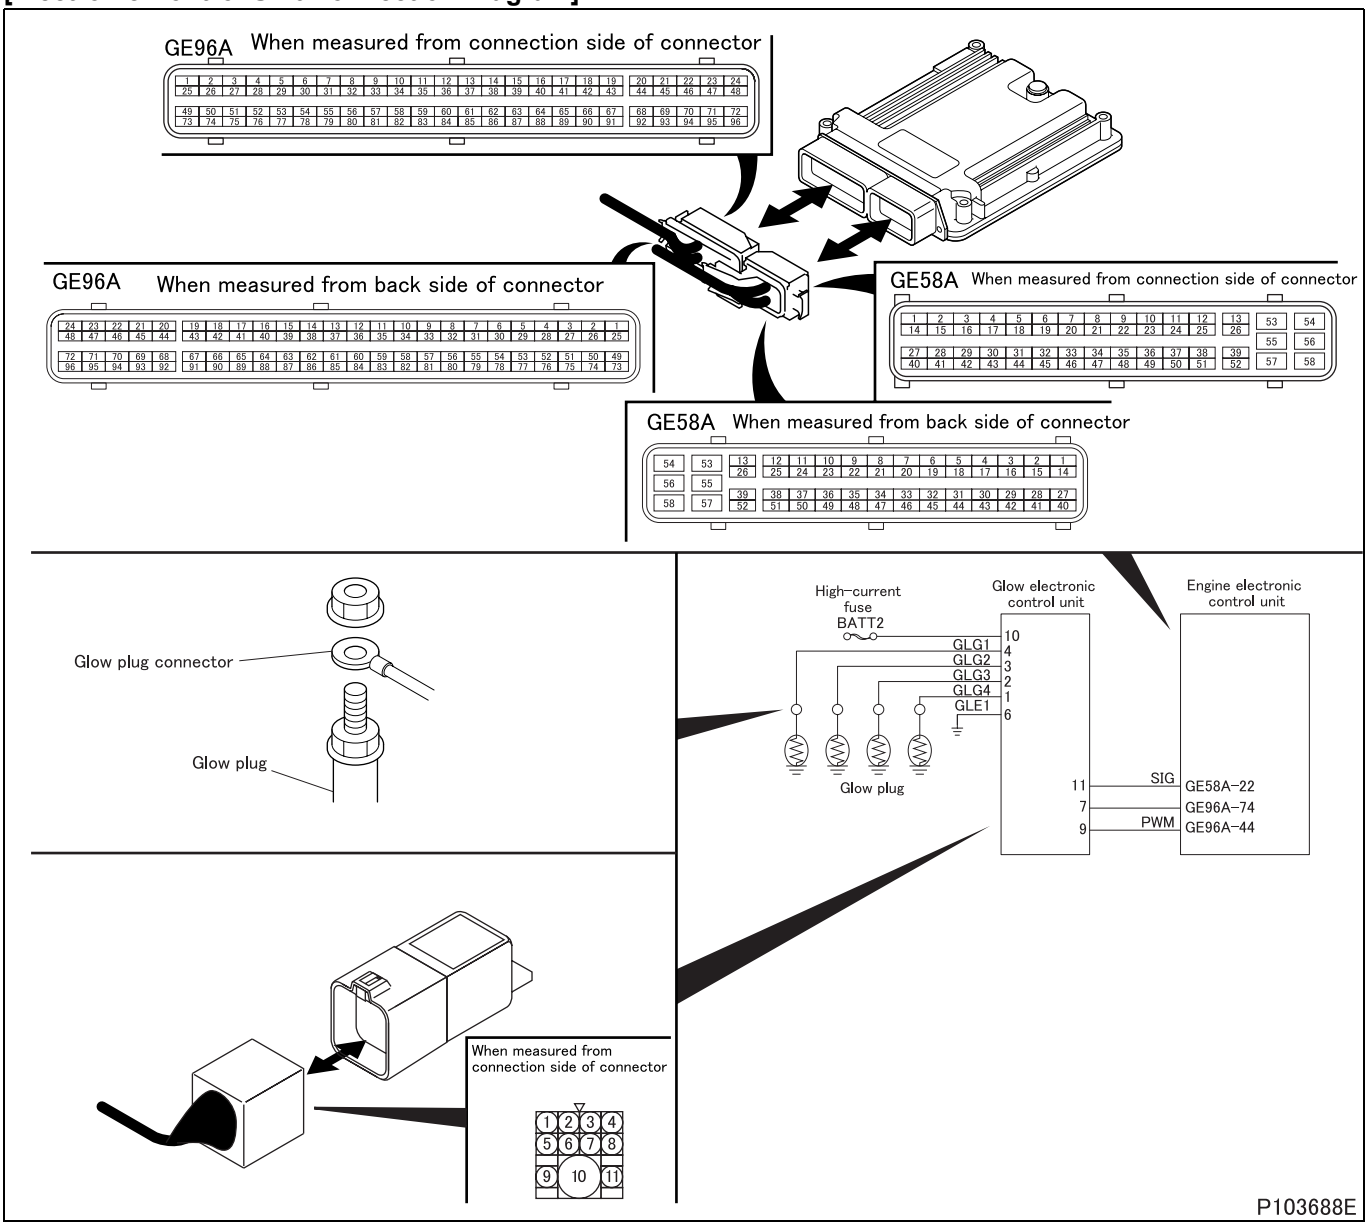
[Diagnostic requirement]
- Glow electronic control unit operating voltage: higher than 8 V

[Control effected by electronic control unit during fault]
- Effects no special control.

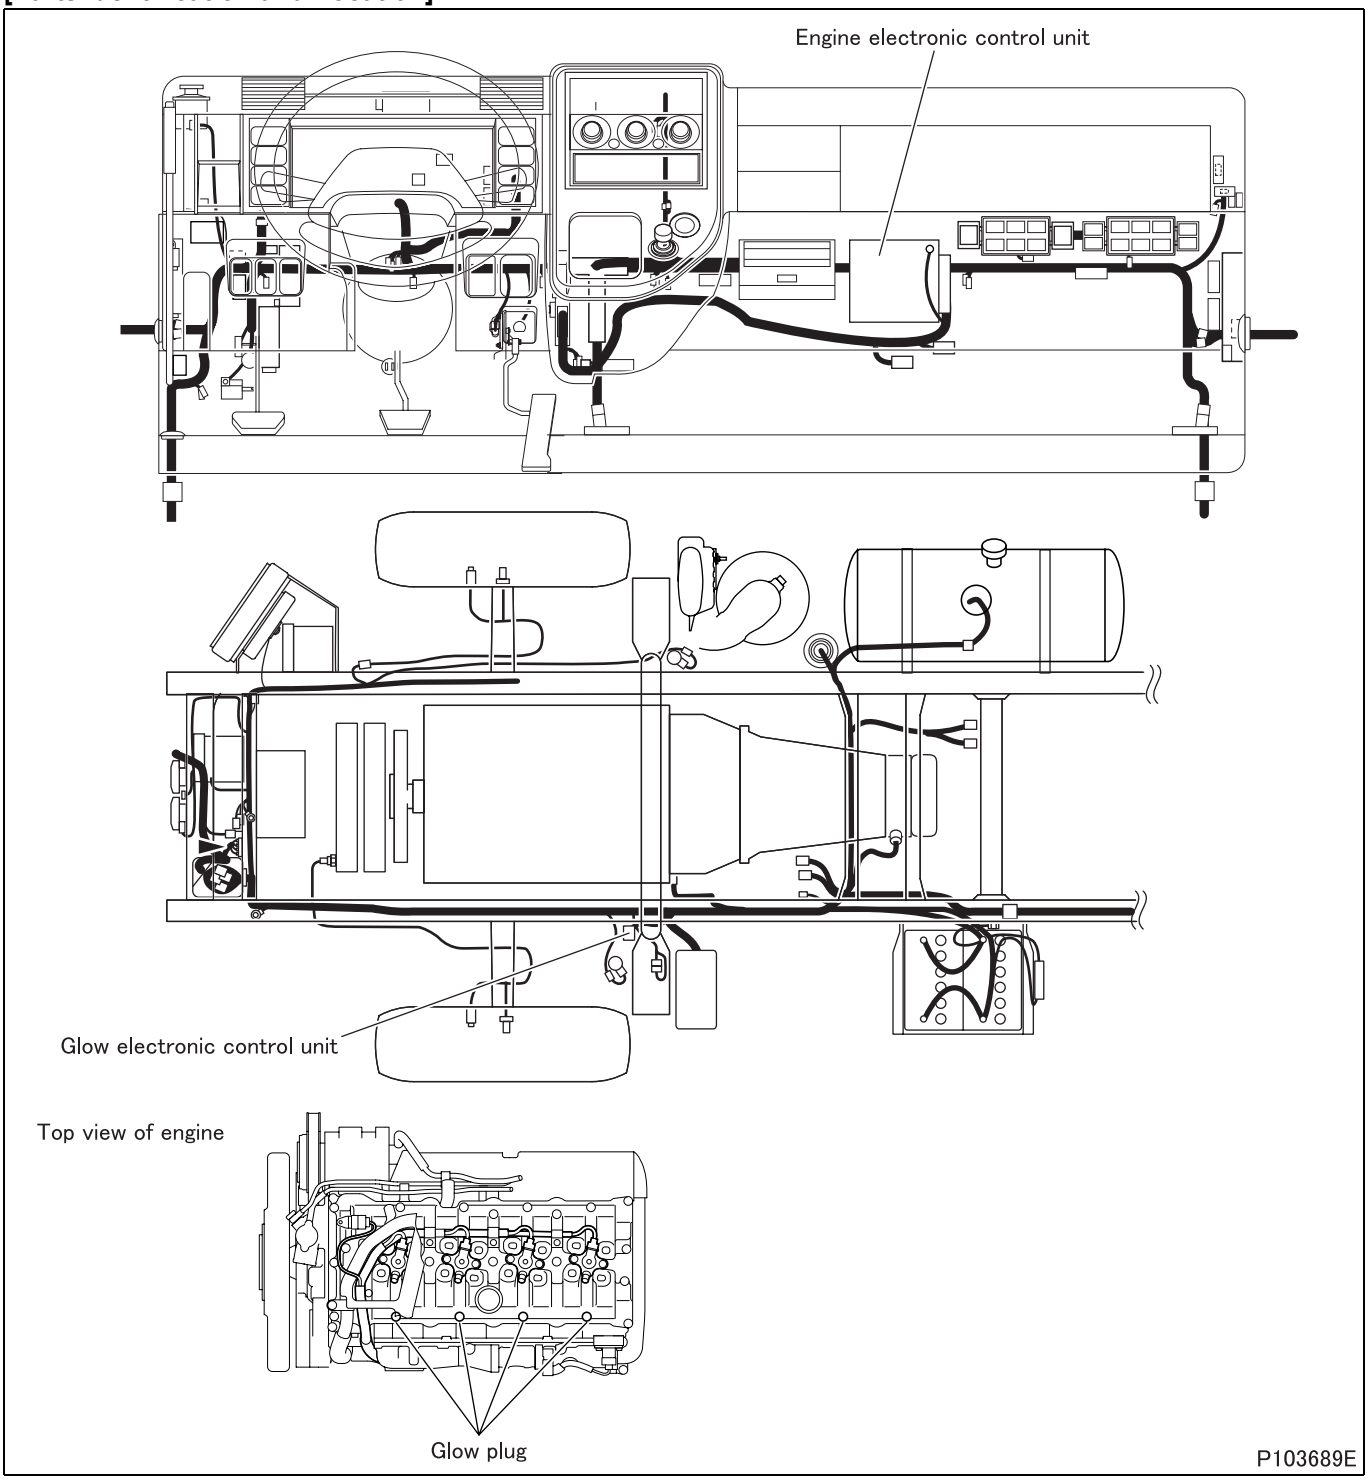
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and glow plug
- Malfunction of each connector
- Malfunction of glow plug
- Malfunction of glow electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

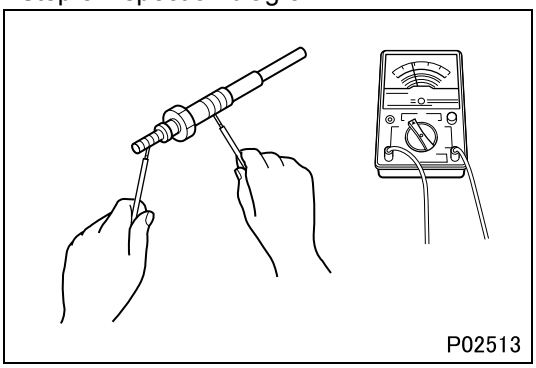
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of harness between glow electronic control unit and chassis ground
	Maintenance item		Check circuit between glow electronic control unit terminal No. 1 and chassis ground
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of harness between glow electronic control unit and glow plug
	Maintenance item		Check circuit between glow electronic control unit terminal No. 1 and glow plug connector (for No. 4 cylinder)
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify harness.

Step 3	Inspection items		Inspection of glow plug unit
	Maintenance item		Measure value of resistance of glow plug as shown in inspection diagram.
	Inspection condition		–
	Requirements		1 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of glow plug

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 6
		NO	Modify connector.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0684/Flash code: 26
[Monitor]
Failure of preheating control
[Fault (outline)]
Overload
[Diagnosis check]
- Engine electronic control unit monitors data transfer from glow electronic control unit for abnormality (by glow electronic control unit feedback signal).

[Code generation condition]
When either of the following conditions continues for 2, 3 seconds (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.).
- Transmitted signal is too low or too high.
- Transmission time is too long (over).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

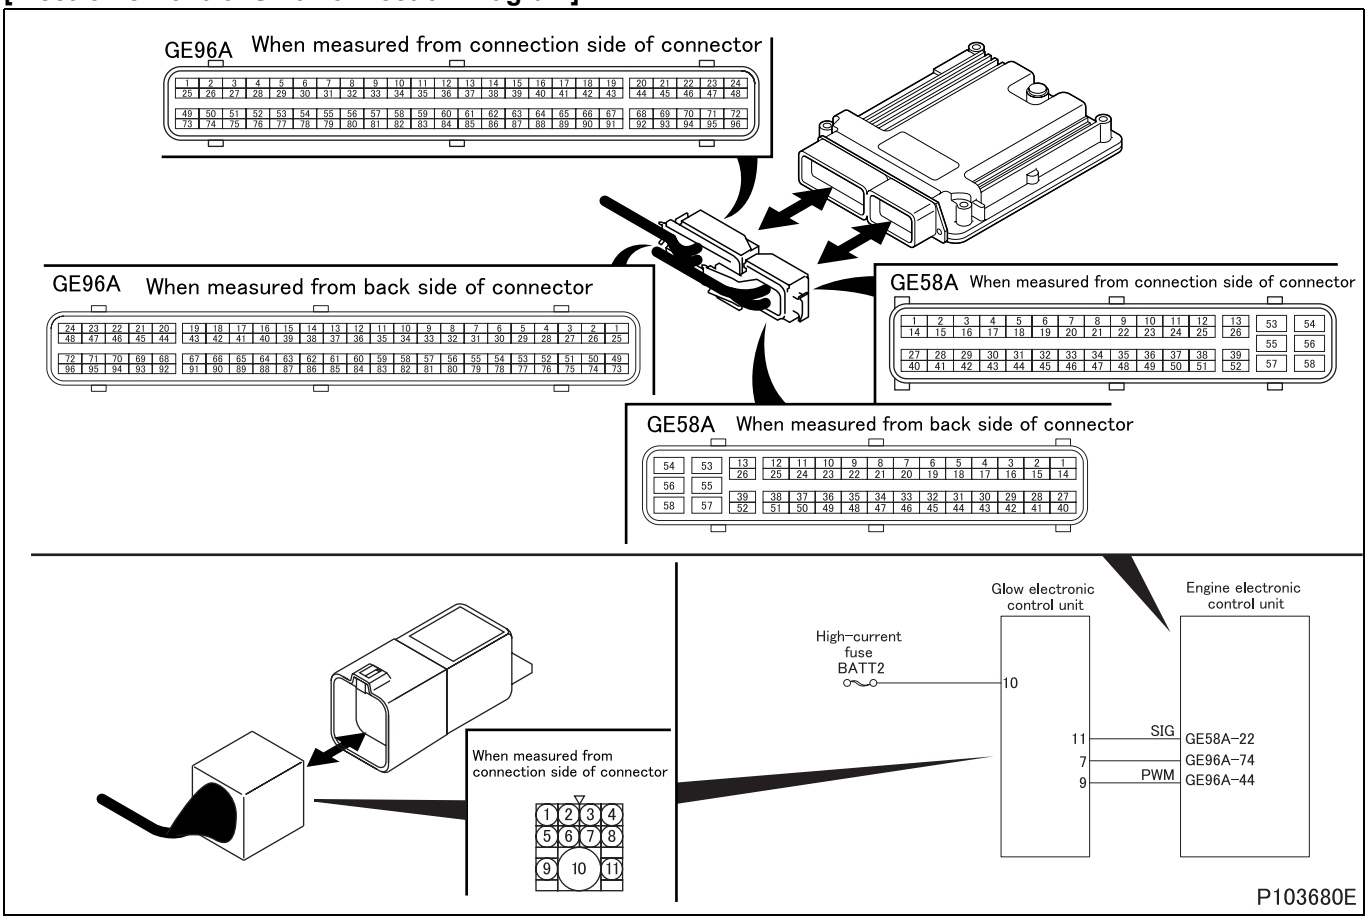
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

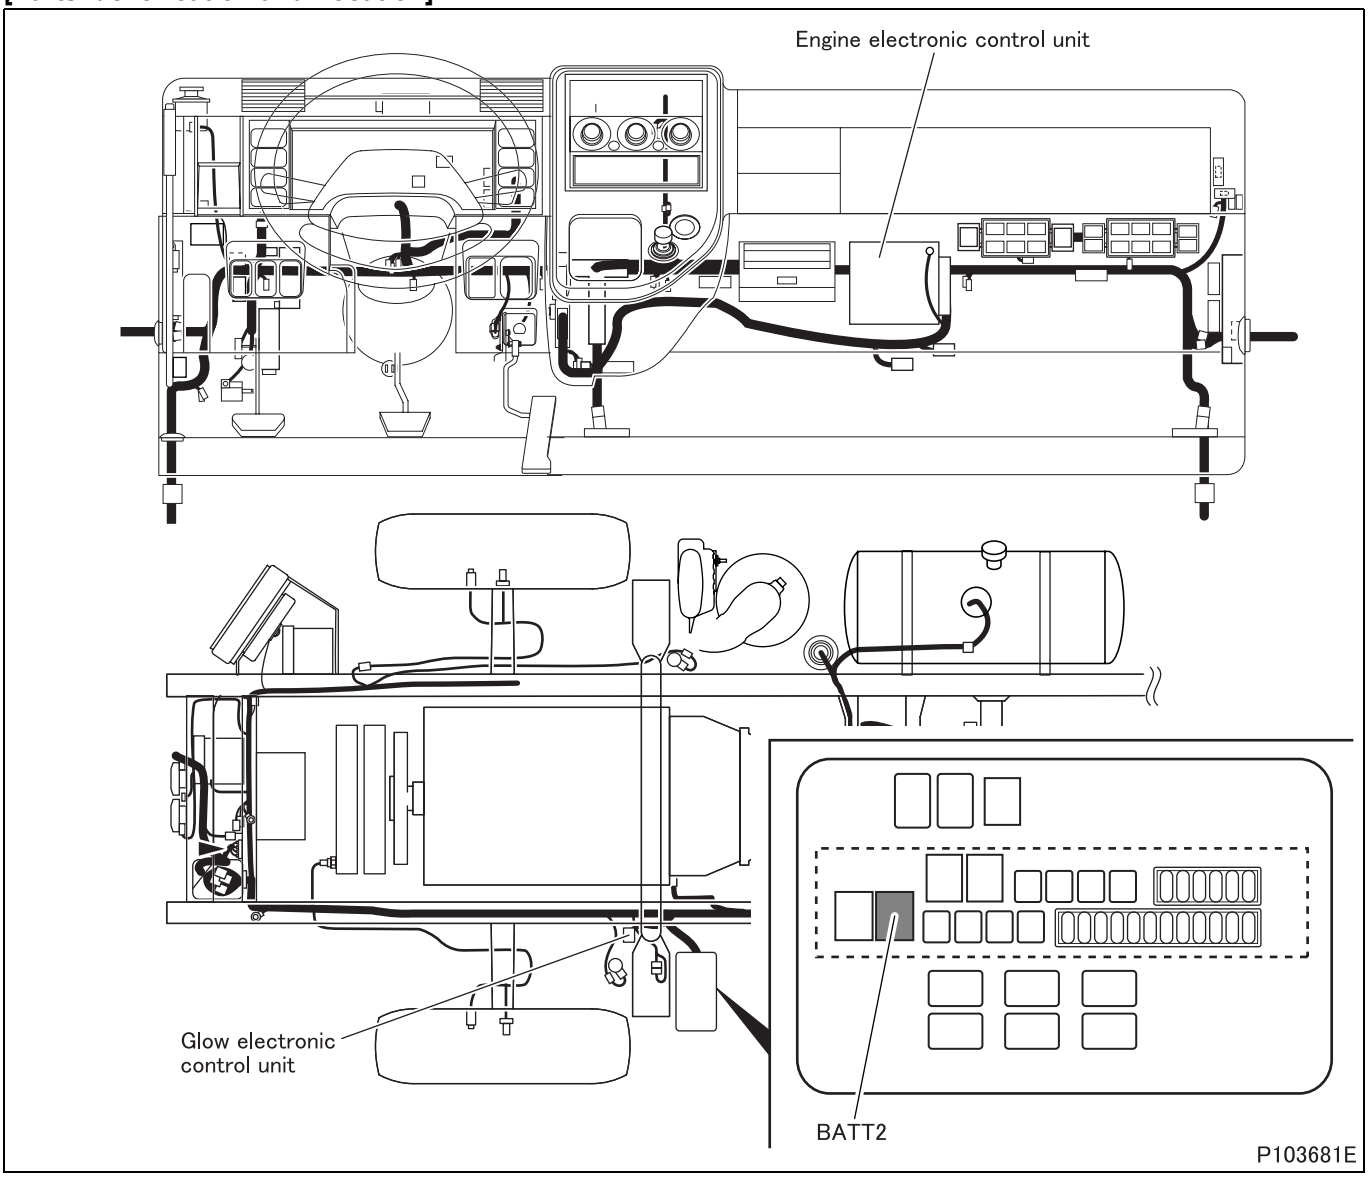
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between glow electronic control unit and engine electronic control unit
- Malfunction of each connector
- Malfunction of glow electronic control unit
- Malfunction of engine electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of harness between glow electronic control unit and engine electronic control unit
	Maintenance item		Check circuit between following connector terminals. • Fault information circuit: glow electronic control unit terminal No. 11 - engine electronic control unit (GE58A) terminal No. 22 • Power supply circuit: glow electronic control unit terminal No. 7 - engine electronic control unit (GE96A) terminal No. 74 • Operating signal circuit: glow electronic control unit terminal No. 9 - engine electronic control unit (GE96A) terminal No. 44
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify harness.

Step 2	Inspection items		Inspection of glow electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of glow electronic control unit, go to step 3
		NO	Modify connector.

Step 3	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of engine electronic control unit
		NO	Modify connector.

[Fault code]
Diagnosis code: P0685/Flash code: 84
[Monitor]
Failure of electronic drive unit relay
[Fault (outline)]
Open circuit
[Diagnosis check]
- Electronic drive unit relay circuit is monitored for fault.

[Code generation condition]
- Electronic drive unit relay circuit remains open as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

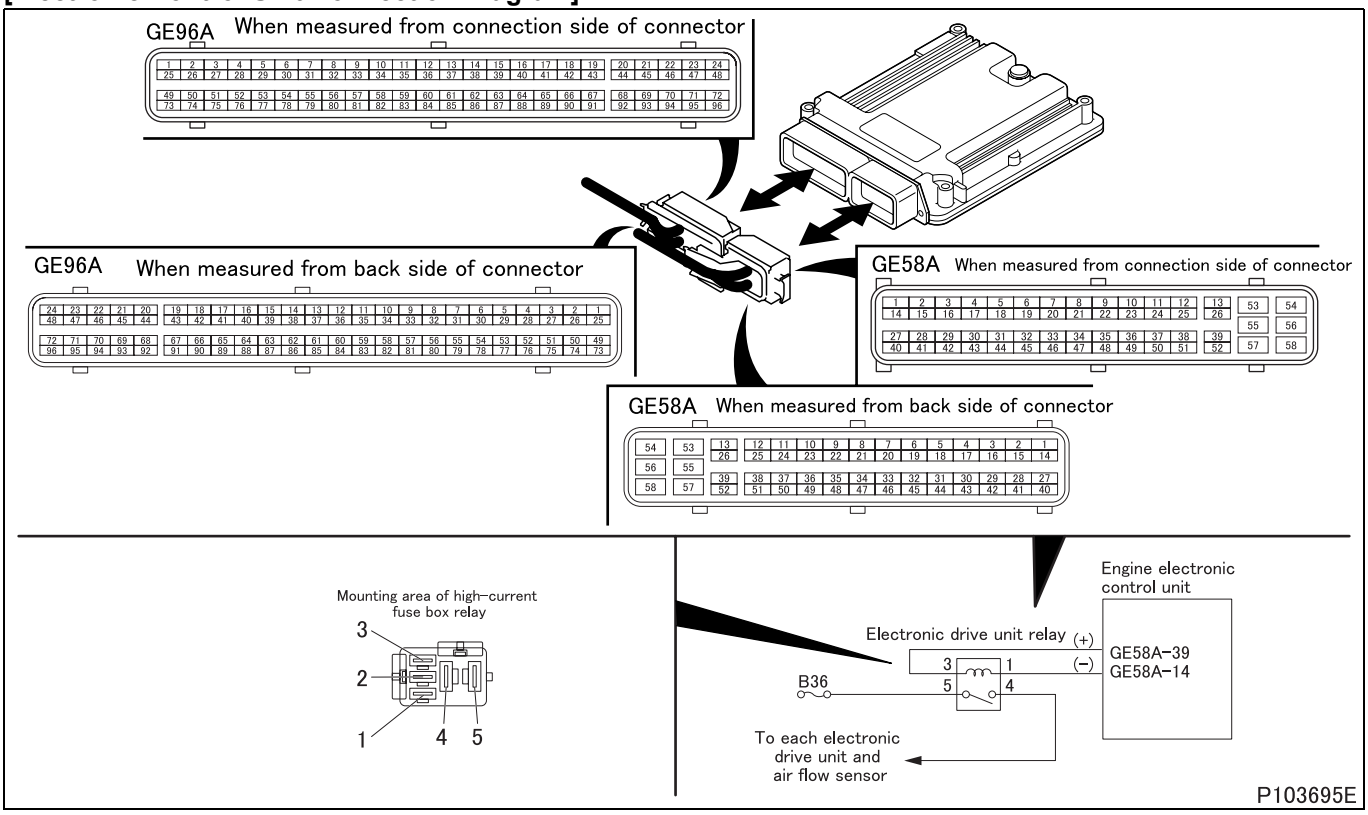
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

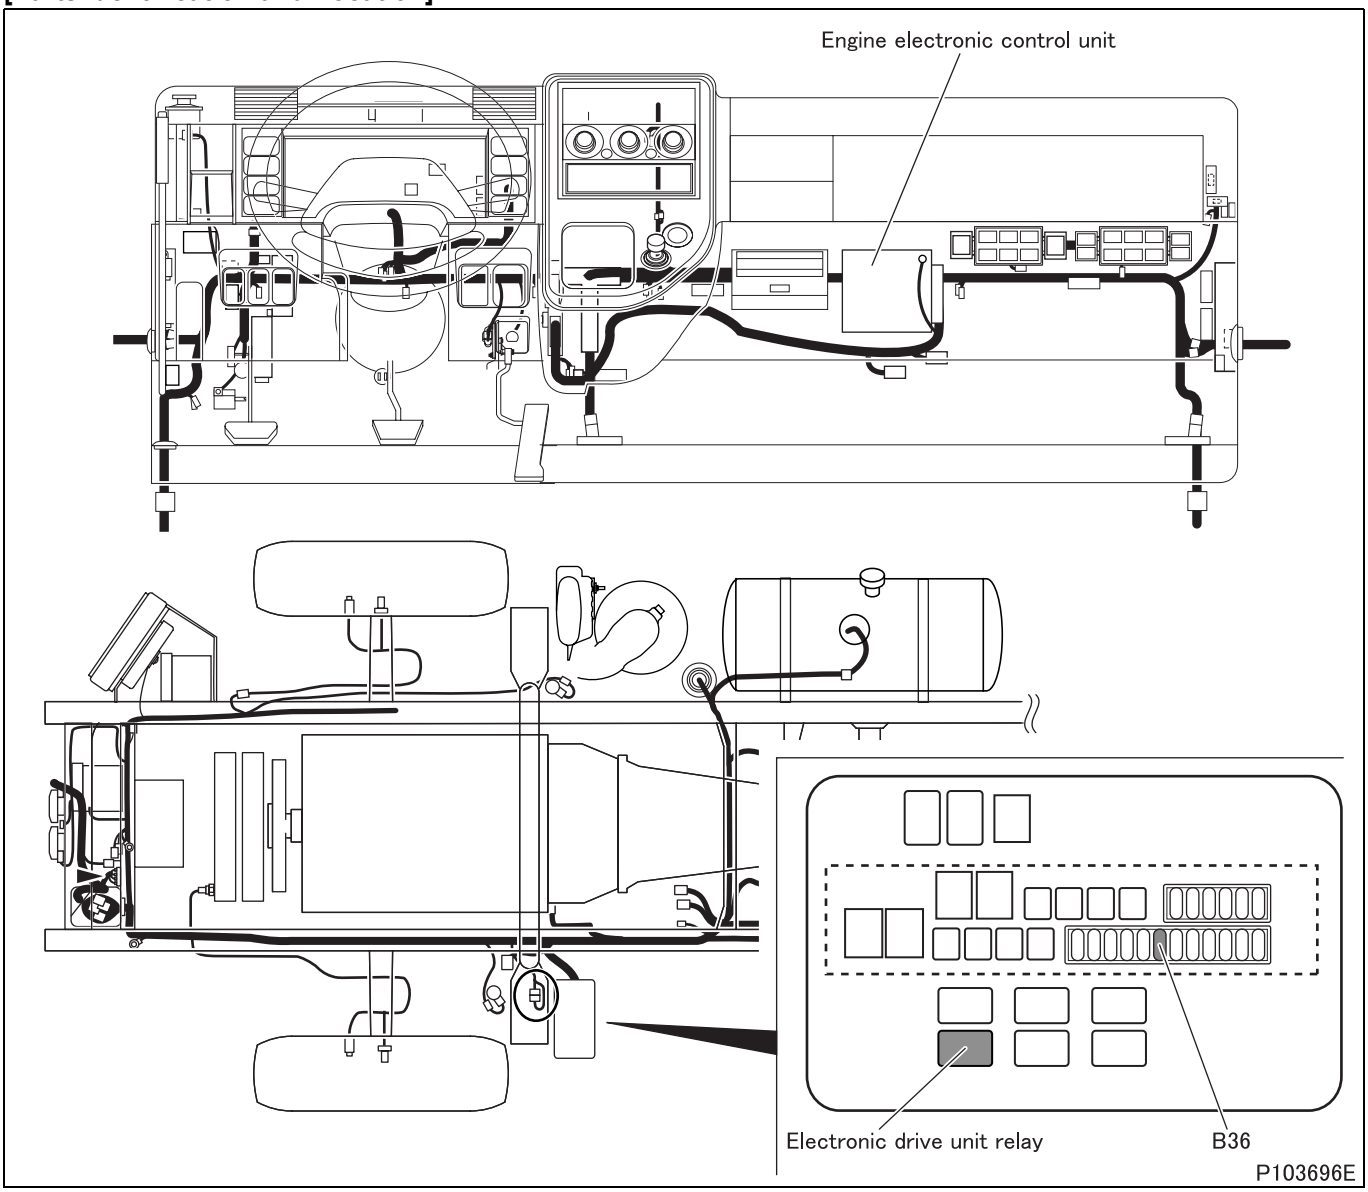
[Probable cause of trouble]
- Open-circuit of harness between electronic control unit and electronic drive unit relay
- Malfunction of each connector
- Malfunction of electronic drive unit relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

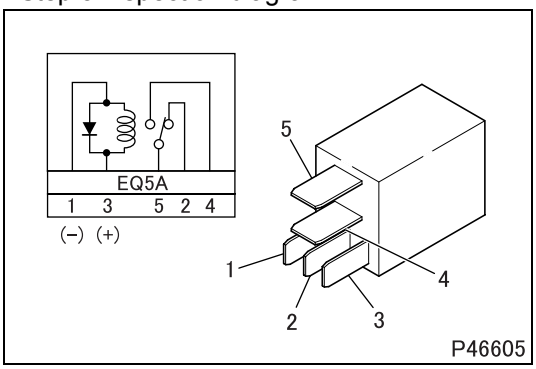
Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 39 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage (automatic reset after six seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic drive unit connector (GE58A) terminal No. 39
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic drive unit connector (GE58A) terminal No. 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0686/Flash code: 84
[Monitor]
Failure of electronic drive unit relay
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- Electronic drive unit relay circuit is monitored for fault.

[Code generation condition]
- Electronic drive unit relay circuit remains shorted to ground as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

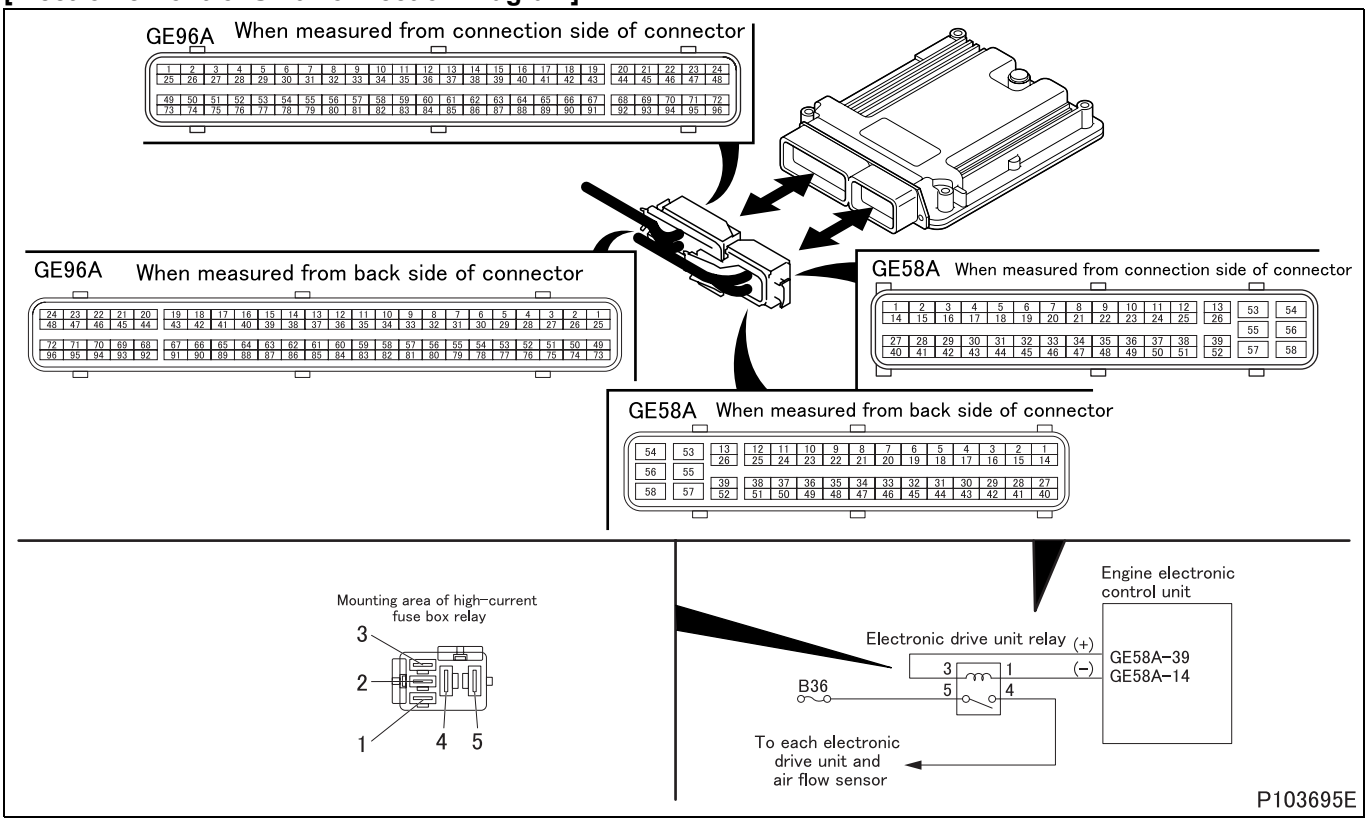
[Diagnostic requirement]
- After-run executed
- Electronic drive unit relay request signal: OFF

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

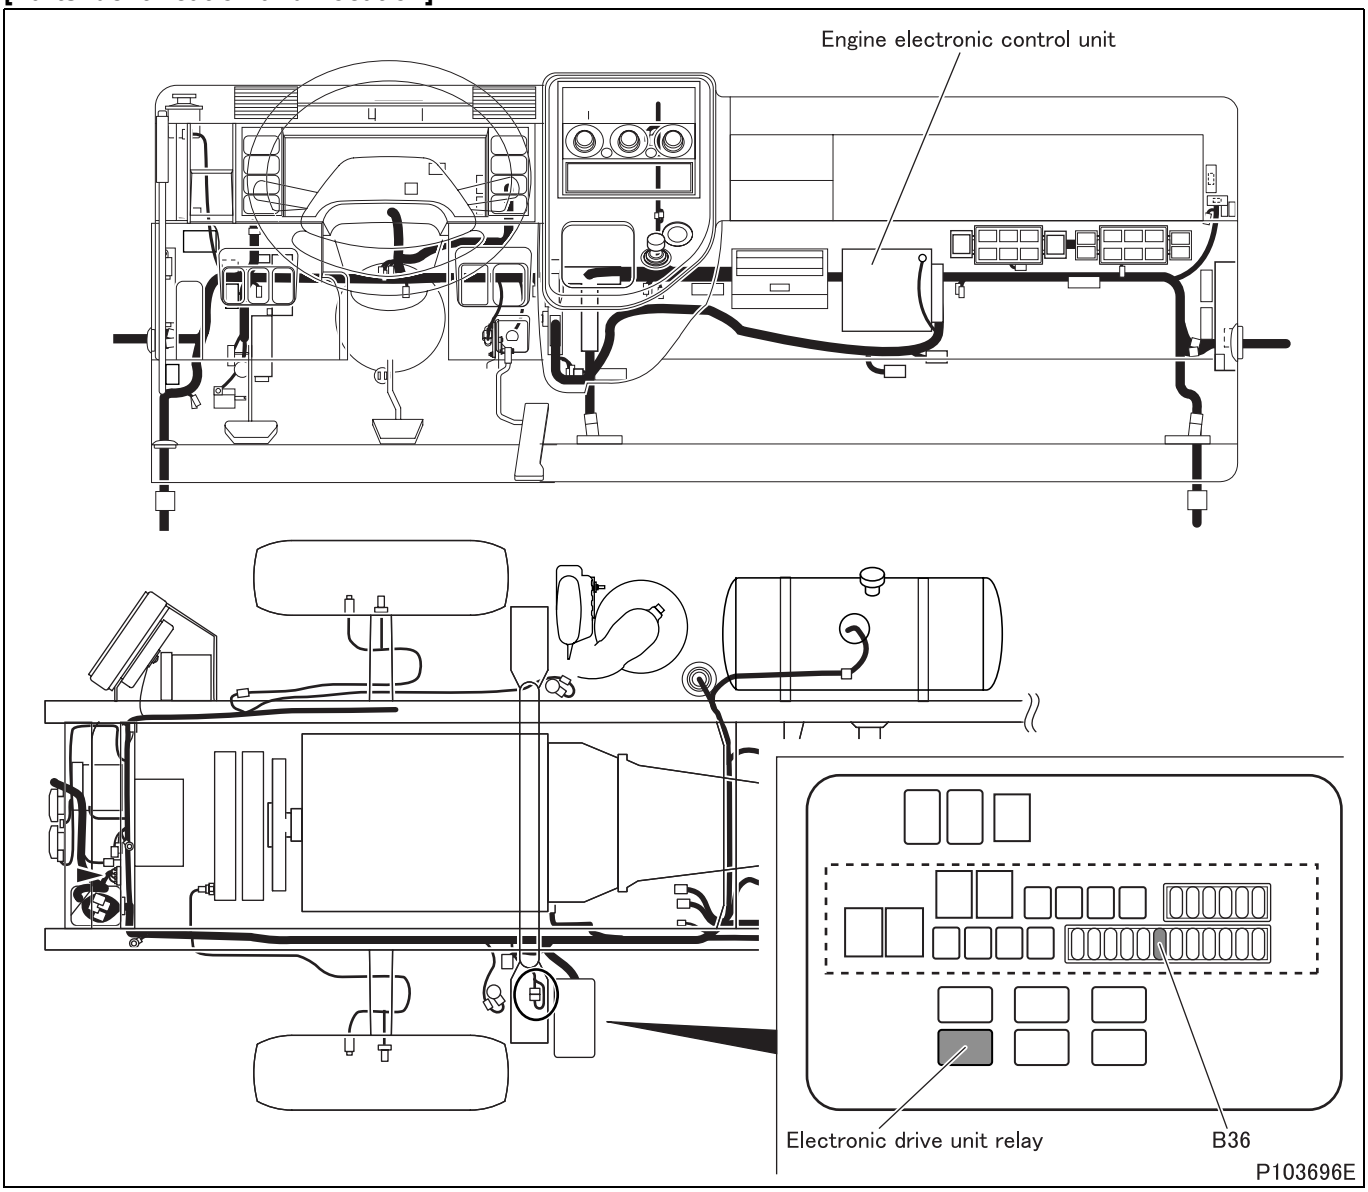
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and electronic drive unit relay
- Malfunction of each connector
- Malfunction of electronic drive unit relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

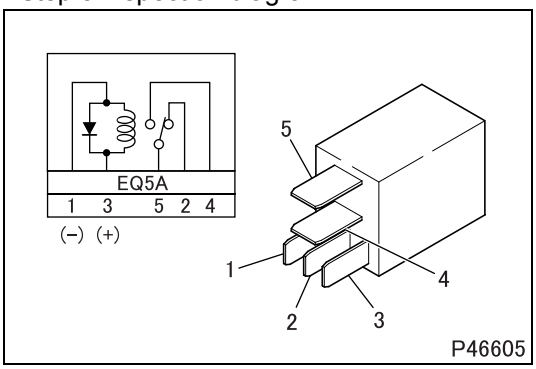
Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 39 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage (automatic reset after six seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic drive unit connector (GE58A) terminal No. 39
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic drive unit connector (GE58A) terminal No. 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0687/Flash code: 84
[Monitor]
Failure of electronic drive unit relay
[Fault (outline)]
Short circuit battery
[Diagnosis check]
- Electronic drive unit relay circuit is monitored for fault.

[Code generation condition]
- Electronic drive unit relay circuit remains shorted to power supply as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

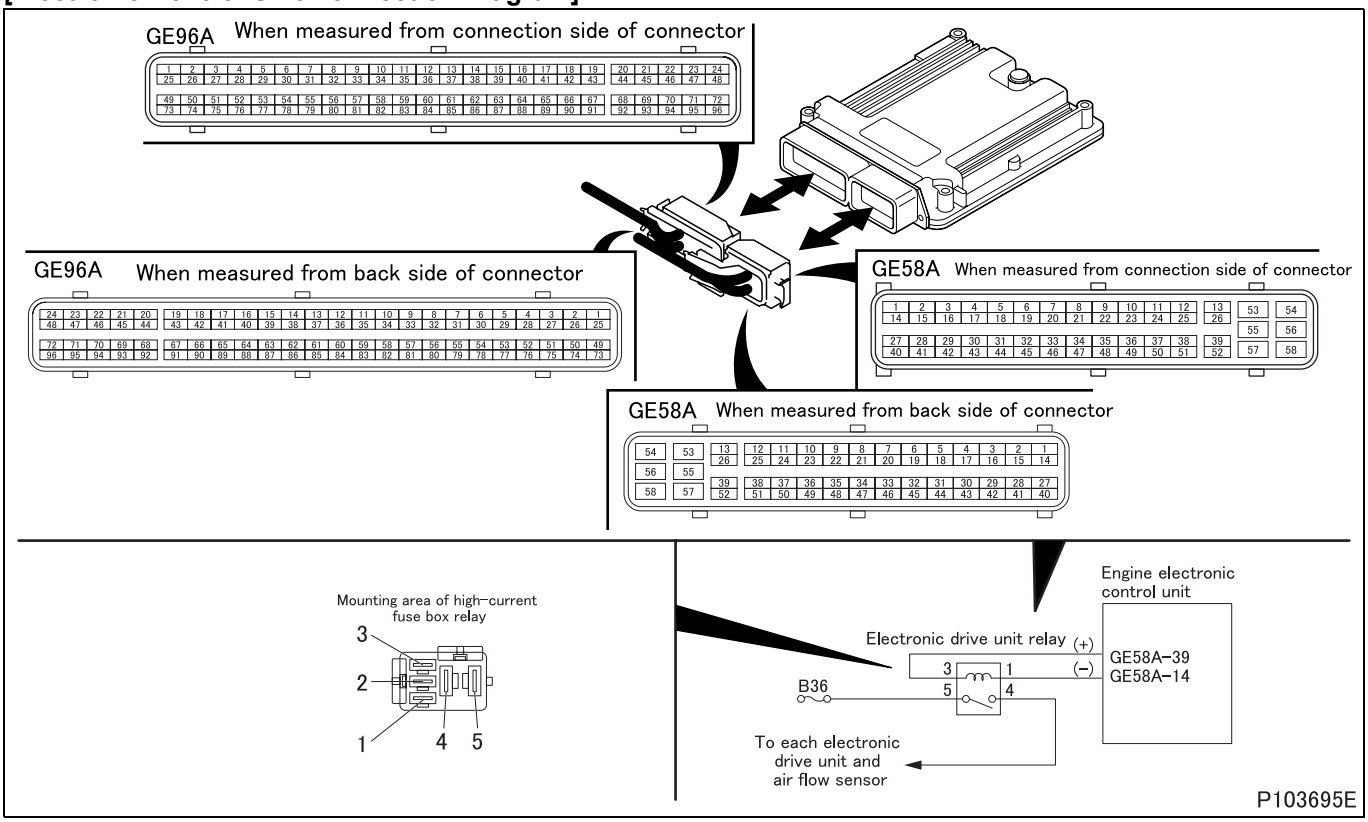
[Diagnostic requirement]
- Electronic drive unit relay is on.
- Electronic drive unit relay request signal: ON

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

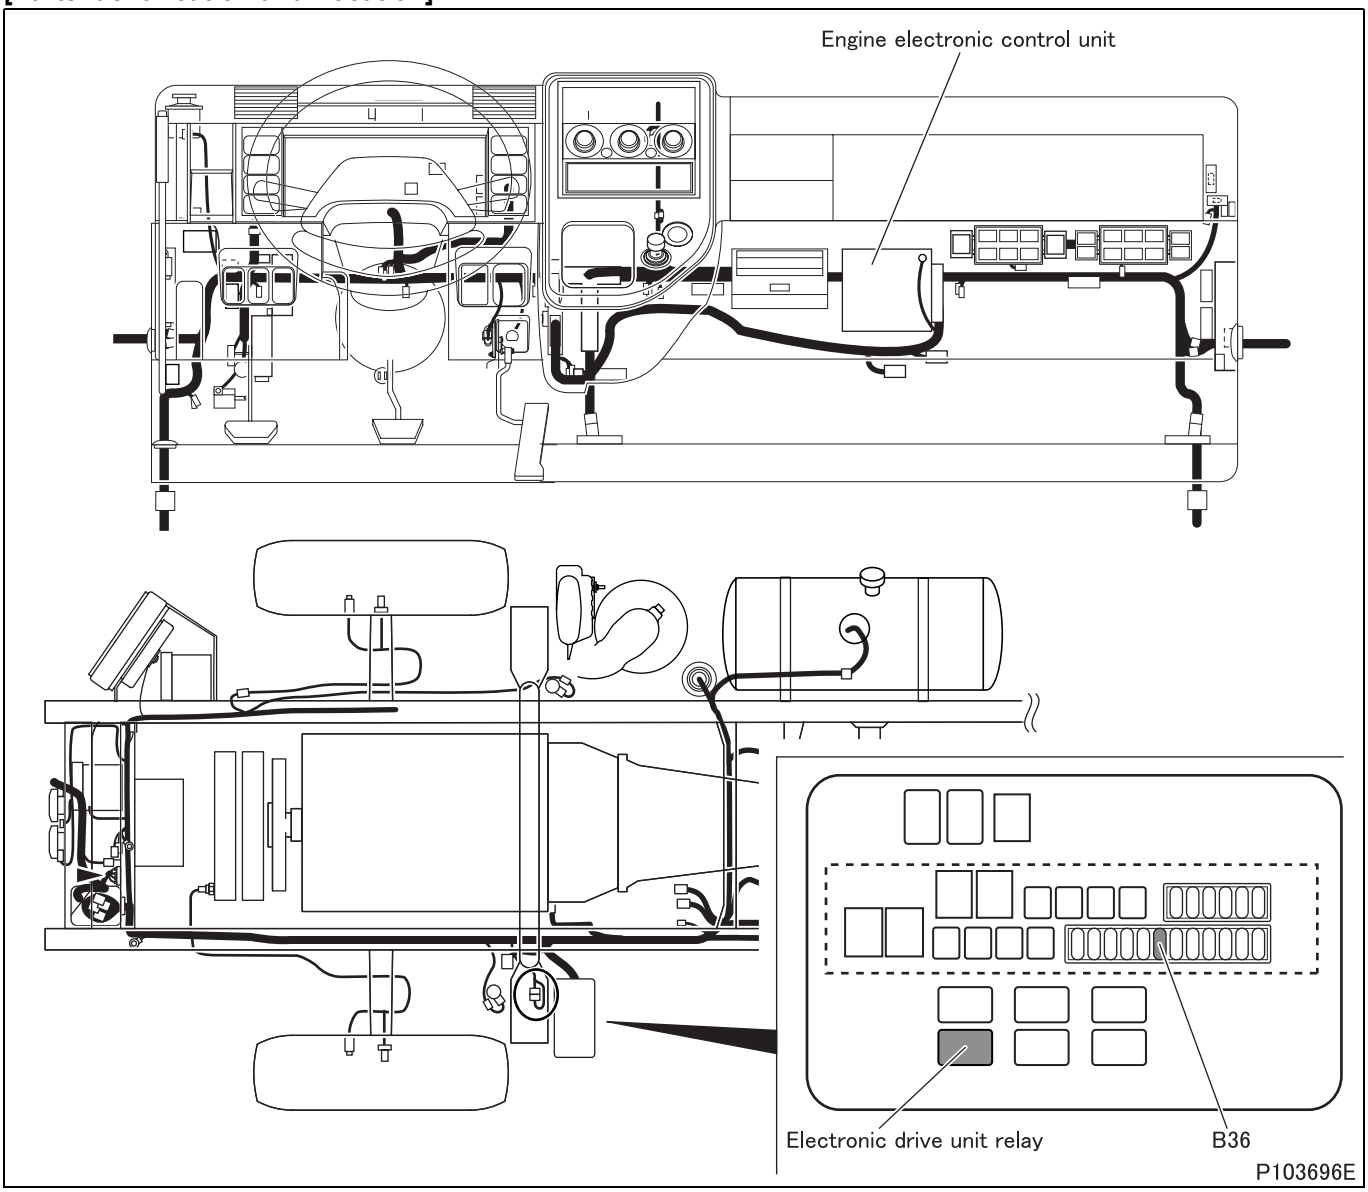
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and electronic drive unit relay
- Malfunction of each connector
- Malfunction of electronic drive unit relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

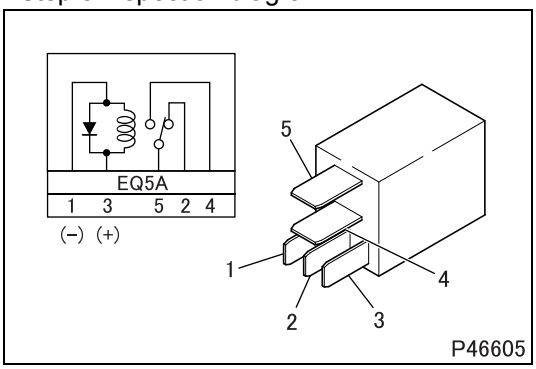
Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 39 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage (automatic reset after six seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic drive unit connector (GE58A) terminal No. 39
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic drive unit connector (GE58A) terminal No. 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0688/Flash code: 84
[Monitor]
Failure of electronic drive unit relay
[Fault (outline)]
Overload
[Diagnosis check]
- Electronic drive unit relay circuit is monitored for fault.

[Code generation condition]
- Power supply temperature in electronic drive unit relay circuit remains at 100°C {212°F} for 1 second (overcurrent).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

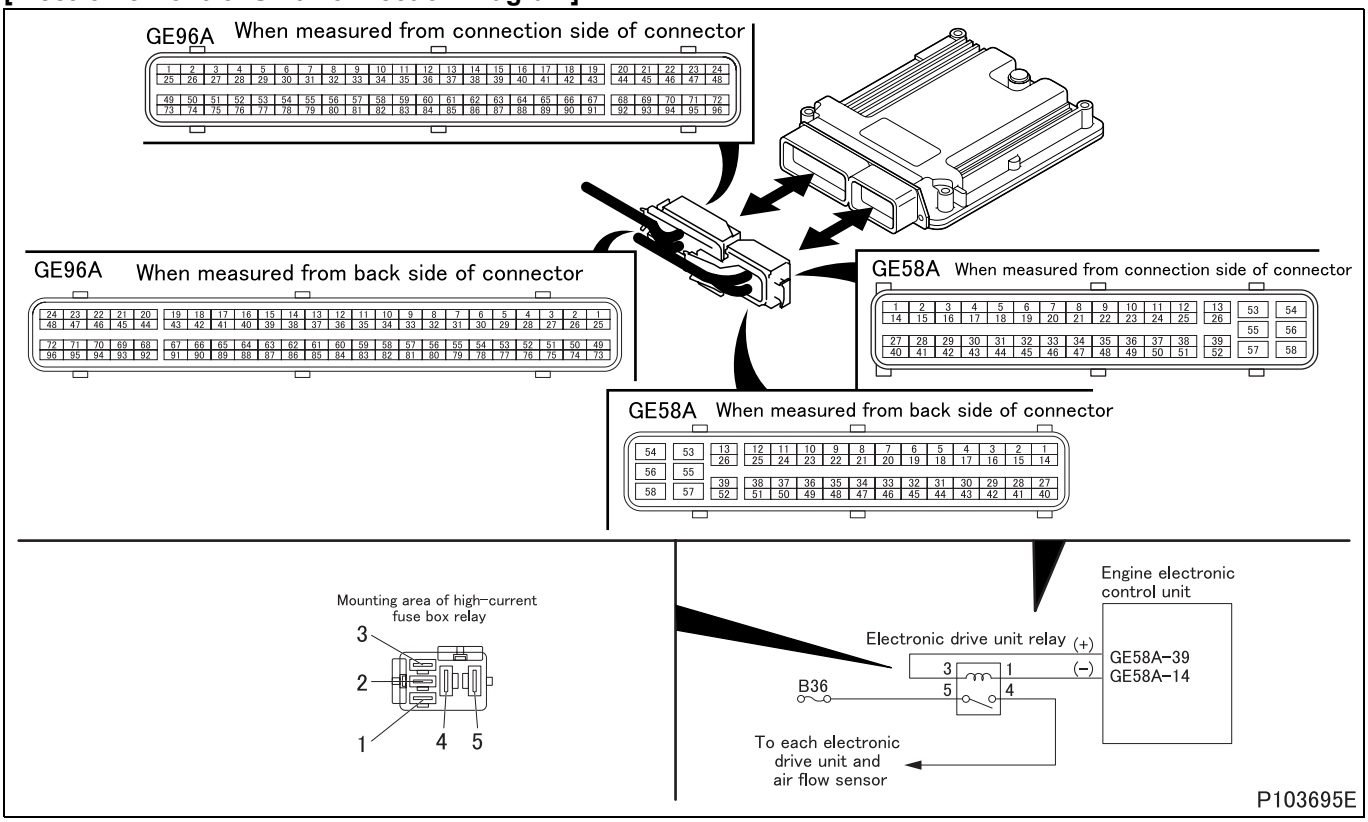
[Diagnostic requirement]
- Electronic drive unit relay is on.
- Electronic drive unit relay request signal: ON

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

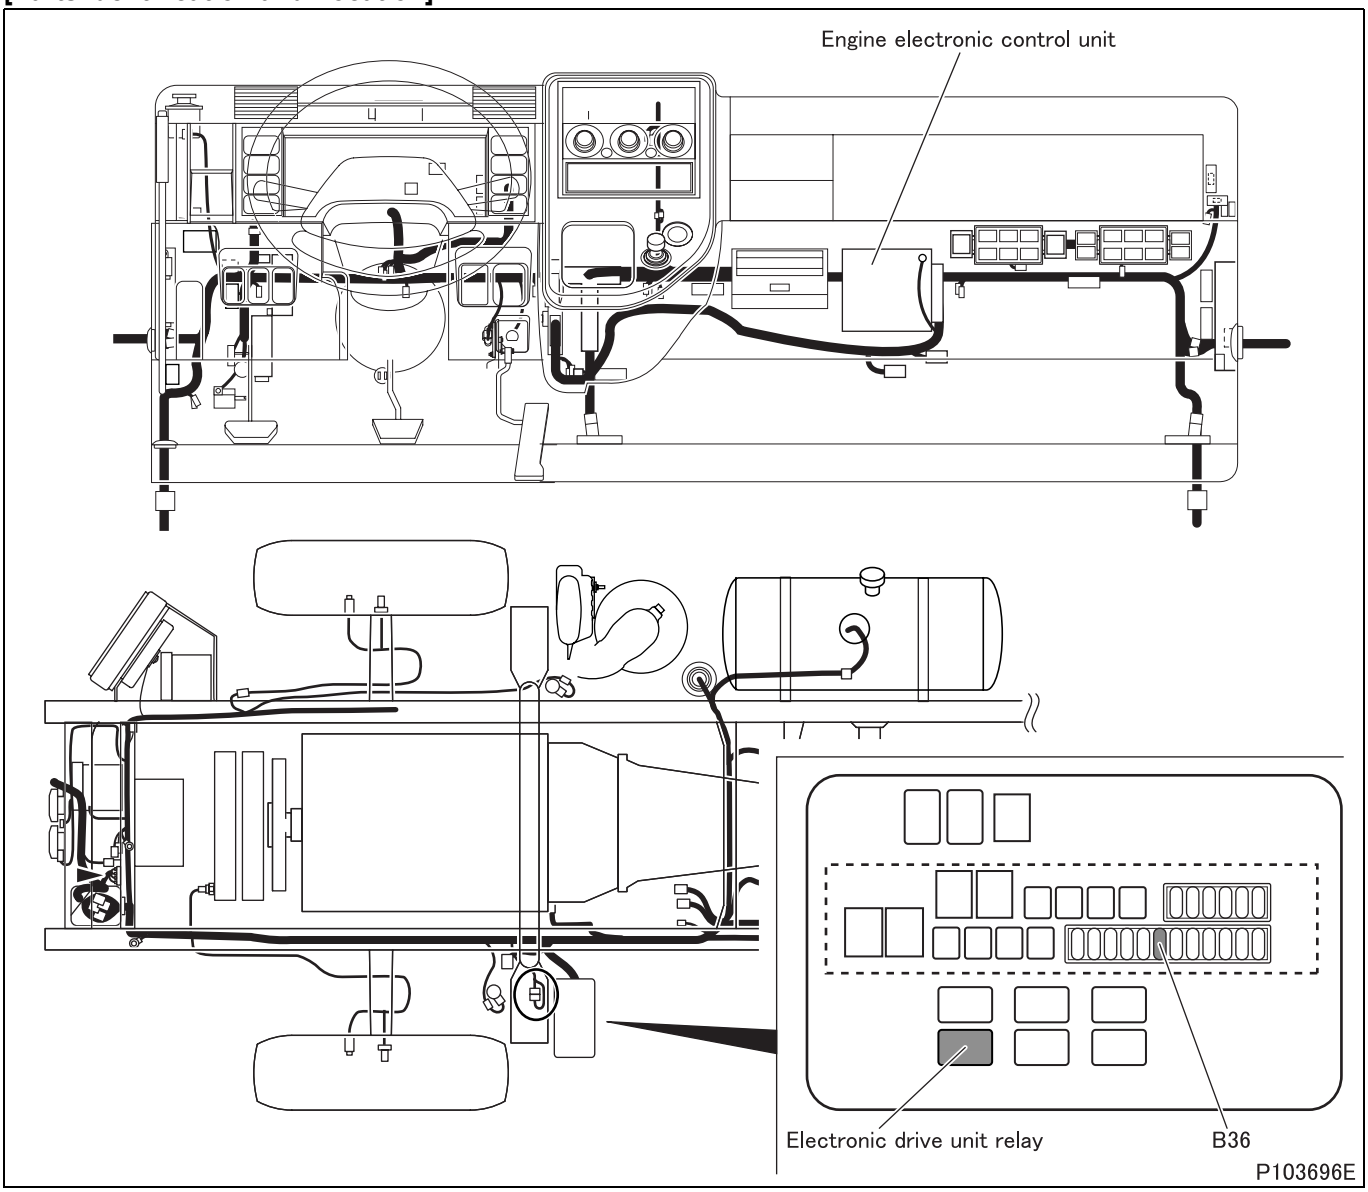
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and electronic drive unit
- Malfunction of each connector
- Malfunction of electronic drive unit relay
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

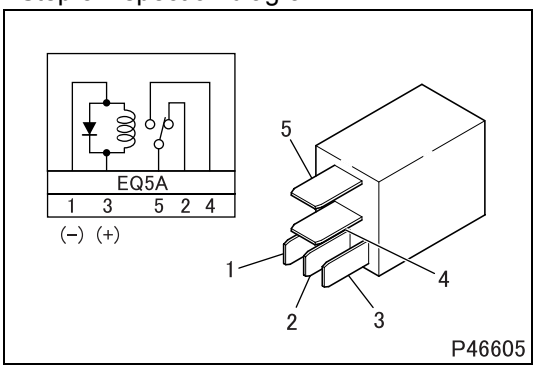
Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 39 (+) and No. 14 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage (automatic reset after six seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between relay and electronic control unit (power supply)
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic drive unit connector (GE58A) terminal No. 39
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between relay and electronic control unit (ground)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic drive unit connector (GE58A) terminal No. 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AF “EDU Relay”.
	Inspection condition		–
	Requirements		Relay operation sound is noted (automatic reset after six seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0698/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Sensor supply voltage 3 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 3
- Common rail pressure sensor
- DPF pressure sensor (DIFF)
- Boost air temperature sensor

[Code generation condition]
- Supply voltage to units remain below 4.7 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

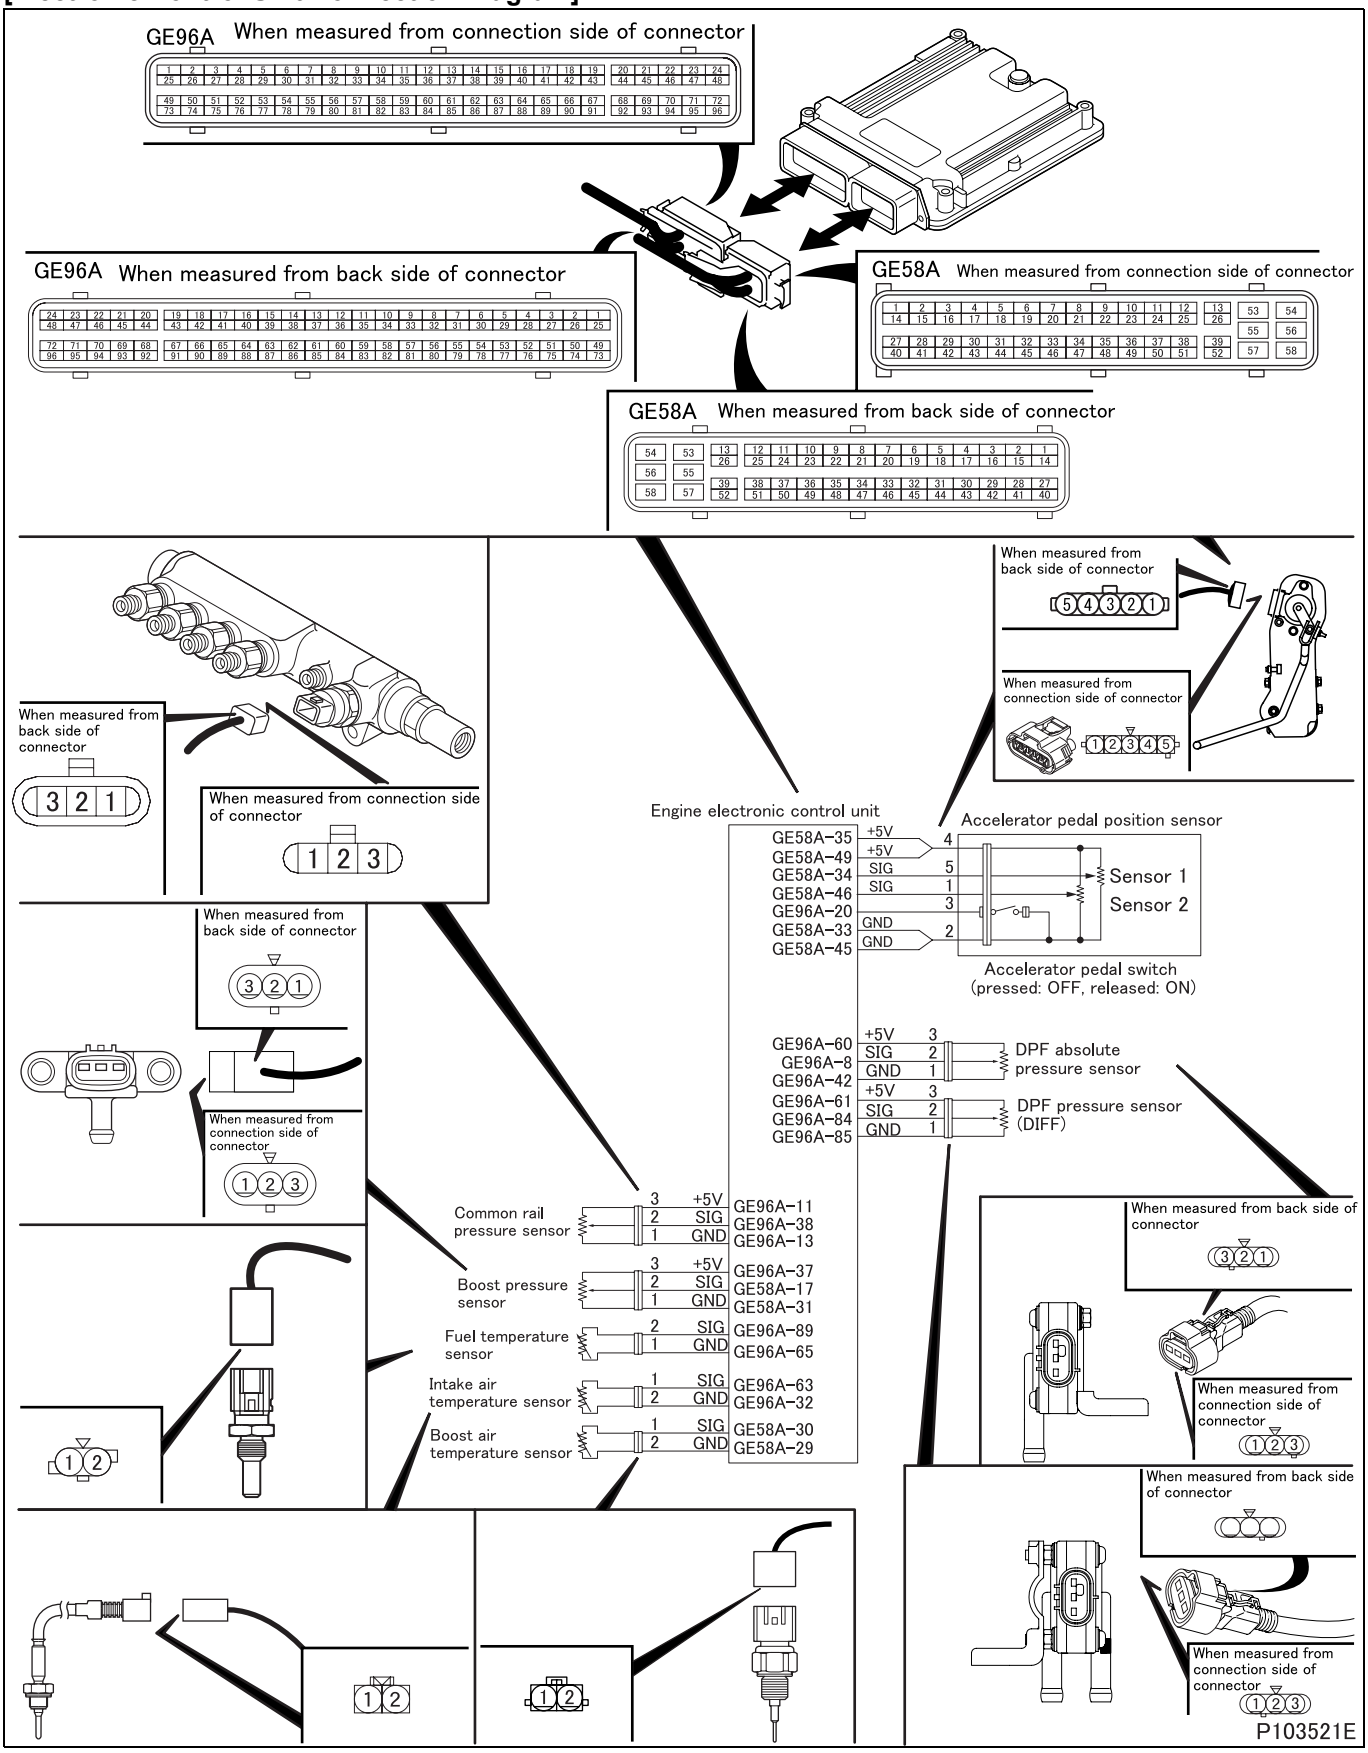
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

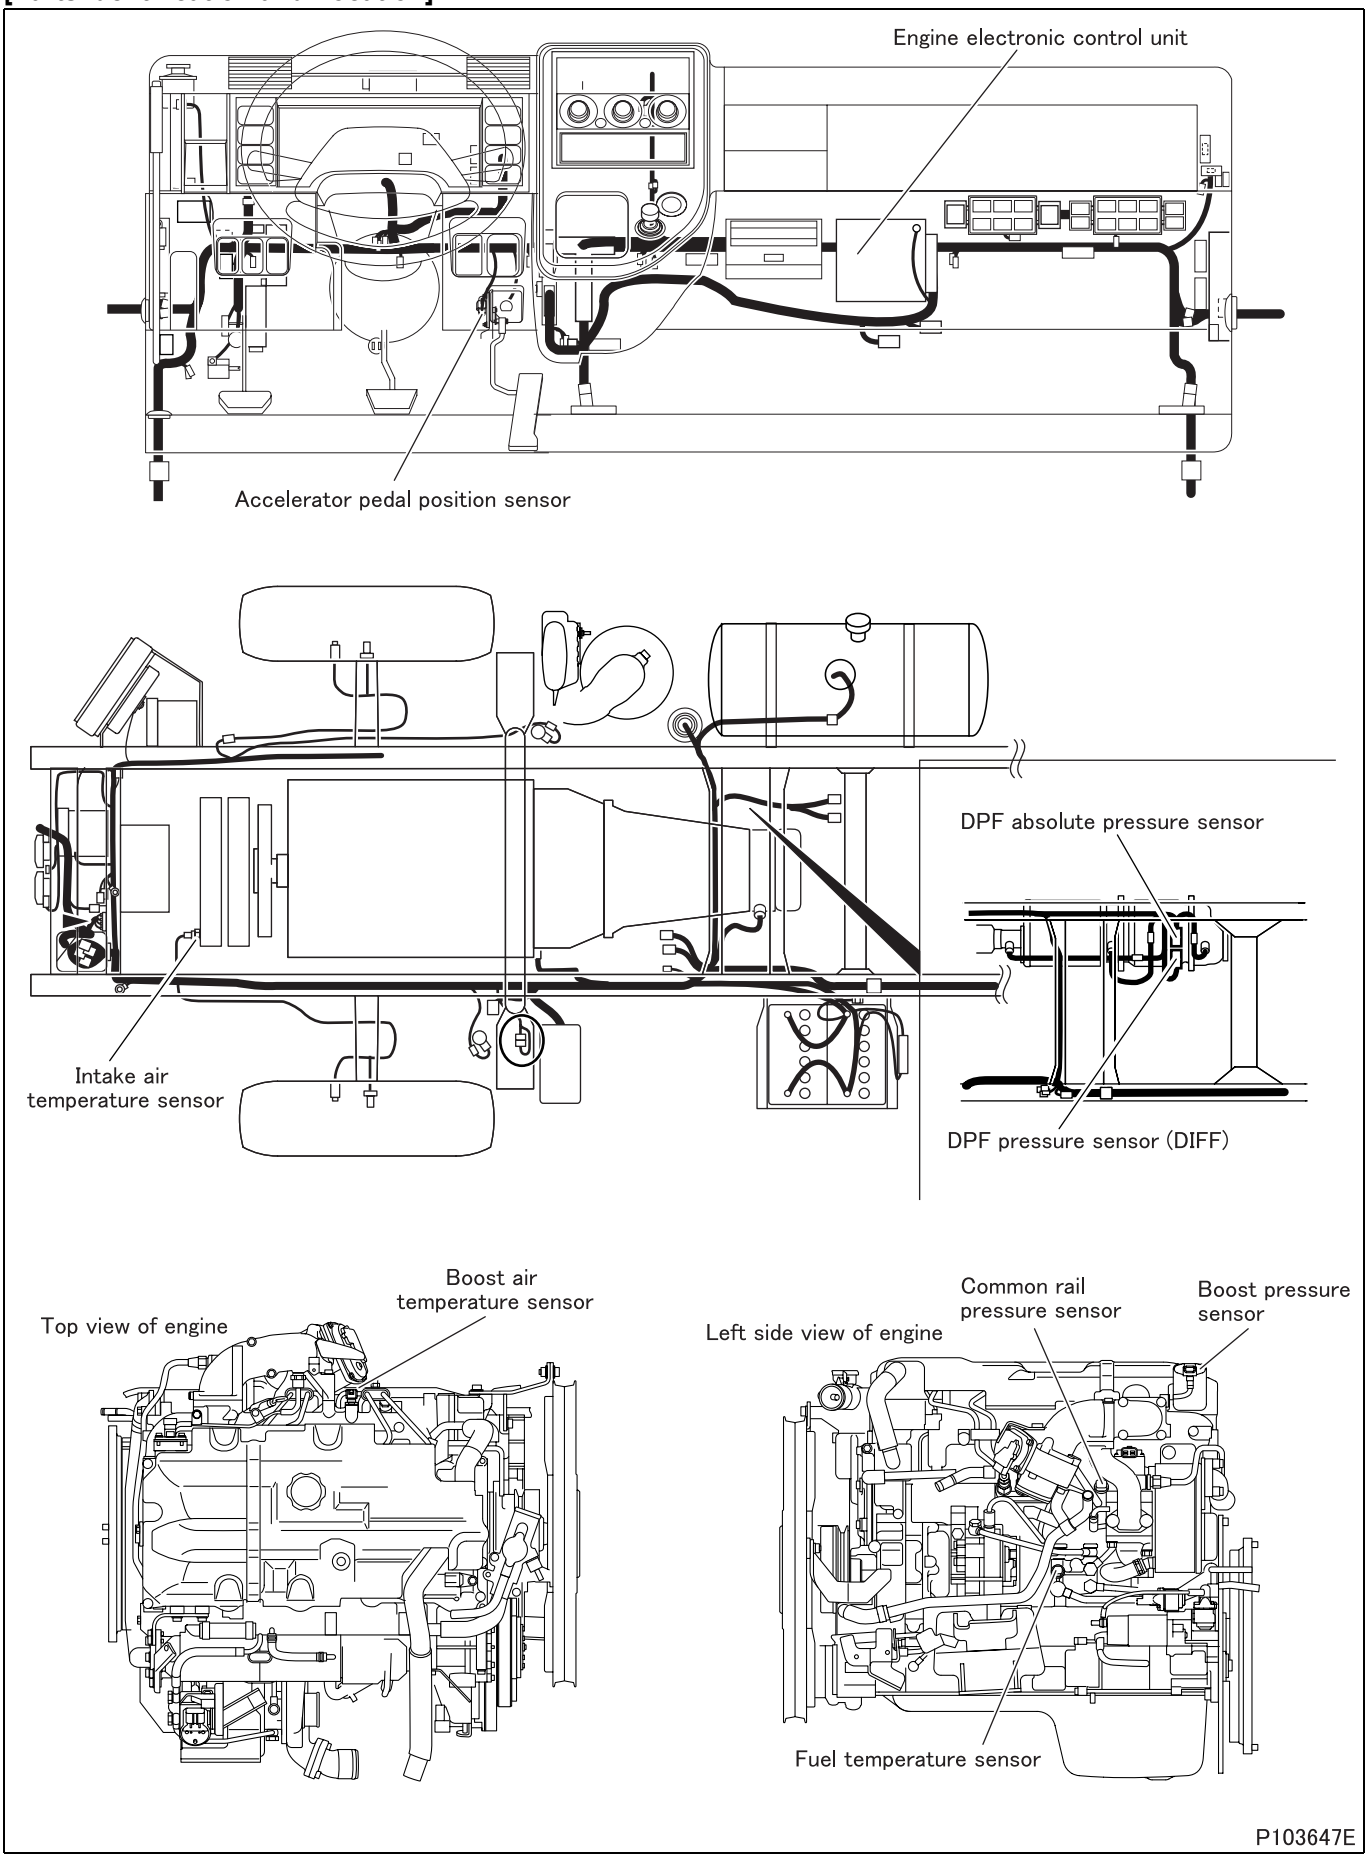
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): common rail pressure sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 11 (+) and No. 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of common rail pressure sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and common rail pressure sensor (power supply)
	Maintenance item		Check circuit between common rail pressure sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector (power supply): DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 61 (+) and No. 85 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of DPF pressure sensor (DIFF) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and DPF pressure sensor (DIFF) (power supply)
	Maintenance item		Check circuit between DPF pressure sensor (DIFF) connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 61.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by electronic control unit connector: boost air temperature sensor
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 30 (+) and No. 29 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 9.

Step 9	Inspection items		Inspection of boost air temperature sensor
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between electronic control unit and boost air temperature sensor (power supply)
	Maintenance item		Check circuit between boost air temperature sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 30
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0699/Flash code: 81
[Monitor]
Sensor power supply abnormal
[Fault (outline)]
High signal range check
[Diagnosis check]
- Sensor supply voltage 3 in engine electronic control unit is monitored.
- Units served by sensor supply voltage 3
- Common rail pressure sensor
- DPF pressure sensor (DIFF)
- Boost air temperature sensor

[Code generation condition]
- Supply voltage to units remain over 5.3 V for 0.5 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

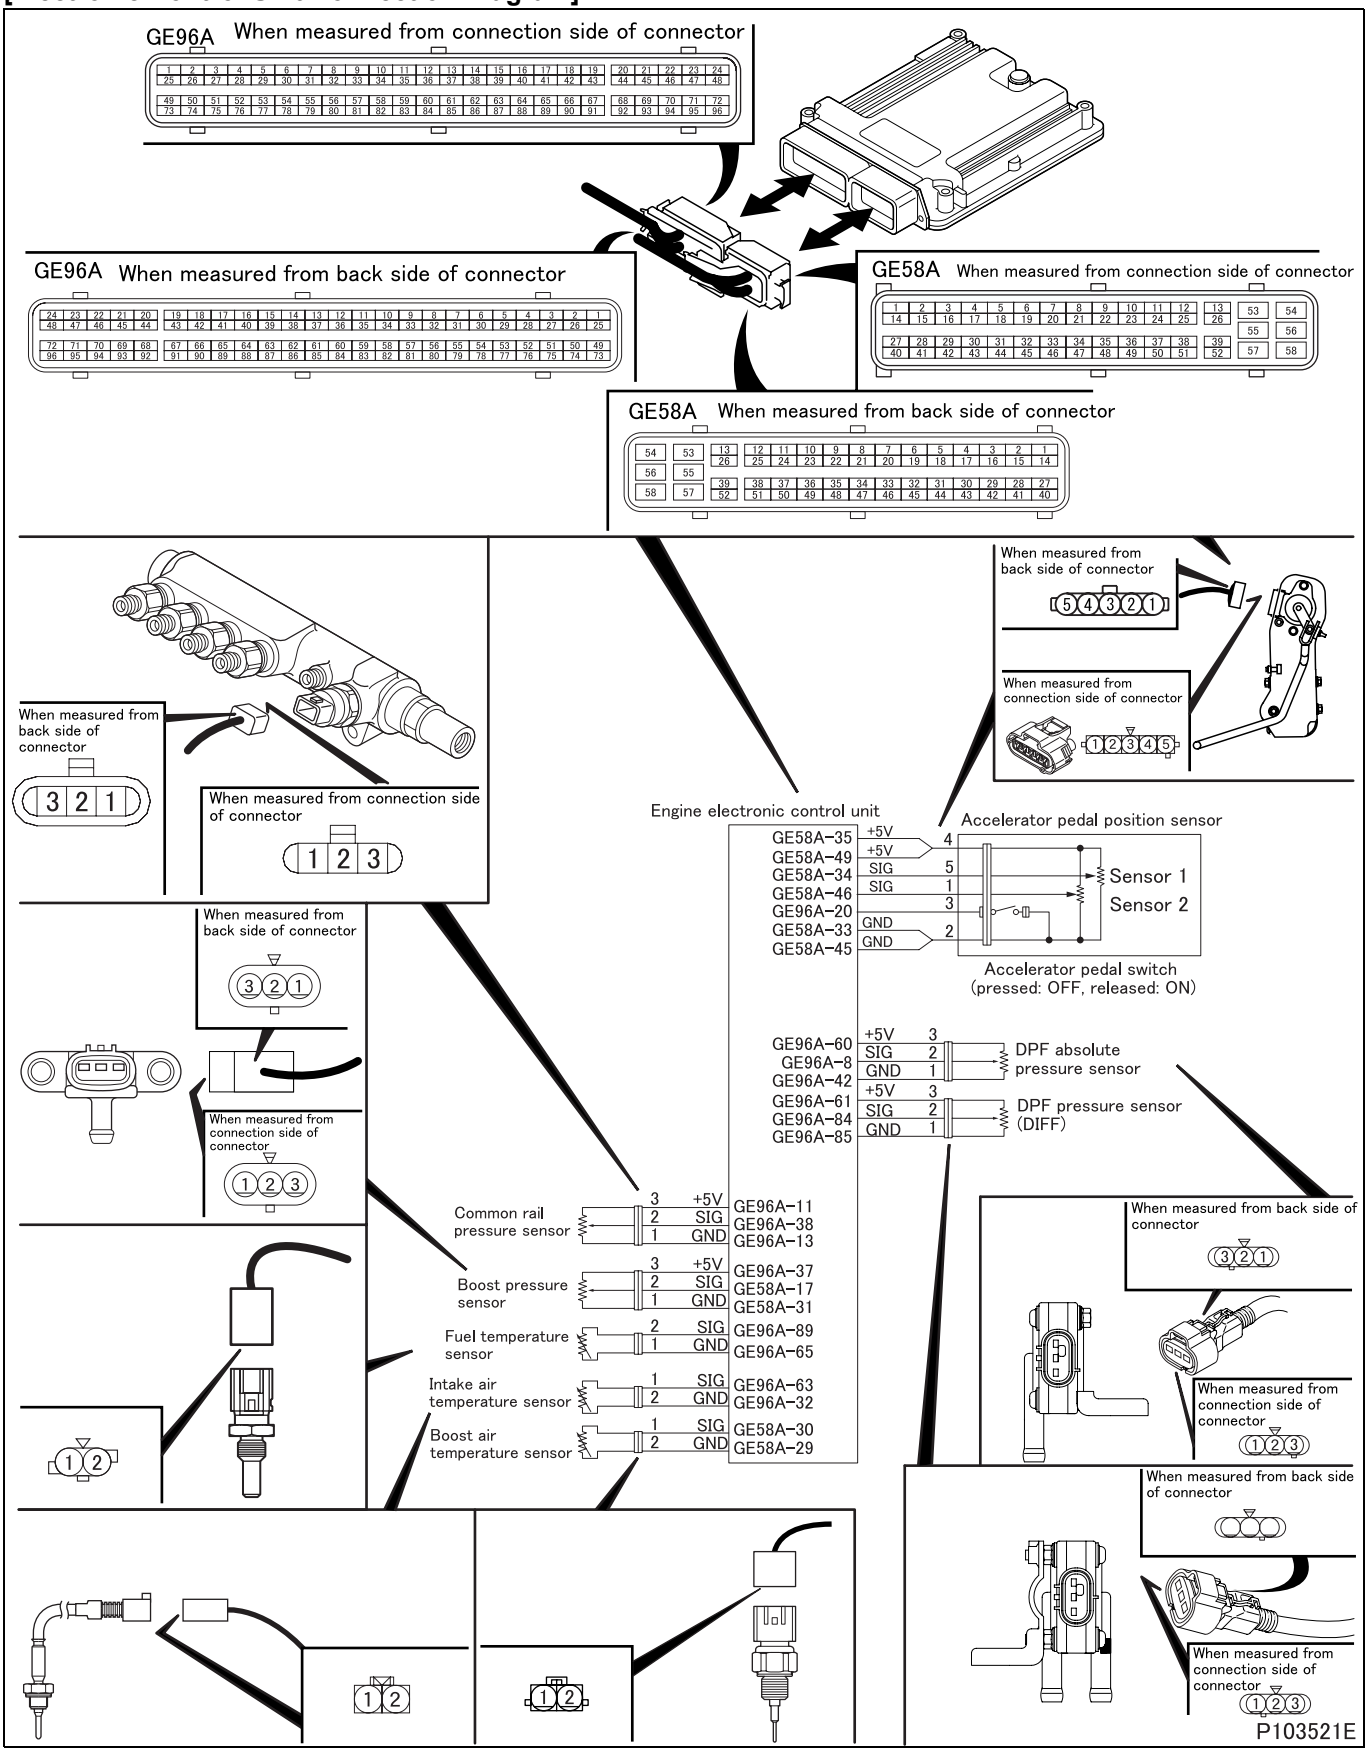
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

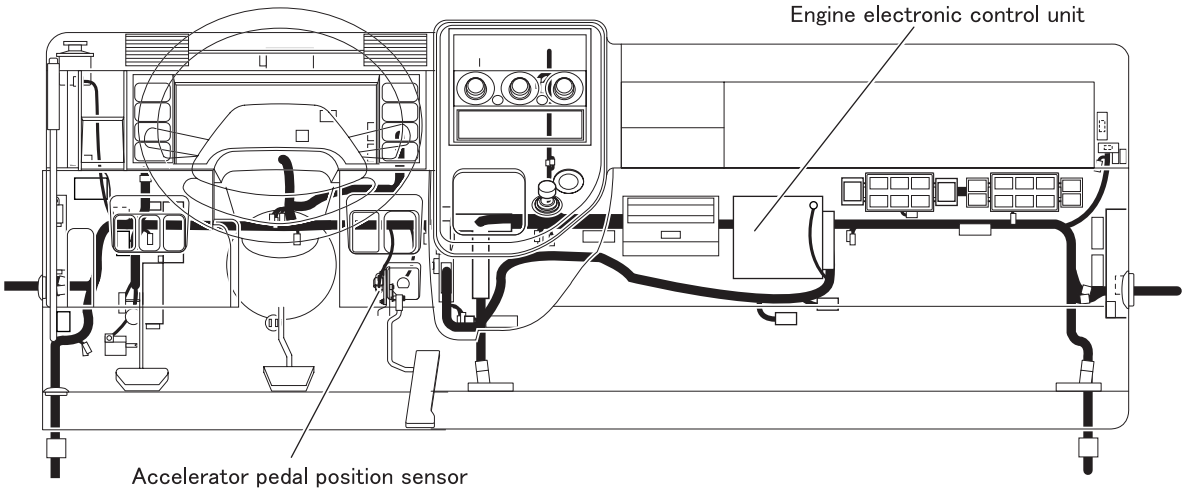
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and each sensor
- Malfunction of each connector
- Malfunction of each sensor
- Malfunction of electronic control unit

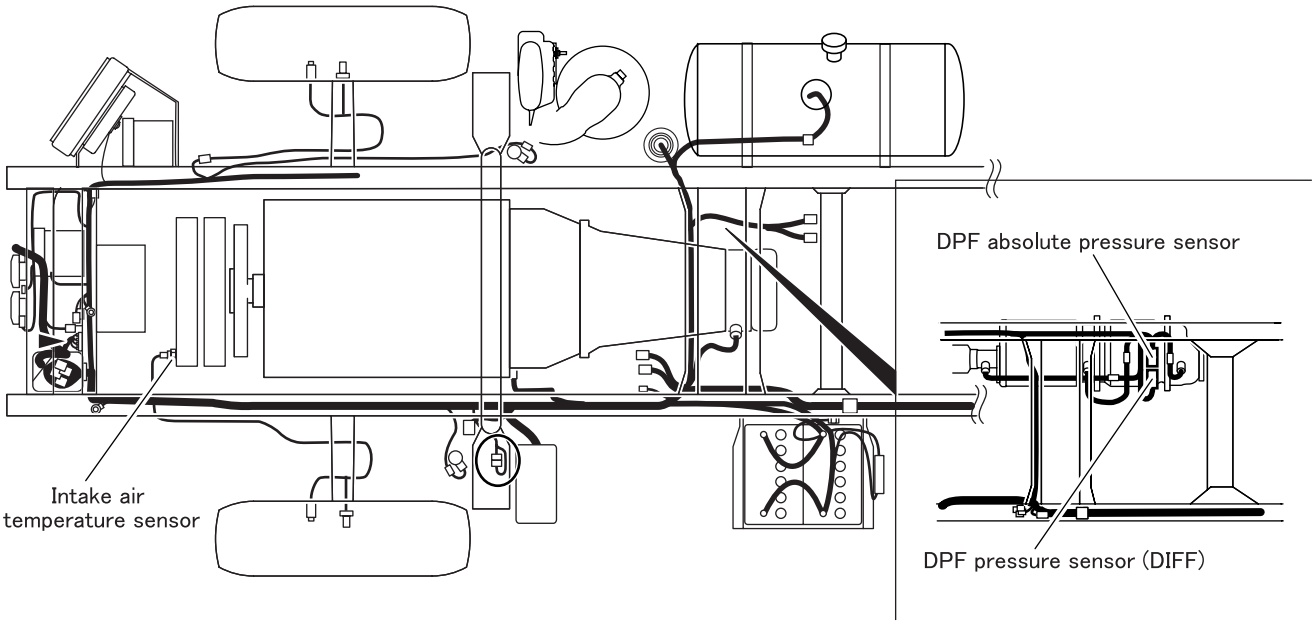
[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

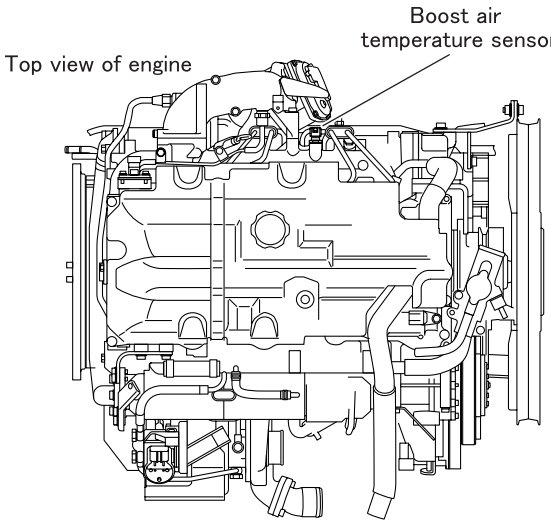
[Electronic Control Unit Connection Diagram]

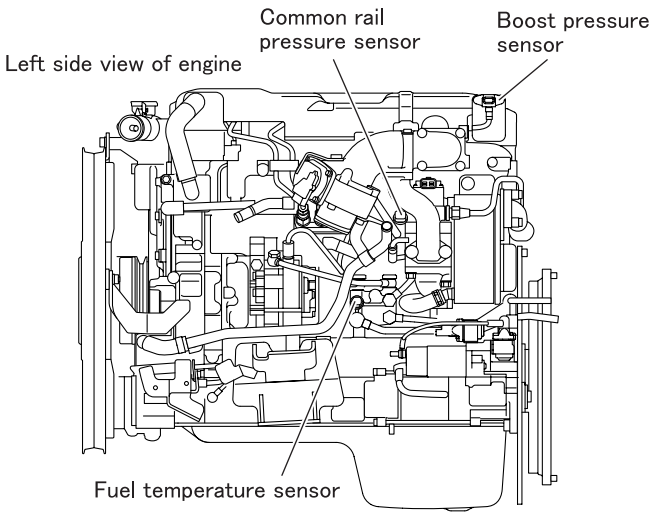


[Parts Identification and Location]









P103647E

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Modify connector.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply): common rail pressure sensor
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 11 (+) and No. 13 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection of common rail pressure sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and common rail pressure sensor (power supply)
	Maintenance item		Check circuit between common rail pressure sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection by electronic control unit connector (power supply): DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 61 (+) and No. 85 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of DPF pressure sensor (DIFF) connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between electronic control unit and DPF pressure sensor (DIFF) (power supply)
	Maintenance item		Check circuit between DPF pressure sensor (DIFF) connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 61.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by electronic control unit connector: boost air temperature sensor
	Maintenance item		Measure value of voltage between connector (GE58A) terminal No. 30 (+) and No. 29 (–).
	Inspection condition		• Measure from back side of connector of harness with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 9.

Step 9	Inspection items		Inspection of boost air temperature sensor
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between electronic control unit and boost air temperature sensor (power supply)
	Maintenance item		Check circuit between boost air temperature sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 30
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P0700/Flash code: 71
[Monitor]
Failure of automatic transmission control
[Fault (outline)]
Fault present in TCM
(TCM: Transmission Control Module)
[Diagnosis check]
- Transfer of fault status information from automatic transmission electronic control unit is monitored.

[Code generation condition]
- Fault information from automatic transmission electronic control unit has been received for more than 2 seconds. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Failure of automatic transmission system (See Gr23.)

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P1169/Flash code: 56
[Monitor]
Characteristic value in air flow sensor
[Fault (outline)]
Electronic control unit
[Diagnosis check]
- Availability of stored air flow sensor data in engine electronic control unit is checked.

[Code generation condition]
- Air flow sensor data are found missing.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- No air flow sensor data stored in engine electronic control unit
  (For data alteration/registration and data write operation, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P1170/Flash code: 34
[Monitor]
Injection quantity adjustment data
[Fault (outline)]
Electronic control unit
[Diagnosis check]
- Availability of stored injection quantity adjustment data in engine electronic control unit is checked.

[Code generation condition]
- Injection quantity adjustment data are found missing.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injection quantity adjustment data is fixed at backup value.

[Probable cause of trouble]
- No injection quantity adjustment data stored in engine electronic control unit
  (For data alteration/registration and data write operation, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault code]
Diagnosis code: P1410/Flash code: 92
[Monitor]
Excessive exhaust pressure
[Fault (outline)]
- Low signal range check
- High signal range check

[Diagnosis check]
- Pressure before ceramic filter is monitored by DPF absolute pressure sensor for clogging of ceramic filter.

[Code generation condition]
- Pressure before ceramic filter remains over specified value for 3 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

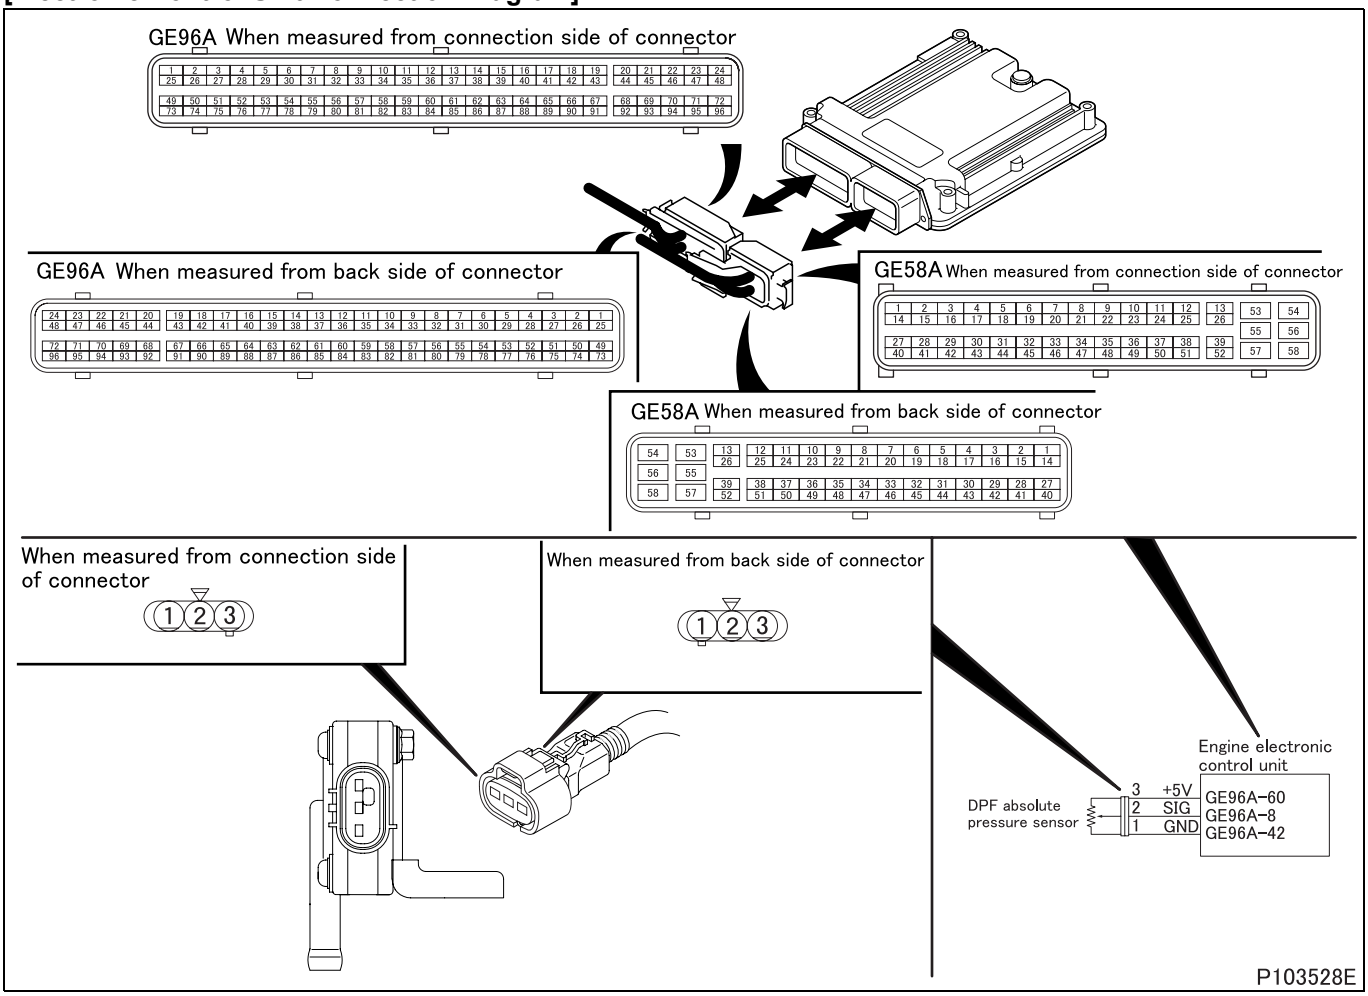
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Exhaust gas recirculation control is stopeed.
- Throttle control disabled.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.

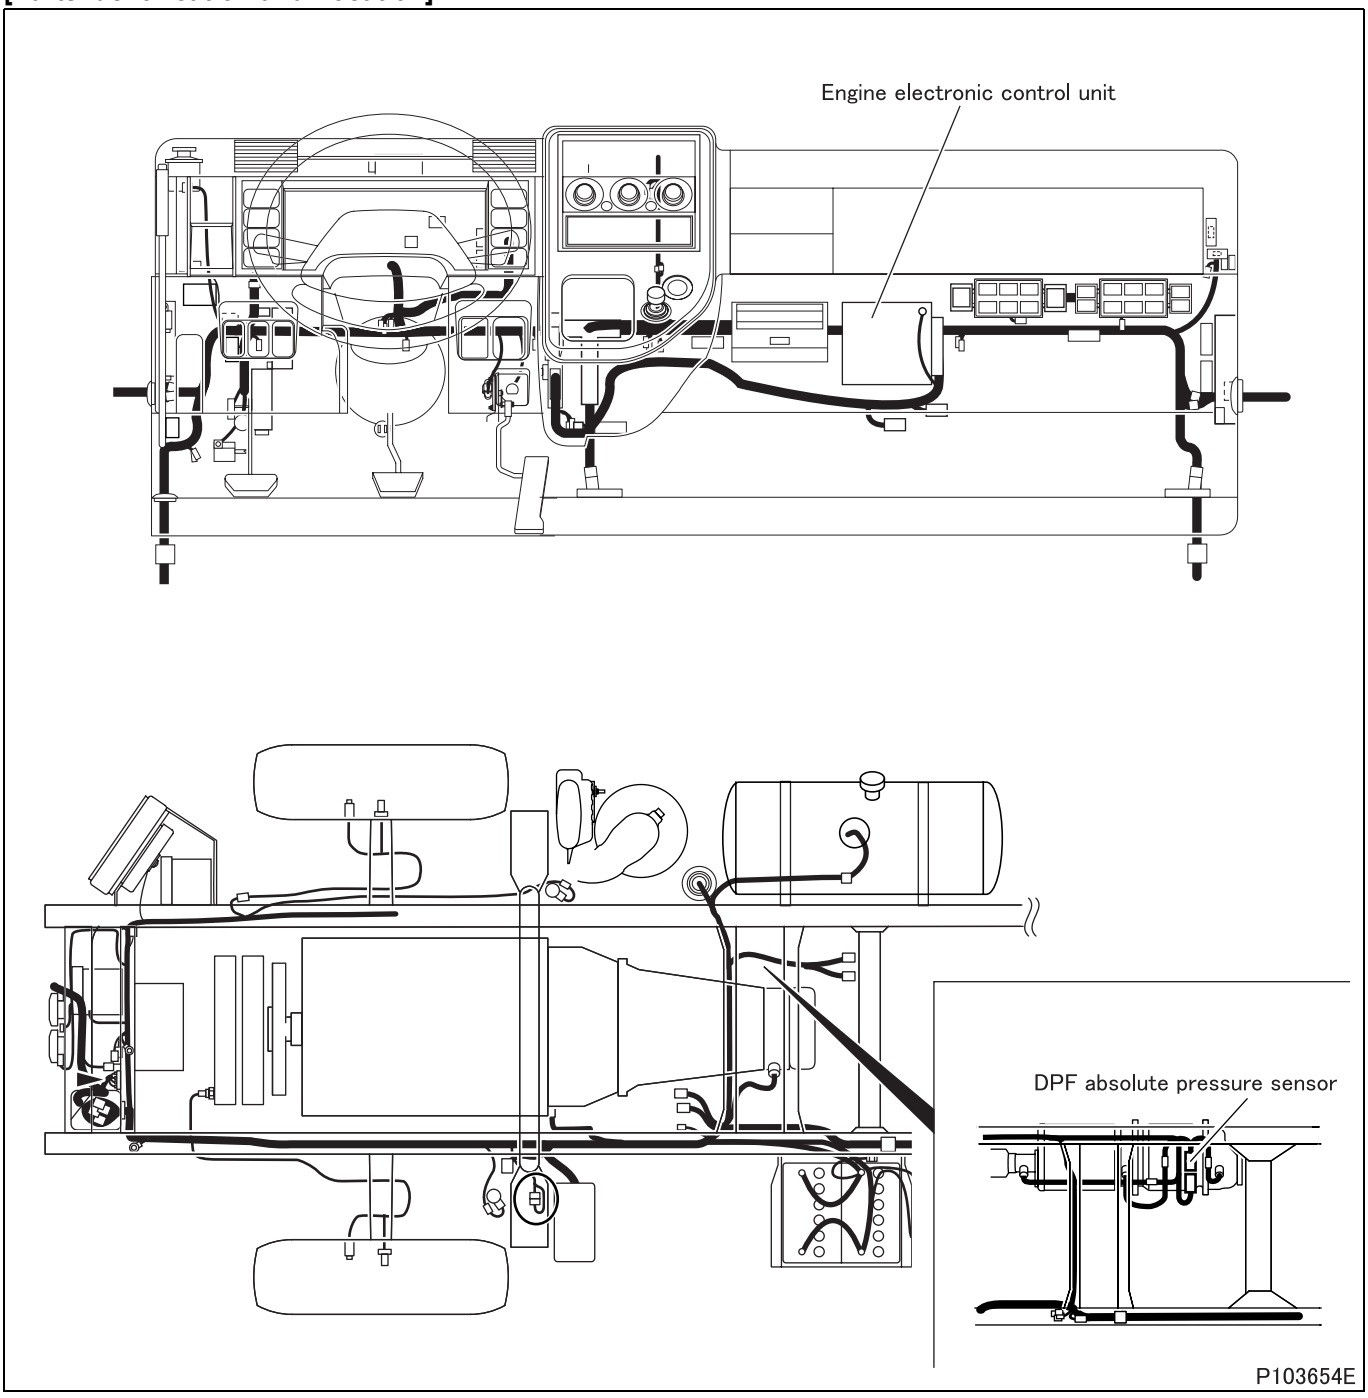
[Probable cause of trouble]
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of diesel particulate filter regeneration control
- Excessive particuler matter (PM) deposit
- Malfunction of DPF absolute pressure sensor.
- Malfunction of engine electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



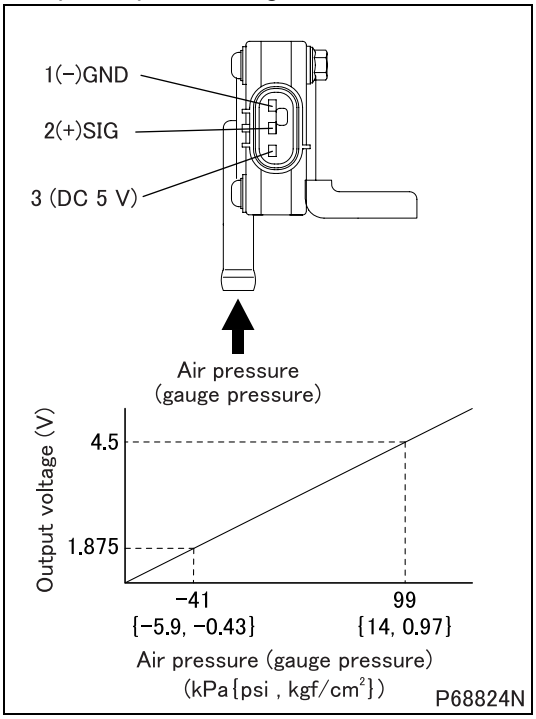
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow sensor (Low)” • P0103 “Airflow sensor (High)” • P0426 ”EXH Gas Temp SNSR1 (Plausibility)” • P0427 ”EXH Gas Temp SNSR1 (Low)” • P0428 ”EXH Gas Temp SNSR1 (High)” • P0545 ”DPF Temp SNSR (upstream) Low” • P0546 ”DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (HIgh) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	After inspection of diagnosis cord that is occuring, go to step 2.
		NO	Go to step 2.

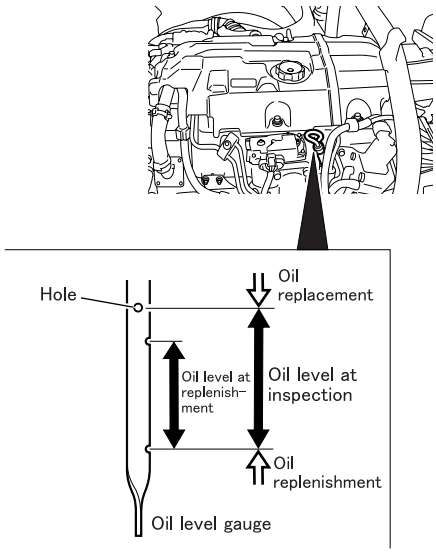
Step 2	Inspection items		Inspection of DPF absolute pressure sensor unit
	Maintenance item		Measure value of voltage between terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across connector terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 41 ± 3.2 kPa {5.9 ± 0.5 psi, 0.43 ± 0.03 kgf/cm^2}: 1.875 V • 99 ± 3.2 kPa {14 ± 0.5 psi, 1.0 ± 0.03 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Replacement of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine is stopped.
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4.

<Step 3 inspection diagram>

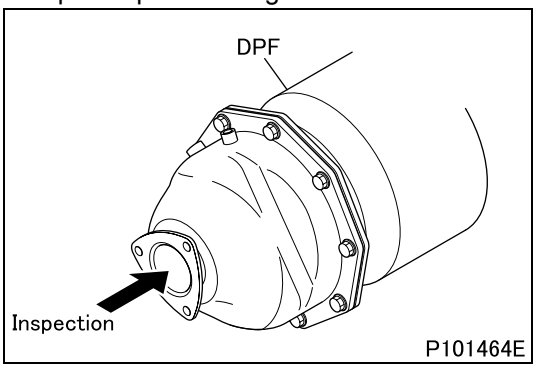


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information and go to step 7.

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of diesel particulate filter unit for clogging and cleaning of the diesel particulate filter unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”.
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related Information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection.
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P1411/Flash code: 88
[Monitor]
Diesel particulate filter is overheated.
[Fault (outline)]
- Low signal range check
- High signal range check
- Plausibility

[Diagnosis check]
- Temperature after ceramic diesel particulate filter is monitored and manual filter regeneration is stopped if filter temperature excessively rises.

[Code generation condition]
- Temperature output from DPF temperature sensor 2 remains over 700°C {1292°F} for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
<Fault diagnosis for signals>
- Fault diagnosis is continuously performed during the driving cycle.

<Fault diagnosis by comparison with other information>
- Fault diagnosis is performed only once during the driving cycle.

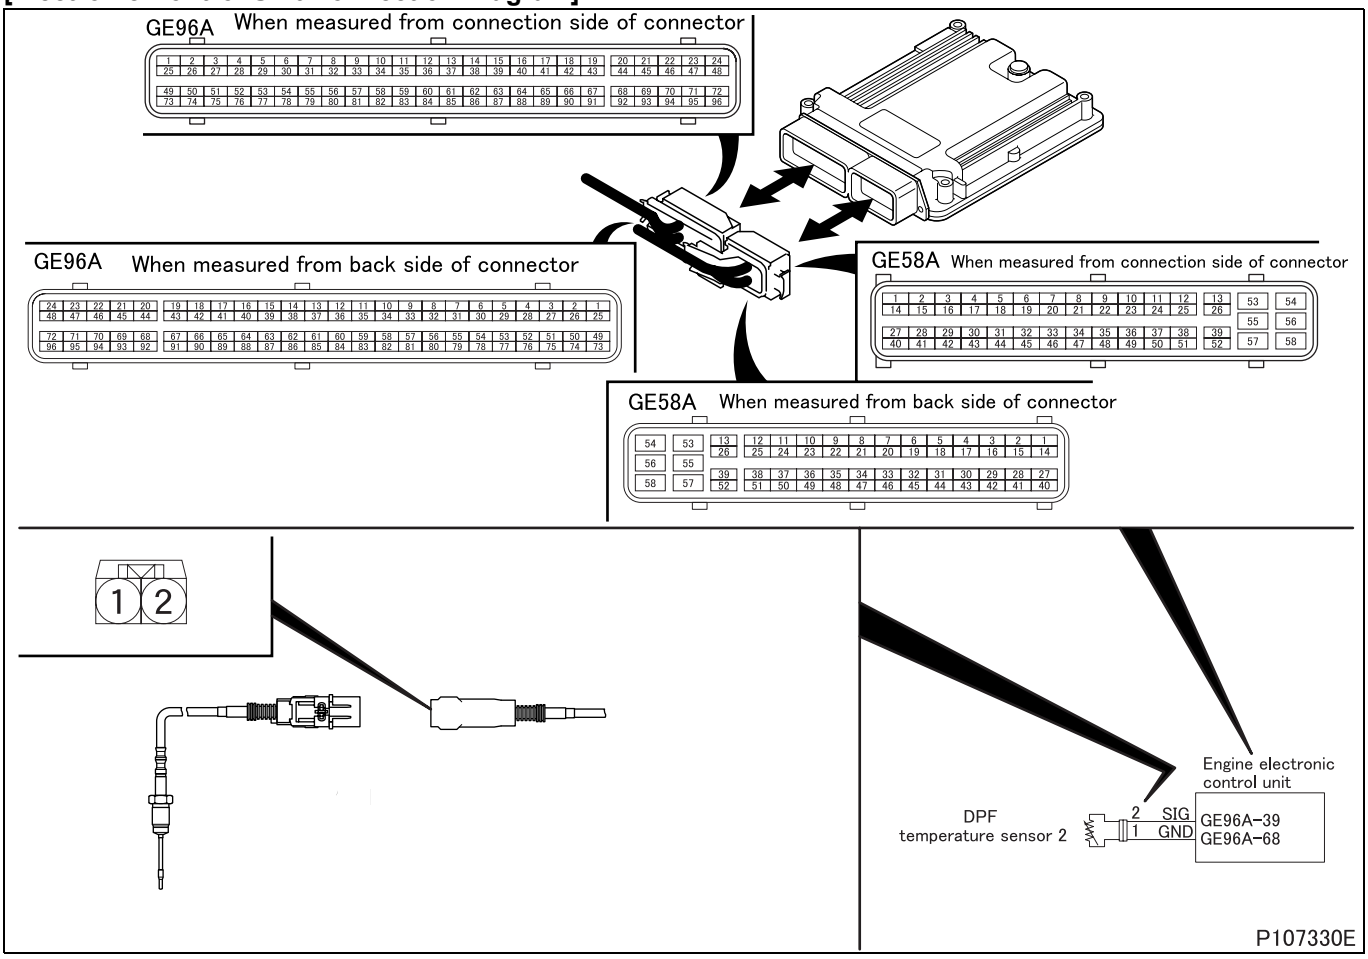
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.

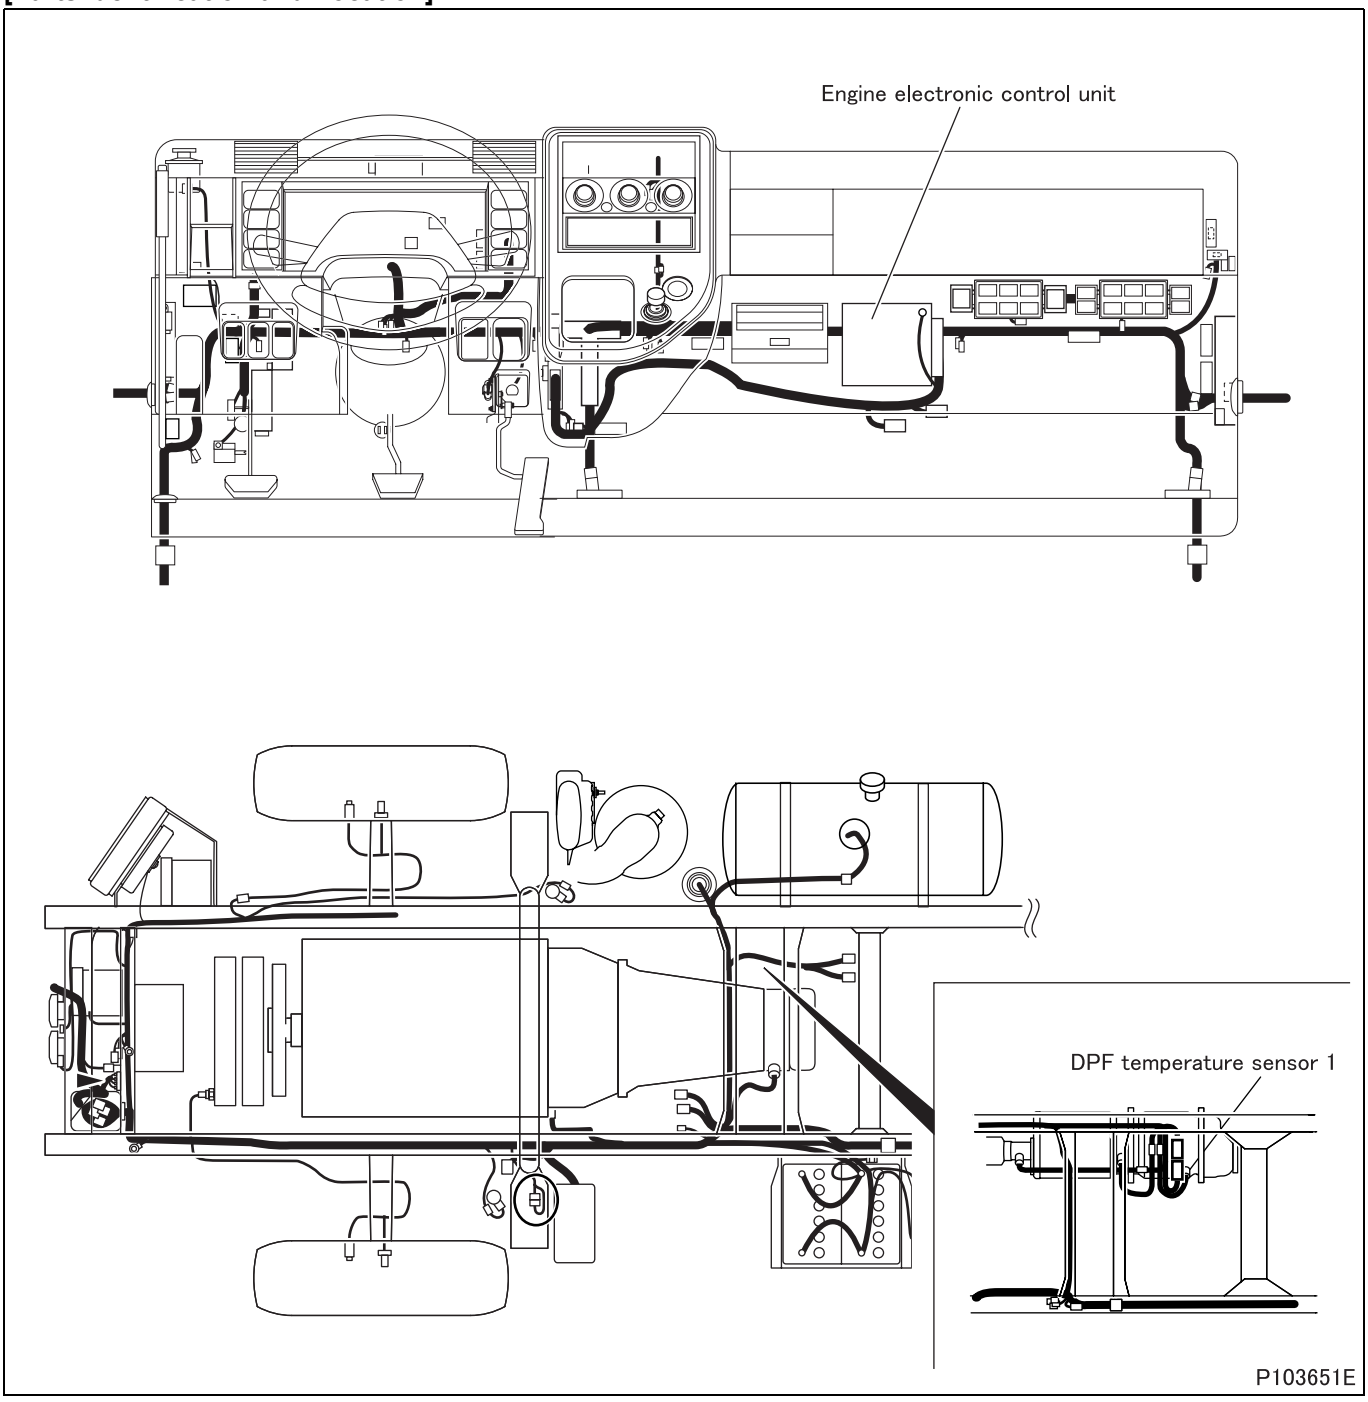
[Probable cause of trouble]
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of diesel particulate filter regeneration control
- Excessive particulate matter (PM) deposit
- Malfunction of engine electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



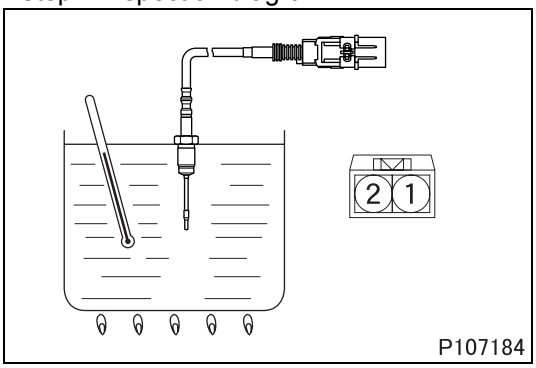
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	After inspection of diagnosis code that is occurring, go to step 2.
		NO	Go to step 2.

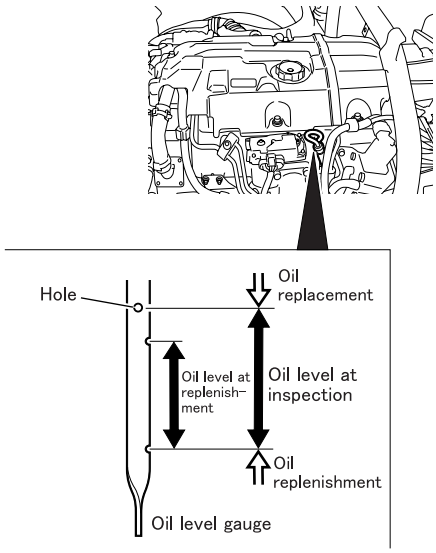
Step 2	Inspection items		Inspection of DPF temperature sensor 2 unit
	Maintenance item		Measure value of resistance between terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine is stopped.
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4.

<Step 3 inspection diagram>

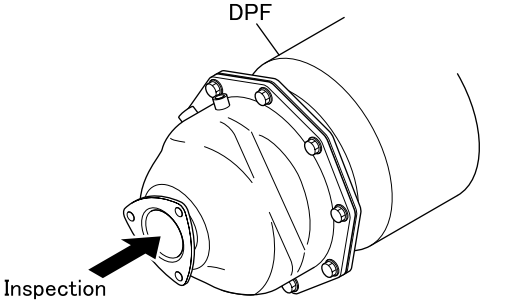


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information and go to step 7.

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of diesel particulate filter unit for clogging and cleaning of the diesel particulate filter unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”.
	Inspection condition		Perform following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection.
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P1412/Flash code: 92
[Monitor]
Temperature increase is insufficient for automatic diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Temperature in diesel particulate filter during automatic filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- Abnormality is determined if the remaining of temperature below 250°C {482°F} during 5 km {3.11 miles} of running after start of automatic diesel particulate filter regeneration is repeated three times.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

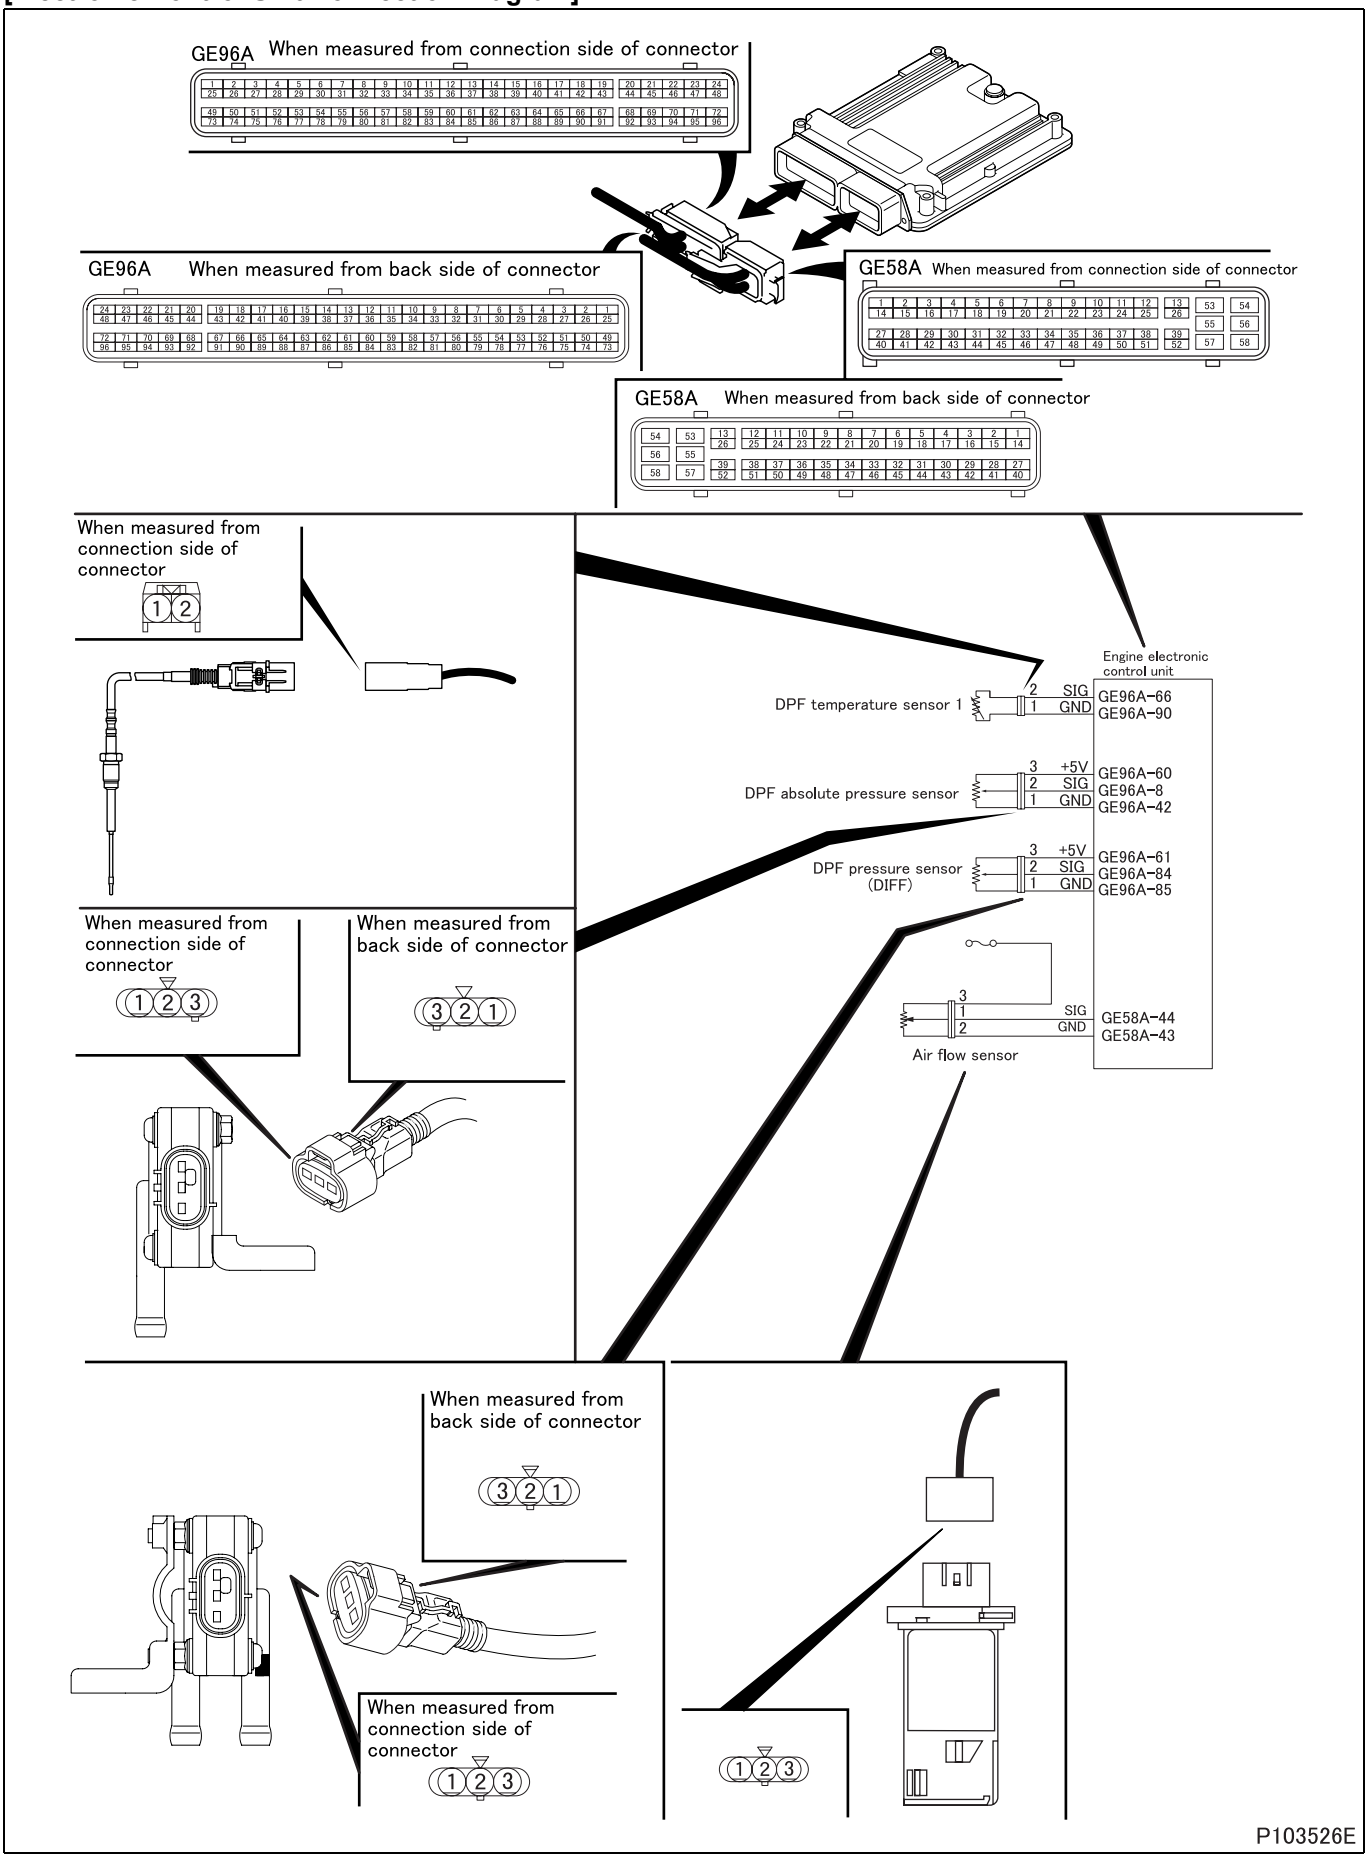
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible)

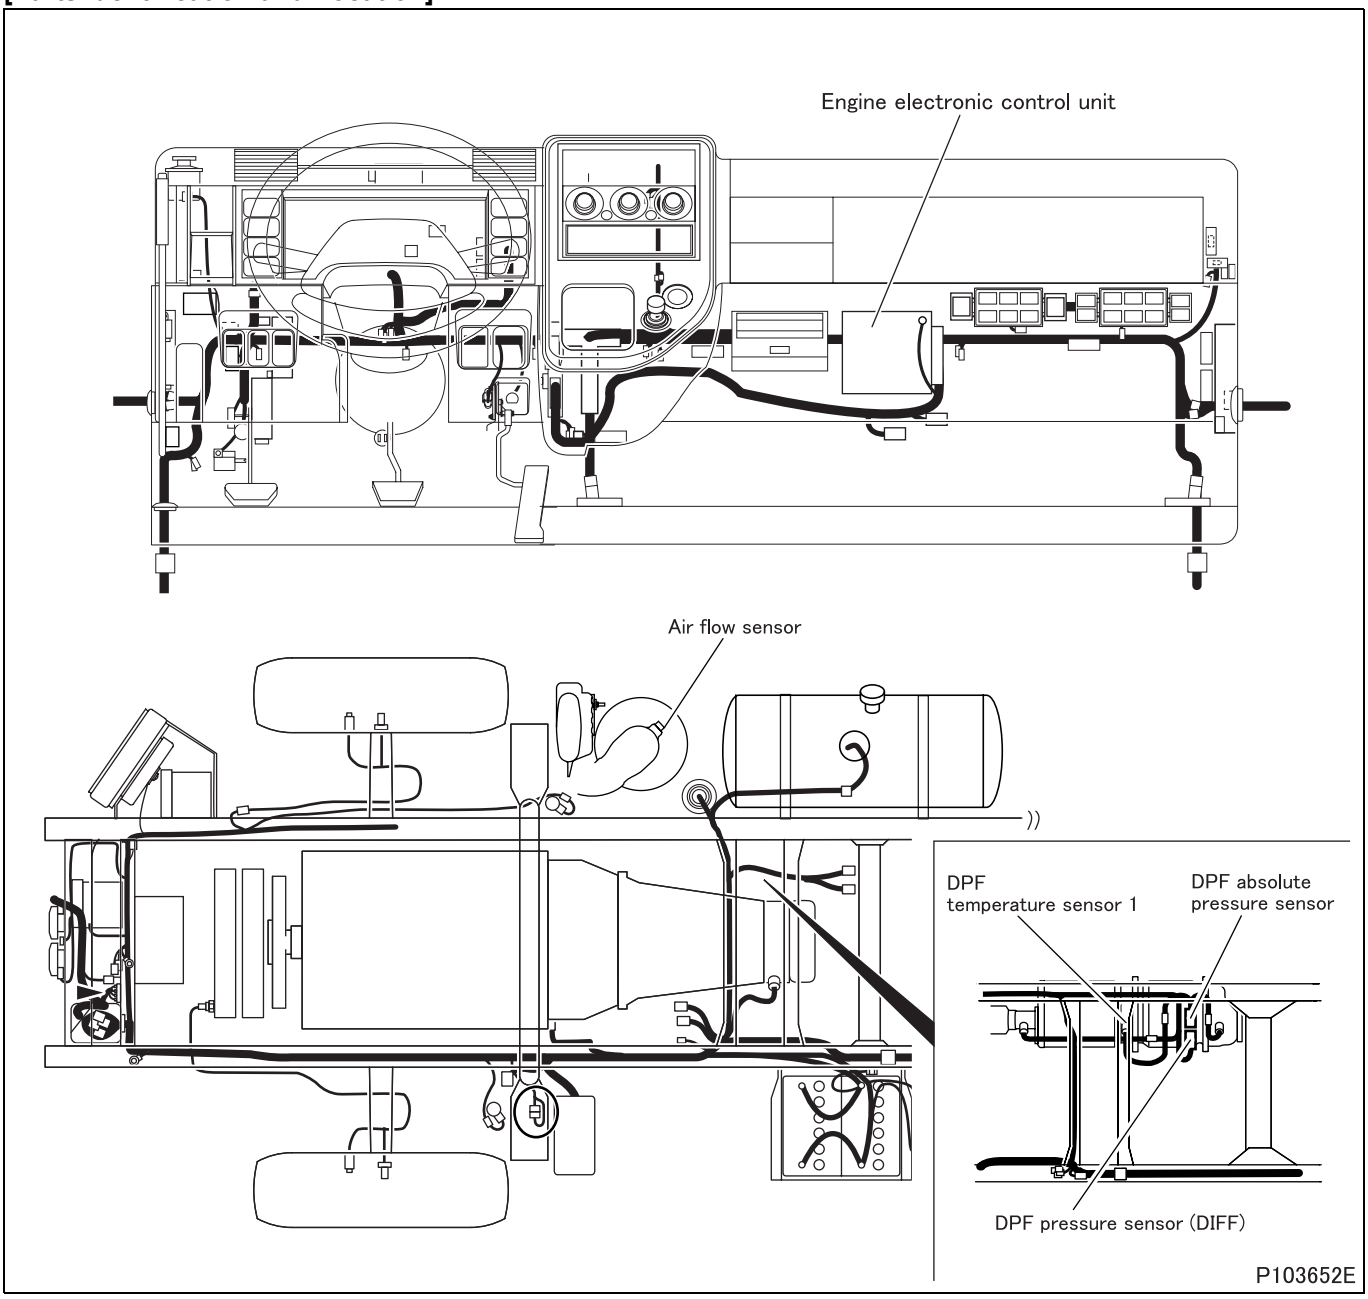
[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



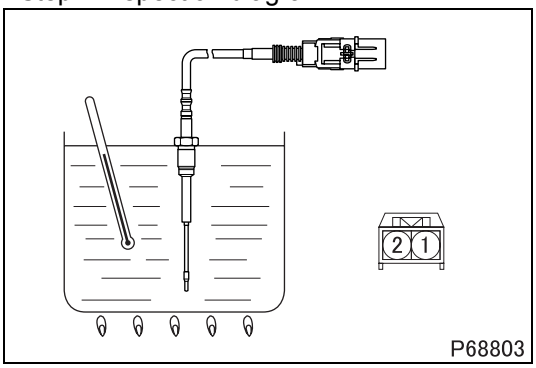
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	After inspection of diagnosis code that is occurring, go to step 2.
		NO	Go to step 2.

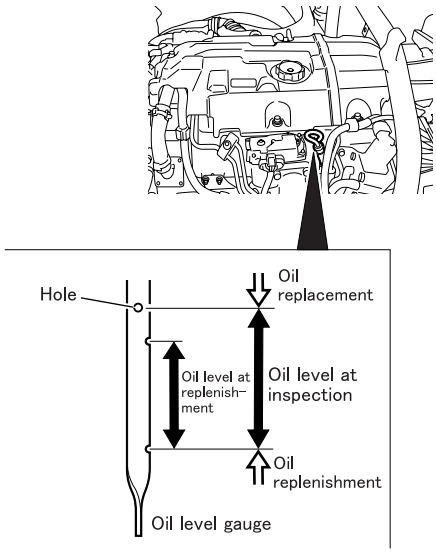
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine is stopped.
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4.

<Step 3 inspection diagram>

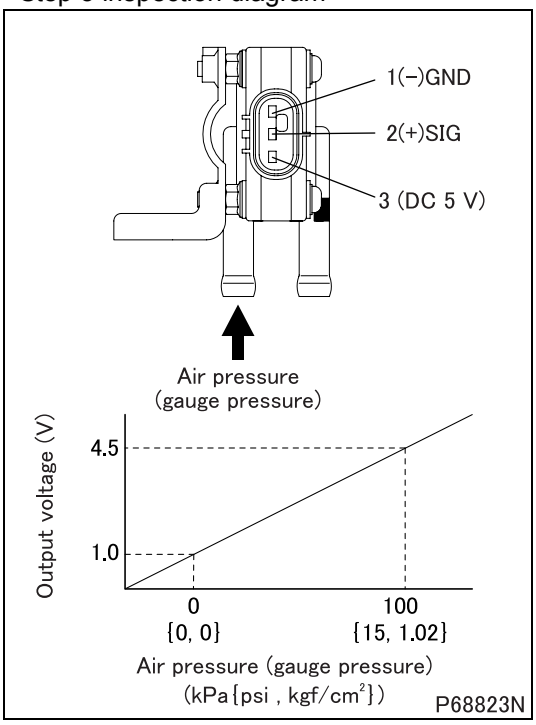


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Correction and replacement of hose

Step 5	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of sensor

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1413/Flash code: 92
[Monitor]
Temperature increase is insufficient for automatic diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Temperature in diesel particulate filter during automatic filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- Abnormality is determined if the remaining of temperature below 500°C {932°F} for 30 minutes after start of automatic diesel particulate filter regeneration is repeated three times.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).

[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of sensor

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1415/Flash code: 92
[Monitor]
Failure of automatic diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Duration of automatic diesel particulate filter regeneration is monitored.

[Code generation condition]
- Regeneration exceeds specified time. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).

[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

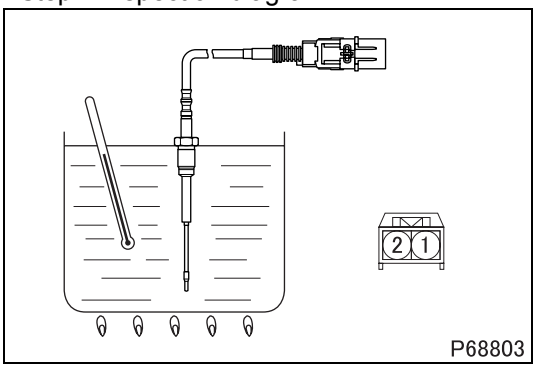
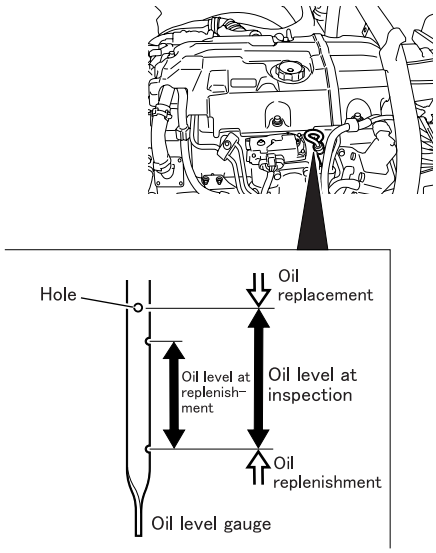
	Maintenance item		Measure value of resistance between terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4

<Step 3 inspection diagram>

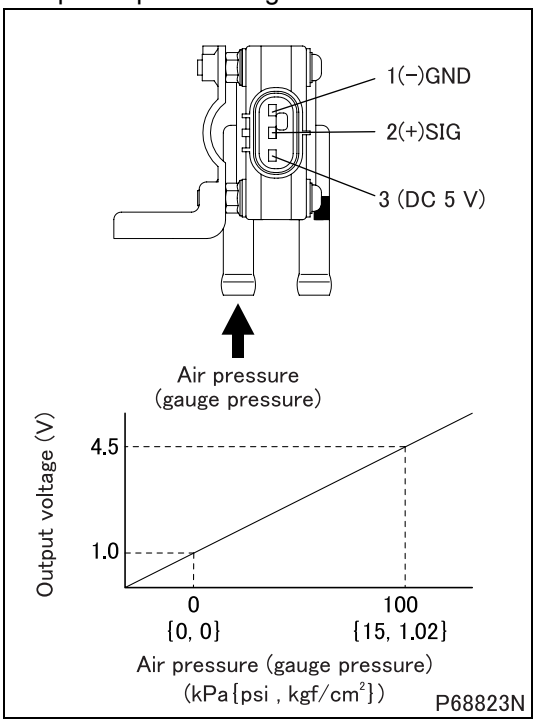


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Correction and replacement of hose

Step 5	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of sensor

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1416/Flash code: 92
[Monitor]
Temperature increase is insufficient for manual diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Temperature in diesel particulate filter during manual diesel particular filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- If temperature does not exceed 250°C {482°F} in 5 minutes after start of manual diesel particulate filter regeneration.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

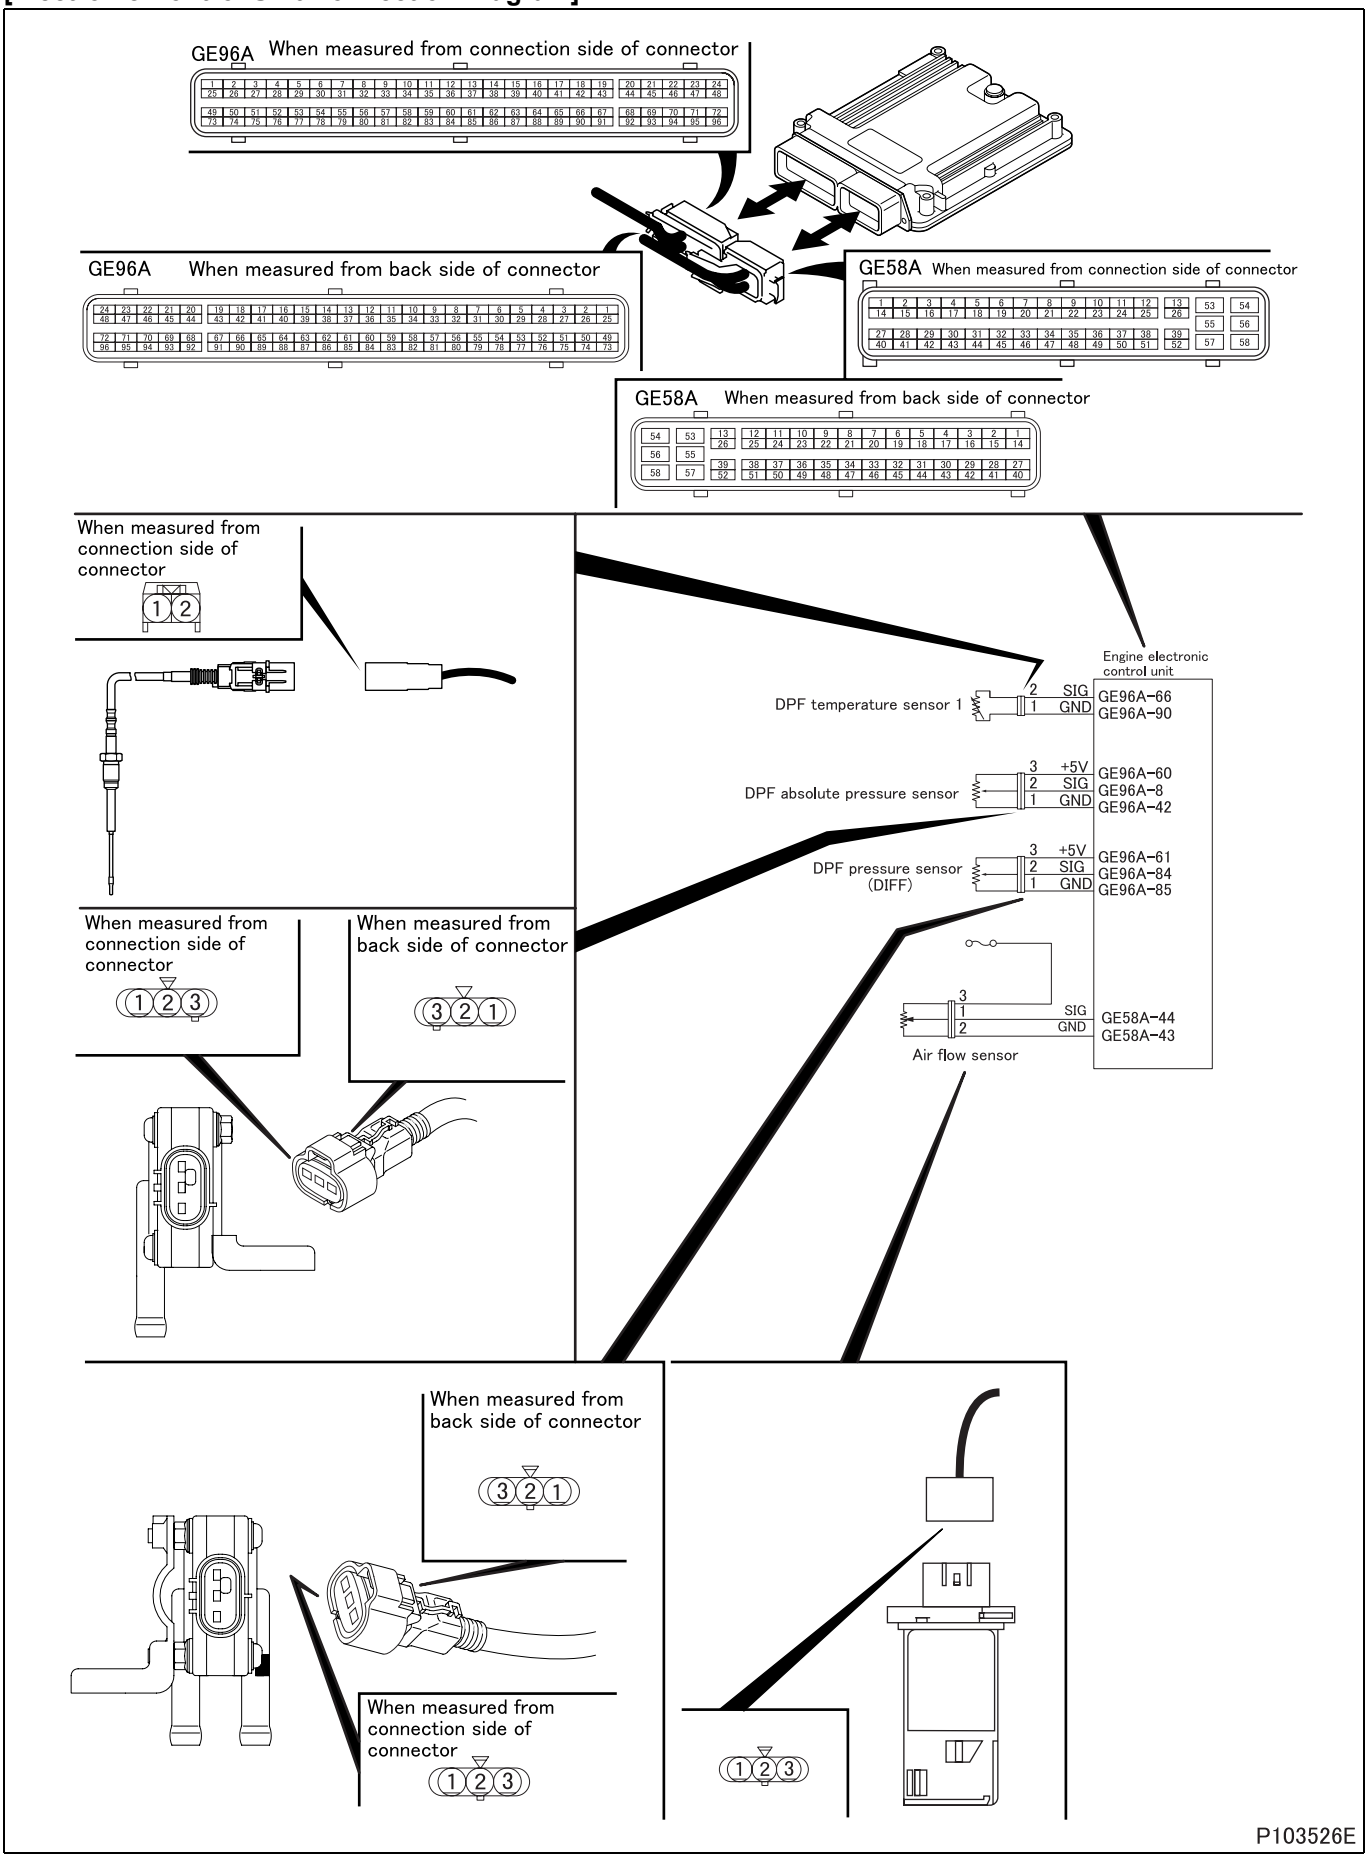
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

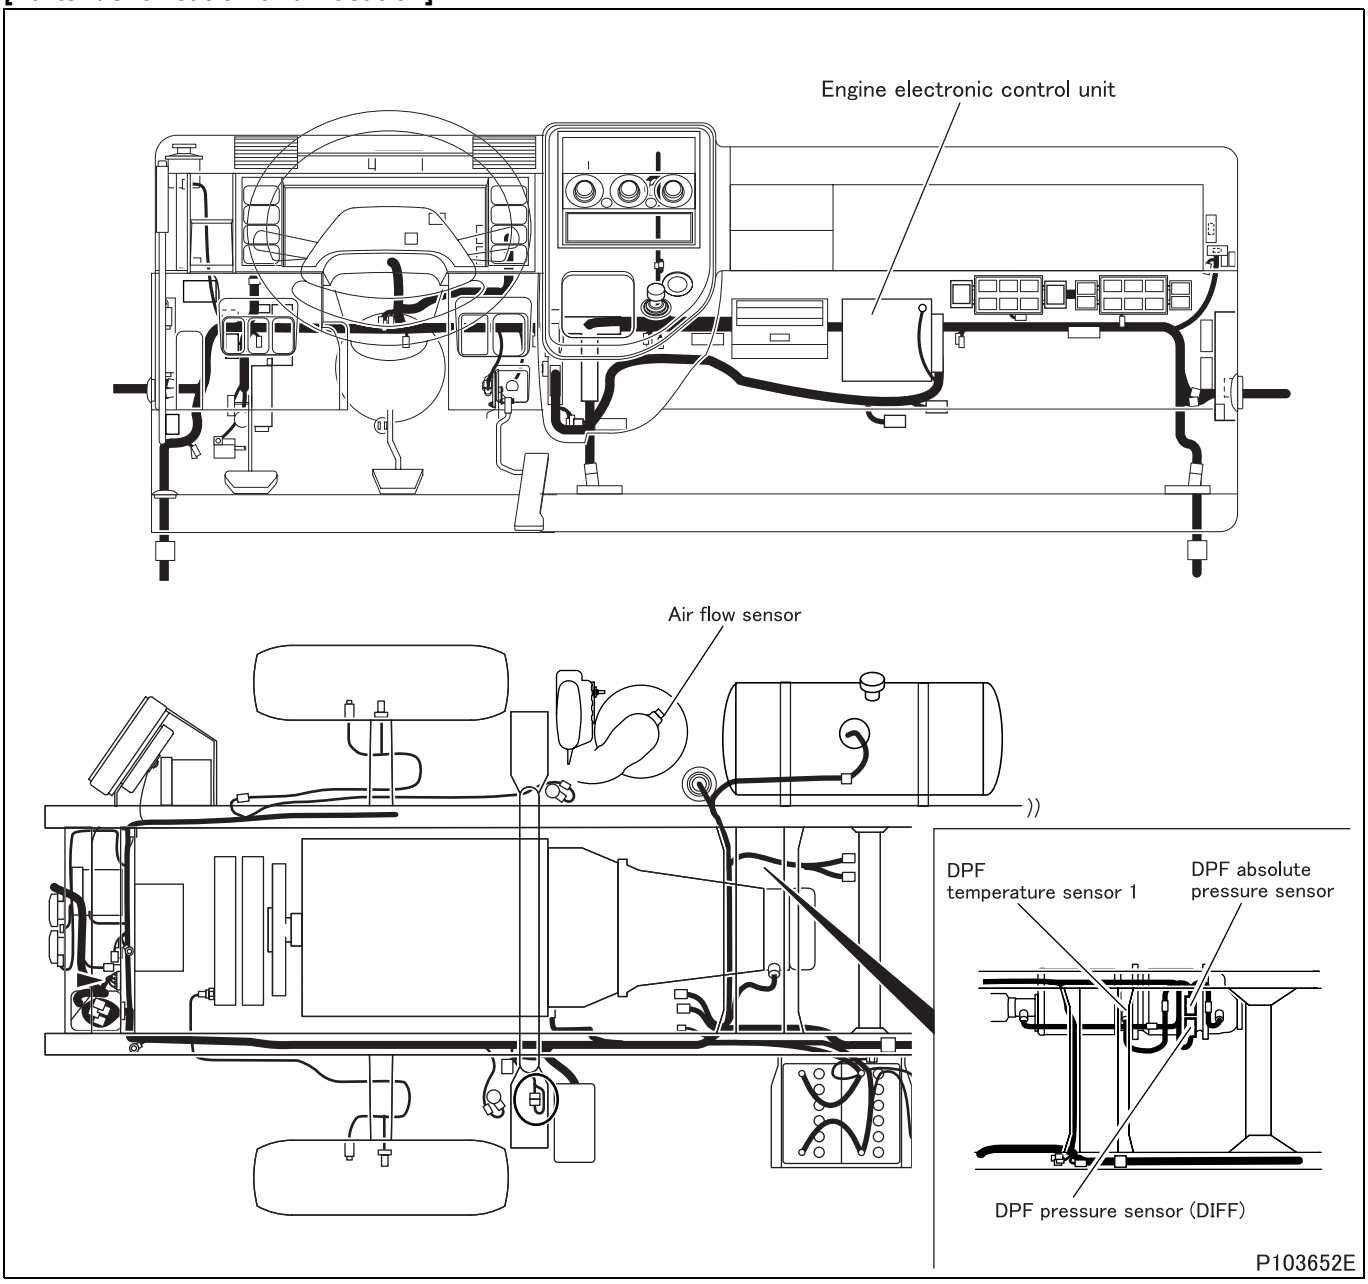
[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



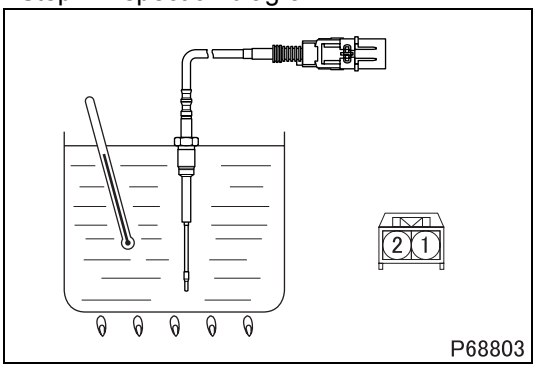
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring and go to step 2.
		NO	Go to step 2.

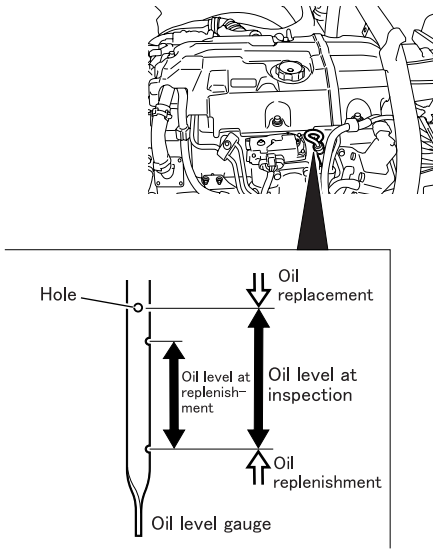
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No.1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4

<Step 3 inspection diagram>

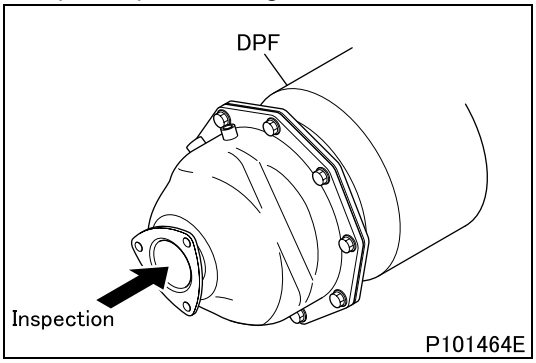


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

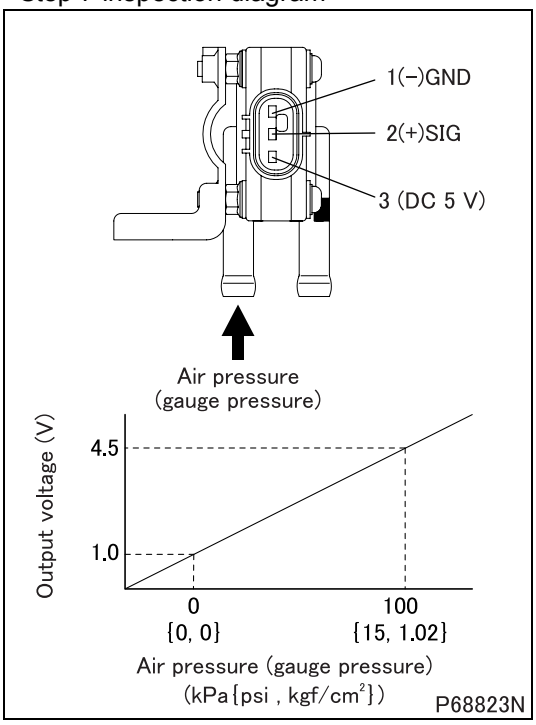
<Step 5 inspection diagram>



Step 6	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral (place the automatic transmission in P range). • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related Information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F} (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”).
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of electronic control unit

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1417/Flash code: 92
[Monitor]
Temperature increase is insufficient for manual diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Temperature in diesel particulate filter during manual diesel particular filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- If temperature remains below 500°C {932°F} for 30 minutes after start of manual diesel particulate filter regeneration.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

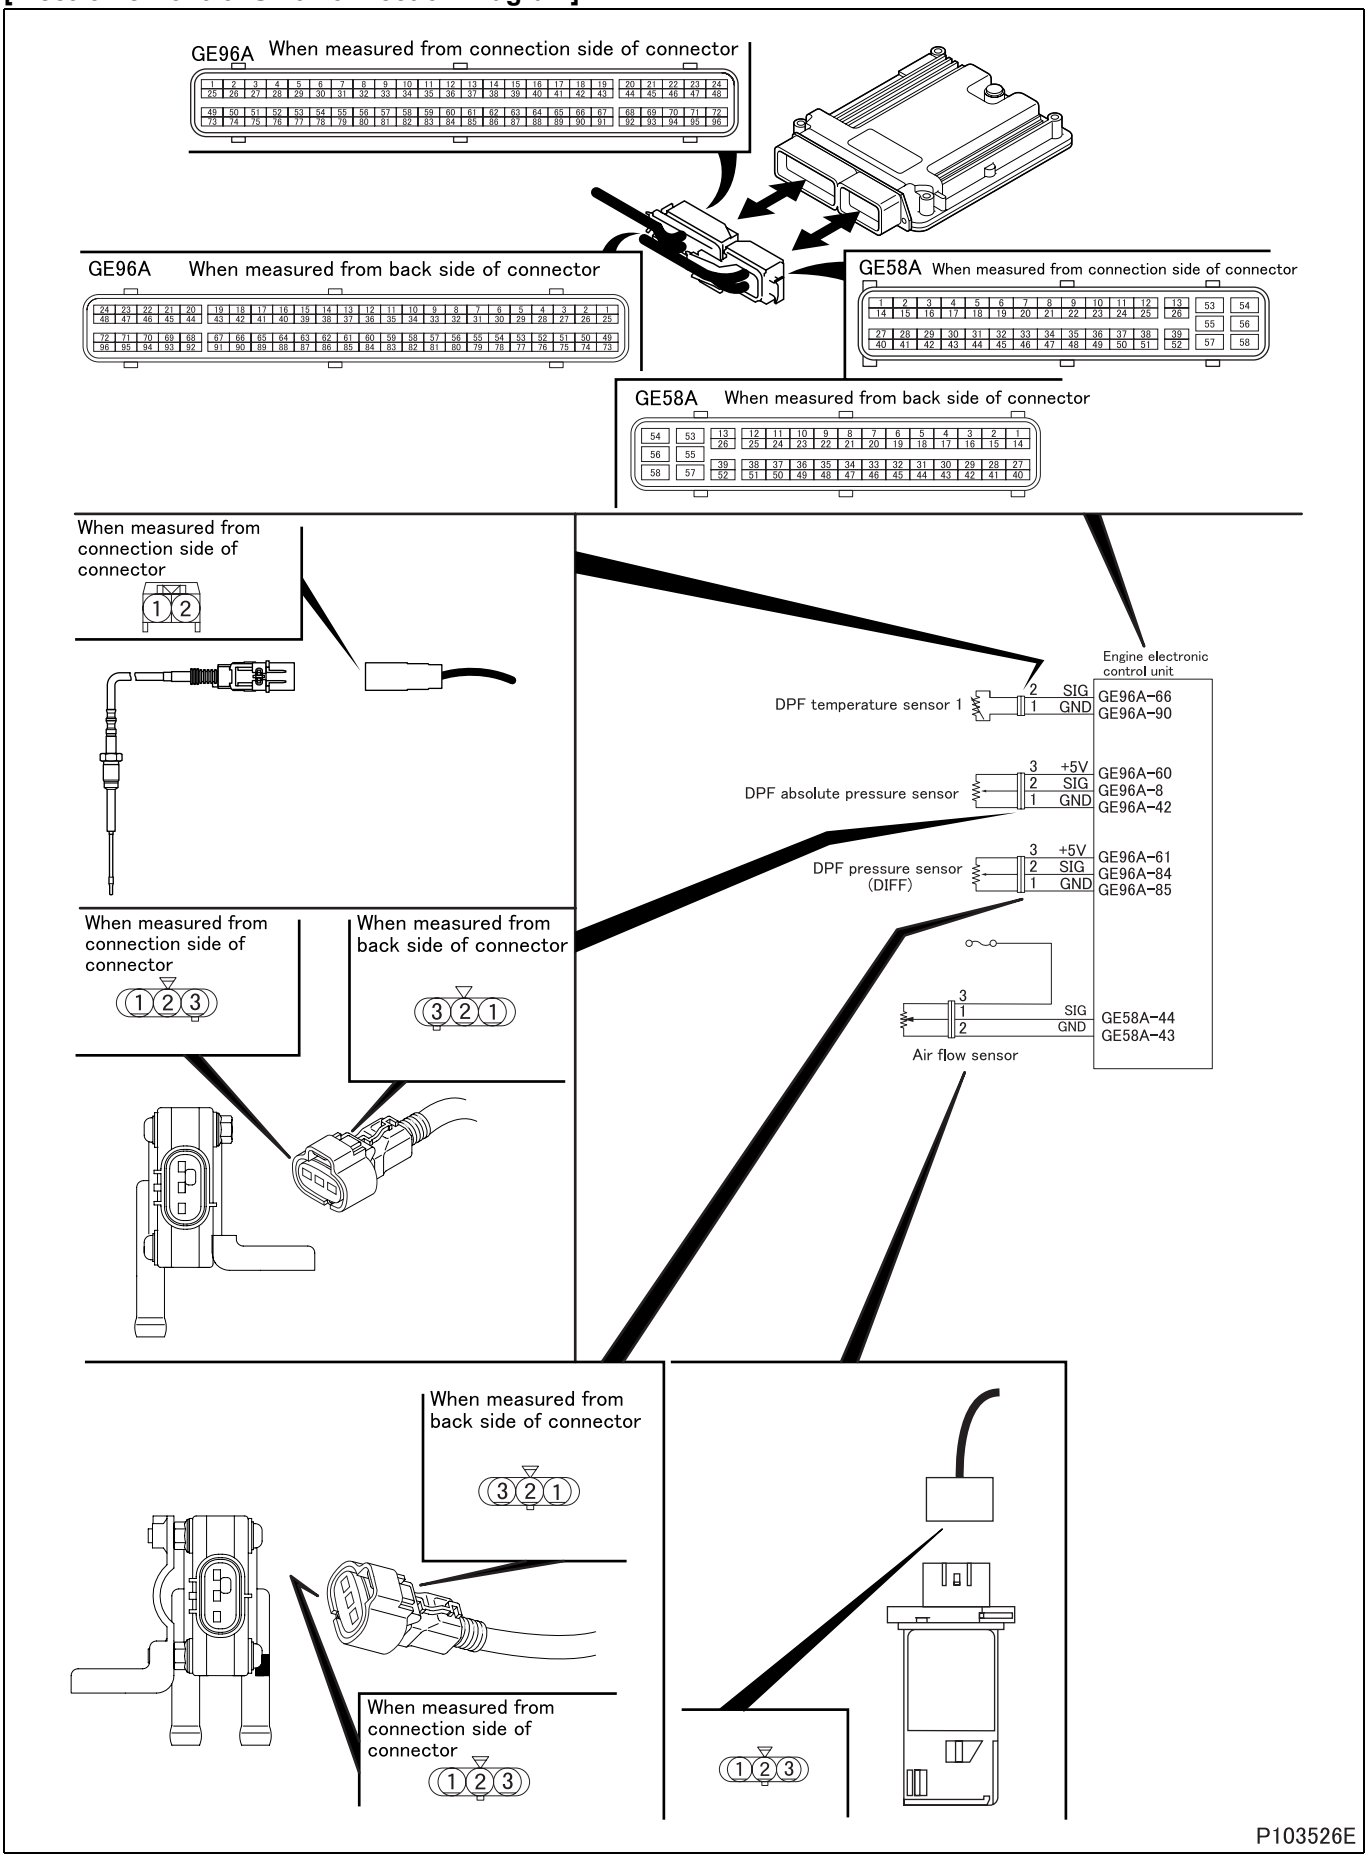
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

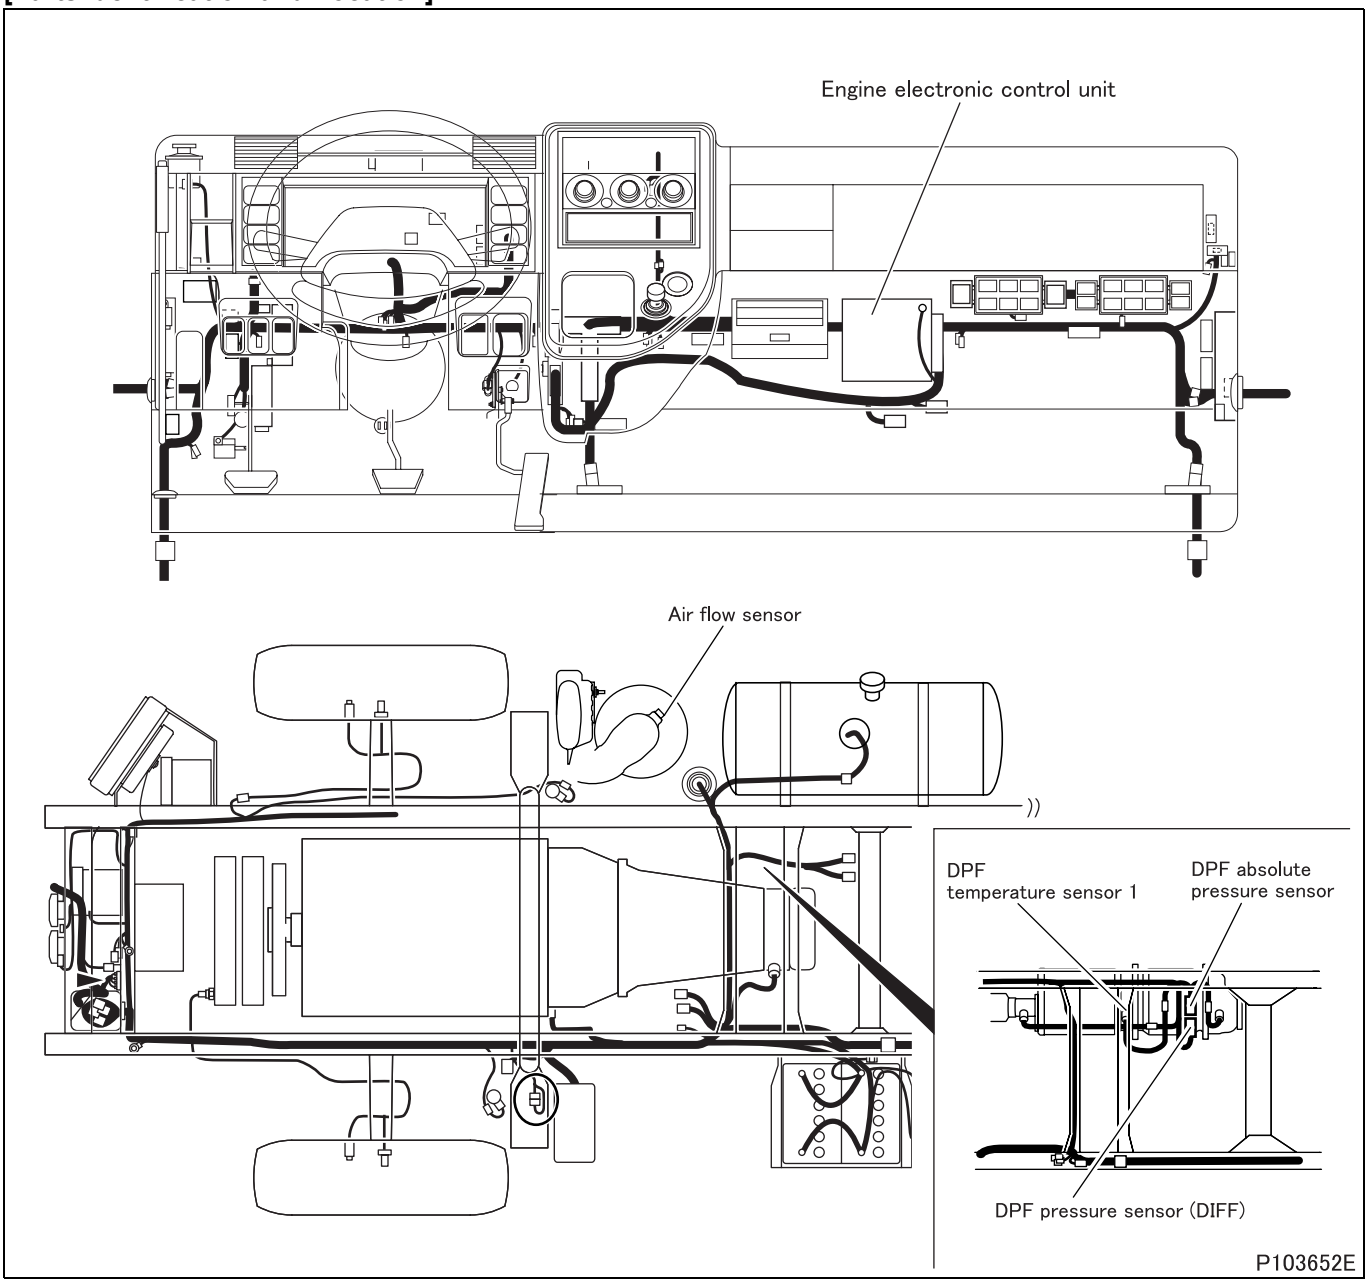
[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



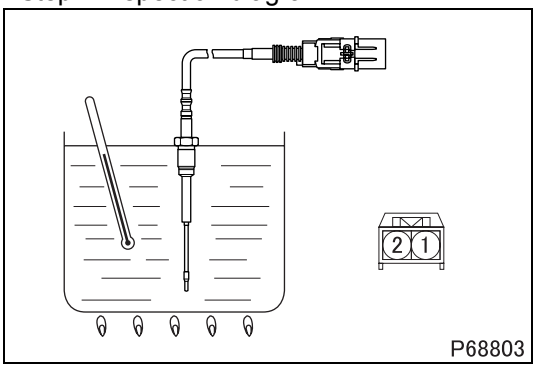
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring and go to step 2.
		NO	Go to step 2.

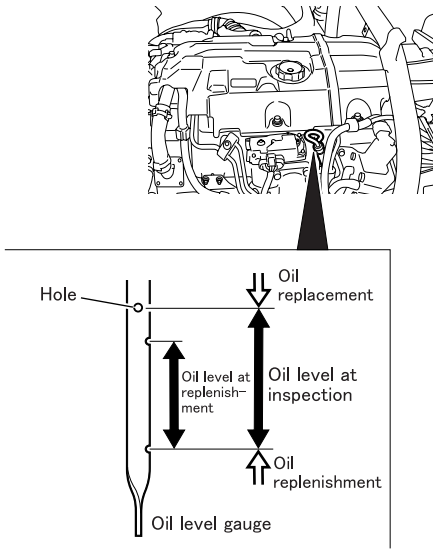
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4

<Step 3 inspection diagram>

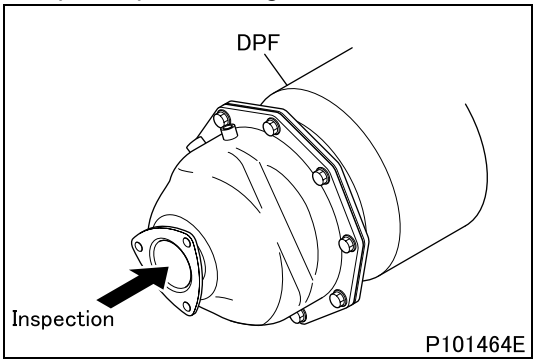


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

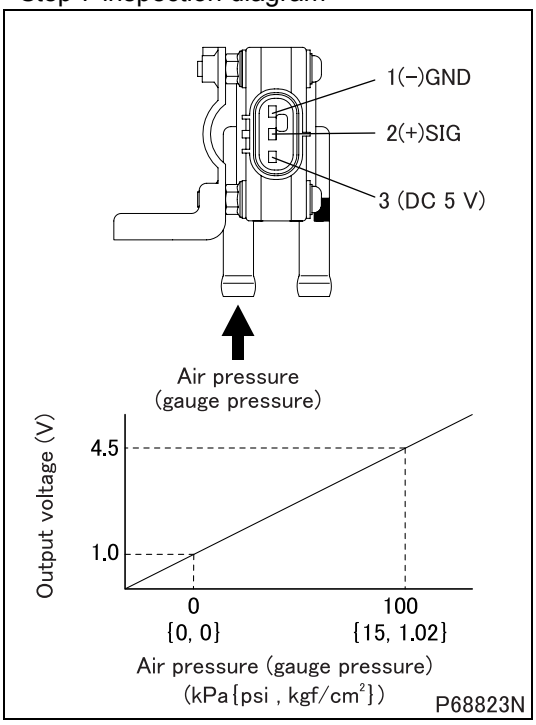
<Step 5 inspection diagram>



Step 6	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral (place the automatic transmission in P range). • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related Information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F} (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”).
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of electronic control unit

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1418/Flash code: 92
[Monitor]
Temperature increase is insufficient for manual diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Temperature in diesel particulate filter during manual diesel particular filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- If temperature remains over 620°C {1148°F} for 10 minutes after start of manual diesel particulate filter regeneration.

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

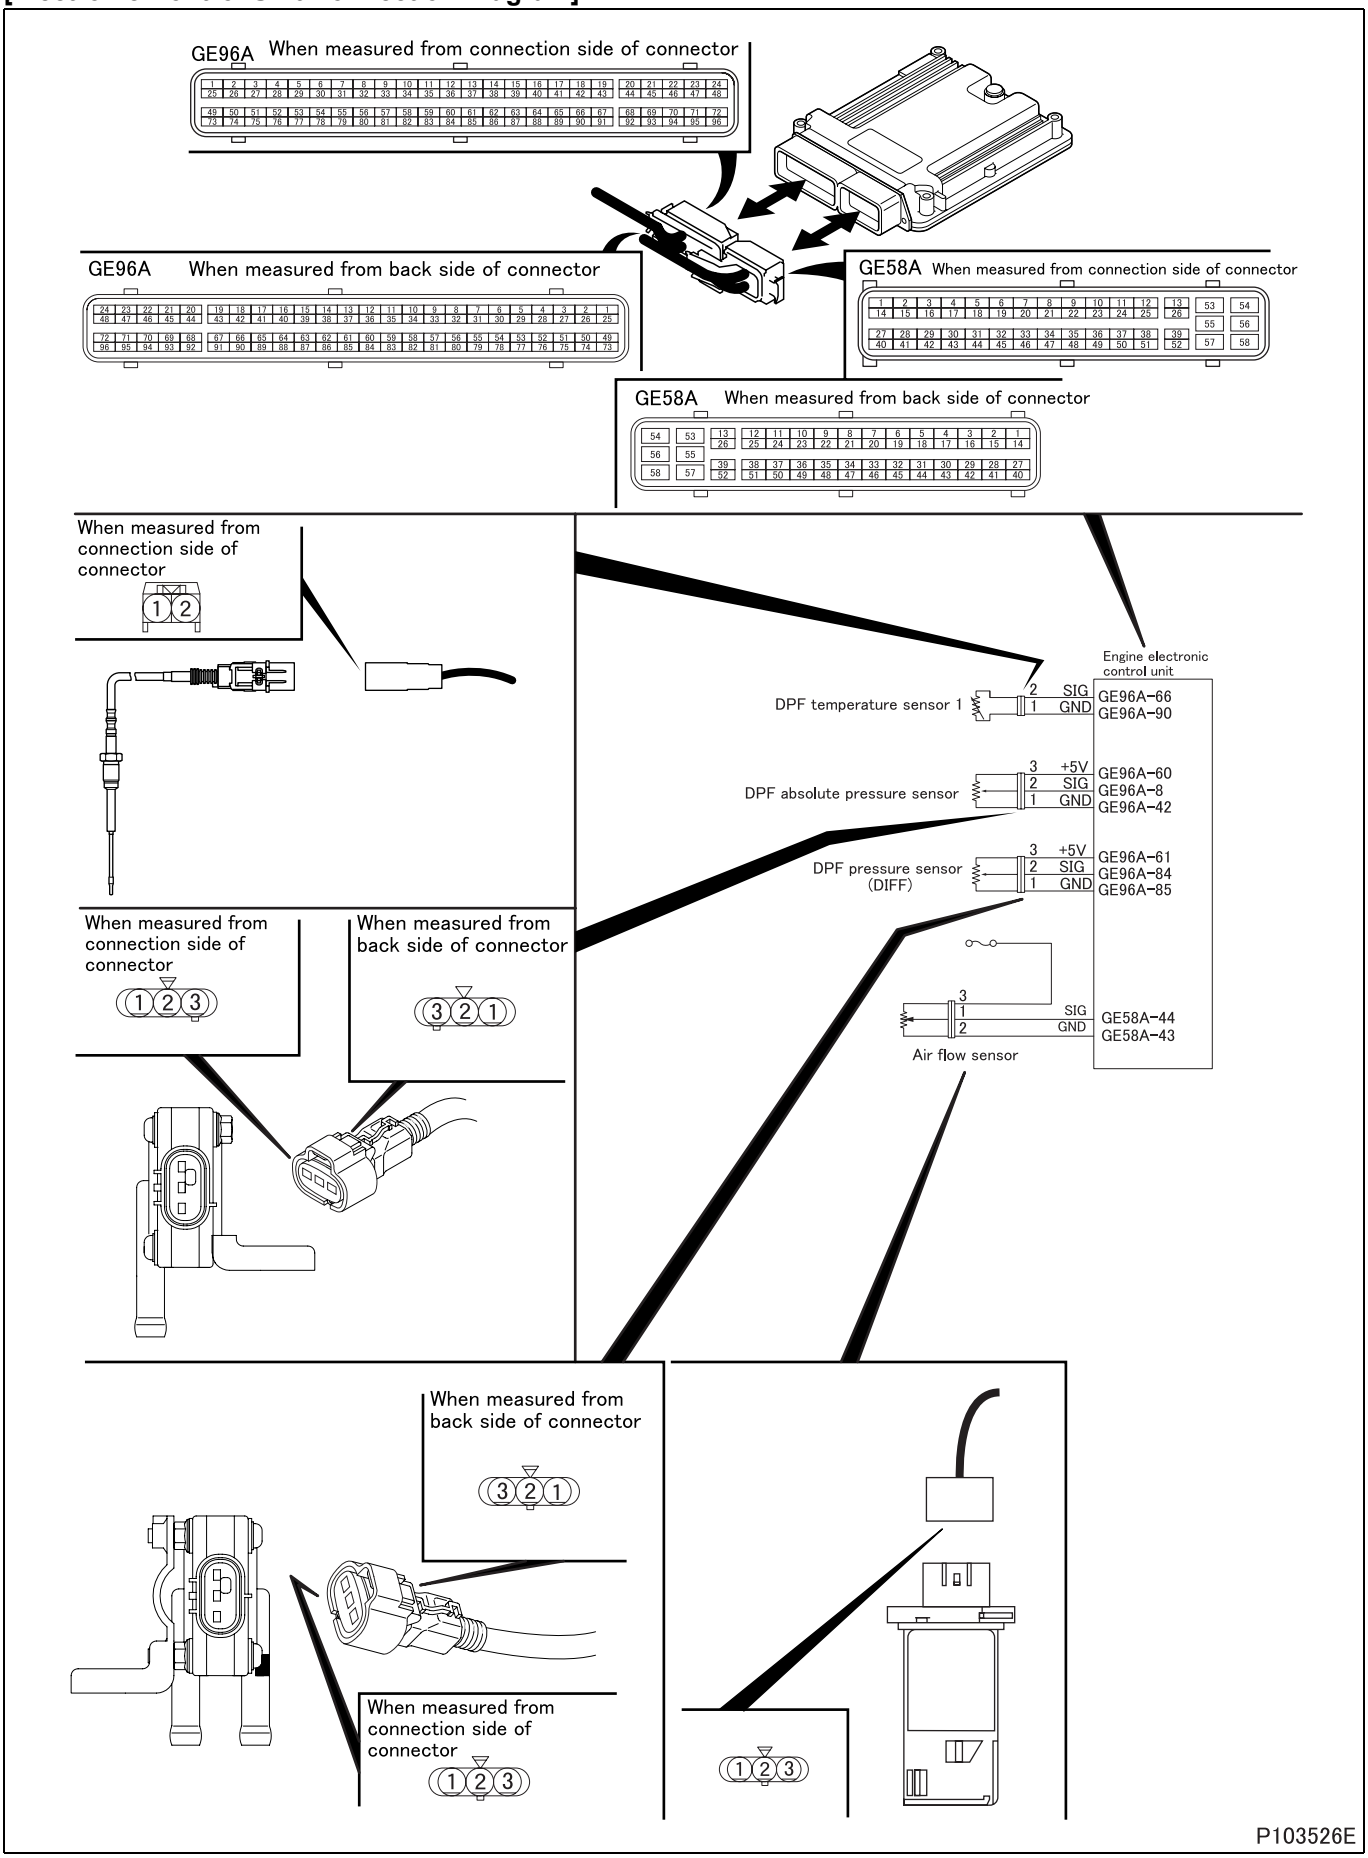
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

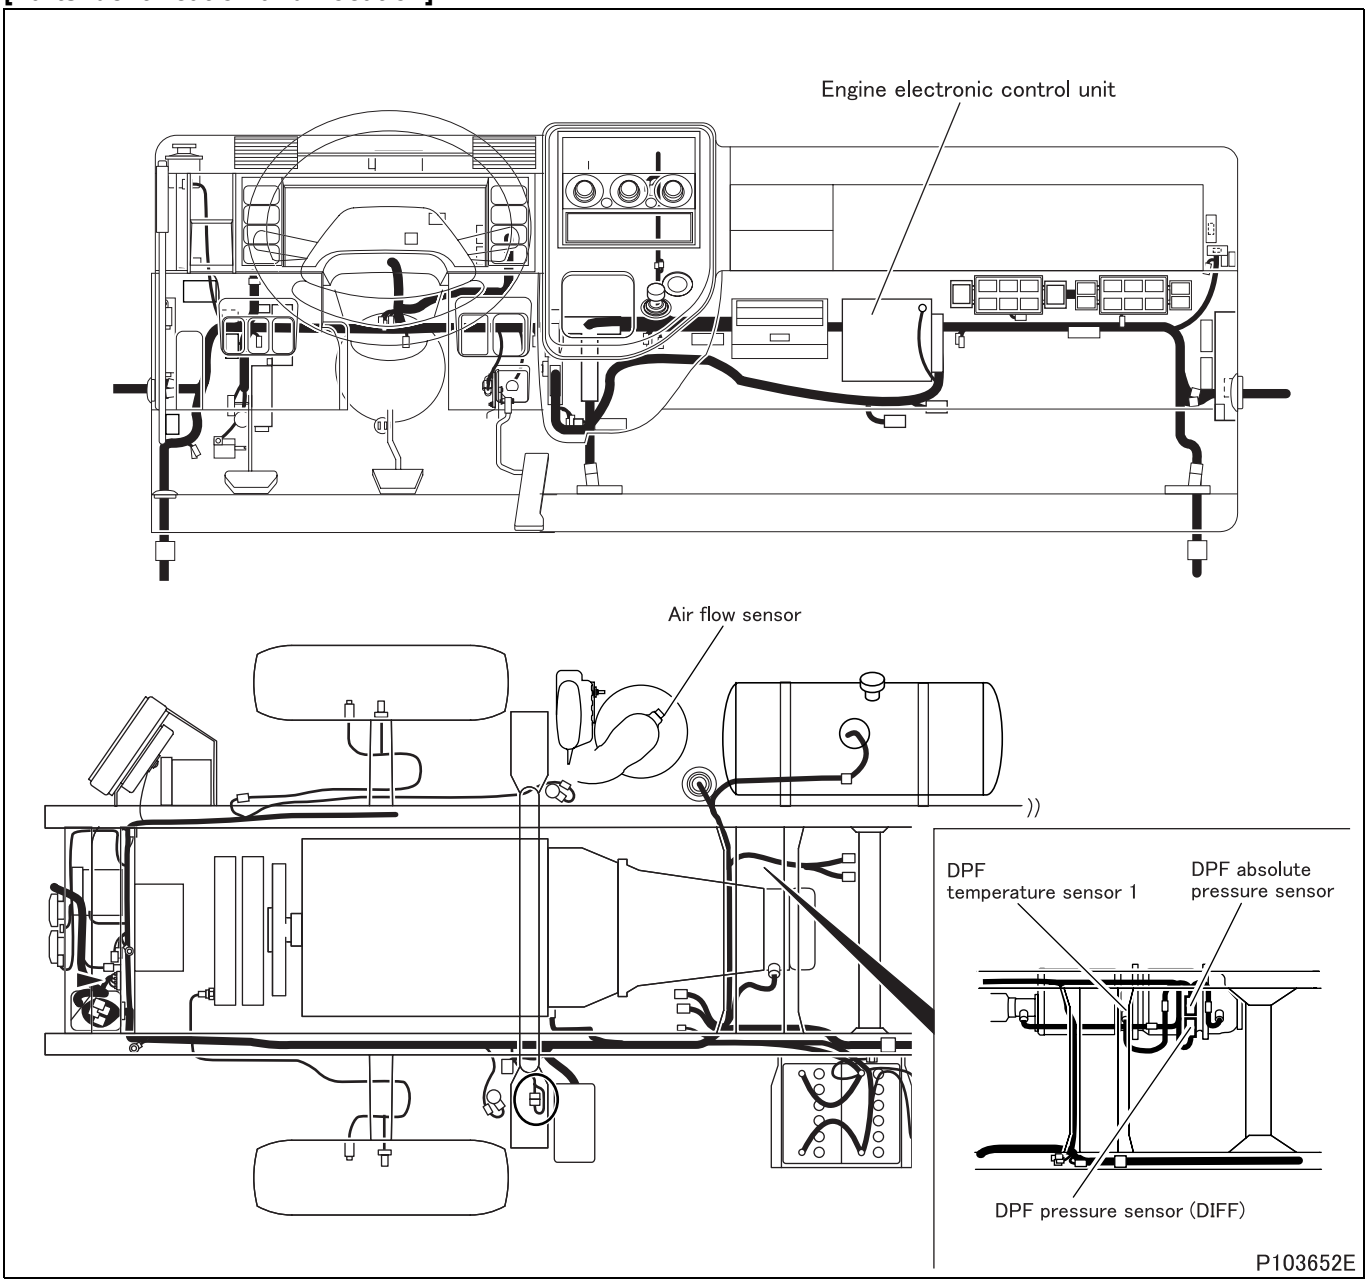
[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



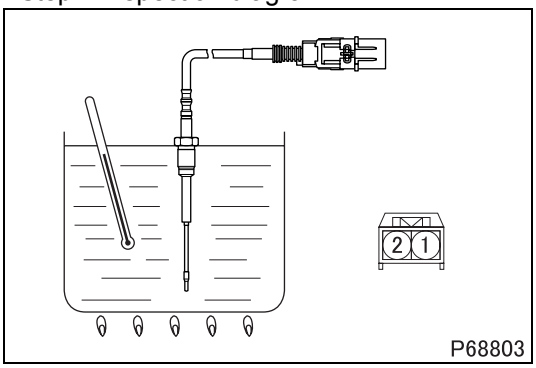
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring and go to step 2.
		NO	Go to step 2.

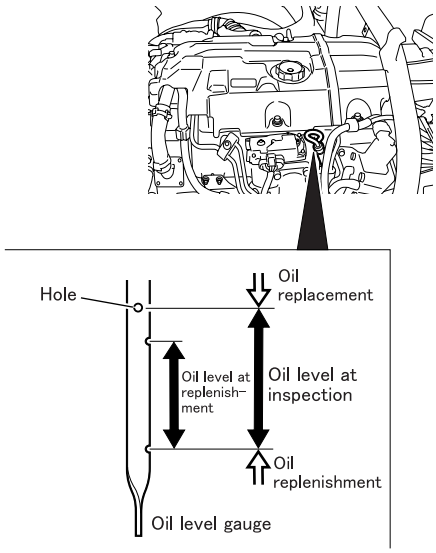
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4

<Step 3 inspection diagram>

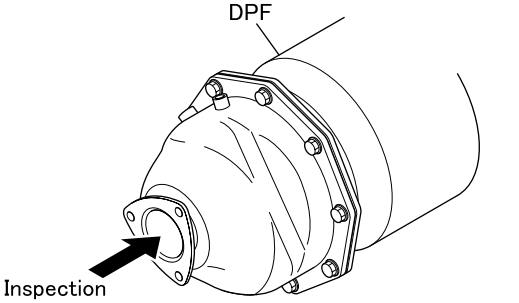


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

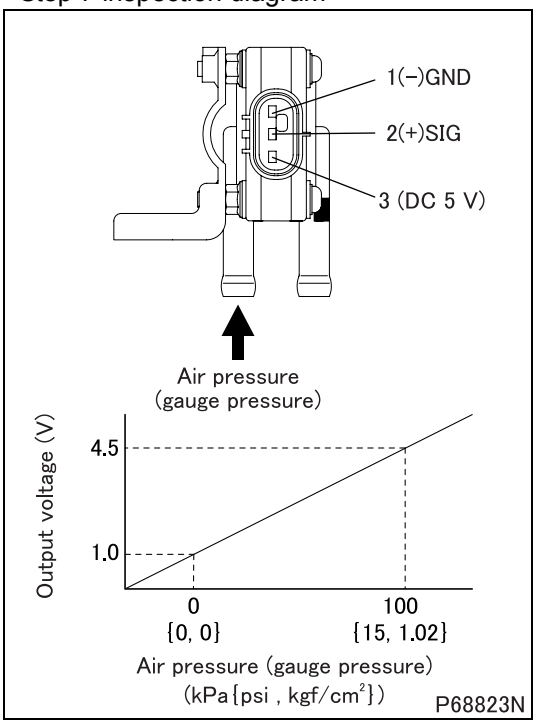
<Step 5 inspection diagram>



Step 6	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral (place the automatic transmission in P range). • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related Information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F} (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”).
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of electronic control unit

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1419/Flash code: 92
[Monitor]
Failure of manual diesel particulate filter regeneration control
[Fault (outline)]
Plausibility
[Diagnosis check]
- Duration of manual diesel particulate filter regeneration is monitored.

[Code generation condition]
- Regeneration exceeds specified time. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

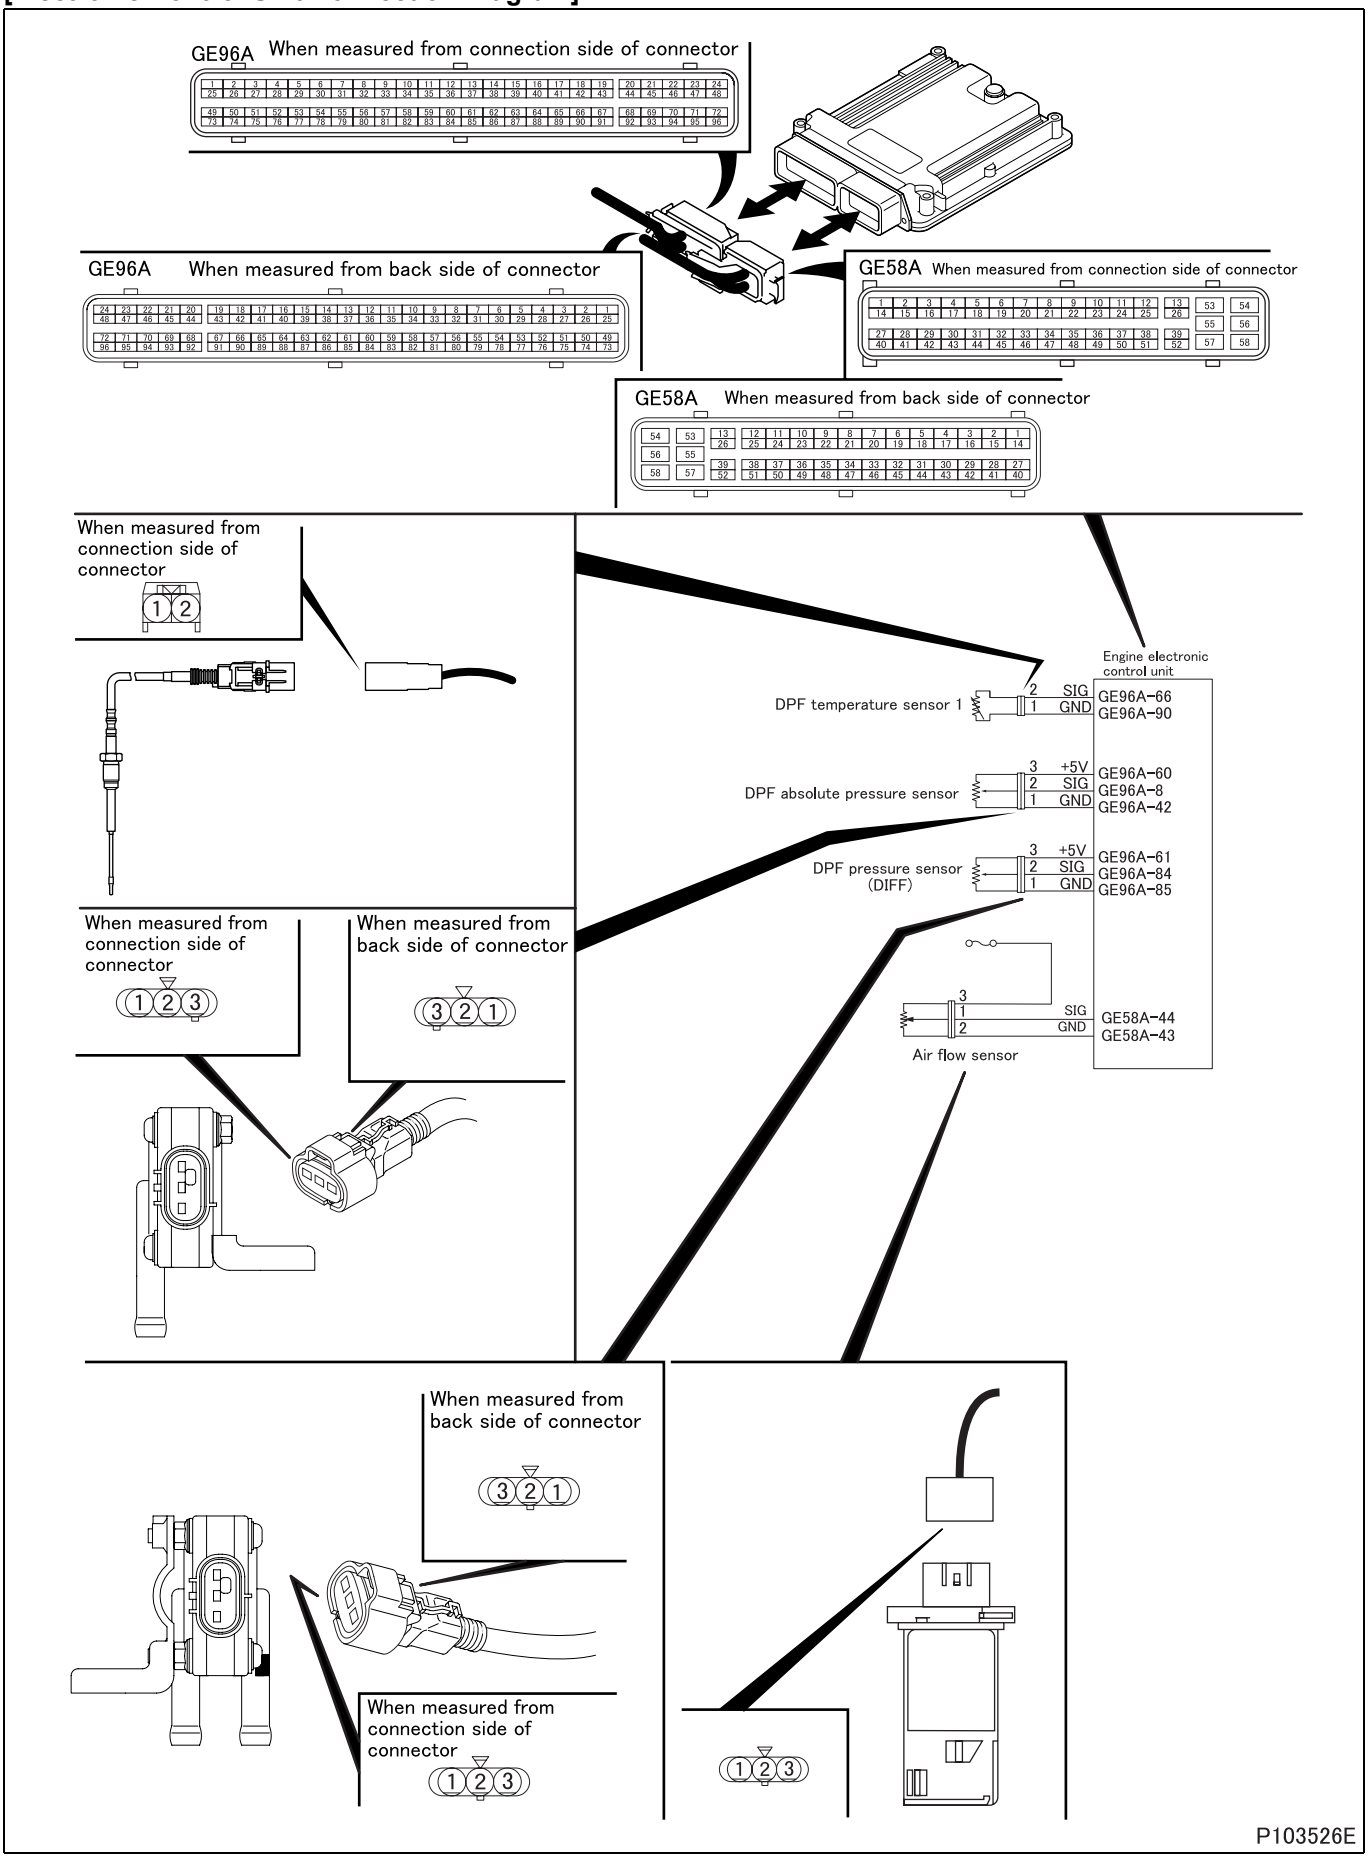
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

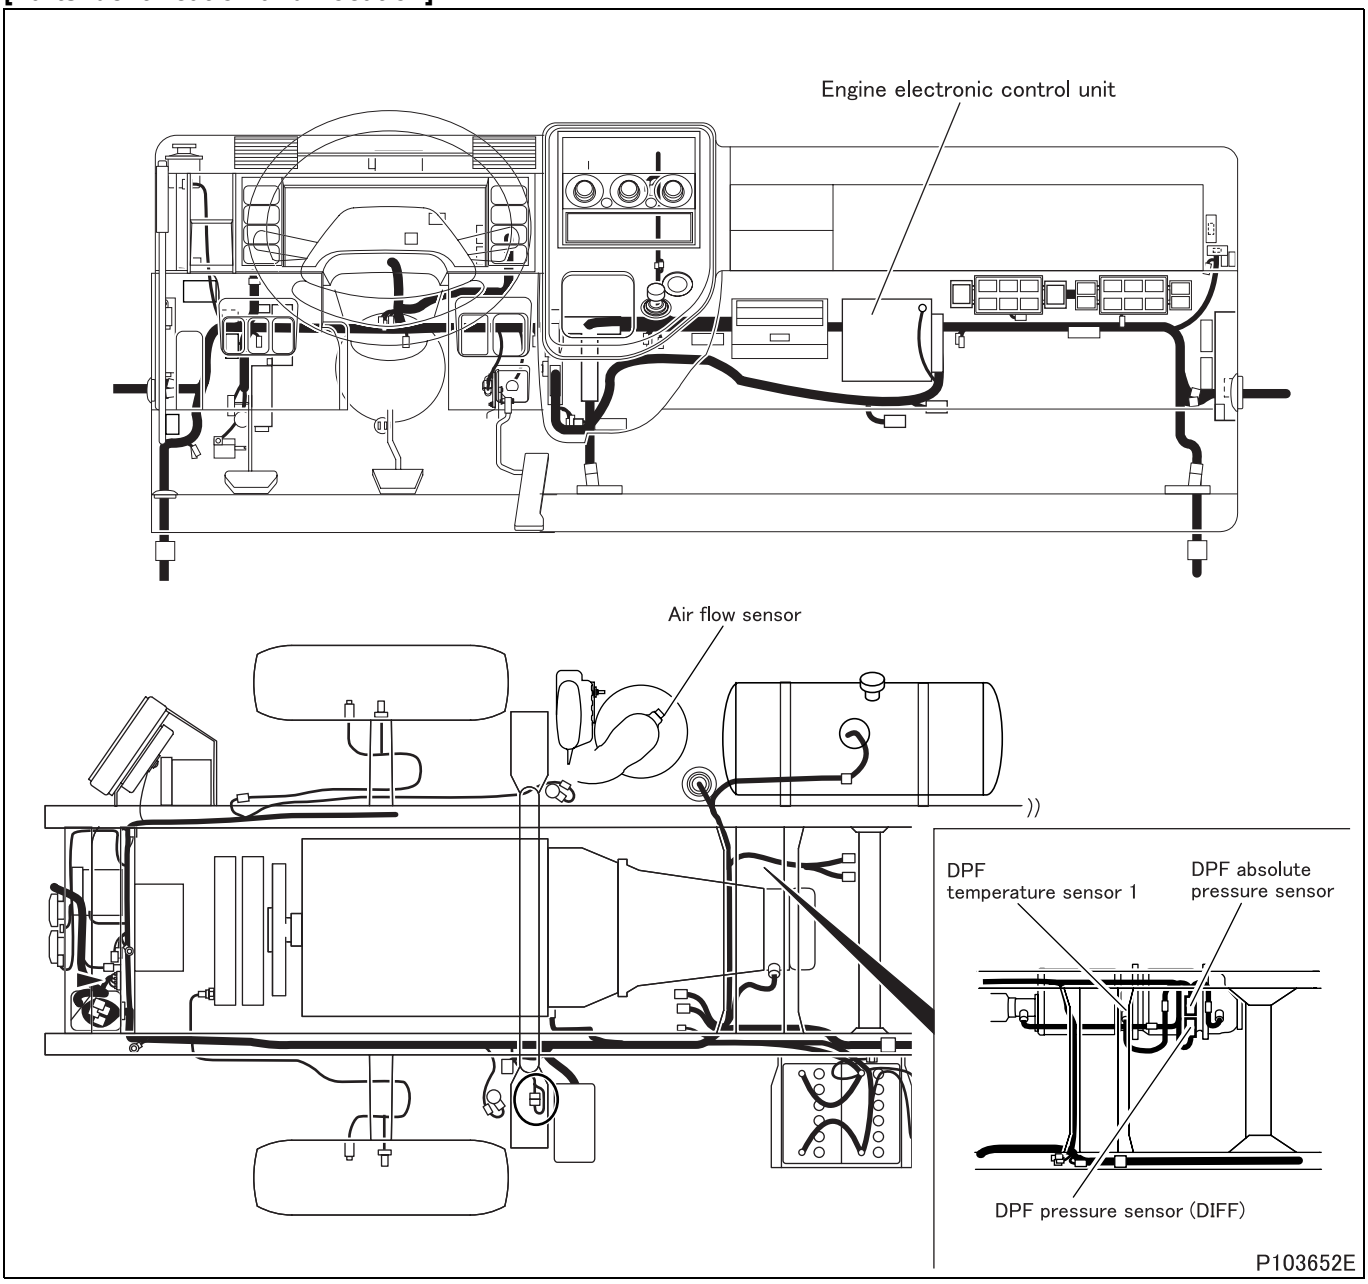
[Probable cause of trouble]
- Malfunction of diesel particulate filter regeneration control
- Malfunction of DPF temperature sensor 1
- Malfunction of engine electronic control unit
- Malfunction of common rail
- Malfunction of diesel particulate filter (front oxidation catalyst)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



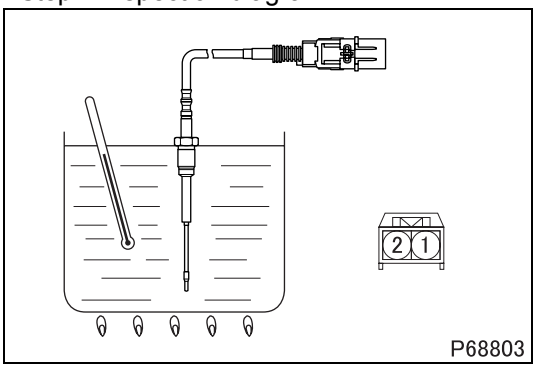
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring and go to step 2.
		NO	Go to step 2.

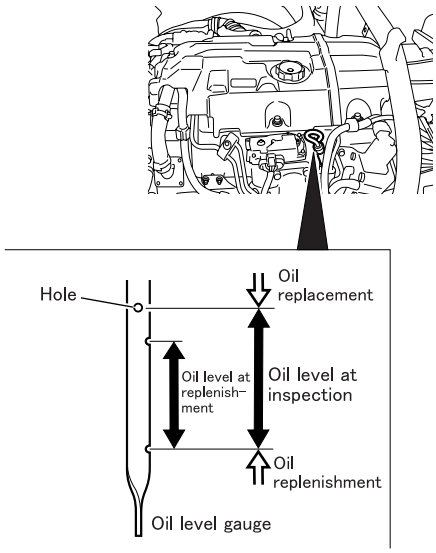
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4

<Step 3 inspection diagram>

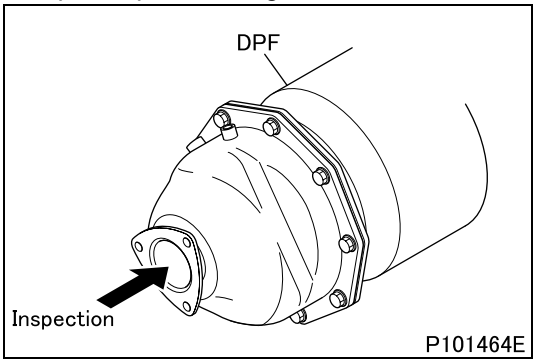


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

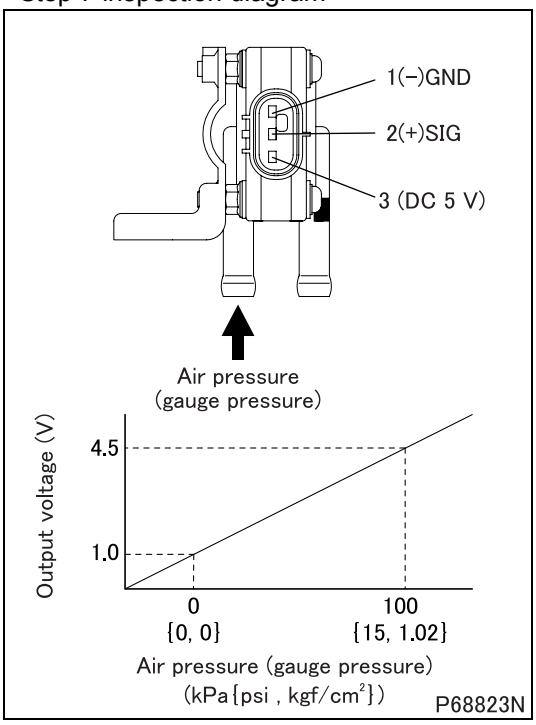
<Step 5 inspection diagram>



Step 6	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral (place the automatic transmission in P range). • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related Information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F} (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”).
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of electronic control unit

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of sensor

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1421/Flash code: 92
[Monitor]
Diesel particulate filter clogged
[Fault (outline)]
Plausibility
[Diagnosis check]
- Particulate matter (PM) deposit estimated by engine electronic control unit exceeded specified value.

[Code generation condition]
- Particulate matter (PM) deposit is more than specified value (clogging level: low).
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

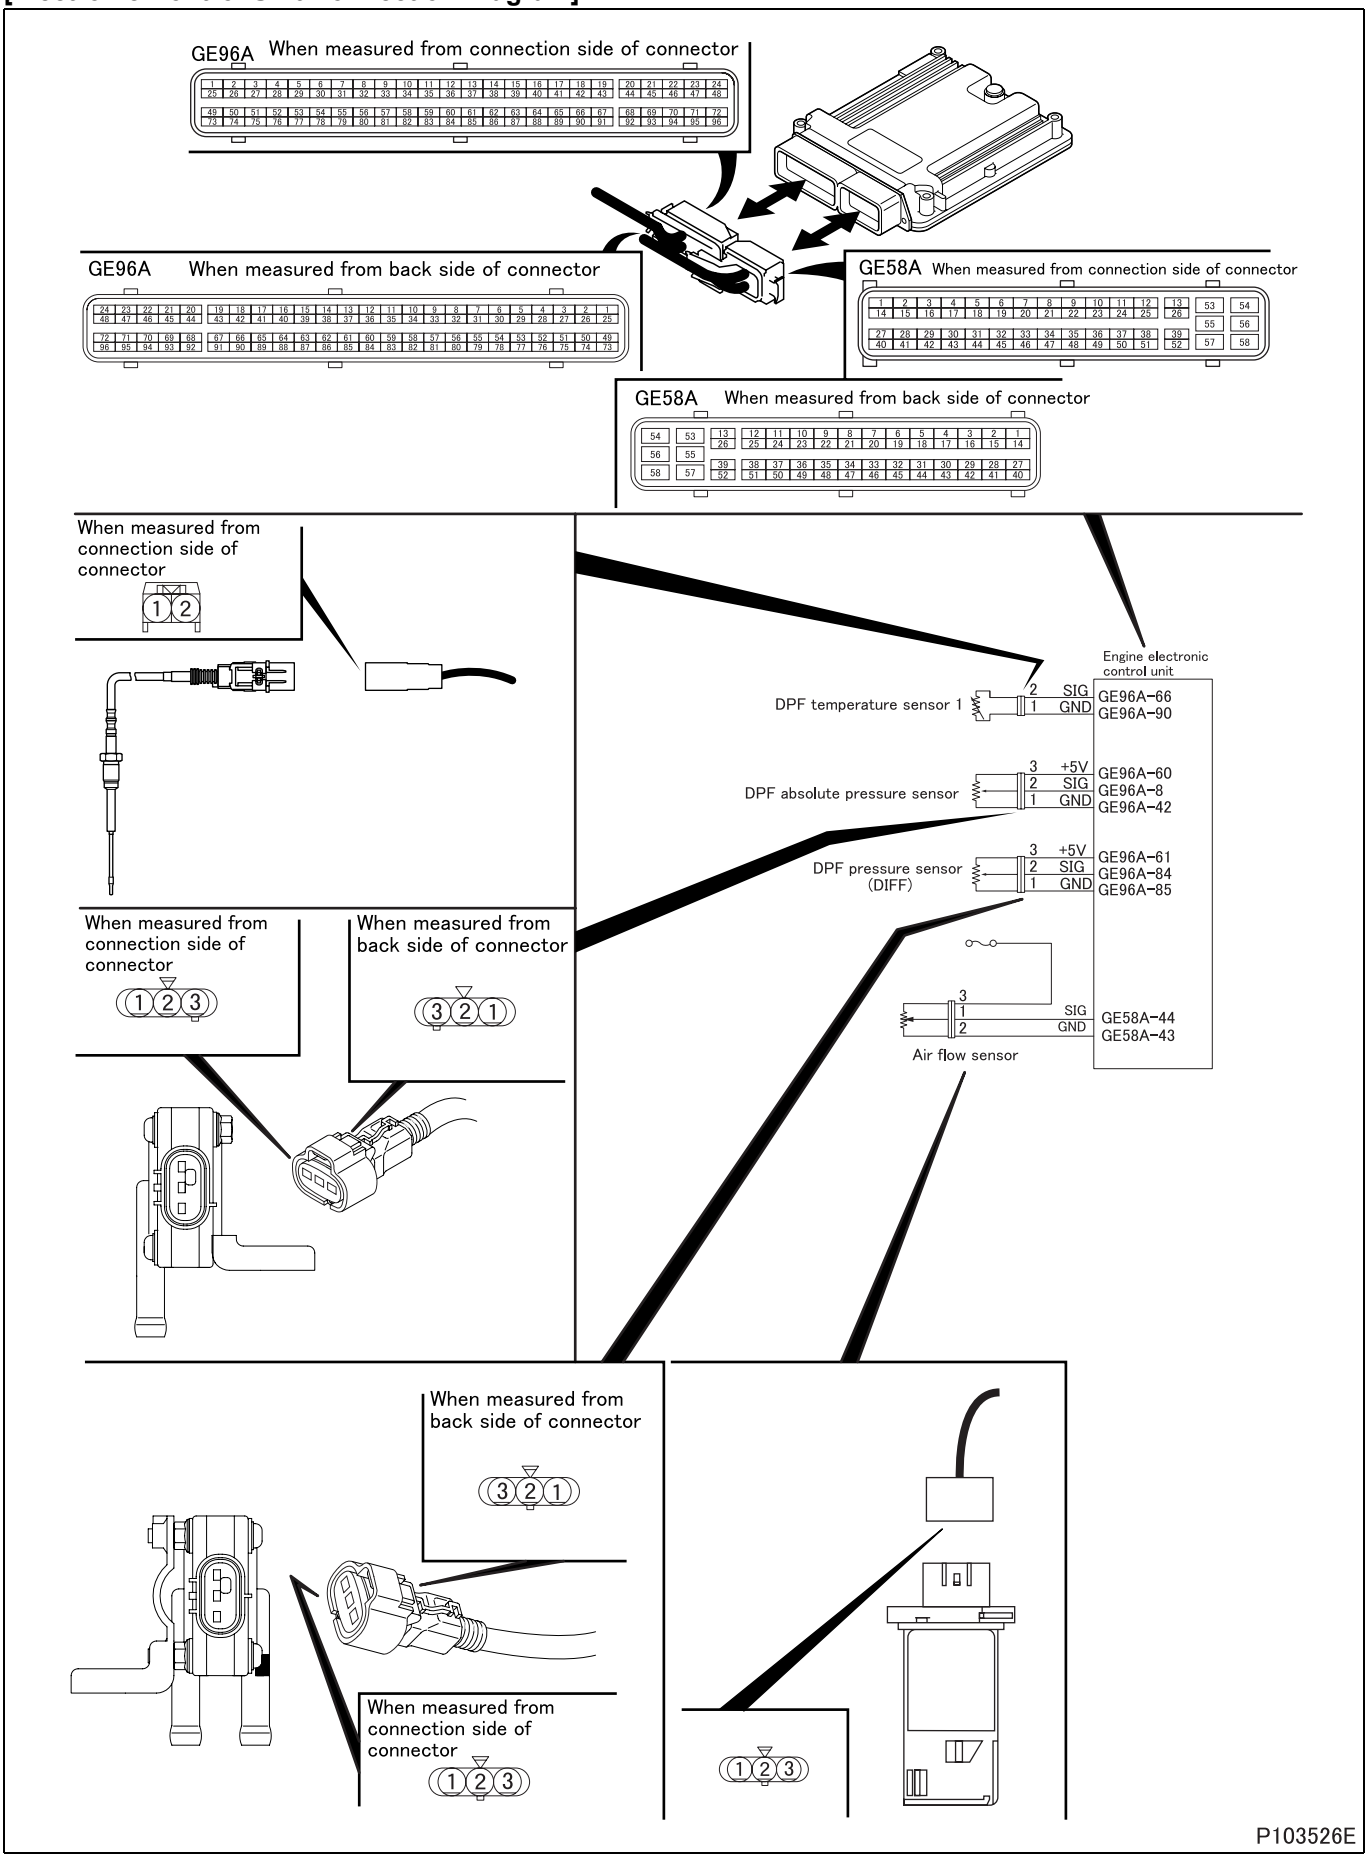
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>

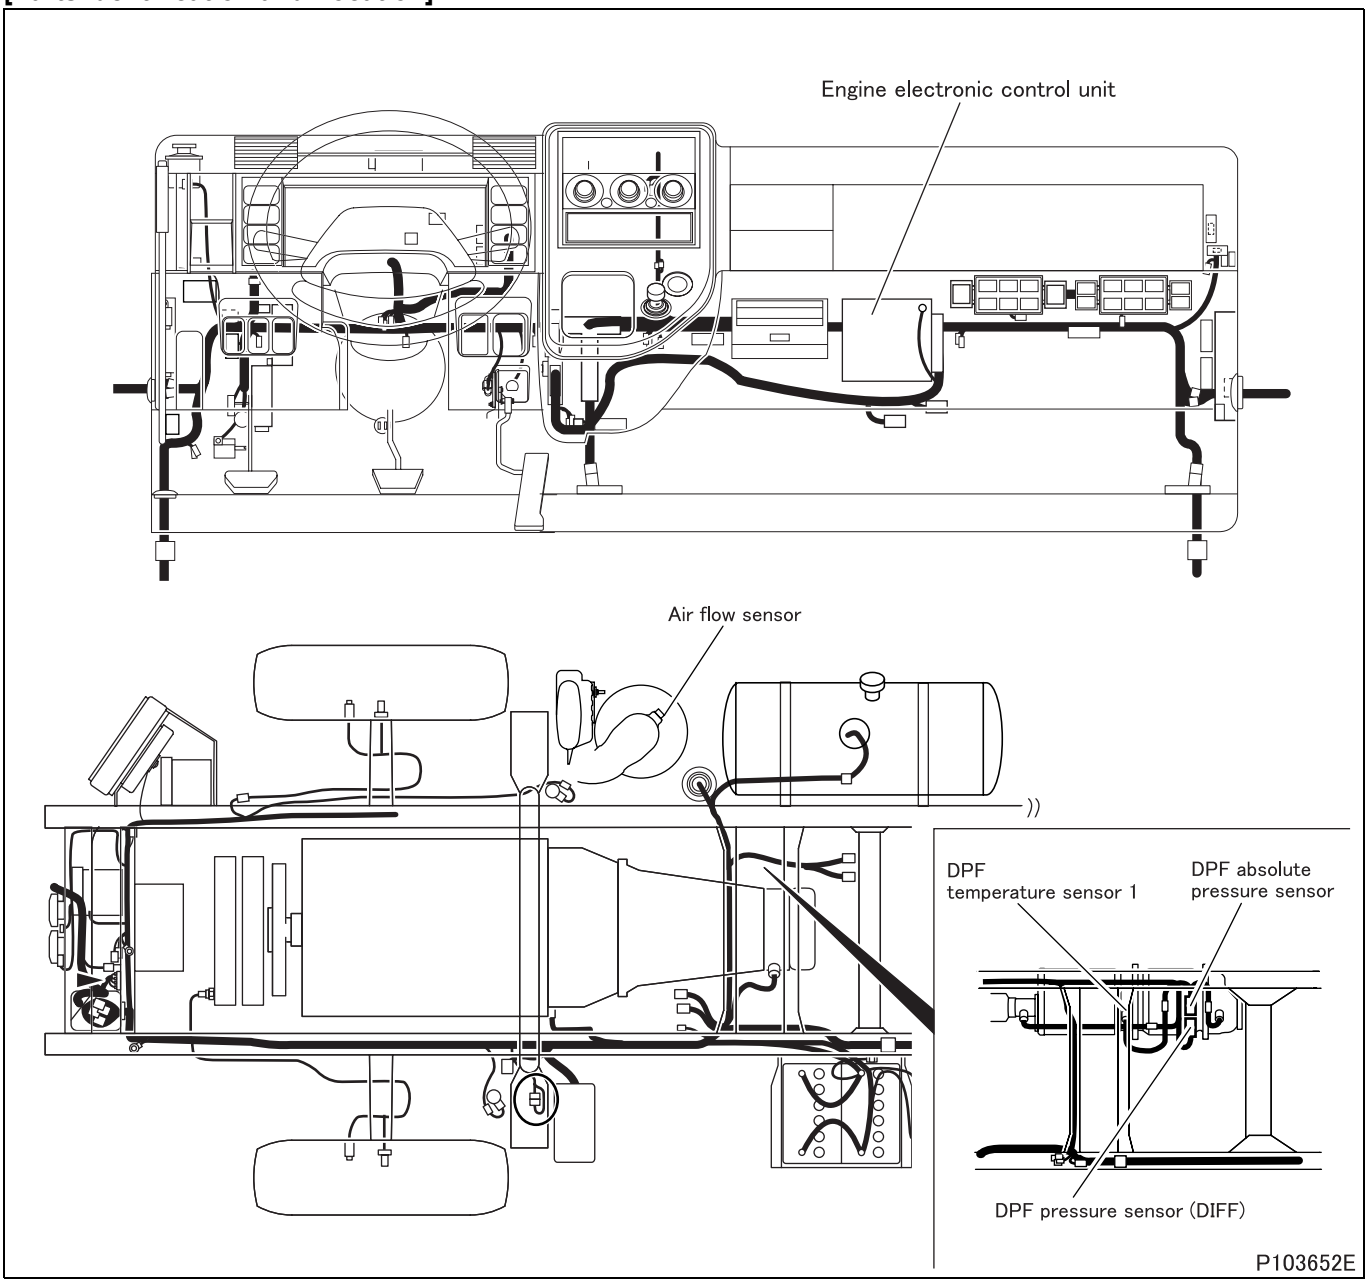
[Probable cause of trouble]
- Failure of diesel particulate filter indicator lamp
- Failure of diesel particulate filter cleaning switch
- Manual diesel particulate filter regeneration is not performed.
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of air flow sensor
- Malfunction of DPF absolute pressure sensor or DPF pressure sensor (DIFF)
- Malfunction of diesel particulate filter

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]

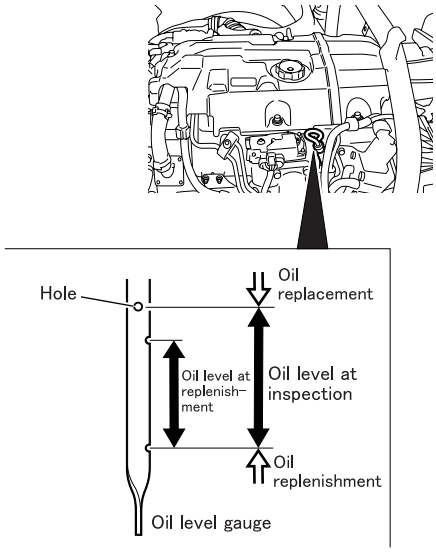


[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	After replacement of oil, go to step 2

<Step 1 inspection diagram>

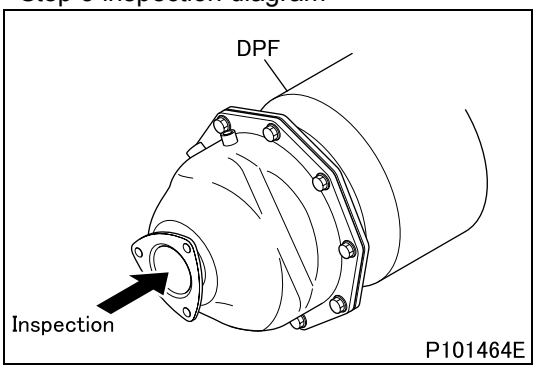


P103677E

Step 2	Inspection items		Inspection by manual diesel particulate filter regeneration
	Maintenance item		Perform Multi-Use Tester actuator test item No. A5 “DPF Regeneration (Manual)”, and clean ceramic diesel particulate filter.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Engine: idling • Place the transmission in neutral. (place the automatic transmission in P range) • Parking brake: vehicle parked (parking brake switch: ON) • After engine warm-up
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 3.

Step 3	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

<Step 3 inspection diagram>



Step 4	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 5.

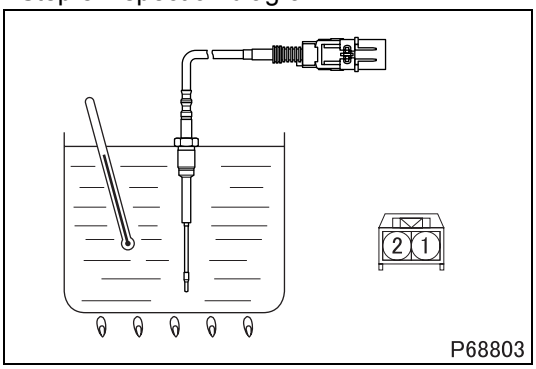
Step 5	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp illuminates (automatic reset after 15 seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of engine electronic control unit

Step 6	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of diesel particulate filter cleaning switch or engine electronic control unit

Step 7	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	After correction and replacement of hose, go to step 8.

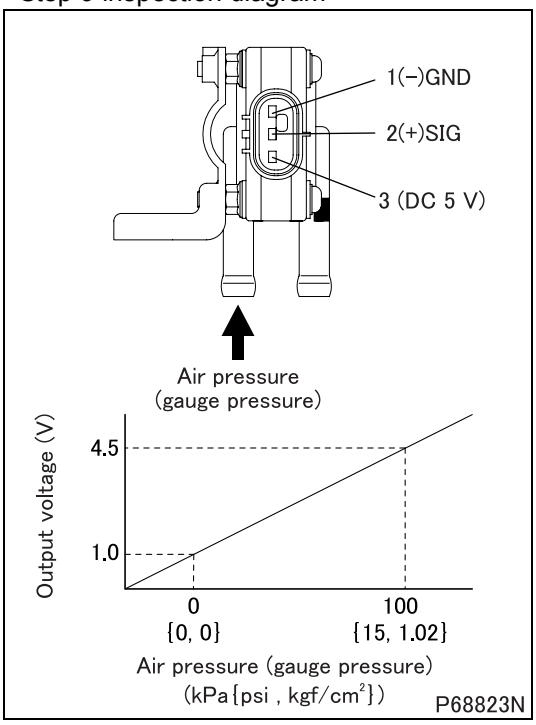
Step 8	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Cleaning of sensor

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection of DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of DPF pressure sensor (DIFF)

<Step 9 inspection diagram>



Step 10	Inspection items		Inspection of air flow sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Replacement of air flow sensor

Step 11	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	• Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve) • Inspection of engine
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1422/Flash code: 92
[Monitor]
Diesel particulate filter clogged
[Fault (outline)]
Plausibility
[Diagnosis check]
- Particulate matter (PM) deposit estimated by engine electronic control unit exceeded specified value.

[Code generation condition]
- Particulate matter (PM) deposit is more than specified value (clogging level: medium to high).
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

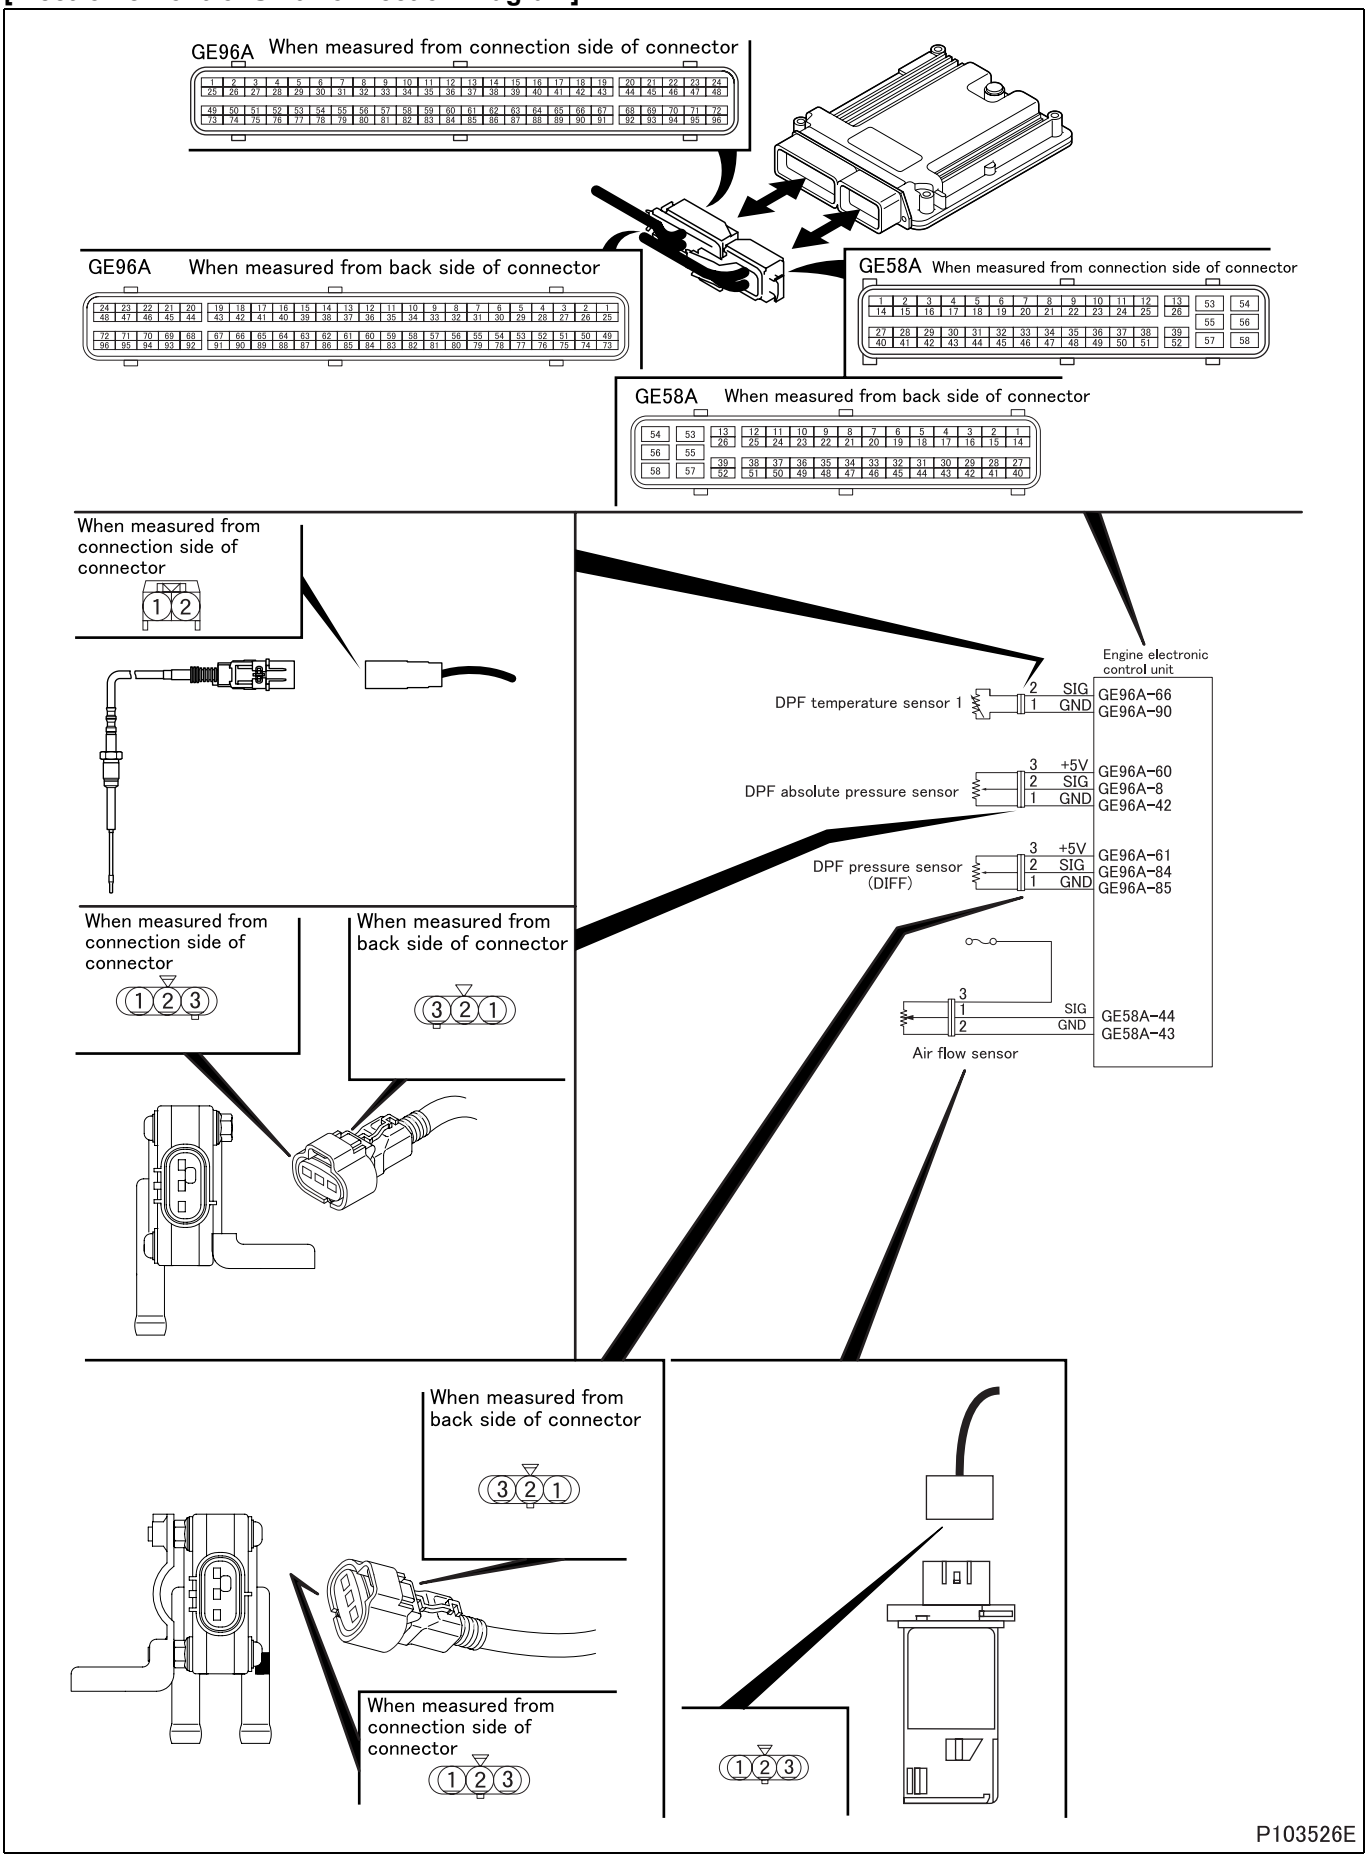
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Auto cruise control stopped
- Traction control is stopped <Automatic transmission>
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Failure of diesel particulate filter indicator lamp
- Failure of diesel particulate filter cleaning switch
- Manual diesel particulate filter regeneration is not performed.
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of air flow sensor
- Malfunction of DPF absolute pressure sensor or DPF pressure sensor (DIFF)
- Malfunction of diesel particulate filter

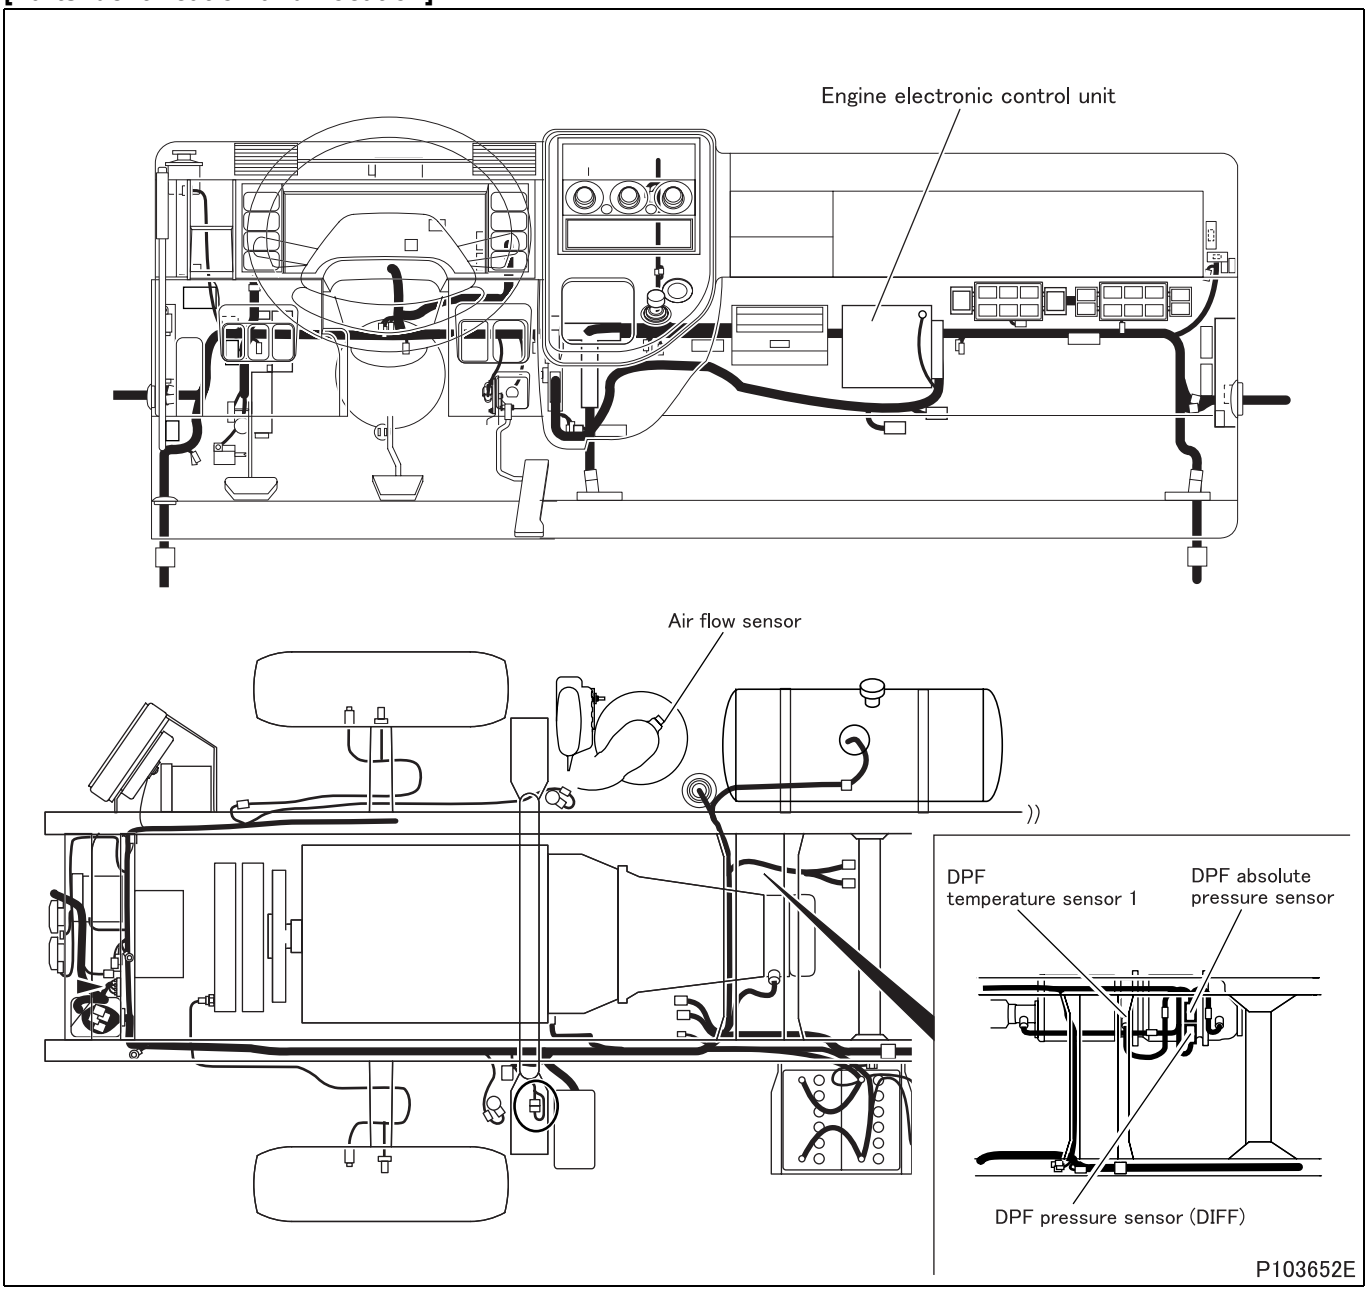
[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



P103526E

[Parts Identification and Location]

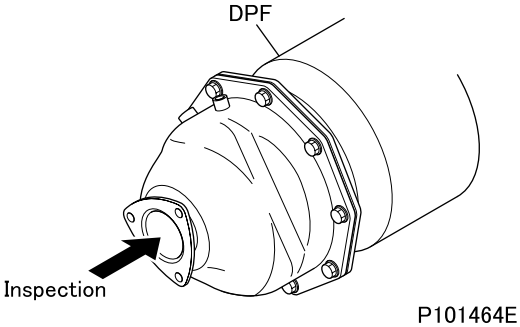


[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

<Step 1 inspection diagram>



Step 2	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 3.

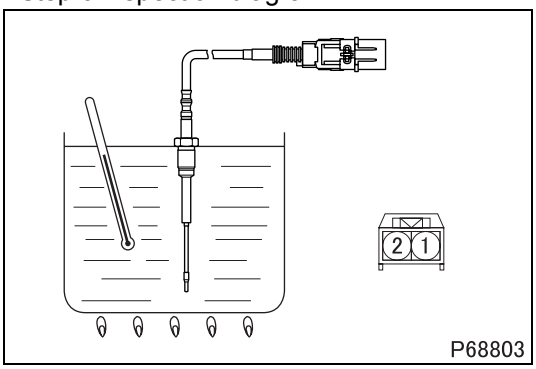
Step 3	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp illuminates (automatic reset after 15 seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of engine electronic control unit

Step 4	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of diesel particulate filter cleaning switch or engine electronic control unit

Step 5	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After correction and replacement of hose, go to step 6.

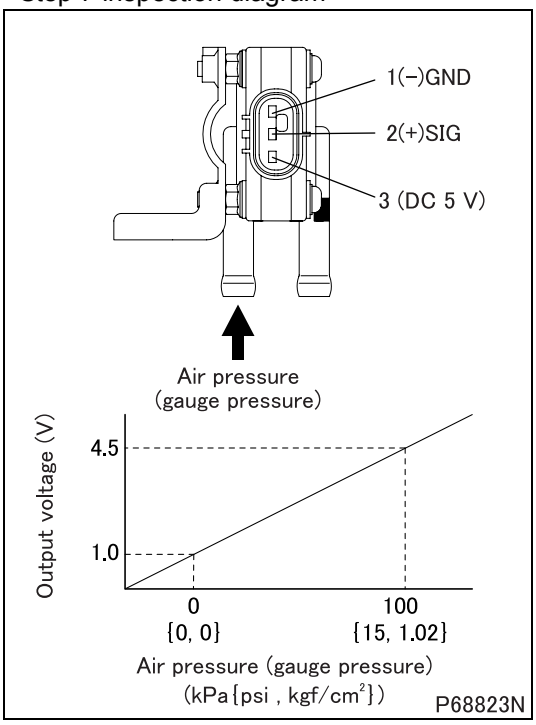
Step 6	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Cleaning of sensor

<Step 6 inspection diagram>



Step 7	Inspection items		Inspection of DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of DPF pressure sensor (DIFF)

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of air flow sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of air flow sensor

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	• Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve) • Inspection of engine
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1430/Flash code: 78
[Monitor]
Failure of diesel particulate filter cleaning switch
[Fault (outline)]
Plausibility
[Diagnosis check]
- Working condition of diesel particulate filter cleaning switch during manual diesel particulate filter regeneration is monitored.

[Code generation condition]
- Output signal remains ON for 60 seconds after diesel particulate filter cleaning switch turned ON for manual filter regeneration is turned OFF.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

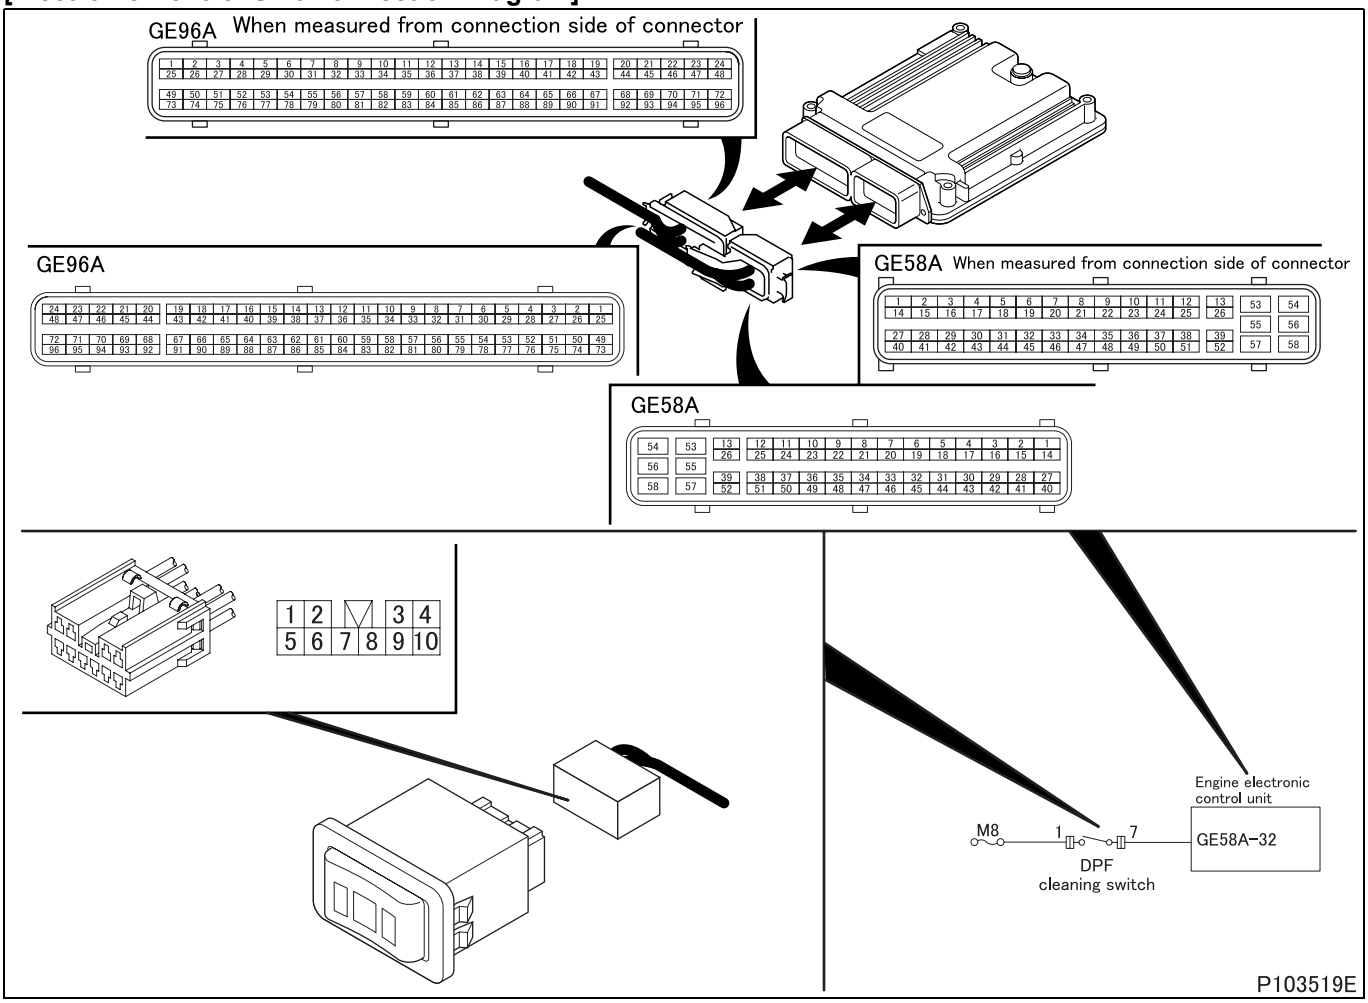
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

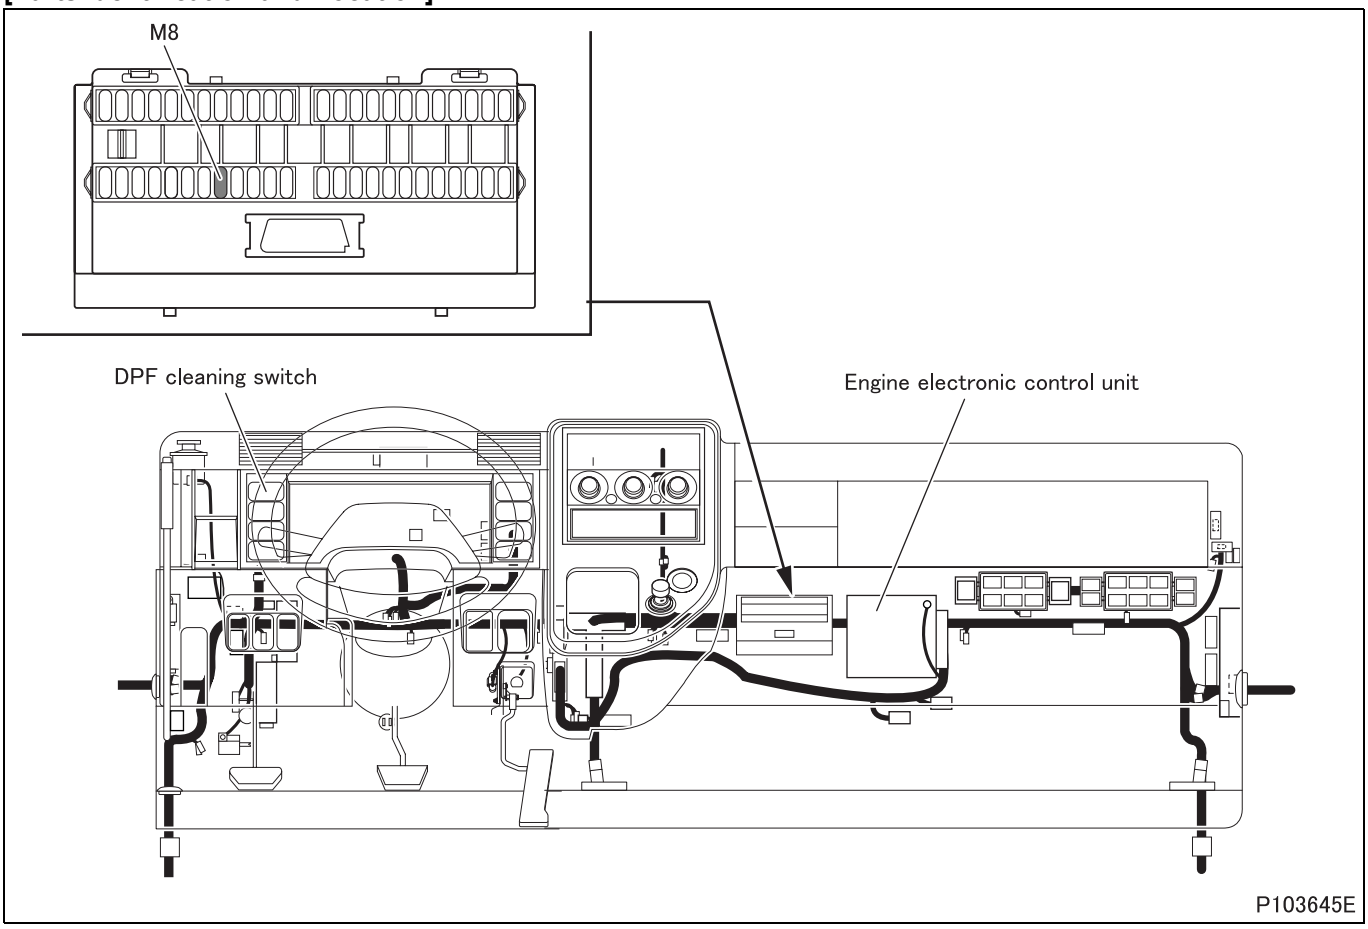
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and switch
- Malfunction of each connector
- Malfunction of switch
- Malfunction of engine electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

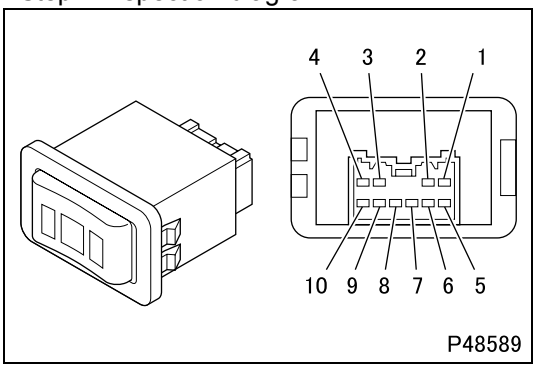
Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of diesel particulate filter cleaning switch connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of diesel particulate filter cleaning switch unit
	Maintenance item		• Switch: Check continuity between connector terminal No. 1 and 8. • Switch ON: Check continuity between connector terminal No. 1 and 7.
	Inspection condition		Disconnect connector and measure switch side.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of switch

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between electronic control unit and diesel particulate filter cleaning switch
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 32 and diesel particulate filter cleaning switch connector terminal No. 7.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between fuse and diesel particulate filter cleaning switch
	Maintenance item		Check circuit between fuse M8 and diesel particulate filter cleaning switch connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P1435/Flash code: 92
[Monitor]
Diesel particulate filter broken
[Fault (outline)]
Efficiency below threshold (blocked diesel particulate filter)
[Diagnosis check]
- Ceramic filter is monitored for clogging through DPF pressure sensor (DIFF) during operation of diesel particulate filter regeneration function.

[Code generation condition]
- Difference between actual diesel particulate filter pressure and maximum pressure calculated by electronic control unit remains out of control map for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Pressure adjustment in DPF pressure sensor (DIFF):
  Has been carried out this drive cycle ; for drift correction, the following conditions exist for >5s :
  - Engine speed: less than 875 rpm
  - Fuel injection quantity: below 25 mg/cyc
  - Exhaust flow rate: less than 90 m^3/h
  - Exhaust gas recirculation valve position: more than 8 mm {0.3 in.}
- Exhaust volume-flow rate: 500 to 900 m^3/h
- Diesel particulate filter inlet temperature: 200 to 400°C {392 to 752°F}
- Water temperature: 65 to 110°C {149 to 230°F}
- Atmospheric pressure: more than 750 mbar {10.87 psi}
- Approximate environment atmospheric temperature: –7 to 50°C {19 to 122°F}
- Frequency of diesel particulate filter regeneration control: less than 3 times (discontinued after start of diesel particulate filter regeneration control)
- Soot deposit: 15 to 30 g {0.53 to 1.06 oz}
- Diesel particulate filter regeneration control: not effected
- Controller area network communication of exhaust gas recirculation electronic drive unit: in order
- DPF pressure sensor (DIFF): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Catalytic temperature sensor: in order
- DPF temperature sensor 1: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order

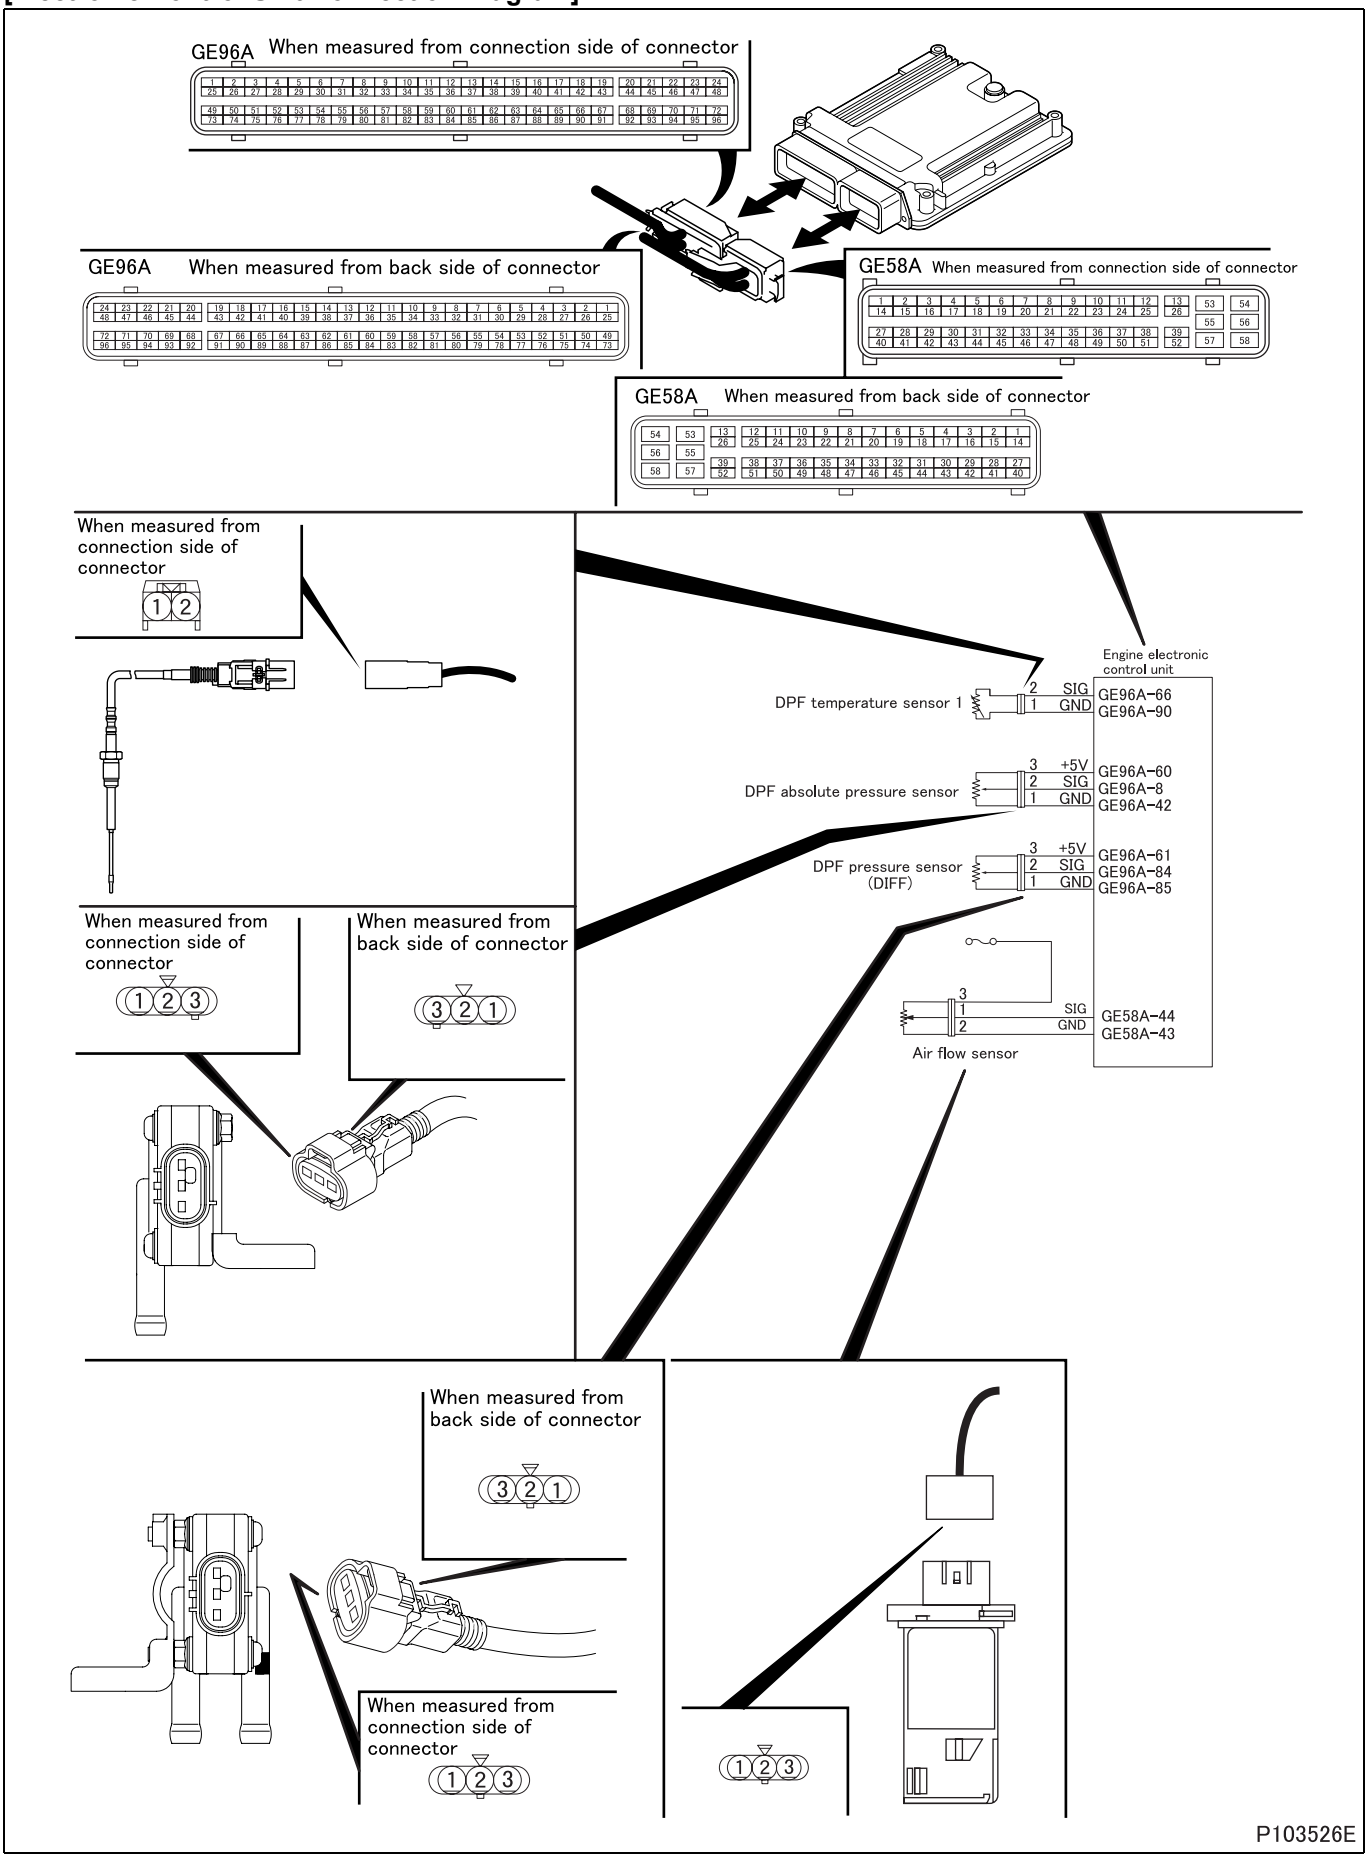
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the engine model.
<Except FE83>
- Engine torque is limited.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<FE83>
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Damage of ceramic filter
- Failure of diesel particulate filter indicator lamp
- Failure of diesel particulate filter cleaning switch
- Manual diesel particulate filter regeneration is not performed.
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of air flow sensor
- Malfunction of DPF absolute pressure sensor or DPF pressure sensor (DIFF)

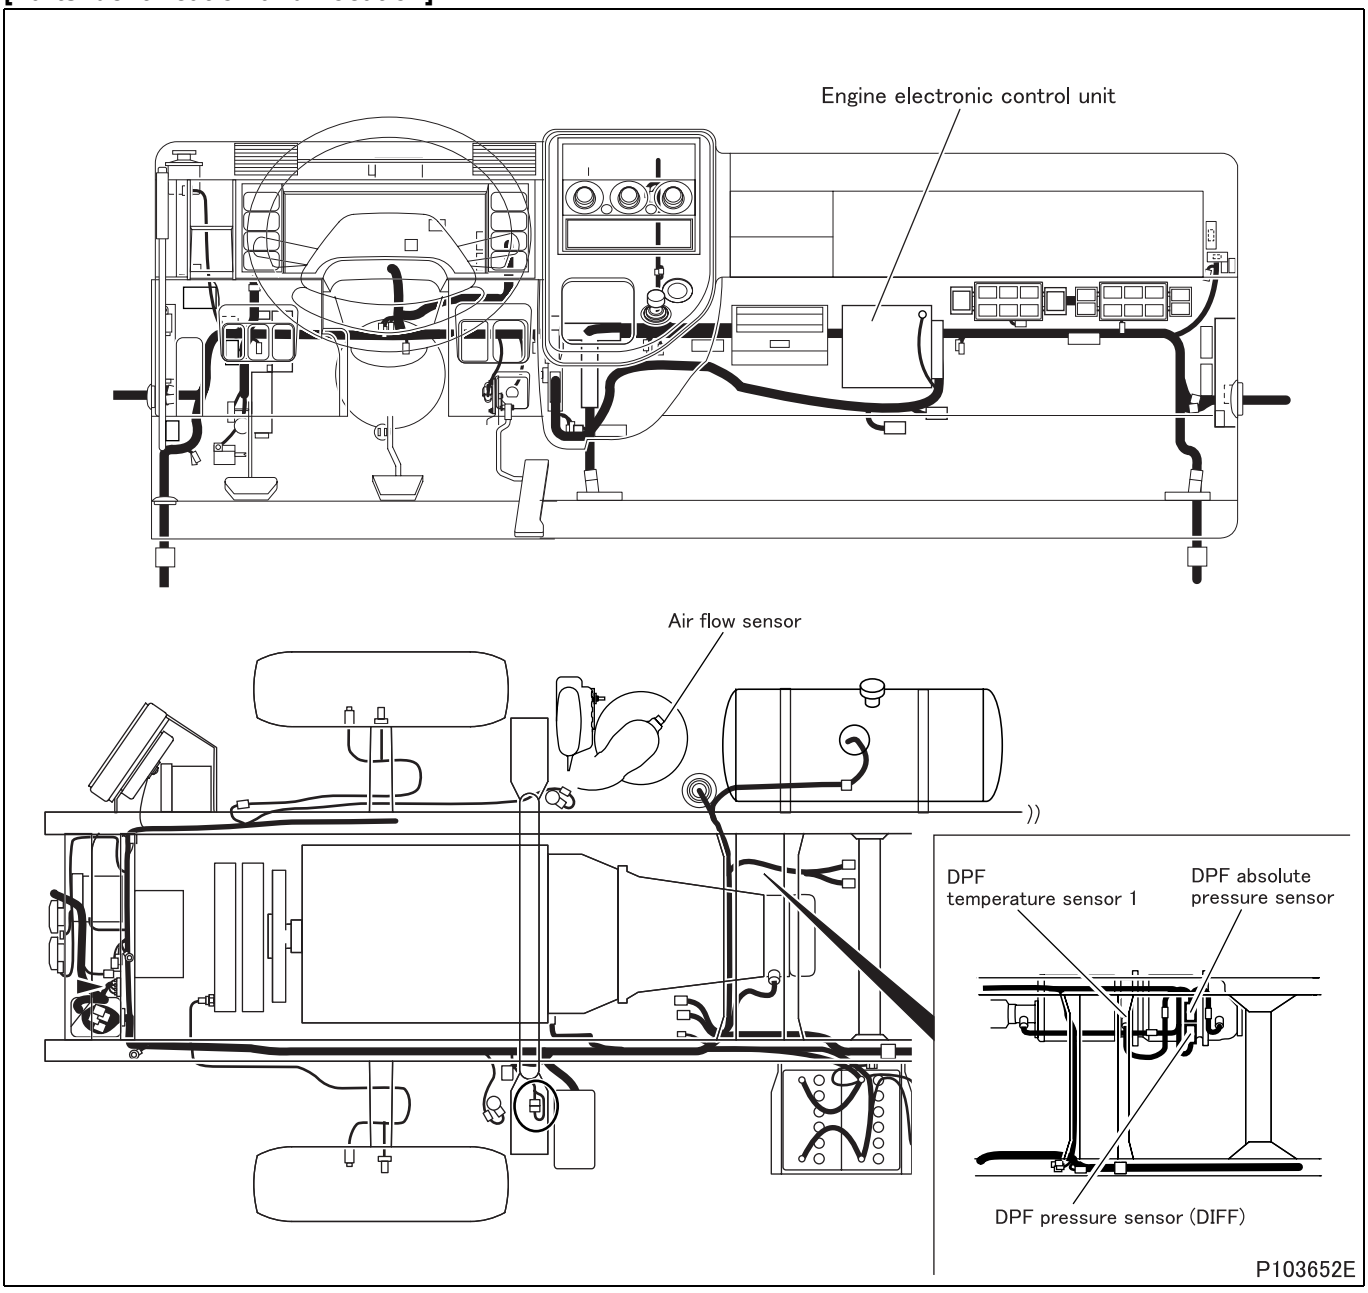
[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



P103526E

[Parts Identification and Location]

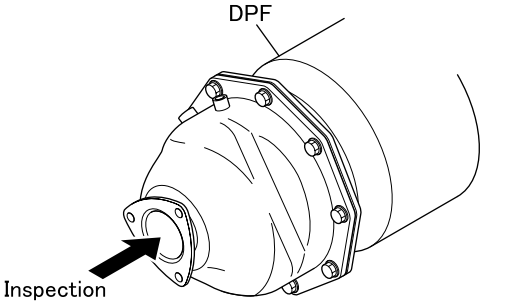


[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

<Step 1 inspection diagram>



Step 2	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 3.

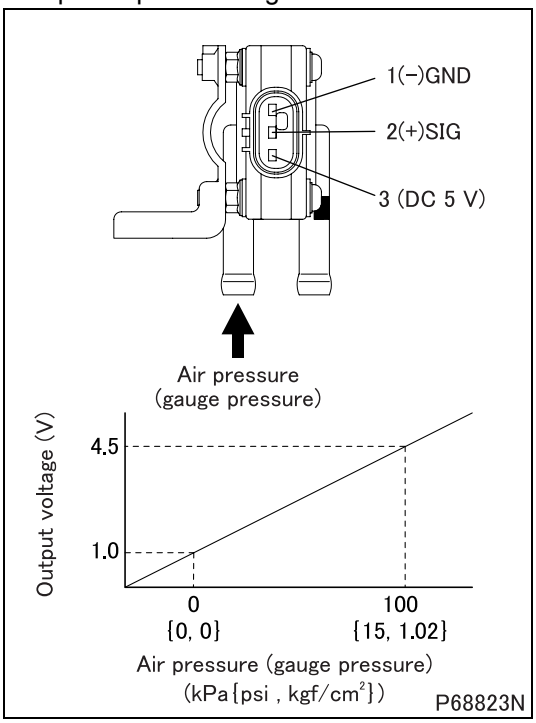
Step 3	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp illuminates (automatic reset after 15 seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of engine electronic control unit

Step 4	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of diesel particulate filter cleaning switch or engine electronic control unit

Step 5	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	After correction and replacement of hose, go to step 6.

Step 6	Inspection items		Inspection of DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of DPF pressure sensor (DIFF)

<Step 6 inspection diagram>



Step 7	Inspection items		Inspection of air flow sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of air flow sensor

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	• Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve) • Inspection of engine
		NO	Replacement of injector

[Fault code]
Diagnosis code: P1440/Flash code: 92
[Monitor]
For counter recording of diagnosis code P1412, P1413, P1414
[Fault (outline)]
Plausibility
[Diagnosis check]
- Exhaust gas temperature during automatic diesel particulate filter regeneration is monitored through DPF temperature sensor 1 for abnormality arising from transient diesel particulate filter temperature control failure or very slow vehicle run.

[Code generation condition]
- Insufficient temperature rise occurred during automatic filter regeneration.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).

[Probable cause of trouble]
- Diesel particulate filter temperature control failure (caused by transient fault)
- If automatic regeneration is difficult due to long-time idling or very slow vehicle run.

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P1412 “DPF Temp Abnormal1 (Auto)(Low)” • P1413 “DPF Temp Abnormal2 (Auto)(Low)” • P1414 “DPF Temp Abnormal3 (Auto)(High)”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P1441/Flash code: 92
[Monitor]
For counter recording of diagnosis code P1416, P1417, P1418
[Fault (outline)]
High signal range check
[Diagnosis check]
- Temperature in diesel particulate filter during manual diesel particular filter regeneration is monitored through DPF temperature sensor 1.

[Code generation condition]
- Insufficient temperature rise occurred during manual filter regeneration.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Diesel particulate filter temperature control failure (caused by transient fault)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P1416 “DPF Temp Abnormal1 (Auto)(Low)” • P1417 “DPF Temp Abnormal2 (Auto)(Low)” • P1418 “DPF Temp Abnormal3 (Auto)(High)”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P1632/Flash code: 73
[Monitor]
Abnormality in controller area network 2 communication
[Fault (outline)]
Message timeout
[Diagnosis check]
- Controller area network communication between engine electronic control unit and exhaust gas recirculation electronic drive unit is monitored for abnormality.

[Code generation condition]
- Engine electronic control unit fails to receive controller area network signal concerning throttle control from exhaust gas recirculation electronic drive unit within specified time (controller area network bus OFF).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

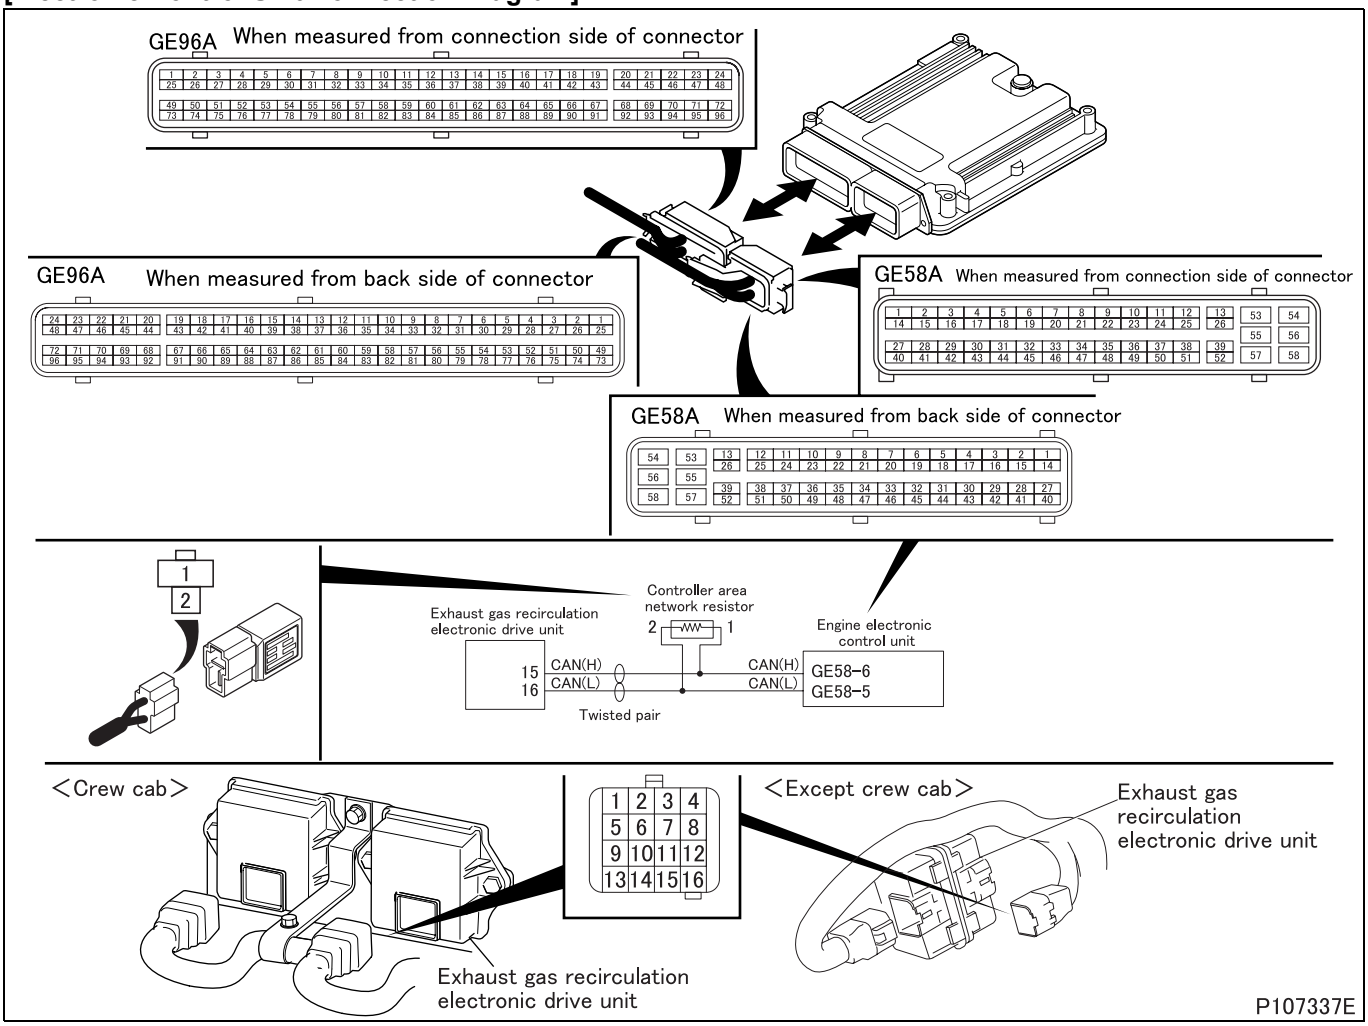
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

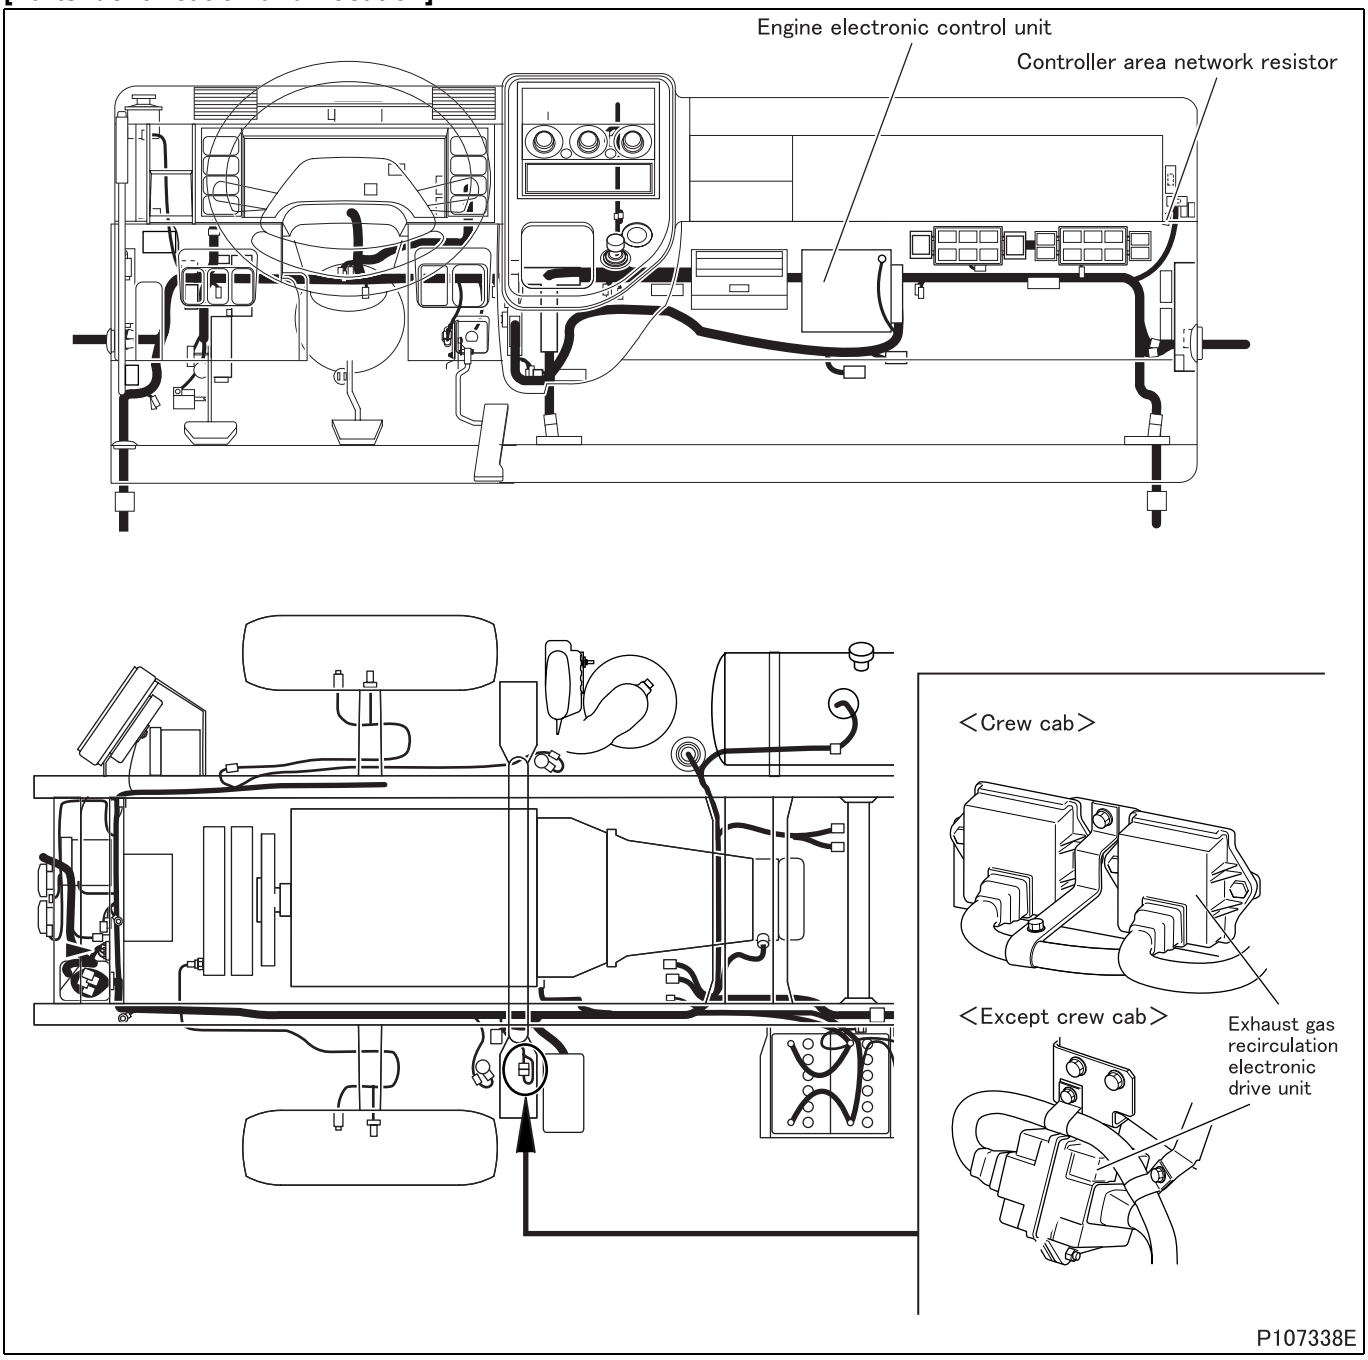
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and exhaust gas recirculation electronic drive unit
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of exhaust gas recirculation electronic drive unit
- Malfunction of controller area network resistor

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

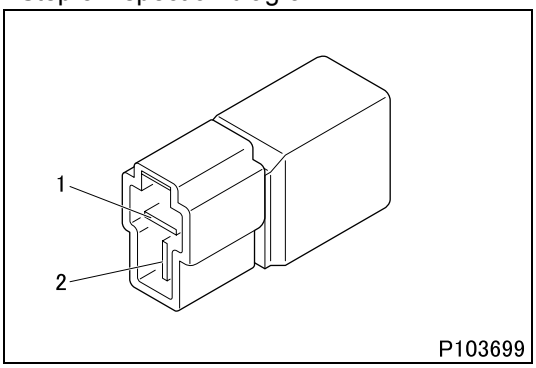
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 5 and 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and electronic drive unit connector terminal No. 15
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between engine electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and electronic drive unit connector terminal No. 16
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of electronic drive unit.
		NO	Modify connector.

[Fault code]
Diagnosis code: P1635/Flash code: 74
[Monitor]
Abnormality in controller area network 2 communication
[Fault (outline)]
Message timeout
[Diagnosis check]
- Controller area network communication between engine electronic control unit and throttle electronic drive unit is monitored for abnormality.

[Code generation condition]

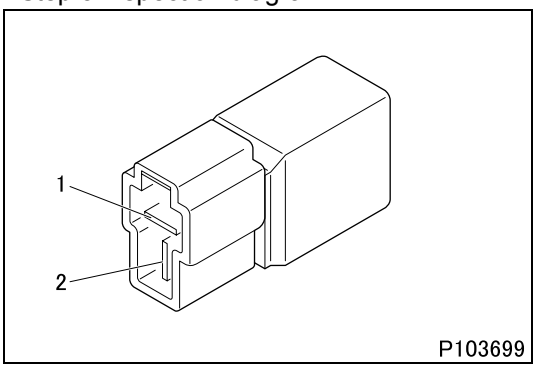
Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and electronic drive unit connector terminal No. 15
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between engine electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and electronic drive unit connector terminal No. 16
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of electronic drive unit.
		NO	Modify connector.

[Fault code]
Diagnosis code: P1660/Flash code: 29
[Monitor]
Failure of diesel particulate filter indicator lamp
[Fault (outline)]
- Short circuit battery
- Short circuit ground
- Open circuit
- Overload

[Diagnosis check]
- Diesel particulate filter indicator lamp circuit is monitored for fault.

[Code generation condition]
- Diesel particulate filter indicator lamp circuit remains open, shorted or overcurrent as detected for 0.2 second. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.
- Fault diagnosis is performed each time when the control is halted.

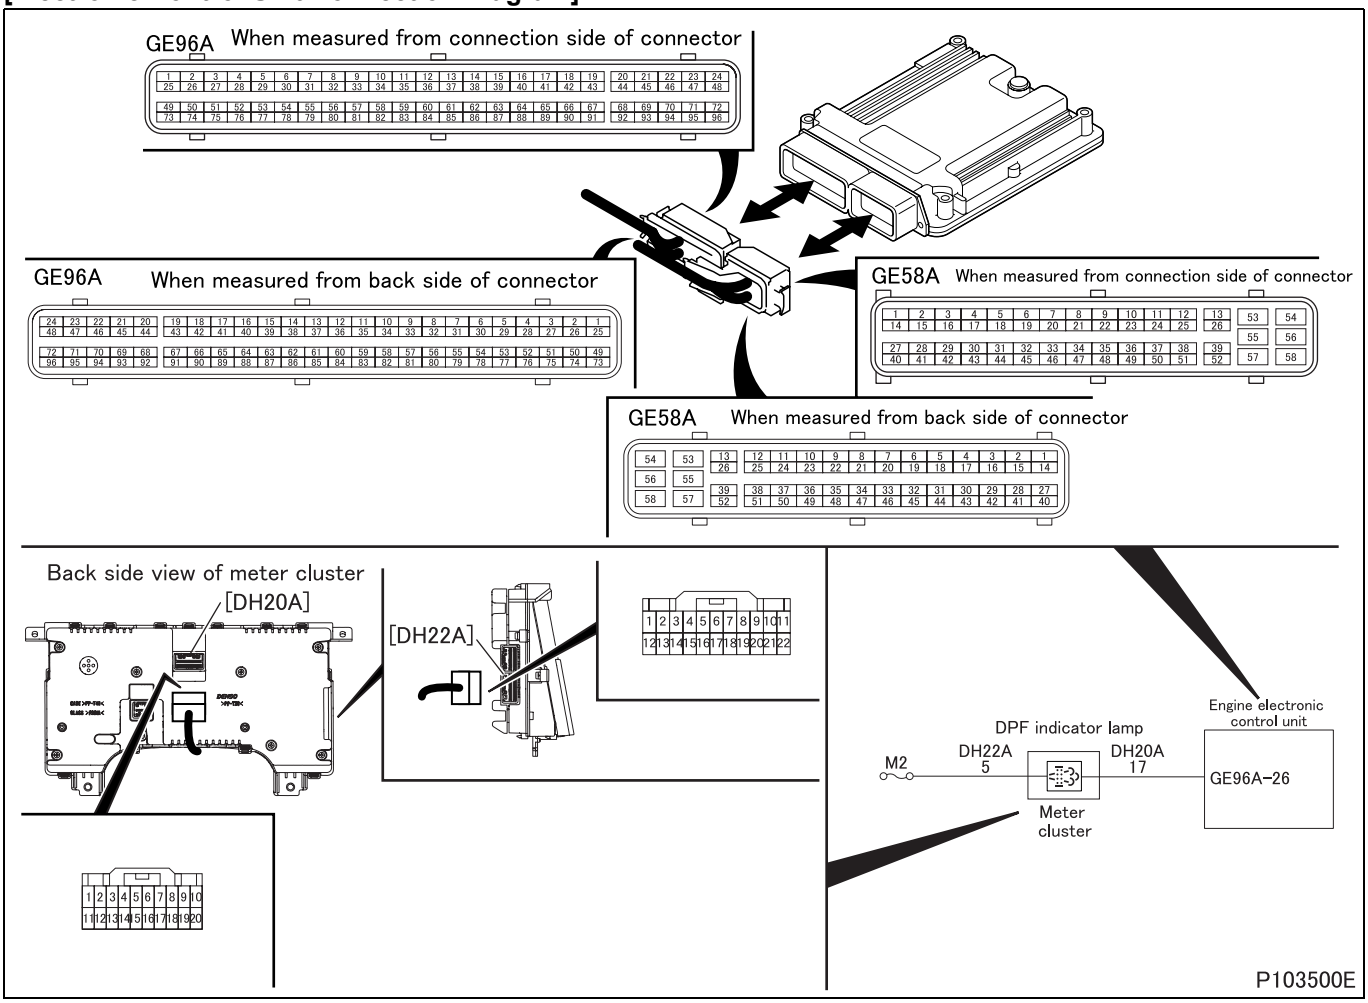
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

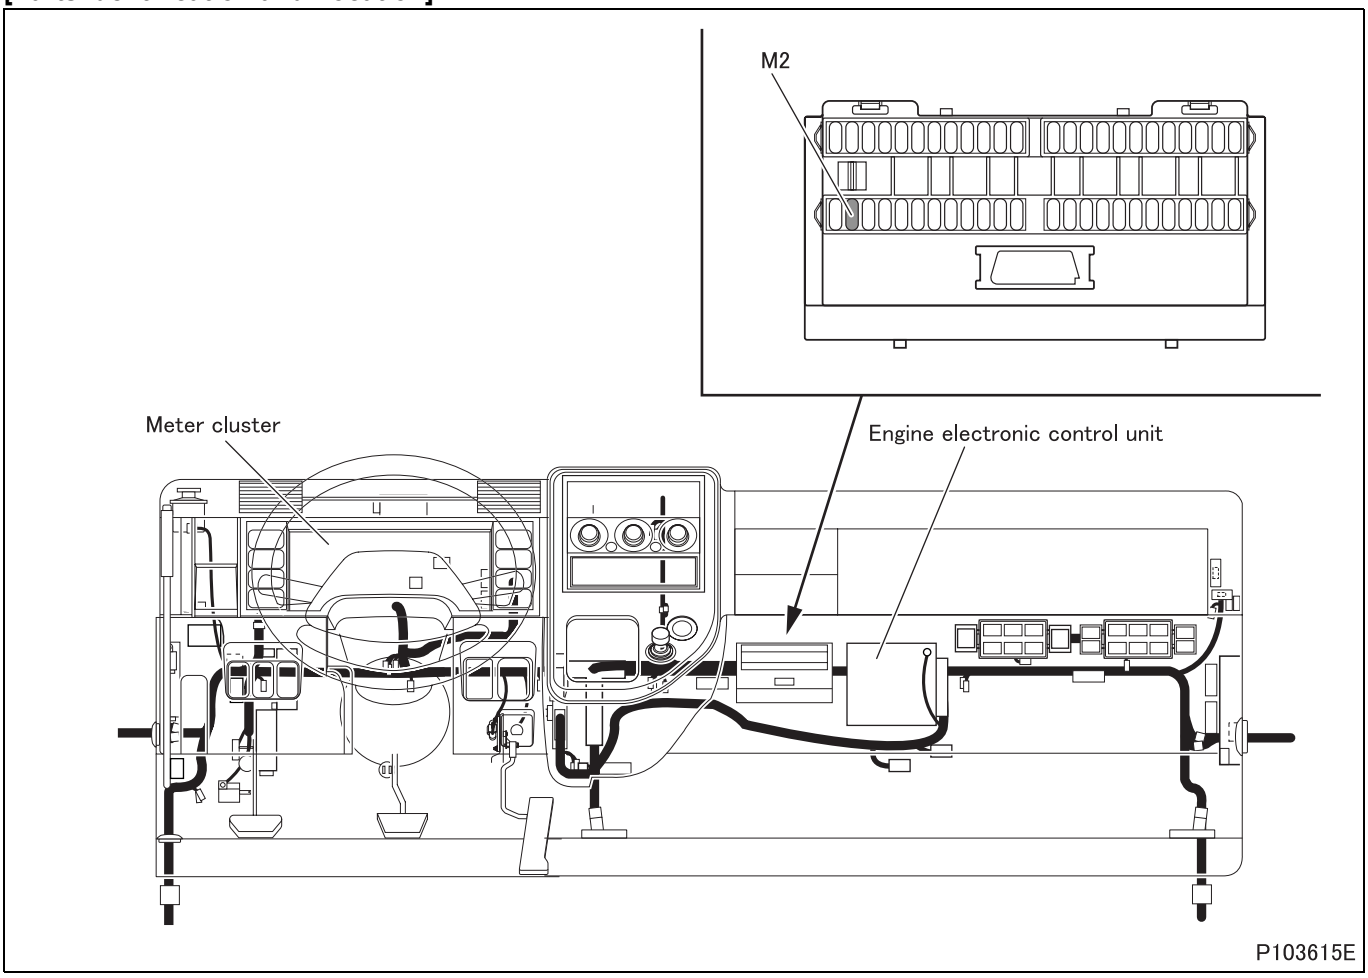
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and diesel particulate filter indicator lamp
- Malfunction of each connector
- Malfunction of diesel particulate filter indicator lamp
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position. (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp lit (automatic reset after 15 seconds).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Ground connector (GE96A) terminal No. 26.
	Inspection condition		It wires for the ground harness from the other side of the connector.
	Requirements		Diesel particulate filter indicator lamp illuminates
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between fuse and meter cluster
	Maintenance item		Check circuit between fuse M2 and meter cluster connector (DH22A) terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between electronic control unit and meter cluster
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 26 and meter cluster connector (DH20A) terminal No. 10.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of meter cluster
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of meter cluster or lamp
		NO	Modify connector.

[Fault code]
Diagnosis code: P2002/Flash code: 92
[Monitor]
Diesel particulate filter clogged
[Fault (outline)]
Efficiency below threshold (leaking diesel particulate filter)
[Diagnosis check]
- Ceramic filter is monitored for failure through DPF pressure sensor (DIFF) during operation of diesel particulate filter regeneration function.

[Code generation condition]
- Difference between maximum pressure calculated by electronic control unit and actual diesel particulate filter pressure remains out of control map for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Pressure adjustment in DPF pressure sensor (DIFF):
  Has been carried out this drive cycle ; for drift correction, the following conditions exist for >5s :
  - Engine speed: less than 875 rpm
  - Fuel injection quantity: below 25 mg/cyc
  - Exhaust flow rate: less than 90 m^3/h
  - Exhaust gas recirculation valve position: more than 8 mm {0.3 in.}
- Exhaust volume-flow rate: 500 to 900 m^3/h
- Diesel particulate filter inlet temperature: 200 to 400°C {392 to 752°F}
- Water temperature: 65 to 110°C {149 to 230°F}
- Atmospheric pressure: more than 750 mbar {10.87 psi}
- Approximate environment atmospheric temperature: –7 to 50°C {19 to 122°F}
- Frequency of diesel particulate filter regeneration control: less than 3 times (discontinued after start of diesel particulate filter regeneration control)
- Soot deposit: 15 to 30 g {0.53 to 1.06 oz}
- Diesel particulate filter regeneration control: not effected
- Controller area network communication of exhaust gas recirculation electronic drive unit: in order
- DPF pressure sensor (DIFF): in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Water temperature sensor: in order
- Intake air temperature sensor: in order
- Catalytic temperature sensor: in order
- DPF temperature sensor 1: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order

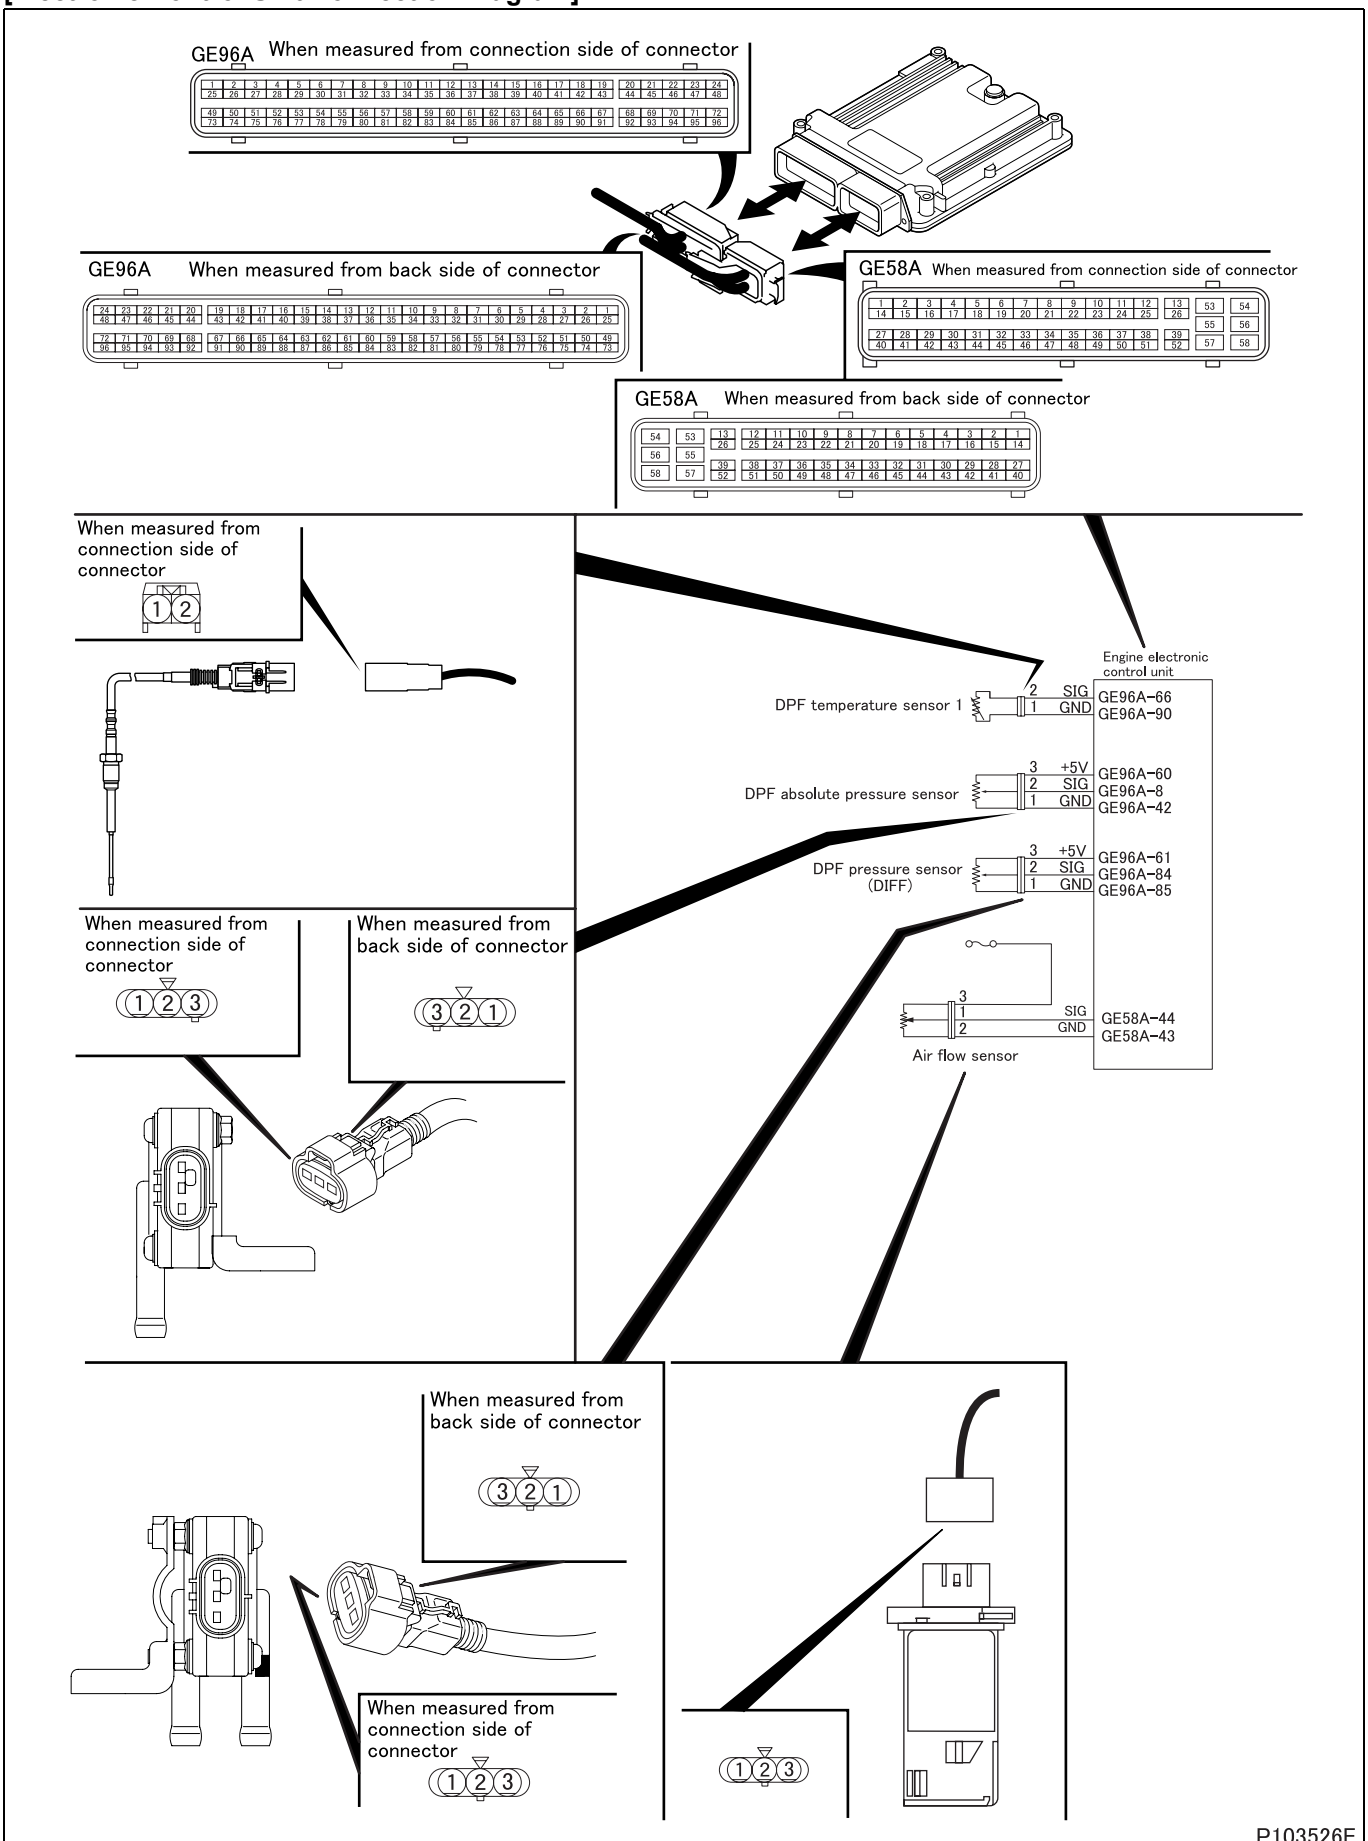
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the engine model.
<Except FE83>
- Engine torque is limited.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<FE83>
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Failure of diesel particulate filter indicator lamp
- Failure of diesel particulate filter cleaning switch
- Manual diesel particulate filter regeneration is not performed.
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of air flow sensor
- Malfunction of DPF absolute pressure sensor and DPF pressure sensor (DIFF)
- Malfunction of diesel particulate filter

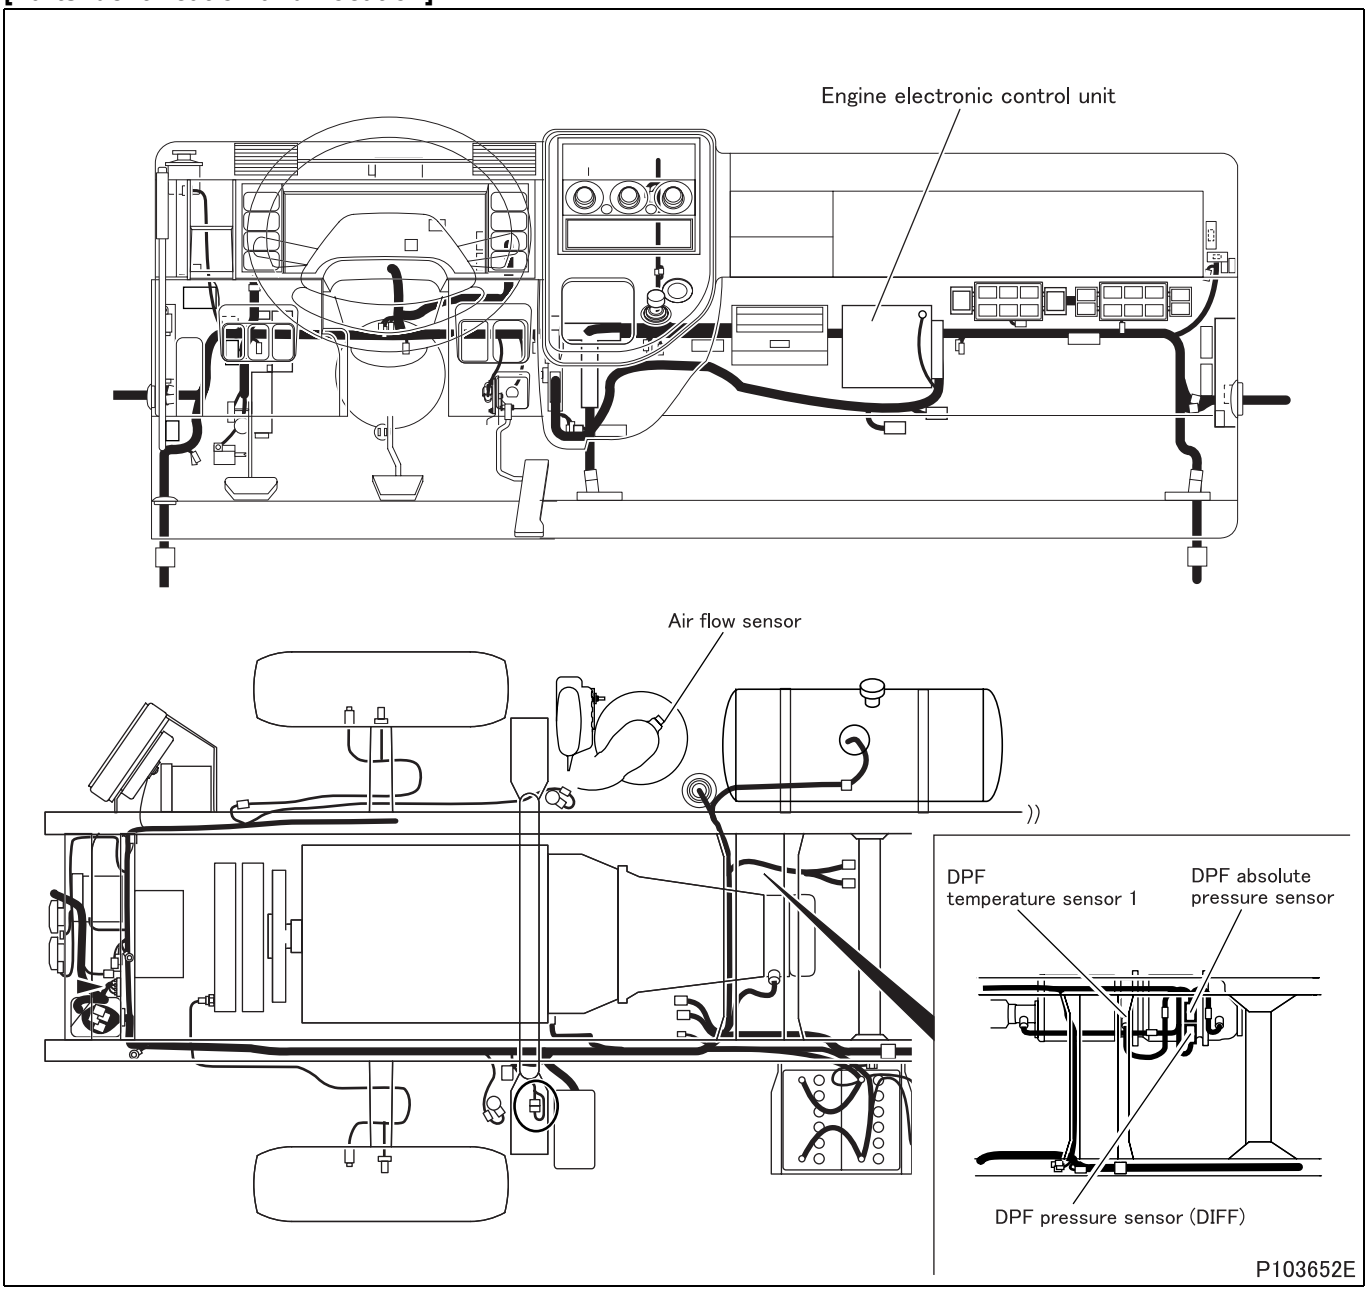
[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



P103526E

[Parts Identification and Location]

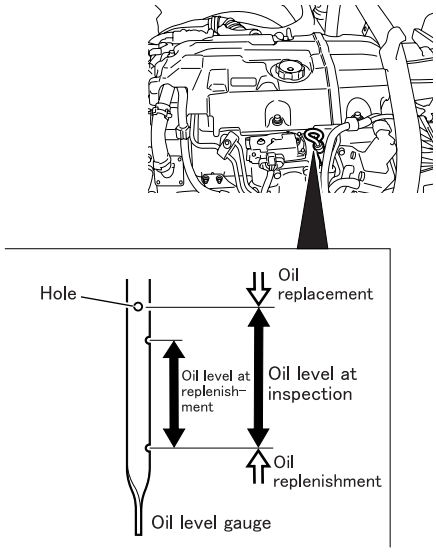


[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	After replacement of oil, go to step 2

<Step 1 inspection diagram>

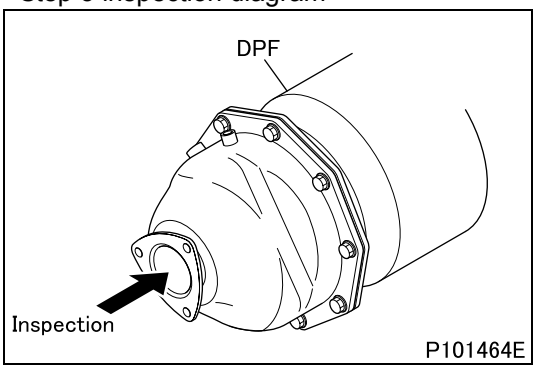


P103677E

Step 2	Inspection items		Inspection by manual diesel particulate filter regeneration
	Maintenance item		Perform Multi-Use Tester actuator test item No. A5 “DPF Regeneration (Manual)”, and clean ceramic diesel particulate filter.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Engine: idling • Place the transmission in neutral. (place the automatic transmission in P range) • Parking brake: vehicle parked (parking brake switch: ON) • After engine warm-up
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 3.

Step 3	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

<Step 3 inspection diagram>



Step 4	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 5.

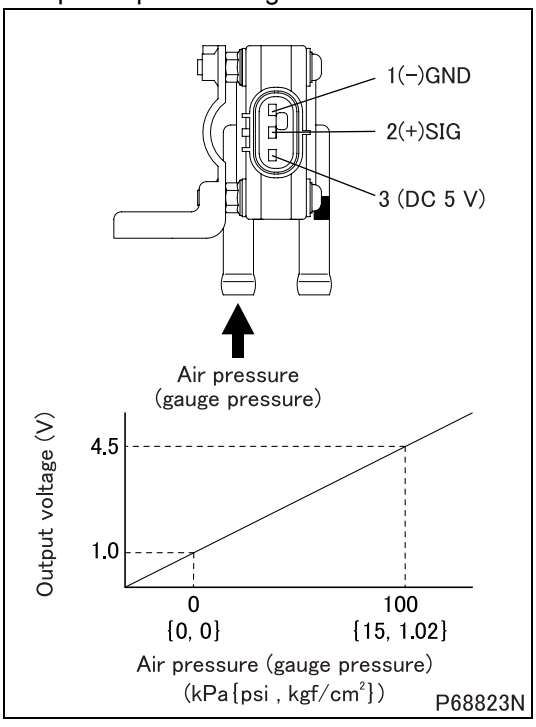
Step 5	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp illuminates (automatic reset after 15 seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of engine electronic control unit

Step 6	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of diesel particulate filter cleaning switch or engine electronic control unit

Step 7	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	After correction and replacement of hose, go to step 8.

Step 8	Inspection items		Inspection of DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2} : 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2} : 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of DPF pressure sensor (DIFF)

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection of air flow sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of air flow sensor

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	• Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve) • Inspection of engine
		NO	Replacement of injector

[Fault code]
Diagnosis code: P2031/Flash code: 88
[Monitor]
Characteristic abnormality of DPF temperature sensor 2
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Difference in temperature output between DPF temperature sensors (1 and 2) is monitored for clogging of ceramic filter during stop of diesel particulate filter regeneration function (with vehicle in normal condition).

[Code generation condition]
- Difference in temperature output remains excessively high (over 150°C {302°F}) or low (below –150°C {–238°F}) for 10 seconds <Relative check> and 20 seconds <Separate check> .
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Diesel particulate filter regeneration control: not effected
- Engine running time: more than 300 seconds
- Time after diesel particulate filter regeneration control was effected: more than 1500 seconds
- Engine speed and load: logical output is 1
- Time till above conditions were met: more than 30 seconds
- Catalytic temperature sensor: normal in output signal
- DPF temperature sensor 1: normal in output signal
- DPF temperature sensor 2: normal in output signal
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of DPF temperature sensor 2

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P2032/Flash code: 88
[Monitor]
Failure of DPF temperature sensor 2
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of DPF temperature sensor 2 is monitored.

[Code generation condition]
- Output voltage of DPF temperature sensor 2 remains below 0.36 V for 3 seconds. (sensor temperature: 1000°C {1832°F} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

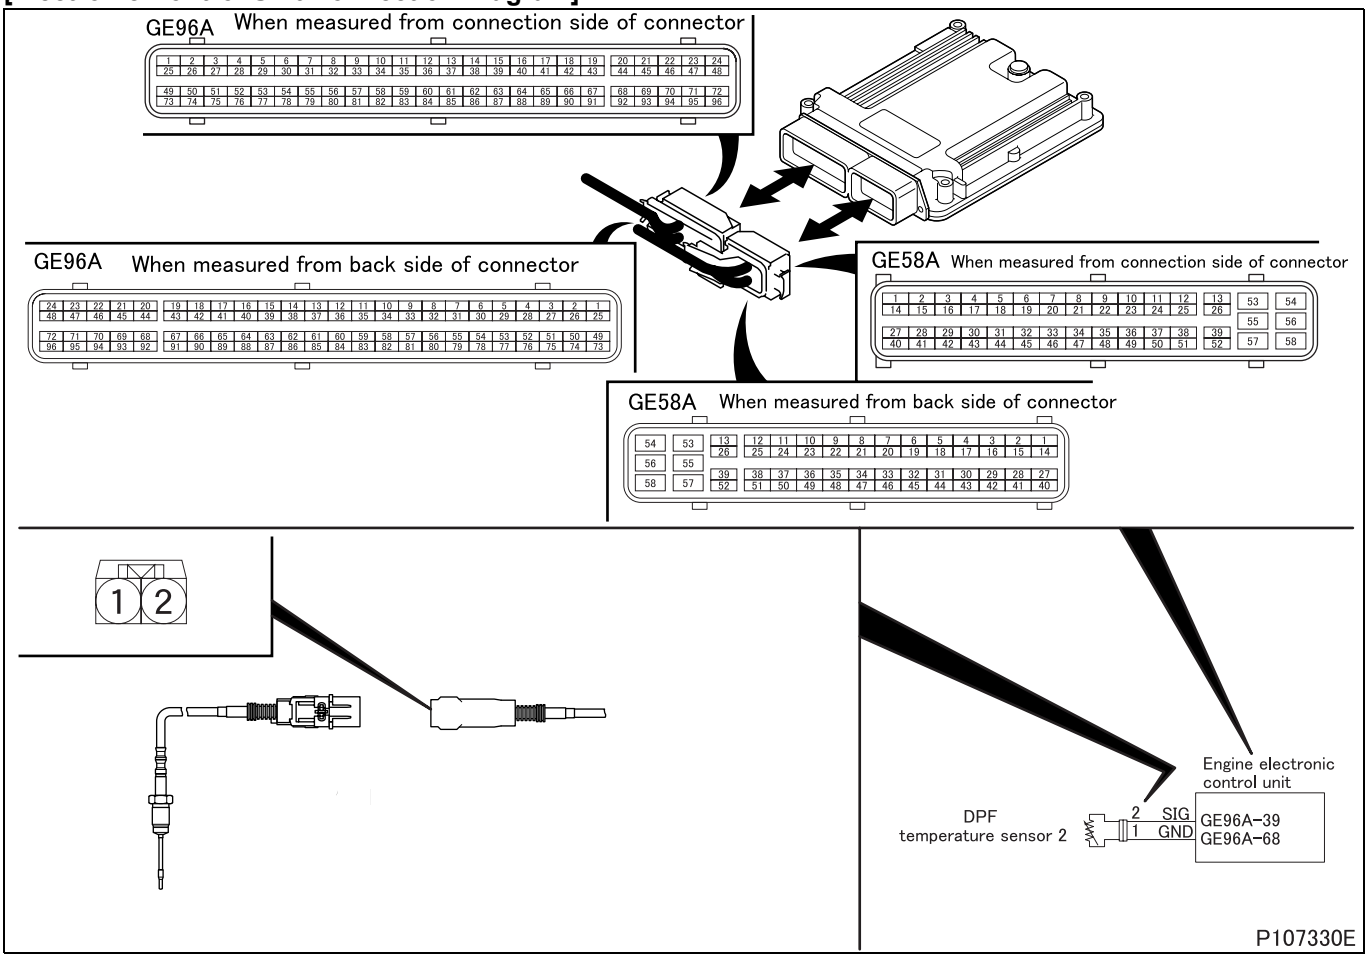
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Pressure after ceramic diesel particulate filter is fixed at backup value.
- Related fault check is stopped.

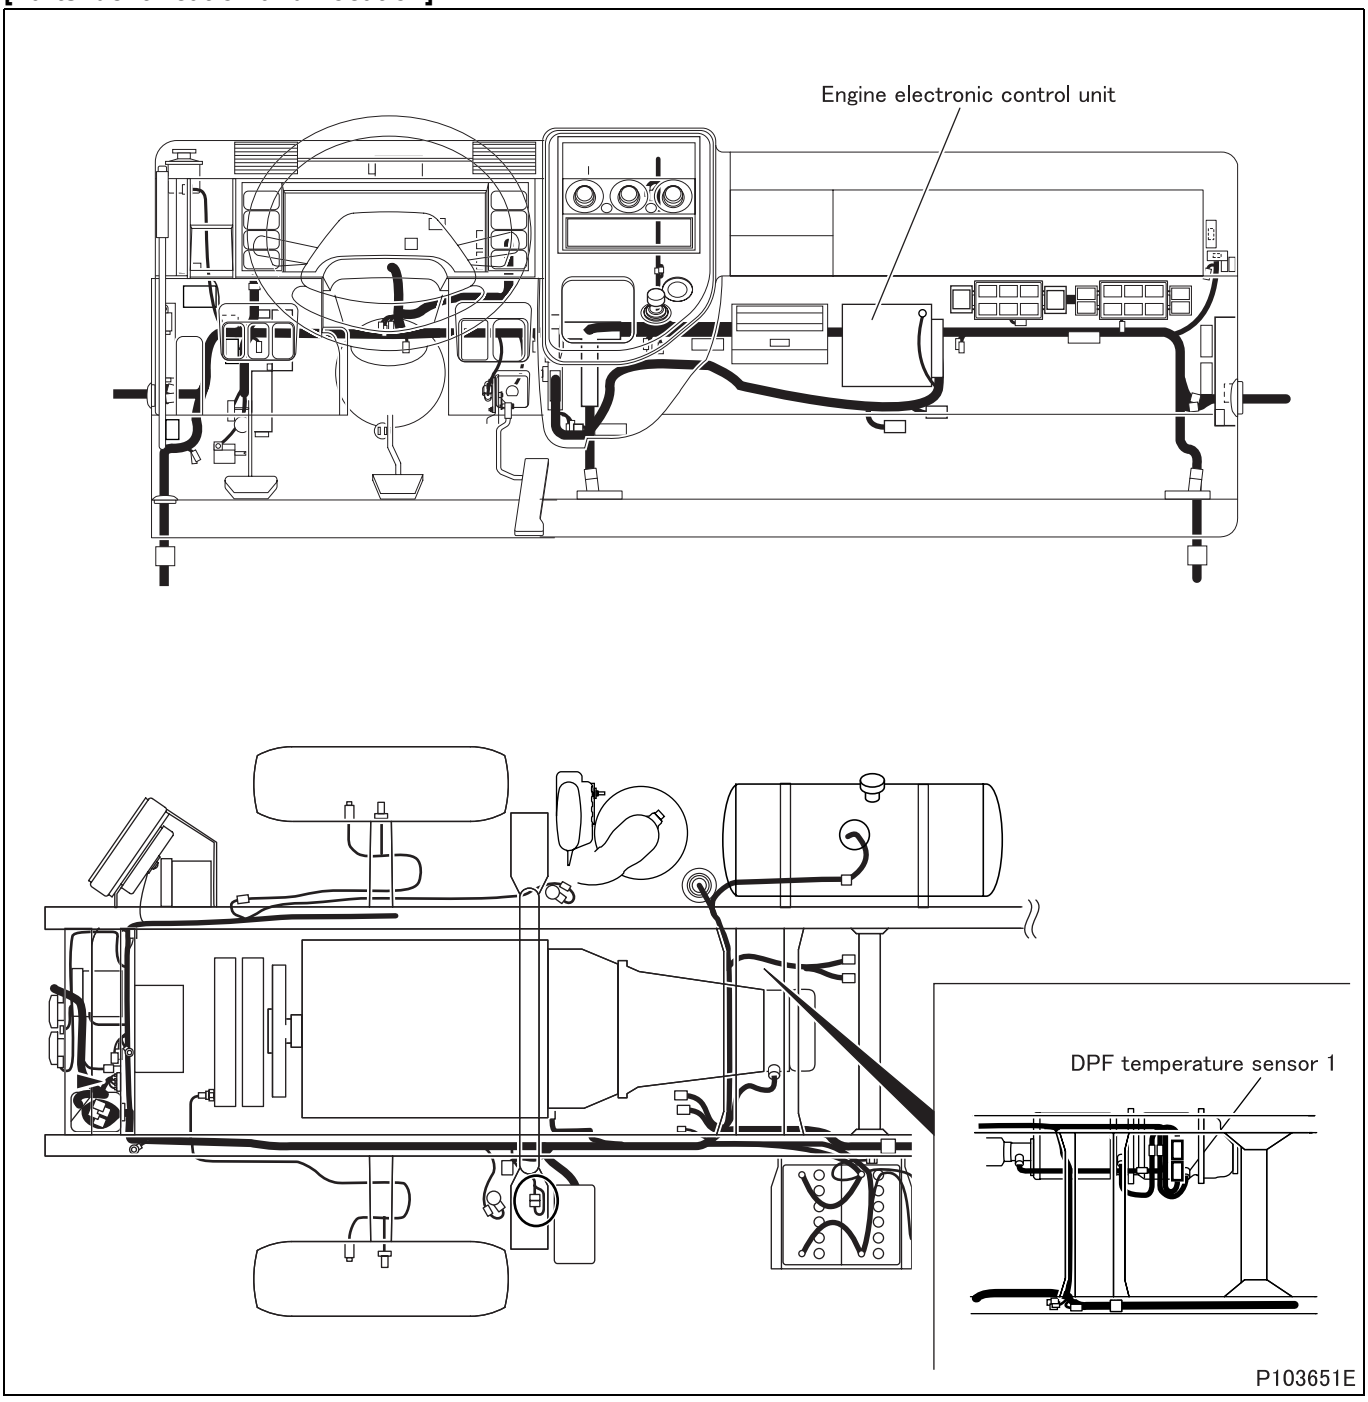
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of DPF temperature sensor 2
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 26 “DPF Temperature (DownStream)” of Service Data.
	Inspection condition		During warm-up
	Requirements		Gradually increased
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

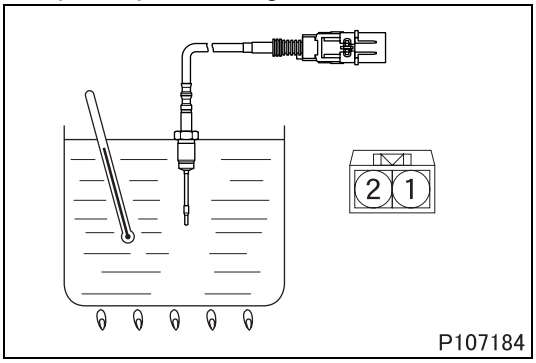
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 39 and 68.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle side connector.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of DPF temperature sensor 2 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 39 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 68 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 26 “DPF Temperature (DownStream)” of Service Data.
	Inspection condition		During warm-up
	Requirements		Gradually increased
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2033/Flash code: 88
[Monitor]
Failure of DPF temperature sensor 2
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of DPF temperature sensor 2 is monitored.

[Code generation condition]
- Output voltage of DPF temperature sensor 2 remains over 4.93 V for 30 seconds. (sensor temperature: 40°C {118°F} or less).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

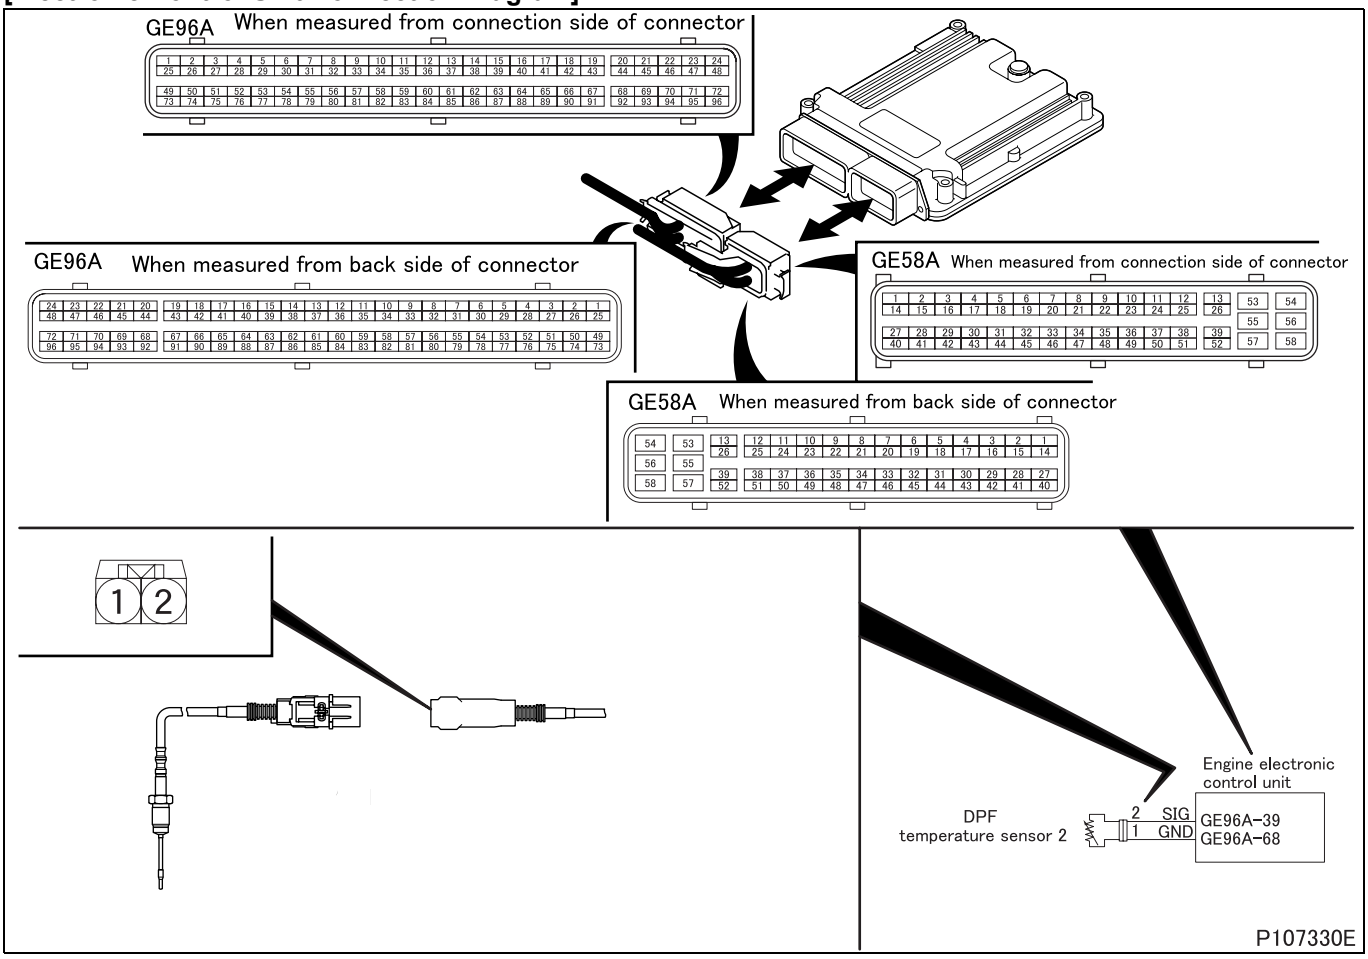
[Diagnostic requirement]
- Engine speed: 1400 to 5000 rpm
- Fuel injection quantity: 35 to 200 mg/cyc
- Water temperature: above 35°C {95°F}

[Control effected by electronic control unit during fault]
- Pressure after ceramic diesel particulate filter is fixed at backup value.
- Related fault check is stopped.

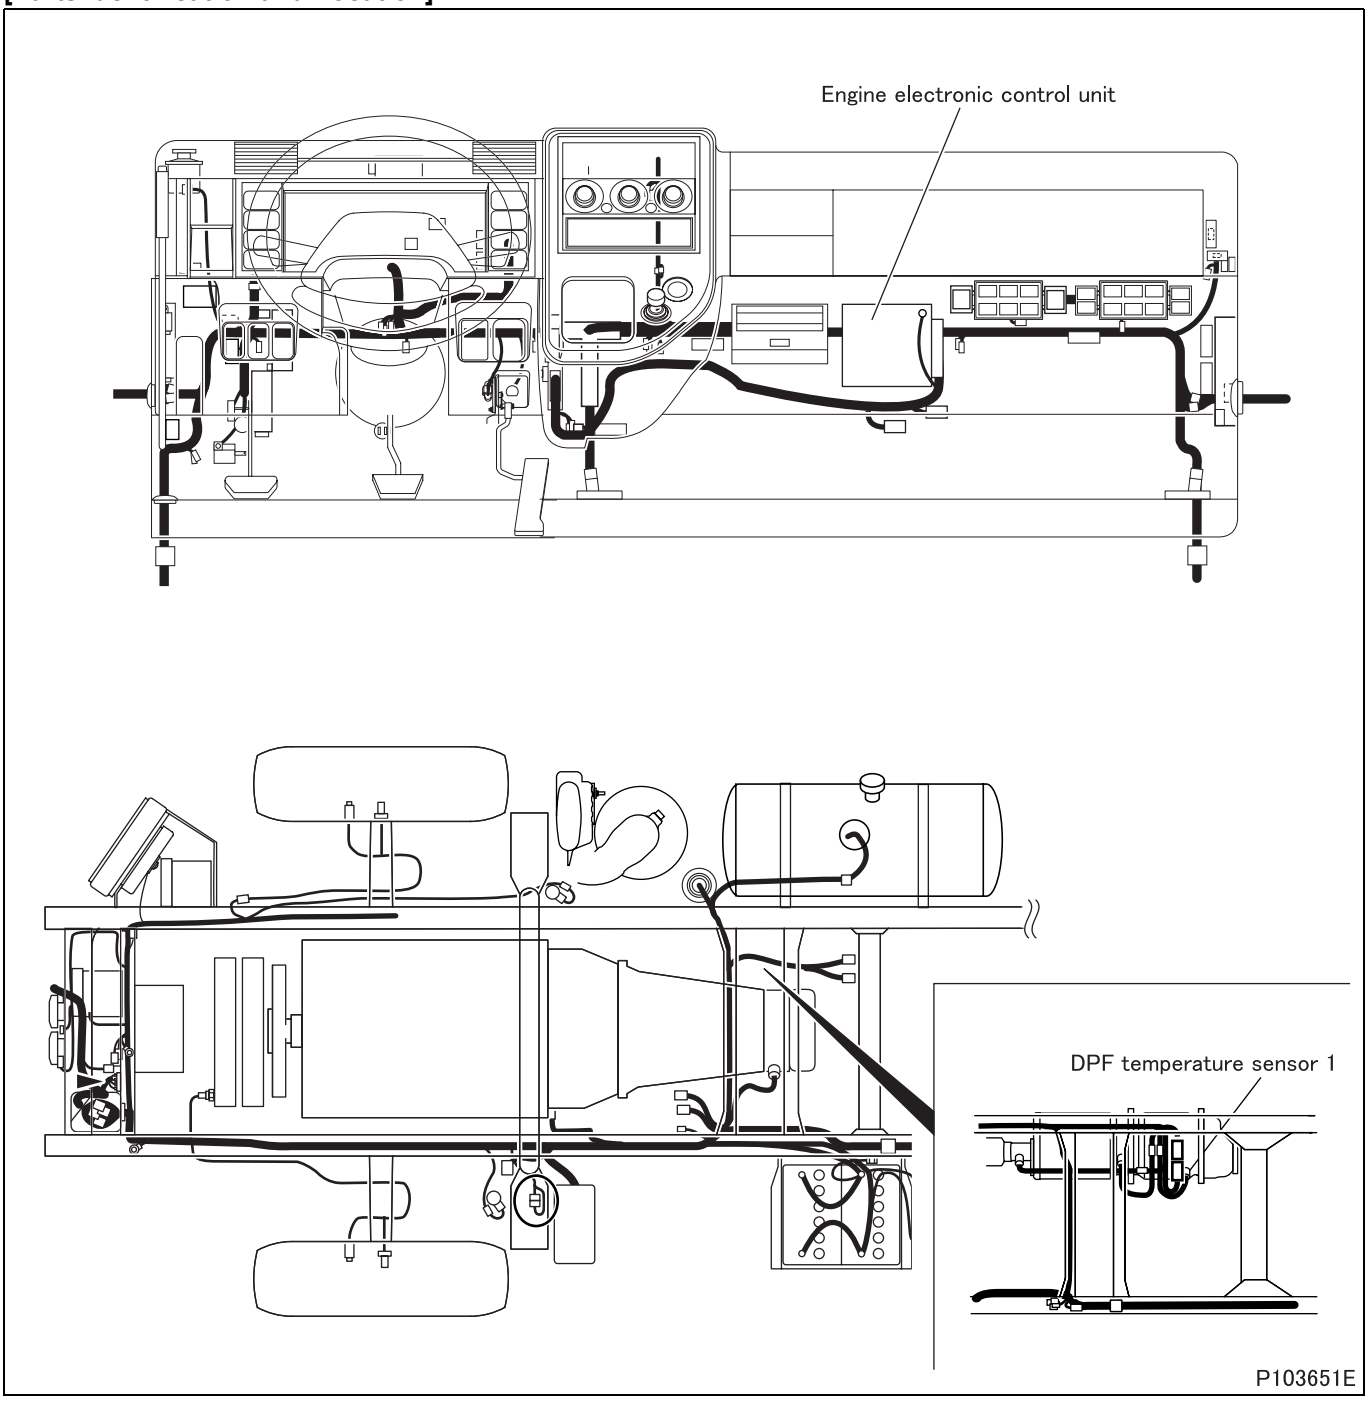
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of DPF temperature sensor 2
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 26 “DPF Temperature (DownStream)” of Service Data.
	Inspection condition		During warm-up
	Requirements		Gradually increased
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

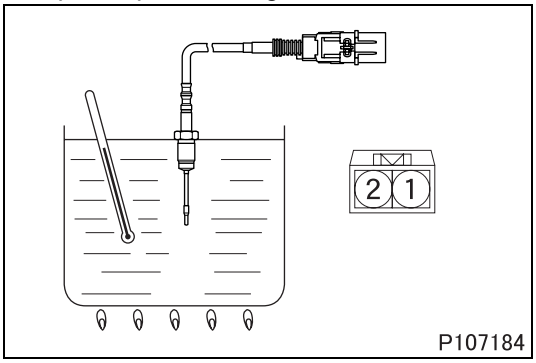
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 39 and 68.
	Inspection condition		• Starter switch: OFF • Disconnect electronic control unit from harness and measure at vehicle side connector.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of DPF temperature sensor 2 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F} : 241.8 kΩ • 50°C {122°F} : 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F} : 33.58 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F} : 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F} : 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 39 and sensor connector terminal No. 2.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 68 and sensor connector terminal No. 1.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Measure item No. 26 “DPF Temperature (DownStream)” of Service Data.
	Inspection condition		During warm-up
	Requirements		Gradually increased
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2080/Flash code: 42
[Monitor]
Relative check between catalytic temperature sensor and DPF temperature sensor 1
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Relative temperature check is made between catalytic temperature sensor and DPF temperature sensor 1 during stop of diesel particulate filter regeneration function (with vehicle in normal condition).

[Code generation condition]
- Difference in temperature output remains high (over 150°C {302°F}) or low (below –150°C {–238°F}) for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Diesel particulate filter regeneration control: not effected
- Engine running time: more than 300 seconds
- Time after diesel particulate filter regeneration control was effected: more than 1500 seconds
- Engine speed and load: logical output is 1
- Time till above conditions were met: more than 30 seconds
- Catalytic temperature sensor: normal in output signal
- DPF temperature sensor 1: normal in output signal
- DPF temperature sensor 2: normal in output signal
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- When catalytic temperature sensor and DPF temperature sensor 2 are the same in output.

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
<If diagnosis code P0284 was not recorded at the same time>
- Malfunction of catalytic temperature sensor

<If diagnosis code P0284 was recorded at the same time>
- Malfunction of DPF temperature sensor 2

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P2084/Flash code: 92
[Monitor]
Relative check between DPF temperature sensors (1 and 2)
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Relative temperature check is made between DPF temperature sensors (1 and 2) during stop of diesel particulate filter regeneration function (with vehicle in normal condition).

[Code generation condition]
- Temperature difference remains for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Diesel particulate filter regeneration control: not effected
- Engine running time: more than 300 seconds
- Time after diesel particulate filter regeneration control was effected: more than 1500 seconds
- Engine speed and load: logical output is 1
- Time till above conditions were met: more than 30 seconds
- Catalytic temperature sensor: normal in output signal
- DPF temperature sensor 1: normal in output signal
- DPF temperature sensor 2: normal in output signal
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- When catalytic temperature sensor and DPF temperature sensor 2 are the same in output.

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
<If diagnosis code P2080 was not recorded at the same time>
- Malfunction of DPF temperature sensor 1

<If diagnosis code P2080 was recorded at the same time>
- Malfunction of DPF temperature sensor 2

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P2100/Flash code: 28
[Monitor]
Failure of intake throttle system
[Fault (outline)]
Circuit check
[Diagnosis check]
- Throttle electronic drive unit monitors built in motor of intake throttle for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Monitoring by throttle electronic drive unit is performed from initial operational status of motor at starter switch ON.

[Code generation condition]
- Motor circuit remains open as detected by electronic drive unit for 2 seconds (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

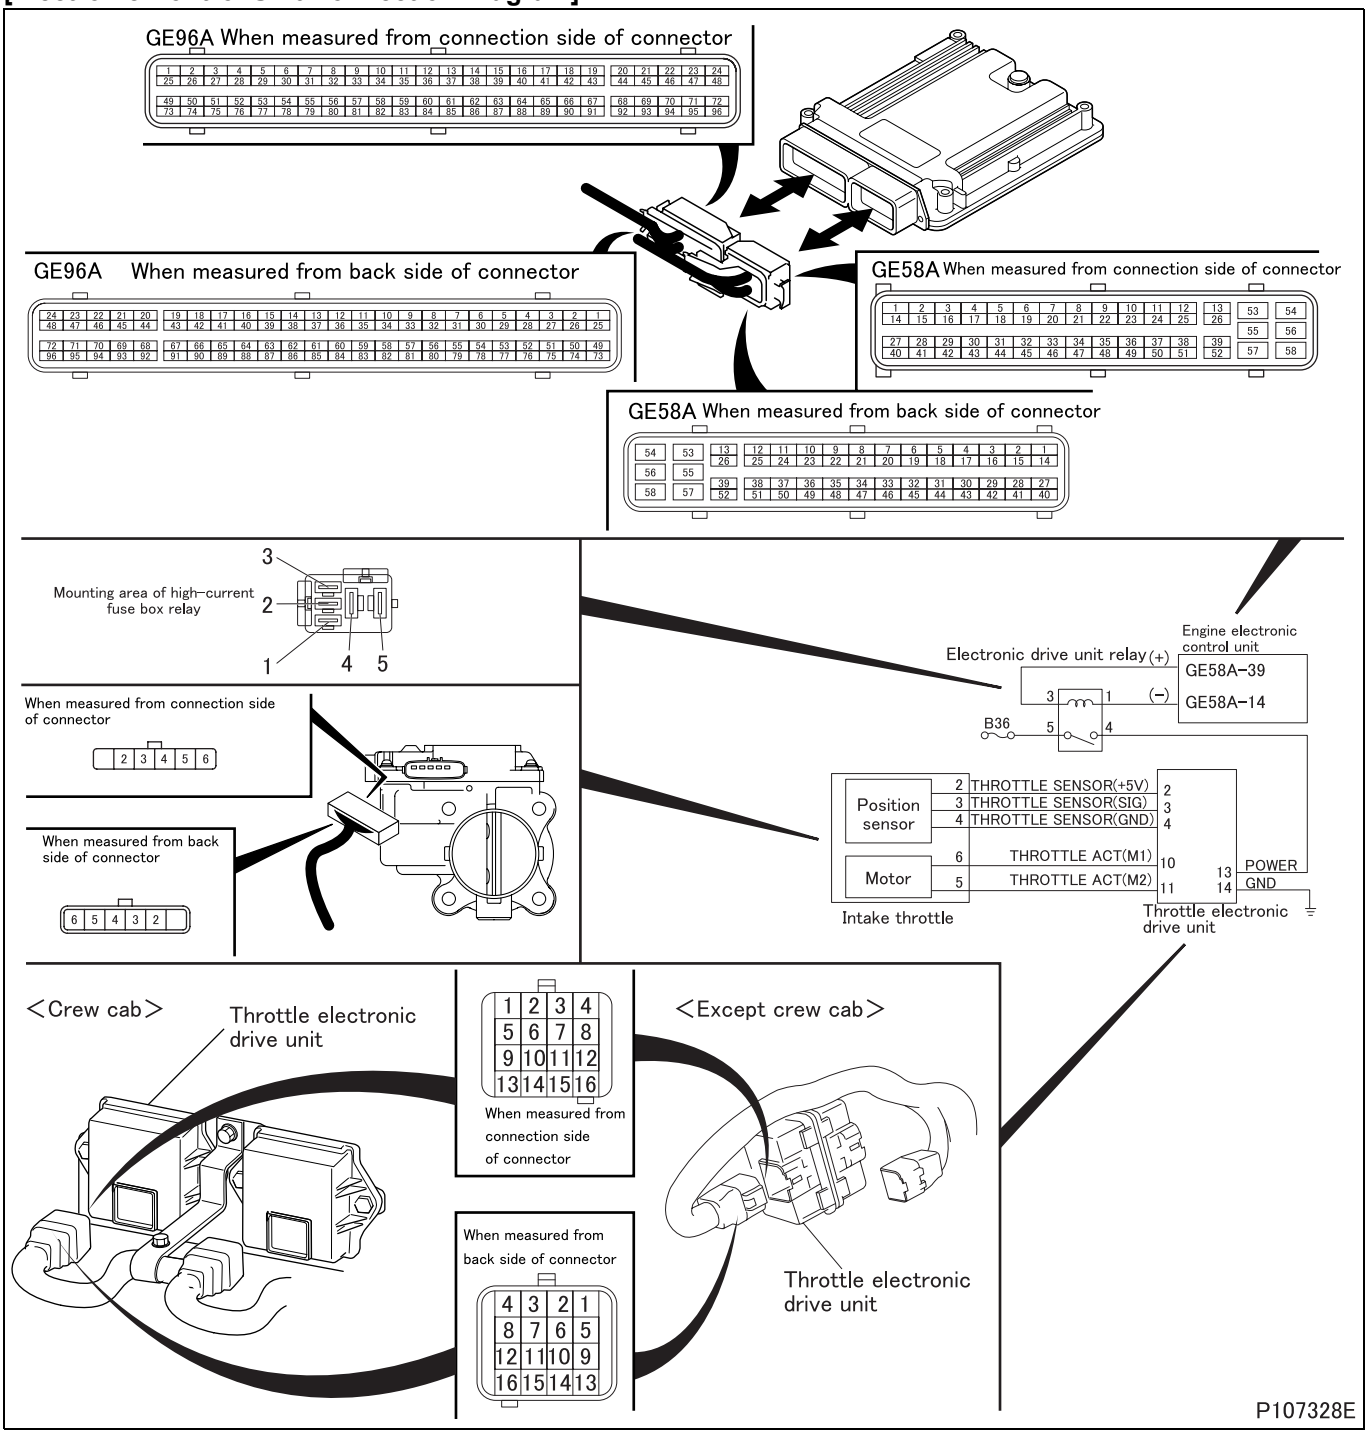
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Intake throttle actuator test is inhibited.
- Related fault check is stopped.

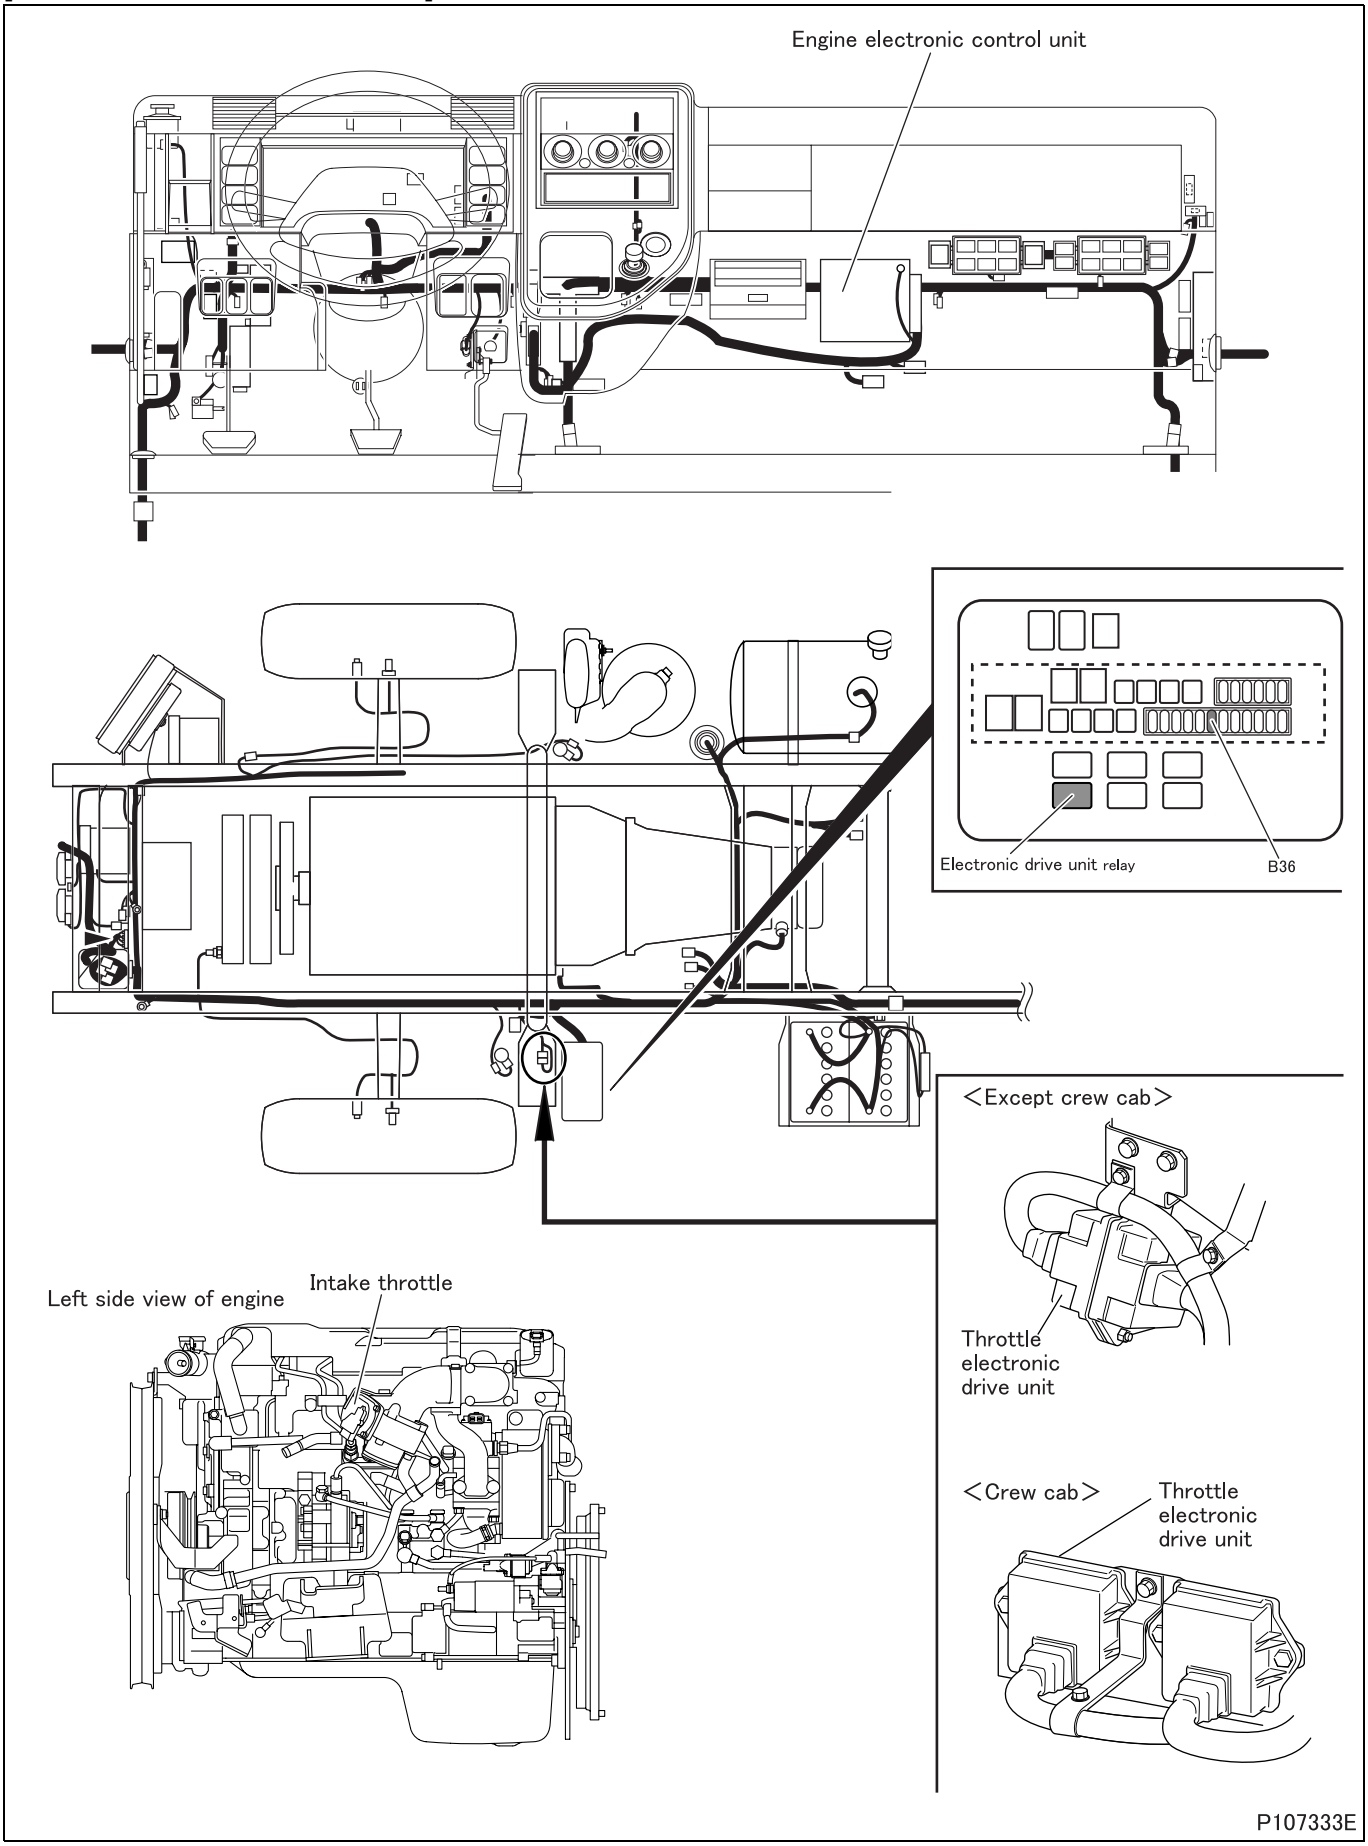
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and throttle actuator
- Malfunction of each connector
- Malfunction of throttle motor (built in throttle actuator)
- Malfunction of throttle position sensor (built in throttle actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of throttle actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of relay, go to step 9
		NO	Modify harness.

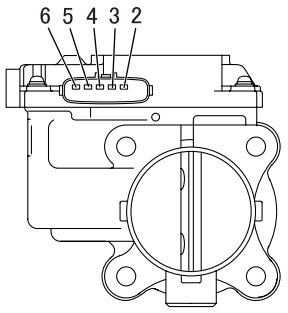
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor ground: terminal No. 4 and 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 10 and 11.
	Inspection condition		Disconnect connector and measure from harness side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (1): electronic drive unit connector terminal No. 10 - throttle actuator connector terminal No. 6 • Motor (2): electronic drive unit connector terminal No. 11 - throttle actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle actuator unit (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 5 and 6.
	Inspection condition		• Keep throttle actuator installed on vehicle. • Disconnect connector and measure throttle actuator side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of throttle actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of throttle actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A3 “Intake Throttle 1”.
	Requirements		• Valve fully closed: 0.5 V • Valve fully opened: 4.375 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 2 - throttle actuator connector terminal No. 2 • Sensor (signal): electronic drive unit connector terminal No. 3 - throttle actuator connector terminal No. 3 • Sensor (ground): electronic drive unit connector terminal No. 4 - throttle actuator connector terminal No. 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of throttle actuator, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2101/Flash code: 28
[Monitor]
Failure of intake throttle system
[Fault (outline)]
- Intake throttle valve slow response/steady state position deviation
- Circuit check

[Diagnosis check]
- Throttle electronic drive unit monitors built in motor of intake throttle for sticking and sends fault information to engine electronic control unit through controller area network communication.
- Throttle electronic drive unit detects valve opening by position sensor output data and calculates target opening from such data.

[Code generation condition]
Diagnosis code is generated under either of the following conditions (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition).
- Difference in valve opening between target and actual values remains more than 20 degrees for 2 seconds.
- Motor remains stuck as detected by electronic drive unit for 2 seconds.

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

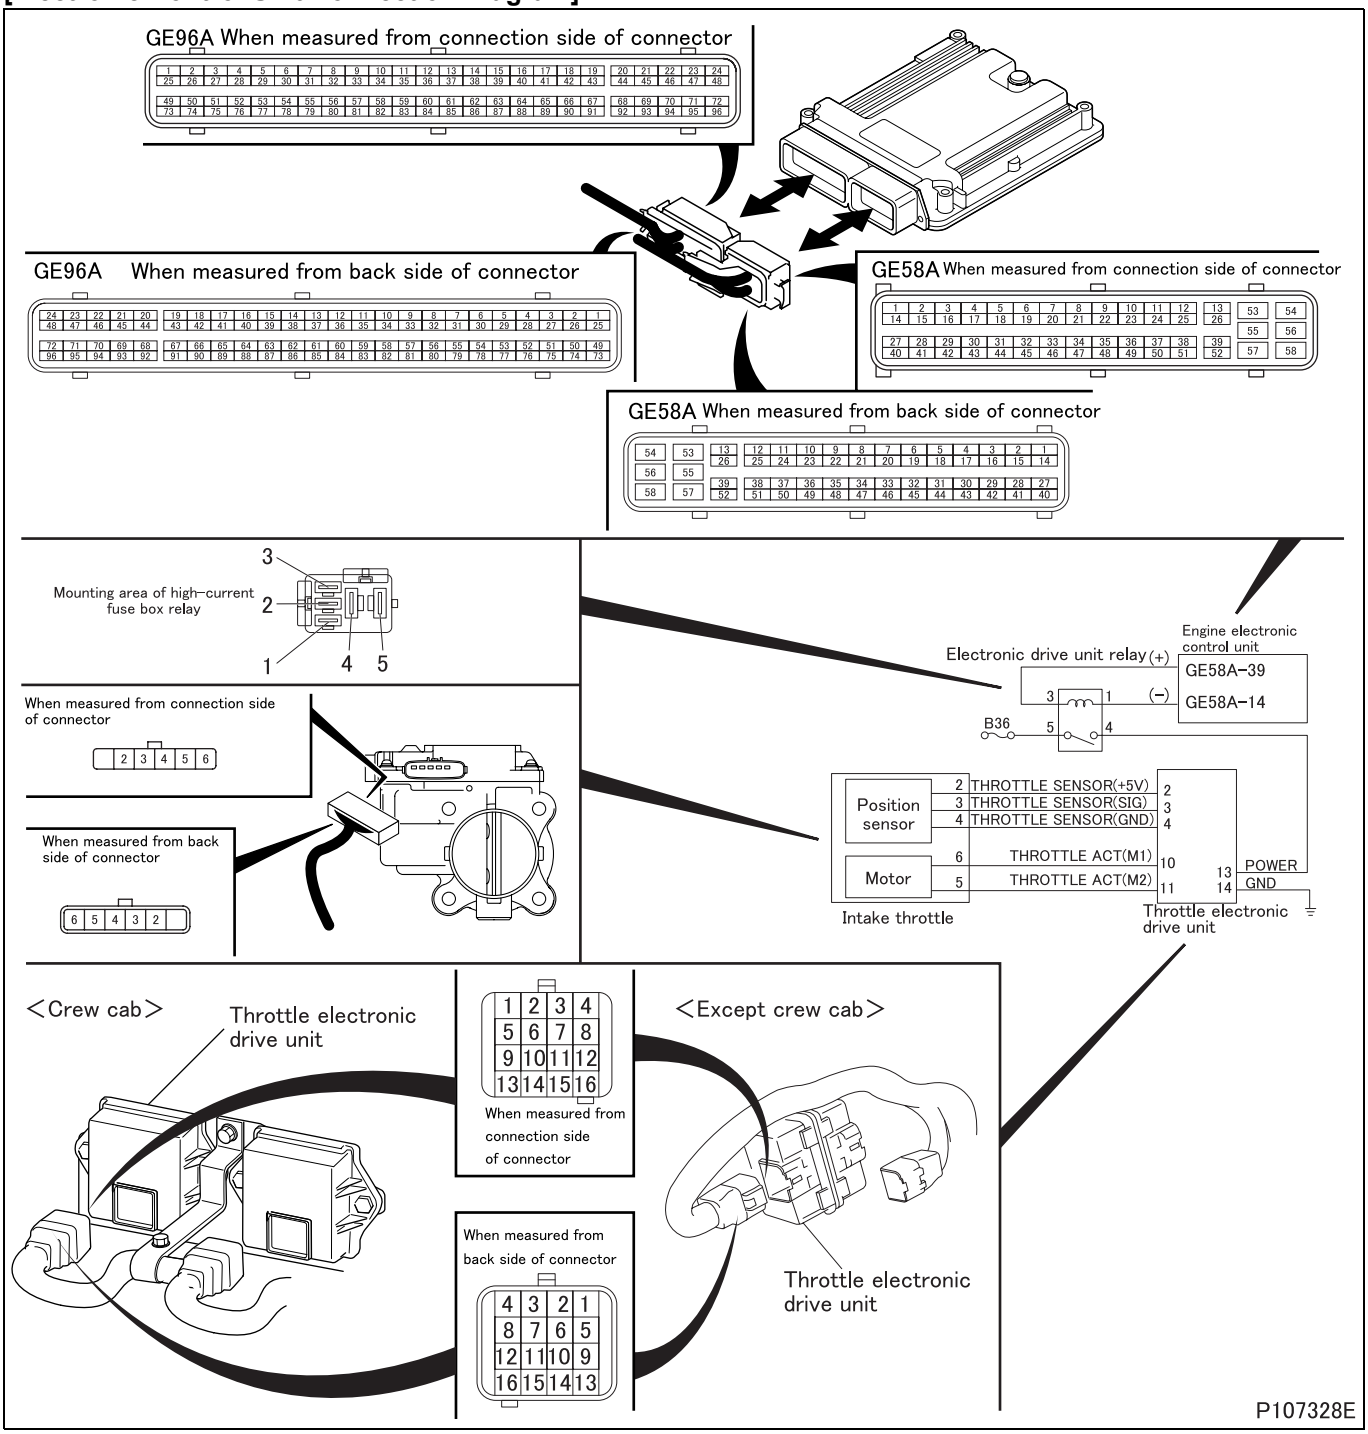
[Diagnostic requirement]
- Battery voltage: in order
- Exhaust gas recirculation valve: in order
- Electronic drive unit controller area network: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Intake throttle actuator test is inhibited.
- Related fault check is stopped.

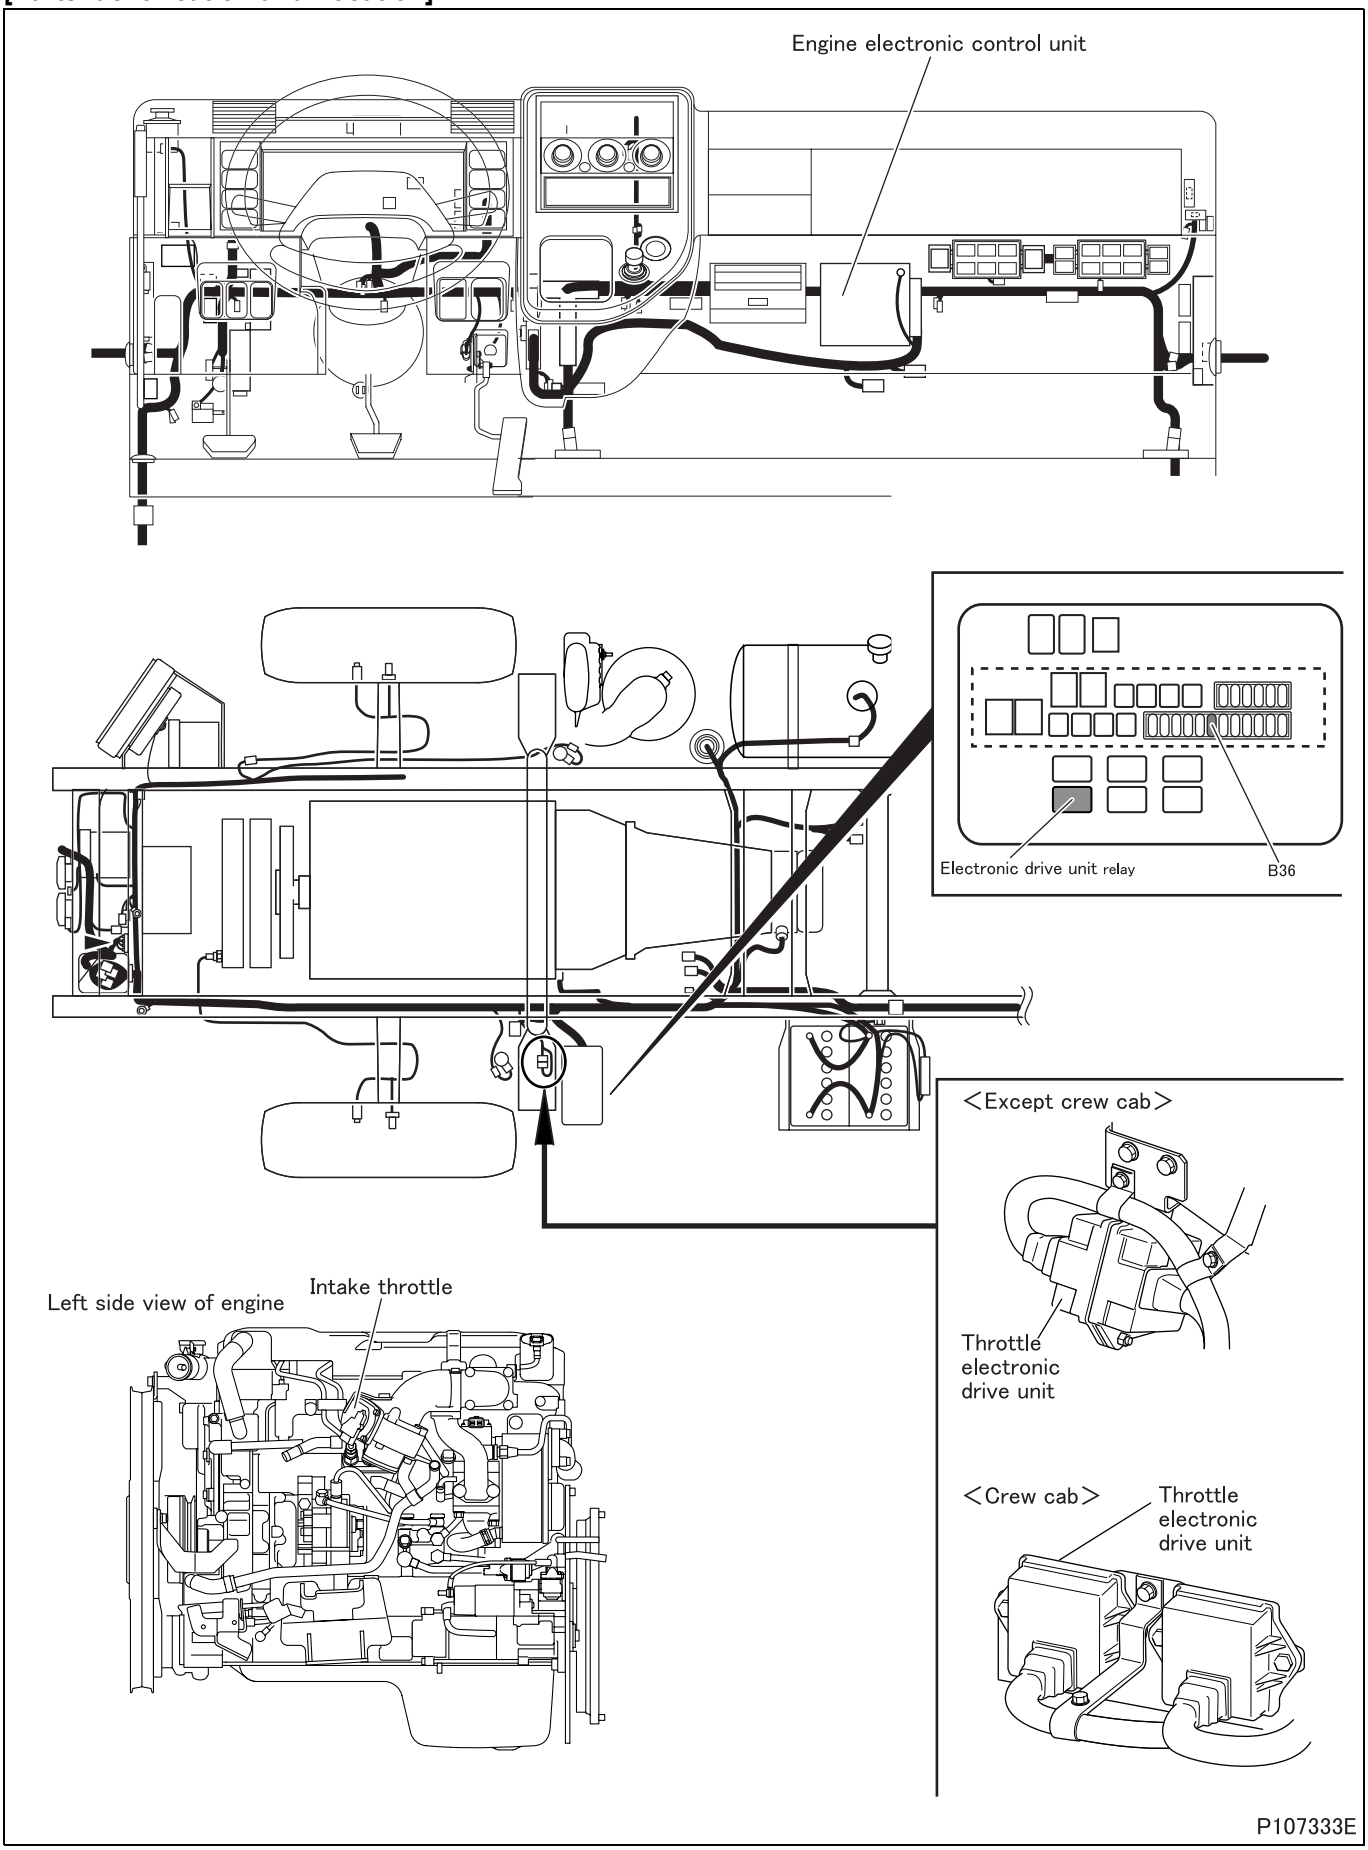
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and throttle actuator
- Malfunction of each connector
- Malfunction of throttle motor (built in throttle actuator)
- Malfunction of throttle position sensor (built in throttle actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of throttle actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of relay, go to step 9
		NO	Modify harness.

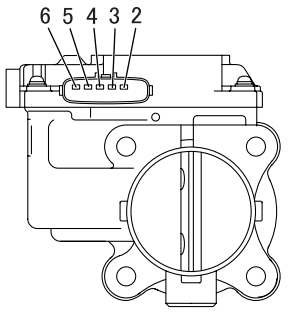
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor ground: terminal No. 4 and 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 10 and 11.
	Inspection condition		Disconnect connector and measure from harness side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (1): electronic drive unit connector terminal No. 10 - throttle actuator connector terminal No. 6 • Motor (2): electronic drive unit connector terminal No. 11 - throttle actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle actuator unit (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 5 and 6.
	Inspection condition		• Keep throttle actuator installed on vehicle. • Disconnect connector and measure throttle actuator side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of throttle actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of throttle actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A3 “Intake Throttle 1”.
	Requirements		• Valve fully closed: 0.5 V • Valve fully opened: 4.375 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 2 - throttle actuator connector terminal No. 2 • Sensor (signal): electronic drive unit connector terminal No. 3 - throttle actuator connector terminal No. 3 • Sensor (ground): electronic drive unit connector terminal No. 4 - throttle actuator connector terminal No. 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of throttle actuator, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2102/Flash code: 28
[Monitor]
Failure of intake throttle system
[Fault (outline)]
Circuit check
[Diagnosis check]
- Throttle electronic drive unit monitors built in motor of intake throttle for circuit fault and sends fault information to engine electronic control unit through controller area network communication.
- Monitoring by throttle electronic drive unit is performed from internal current detection circuit.

[Code generation condition]
- Motor circuit remains short as detected by electronic drive unit for 2 seconds. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

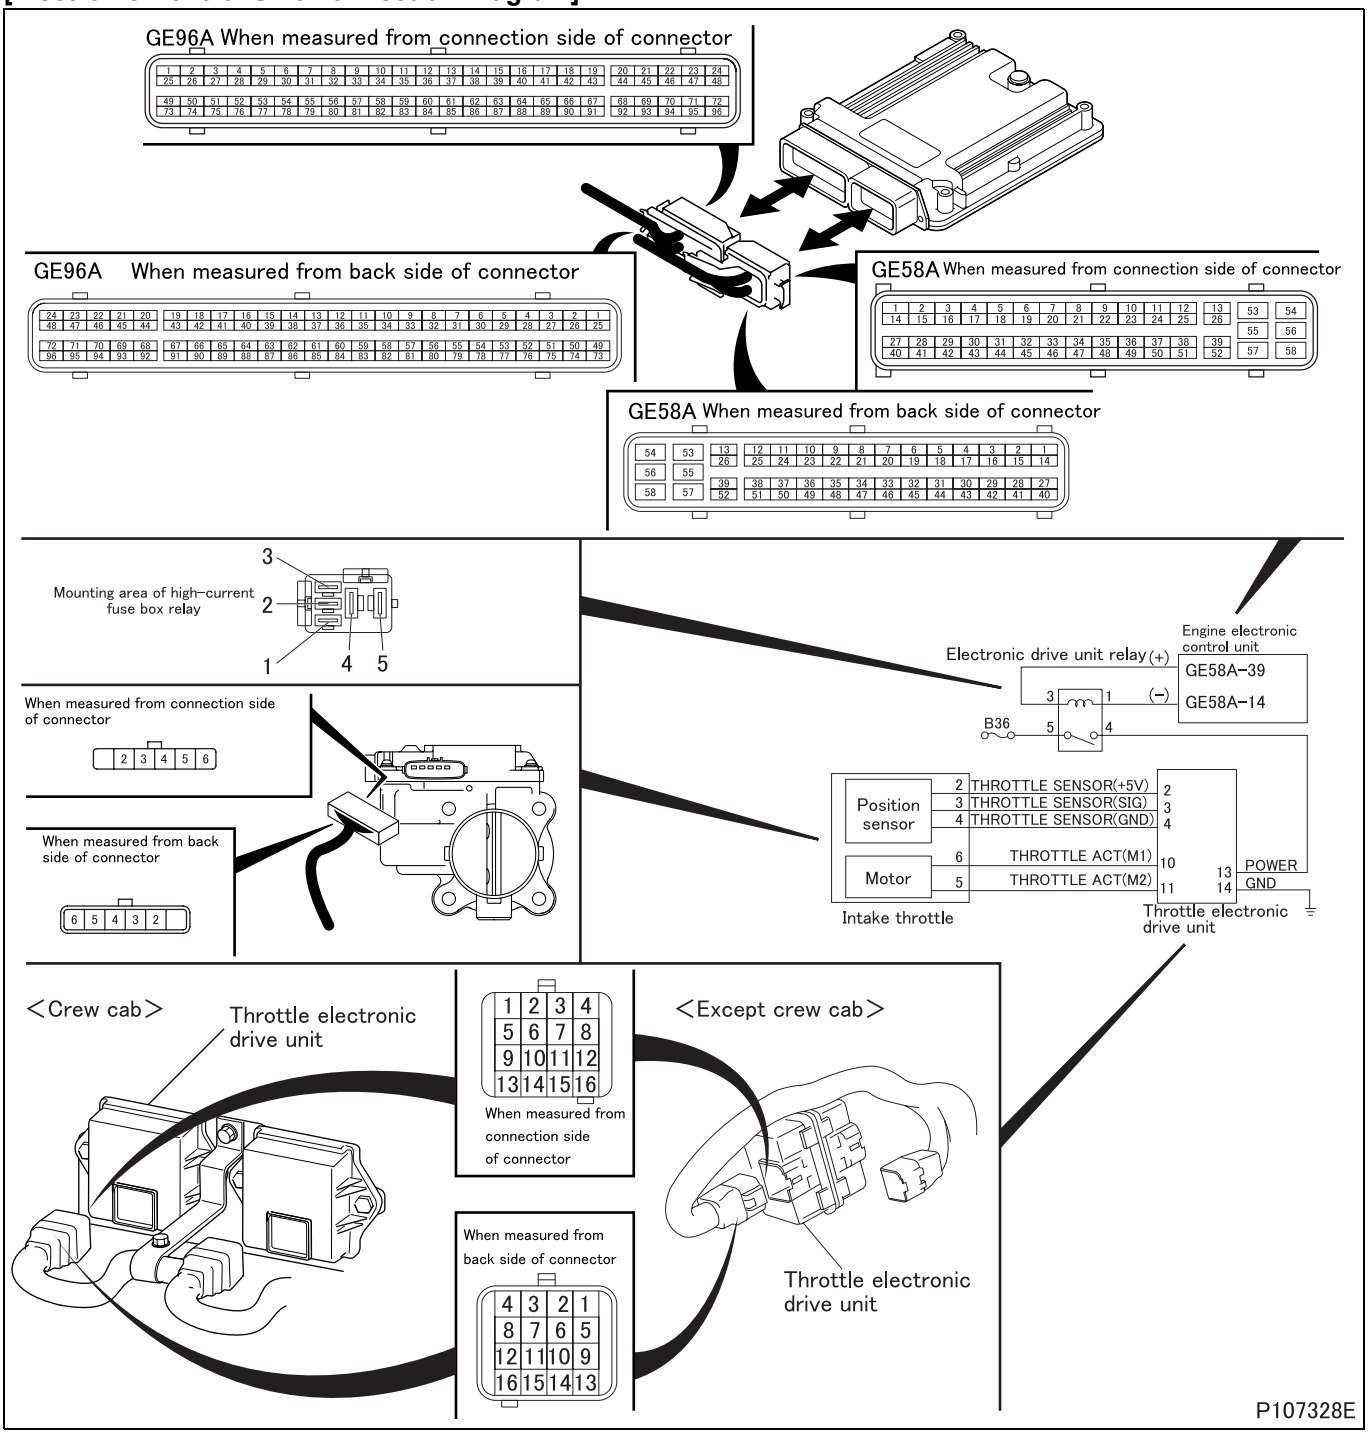
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Intake throttle actuator test is inhibited.
- Related fault check is stopped.

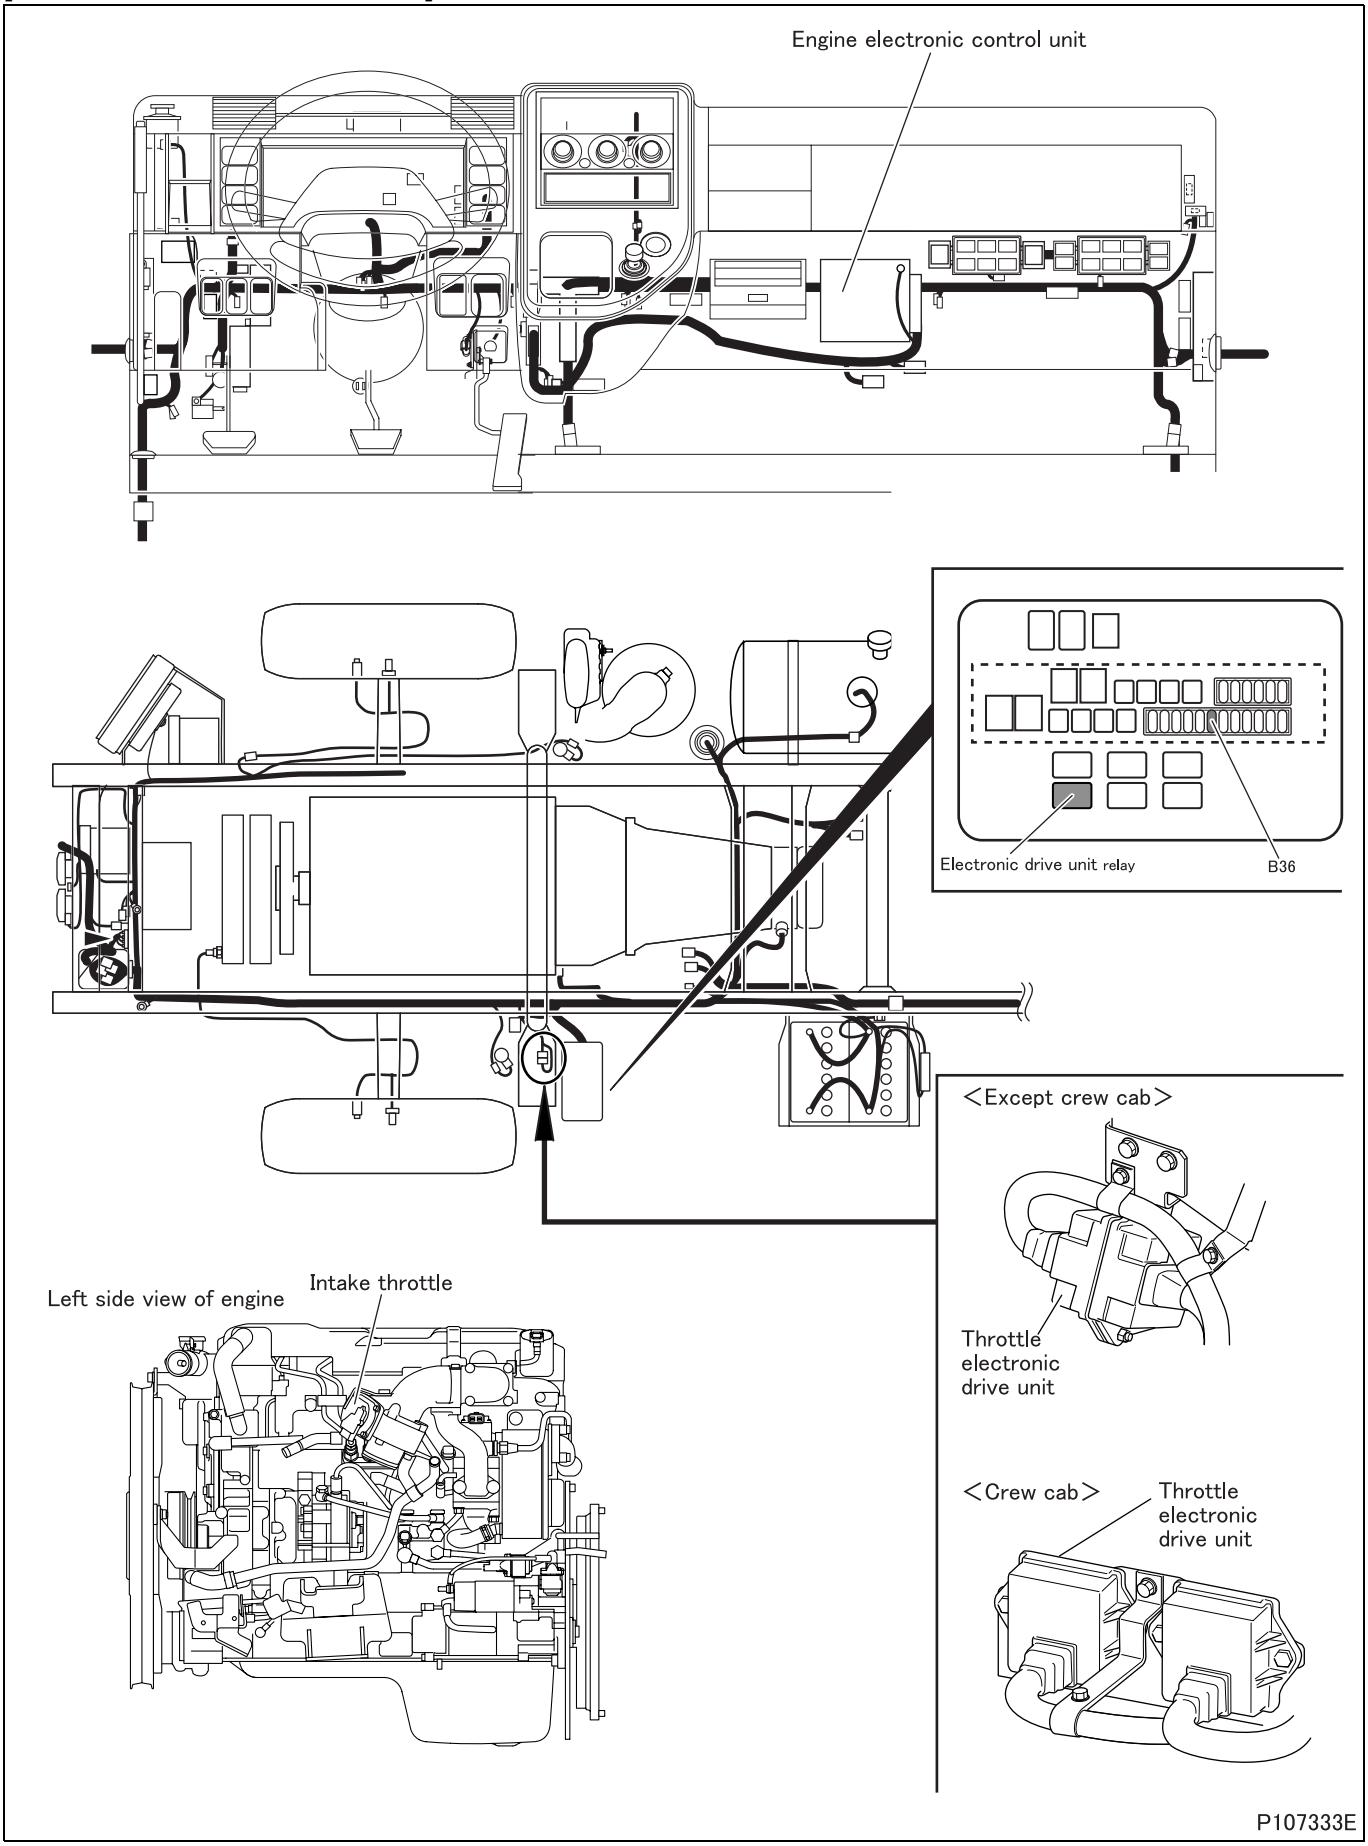
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and throttle actuator
- Malfunction of each connector
- Malfunction of throttle motor (built in throttle actuator)
- Malfunction of throttle position sensor (built in throttle actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of throttle actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of relay, go to step 9
		NO	Modify harness.

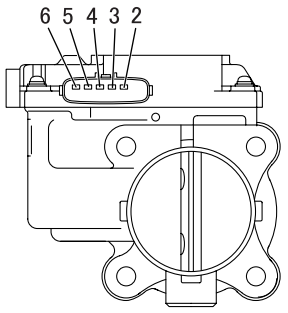
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor ground: terminal No. 4 and 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 10 and 11.
	Inspection condition		Disconnect connector and measure from harness side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (1): electronic drive unit connector terminal No. 10 - throttle actuator connector terminal No. 6 • Motor (2): electronic drive unit connector terminal No. 11 - throttle actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle actuator unit (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 5 and 6.
	Inspection condition		• Keep throttle actuator installed on vehicle. • Disconnect connector and measure throttle actuator side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of throttle actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of throttle actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A3 “Intake Throttle 1”.
	Requirements		• Valve fully closed: 0.5 V • Valve fully opened: 4.375 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 2 - throttle actuator connector terminal No. 2 • Sensor (signal): electronic drive unit connector terminal No. 3 - throttle actuator connector terminal No. 3 • Sensor (ground): electronic drive unit connector terminal No. 4 - throttle actuator connector terminal No. 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of throttle actuator, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2108/Flash code: 28
[Monitor]
Failure of intake throttle system
[Fault (outline)]
Plausibility
[Diagnosis check]
- Degree of intake throttle butterfly valve opening is detected through position sensor as actual stop opening and compared with target opening for control by engine electronic control unit.

[Code generation condition]
- Target valve position calculated by engine electronic control unit remains out of specified limits (upper limit: 90 degrees, lower limit: 6 degrees) for 1 second. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

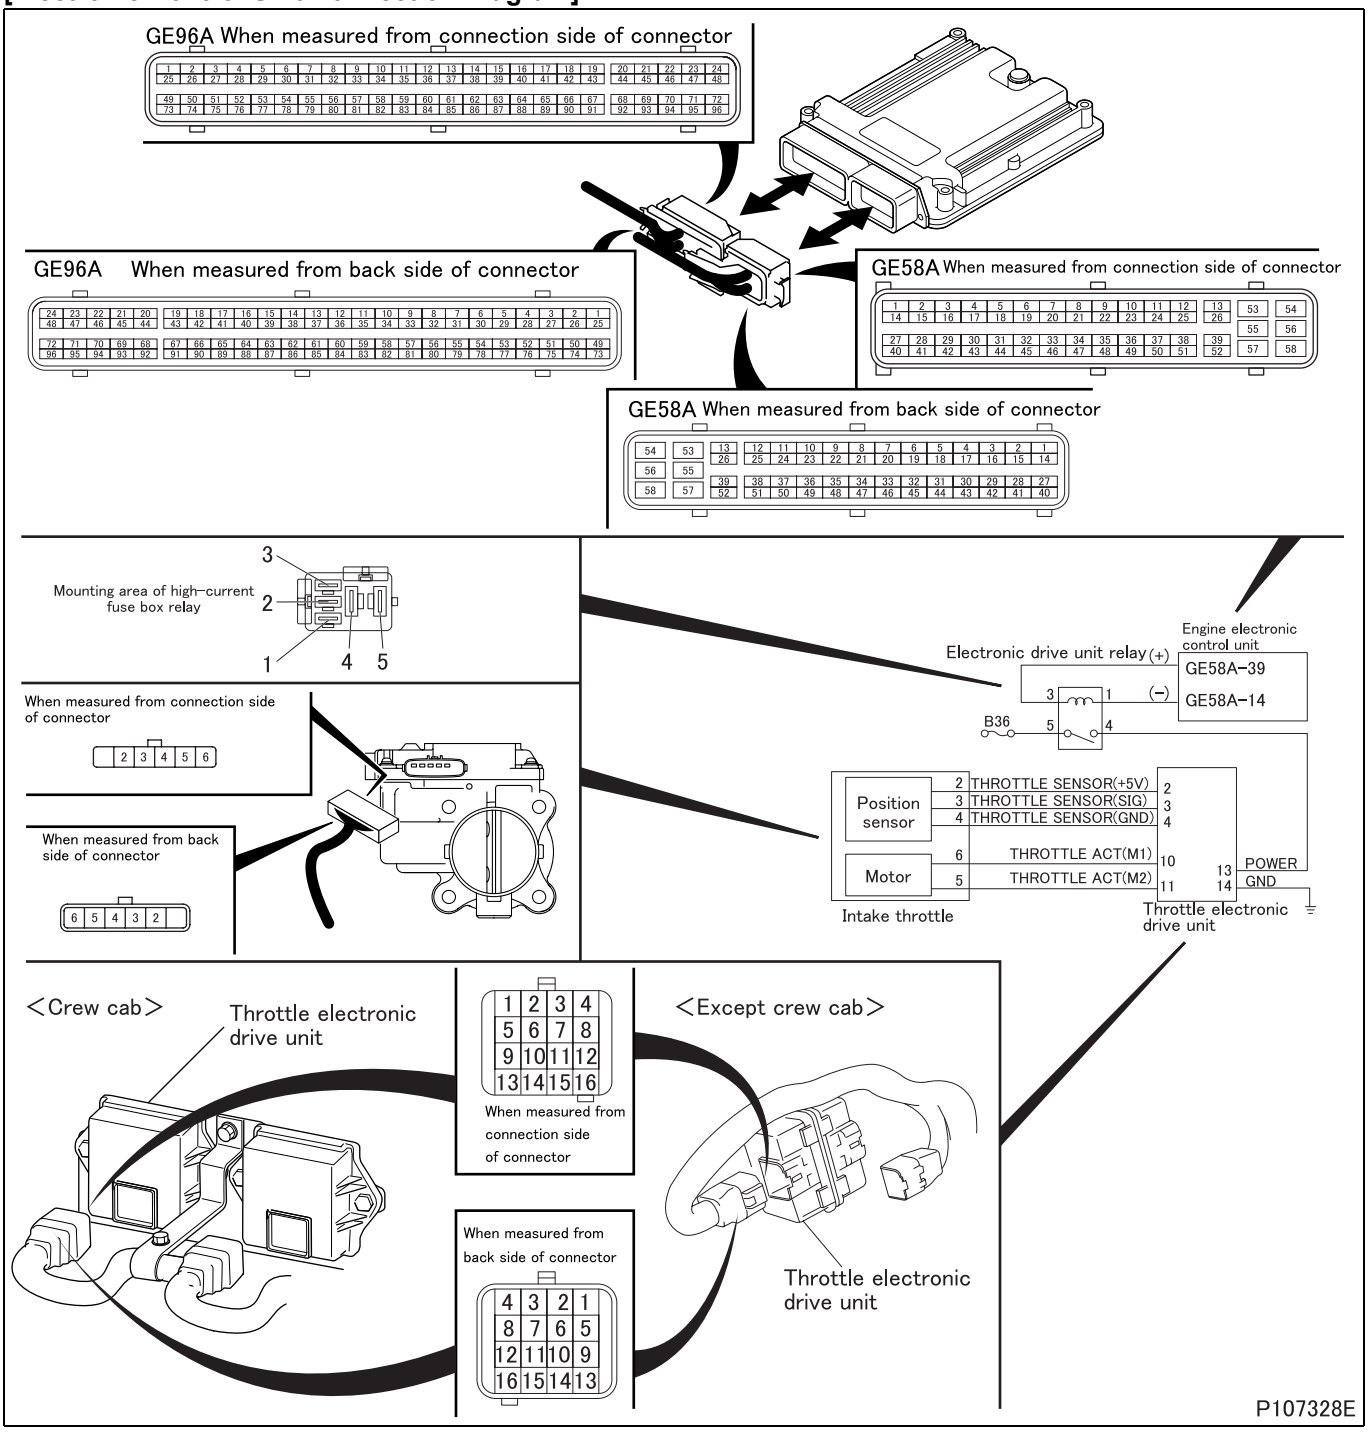
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Intake throttle actuator test is inhibited.
- Related fault check is stopped.

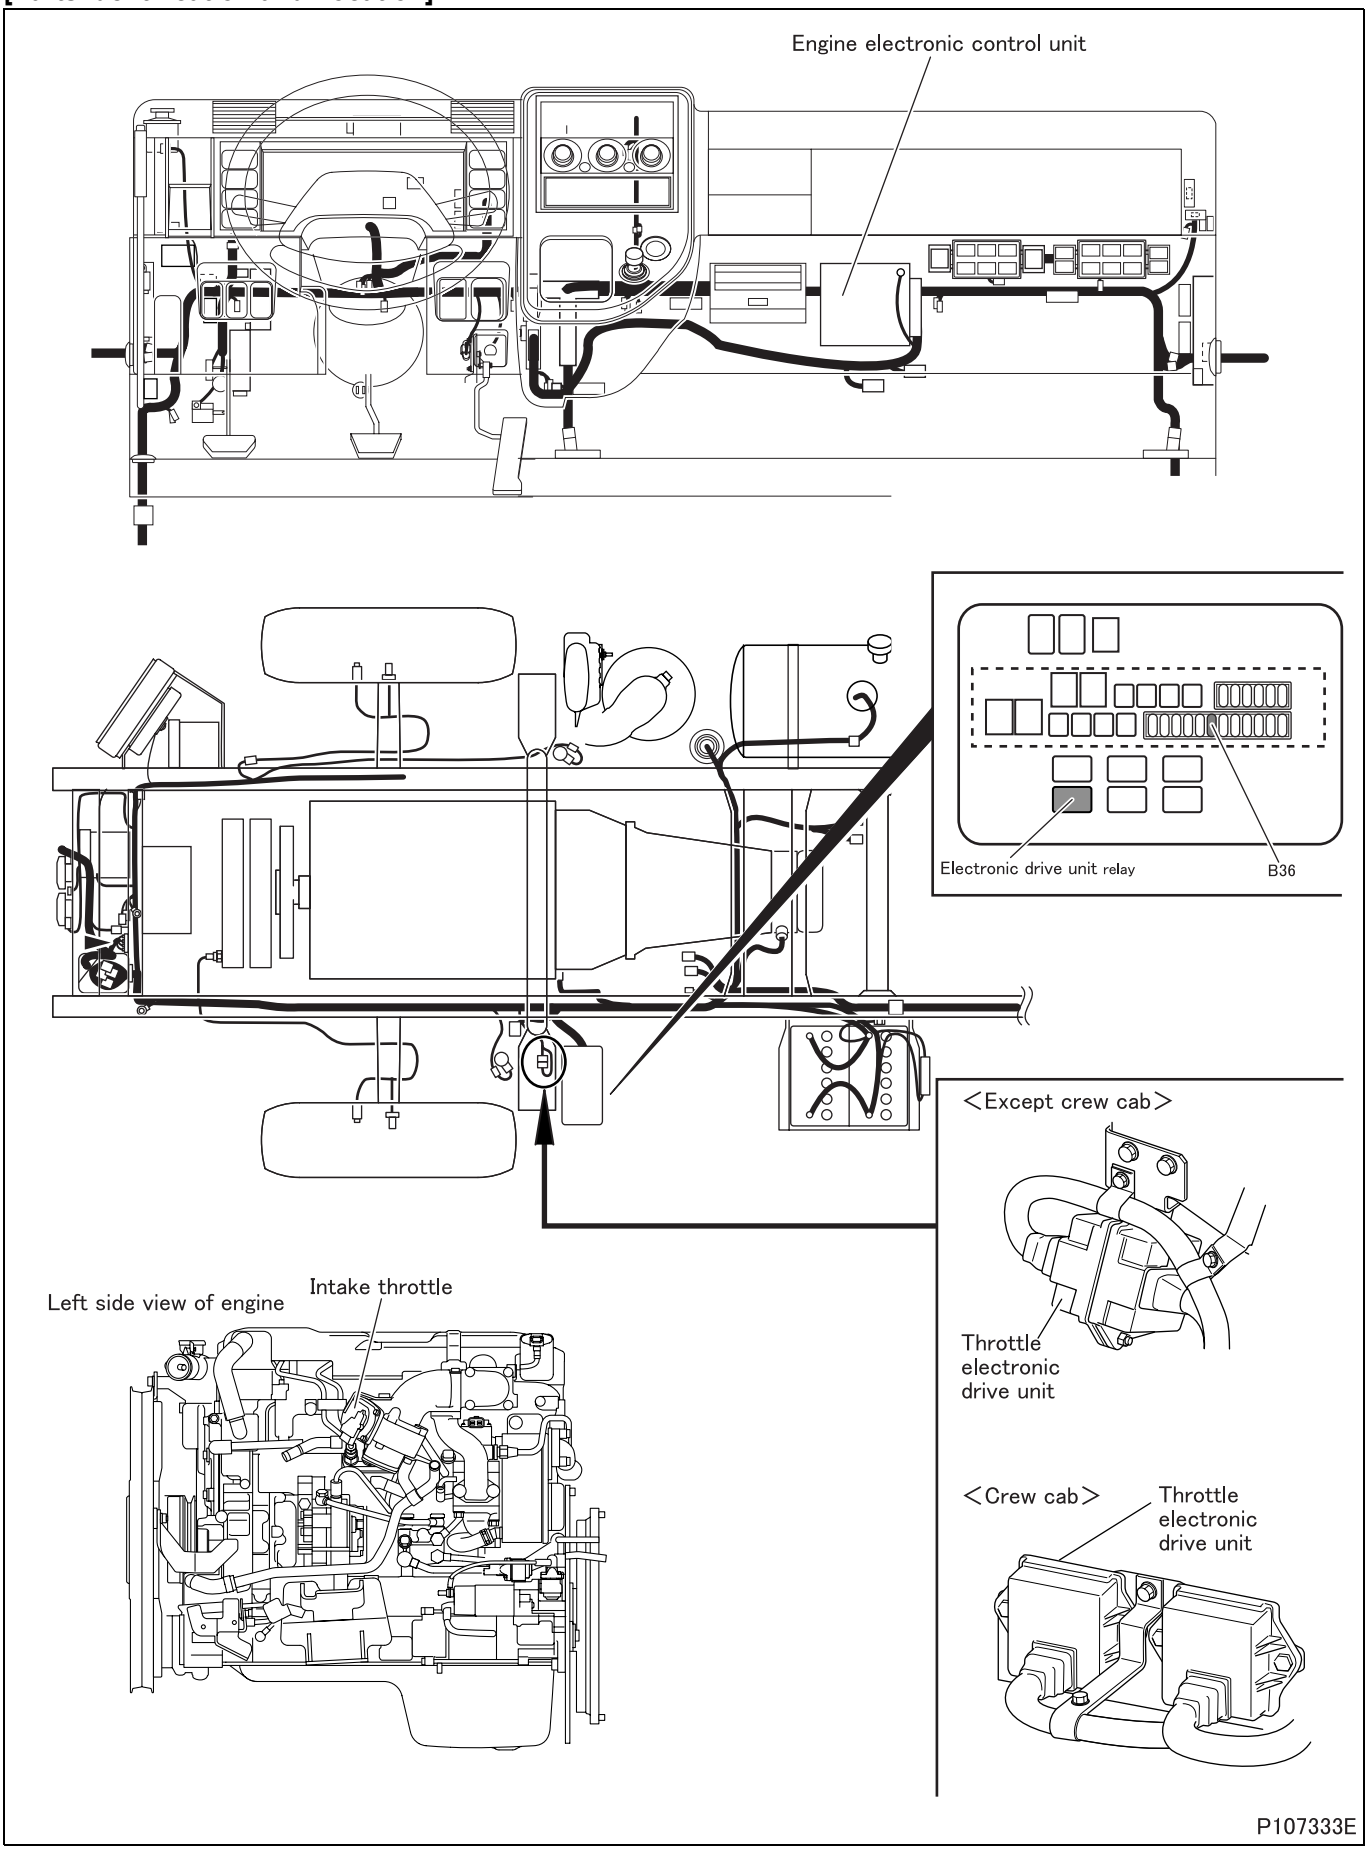
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and throttle actuator
- Malfunction of each connector
- Malfunction of throttle motor (built in throttle actuator)
- Malfunction of throttle position sensor (built in throttle actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of throttle actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of relay, go to step 9
		NO	Modify harness.

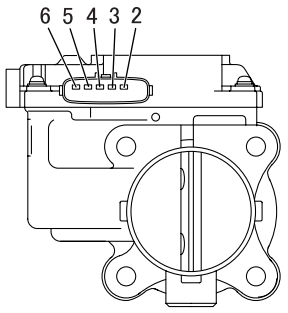
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor ground: terminal No. 4 and 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 10 and 11.
	Inspection condition		Disconnect connector and measure from harness side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (1): electronic drive unit connector terminal No. 10 - throttle actuator connector terminal No. 6 • Motor (2): electronic drive unit connector terminal No. 11 - throttle actuator connector terminal No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle actuator unit (motor)
	Maintenance item		Measure value of resistance between connector terminal No. 5 and 6.
	Inspection condition		• Keep throttle actuator installed on vehicle. • Disconnect connector and measure throttle actuator side.
	Requirements		0.3 to 80 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of throttle actuator

<Step 12 inspection diagram>



Step 13	Inspection items		Inspection of throttle actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 4 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A3 “Intake Throttle 1”.
	Requirements		• Valve fully closed: 0.5 V • Valve fully opened: 4.375 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and throttle actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 2 - throttle actuator connector terminal No. 2 • Sensor (signal): electronic drive unit connector terminal No. 3 - throttle actuator connector terminal No. 3 • Sensor (ground): electronic drive unit connector terminal No. 4 - throttle actuator connector terminal No. 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of throttle actuator, go to step 16
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A3 “Intake Throttle 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “53: Actual Intake Throttle Position”).
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2120/Flash code: 65
[Monitor]
Failure of accelerator pedal switch
[Fault (outline)]
Plausibility
[Diagnosis check]
- Pedal depressing angle output from accelerator pedal position sensor is monitored for abnormality in ON/OFF status of accelerator switch.

[Code generation condition]
- Accelerator switch remains OFF for 1 second at 30% depression of accelerator pedal. (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

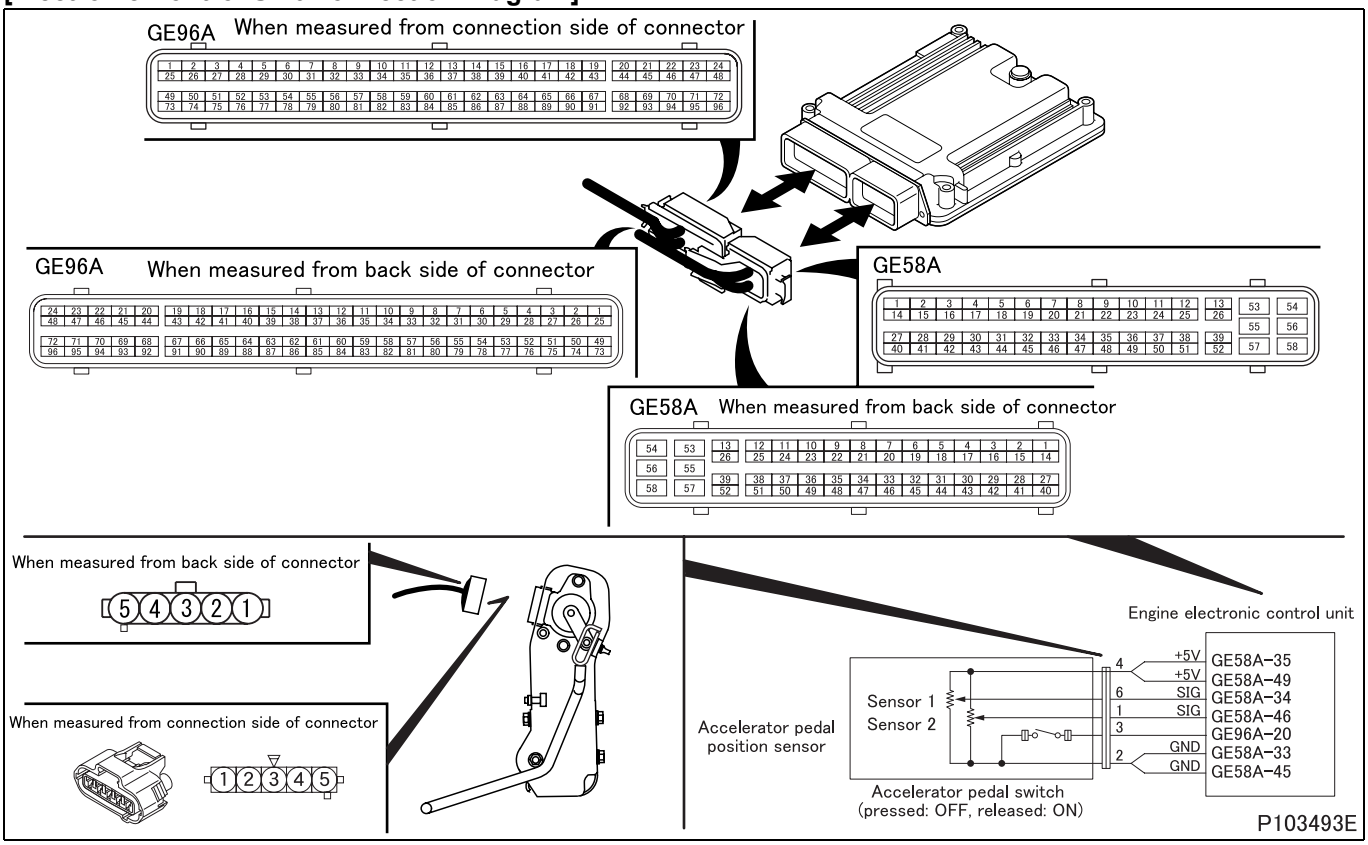
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Effects no special control.

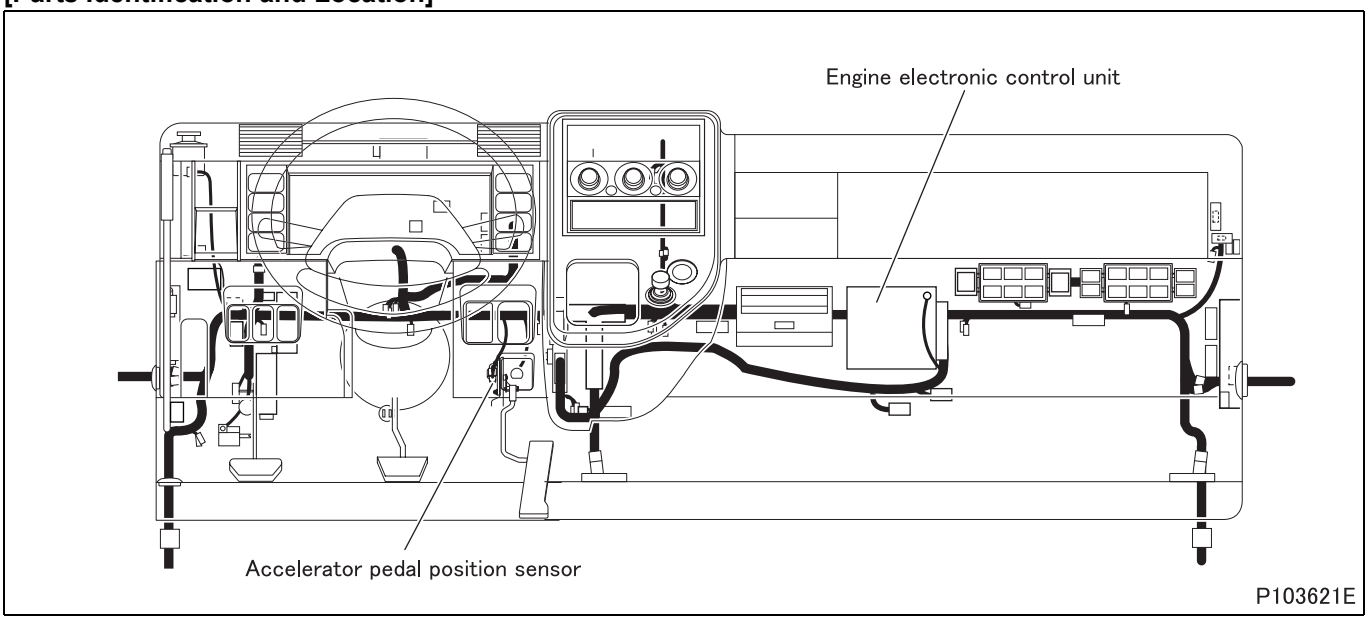
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and accelerator pedal position sensor (switch)
- Malfunction of each connector
- Malfunction of accelerator pedal position sensor (switch)
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

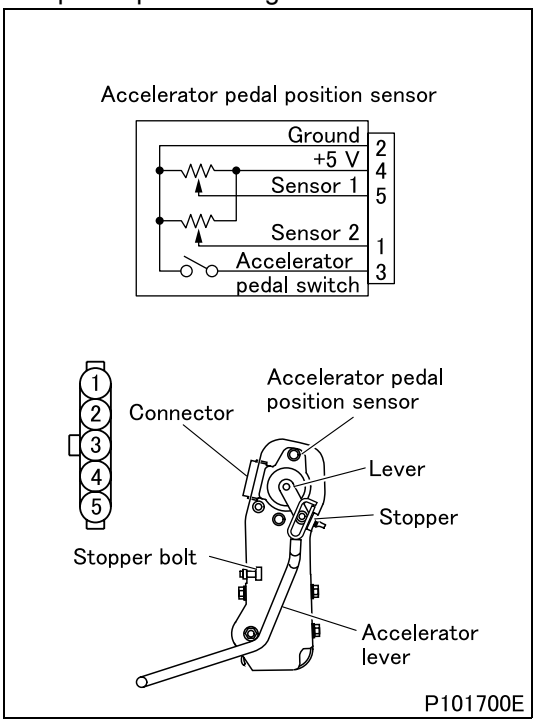
Step 1	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A2 “Accel SW” of Service Data.
	Inspection condition		–
	Requirements		• Accelerator pedal released: ON • Accelerator pedal pressed: OFF
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

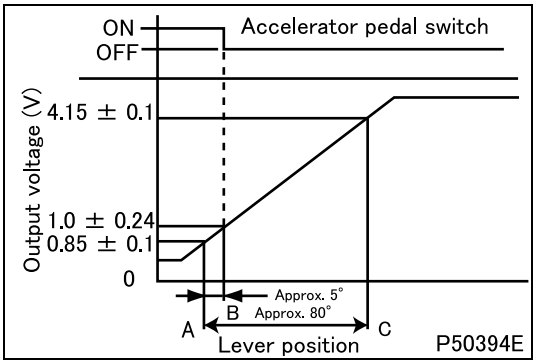
Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of accelerator switch connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of accelerator switch unit
	Maintenance item		Check continuity between connector terminal No. 2 and 3.
	Inspection condition		Disconnect connector and measure switch side.
	Requirements		• Accelerator pedal released: There is continuity. • Accelerator pedal pressed: There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Adjustment of accelerator pedal position sensor

<Step 4 inspection diagram>





Step 5	Inspection items		Inspection of harness (power supply)
	Maintenance item		Check circuit between accelerator switch connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 20.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness (ground)
	Maintenance item		Check circuit between accelerator switch connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 33 or 45.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A2 “Accel SW” of Service Data.
	Inspection condition		–
	Requirements		• Accelerator pedal released: ON • Accelerator pedal pressed: OFF
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2135/Flash code: 16, 24, 58
[Monitor]
Failure of accelerator pedal position sensors (1 and 2)
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Difference in output voltage between accelerator pedal position sensors 1 and 2 is monitored for deviation from specified value.

[Code generation condition]
- Difference in output voltage between accelerator pedal position sensors 1 and 2 remains more than 10% out of specification for 6 seconds. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Accelerator pedal position sensor 1>
- Accelerator pedal position sensor 2 is computed with accelerator pedal position sensor 1 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

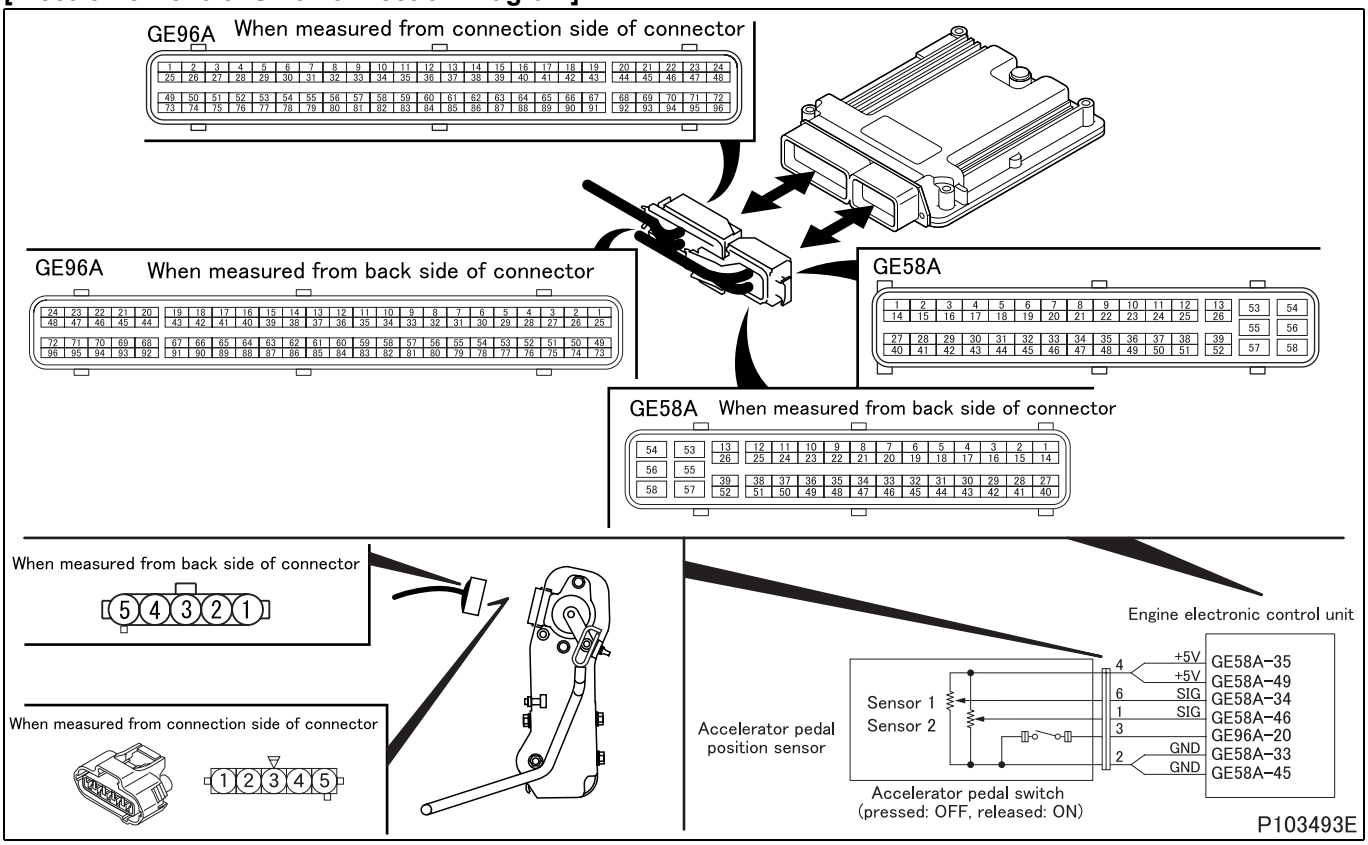
<Accelerator pedal position sensor 2>
- Accelerator pedal position sensor 1 is computed with accelerator pedal position sensor 2 only.
- In-use performance counter is stopped.
- Related fault check is stopped.

<Accelerator pedal position sensors 1 and 2>
- Related fault check is stopped.

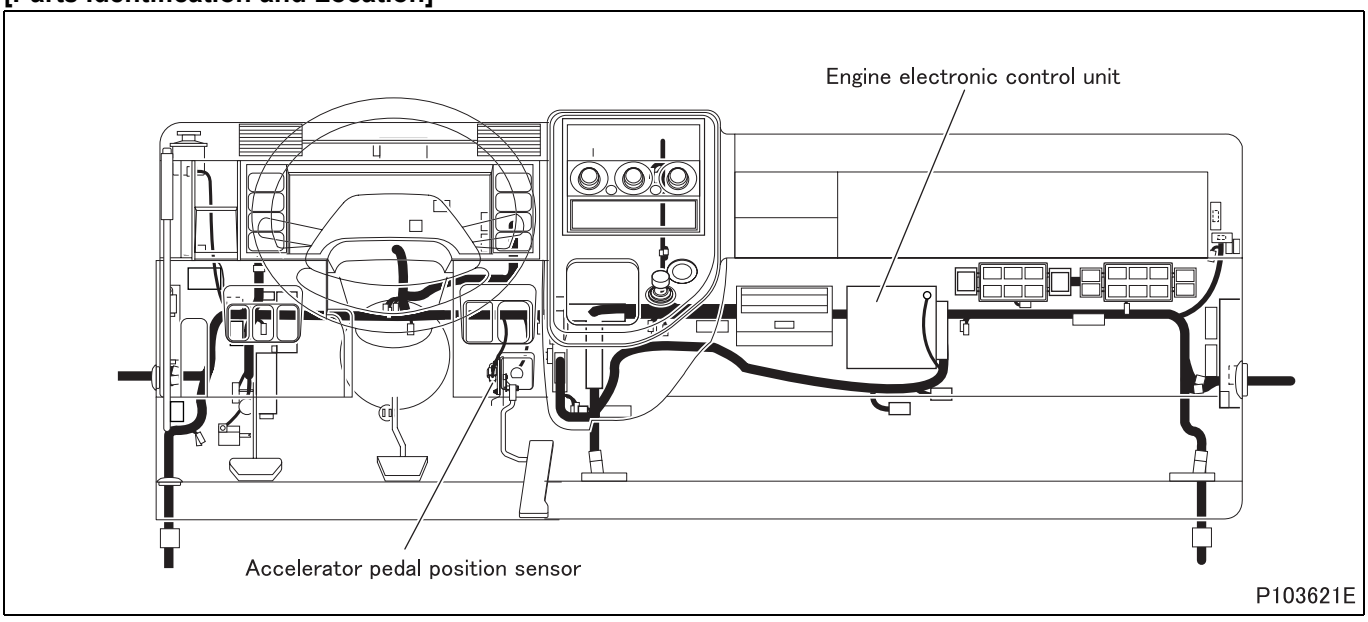
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** Measurement of following service data • Sensor 1: Item “Accelerator Pedal Position 1” • Sensor 2: Item “Accelerator Pedal Position 2” **<Multi-Use Tester used>** Measurement of following service data • Sensor 1: Item No. 40 “Accelerator sensor voltage 1”. • Sensor 2: Item No. 41 “Accelerator sensor voltage 2”.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal released: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 34 (+) - 33 (–) • Sensor 2: 46 (+) - 45 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		• Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 35 (+) - 33 (–) • Sensor 2: 49 (+) - 45 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

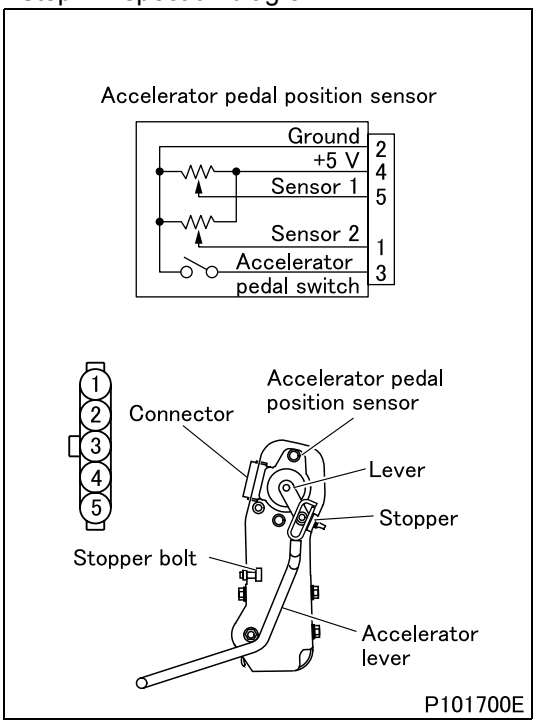
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 33 (+) - 53 (–) • Sensor 2: 45 (+) - 53 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

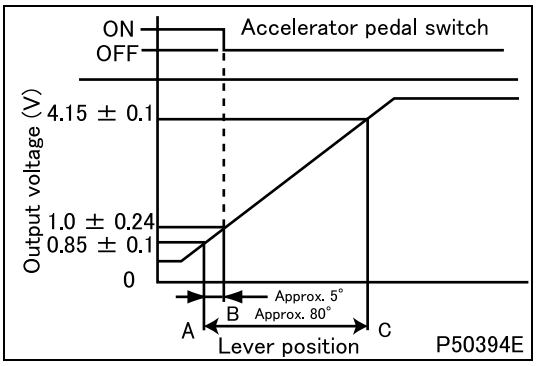
Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure values of voltage between the following connector terminals. • Sensor 1: 5 (+) - 2 (–) • Sensor 2: 1 (+) - 2 (–)
	Inspection condition		Apply voltage DC 5 V across terminals No. 4 (+) and 2 (–).
	Requirements		• Idling position A: 0.85 ± 0.1 V • Accelerator switch operating position B: 1.0 ± 0.24 V • Full-load position C: 4.15 ± 0.1 V A: When accelerator lever is in contact with stopper B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3. C: When accelerator lever is in contact with full load stopper bolt
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between sensor connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 4 - electronic control unit connector (GE58A) terminal No. 35 • Sensor 2: sensor connector terminal No. 4 - electronic control unit connector (GE58A) terminal No. 49
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 2 - electronic control unit connector (GE58A) terminal No. 33 • Sensor 2: sensor connector terminal No. 2 - electronic control unit connector (GE58A) terminal No. 45
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 5 - electronic control unit connector (GE58A) terminal No. 34 • Sensor 2: sensor connector terminal No. 1 - electronic control unit connector (GE58A) terminal No. 46
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** Measurement of following service data • Sensor 1: Item “Accelerator Pedal Position 1” • Sensor 2: Item “Accelerator Pedal Position 2” **<Multi-Use Tester used>** Measurement of following service data • Sensor 1: Item No. 40 “Accelerator sensor voltage 1”. • Sensor 2: Item No. 41 “Accelerator sensor voltage 2”.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal released: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2138/Flash code: 58
[Monitor]
Failure of accelerator pedal position sensors (1 and 2)
[Fault (outline)]
- Low signal range check
- High signal range check
- Plausibility

[Diagnosis check]
- Status of accelerator pedal position sensor 1 and 2 is monitored for simultaneous fault.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)
- Output signal error (high, low) in accelerator pedal position sensors 1 and 2
- Different errors in accelerator pedal position sensors 1 and 2
- Relative check error between accelerator pedal position sensors 1 and 2

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

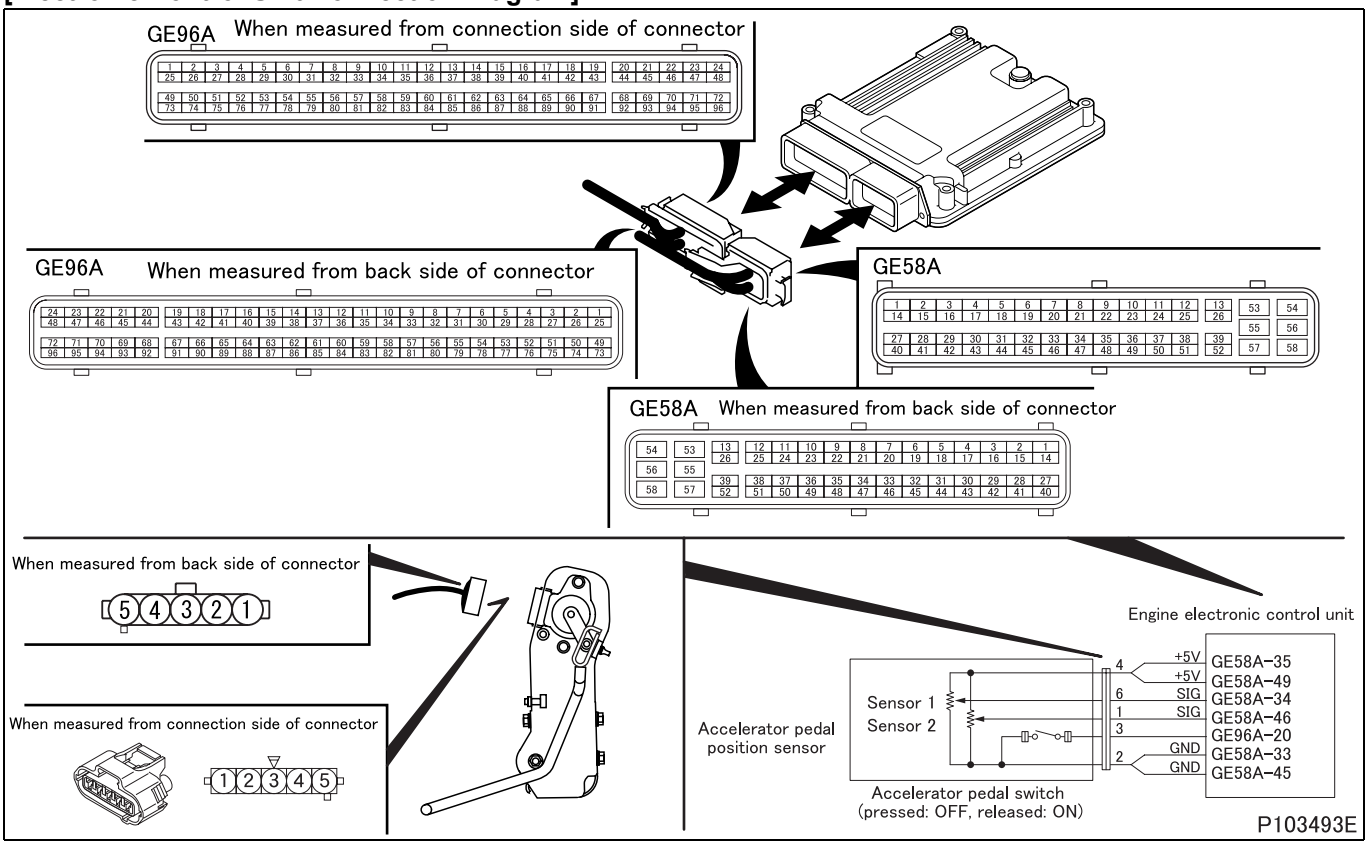
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Accelerator pedal position is computed with accelerator switch.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

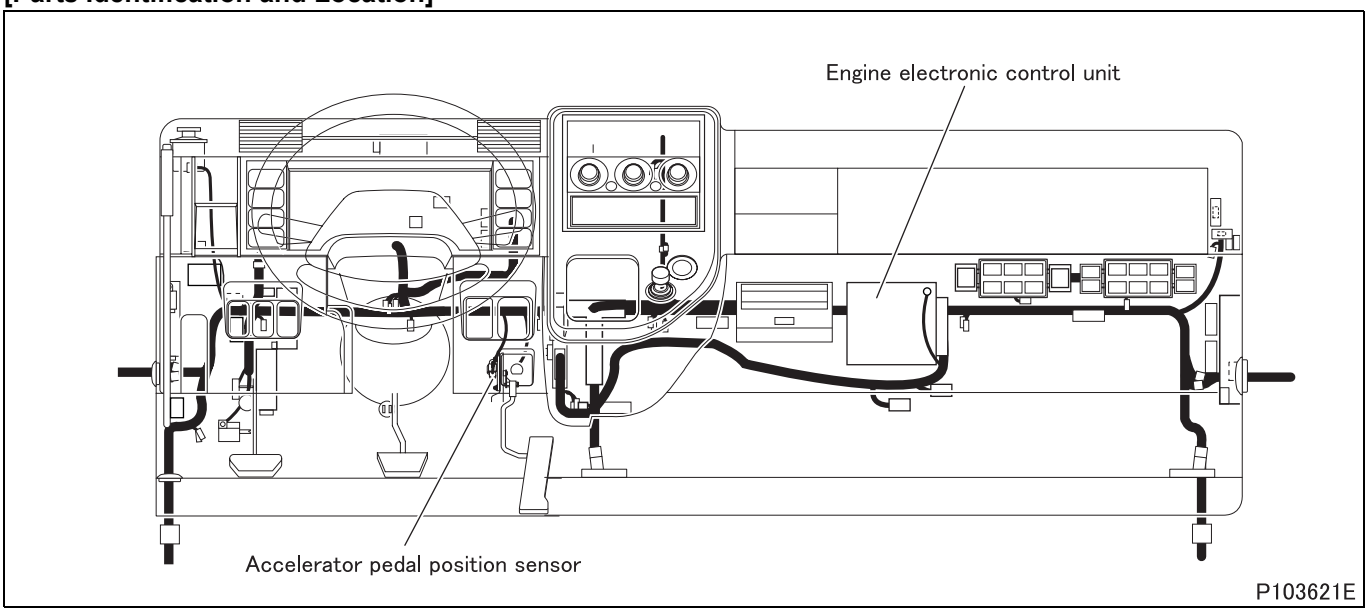
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** Measurement of following service data • Sensor 1: Item “Accelerator Pedal Position 1” • Sensor 2: Item “Accelerator Pedal Position 2” **<Multi-Use Tester used>** Measurement of following service data • Sensor 1: Item No. 40 “Accelerator sensor voltage 1”. • Sensor 2: Item No. 41 “Accelerator sensor voltage 2”.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal released: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 34 (+) - 33 (–) • Sensor 2: 46 (+) - 45 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		• Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 35 (+) - 33 (–) • Sensor 2: 49 (+) - 45 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

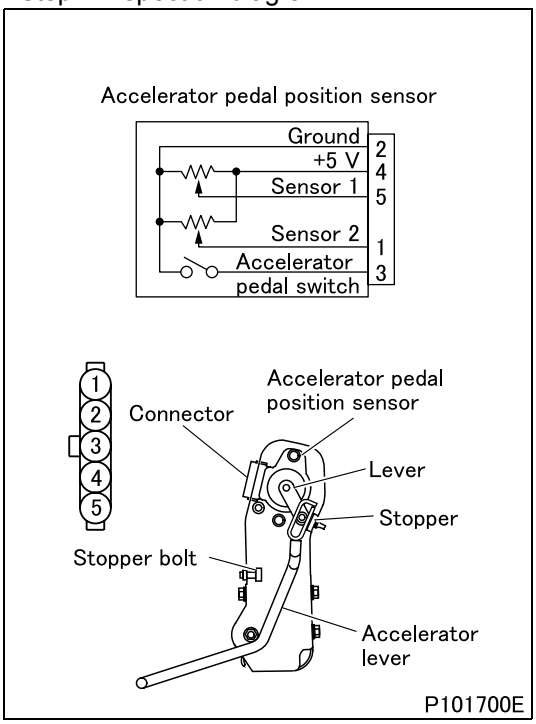
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure values of voltage between following connector (GE58A) terminals • Sensor 1: 33 (+) - 53 (–) • Sensor 2: 45 (+) - 53 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

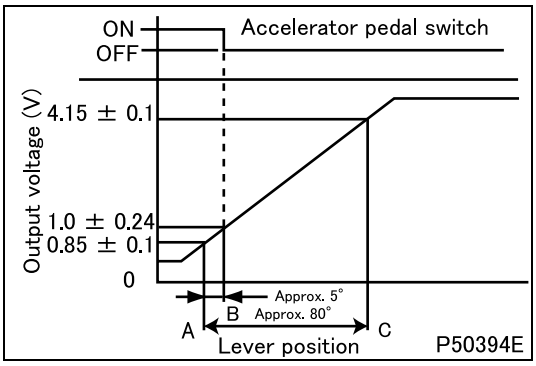
Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure values of voltage between the following connector terminals. • Sensor 1: 5 (+) - 2 (–) • Sensor 2: 1 (+) - 2 (–)
	Inspection condition		Apply voltage DC 5 V across terminals No. 4 (+) and 2 (–).
	Requirements		• Idling position A: 0.85 ± 0.1 V • Accelerator switch operating position B: 1.0 ± 0.24 V • Full-load position C: 4.15 ± 0.1 V A: When accelerator lever is in contact with stopper B: When accelerator pedal is pressed until there is no continuity between terminals 2 and 3. C: When accelerator lever is in contact with full load stopper bolt
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Adjustment of sensor

<Step 7 inspection diagram>





Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between sensor connector terminal No. 4 (+) and 2 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 4 - electronic control unit connector (GE58A) terminal No. 35 • Sensor 2: sensor connector terminal No. 4 - electronic control unit connector (GE58A) terminal No. 49
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 2 - electronic control unit connector (GE58A) terminal No. 33 • Sensor 2: sensor connector terminal No. 2 - electronic control unit connector (GE58A) terminal No. 45
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between following connector terminals. • Sensor 1: sensor connector terminal No. 5 - electronic control unit connector (GE58A) terminal No. 34 • Sensor 2: sensor connector terminal No. 1 - electronic control unit connector (GE58A) terminal No. 46
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** Measurement of following service data • Sensor 1: Item “Accelerator Pedal Position 1” • Sensor 2: Item “Accelerator Pedal Position 2” **<Multi-Use Tester used>** Measurement of following service data • Sensor 1: Item No. 40 “Accelerator sensor voltage 1”. • Sensor 2: Item No. 41 “Accelerator sensor voltage 2”.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • Accelerator pedal released: 0% • Accelerator pedal pressed: 100% **<Multi-Use Tester used>** • Accelerator pedal released: 0.85 ± 0.1 V • Accelerator pedal pressed: 4.15 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2147/Flash code: 82
[Monitor]
Injector magnetic valve
[Fault (outline)]
Injector short circuit (No.1 and 3 cylinders)
[Diagnosis check]
- Injector magnetic valve (No. 1, 3 cylinders) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 1, 3 cylinders) circuit remains shorted to ground as detected for 3 consecutive cycles (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

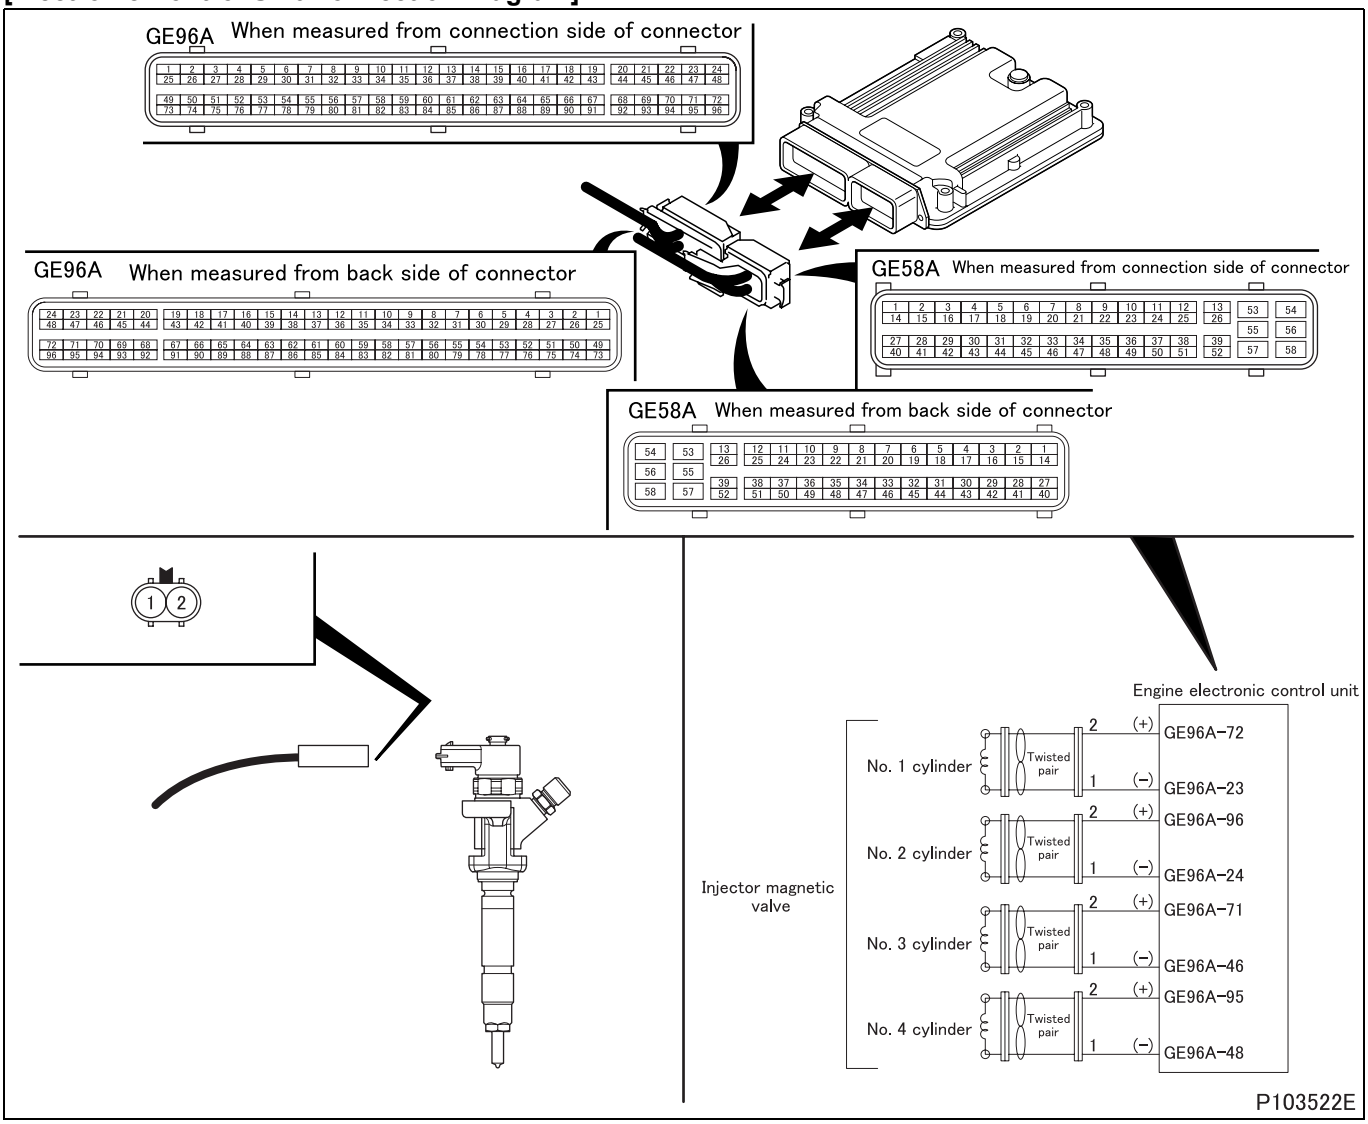
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 1 and No. 4 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

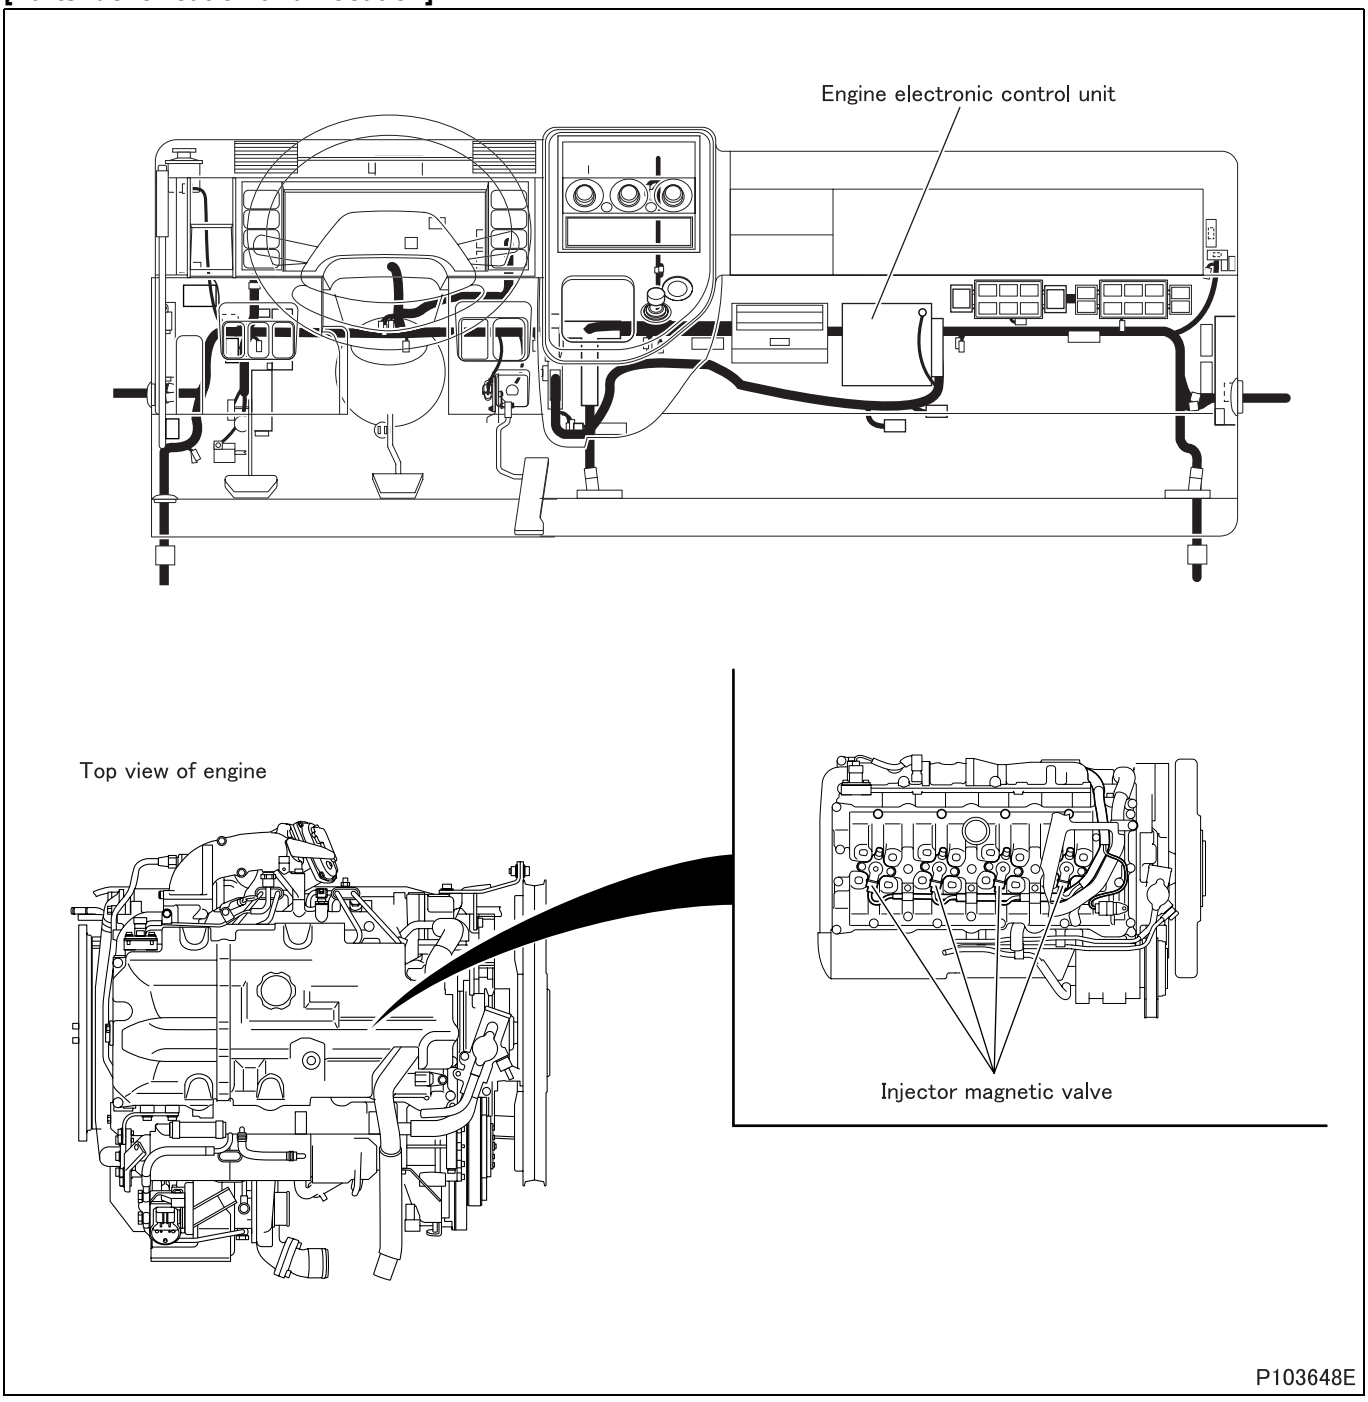
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

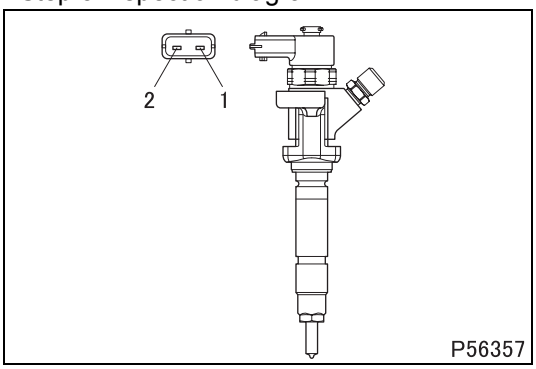
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure values of resistance between following connector (GE96A) terminals • Injector magnetic valve (No. 1 cylinder): 72 (+) - 23 (–) • Injector magnetic valve (No. 3 cylinder): 71 (+) - 46 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 72 • Injector magnetic valve (No. 3 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 71
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 23 • Injector magnetic valve (No. 3 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 46
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2148/Flash code: 82
[Monitor]
Injector magnetic valve
[Fault (outline)]
Injector short circuit (No. 1 and 3 cylinders)
[Diagnosis check]

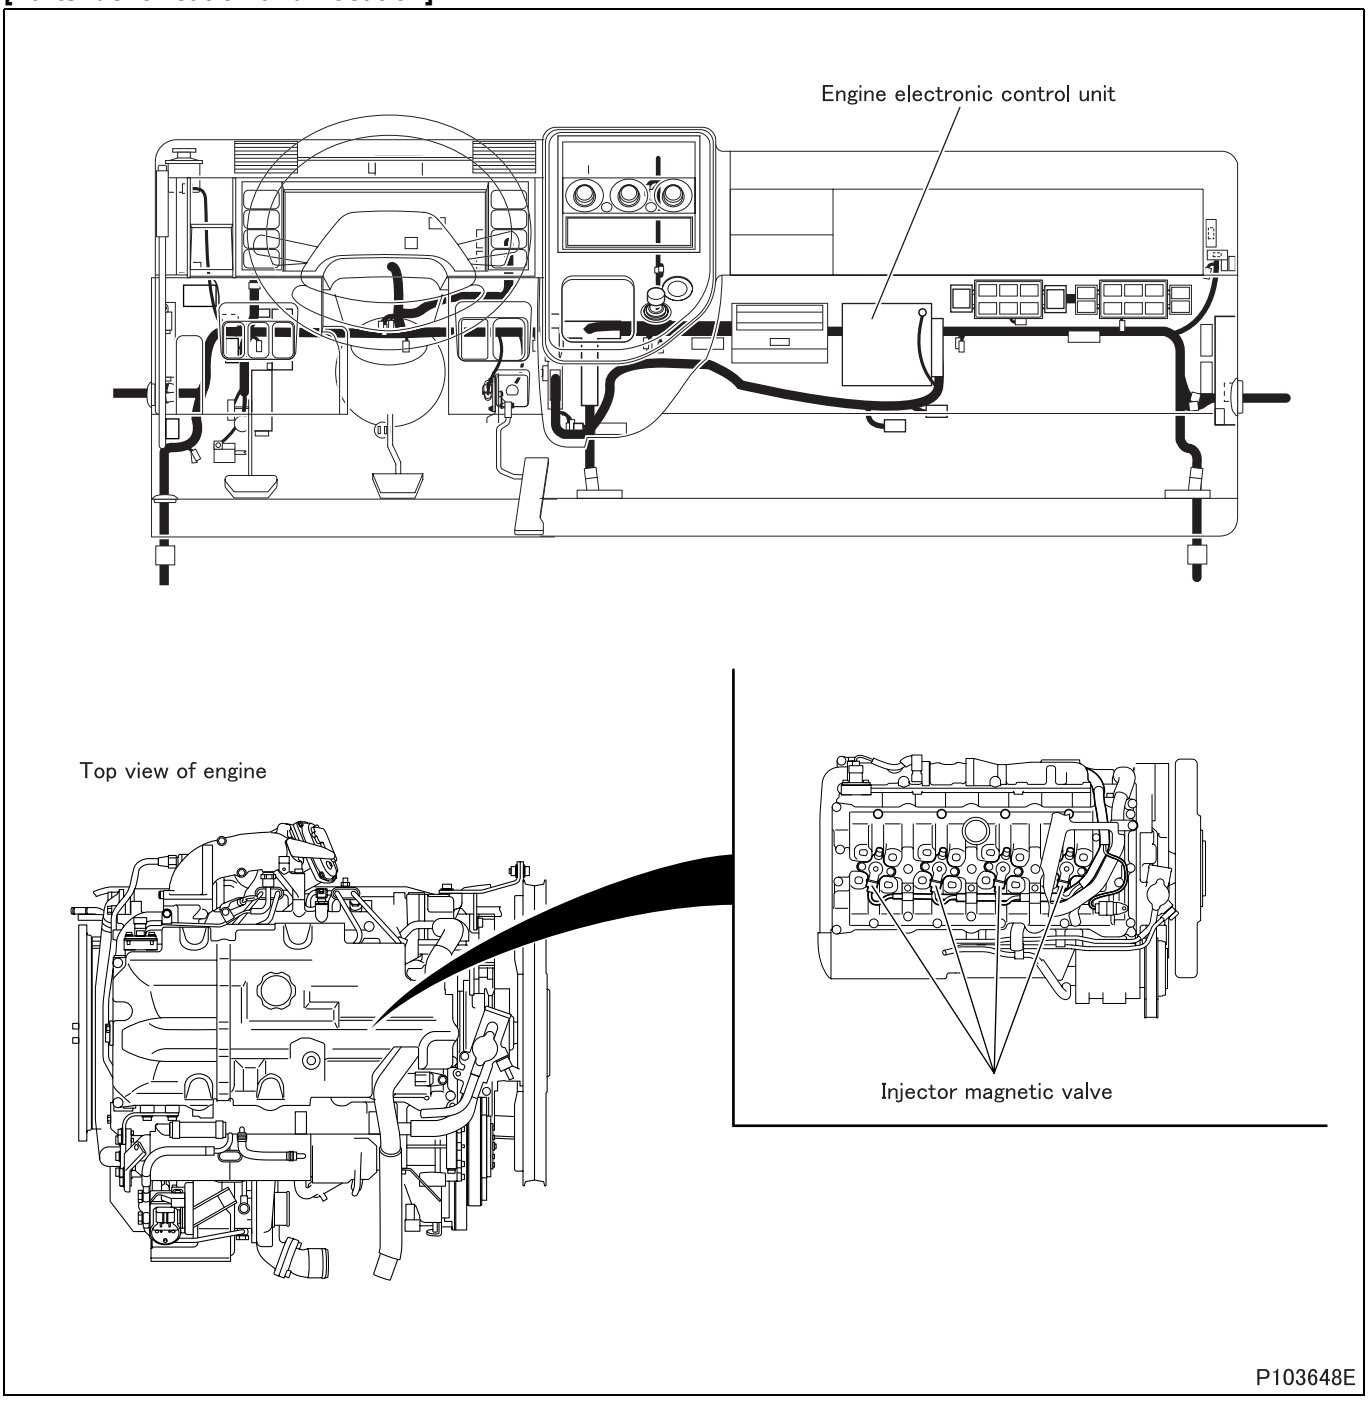
[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

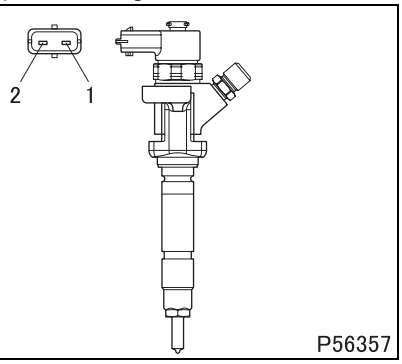
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure values of resistance between following connector (GE96A) terminals • Injector magnetic valve (No. 1 cylinder): 72 (+) - 23 (–) • Injector magnetic valve (No. 3 cylinder): 71 (+) - 46 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 72 • Injector magnetic valve (No. 3 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 71
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 1 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 23 • Injector magnetic valve (No. 3 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 46
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 1 cylinder): Perform item No. BB “Injector Test 1”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 1 cylinder) or Injector (No. 3 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2150/Flash code: 82
[Monitor]
Injector magnetic valve
[Fault (outline)]
Injector short circuit (No. 2 and 4 cylinders)
[Diagnosis check]
- Injector magnetic valve (No. 2, 4 cylinders) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 2, 4 cylinders) circuit remains shorted to ground as detected for 3 consecutive cycles (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

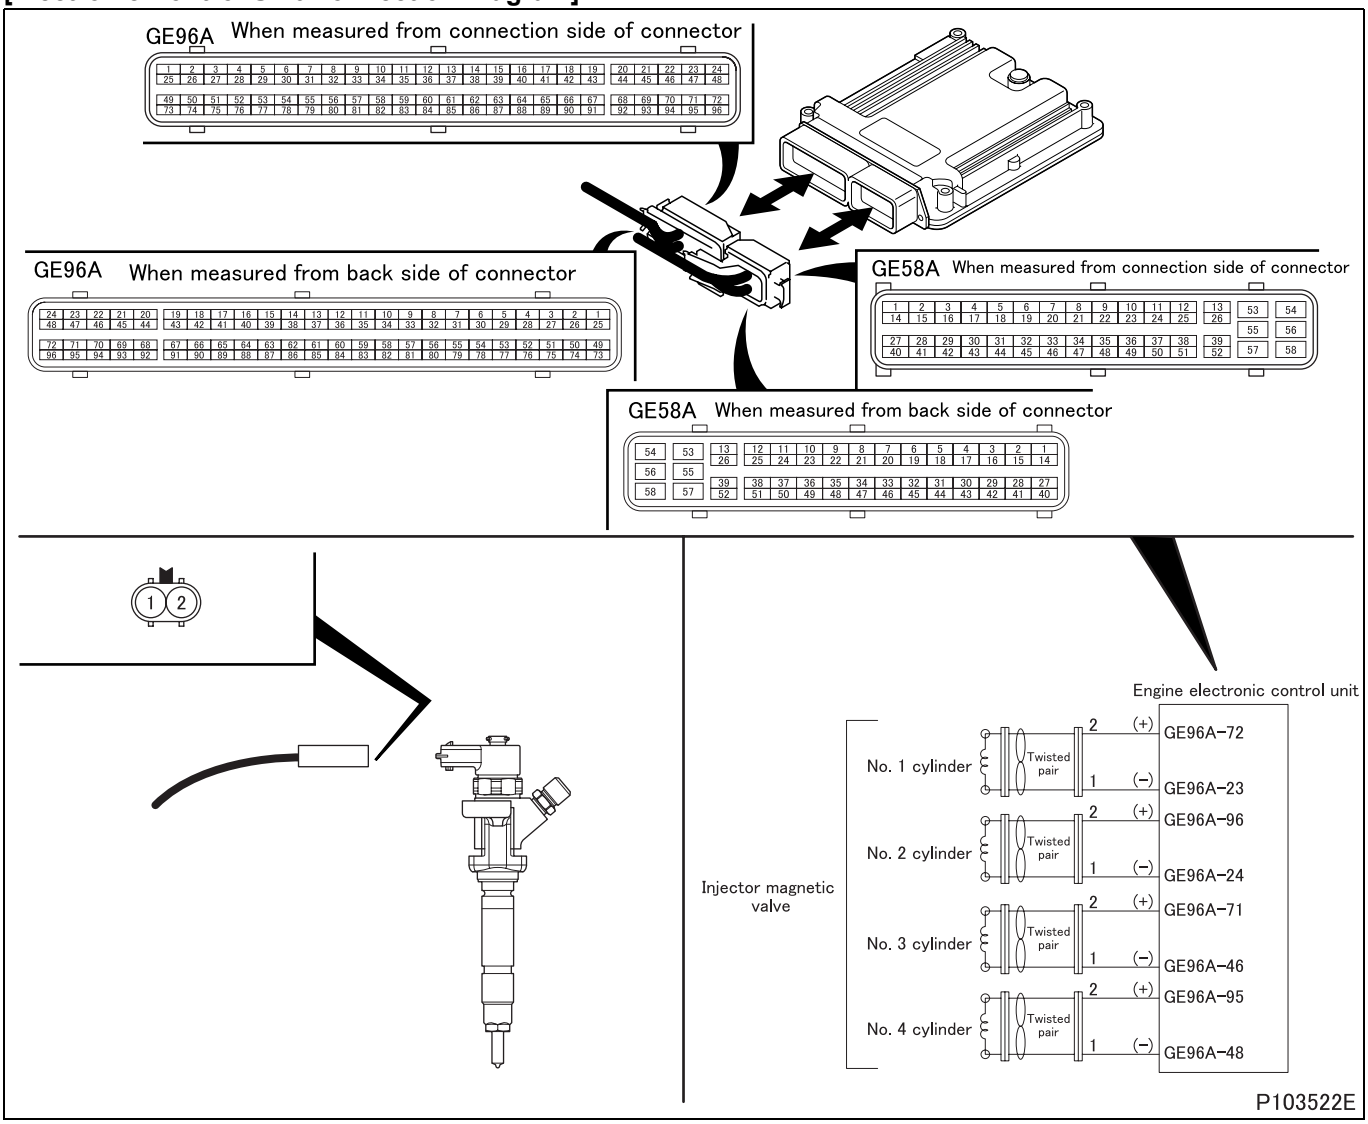
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

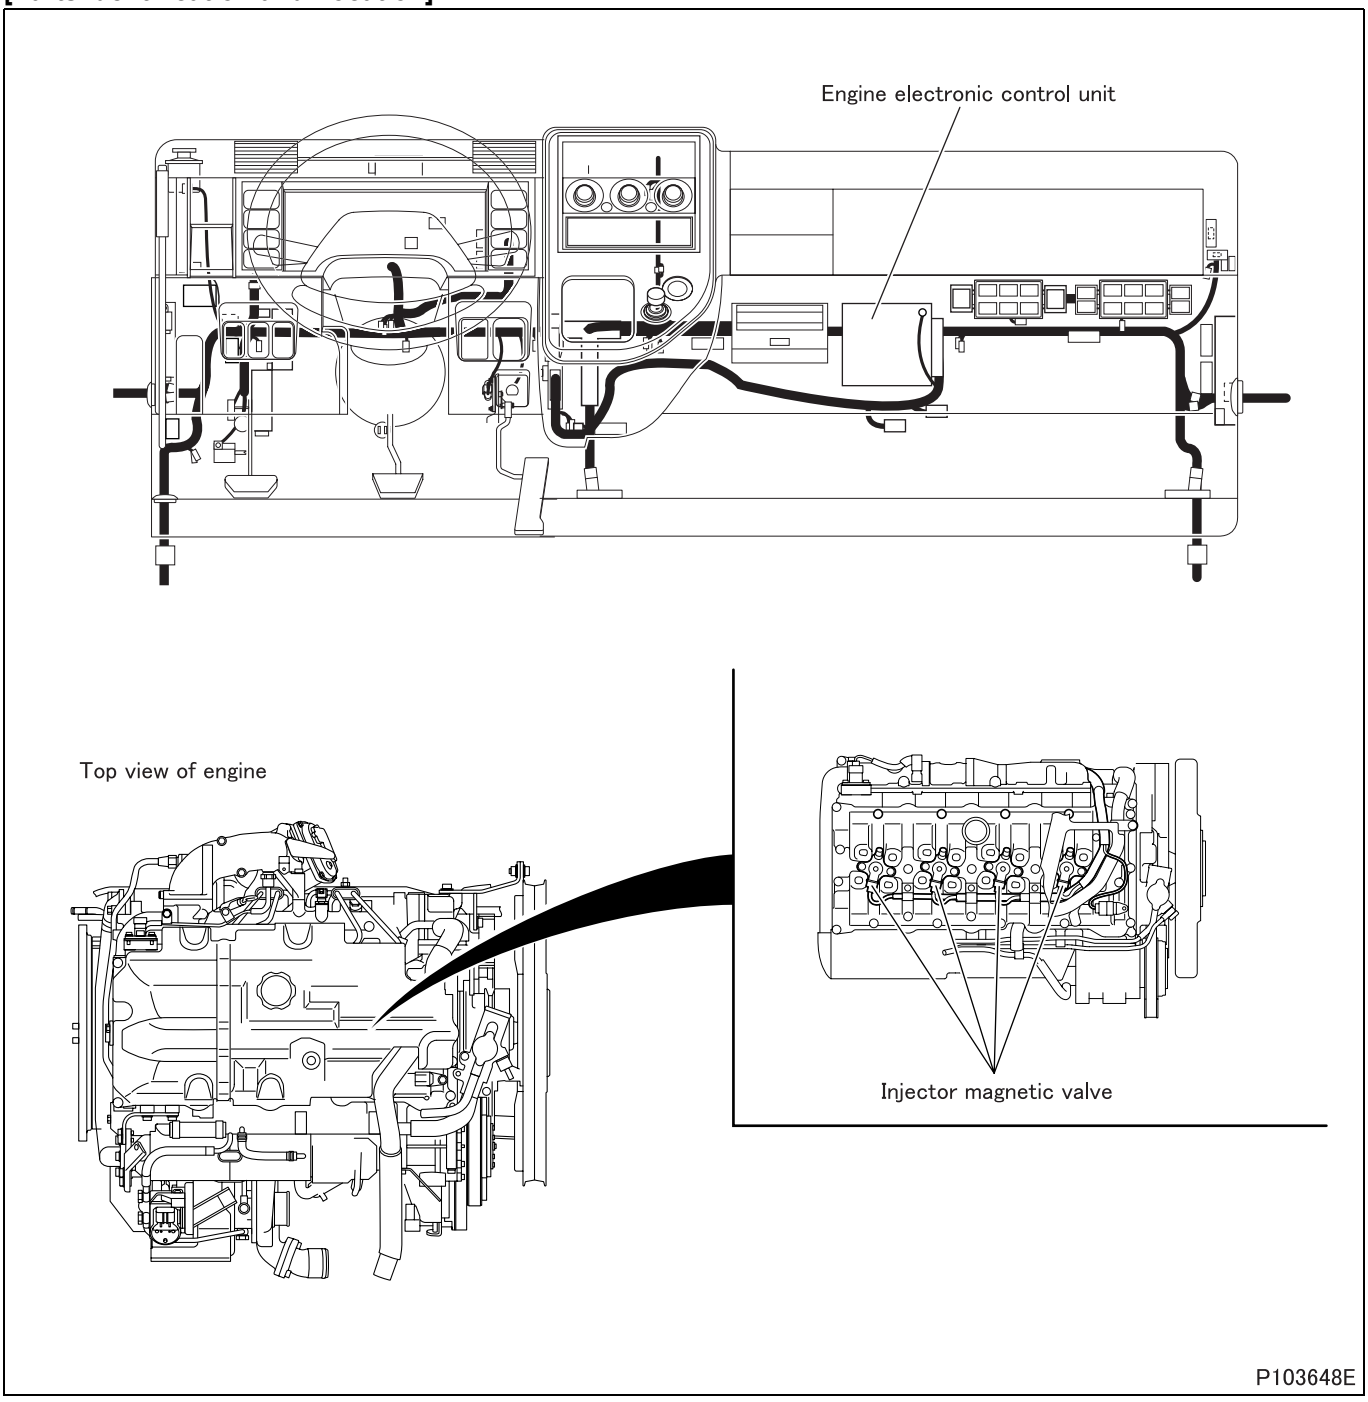
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

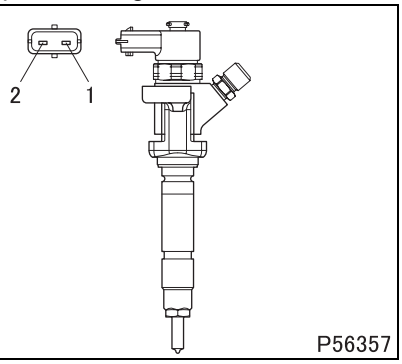
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure values of resistance between following connector (GE96A) terminals • Injector magnetic valve (No. 2 cylinder): 96 (+) - 24 (–) • Injector magnetic valve (No. 4 cylinder): 95 (+) - 48 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 96 • Injector magnetic valve (No. 4 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 95
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 24 • Injector magnetic valve (No. 4 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 48
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2151/Flash code: 82
[Monitor]
Injector magnetic valve
[Fault (outline)]
Injector short circuit (No. 2 and 4 cylinders)
[Diagnosis check]
- Injector magnetic valve (No. 2, 4 cylinders) circuit is monitored for fault.

[Code generation condition]
- Injector magnetic valve (No. 2, 4 cylinders) circuit remains shorted to power supply as detected for 3 consecutive cycles (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition).

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Injector magnetic valve (No. 2 and No. 3 cylinder) is stopped.
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Misfire detection is stopped.
- Auto cruise control stopped
- Diesel particulate filter regeneration is stopped.
- Injector actuator test is inhibited.

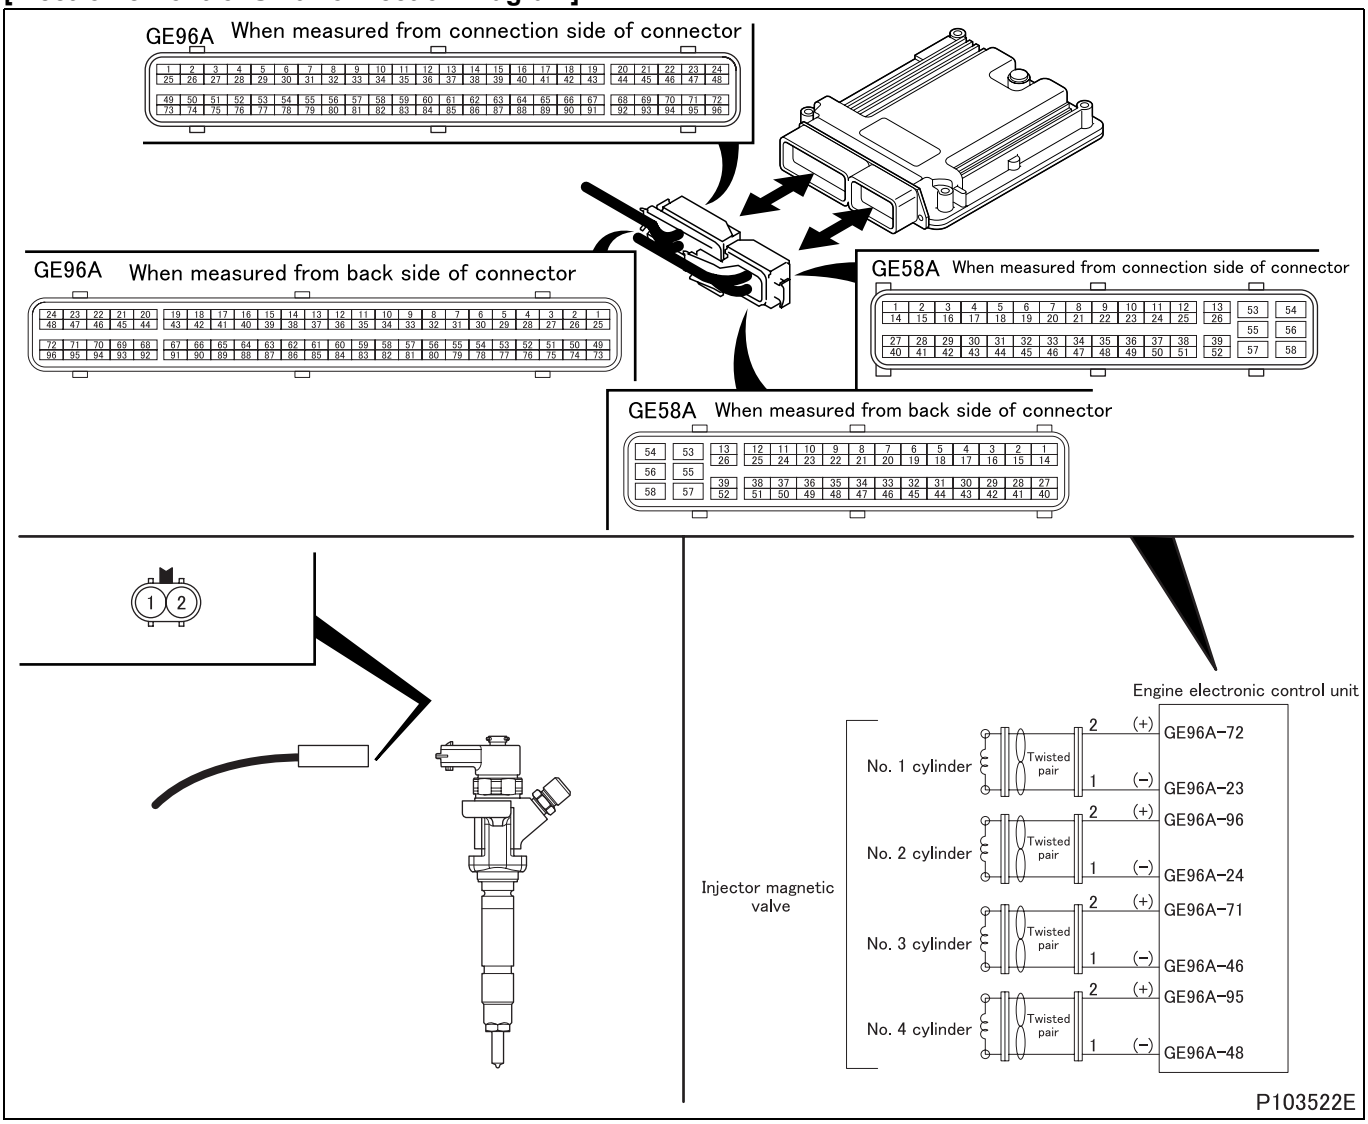
- Related fault check is stopped.

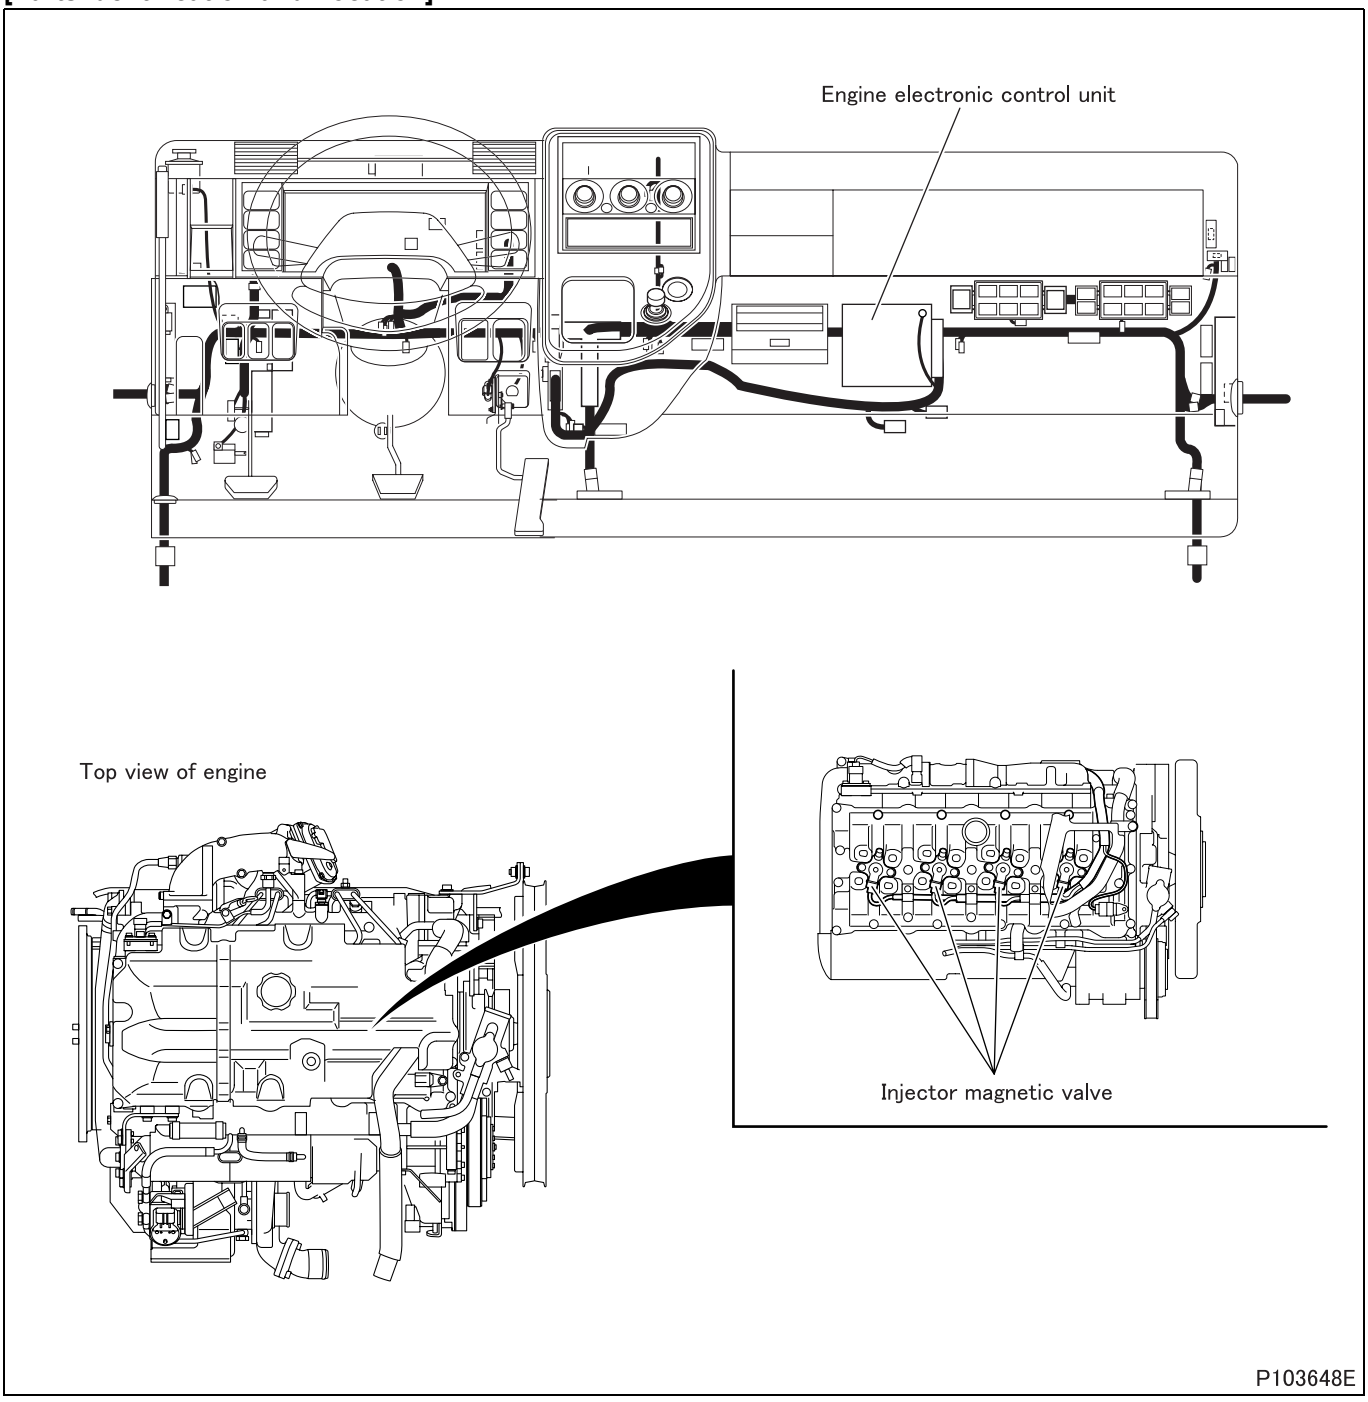
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and injector magnetic valve
- Malfunction of each connector
- Malfunction of injector magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

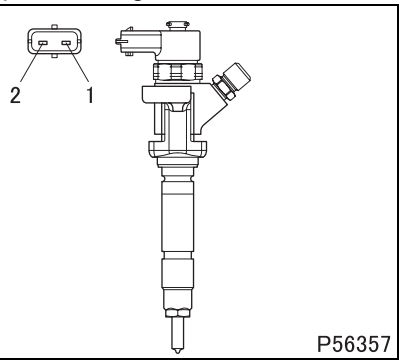
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure values of resistance between following connector (GE96A) terminals • Injector magnetic valve (No. 2 cylinder): 96 (+) - 24 (–) • Injector magnetic valve (No. 4 cylinder): 95 (+) - 48 (–)
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of injector magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of injector magnetic valve unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		–
	Requirements		0.255 ± 0.04 Ω (20°C {68°F})
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of injector

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 96 • Injector magnetic valve (No. 4 cylinder): magnetic valve terminal No. 2 - electronic control unit (GE96A) terminal No. 95
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between injector magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between following connector terminals. • Injector magnetic valve (No. 2 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 24 • Injector magnetic valve (No. 4 cylinder): magnetic valve terminal No. 1 - electronic control unit (GE96A) terminal No. 48
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform following actuator test. • Injector magnetic valve (No. 2 cylinder): Perform item No. BD “Injector Test 3”. • Injector magnetic valve (No. 4 cylinder): Perform item No. BC “Injector Test 2”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.
	Requirements		Injector (No. 2 cylinder) or Injector (No. 4 cylinder) stops injection and engine vibrations become slightly larger.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2169/Flash code: 93
[Monitor]
Failure of exhaust shutter 2-way magnetic valve
[Fault (outline)]
Open circuit
[Diagnosis check]
- Exhaust shutter 2-way magnetic valve circuit is monitored for fault.

[Code generation condition]
- Exhaust shutter 2-way magnetic valve circuit remains open or overloaded as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.
- Fault diagnosis is performed each time when the control is halted.

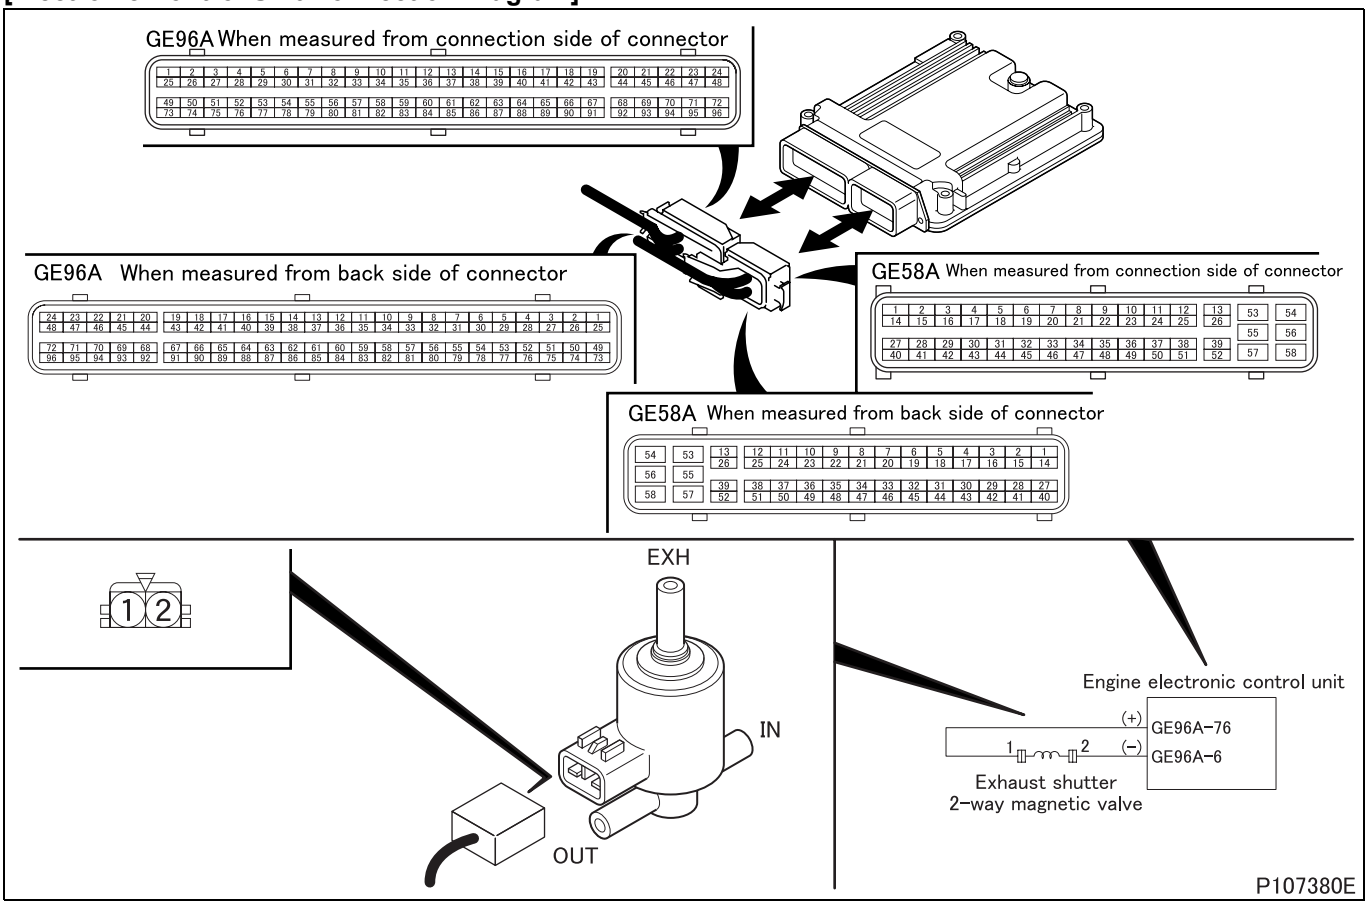
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Auxiliary brake control is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

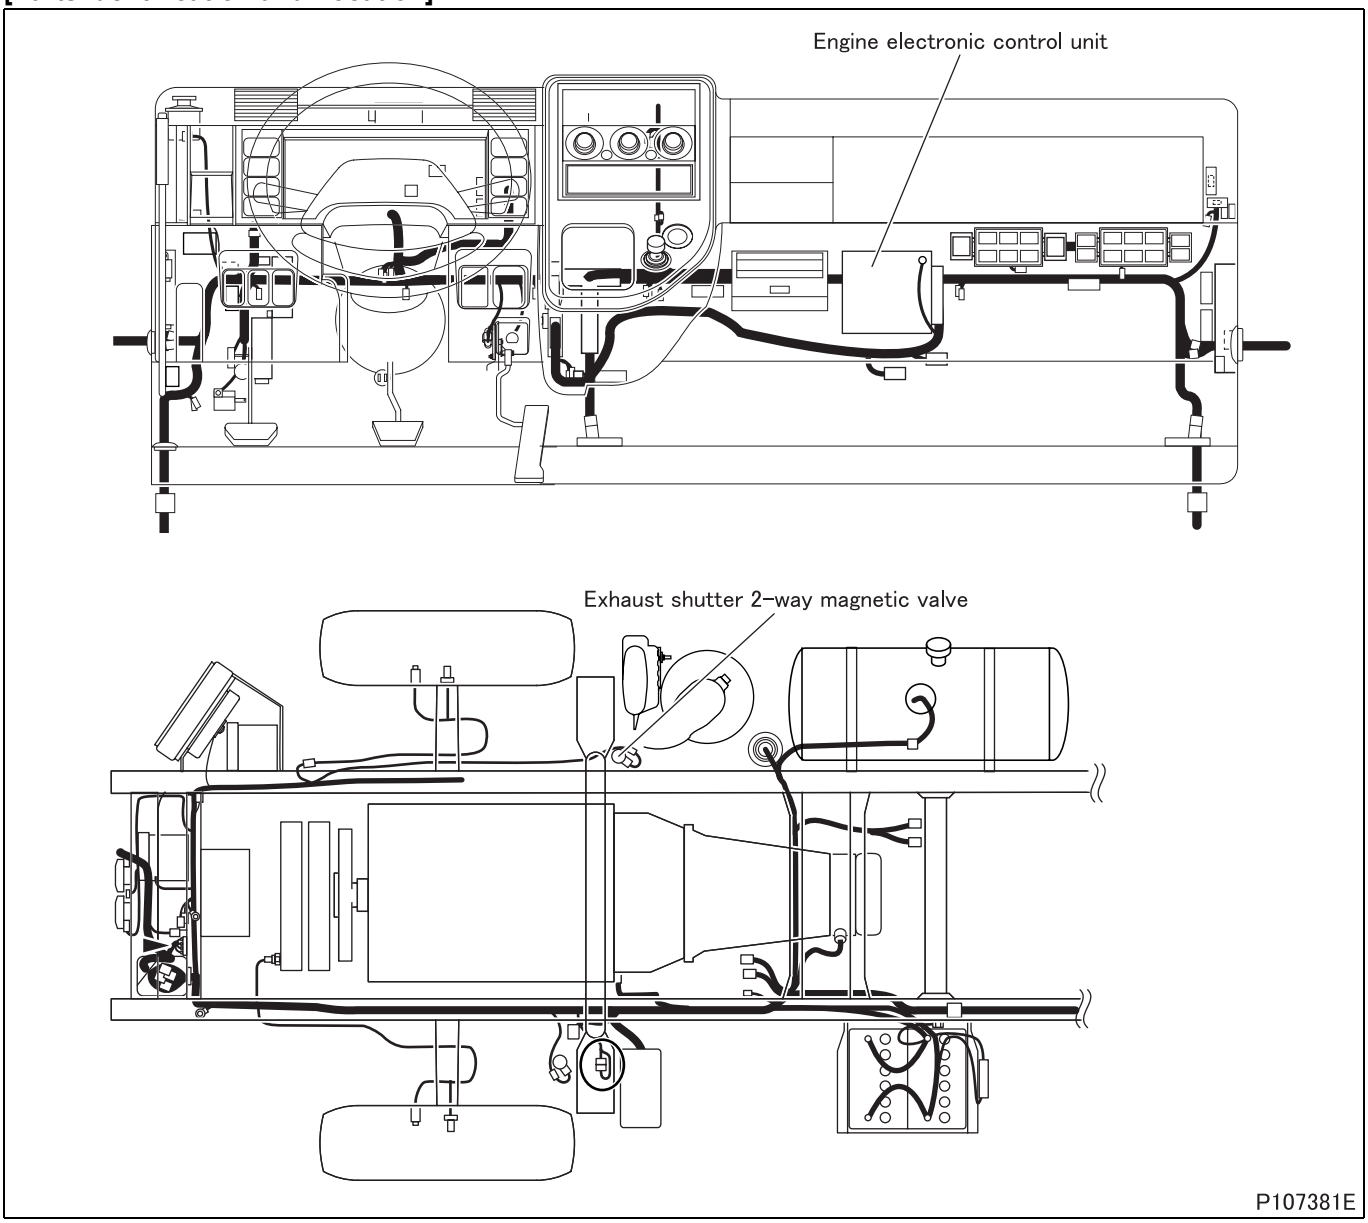
[Probable cause of trouble]
- Open-circuit of harness between electronic control unit and exhaust shutter 2-way magnetic valve
- Malfunction of each connector
- Malfunction of exhaust shutter 2-way magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

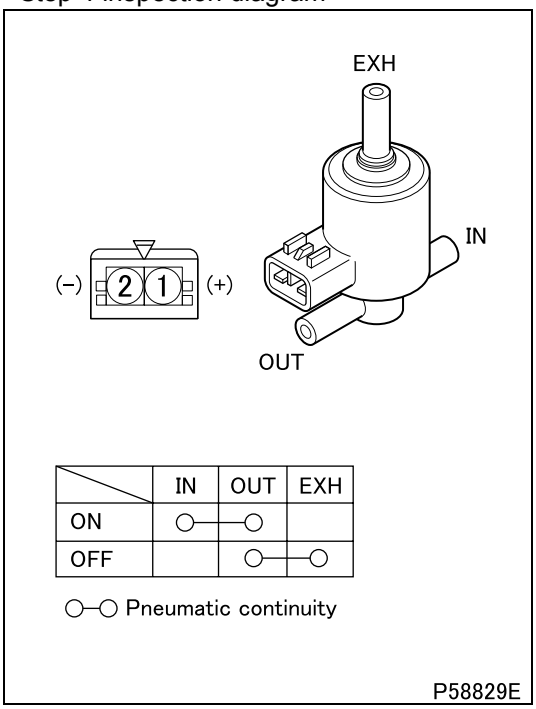
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 6 and 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		48 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of 2-way magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of 2-way magnetic valve unit
	Maintenance item		Measure minimum operating voltage when 2-way magnetic valve operates (judge by operation sound).
	Inspection condition		Gradually increase from zero the voltage applied to terminals No. 1 (+) and 2 (–).
	Requirements		11 V or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of 2-way magnetic valve

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 76.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AA “Auxiliary Brake M/V 1”.
	Inspection condition		Starter switch: ON
	Requirements		2-way magnetic valve operation sound is noted
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2170/Flash code: 93
[Monitor]
Failure of exhaust shutter 2-way magnetic valve
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- Exhaust shutter 2-way magnetic valve circuit is monitored for fault.

[Code generation condition]
- Exhaust shutter 2-way magnetic valve circuit remains shorted to ground as detected for 1 second. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is halted.

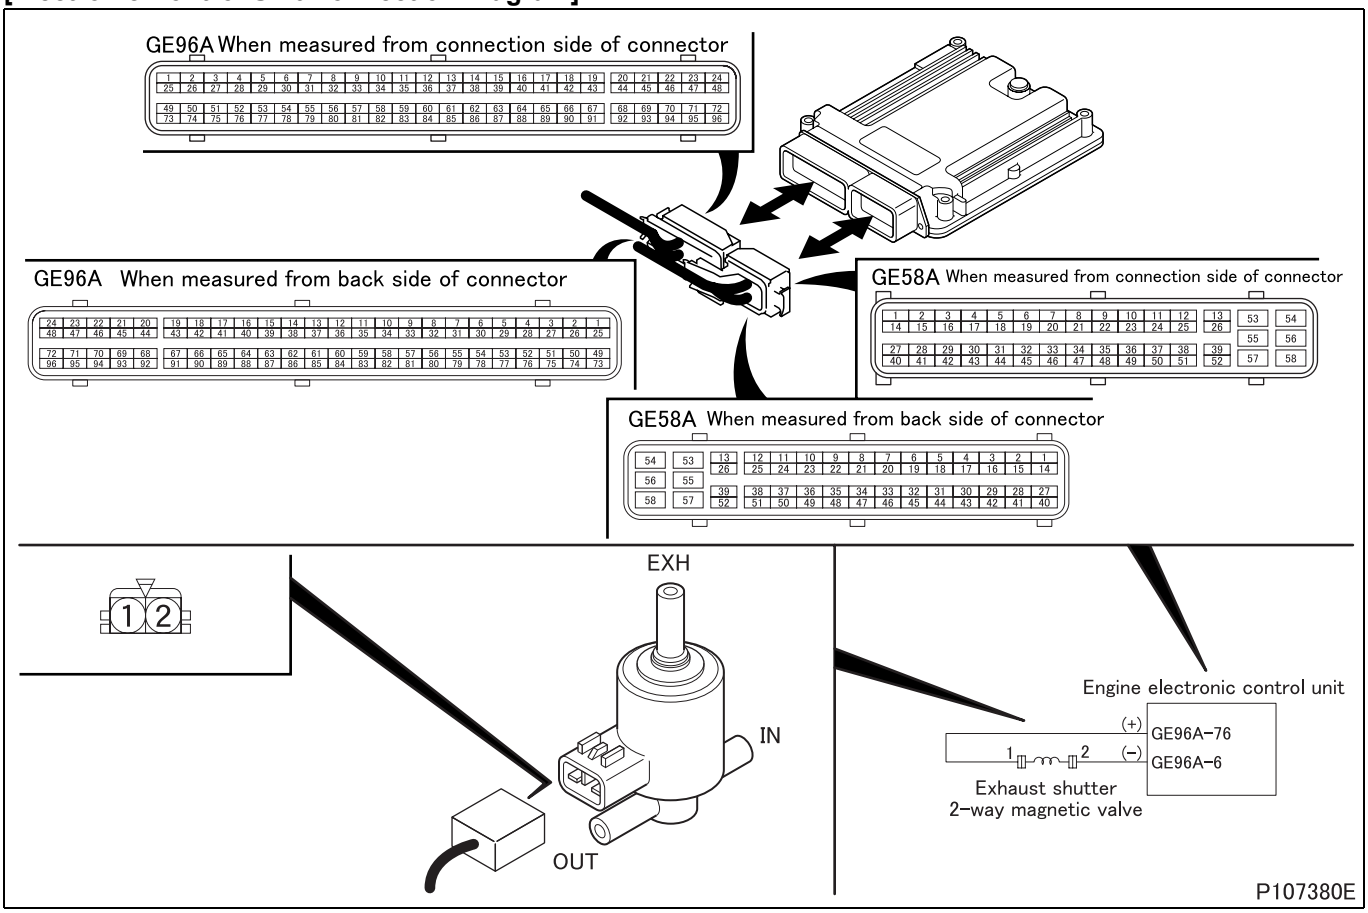
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Auxiliary brake control is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

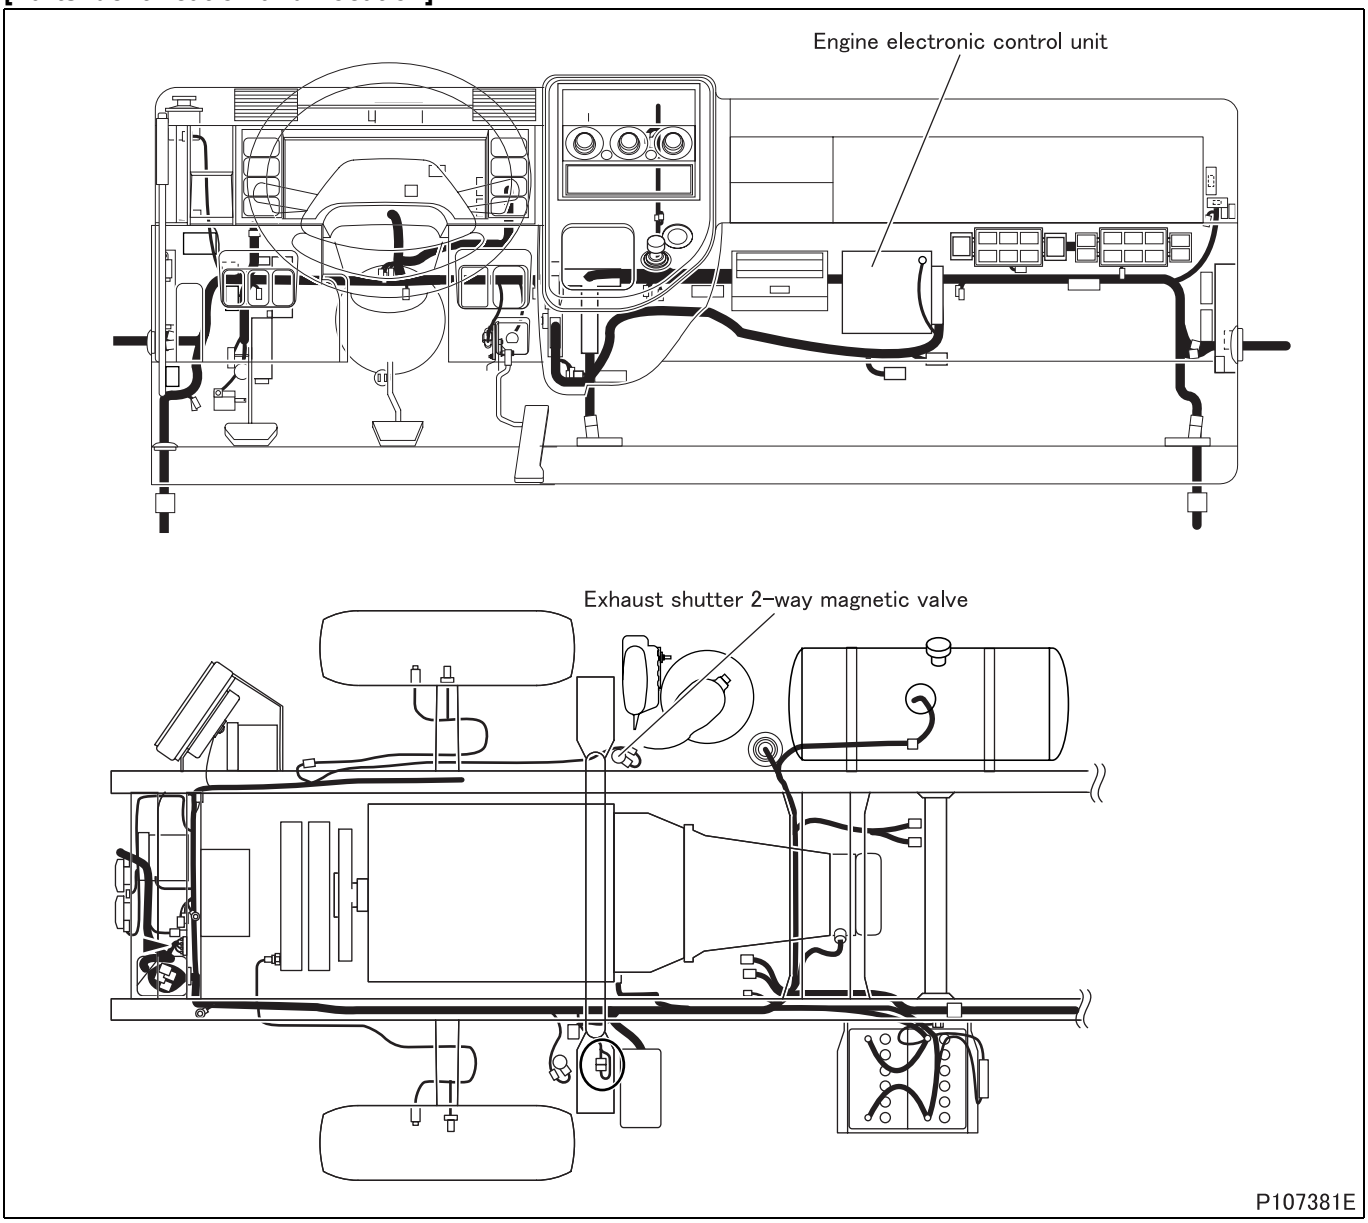
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and exhaust shutter 2-way magnetic valve
- Malfunction of each connector
- Malfunction of exhaust shutter 2-way magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

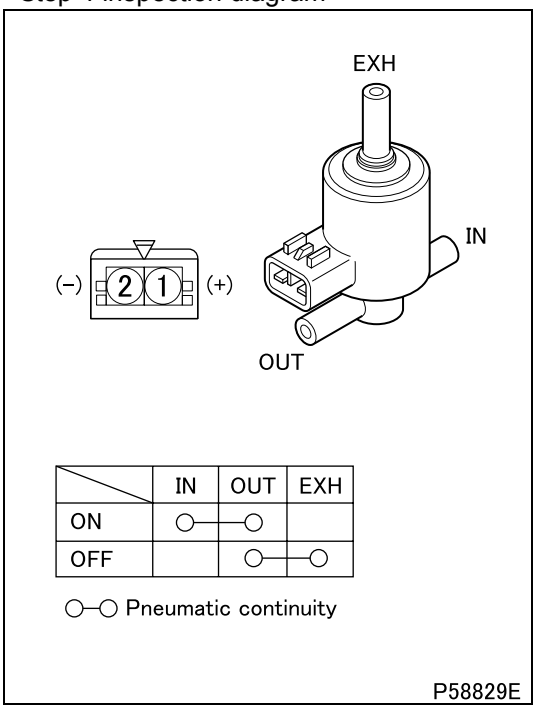
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 6 and 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		48 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of 2-way magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of 2-way magnetic valve unit
	Maintenance item		Measure minimum operating voltage when 2-way magnetic valve operates (judge by operation sound).
	Inspection condition		Gradually increase from zero the voltage applied to terminals No. 1 (+) and 2 (–).
	Requirements		11 V or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of 2-way magnetic valve

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 76.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AA “Auxiliary Brake M/V 1”.
	Inspection condition		Starter switch: ON
	Requirements		2-way magnetic valve operation sound is noted
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2171/Flash code: 93
[Monitor]
Failure of exhaust shutter 2-way magnetic valve
[Fault (outline)]
Short circuit battery
[Diagnosis check]
- Exhaust shutter 2-way magnetic valve circuit is monitored for fault.

[Code generation condition]
- Exhaust shutter 2-way magnetic valve circuit remains shorted to power supply as detected for 1 second. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is initiated.

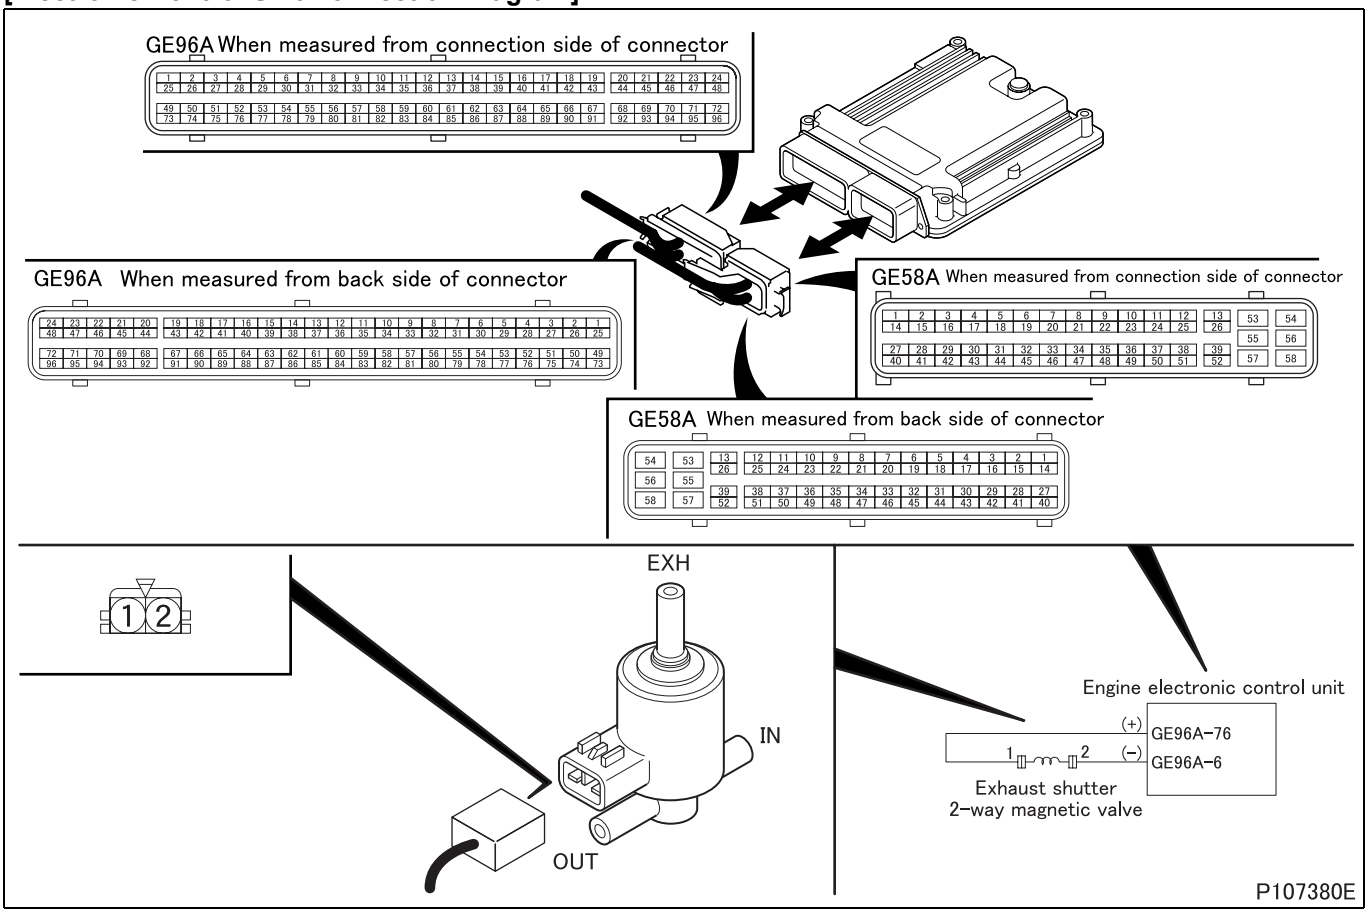
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Auxiliary brake control is stopped.
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

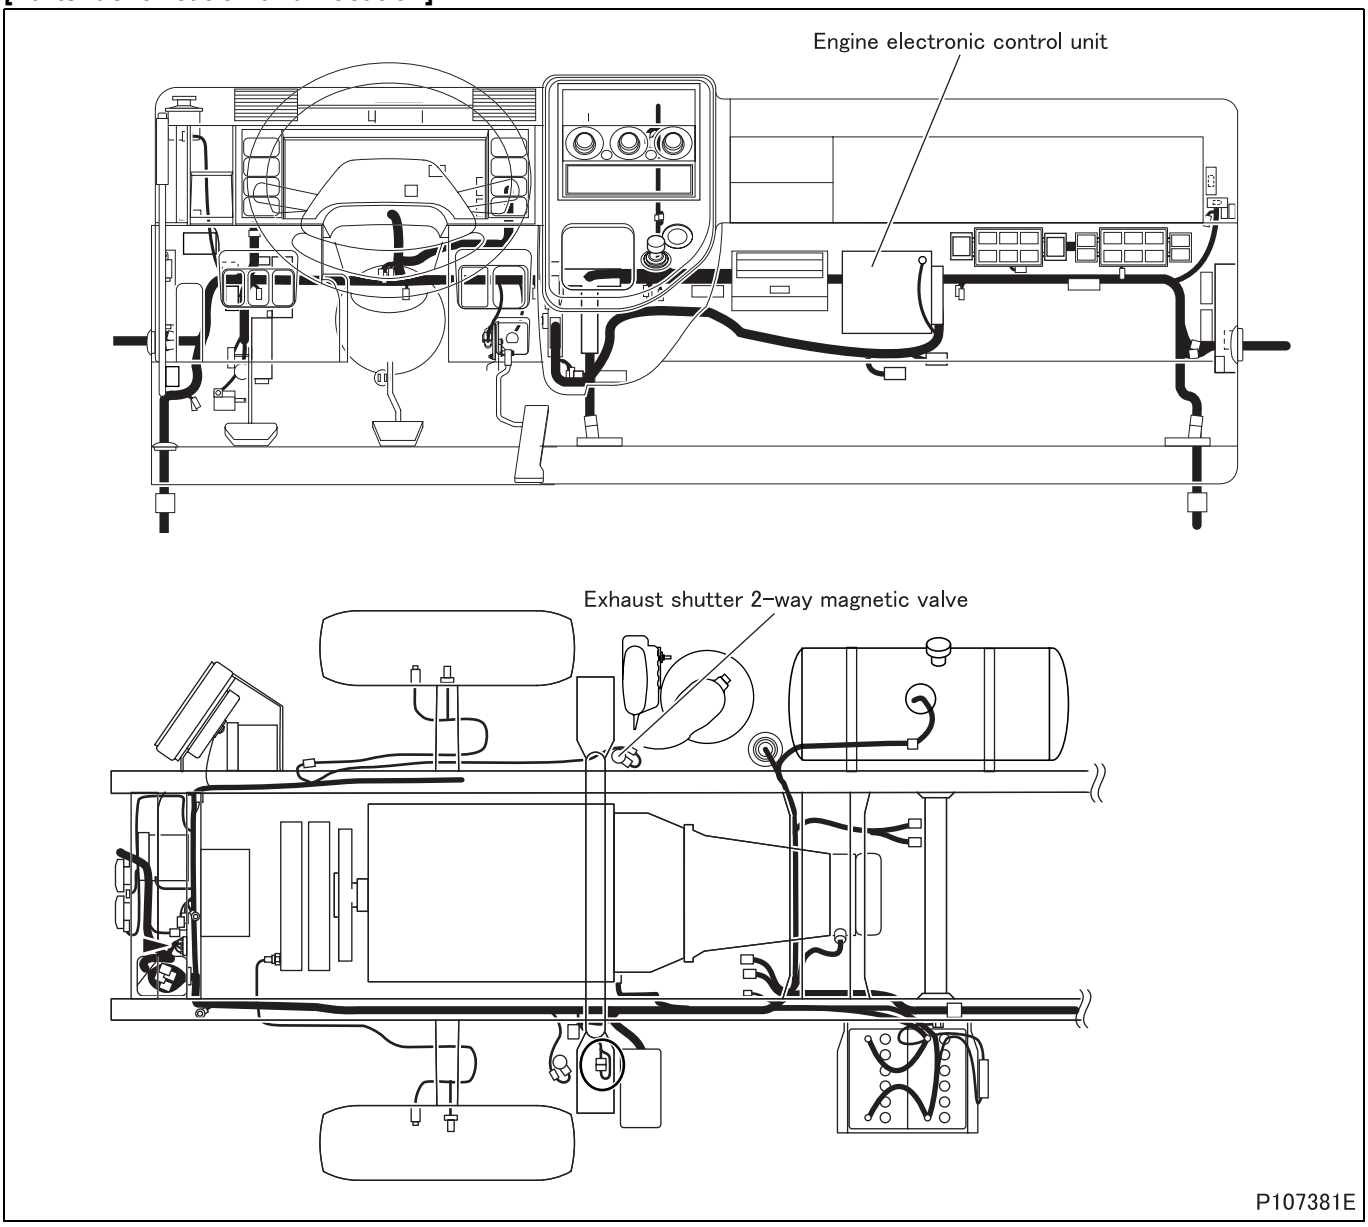
[Probable cause of trouble]
- Short-circuit of harness between electronic control unit and exhaust shutter 2-way magnetic valve
- Malfunction of each connector
- Malfunction of exhaust shutter 2-way magnetic valve
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

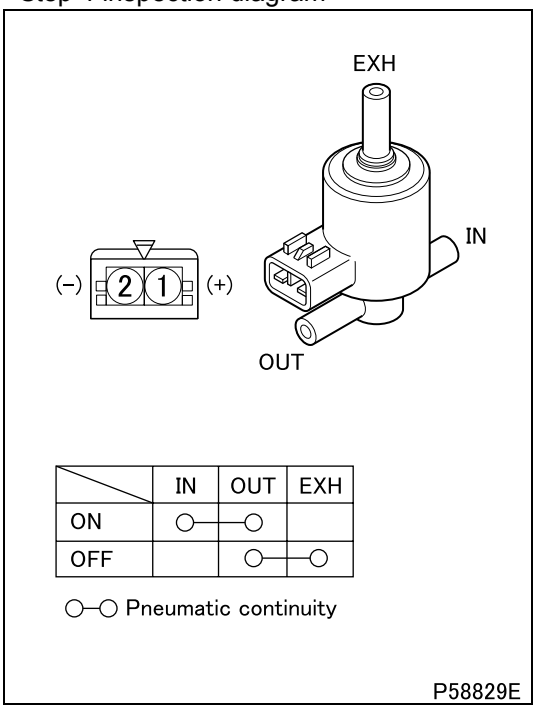
Step 1	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 6 and 76.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		48 Ω or more
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of 2-way magnetic valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of 2-way magnetic valve unit
	Maintenance item		Measure minimum operating voltage when 2-way magnetic valve operates (judge by operation sound).
	Inspection condition		Gradually increase from zero the voltage applied to terminals No. 1 (+) and 2 (–).
	Requirements		11 V or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of 2-way magnetic valve

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 76.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (power supply)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is no continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between exhaust shutter 2-way magnetic valve and electronic control unit (ground)
	Maintenance item		Check circuit between exhaust shutter 2-way magnetic valve connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. AA “Auxiliary Brake M/V 1”.
	Inspection condition		Starter switch: ON
	Requirements		2-way magnetic valve operation sound is noted
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2184/Flash code: 21
[Monitor]
Failure of water temperature sensor 2
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of water temperature sensor 2 is monitored.

[Code generation condition]
- Voltage of water temperature sensor 2 remains below 0.1 V for 1 second. (sensor temperature: 150°C {302°F} or more) (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

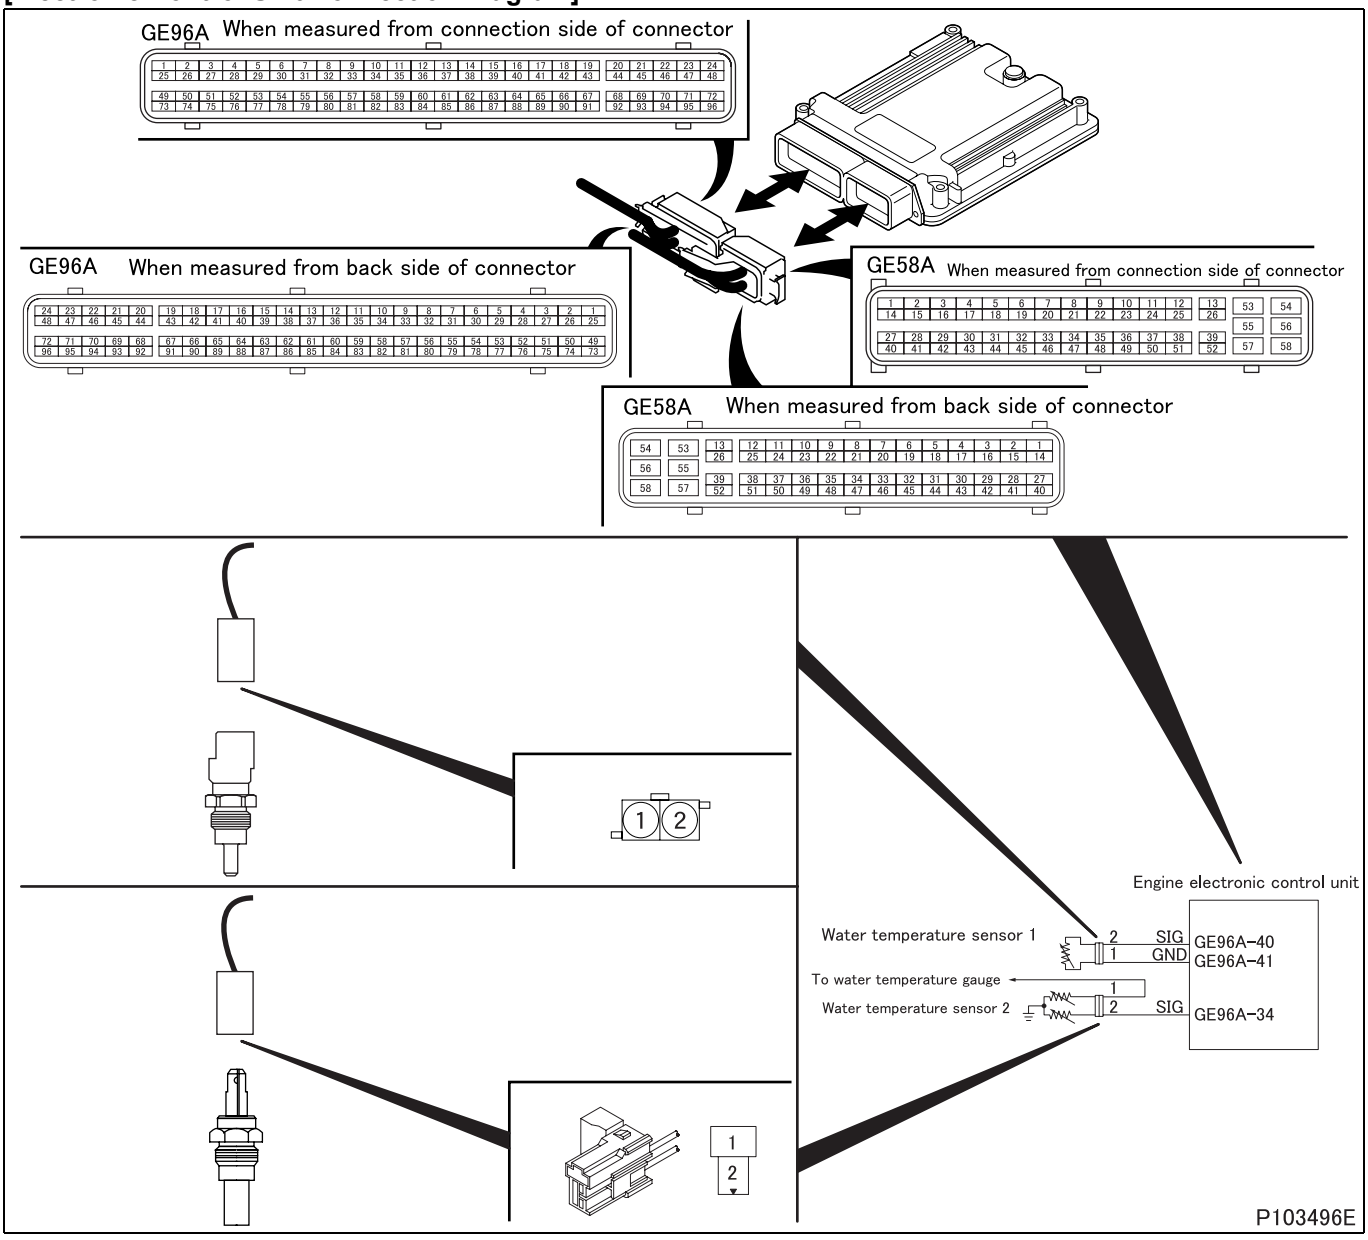
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

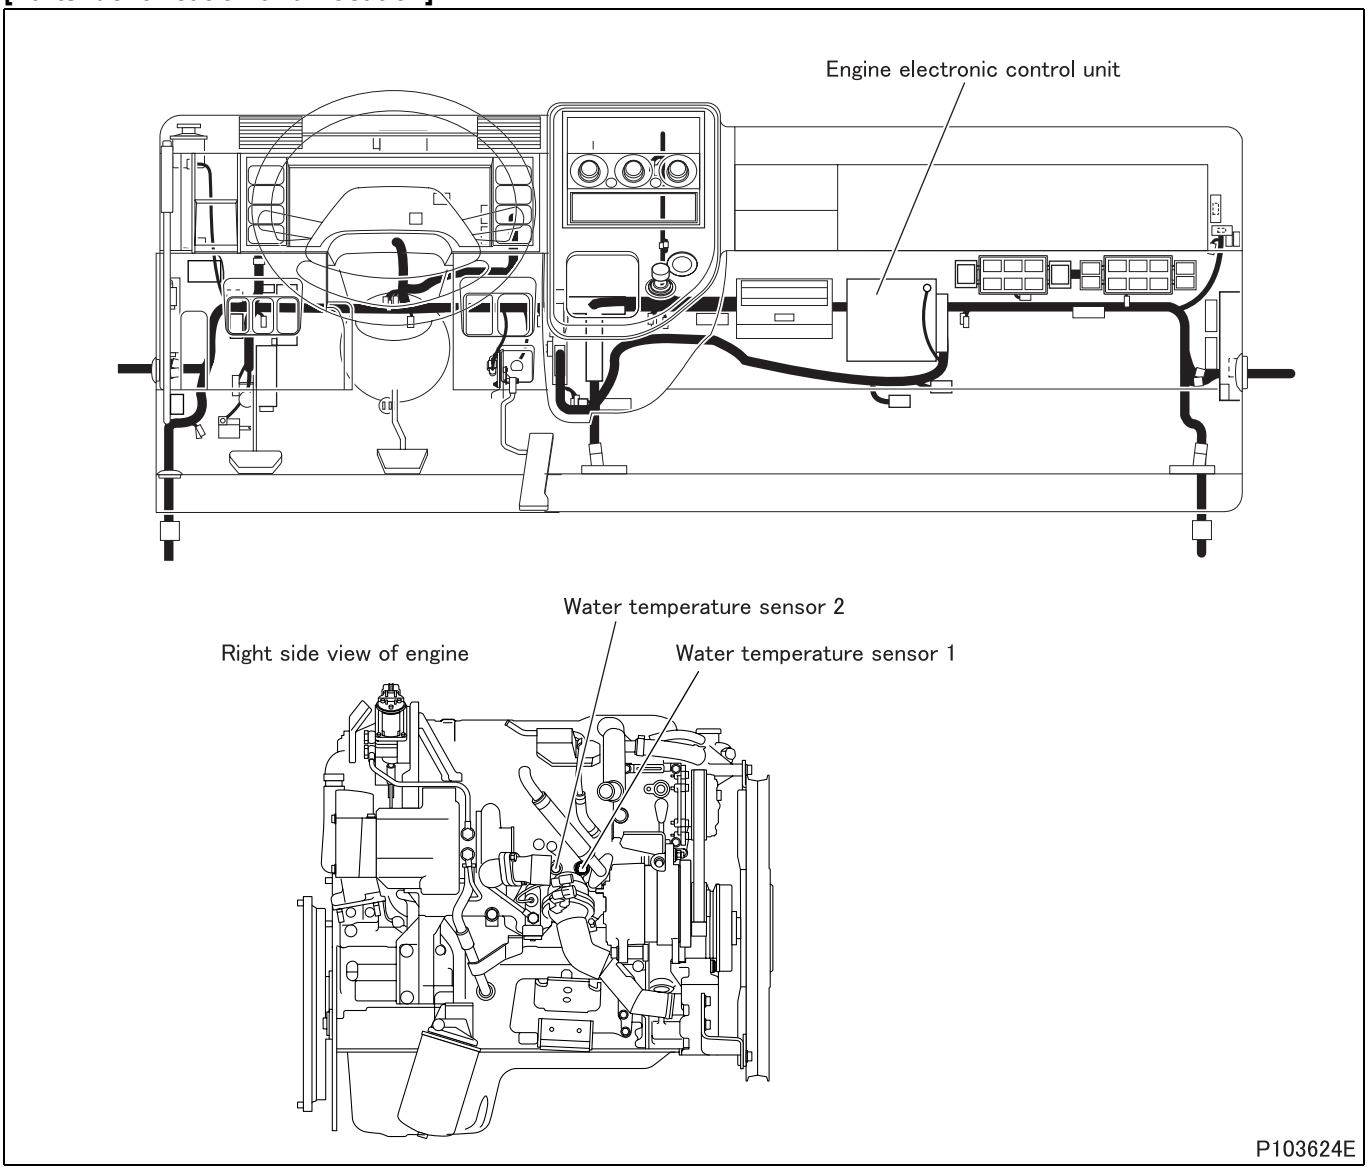
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and water temperature sensor 2
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measurement of item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 32 “Water Temperature 2” of Service Data.
	Inspection condition		–
	Requirements		• Cold engine: Equivalent to outside air temperature • During warm-up: Temperature gradually increased. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

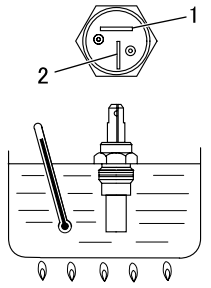
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 34 and ground.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• –20°C {–4°F} : 24.8 ± 2.5 kΩ • 0°C {32°F} : 8.62 kΩ (reference value) • 20°C {68°F} : 3.25 ± 0.33 kΩ • 60°C {140°F} : 620 Ω (reference value) • 80°C {176°F} : 300 Ω (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 4	Inspection items		Inspection of water temperature sensor 2 connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of water temperature sensor 2 unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and body.
	Inspection condition		• Put water temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• –20°C {–4°F} : 24.8 ± 2.5 kΩ • 0°C {32°F} : 8.62 kΩ (reference value) • 20°C {68°F} : 3.25 ± 0.33 kΩ • 60°C {140°F} : 620 Ω (reference value) • 80°C {176°F} : 300 Ω (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6
		NO	Replacement of sensor

<Step 5 inspection diagram>



P19463

Step 6	Inspection items		Inspection of harness between electronic control unit and sensor
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 34.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measurement of item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 32 “Water Temperature 2” of Service Data.
	Inspection condition		–
	Requirements		• Cold engine: Equivalent to outside air temperature • During warm-up: Temperature gradually increased. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2185/Flash code: 21
[Monitor]
Failure of water temperature sensor 2
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of water temperature sensor 2 is monitored.

[Code generation condition]
- Output voltage of water temperature sensor 2 remains over 4.9 V for 1 second. (sensor temperature: –37°C {–34.6°F} or less)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

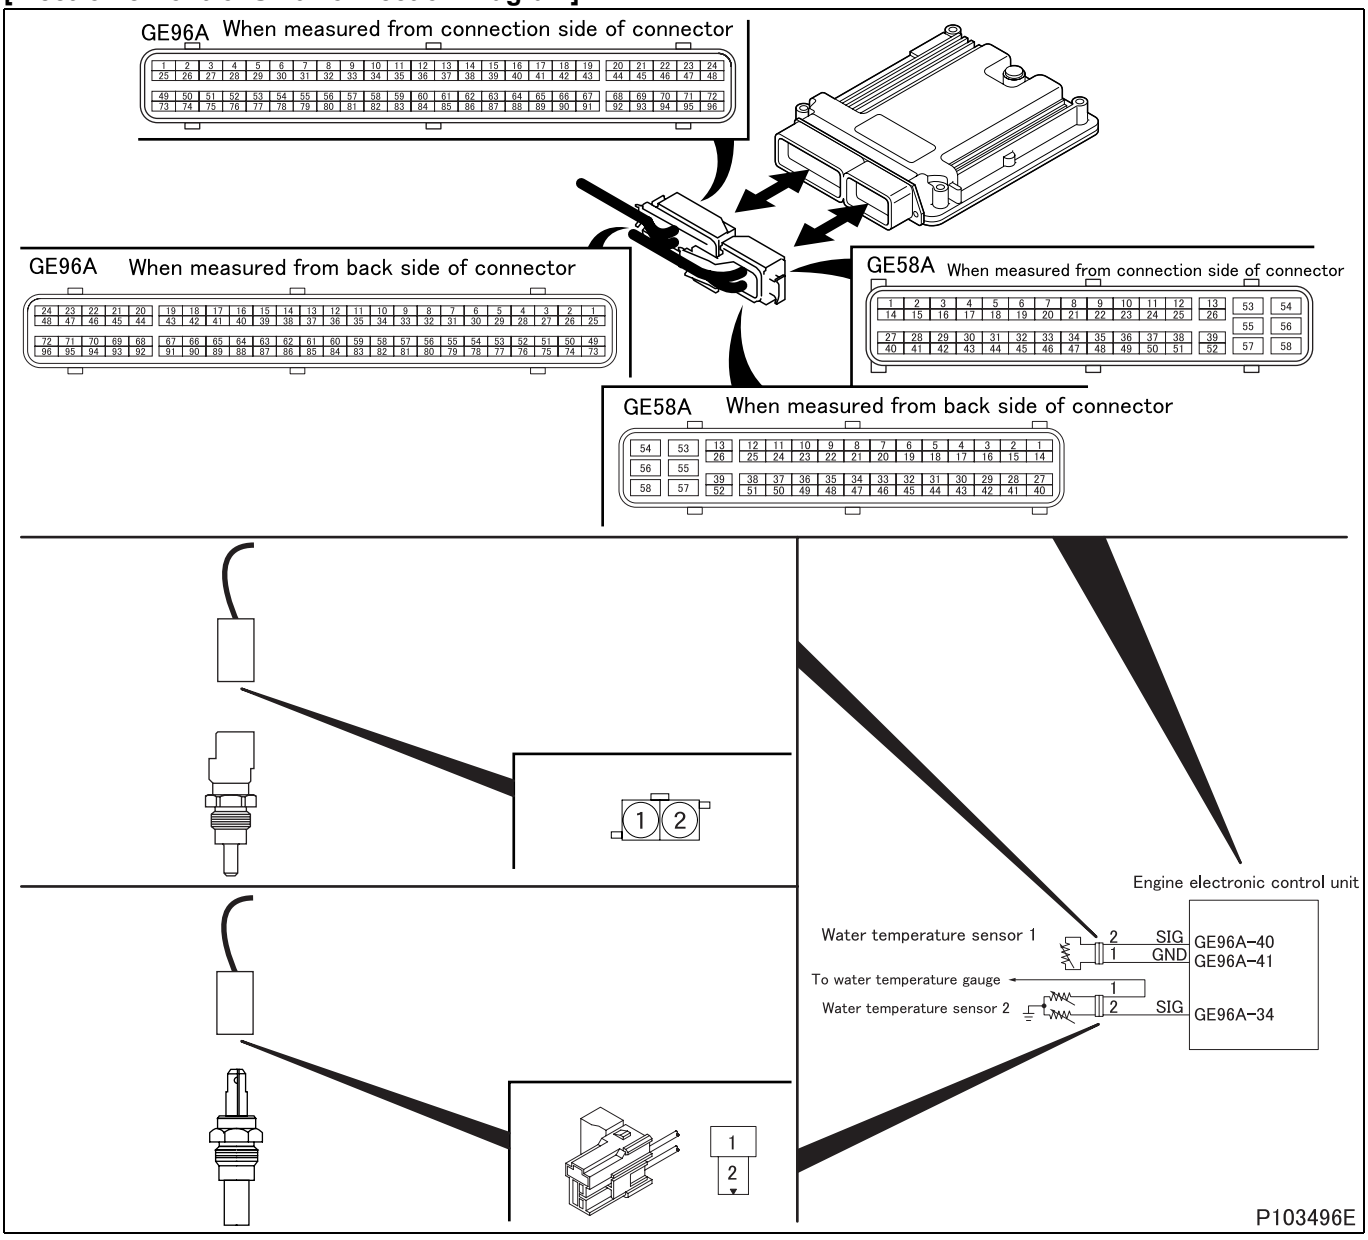
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

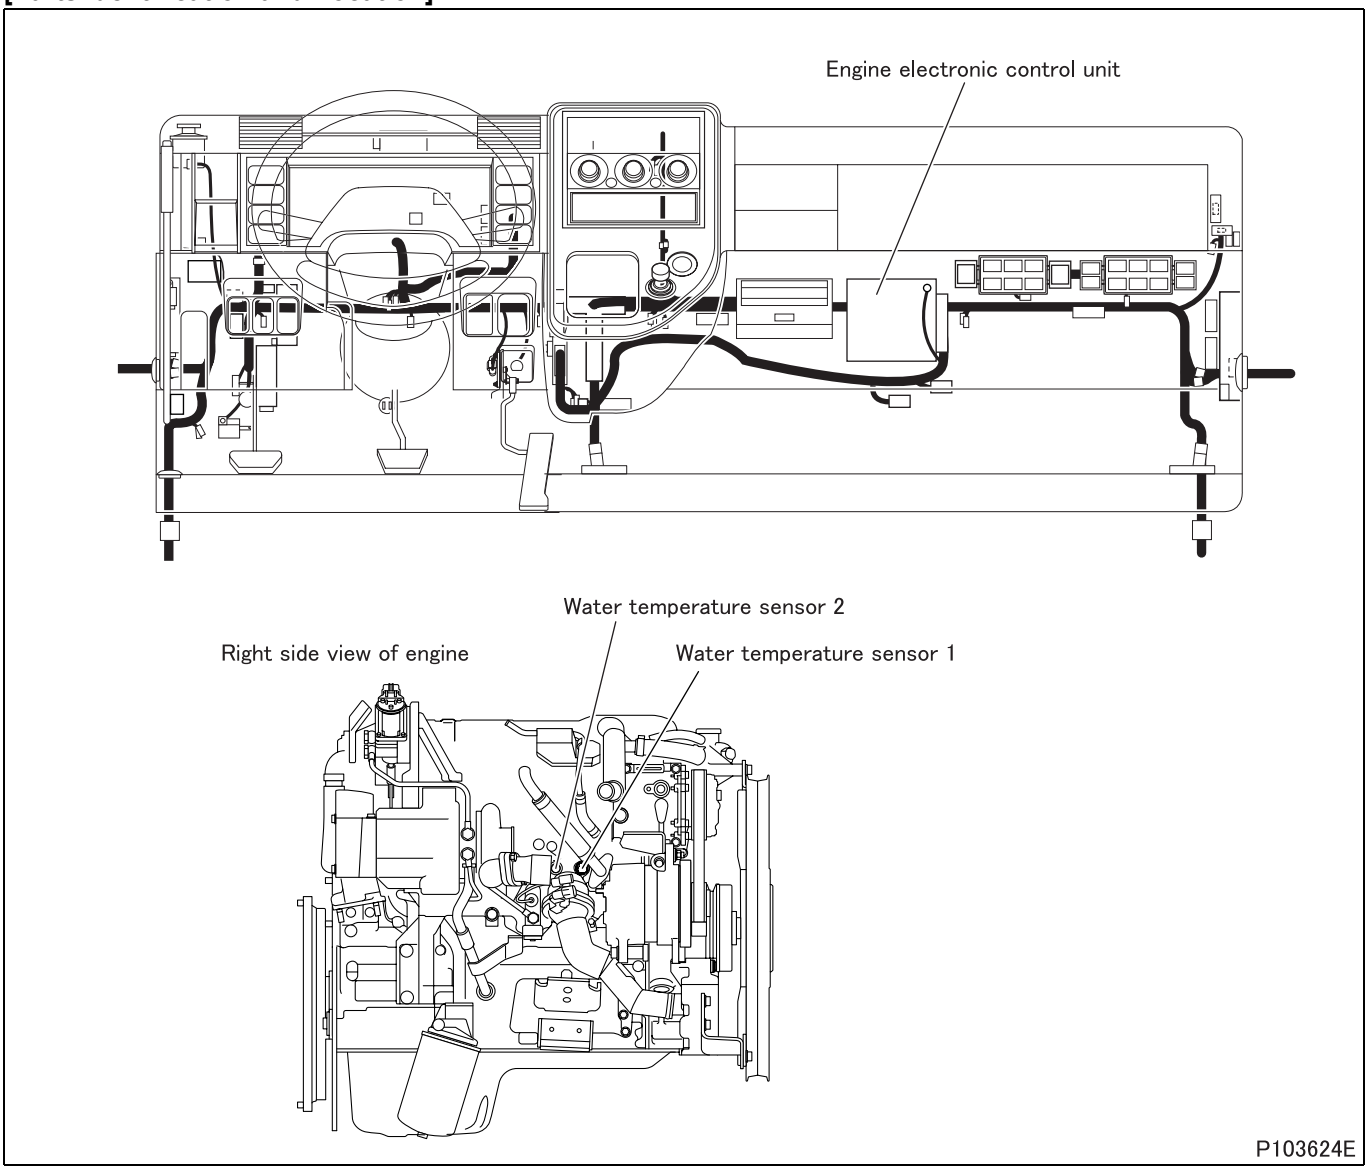
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and water temperature sensor 2
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measurement of item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 32 “Water Temperature 2” of Service Data.
	Inspection condition		–
	Requirements		• Cold engine: Equivalent to outside air temperature • During warm-up: Temperature gradually increased. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

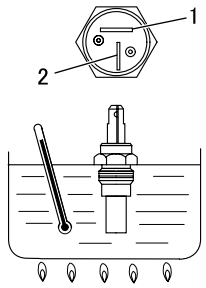
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE96A) terminal No. 34 and ground.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• –20°C {–4°F}: 24.8 ± 2.5 kΩ • 0°C {32°F}: 8.62 kΩ (reference value) • 20°C {68°F}: 3.25 ± 0.33 kΩ • 60°C {140°F}: 620 Ω (reference value) • 80°C {176°F}: 300 Ω (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 4	Inspection items		Inspection of water temperature sensor 2 connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of water temperature sensor 2 unit
	Maintenance item		Measure value of resistance between connector terminal No. 2 and body.
	Inspection condition		• Put water temperature sensor 2 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• –20°C {–4°F}: 24.8 ± 2.5 kΩ • 0°C {32°F}: 8.62 kΩ (reference value) • 20°C {68°F}: 3.25 ± 0.33 kΩ • 60°C {140°F}: 620 Ω (reference value) • 80°C {176°F}: 300 Ω (reference value)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



P19463

Step 6	Inspection items		Inspection of harness between electronic control unit and sensor
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 34.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measurement of item “Engine Coolant Temperature”. **<Multi-Use Tester used>** • Measure item No. 32 “Water Temperature 2” of Service Data.
	Inspection condition		–
	Requirements		**<General Scanning Tool used>** • During warm-up: Value of resistance gradually declines. • When engine is stopped after warm-up: Value of resistance gradually increased. **<Multi-Use Tester used>** • Cold engine: Equivalent to outside air temperature • During warm-up: Temperature gradually increased. • When engine is stopped after warm-up: Temperature gradually declines.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2187/Flash code: 52
[Monitor]
Abnormality in idling control
[Fault (outline)]
Idle fuelling too low
[Diagnosis check]
- Injection quantity during idling is monitored.

[Code generation condition]
- Actual injection quantity during idling remains below 3 mg/cycle for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Warming-up control: normal
- PTO SW: OFF
- Water temperature: above 55°C {131°F}
- Diesel particulate filter regeneration control: not effected

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P2188/Flash code: 52
[Monitor]
Abnormality in idling control
[Fault (outline)]
Idle fuelling too high
[Diagnosis check]
- Injection quantity during idling is monitored.

[Code generation condition]
- Actual injection quantity during idling remains excessive for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Warming-up control: normal
- PTO SW: OFF
- Water temperature: above 55°C {131°F}
- Diesel particulate filter regeneration control: not effected

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of injector

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault code]
Diagnosis code: P2199/Flash code: 44
[Monitor]
Characteristic abnormality of intake air temperature sensor
[Fault (outline)]
Gain and offset drift
[Diagnosis check]
- Difference in temperature between intake air temperature sensor and boost air temperature sensor is monitored for deviation from specified value.

[Code generation condition]
- Difference in output voltage remains below 0°C {32°F} or over 35°C {95°F} for 10 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine operating mode: normal (engine in operation)
- Engine speed: 400 to 2000 rpm
- Fuel injection quantity: 3 to 50 mg/cyc
- Water temperature: 65 to 110°C {149 to 230°F}
- Time till above conditions were met: more than 5 seconds
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: normal in output signal
- Intake air temperature sensor: normal in output signal
- Boost air temperature sensor: in order
- Exhaust gas recirculation system: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- Injector: in order
- MPROP (rail pressure control valve): in order
- Fuel feed when engine is idling: in order
- Exhaust shutter 3-way magnetic valve: in order
- Exhaust gas recirculation temperature remains unchanged.

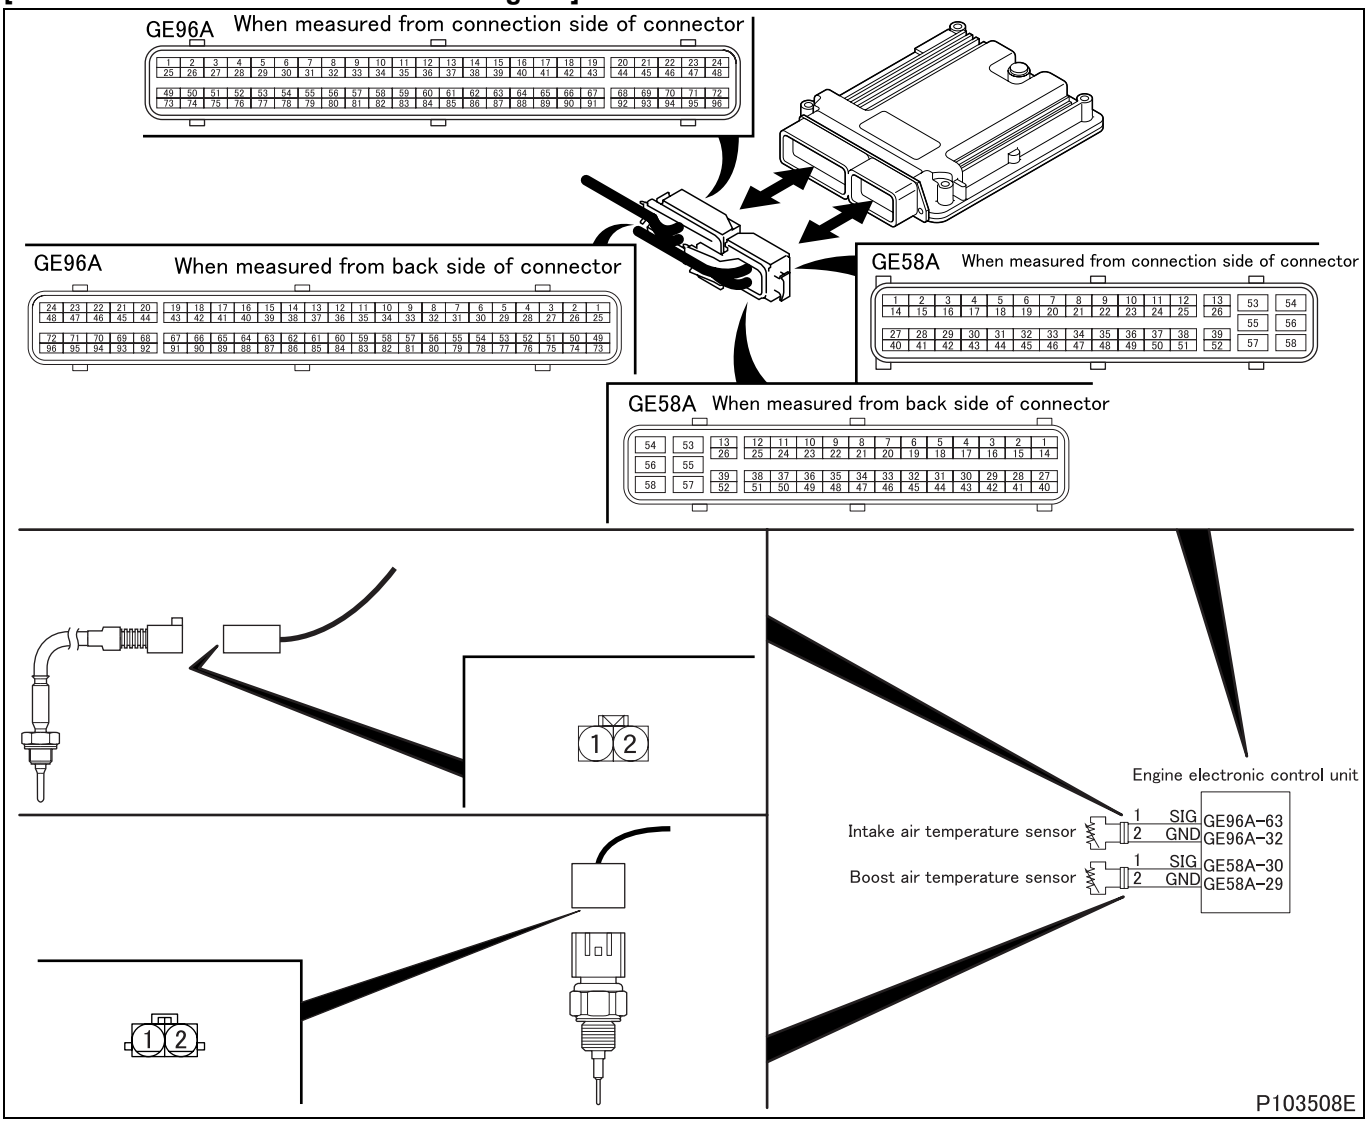
[Control effected by electronic control unit during fault]
- Intake air temperature is fixed at backup value.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and boost air temperature sensor and intake air temperature sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

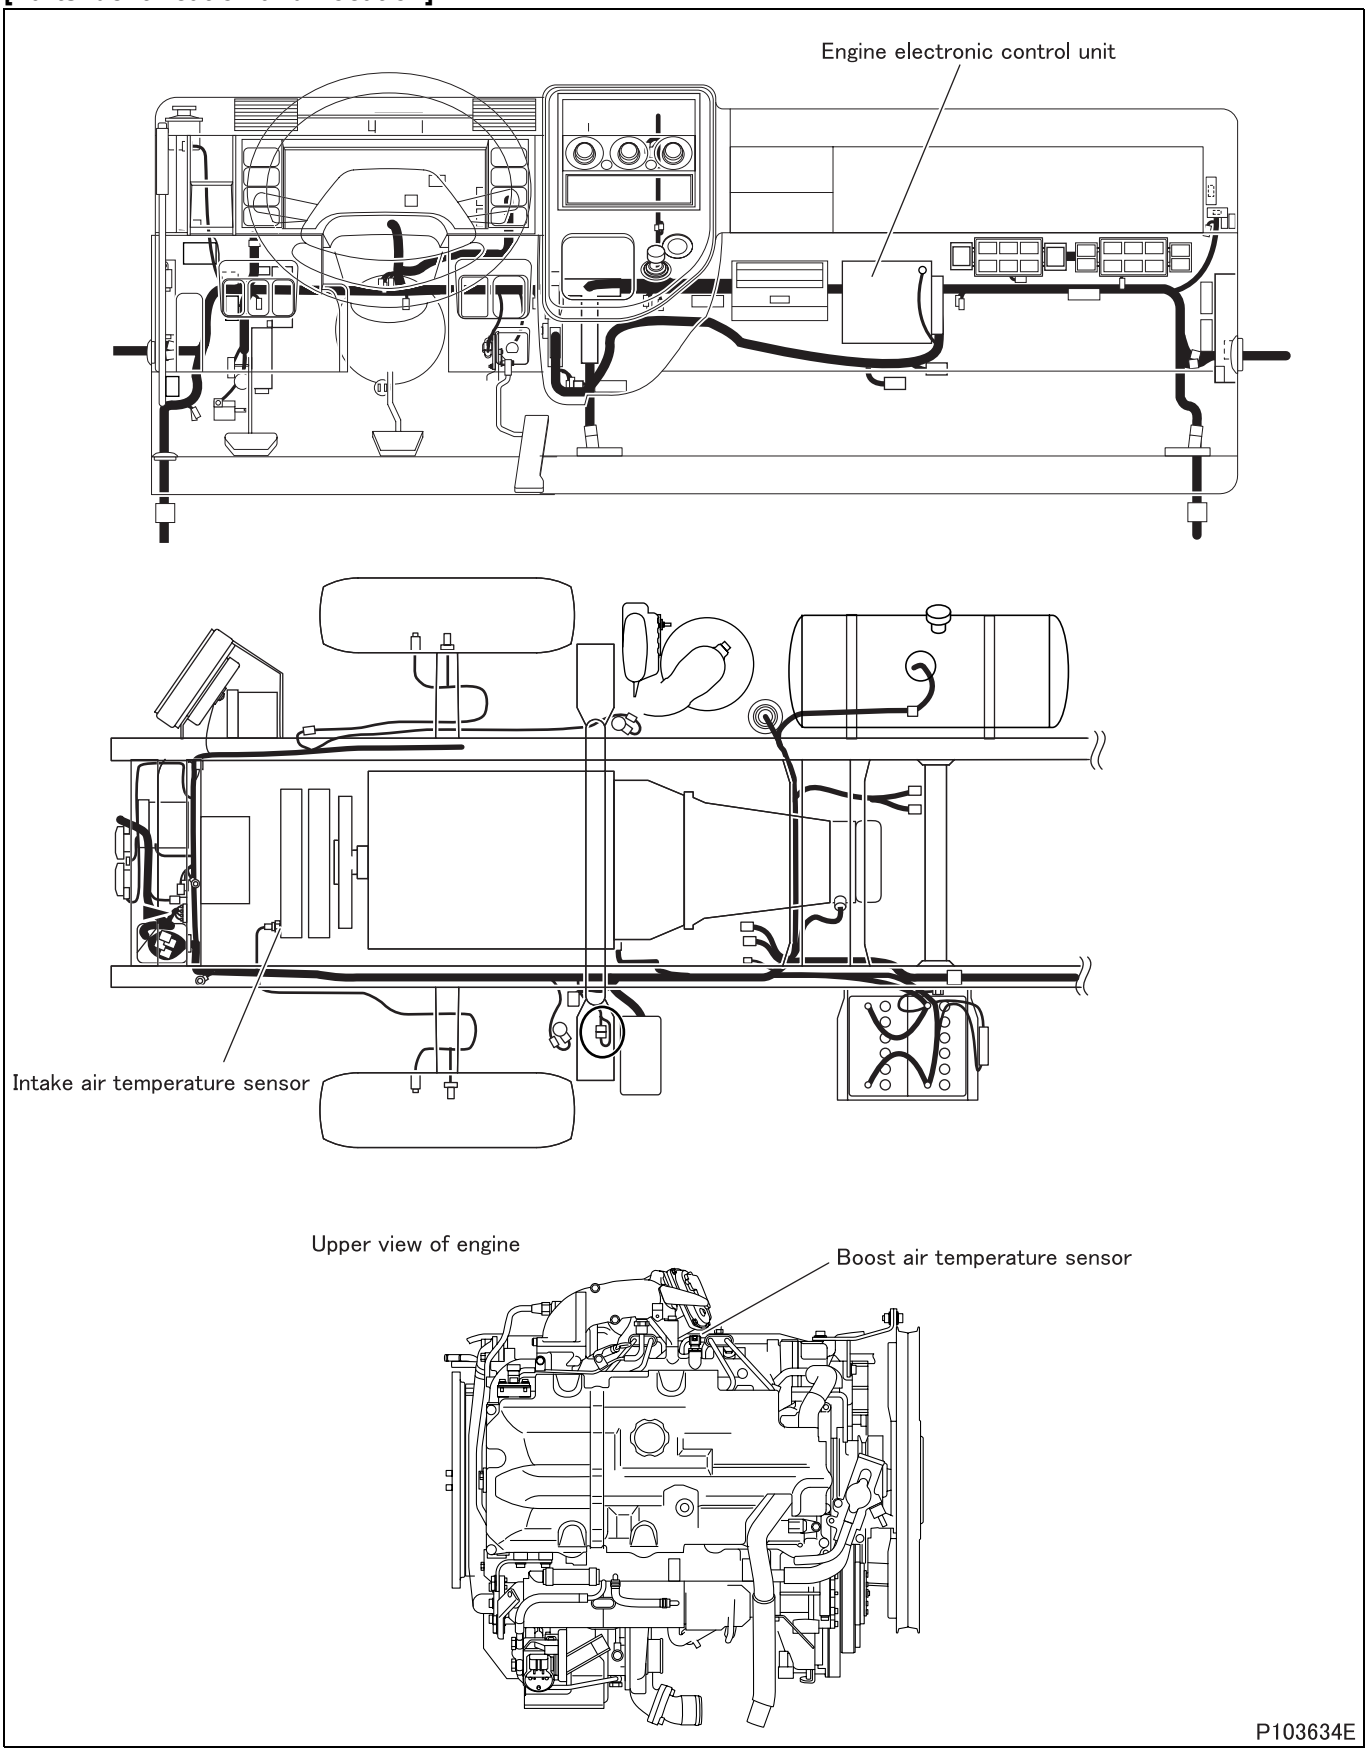
[Recoverability]

- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		Cold engine: Equivalent to outside air temperature
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 2.

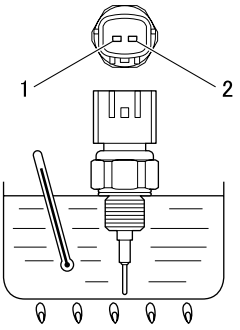
Step 2	Inspection items		Inspection by electronic control unit connector
	Maintenance item		Measure value of resistance between connector (GE58A) terminal No. 29 and 30.
	Inspection condition		Disconnect electronic control unit from harness and measure from connection side of harness connector.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify connector.

Step 4	Inspection items		Inspection of boost air temperature sensor
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of boost air temperature sensor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		• Put boost air temperature sensor in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 0°C {32°F}: 162.3 $^{+48.8}_{-36.5}$ kΩ • 20°C {68°F}: 61.47 $^{+15.99}_{-12.35}$ kΩ • 80°C {176°F}: 6.120 $^{+1.095}_{-0.907}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE58A) terminal No. 30.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE58A) terminal No. 29.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Intake Air Temperature”. **<Multi-Use Tester used>** • Measure item No. 10 “Intake Air Temperature (EGR)” of Service Data.
	Inspection condition		–
	Requirements		Cold engine: Equivalent to outside air temperature
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2228/Flash code: 19
[Monitor]
Failure of atmospheric pressure sensor (inside engine electronic control unit)
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of atmospheric pressure sensor (built in engine electronic control unit) is monitored.

[Code generation condition]
- Voltage from atmospheric pressure sensor (built in engine electronic control unit) remains below 2 V for 1 second. (sensor pressure: 507 mbar {7.35 psi} or less)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- In-use performance counter is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of atmospheric pressure sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Barometric Pressure”. **<Multi-Use Tester used>** • Measure item No. 20 “Atmospheric Pressure” of Service Data.
	Inspection condition		–
	Requirements		Standard atmospheric pressure (around 101.3 kPa {15 psi, 1.0 kgf/cm^2})
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2229/Flash code: 19
[Monitor]
Failure of atmospheric pressure sensor (inside engine electronic control unit)
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of atmospheric pressure sensor (built in engine electronic control unit) is monitored.

[Code generation condition]
- Voltage from atmospheric pressure sensor (built in engine electronic control unit) remains over 4.8 V for 1 second. (sensor pressure: 1215 mbar {17.62 psi} or more)
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- In-use performance counter is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of atmospheric pressure sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure item “Barometric Pressure”. **<Multi-Use Tester used>** • Measure item No. 20 “Atmospheric Pressure” of Service Data.
	Inspection condition		–
	Requirements		Standard atmospheric pressure (around 101.3 kPa {15 psi, 1.0 kgf/cm^2})
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2263/Flash code: 51
[Monitor]
Turbocharger actuator system
[Fault (outline)]
- Turbocharger actuator slow response/steady state position deviation
- Plausibility
- Motor lock

[Diagnosis check]
- Turbocharger actuator shaft position is detected as actual position through position sensor and compared with target position for control by engine electronic control unit.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
- Actual position remains larger than target position by 15% or more for 5 seconds.
- Difference between actual position and target position remains less than 0 {0 in.} mm and more than 23 {0.9 in.} mm for 1 second.
- Initialization error remains for 1 second.

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
- Battery voltage: in order
- Turbocharger actuator: in order
- Controller area network communication of turbocharger electronic drive unit: in order

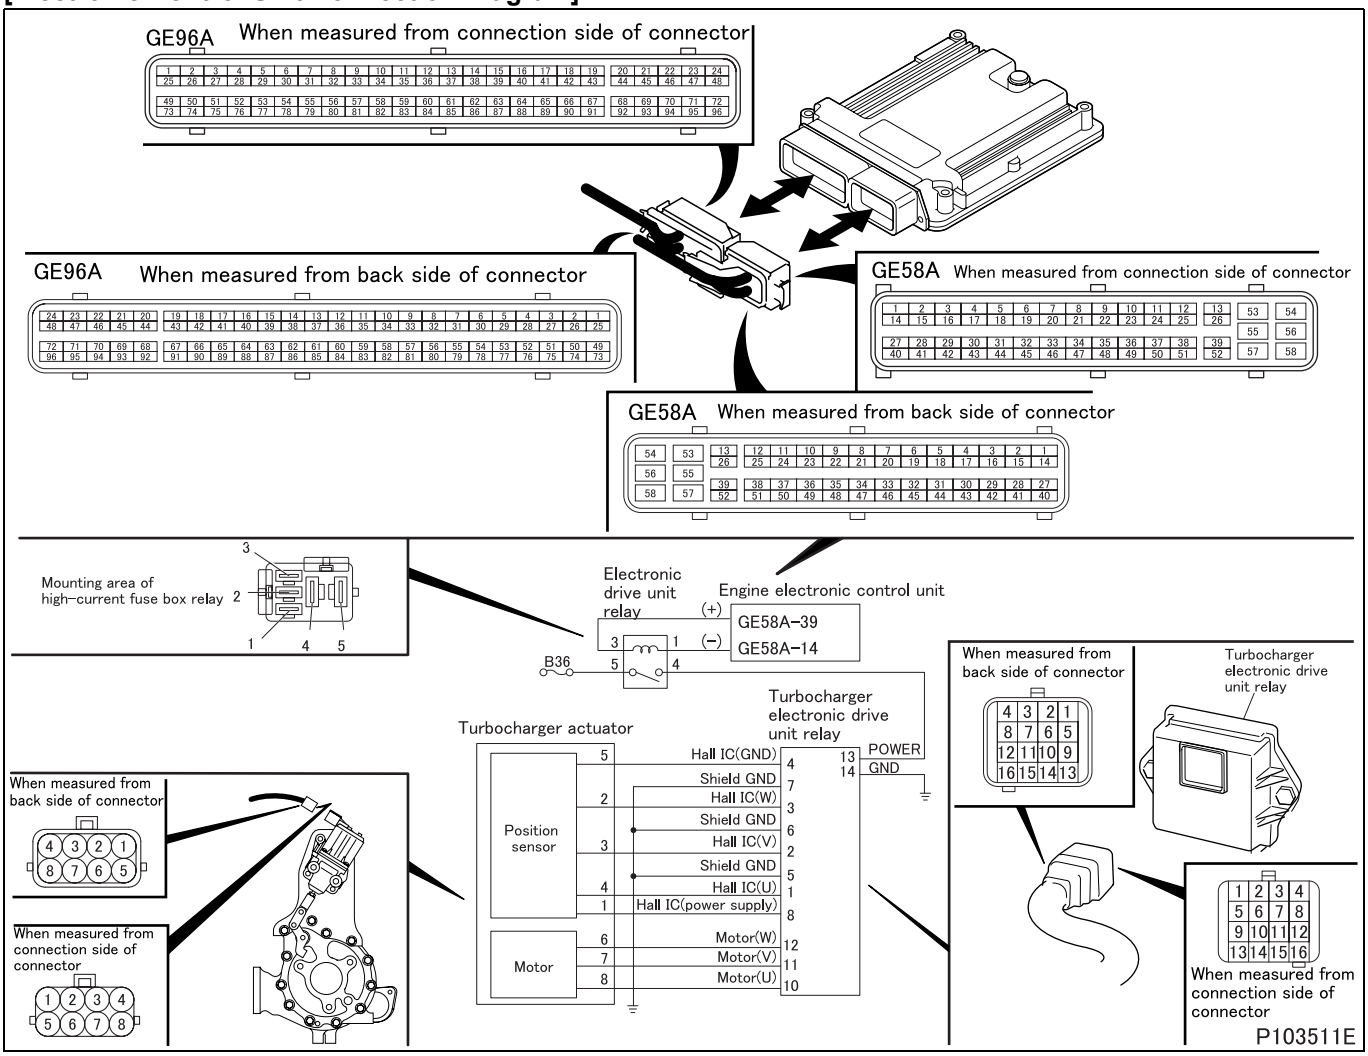
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Deviation in position, wiping (sliding)>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Turbocharger control is stopped.
- Diesel particulate filter regeneration is stopped.
- Turbocharger actuator test is inhibited.
- Related fault check is stopped.

<Target value>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

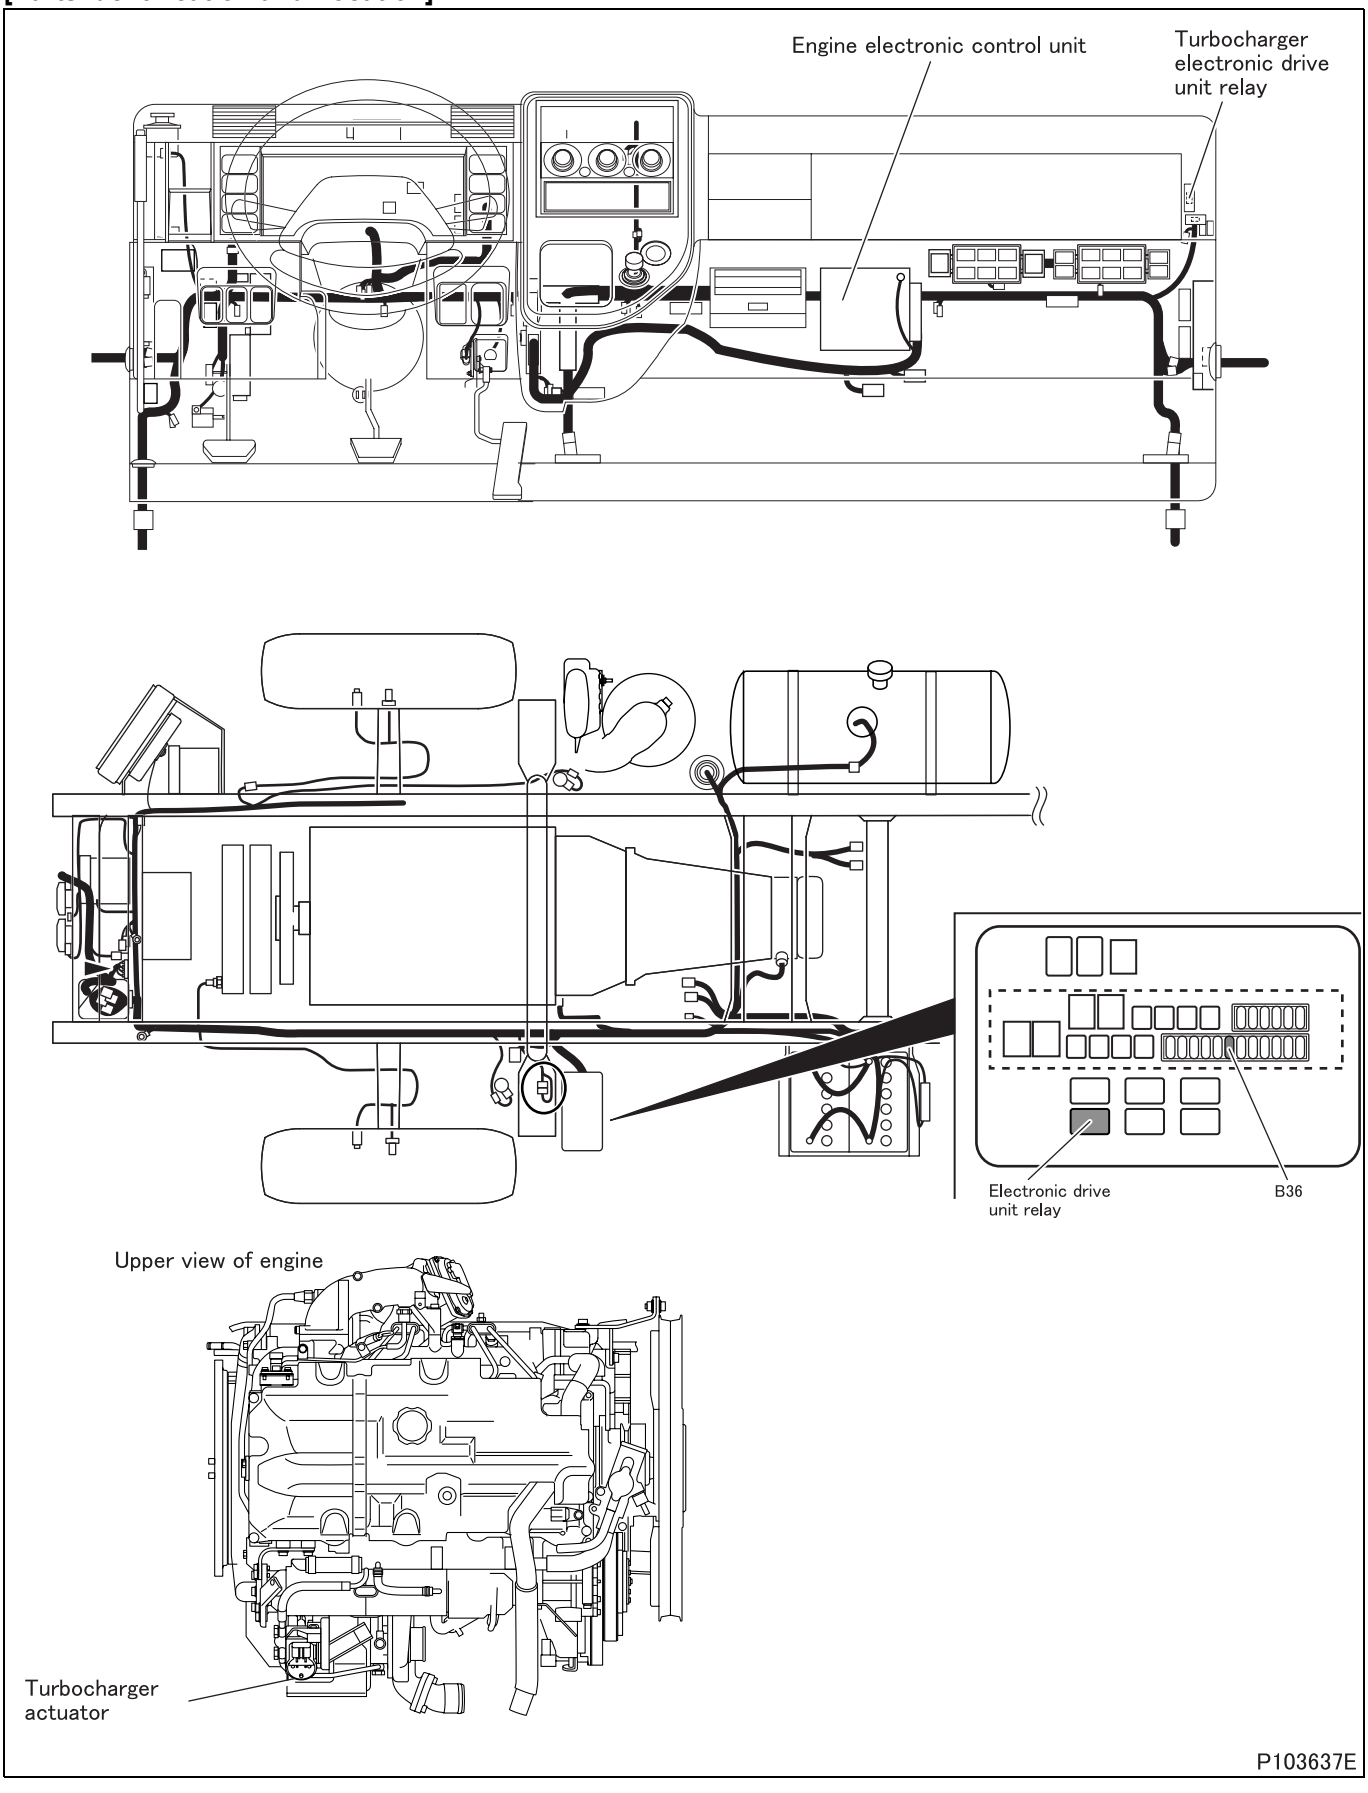
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and turbocharger actuator
- Malfunction of each connector
- Malfunction of turbocharger motor (built in turbocharger actuator)
- Malfunction of turbocharger position sensor (built in turbocharger actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “54: Target VGT Position, 55: Actual VGT Position”). **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of turbocharger actuator connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9.
		NO	Modify harness.

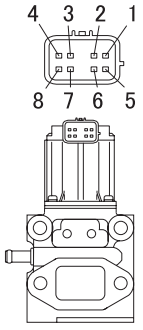
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - turbocharger actuator connector No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - turbocharger actuator connector No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - turbocharger actuator connector No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of turbocharger actuator unit (motor)
	Maintenance item		Measure value of resistance between following turbocharger actuator connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		• Keep turbocharger actuator installed on vehicle. • Remove harness connector and measure turbocharger actuator side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of turbocharger actuator

<Step 12 inspection diagram>



P68994

Step 13	Inspection items		Inspection of turbocharger actuator connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure values of voltage between the following electronic drive unit connector terminals. • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A4 “VGT 1”.
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - turbocharger actuator connector No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - turbocharger actuator connector No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - turbocharger actuator connector No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - turbocharger actuator connector No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - turbocharger actuator connector No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of turbocharger, go to step 16.
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A4 “VGT 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “54: Target VGT Position, 55: Actual VGT Position”). **NOTE** • **Set turbocharger opening to the range of 20 to 80%.** • **As initial operational check of turbocharger actuator is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2413/Flash code: 67, 95
[Monitor]
Abnormality in exhaust gas recirculation valve position
[Fault (outline)]
- Exhaust gas recirculation valve slow response/steady state position deviation
- Plausibility

[Diagnosis check]
- Exhaust gas recirculation valve position is detected as actual position through position sensor and compared with target position for control by engine electronic control unit.

[Code generation condition]
Diagnosis code is generated under either of the following conditions. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)
- Difference between actual valve position and target valve position remains more than 2 mm {0.08 in.} for 5 seconds.
- Target valve position calculated by engine electronic control unit remains out of specified limits (upper limit: 10 mm {0.39 in.}; lower limit: 0 mm {0 in.}) for 1 second.

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
- Battery voltage: in order
- Exhaust gas recirculation valve: in order
- Controller area network of electronic drive unit: in order

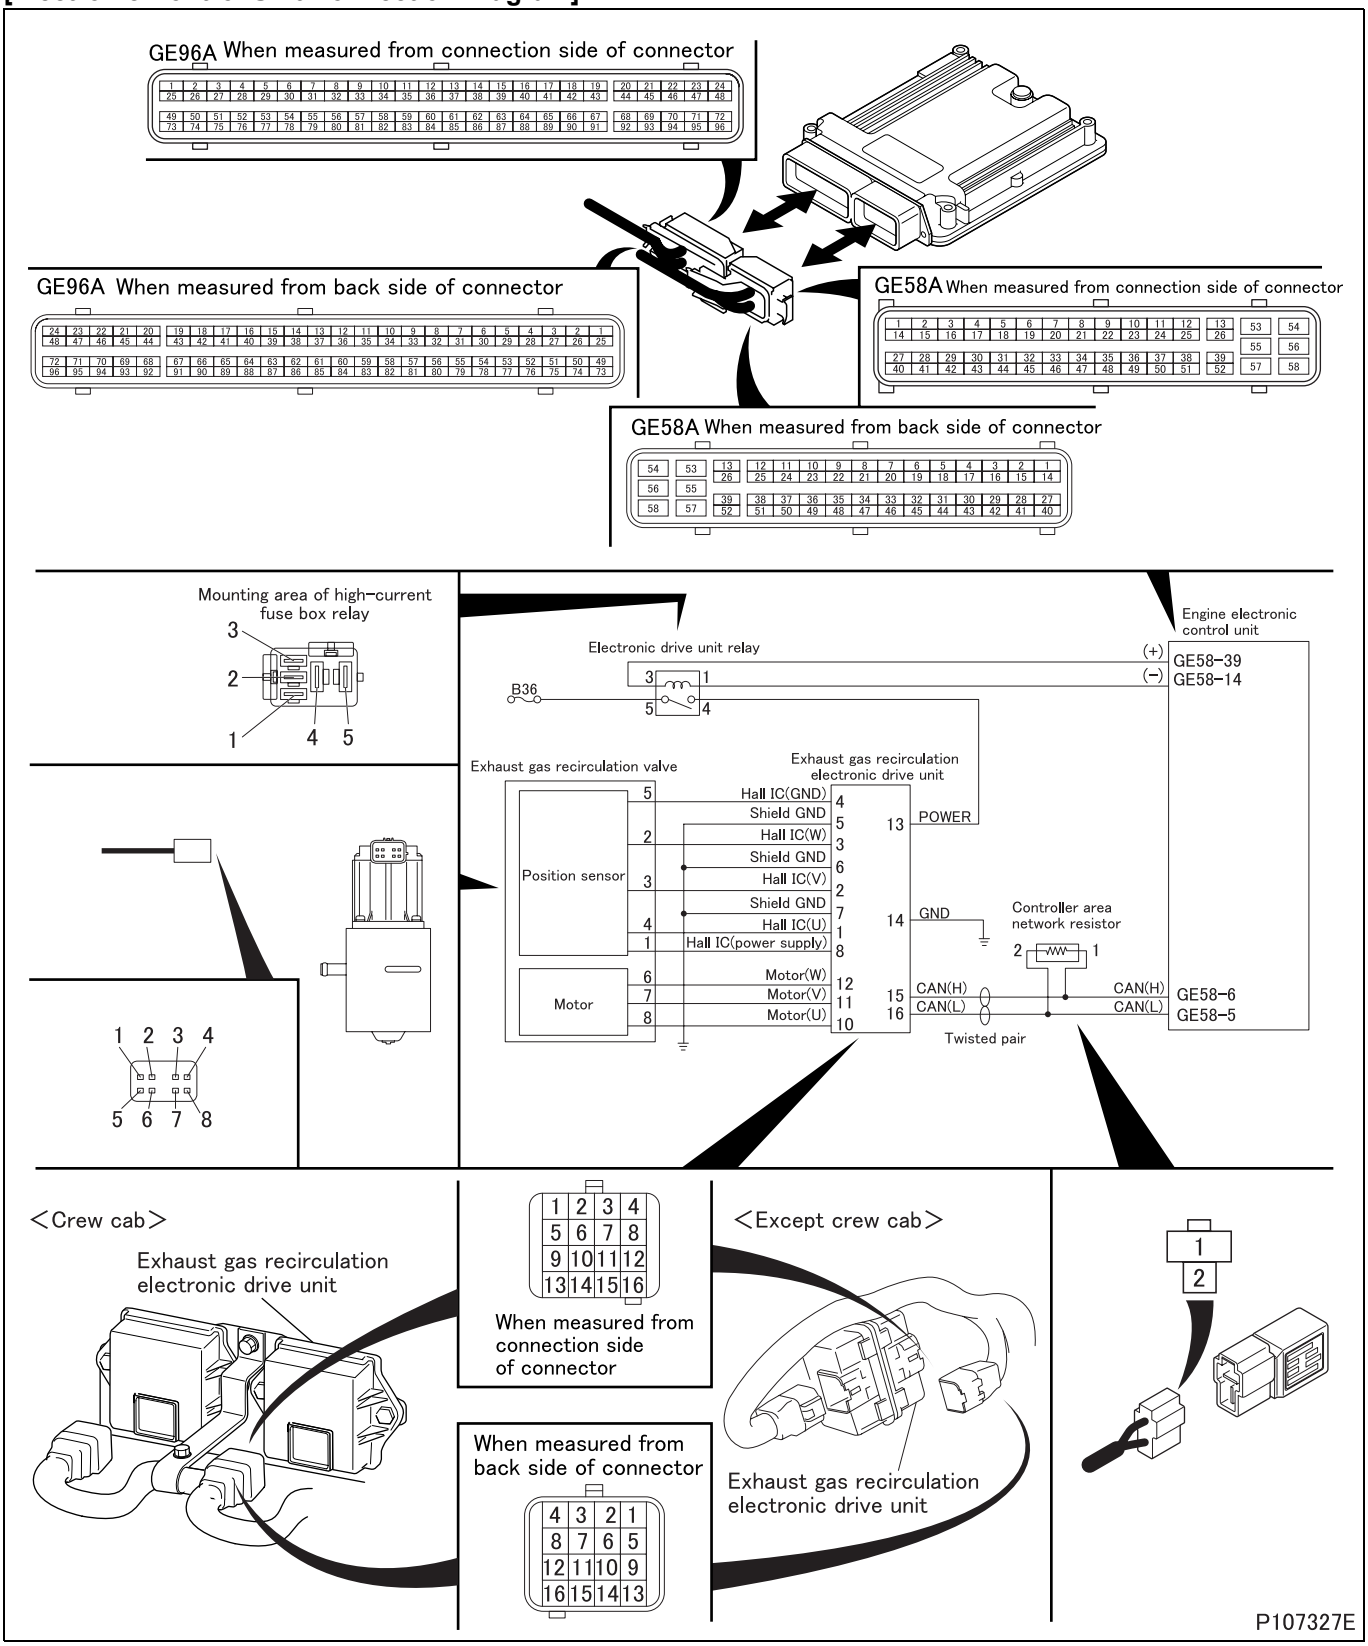
[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Deviation in position>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Turbocharger control is stopped.
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

<Target value>
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped (manual regeneration is feasible).
- Related fault check is stopped.

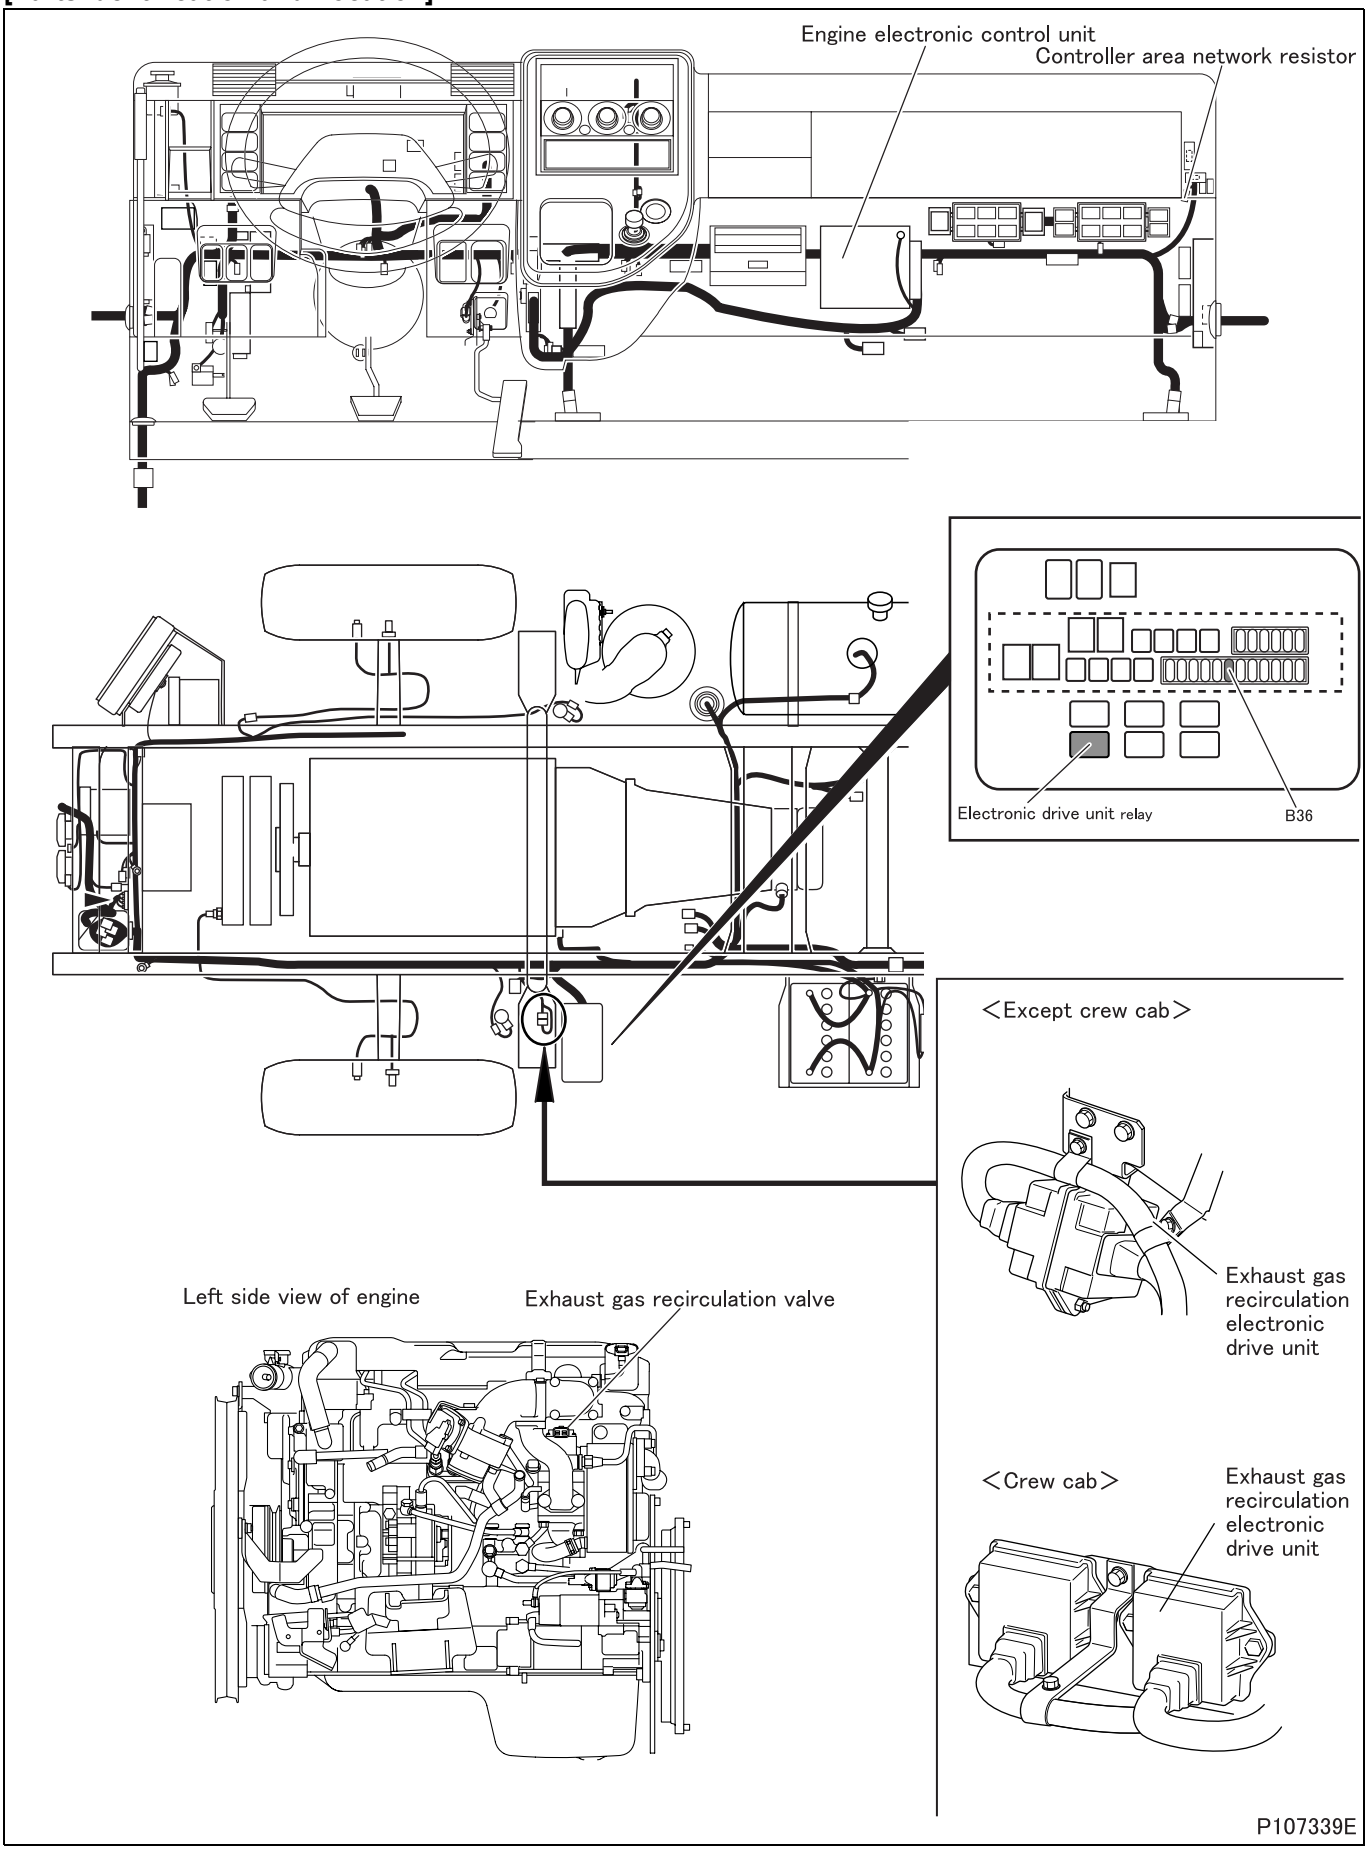
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and exhaust gas recirculation valve
- Malfunction of each connector
- Malfunction of exhaust gas recirculation motor (built in exhaust gas recirculation valve)
- Malfunction of exhaust gas recirculation position sensor (built in exhaust gas recirculation valve)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. A0 “EGR 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “51: Actual EGR Valve Position”). **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of exhaust gas recirculation valve connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)”
	Inspection condition		Starter switch: ON
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Inspect diagnosis code that is occurring.

Step 5	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Disconnect connector and measure from harness side. • Starter switch: ON • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 6.

Step 6	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B35 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 9.
		NO	Modify harness.

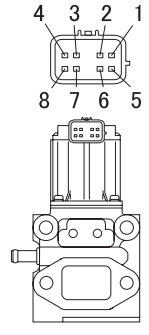
Step 9	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between following electronic drive unit connector terminals. • Electronic drive unit ground: terminal No. 14 - chassis ground • Sensor shield ground (U): terminal No. 5 - 14 • Sensor shield ground (V): terminal No. 6 - 14 • Sensor shield ground (W): terminal No. 7 - 14 • Sensor ground: terminal No. 4 - 14
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection of electronic drive unit connector (motor)
	Maintenance item		Measure value of resistance between following connector terminals • Between U - V: 10 - 11 • Between U - W: 10 - 12 • Between V - W: 11 - 12
	Inspection condition		–
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Go to step 11.

Step 11	Inspection items		Inspection of harness between electronic drive unit and turbocharger actuator (motor)
	Maintenance item		Check circuit between following connector terminals. • Motor (U): electronic drive unit connector terminal No. 10 - turbocharger actuator connector No. 8 • Motor (V): electronic drive unit connector terminal No. 11 - turbocharger actuator connector No. 7 • Motor (W): electronic drive unit connector terminal No. 12 - turbocharger actuator connector No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of exhaust gas recirculation valve unit (motor)
	Maintenance item		Measure value of resistance between following exhaust gas recirculation valve connector terminals • Between U - V: 8 - 7 • Between U - W: 8 - 6 • Between V - W: 7 - 6
	Inspection condition		• Keep exhaust gas recirculation valve installed on vehicle. • Remove harness connector and measure exhaust gas recirculation valve side.
	Requirements		2.1 ± 0.3 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Replacement of turbocharger actuator

<Step 12 inspection diagram>



P68994

Step 13	Inspection items		Inspection of exhaust gas recirculation valve connector (position sensor: power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 1 (+) and 5 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		10 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Go to step 15.

Step 14	Inspection items		Inspection of electronic drive unit connector (position sensor: signal)
	Maintenance item		Measure values of voltage between the following electronic drive unit connector terminals. • U signal output: terminal 1 (+) - 4 (–) • V signal output: terminal 2 (+) - 4 (–) • W signal output: terminal 3 (+) - 4 (–)
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON • Perform actuator test item No. A0 “EGR 1”.
	Requirements		8 to 11 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 16.
		NO	Go to step 15.

Step 15	Inspection items		Inspection of harness between electronic drive unit and exhaust gas recirculation valve (position sensor)
	Maintenance item		Check circuit between following connector terminals. • Sensor (power supply): electronic drive unit connector terminal No. 8 - exhaust gas recirculation valve connector No. 1 • Sensor (U): electronic drive unit connector terminal No. 1 - exhaust gas recirculation valve connector No. 4 • Sensor (V): electronic drive unit connector terminal No. 2 - exhaust gas recirculation valve connector No. 3 • Sensor (W): electronic drive unit connector terminal No. 3 - exhaust gas recirculation valve connector No. 2 • Sensor (ground): electronic drive unit connector terminal No. 4 - exhaust gas recirculation valve connector No. 5
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of exhaust gas recirculation, go to step 16.
		NO	Modify harness.

Step 16	Inspection items		Inspection by control data
	Maintenance item		• Perform actuator test item No. A0 “EGR 1”.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral (parking satisfactory for automatic transmission) • Diagnosis switch: OFF (fuse removed)
	Requirements		Actual position matches with target value set by Multi-Use Tester (check with service data “51: Actual EGR Valve Position”). **NOTE** • **As initial operational check of exhaust gas recirculation valve is automatically effected immediately after starter switch is ON, perform actuator test by Multi-Use Tester after that check (approximately 5 seconds later).**
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic drive unit

[Fault code]
Diagnosis code: P2423/Flash code: 46
[Monitor]
Failure of front oxidation catalyst
[Fault (outline)]
Inactive (unable to generate exotherm for diesel particulate filter regeneration)
[Diagnosis check]
- Heating condition of catalyst is monitored during diesel particulate filter regeneration.
- Actual post injection quantity during diesel particulate filter regeneration and post injection quantity estimated by engine electronic control unit are compared.

[Code generation condition]
Either of the following occurs. (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)
- Post injection quantity used for diesel particulate filter regeneration exceeds 14.8 g {0.52 oz}.
- Difference in total between actual post injection quantity and estimated post injection quantity is more than specified value.
- When all of the following conditions occur;
  - Diesel particulate filter inlet temperature is below 450°C {842°F}.
  - Diesel particulate filter inlet temperature after start of filter regeneration is below 100°C {212°F}.
  - Difference between diesel particulate filter inlet temperature and catalytic inlet temperature is less than 150°C {302°F}.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the diesel particulate filter regeneration control is activated.

[Diagnostic requirement]
- Diesel particulate filter regeneration control: normal (automatic or manual regeneration)
- Fuel injection quantity: above 2.5 mg/cyc
- Engine speed: 600 to 3000 rpm
- Water temperature: 65 to 110°C {149 to 230°F}
- Post injection quantity: above 0.05 mg/cyc
- Diesel particulate filter inlet temperature: above 250°C {482°F}
- Engine operating mode: normal (engine in operation)
- Time till above conditions were met: more than 3 seconds
- Once monitor has been enabled, monitoring continues unless any above conditions are not met for at time: >3s
- Estimated post injection quantity: more than 40 mg (automatic diesel particulate filter regeneration); more than 30 mg (manual diesel particulate filter regeneration)
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Water temperature sensor: in order
- DPF temperature sensor 1: in order
- Catalytic temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order

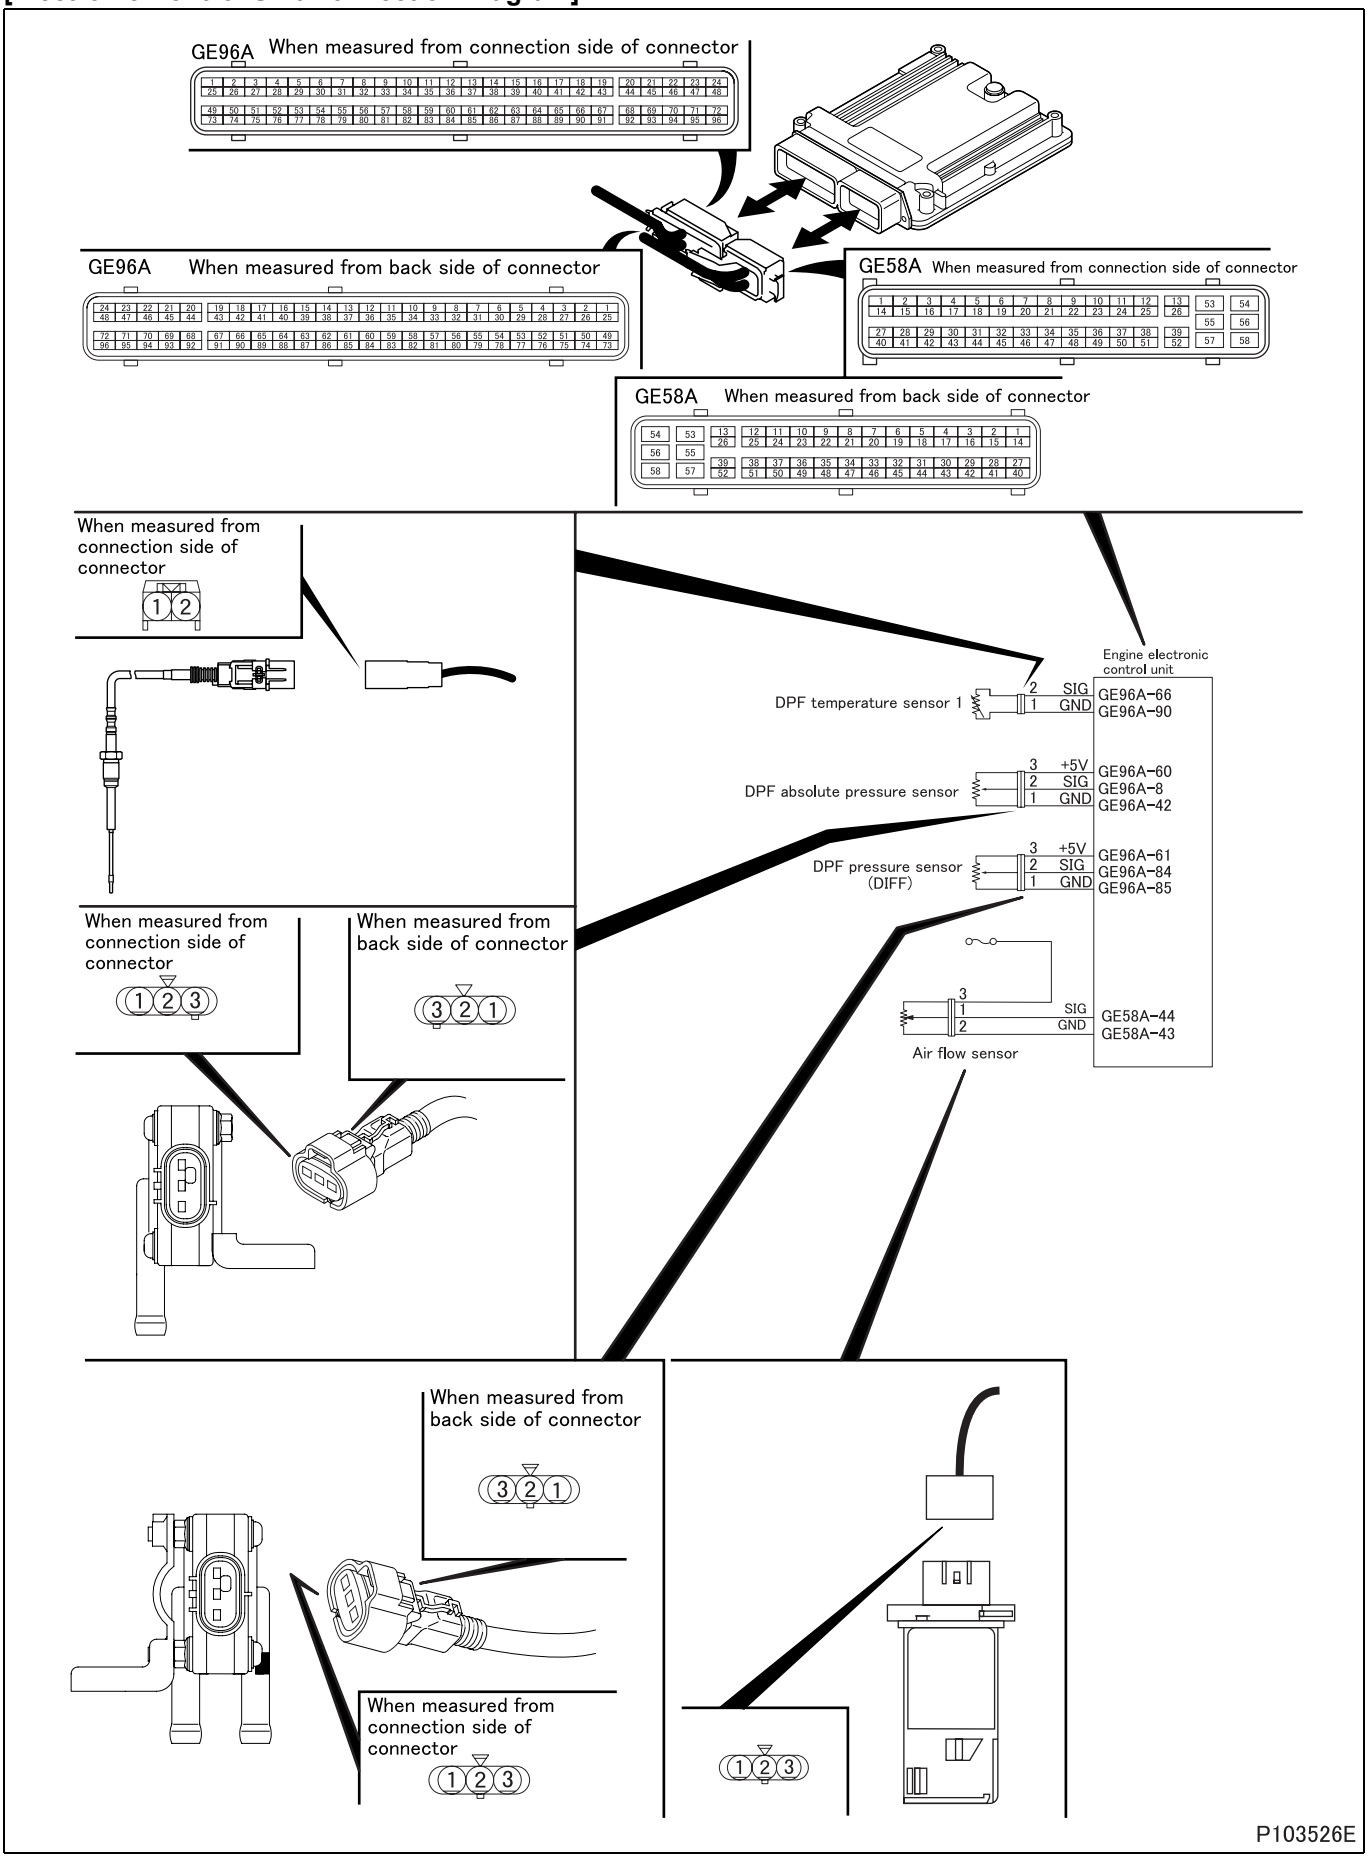
[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Deterioration of diesel particulate filter (front oxidation catalyst)

[Recoverability]

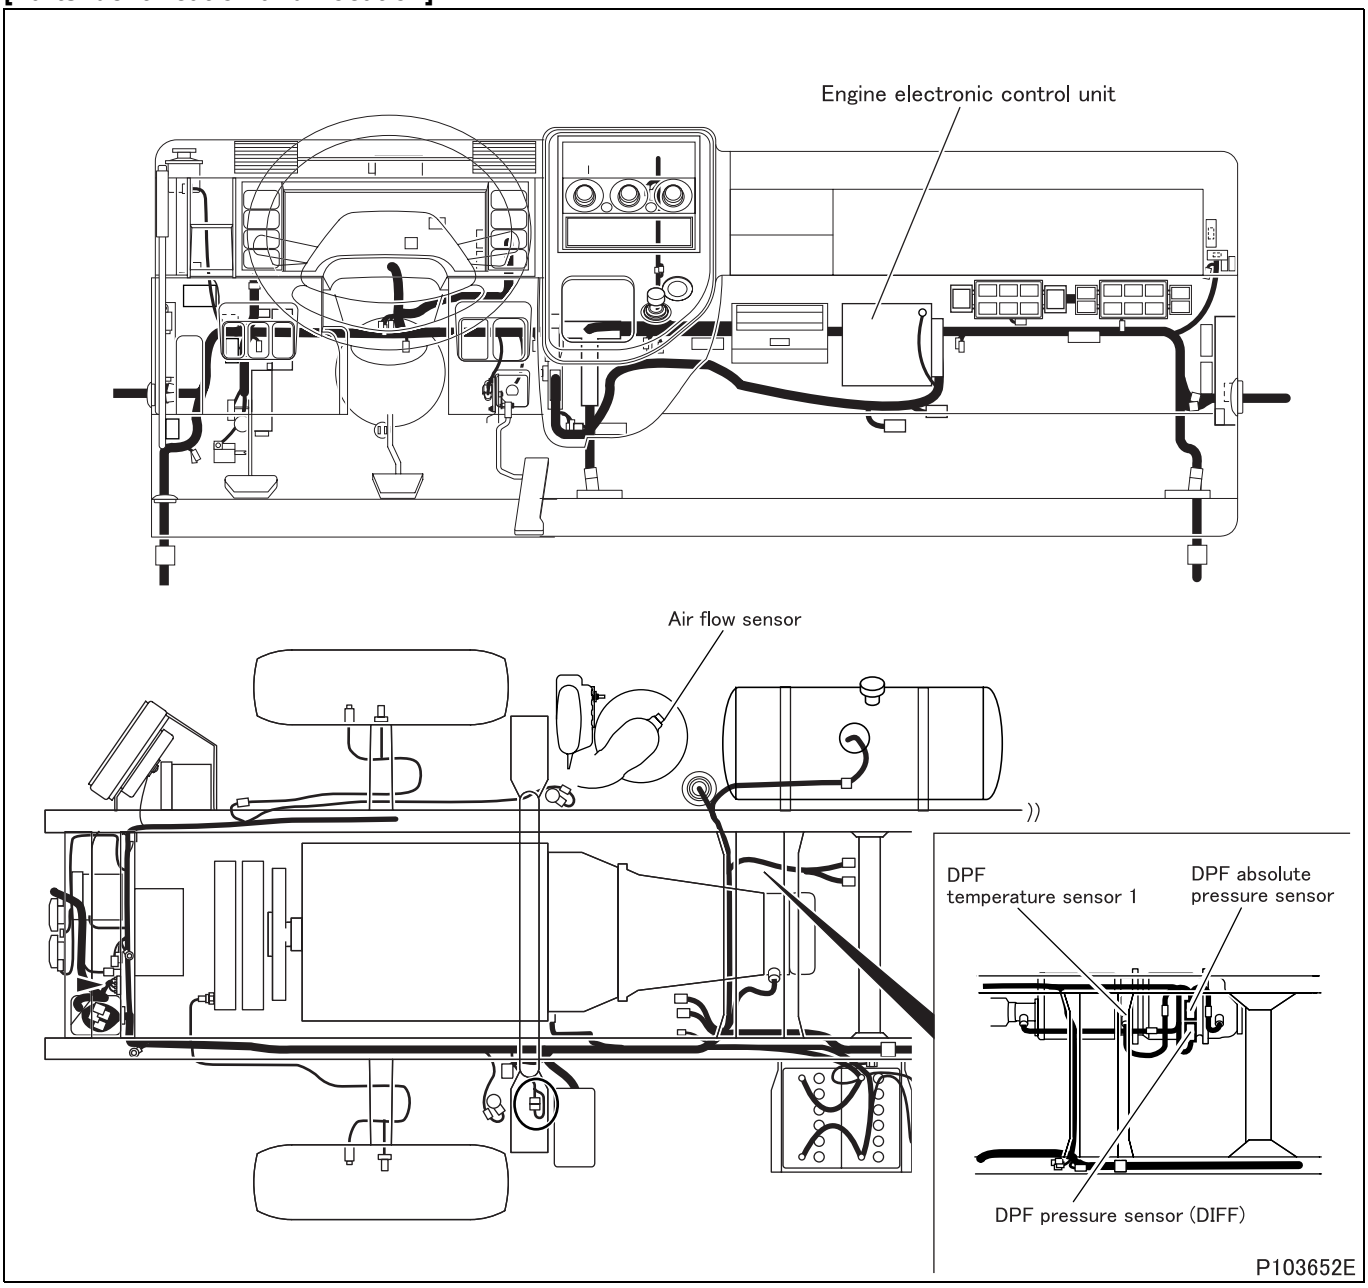
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



P103526E

[Parts Identification and Location]



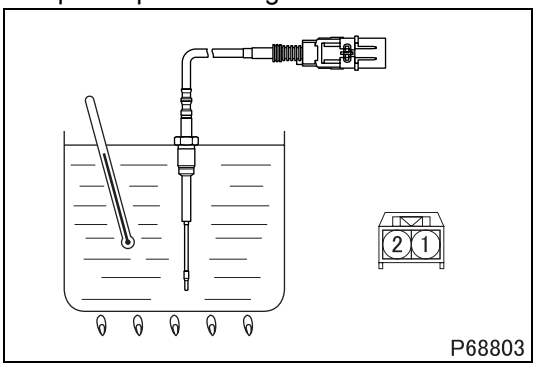
[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0045 “VGT Actuator (Open)” • P0046 “VGT Actuator (Performance)” • P0047 “VGT Actuator (Low)” • P0102 “Airflow Sensor (Low)” • P0103 “Airflow Sensor (High)” • P0426 “EXH Gas Temp SNSR1 (Plausibility)” • P0427 “EXH Gas Temp SNSR1 (Low)” • P0428 “EXH Gas Temp SNSR1 (High)” • P0545 “DPF Temp SNSR (upstream) Low” • P0546 “DPF Temp SNSR (upstream) High” • P1430 “DPF Regeneration Switch” • P1660 “DPF Lamp Control Circuit (Low)” • P2031 “Exhaust Gas Temp” • P2032 “Exhaust Gas Temp (Low)” • P2033 “Exhaust Gas Temp (High)” • P2453 “DPF Diff SNSR (Plausi) & MFF” • P2454 “DPF Diff SNSR (Low) & MFF” • P2455 “DPF Diff SNSR (High) & MFF”
	Inspection condition		Ensure that each sensor mounting condition is free of abnormalities.
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring and go to step 2.
		NO	Go to step 2.

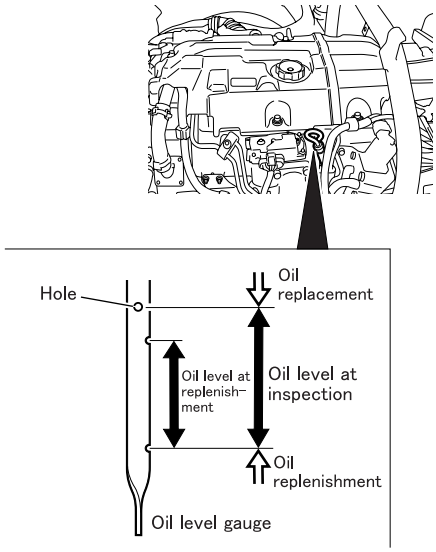
Step 2	Inspection items		Inspection of DPF temperature sensor 1 unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and 2.
	Inspection condition		• Put DPF temperature sensor 1 in container filled with engine oil. • Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
	Requirements		• 20°C {68°F}: 241.8 kΩ • 50°C {122°F}: 106.2 $^{+74.3}_{-41.8}$ kΩ • 100°C {212°F}: 33.56 $^{+17.60}_{-10.60}$ kΩ • 150°C {302°F}: 13.90 $^{+5.36}_{-3.60}$ kΩ • 200°C {392°F}: 6.896 $^{+2.064}_{-1.252}$ kΩ
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Cleaning of sensor

<Step 2 inspection diagram>



Step 3	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of oil, go to step 4.

<Step 3 inspection diagram>

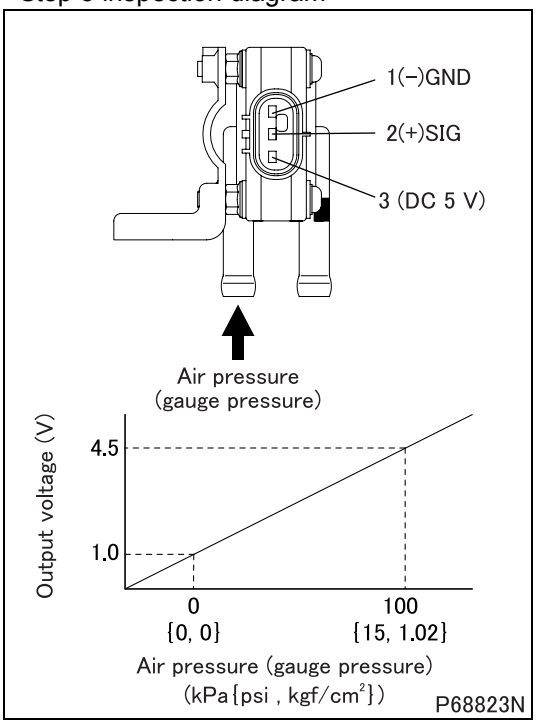


P103677E

Step 4	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	After correction and replacement of hose, go to step 5.

Step 5	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of sensor

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of diesel particulate filter
		NO	Replacement of injector

[Fault code]
Diagnosis code: P2453/Flash code: 97
[Monitor]
Failure of DPF pressure sensor (DIFF)
[Fault (outline)]
- Dynamic check
- Offset check

[Diagnosis check]
Either of the following is monitored.
<Initial>
- Pressure output from DPF pressure sensor (DIFF) is monitored for 0 mbar {0 psi} during engine after run.

<During vehicle operation>
- Diesel particulate filter pressure calculated by engine electronic control unit is monitored for abnormality.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Initial>
- Pressure output from DPF pressure sensor (DIFF) exceeds 70 mbar {1.015 psi}.
  (Warning lamp (red) is lit and diagnosis code is displayed on third establishment of code generation condition.)

<During vehicle operation>
- Pressure output from DPF pressure sensor (DIFF) remains over –4 mbar {–0.058 psi} and below 3 mbar {0.043 psi} for 1 second.
  (Warning lamp (orange) is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
<Initial>
- Engine status: after-run

<During vehicle operation>
- Variation of exhaust volume-flow rate: more than 150 m^3/h/s or less than –200 m^3/h/s
- Air flow sensor: in order
- Atmospheric pressure sensor: in order
- Boost air temperature sensor: in order
- Intake air temperature sensor: in order
- DPF absolute pressure sensor: normal in output signal
- DPF pressure sensor (DIFF): normal in output signal
- DPF temperature sensor 1: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Diesel particulate filter regeneration control: in order

[Control effected by electronic control unit during fault]
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit
- Dissolution, blockage, and damage of diesel particulate filter

[Recoverability]

- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

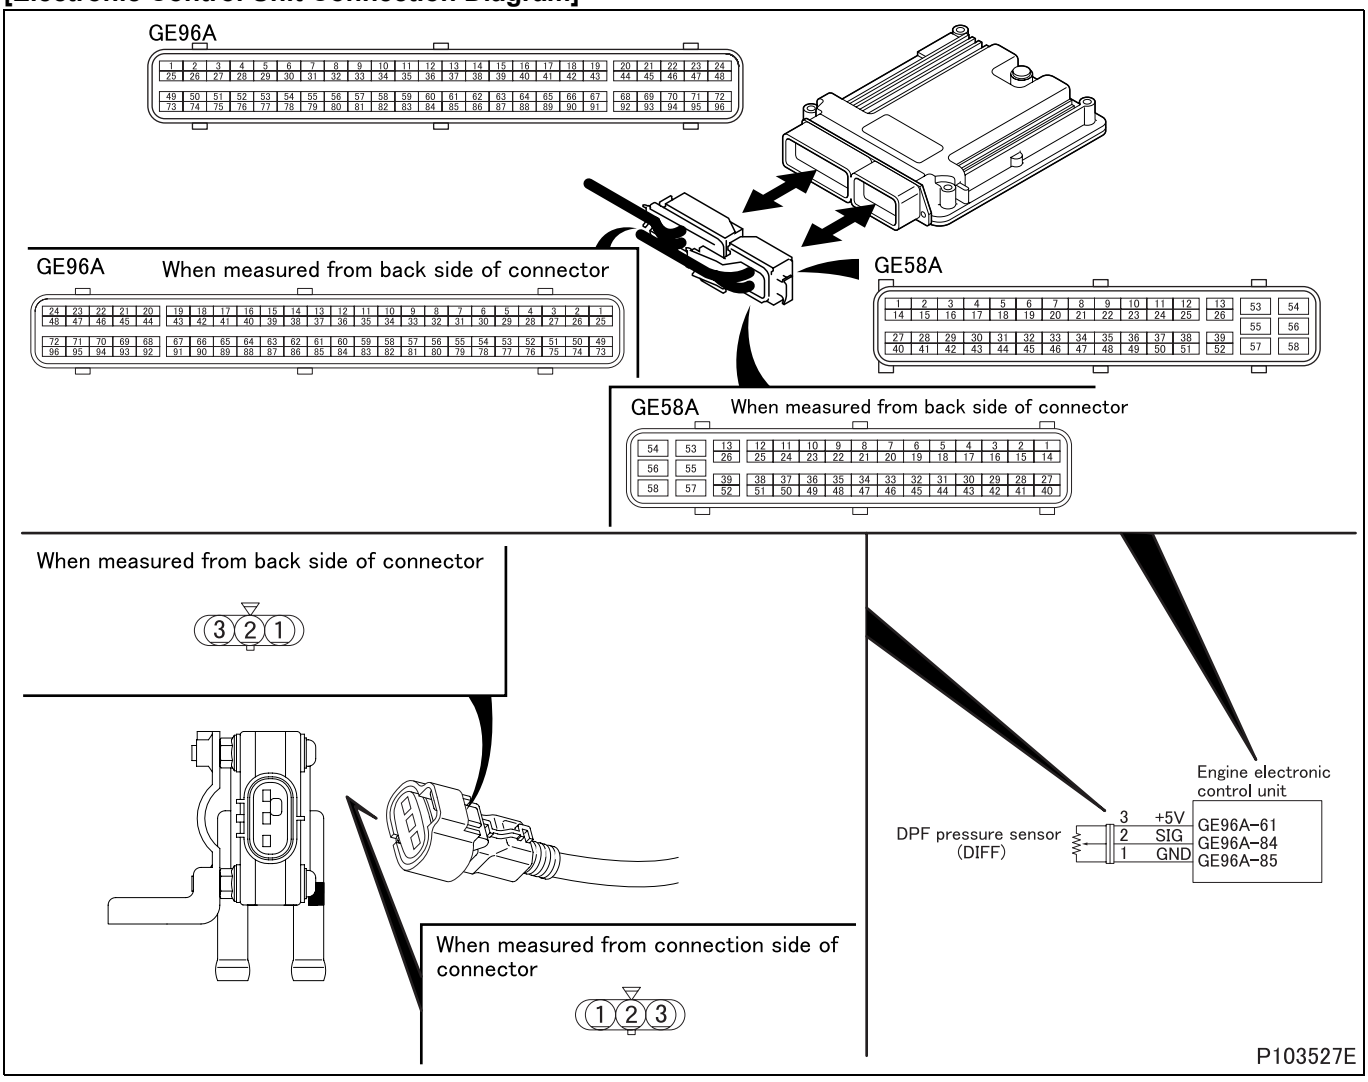
<Initial>

- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

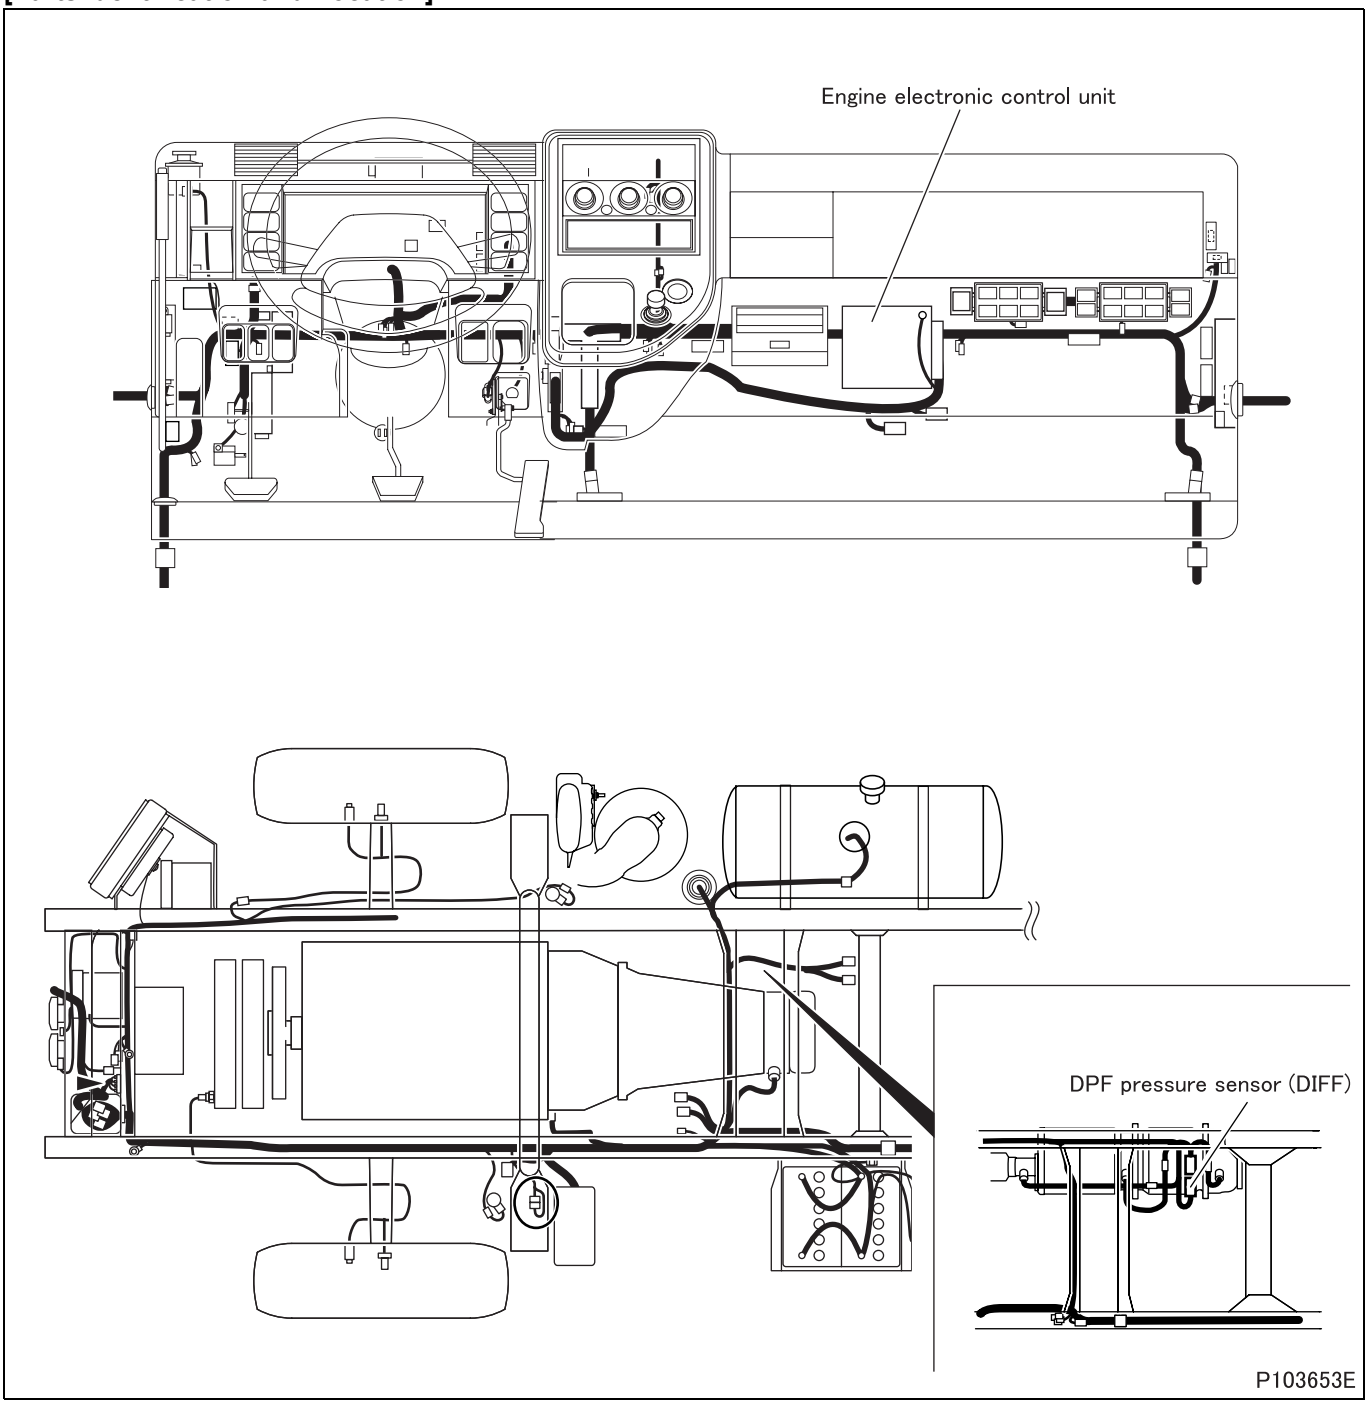
<During vehicle operation>

- Lamp is extinguished and code is cleared simultaneously with recovery.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF” of Service Data.
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 84 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		1 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 61 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

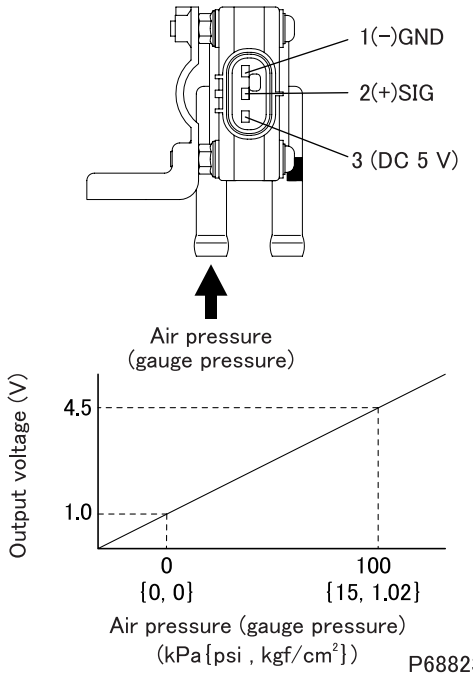
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 85 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 61.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 85.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 84.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF”
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2454/Flash code: 97
[Monitor]
Failure of DPF pressure sensor (DIFF)
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Output voltage of DPF pressure sensor (DIFF) is monitored.

[Code generation condition]
- Pressure output from DPF pressure sensor (DIFF) remains below –179 hpa for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

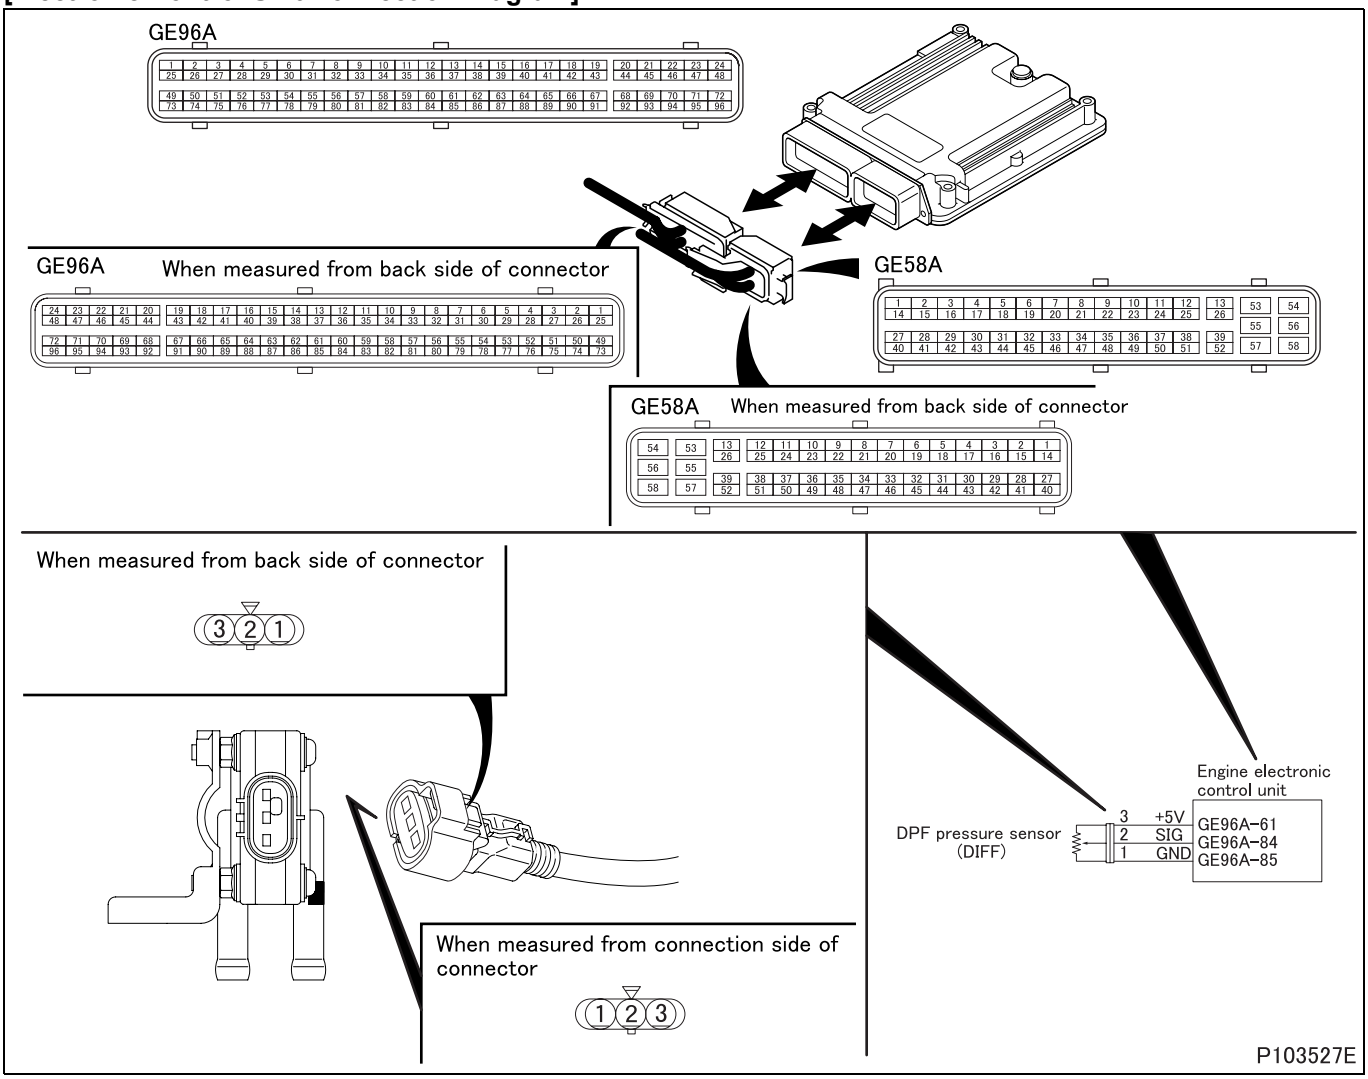
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter differential pressure is fixed at backup value.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

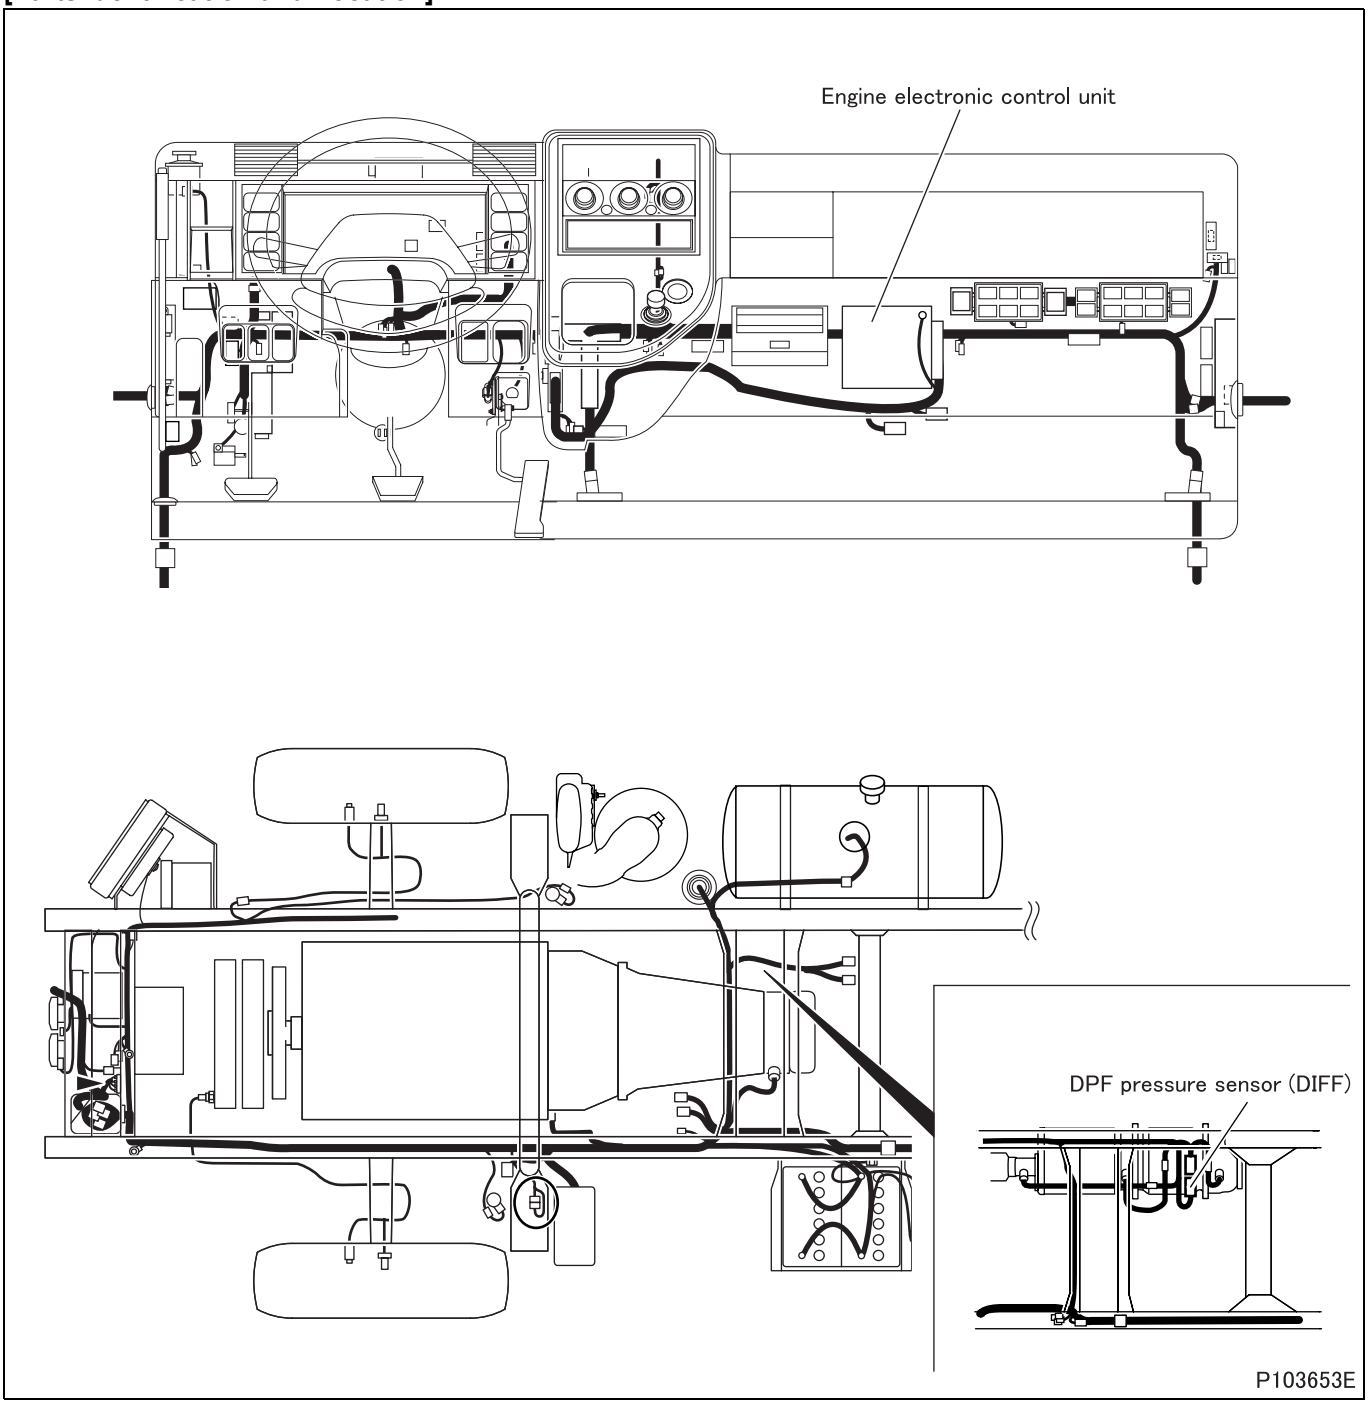
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF” of Service Data.
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 84 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		1 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 61 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

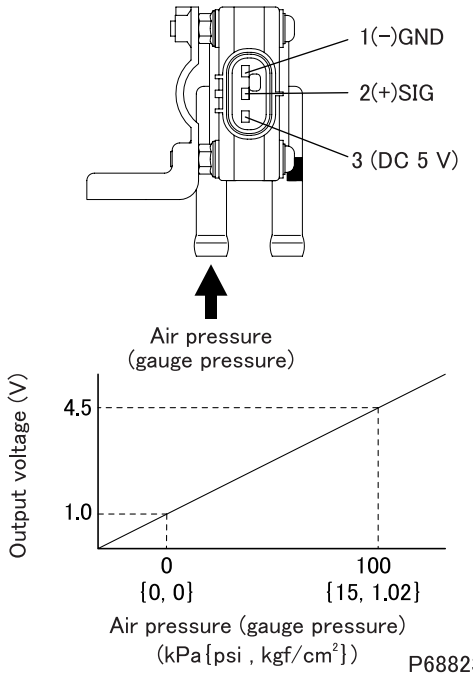
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 85 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 61.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 85.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 84.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF”
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2455/Flash code: 97
[Monitor]
Failure of DPF pressure sensor (DIFF)
[Fault (outline)]
High signal range check
[Diagnosis check]
- Output voltage of DPF pressure sensor (DIFF) is monitored.

[Code generation condition]
- Pressure output from DPF pressure sensor (DIFF) remains below 1108 hpa for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

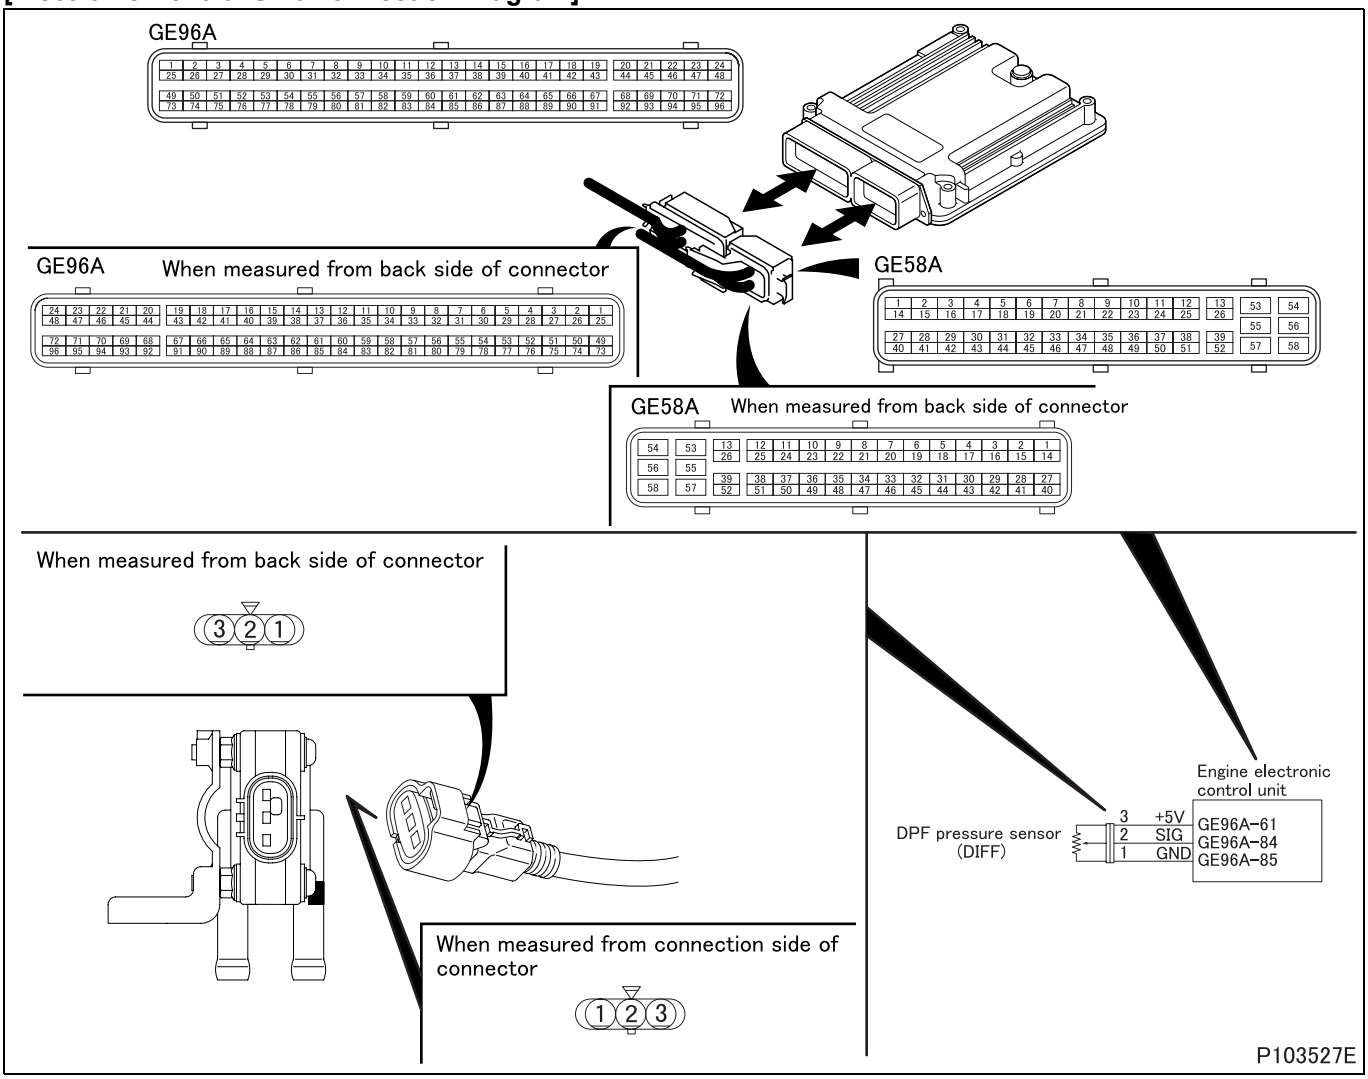
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Diesel particulate filter differential pressure is fixed at backup value.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

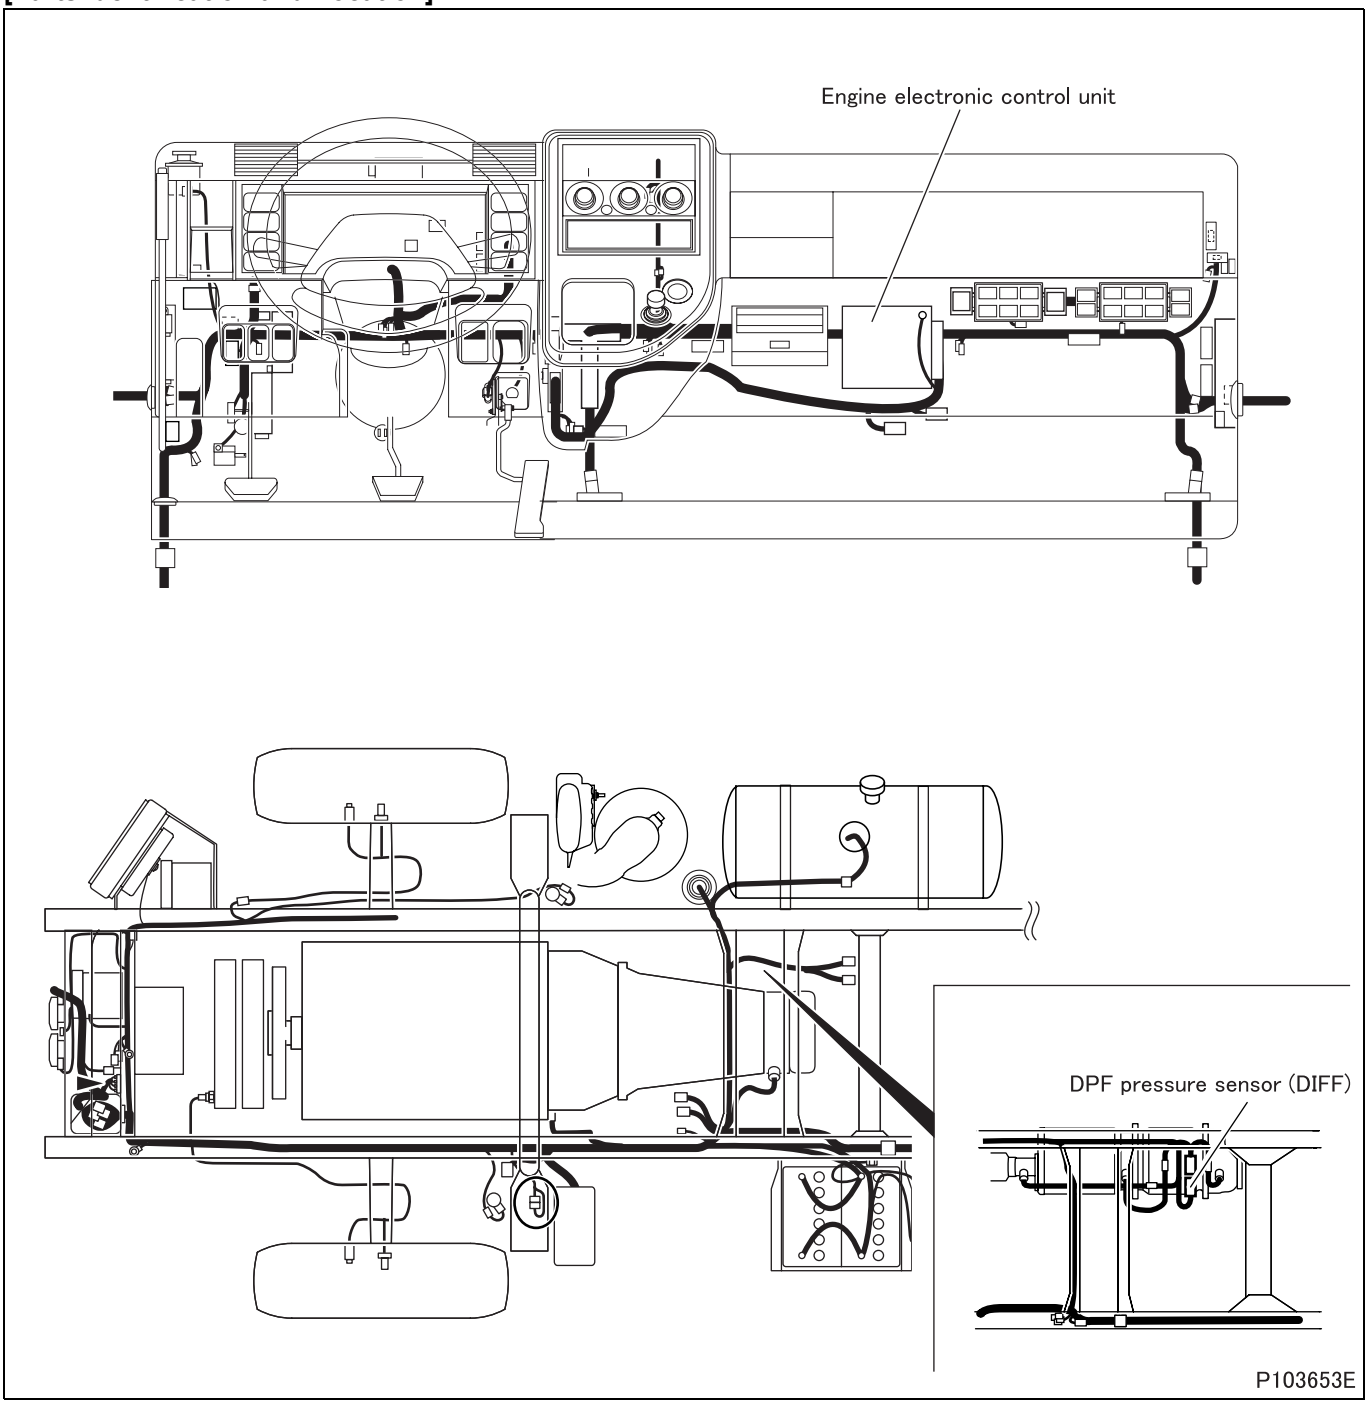
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and sensor
- Malfunction of each connector
- Malfunction of sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF” of Service Data.
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 84 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		1 to 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 61 (+) and 85 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

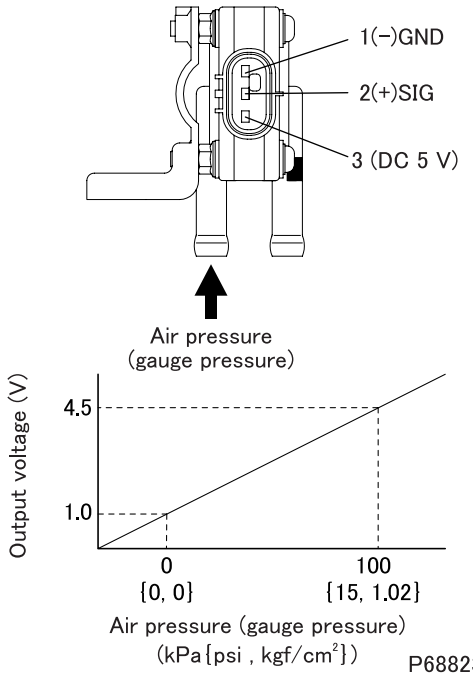
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 85 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 3 (+) and 1 (–).
	Inspection condition		• Measure from back side of harness connector with each device connected to harness. • Starter switch: ON
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between sensor connector terminal No. 3 and electronic control unit connector (GE96A) terminal No. 61.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 1 and electronic control unit connector (GE96A) terminal No. 85.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 2 and electronic control unit connector (GE96A) terminal No. 84.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 22 “Difference pressure across DPF”
	Inspection condition		Past failures include diesel particulate filter pressure sensor, while the current failures do not include diesel particulate filter pressure sensor.
	Requirements		When engine is stationary: 0 kPa {0 psi, 0 kgf/cm^2}
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2457/Flash code: 2
[Monitor]
Failure of exhaust gas recirculation cooler
[Fault (outline)]
Exhaust gas recirculation cooler failure
[Diagnosis check]
Cooling performance of exhaust gas recirculation cooler is monitored, with exhaust gas recirculation system temperature detected through boost air temperature sensor under the following conditions and compared with target temperature for control by engine electronic control unit.
- Engine: started
- Exhaust brake: OFF

[Code generation condition]
- Temperature output from boost air temperature sensor remains over maximum target temperature for 10 seconds. (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

[Diagnostic requirement]
- Engine speed: 500 to 2700 rpm
- Variation in engine speed: less than 300 rpm/s
- Exhaust shutter: open
- Time till above conditions were met: more than 15 seconds

<Conditions after above conditions are met>
- Water temperature: below 95°C {203°F}
- Exhaust gas recirculation cooler temperature: –7 to 60°C {19 to 140°F}
- Engine running time: more than 60 seconds
- Exhaust gas recirculation valve: in order
- Intake throttle: in order
- Turbocharger actuator: in order
- Controller area network communication of each electronic drive unit (exhaust gas recirculation, intake throttle and turbocharger): in order
- Exhaust gas recirculation flow rate and exhaust gas recirculation valve operation: in order
- Atmospheric pressure sensor: in order
- Boost pressure sensor: in order
- Water temperature sensor: in order
- Boost air temperature sensor: in order
- Sensor 5 V power supply: in order
- Battery voltage: in order
- MPROP (rail pressure control valve): in order
- Injector: in order
- Intercooler: in order
- Starter switch circuit: in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

[Probable cause of trouble]
- Malfunction of exhaust gas recirculation cooler (breakage, clogging)
- Malfunction of exhaust gas recirculation pipe and hose (breakage, clogging)

[Recoverability]

- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0403 “EGR1 (Actuator Circuit)” • P0409 “EGR1 (Position Sensor)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0600 “CAN Communication” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)” • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P2413 “EGR System”
	Inspection condition		• Starter switch: ON • Do not start engine
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve)

[Fault code]
Diagnosis code: P2459/Flash code: 92
[Monitor]
Frequent diesel particulate filter regeneration
[Fault (outline)]
Excessive diesel particulate filter regeneration frequency (diesel particulate filter clogged up)
[Diagnosis check]
- Diesel particulate filter is monitored for early clogging through measurement of traveled time and distance from last diesel particulate filter regeneration.

[Code generation condition]
- If regenerative control was effected 2 consecutive times within 90 minutes in traveled time and 80 km {49.7 miles} in traveled distance.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the diesel particulate filter regeneration control is activated.

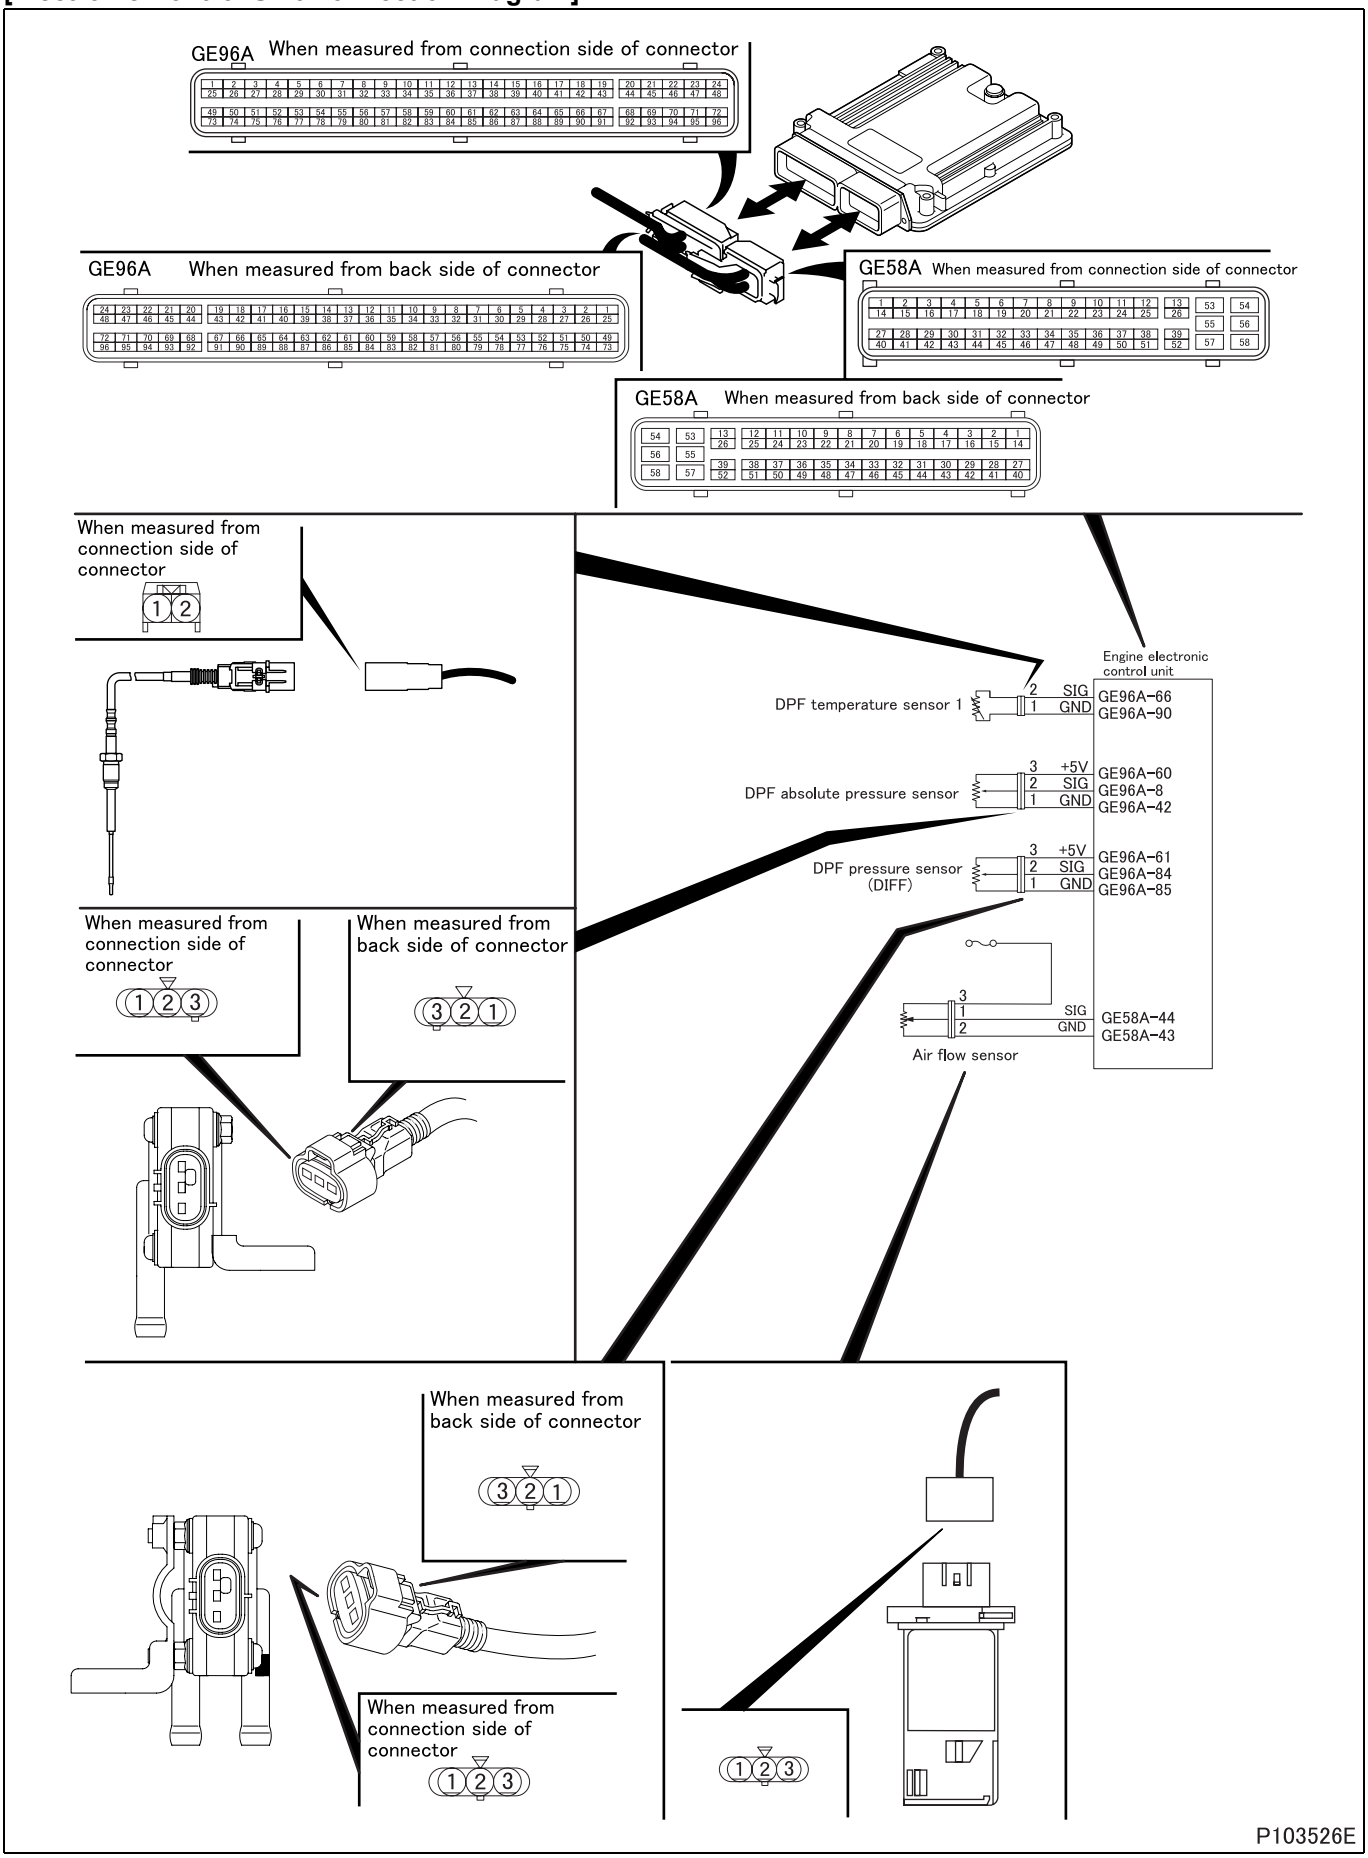
[Diagnostic requirement]
- Diesel particulate filter regeneration control: active

[Control effected by electronic control unit during fault]
- Engine torque is limited.
- Auto cruise control stopped
- Traction control is stopped. <Automatic transmission>
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

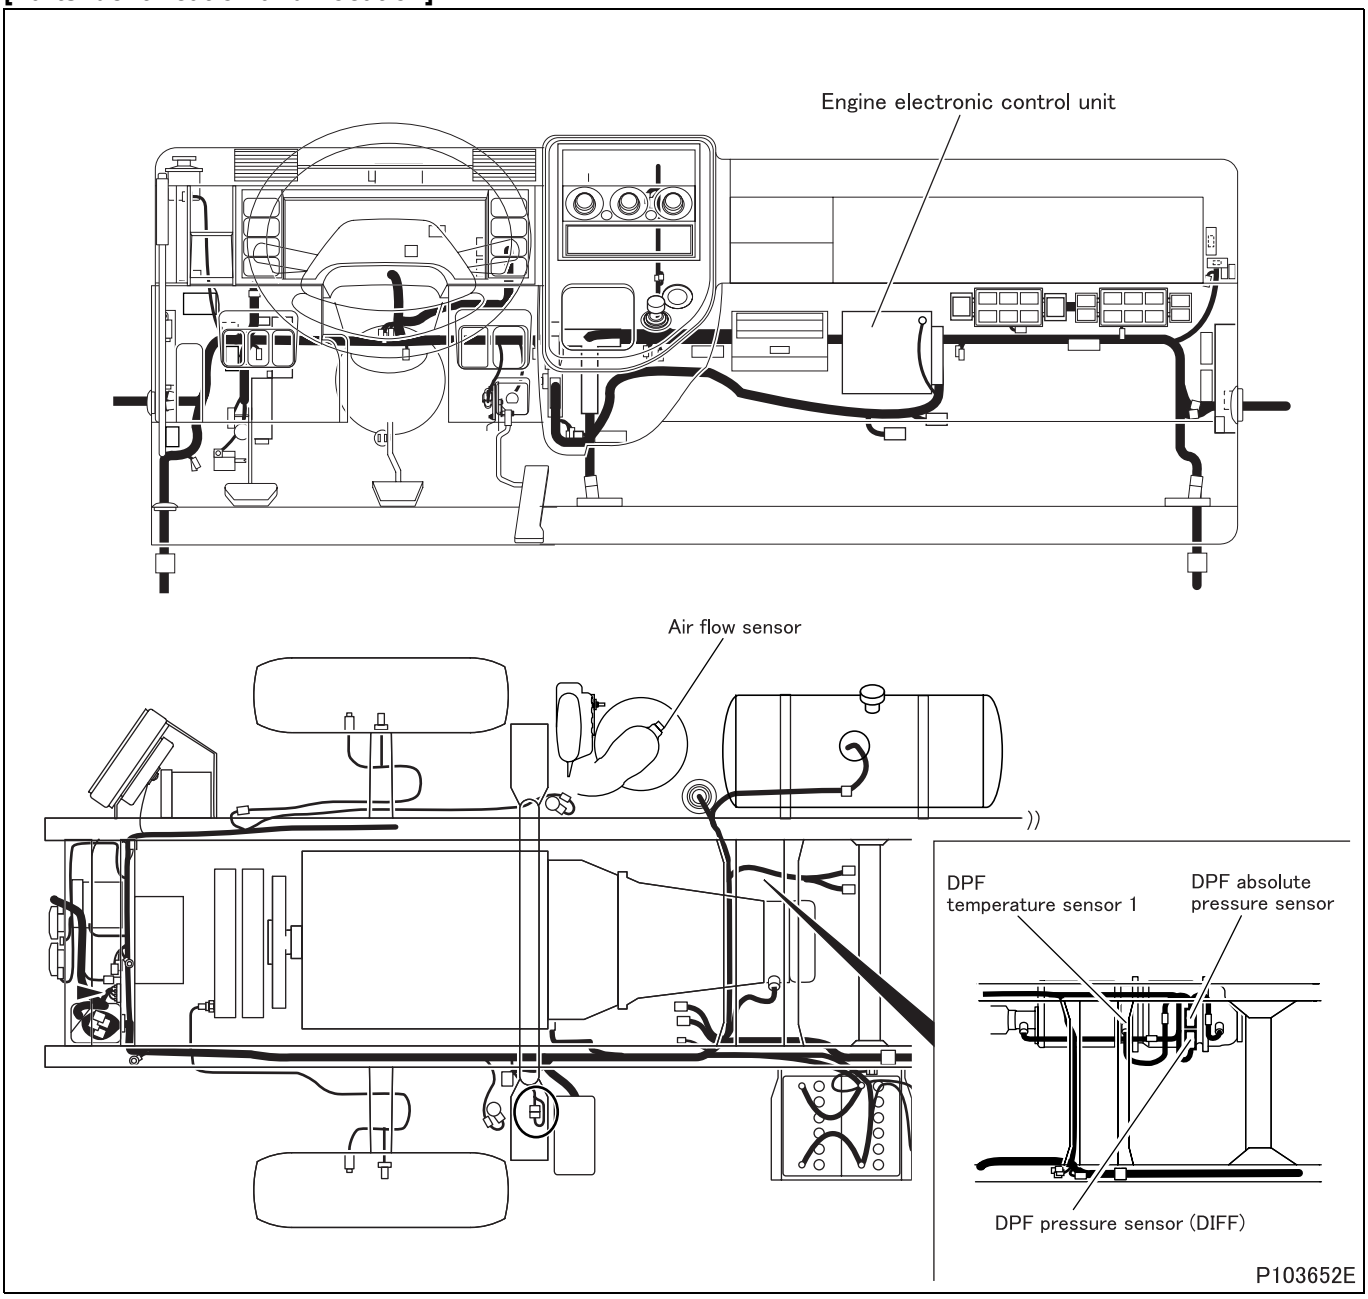
[Probable cause of trouble]
- Failure of diesel particulate filter indicator lamp
- Failure of diesel particulate filter cleaning switch
- Manual diesel particulate filter regeneration is not performed.
- Excessive smoke emission (due to malfunction of engine proper, common rail or exhaust gas recirculation system)
- Malfunction of air flow sensor
- Malfunction of DPF absolute pressure sensor and DPF pressure sensor (DIFF)
- Malfunction of diesel particulate filter

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]

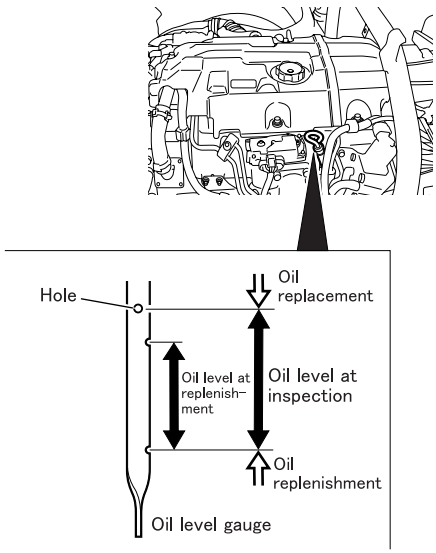


[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection of oil level
	Maintenance item		Inspection of engine oil level
	Inspection condition		Engine stopped
	Requirements		Oil level for inspection is not exceeded.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	After replacement of oil, go to step 2.

<Step 1 inspection diagram>

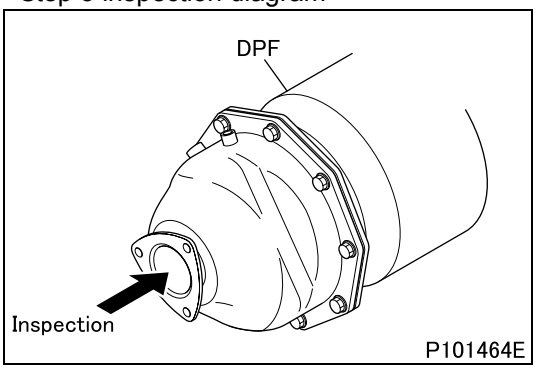


P103677E

Step 2	Inspection items		Inspection by manual diesel particulate filter regeneration
	Maintenance item		Perform Multi-Use Tester actuator test item No. A5 “DPF Regeneration (Manual)”, and clean ceramic diesel particulate filter.
	Inspection condition		• Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Engine: Idling • Place the transmission in neutral. (place the automatic transmission in P range) • Parking brake: vehicle parked (parking brake switch: ON) • After engine warm-up
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 3.

Step 3	Inspection items		Unit inspection of diesel particulate filter
	Maintenance item		Check the exhaust passage inside the diesel particulate filter for adhesion of soot in large quantity.
	Inspection condition		Remove diesel particulate filter.
	Requirements		No soot is deposited.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	After replacement of ceramic filter, perform resetting the DPF-related information.

<Step 3 inspection diagram>



Step 4	Inspection items		Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit
	Maintenance item		See Gr15 “Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit”.
	Inspection condition		Perform the following preparatory works. • Place the transmission in neutral. (place the automatic transmission in P range) • Turn the steering wheel in neutral position and securely apply the parking brake. • Turn off air conditioner not to increase the engine speed. • Check diagnosis code of each electronic control system. If any fault exists, rectify it. • Resetting the DPF-related information (perform “History reset” of Multi-Use Tester) (See Gr15 “Resetting the DPF-related information”.) • Warm up the engine until the engine coolant has been heated to more than 70°C {158°F}. (verify from Service Data “Engine Coolant Temperature” or “31: Water Temperature”)
	Requirements		This diagnosis code does not occur again.
	Inspection result (Is the judging standard satisfied?)	YES	End of inspection
		NO	Go to step 5.

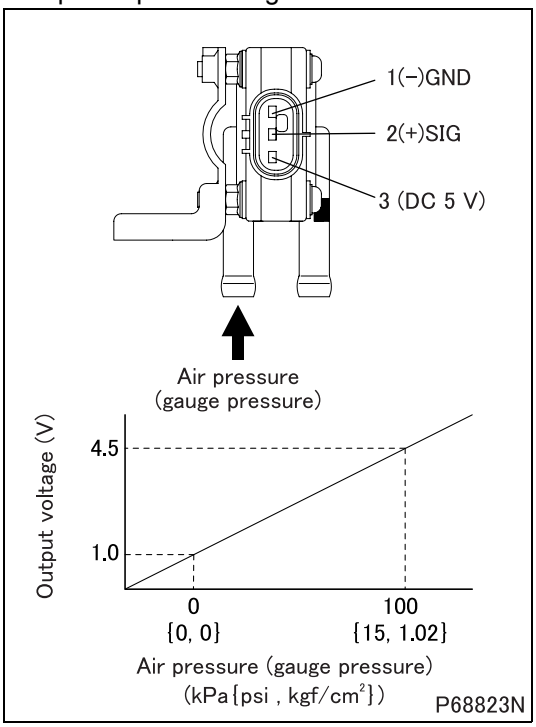
Step 5	Inspection items		Inspection by control data
	Maintenance item		Measure item No. B8 “DPF Indicator Lamp” of Service Data.
	Inspection condition		Perform Multi-Use Tester actuator test item No. A6 “DPF Lamp”.
	Requirements		Diesel particulate filter indicator lamp illuminates (automatic reset after 15 seconds)
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of engine electronic control unit

Step 6	Inspection items		Inspection by control data
	Maintenance item		Measure item No. A4 “DPF SW” of Service Data.
	Inspection condition		–
	Requirements		Press diesel particulate filter cleaning switch and check that “DPF SW” display switches from OFF to ON.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of diesel particulate filter cleaning switch or engine electronic control unit

Step 7	Inspection items		Inspection of pressure hose
	Maintenance item		Check pressure hose of DPF absolute pressure sensor and DPF pressure sensor (DIFF) for connection and cracks.
	Inspection condition		–
	Requirements		Nothing abnormal detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	After correction and replacement of hose, go to step 8.

Step 8	Inspection items		Inspection of DPF pressure sensor (DIFF)
	Maintenance item		Measure value of voltage between connector terminal No.2 (+) and 1 (–).
	Inspection condition		• Apply voltage DC 5 V across terminals No. 3 (+) and 1 (–). • Gradually increase applied air pressure.
	Requirements		• 0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}: 1 V • 100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}: 4.5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of DPF pressure sensor (DIFF)

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection of air flow sensor unit
	Maintenance item		Since inspection of single part is not easy, whether characteristics are deteriorated or not must be checked for the sensor mounted on the current vehicle by measuring and comparing the amount of sensor intake air of the sensor currently mounted on vehicle and that replaced with new one by the service data. **(1) Prepare for inspection** • Clean or replace air cleaner element. • Prepare a new air flow sensor. • Warm up the engine fully. **(2) Measure the intake air of current sensor** • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure the following items from among “Service data”. **<General Scanning Tool used>** • Engine speed: “Ne” (rpm) • Intake air flow rate: “Air Flow Rate from MAFS” (g/s) **<Multi-Use Tester used>** • Engine speed: 01 “Engine Revolution” (rpm) • Intake air flow rate: 60 “Air mass flow” (g/s) **(3) Measure the intake air of new sensor** • Replace the currently mounted sensor with a new sensor. • Keep pressing the accelerator pedal until it bottom the stopper bolt from the idling state. (no load maximum rotation) • Measure intake air flow at the same rpm as that of engine revolution in item (2) of “Service data”. **(4) Comparison whether characteristics are deteriorated** • Calculate the characteristics deterioration factor (%) by the following equation. • Characteristics deterioration factor (%) = (intake air of new item – current intake air) × 100/intake air of new item.
	Inspection condition		–
	Requirements		10% or less
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of air flow sensor

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	• Inspection of exhaust gas recirculation system (exhaust gas recirculation pipe, exhaust gas recirculation cooler, exhaust gas recirculation valve) • Inspection of engine
		NO	Replacement of injector

[Fault code]
Diagnosis code: P2533/Flash code: 66
[Monitor]
Failure of starter switch
[Fault (outline)]
Open circuit at electronic control unit inout
[Diagnosis check]
- Operational relation between starter switch and engine start is monitored.

[Code generation condition]
- Engine starts (engine revolutions are counted) without start signal from starter switch.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed only once during the driving cycle.

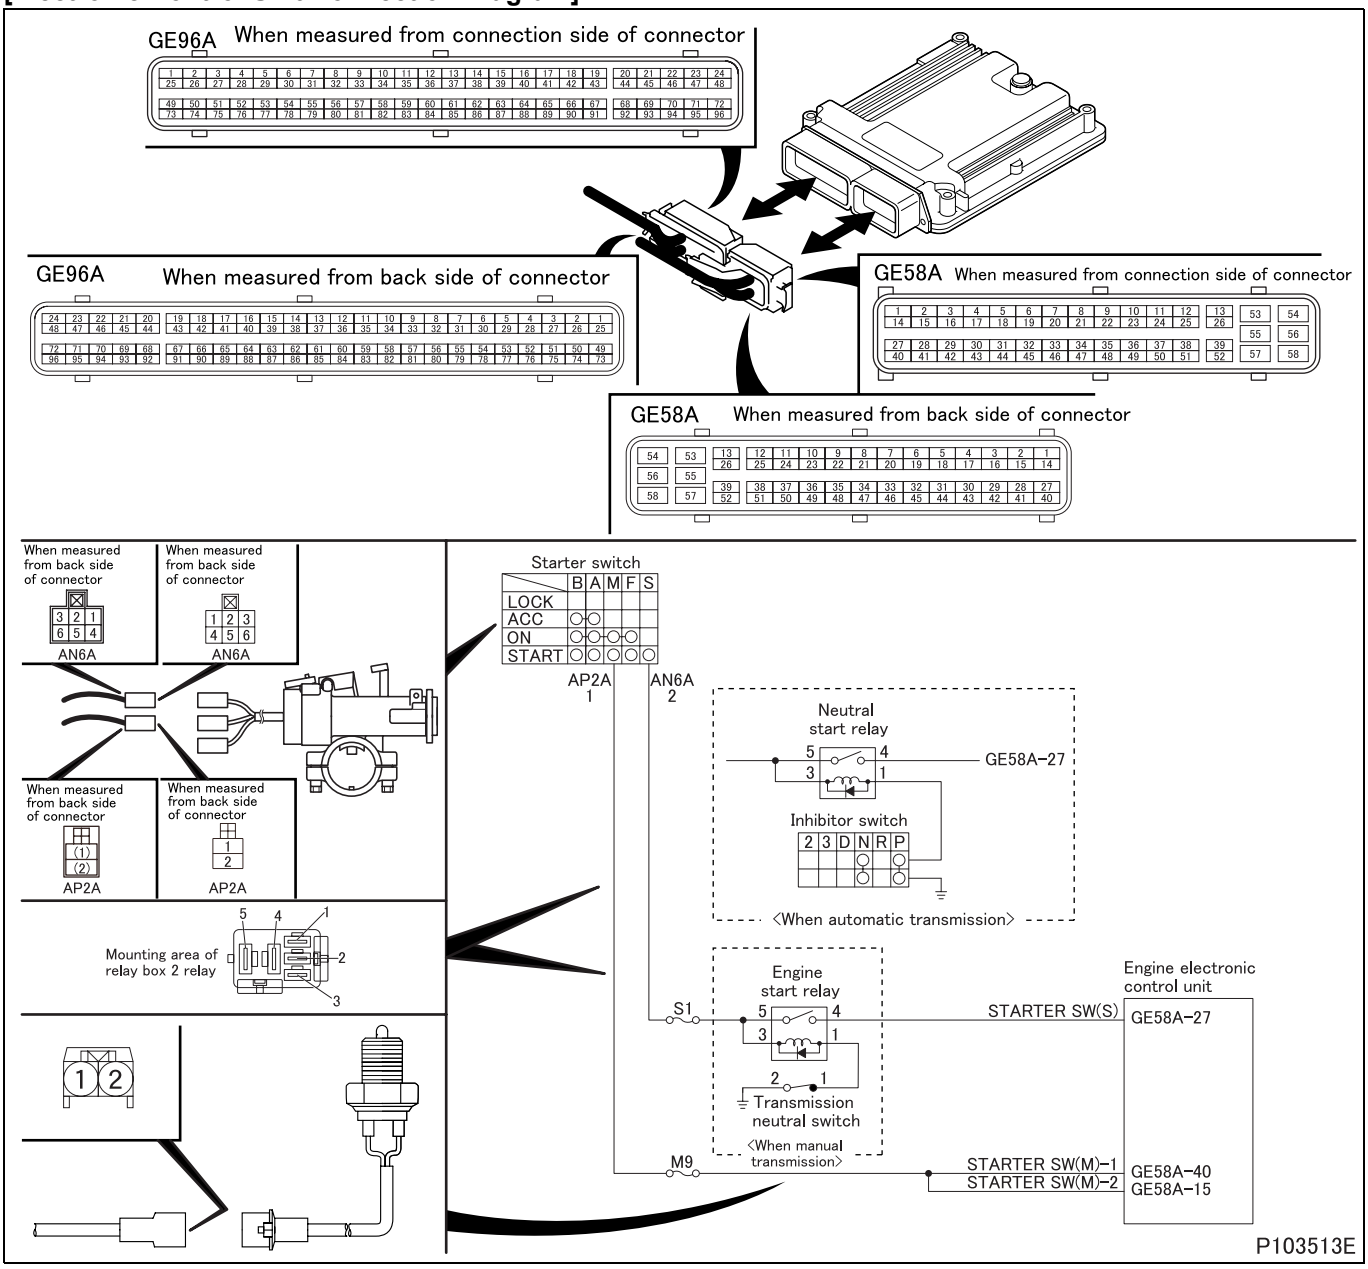
[Diagnostic requirement]
- Engine operating mode: starting
- Previous engine operation mode: OFF
- Speed increase from engine speed sensor: more than 100 rpm
- Speed increase from cylinder recognition sensor: more than 100 rpm
- Vehicle speed: less than 1 km/h {0.62 MPH}
- Vehicle speed sensor: in order

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

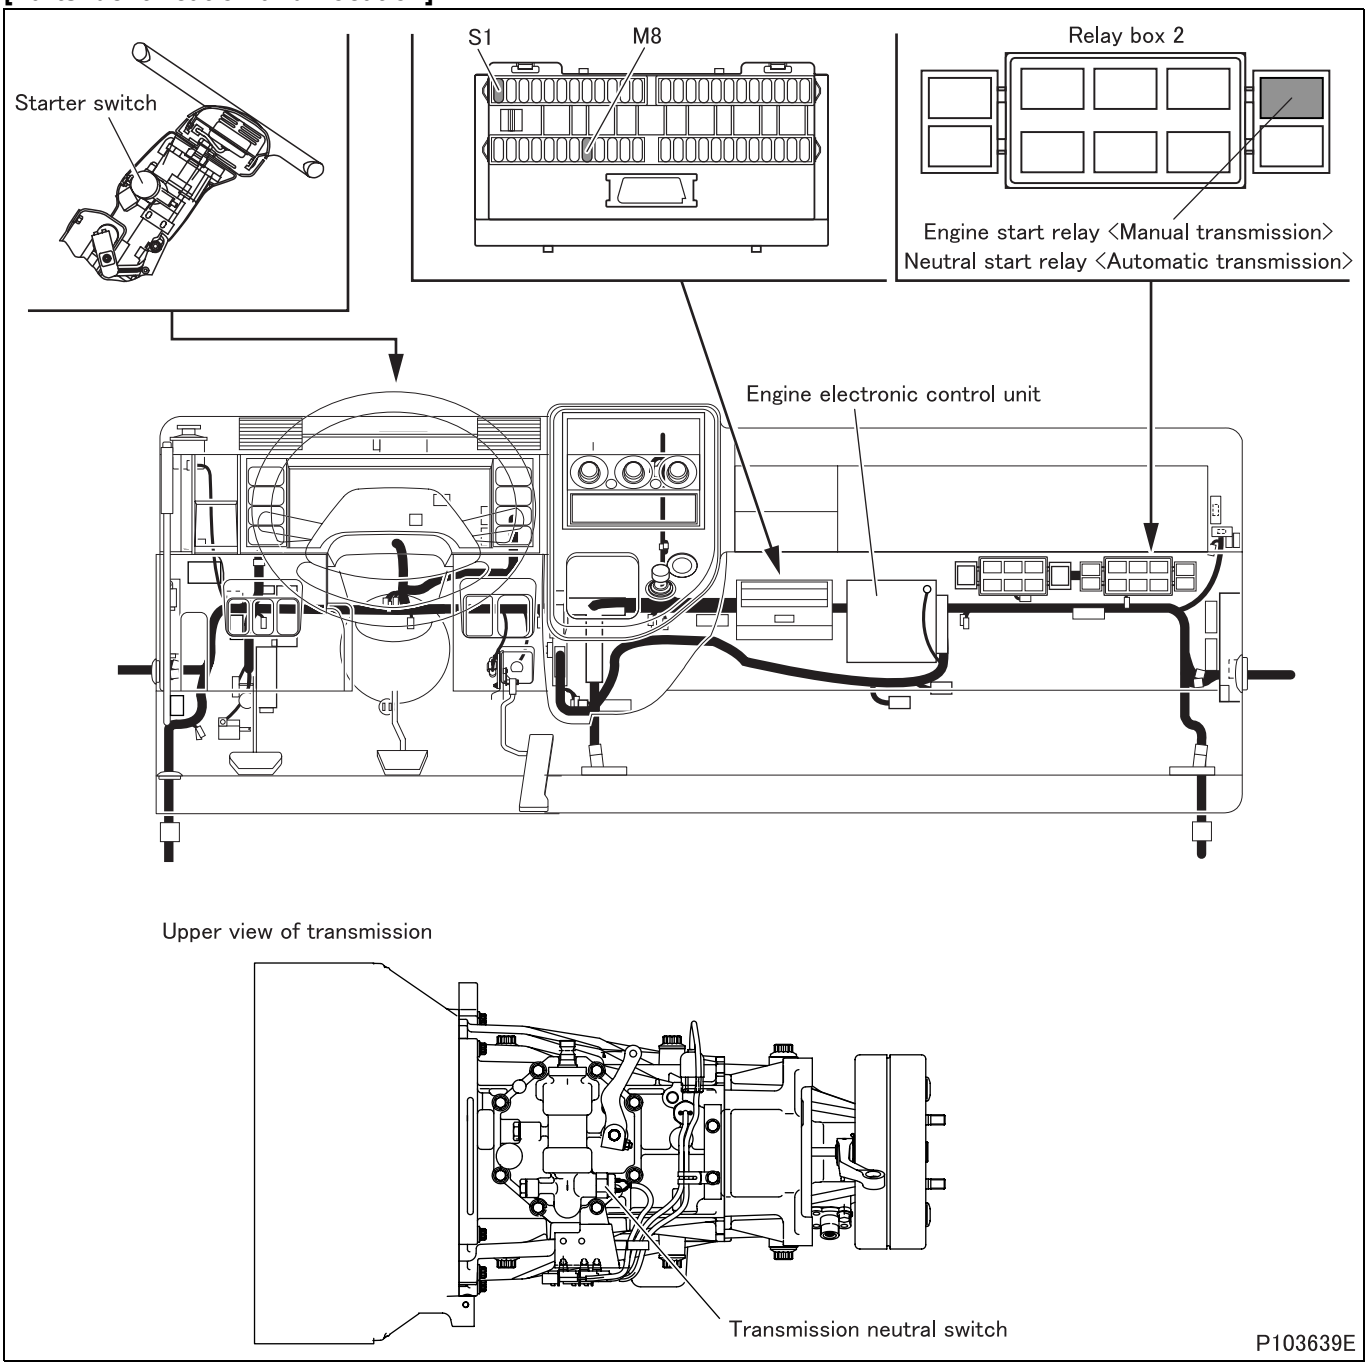
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and starter switch
- Malfunction of each connector
- Malfunction of starter switch
- Malfunction of engine start relay <Manual transmission>
- Malfunction of neutral start relay <Automatic transmission>
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<General Scanning Tool used>** • Measure value of voltage between electronic control unit connector (GE58A) terminal No. 27 (+) and ground (–). **<Multi-Use Tester used>** • Measure item No. A0 “Starter SW (S)” of Service Data.
	Inspection condition		• Transmission: neutral or P range • Starter switch: start
	Requirements		**<General Scanning Tool used>** • Same as battery voltage. **<Multi-Use Tester used>** • Displayed as “ON”.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

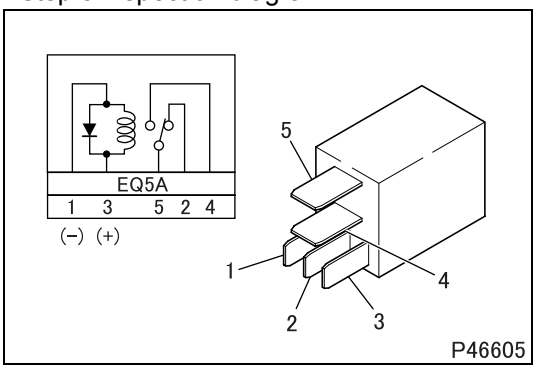
Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of relay connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and ground (–).
	Inspection condition		• Transmission: neutral or P range • Starter switch: start
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Go to step 4.

Step 4	Inspection items		Inspection of relay connector (signal)
	Maintenance item		Check transmission signal between connector terminal No. 1 (+) and ground (–).
	Inspection condition		Transmission: neutral or P range
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	• Replacement of transmission neutral switch <Manual transmission> • Replacement of inhibitor switch <Automatic transmission>

Step 5	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of relay

<Step 5 inspection diagram>

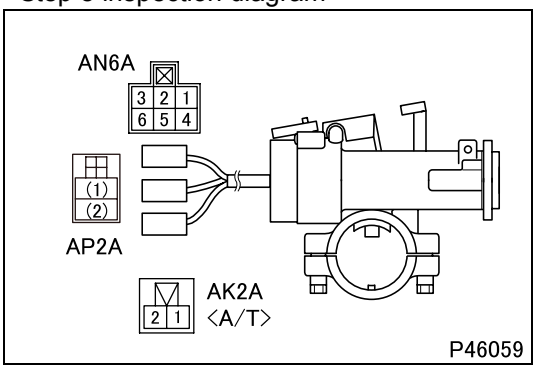


Step 6	Inspection items		Inspection of harness between starter switch and relay
	Maintenance item		Check circuit between starter switch connector (AN6A) terminal No. 2 and relay connector terminal No. 5 and 3.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Go to step 7.

Step 7	Inspection items		Inspection of fuse (S1)
	Maintenance item		Check open-circuit of fuse (S1)
	Inspection condition		–
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of fuse

Step 8	Inspection items		Inspection of starter switch unit
	Maintenance item		Check continuity between connector terminals.
	Inspection condition		Check presence of continuity in each switch position.
	Requirements		• LOCK: There is no continuity. • ACC: There is continuity between [2] and (3) • ON: There is continuity between [1], [2], (3) and (4) • START: There is continuity between [1], [2], (2), (3) and (4) • Terminal No. with [ ] shows connector terminal of AP2A and Terminal No. with ( ) shows connector terminal of AN6A.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of starter switch

<Step 8 inspection diagram>



Step 9	Inspection items		Inspection of harness between electronic control unit and relay
	Maintenance item		Check circuit between electronic control unit connector (GE58A) terminal No. 27 and connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P253C/Flash code: 61
[Monitor]
Failure of auxiliary equipment sensor
[Fault (outline)]
Low signal range check
[Diagnosis check]
- Accelerator pedal position during cab back control is monitored through auxiliary equipment sensor for acceleration opening within specified value.

[Code generation condition]
- Voltage from auxiliary equipment sensor remains below 0.49 V for 1 second.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the power takeoff control is activated.

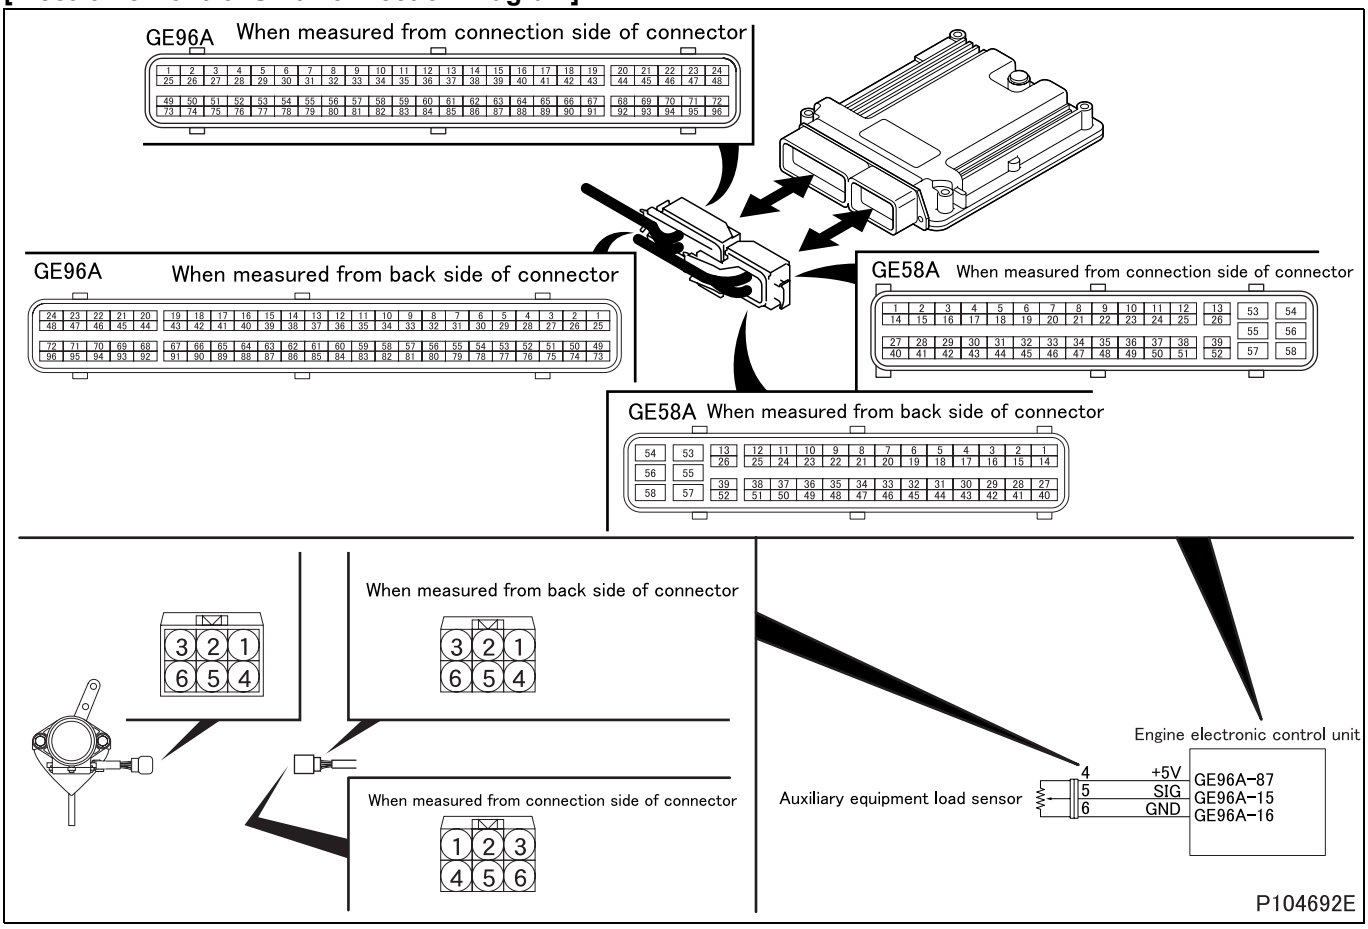
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Power take-off accelerator pedal position is fixed at backup value.

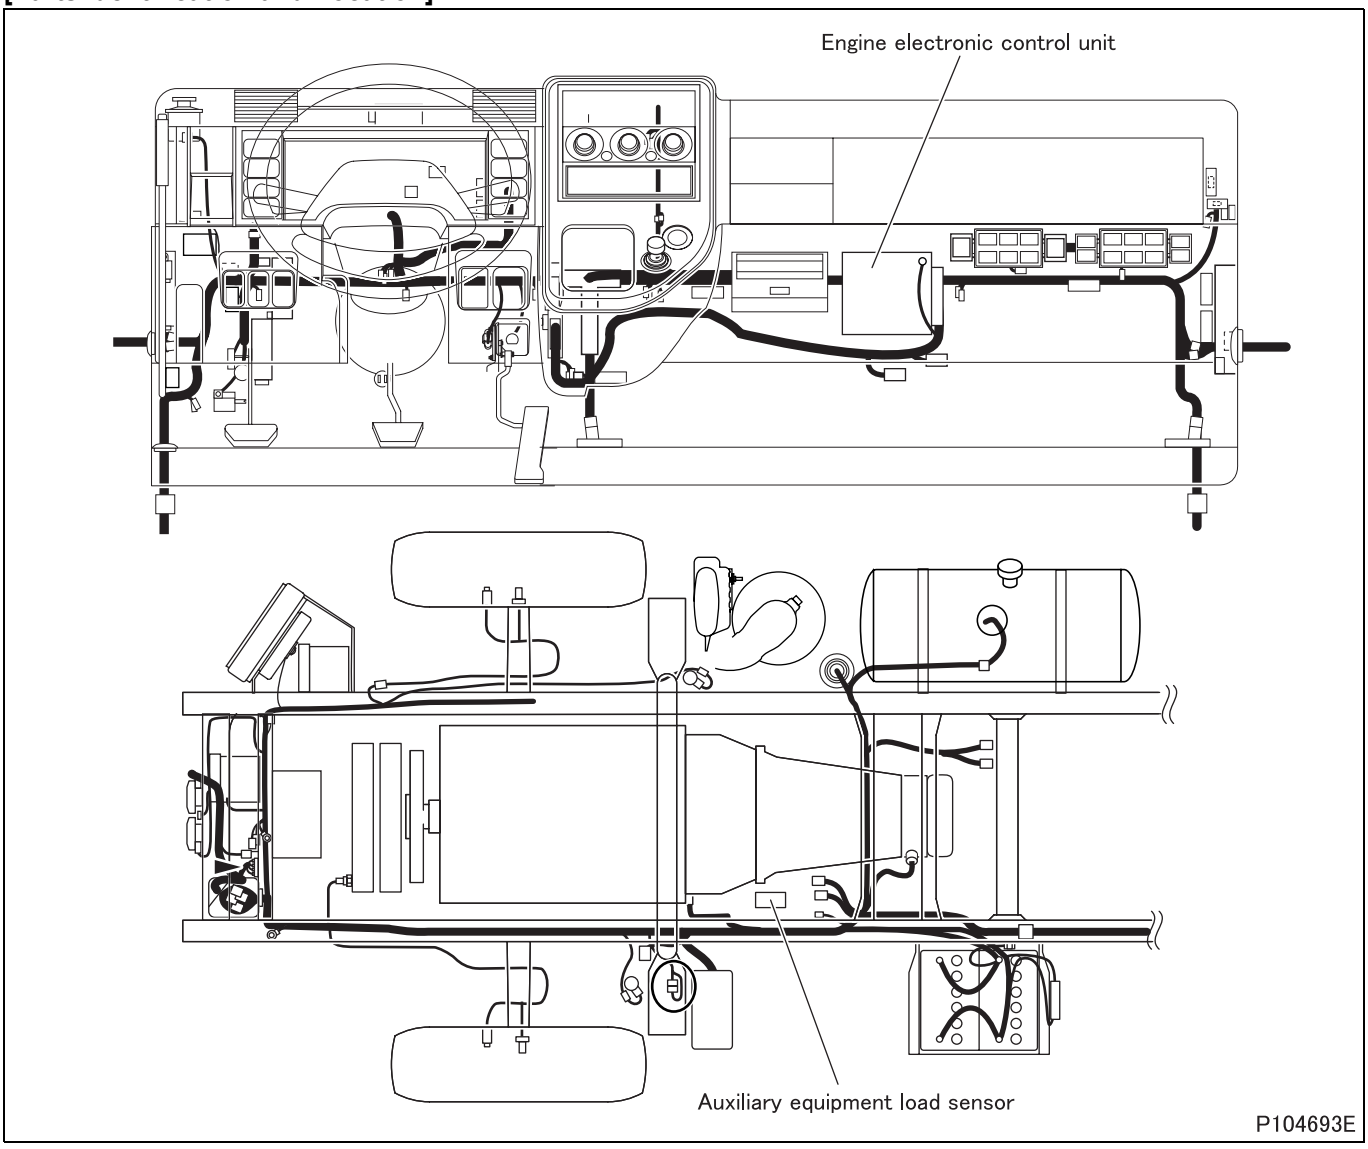
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and auxiliary equipment sensor
- Malfunction of each connector
- Malfunction of auxiliary equipment sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is ON position.
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 84 “PTO Accel Sensor Voltage” of Service Data.
	Inspection condition		–
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 15 (+) and 16 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 87 (+) and 16 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

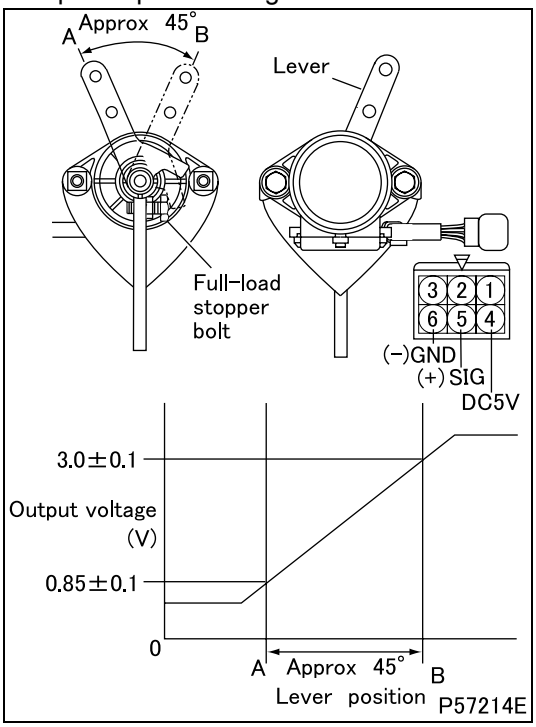
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 16 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of auxiliary equipment sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 5 (+) and 6 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No.4 (+) and 6 (–).
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 6 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 87 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 6 and electronic control unit connector (GE96A) terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 5 and electronic control unit connector (GE96A) terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 84 “PTO Accel Sensor Voltage” of Service Data.
	Inspection condition		–
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P253D/Flash code: 61
[Monitor]
Failure of auxiliary equipment sensor
[Fault (outline)]
High signal range check
[Diagnosis check]
- Accelerator pedal position during cab back control is monitored through auxiliary equipment sensor for acceleration opening within specified value.

[Code generation condition]
- Voltage from auxiliary equipment sensor remains over 3.49 V for 1 second.
  (Diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is performed each time when the power takeoff control is activated.

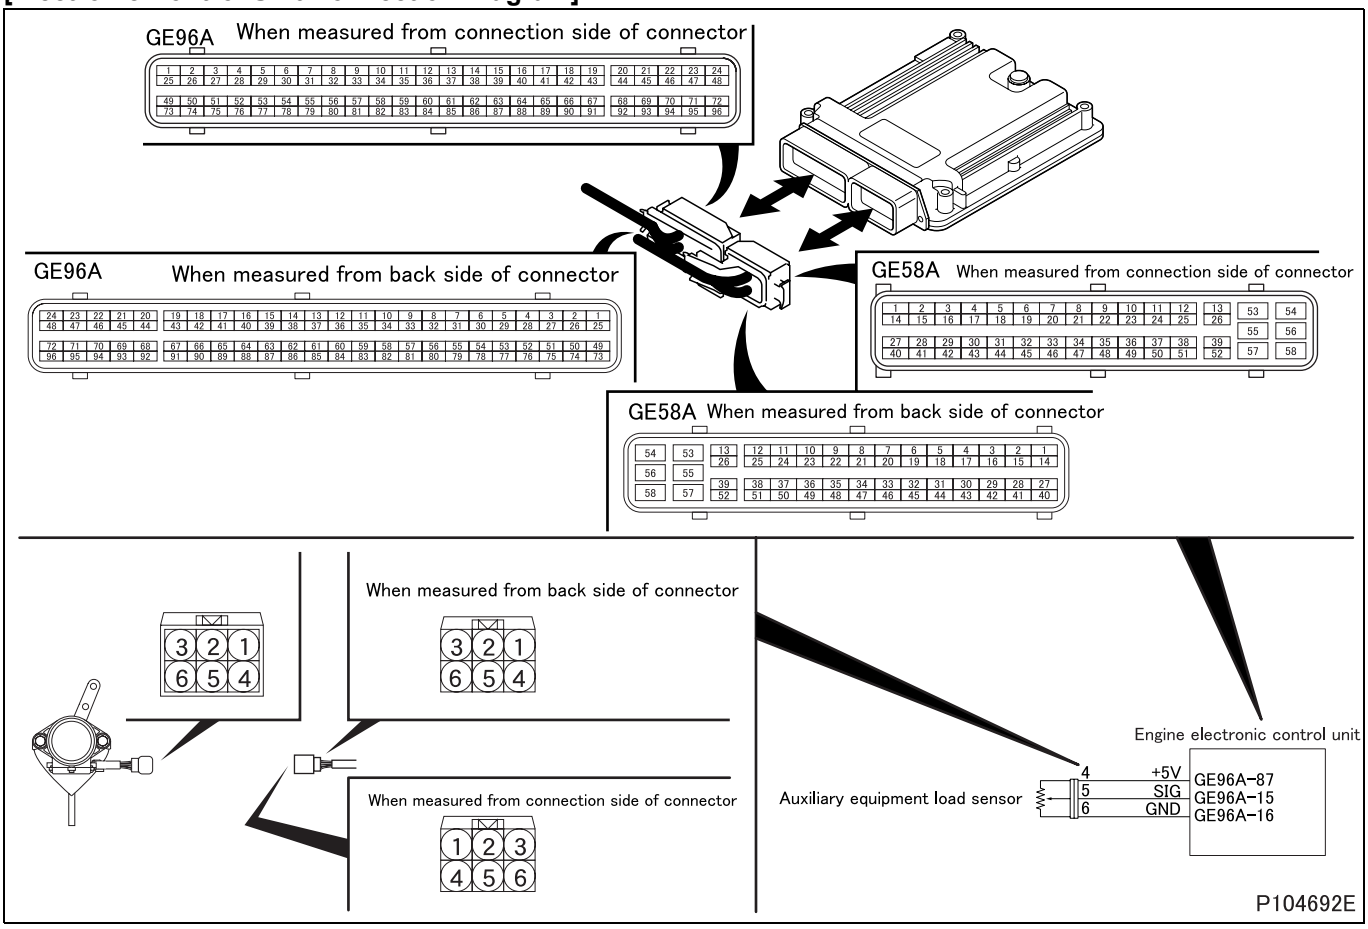
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Power take-off accelerator pedal position is fixed at backup value.

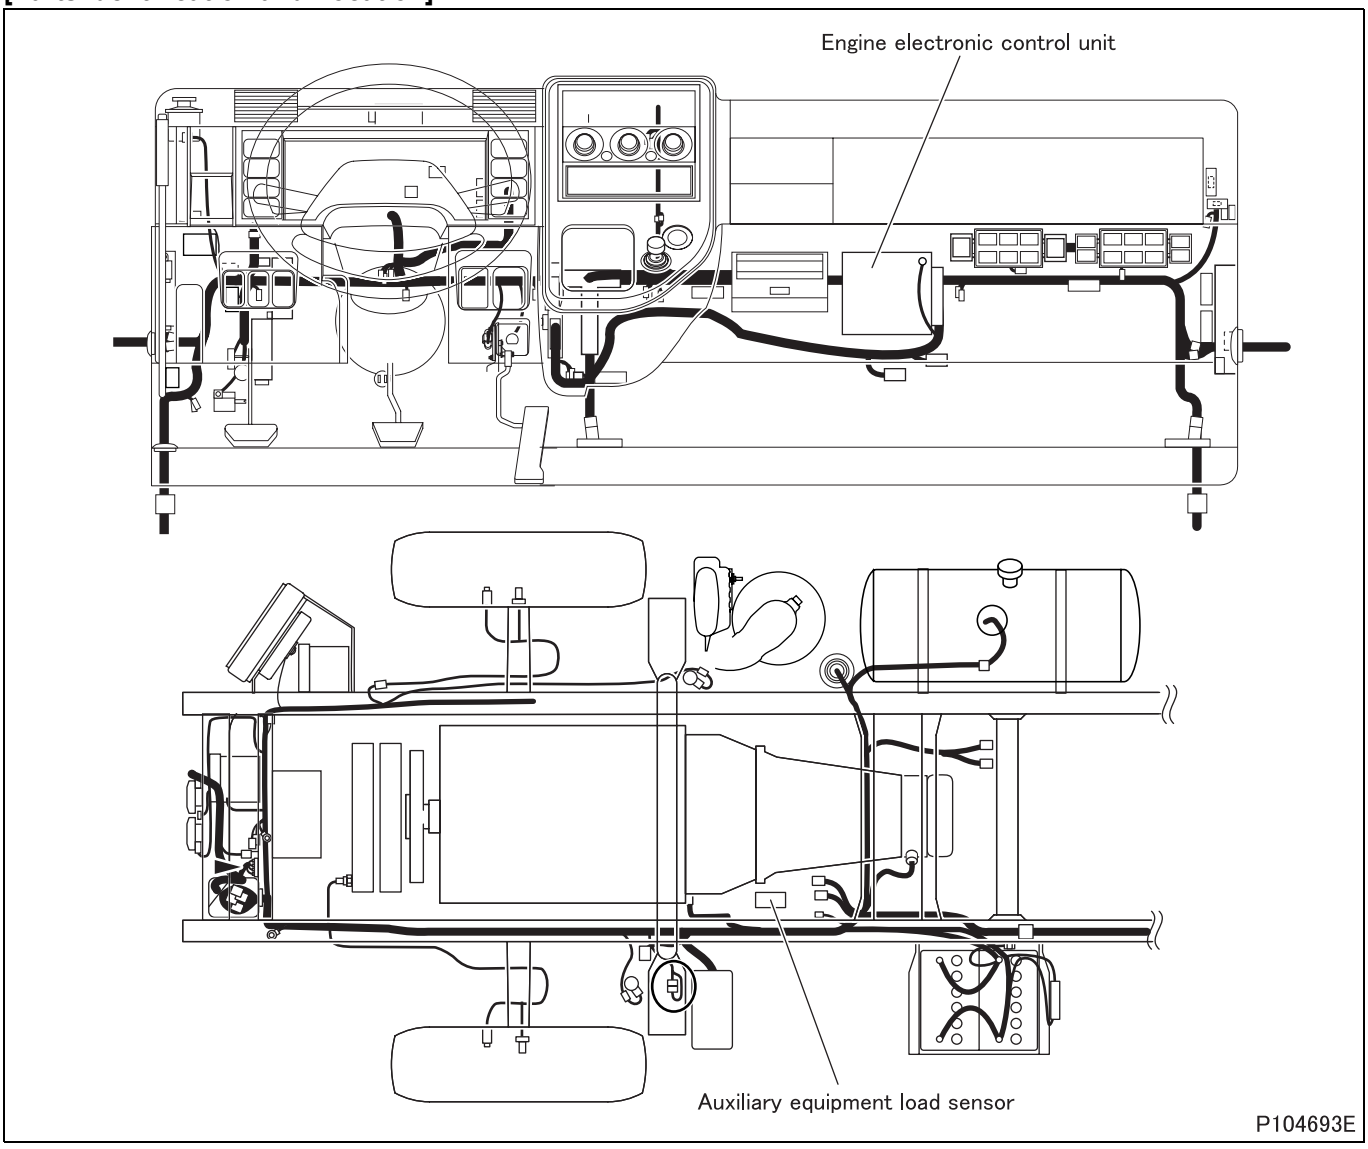
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and auxiliary equipment sensor
- Malfunction of each connector
- Malfunction of auxiliary equipment sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is ON position.
  (Warning lamp and diagnosis code is cleared simultaneously with recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 84 “PTO Accel Sensor Voltage” of Service Data.
	Inspection condition		–
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 15 (+) and 16 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Go to step 3.

Step 3	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 87 (+) and 16 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Go to step 5.

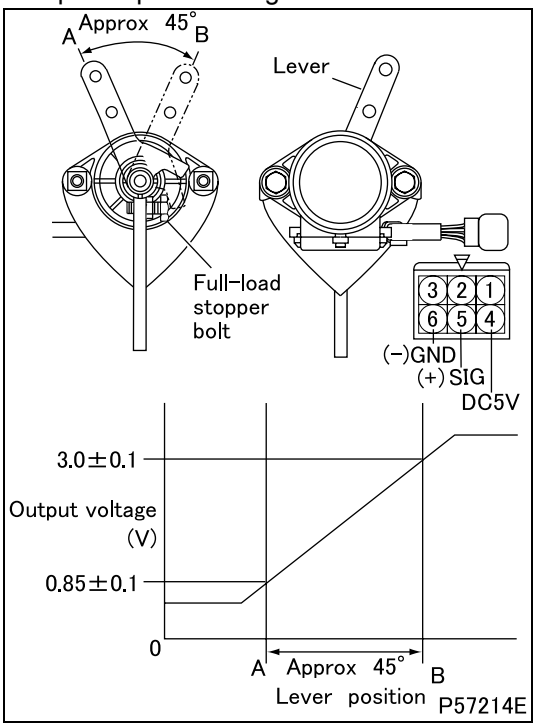
Step 4	Inspection items		Inspection by electronic control unit connector (ground)
	Maintenance item		Measure value of voltage between connector (GE96A) terminal No. 16 (+) and (GE58A) terminal No. 53 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 5.

Step 5	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify connector.

Step 6	Inspection items		Inspection of sensor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify connector.

Step 7	Inspection items		Inspection of auxiliary equipment sensor unit
	Maintenance item		Measure value of voltage between connector terminal No. 5 (+) and 6 (–).
	Inspection condition		Apply voltage DC 5 V across connector terminals No. 4 (+) and 6 (–).
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of sensor

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection by sensor connector
	Maintenance item		Measure value of voltage between connector terminal No. 4 (+) and 6 (–).
	Inspection condition		• Starter switch: ON (Do not start engine) • Measure from back side of harness connector with each device connected to harness.
	Requirements		5 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Go to step 9.

Step 9	Inspection items		Inspection of harness between electronic control unit and sensor (power supply)
	Maintenance item		Check circuit between electronic control unit connector (GE96A) terminal No. 87 and sensor connector terminal No. 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 10	Inspection items		Inspection of harness between electronic control unit and sensor (ground)
	Maintenance item		Check circuit between sensor connector terminal No. 6 and electronic control unit connector (GE96A) terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between electronic control unit and sensor (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 5 and electronic control unit connector (GE96A) terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection by control data
	Maintenance item		Measurement of item No. 84 “PTO Accel Sensor Voltage” of Service Data.
	Inspection condition		–
	Requirements		• Idling position: 0.85 ± 0.1 V • Full-load position: 3.0 ± 0.1 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P2563/Flash code: 51
[Monitor]
Turbocharger actuator system
[Fault (outline)]
- Low signal range check
- High signal range check

[Diagnosis check]
- Turbocharger electronic drive unit monitors turbocharger actuator internal circuit for fault (through throttle position sensor).

[Code generation condition]
- Position sensor output voltage remains 0 V (low pulse) or 8 to 11 V (high pulse) for 2 seconds.
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

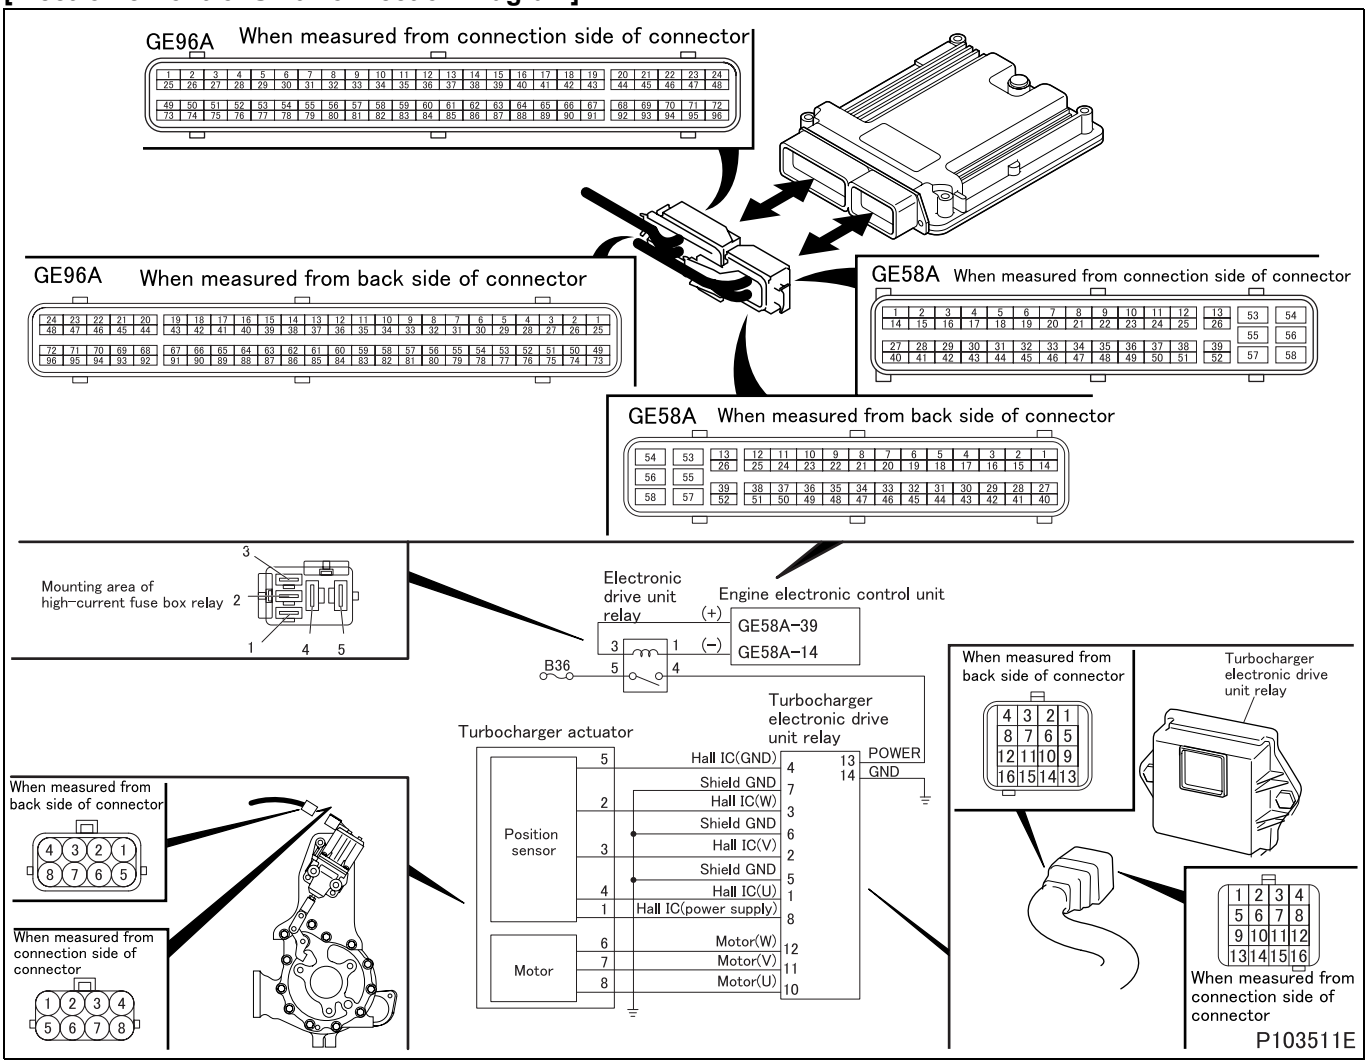
[Diagnostic requirement]
- Controller area network communication in order

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Diesel particulate filter regeneration is stopped.
- Related fault check is stopped.

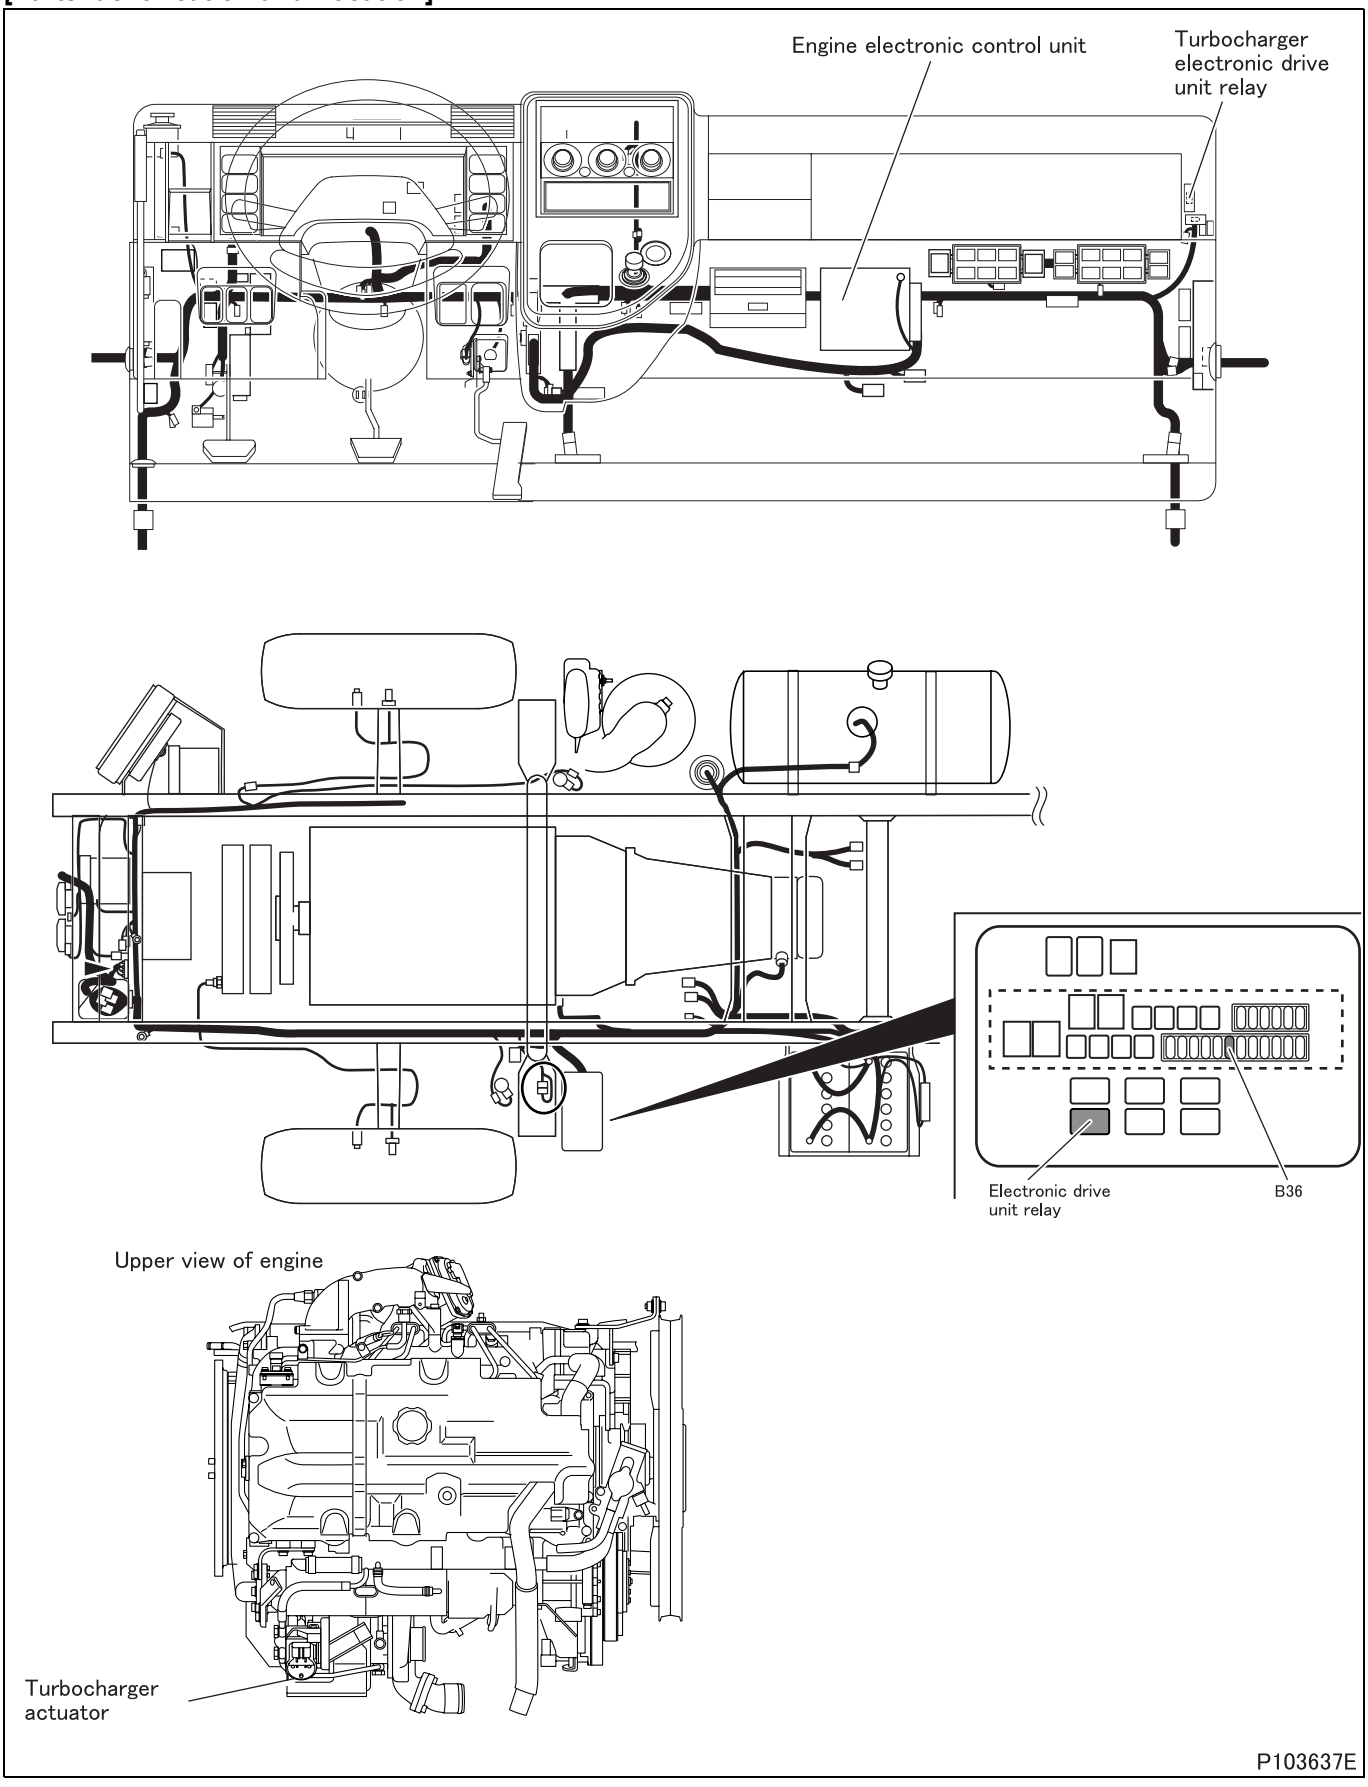
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic drive unit and turbocharger actuator
- Malfunction of each connector
- Malfunction of turbocharger motor (built in turbocharger actuator)
- Malfunction of turbocharger position sensor (built in turbocharger actuator)
- Malfunction of electronic drive unit
- Malfunction of electronic drive unit relay

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0685 “EDU Relay (Open)” • P0686 “EDU Relay (Low)” • P0687 “EDU Relay (High)” • P0688 “EDU Relay (Over Load)”
	Inspection condition		• Starter switch: ON • Engine: stopped
	Requirements		Codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Inspect diagnosis code that is occurring.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of electronic drive unit connector (power supply)
	Maintenance item		Measure value of voltage between connector terminal No. 13 (+) and 14 (–).
	Inspection condition		• Starter switch: ON • Engine: stopped • Disconnect connector and measure from harness side. • Perform actuator test item No. AF “EDU Relay”.
	Requirements		Same as battery voltage.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 4.

Step 4	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of harness between fuse and relay
	Maintenance item		Check circuit between fuse No. B36 and relay connector terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and electronic drive unit
	Maintenance item		Check circuit between relay connector terminal No. 4 and electronic drive unit connector terminal No. 13.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	After replacement of electronic drive unit relay, go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between electronic drive unit and ground
	Maintenance item		Check circuit between electronic drive unit connector terminal No. 14 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic drive unit
		NO	Modify harness.

[Fault code]
Diagnosis code: P2670/Flash code: 36
[Monitor]
Abnormality of common rail pressure (comparison)
[Fault (outline)]
Short circuit ground
[Diagnosis check]
- MPROP (rail pressure control valve) power of engine electronic control unit is monitored for fault.

[Code generation condition]
- Power OFF (shorted to ground) remains as detected for 1 second.
  (Warning lamp is lit and diagnosis code is displayed on first establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Vapor smoke emission control during long-time idling is stopped.
- Diesel particulate filter regeneration is stopped.

[Probable cause of trouble]
- Malfunction of supply pump
- Malfunction of pressure limiter
- Airtight malfunction of injector
- Plugged fuel system

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared simultaneously with recovery.)

[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		Check if following diagnosis codes occur simultaneously. • P0093 “CRS (Fuel Leak)” • P0148 “CRS (Fuel Delivery)” • P0191 “CRS Pressure SNSR (Plausibility)” • P0192 “CRS Pressure SNSR (Low)” • P0193 “CRS Pressure SNSR (High)” • P0201 “Injector M/V-Cylinder 1 (Load)” • P0202 “Injector M/V-Cylinder 2 (Load)” • P0203 “Injector M/V-Cylinder 3 (Load)” • P0204 “Injector M/V-Cylinder 4 (Load)” • P0261 “Injector #1-A (Low)” • P0262 “Injector #1-A (High)” • P0263 “Injector #1-A (Plausibility)” • P0264 “Injector #2-A (Low)” • P0265 “Injector #2-A (High)” • P0266 “Injector #2-A (Plausibility)” • P0267 “Injector #3-A (Low)” • P0268 “Injector #3-A (High)” • P0269 “Injector #3-A (Plausibility)” • P0270 “Injector #4-A (Low)” • P0271 “Injector #4-A (High)” • P0272 “Injector #4-A (Plausibility)” • P0562 “Power Supply Voltage (Low)” • P0563 “Power Supply Voltage (High)” • P0607 “ECU System” • P060B “A/D Converter” • P061B “ECU Performance (Calc)” • P061C “ECU Performance (Ne)”
	Inspection condition		• Starter switch: ON • Do not start engine
	Requirements		No codes occur.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Inspect diagnosis code that is occurring.

Step 2	Inspection items		Checking of engine appearance
	Maintenance item		Check fuel system for fuel leak.
	Inspection condition		Starter switch: OFF
	Requirements		There is no fuel leak.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 6.

Step 3	Inspection items		Inspection of low pressure piping (fuel tank – supply pump)
	Maintenance item		Check suction pipe or hose for bend.
	Inspection condition		Starter switch: OFF
	Requirements		There is no bend on pipe or hose.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Correct and replace suction pipe or hose.

Step 4	Inspection items		Checking of air bleeding
	Maintenance item		Bleed air from fuel filter.
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by bleeding air.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 5.

Step 5	Inspection items		Inspection of low pressure piping
	Maintenance item		Fuel filter
	Inspection condition		Starter switch: OFF
	Requirements		Problem is solved by replacing fuel filter.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 6.

Step 6	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Replacement of supply pump

Step 7	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel pipe between supply pump and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of fuel pipe

Step 8	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Replacement of rail

Step 9	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from fuel injection pipes (four) between injector and rail.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of injection pipe

Step 10	Inspection items		Inspection by control data
	Maintenance item		Perform actuator test item No. B2 “Fuel Leak Check”.
	Inspection condition		Engine start: At idle
	Requirements		There is no leak from injectors (four).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Replacement of injector

Step 11	Inspection items		Inside inspection of combustion chamber
	Maintenance item		Check for fuel leak.
	Inspection condition		• After performing actuator test item No. B2 “Fuel Leak Check”, stop engine. • Remove glow plug, and check from glow plug mounting hole using bore scope.
	Requirements		Inside of combustion chamber is not wet.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Replacement of injector of object cylinder

Step 12	Inspection items		Replacement of rail (flow damper and pressure limiter abnormal)
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing rail.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Go to step 13.

Step 13	Inspection items		Replacement of supply pump
	Maintenance item		–
	Inspection condition		–
	Requirements		Problem is solved by replacing supply pump.
	Inspection result (Is the judging standard satisfied?)	YES	–
		NO	Replacement of injectors (four)

[Fault code]
Diagnosis code: U0001/Flash code: 73
[Monitor]
Abnormality in controller area network 2 communication
[Fault (outline)]
Message timeout
[Diagnosis check]
- Controller area network communication between engine electronic control unit and each electronic drive unit (turbocharger, exhaust gas recirculation, throttle) is monitored for abnormality.

[Code generation condition]
- No controller area network signal is sent from each electronic drive unit within specified time after engine start (time out).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

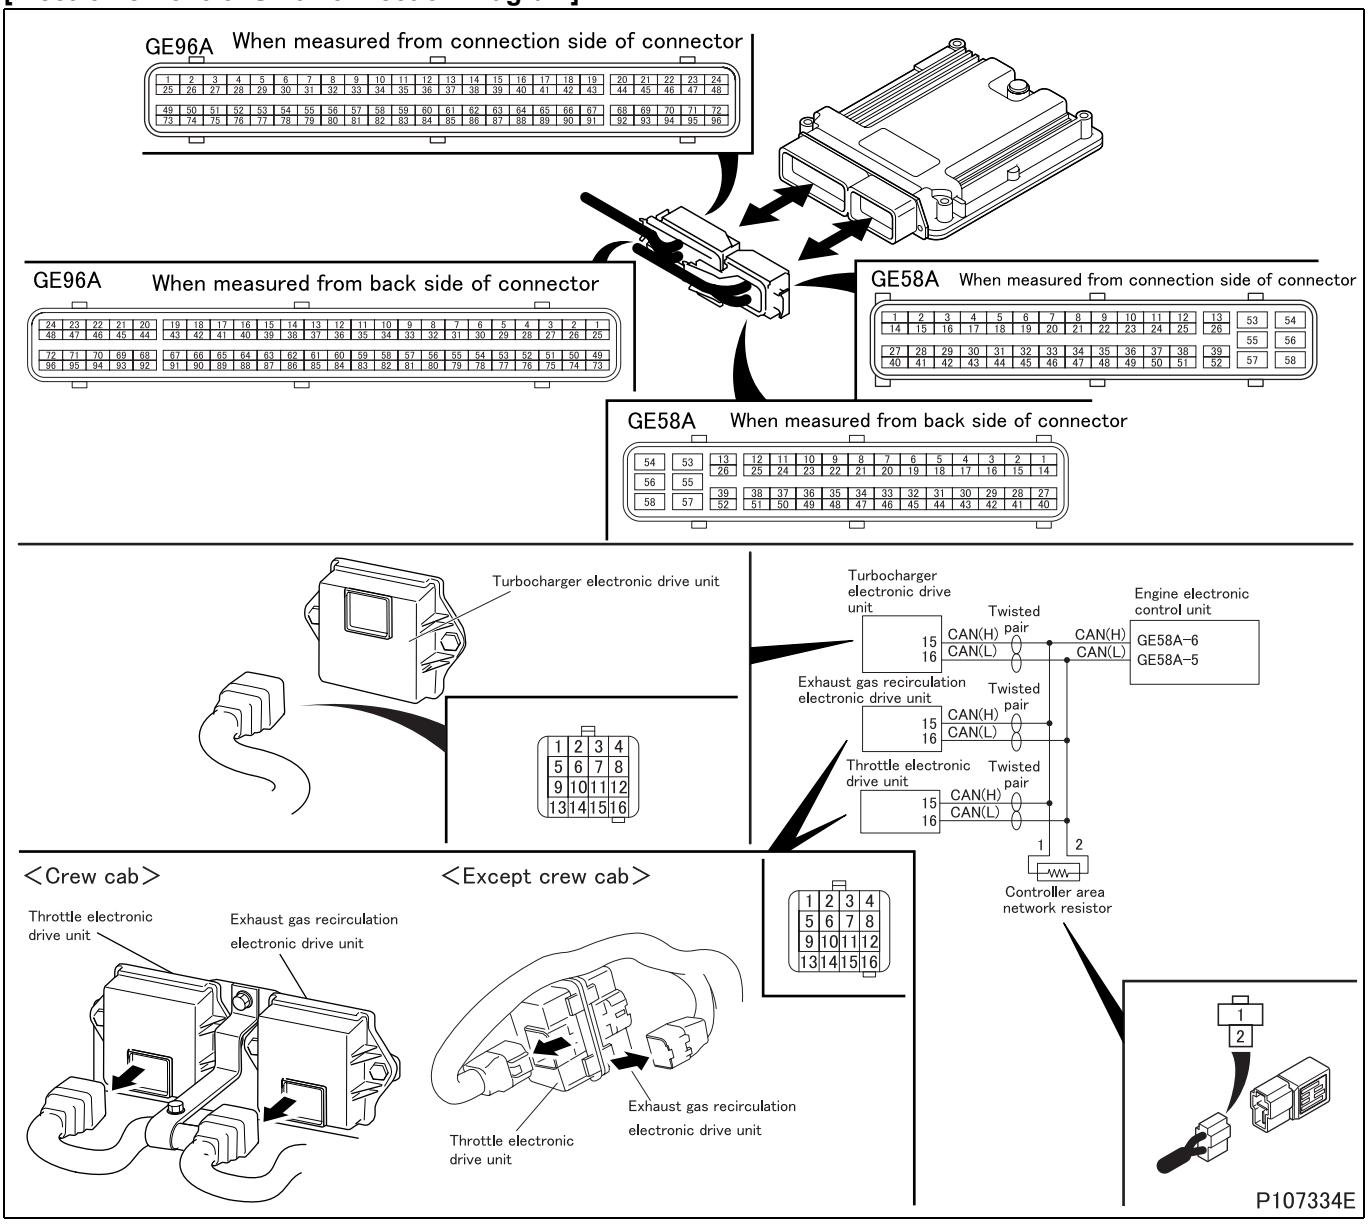
[Diagnostic requirement]
- When engine is in normal condition during period from after-run to start.

[Control effected by electronic control unit during fault]
- Related fault check is stopped.

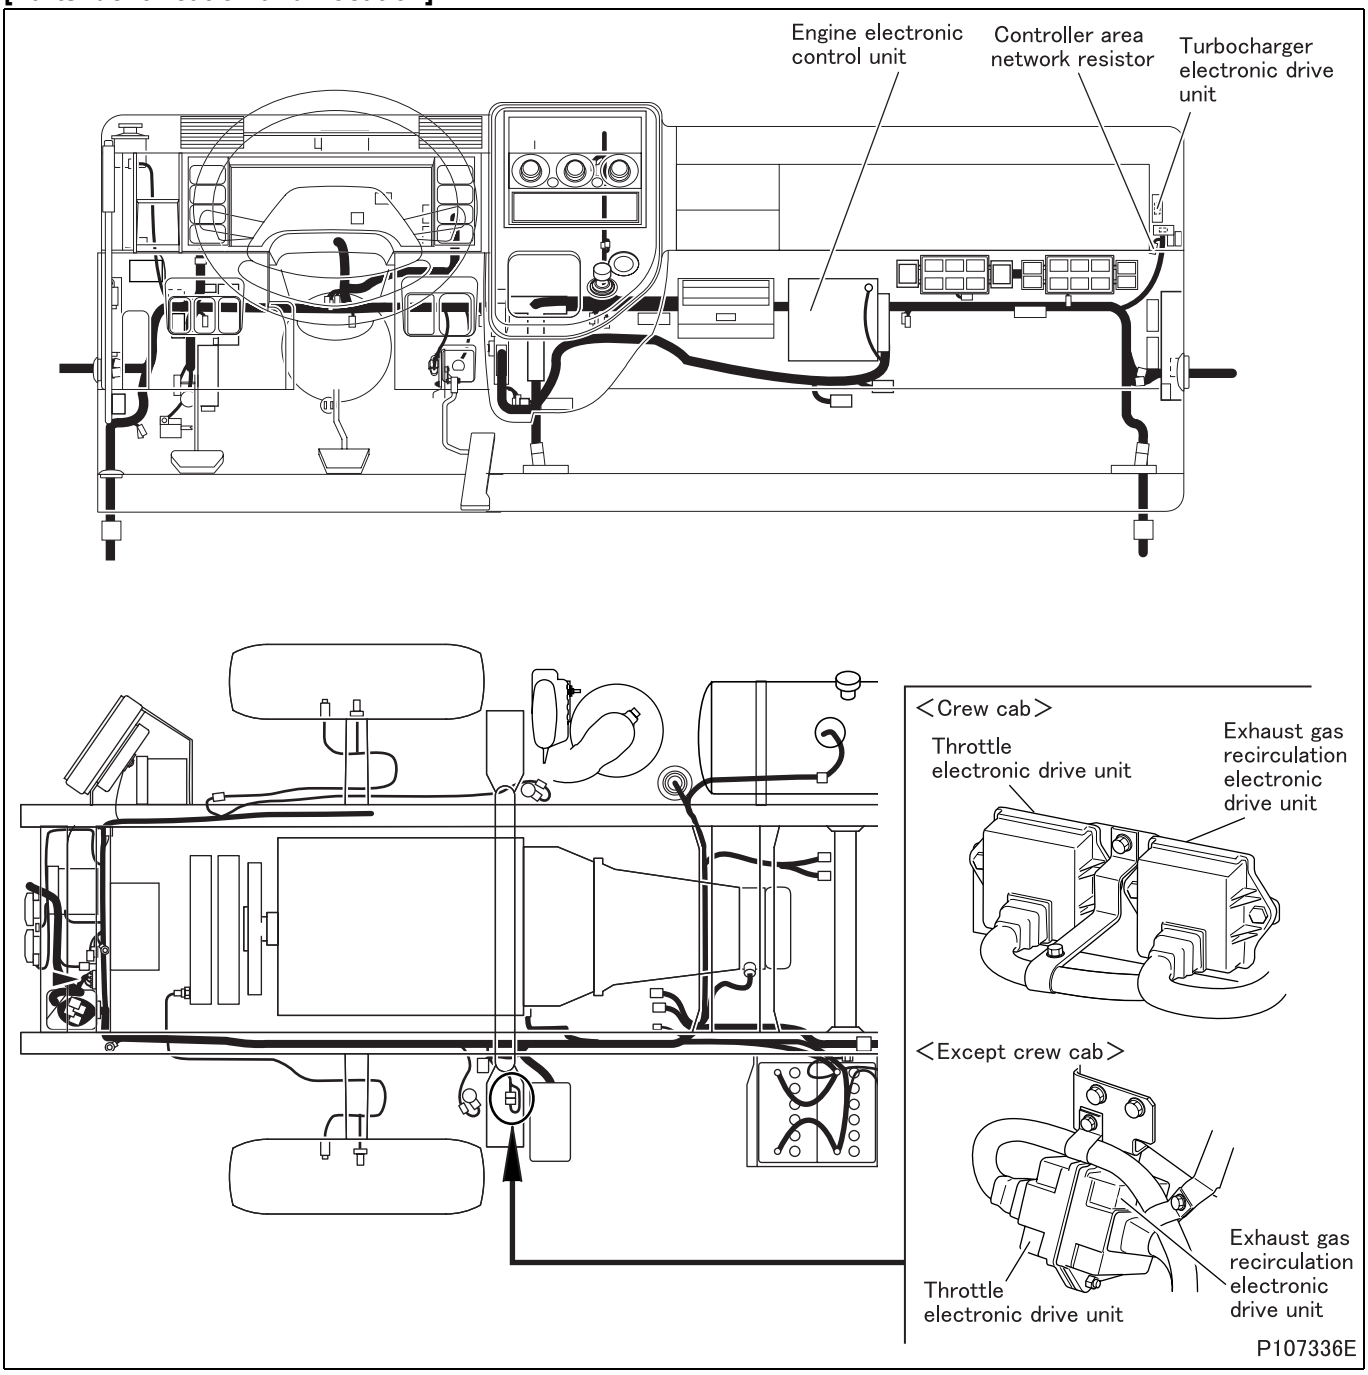
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and each electronic drive unit (turbocharger, exhaust gas recirculation, throttle)
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of each electronic drive unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

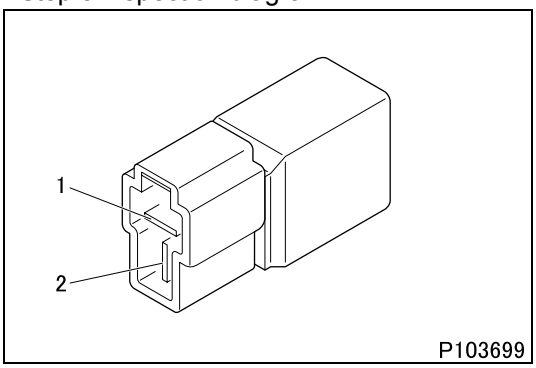
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 5 and 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 6
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between exhaust gas recirculation electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and exhaust gas recirculation electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between exhaust gas recirculation electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and exhaust gas recirculation electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of exhaust gas recirculation electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and throttle electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and throttle electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify connector.

Step 13	Inspection items		Inspection of harness between turbocharger electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and turbocharger electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Modify harness.

Step 14	Inspection items		Inspection of harness between turbocharger electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and turbocharger electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 15.
		NO	Modify harness.

Step 15	Inspection items		Inspection of turbocharger electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of one of electronic drive units.
		NO	Modify connector.

[Fault code]
Diagnosis code: U0002/Flash code: 73
[Monitor]
Abnormality in controller area network 2 communication
[Fault (outline)]
Controller area network B bus off
[Diagnosis check]
- Controller area network communication between engine electronic control unit and each electronic drive unit (turbocharger, exhaust gas recirculation, throttle) is monitored for abnormality.

[Code generation condition]
- No controller area network signal is received from each electronic drive unit after engine start (controller area network bus OFF).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

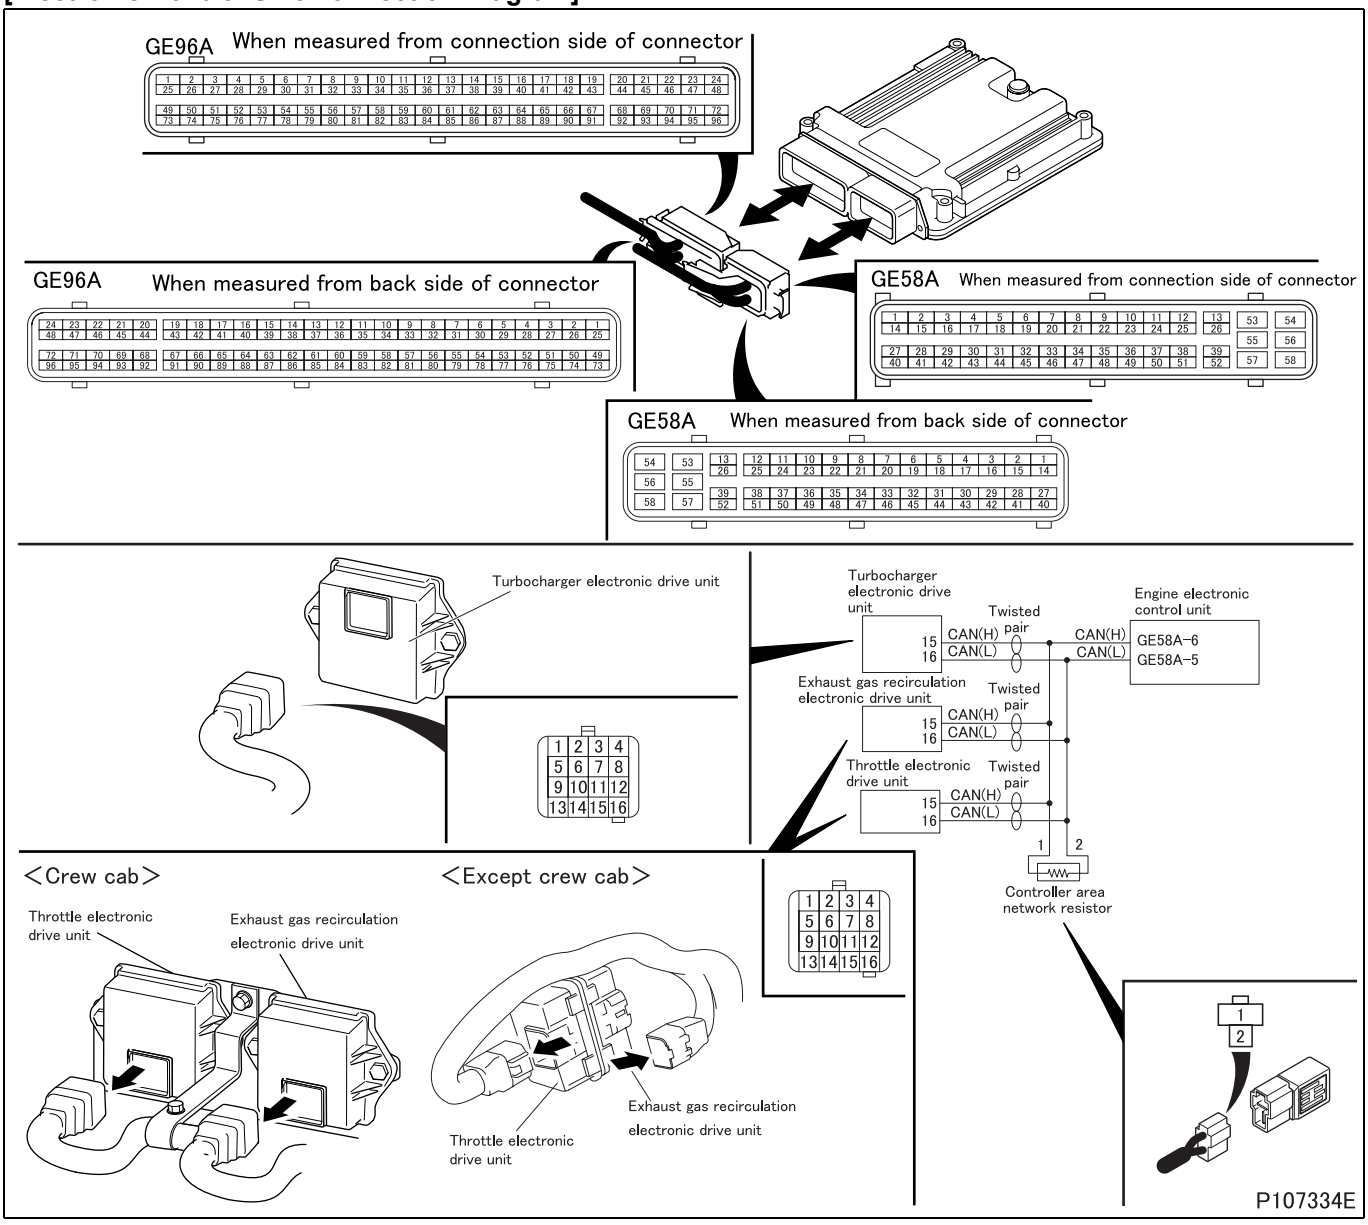
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Exhaust gas recirculation control is stopped.
- Throttle controls disabled
- Post injection is inhibited.
- Diesel particulate filter regeneration is stopped.
- Particulate matter deposit computation is stopped.
- Related fault check is stopped.

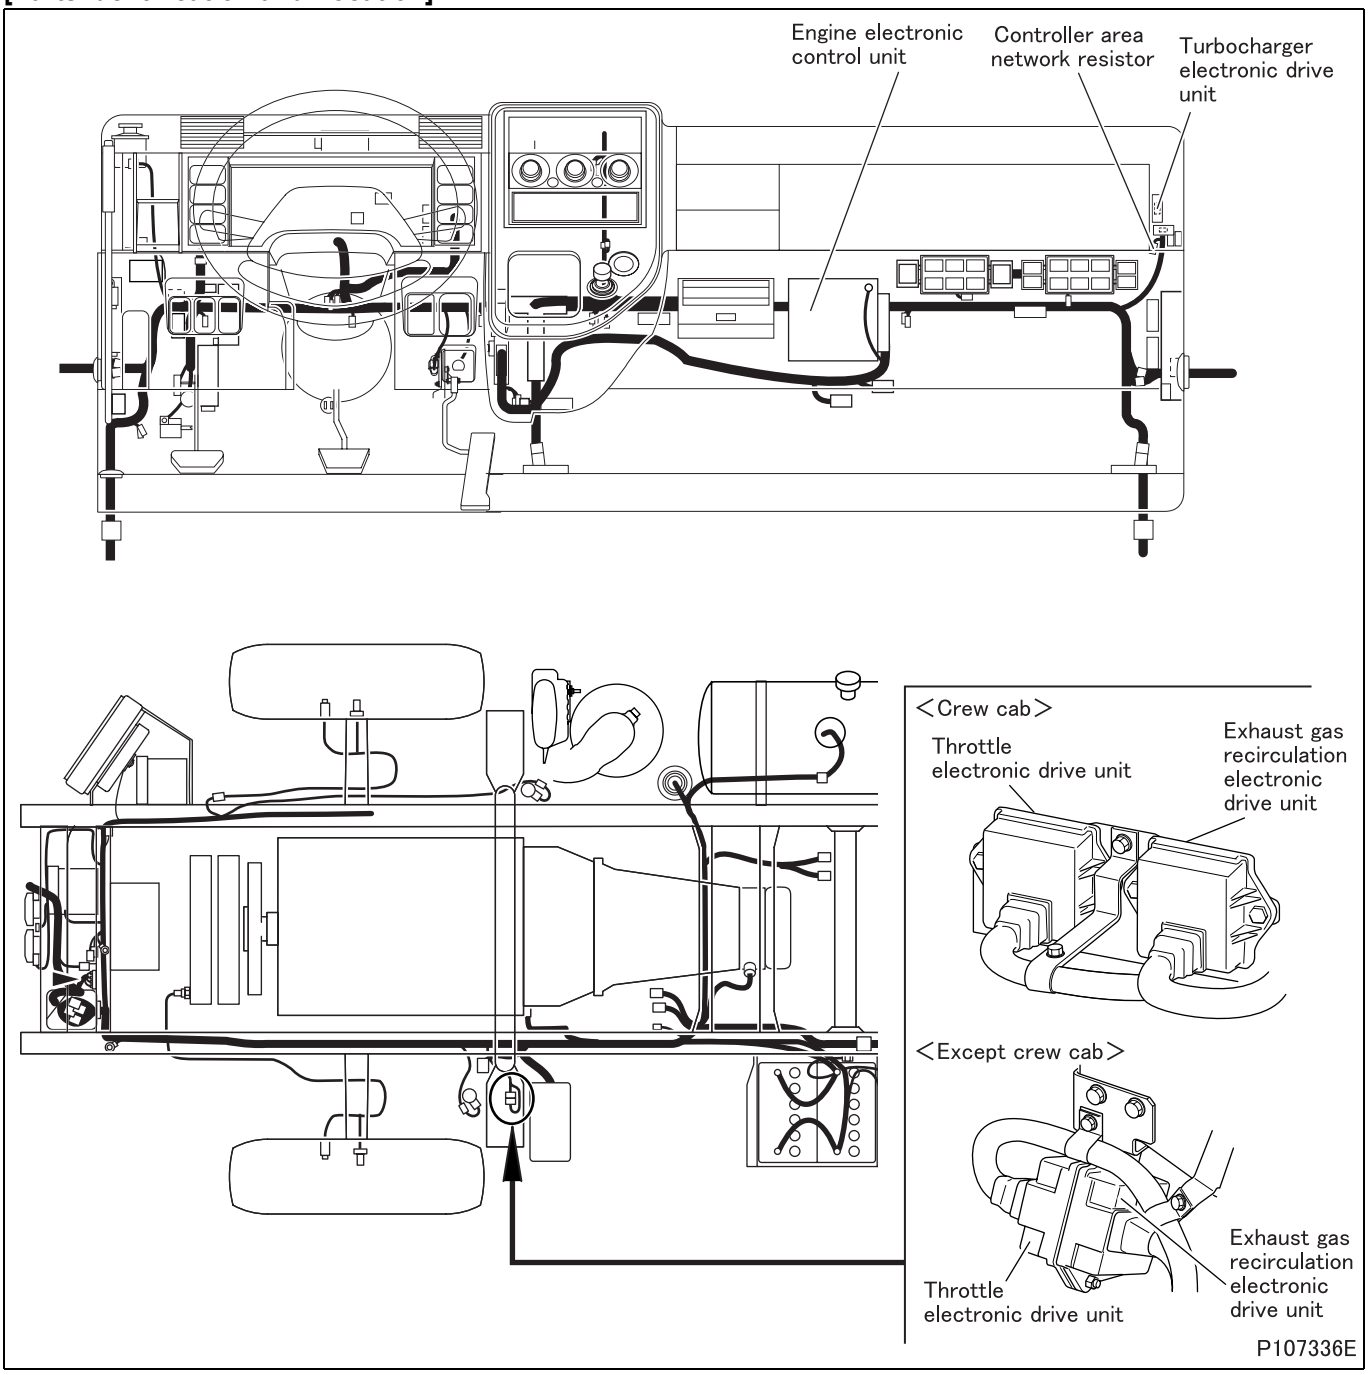
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and each electronic drive unit (turbocharger, exhaust gas recirculation, throttle)
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of each electronic drive unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

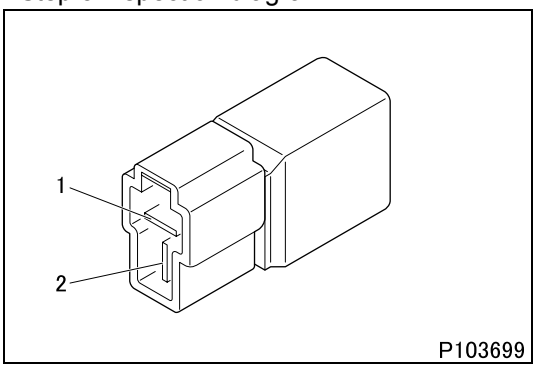
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 5 and 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 6.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 5.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between exhaust gas recirculation electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and exhaust gas recirculation electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between exhaust gas recirculation electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and exhaust gas recirculation electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of exhaust gas recirculation electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and throttle electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and throttle electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of throttle electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 13.
		NO	Modify connector.

Step 13	Inspection items		Inspection of harness between turbocharger electronic drive unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and turbocharger electronic drive unit connector terminal No. 15.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 14.
		NO	Modify harness.

Step 14	Inspection items		Inspection of harness between turbocharger electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and turbocharger electronic drive unit connector terminal No. 16.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 15.
		NO	Modify harness.

Step 15	Inspection items		Inspection of turbocharger electronic drive unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of one of electronic drive units.
		NO	Modify connector.

[Fault code]
Diagnosis code: U0028/Flash code: 72
[Monitor]
Abnormality in controller area network 1 communication
[Fault (outline)]
Message timeout
[Diagnosis check]
- Controller area network communication between engine electronic control unit and each electronic control unit (automatic transmission, multifunction vehicle control unit) is monitored for abnormality.

[Code generation condition]
- No controller area network signal is sent from each electronic control unit within specified time after engine start (time out).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

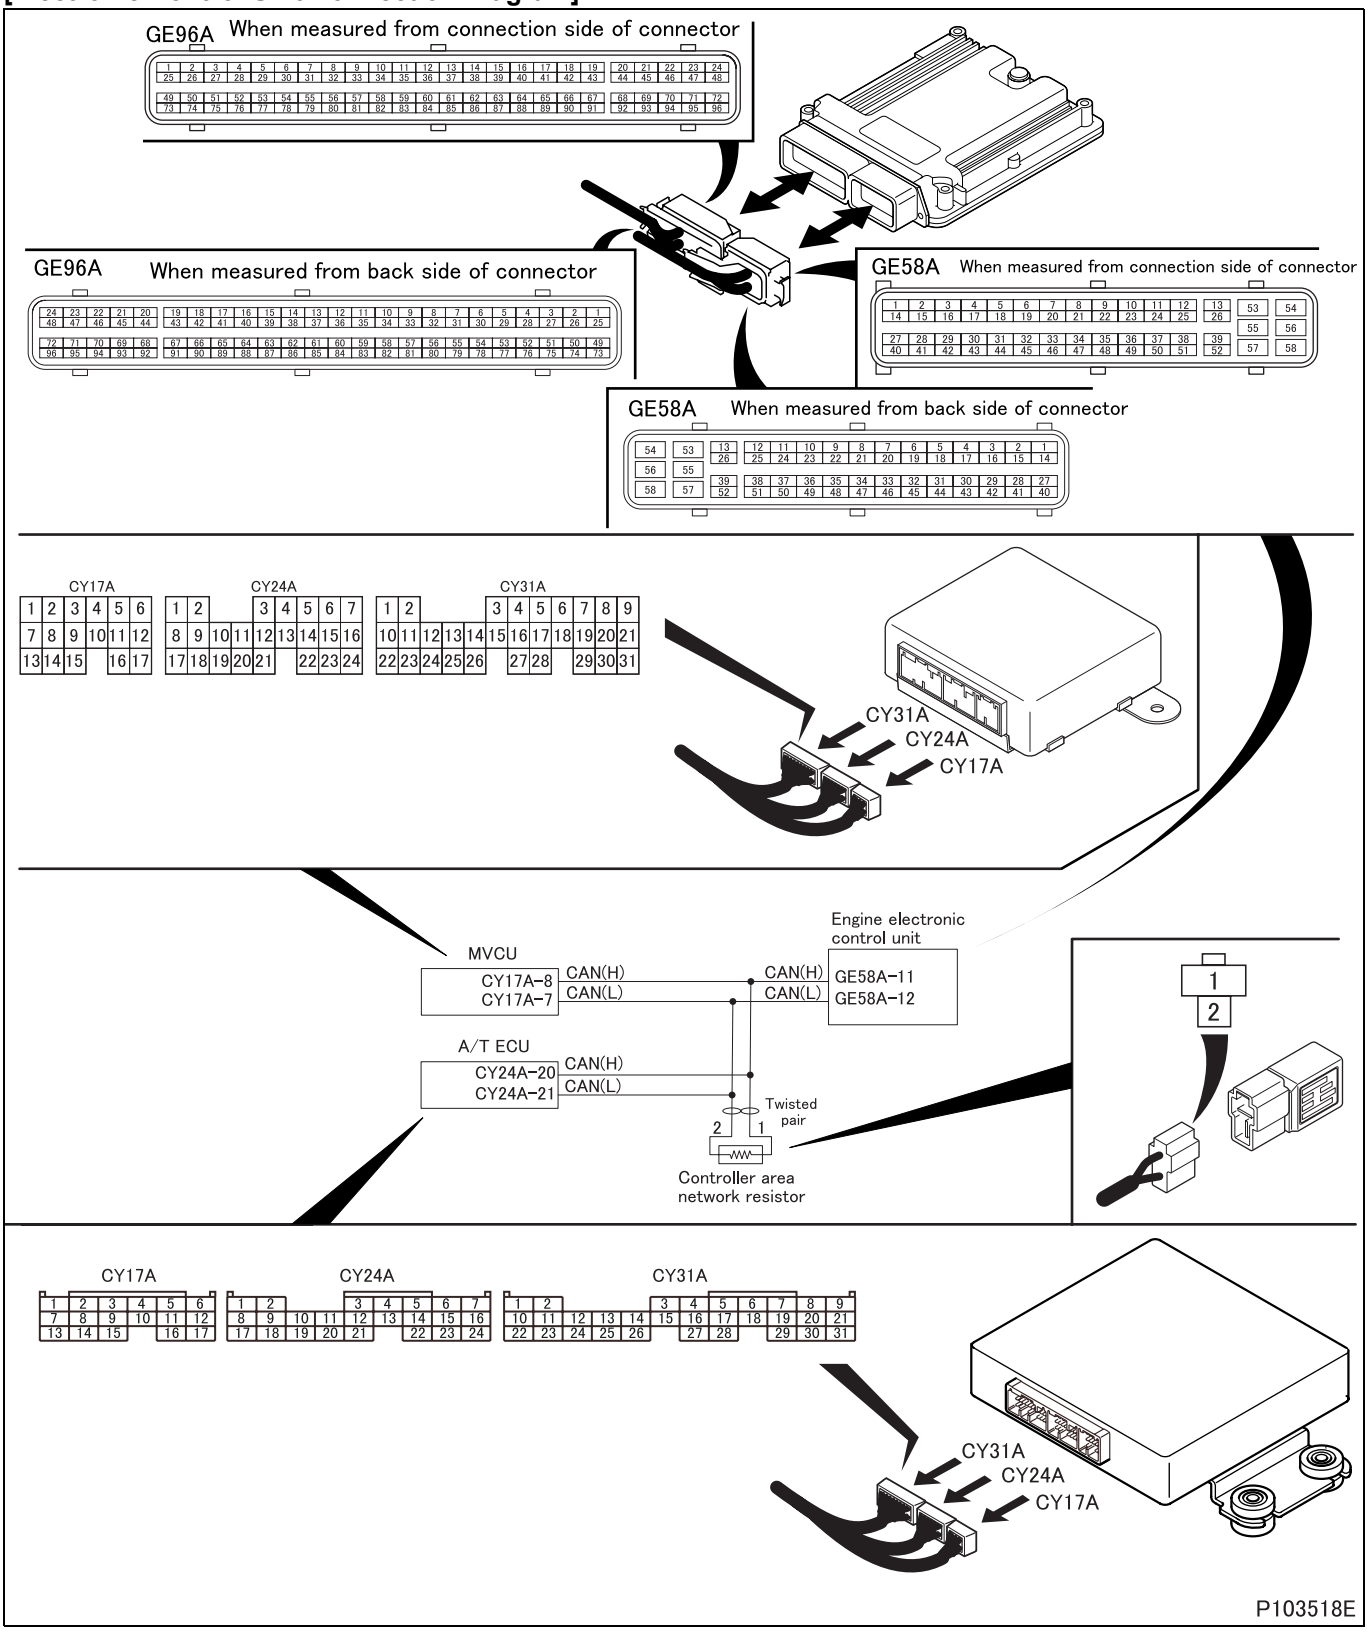
[Diagnostic requirement]
- When engine is in normal condition during period from after-run to start.

[Control effected by electronic control unit during fault]
- Effects no special control.

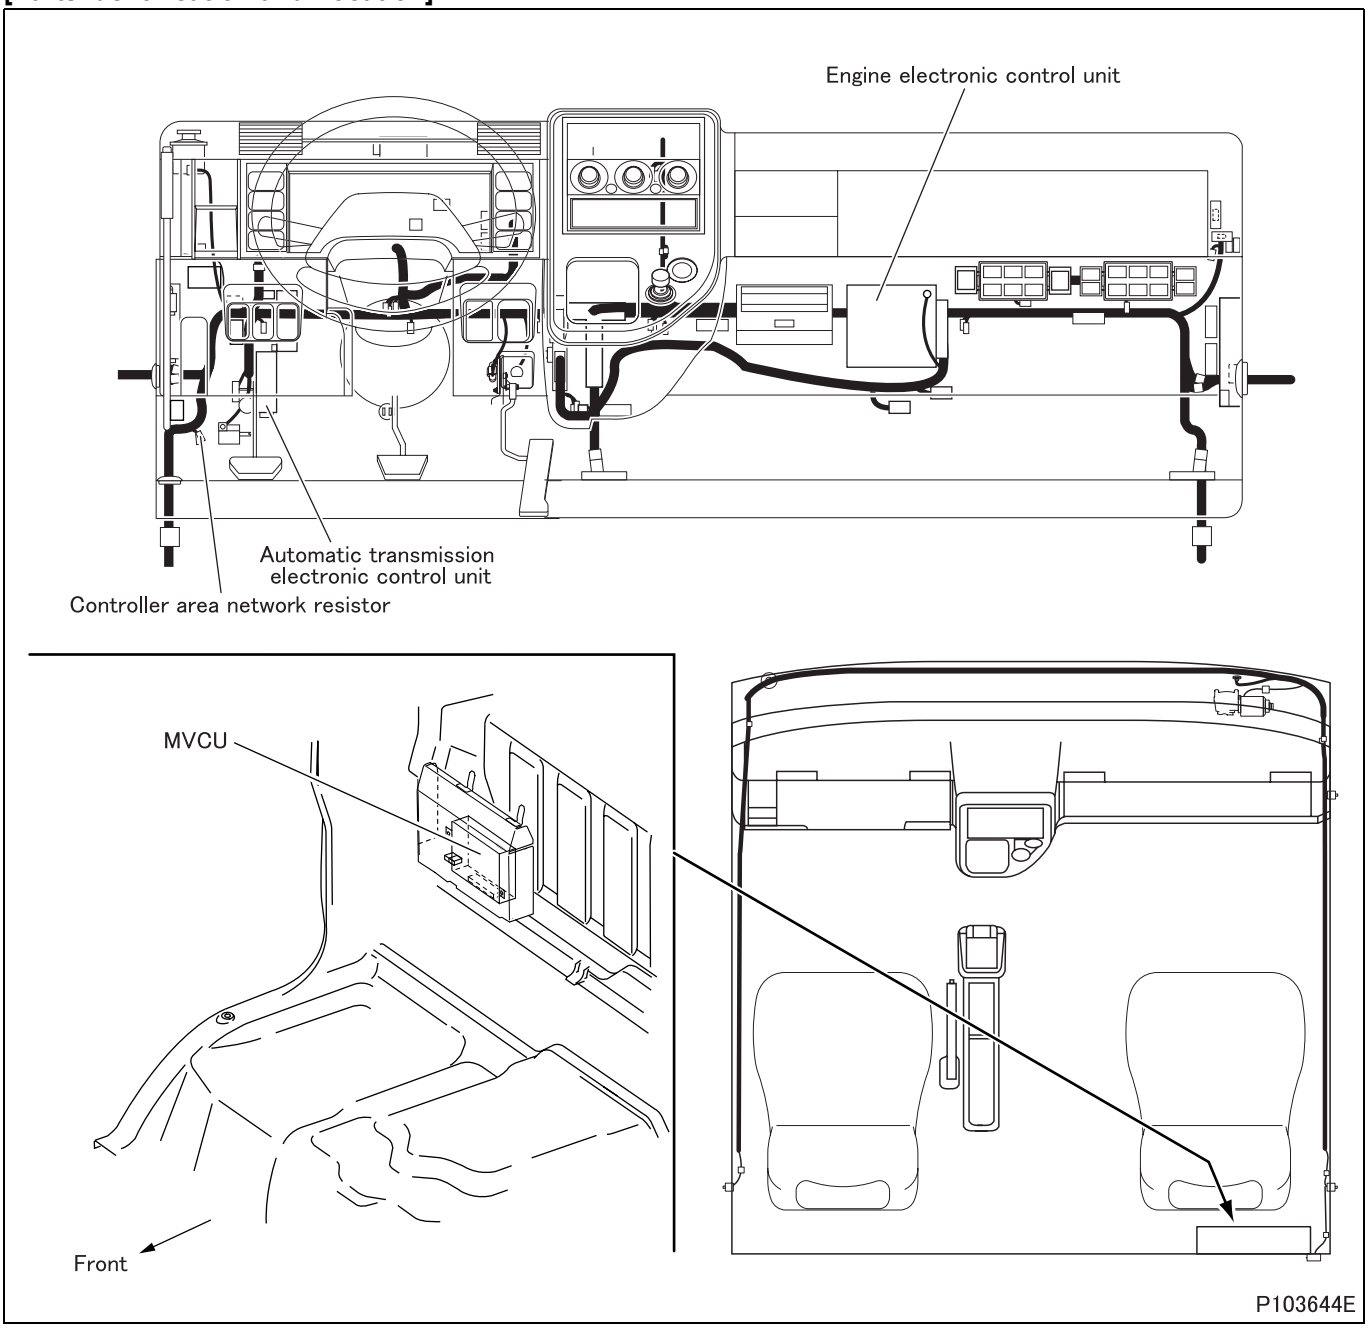
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and each electronic control unit (automatic transmission, multifunction vehicle control unit)
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of each electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

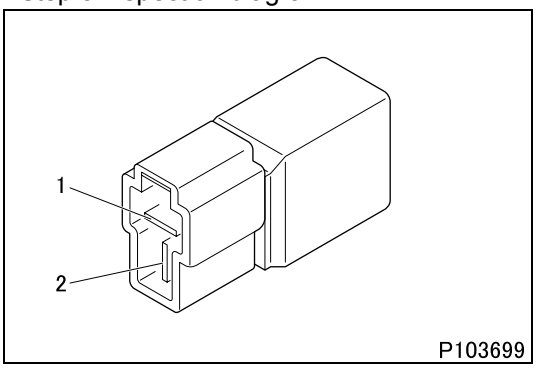
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 11 and 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and multifunction vehicle control unit connector (CY17A) terminal No. 8.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and multifunction vehicle control unit connector (CY17A) terminal No. 7.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of multifunction vehicle control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between automatic transmission electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and automatic transmission electronic control unit connector (CY24A) terminal No. 20.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and automatic transmission electronic control unit connector (CY24A) terminal No. 21.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of automatic transmission electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of either multifunction vehicle control unit or automatic transmission electronic control unit.
		NO	Modify connector.

[Fault code]
Diagnosis code: U0029/Flash code: 76
[Monitor]
Abnormality in controller area network 1 communication
[Fault (outline)]
Controller area network A bus off
[Diagnosis check]
- Controller area network communication between engine electronic control unit and each electronic control unit (automatic transmission, multifunction vehicle control unit) is monitored for abnormality.

[Code generation condition]
- No controller area network signal is received from each electronic control unit after engine start (controller area network bus OFF).
  (Warning lamp is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

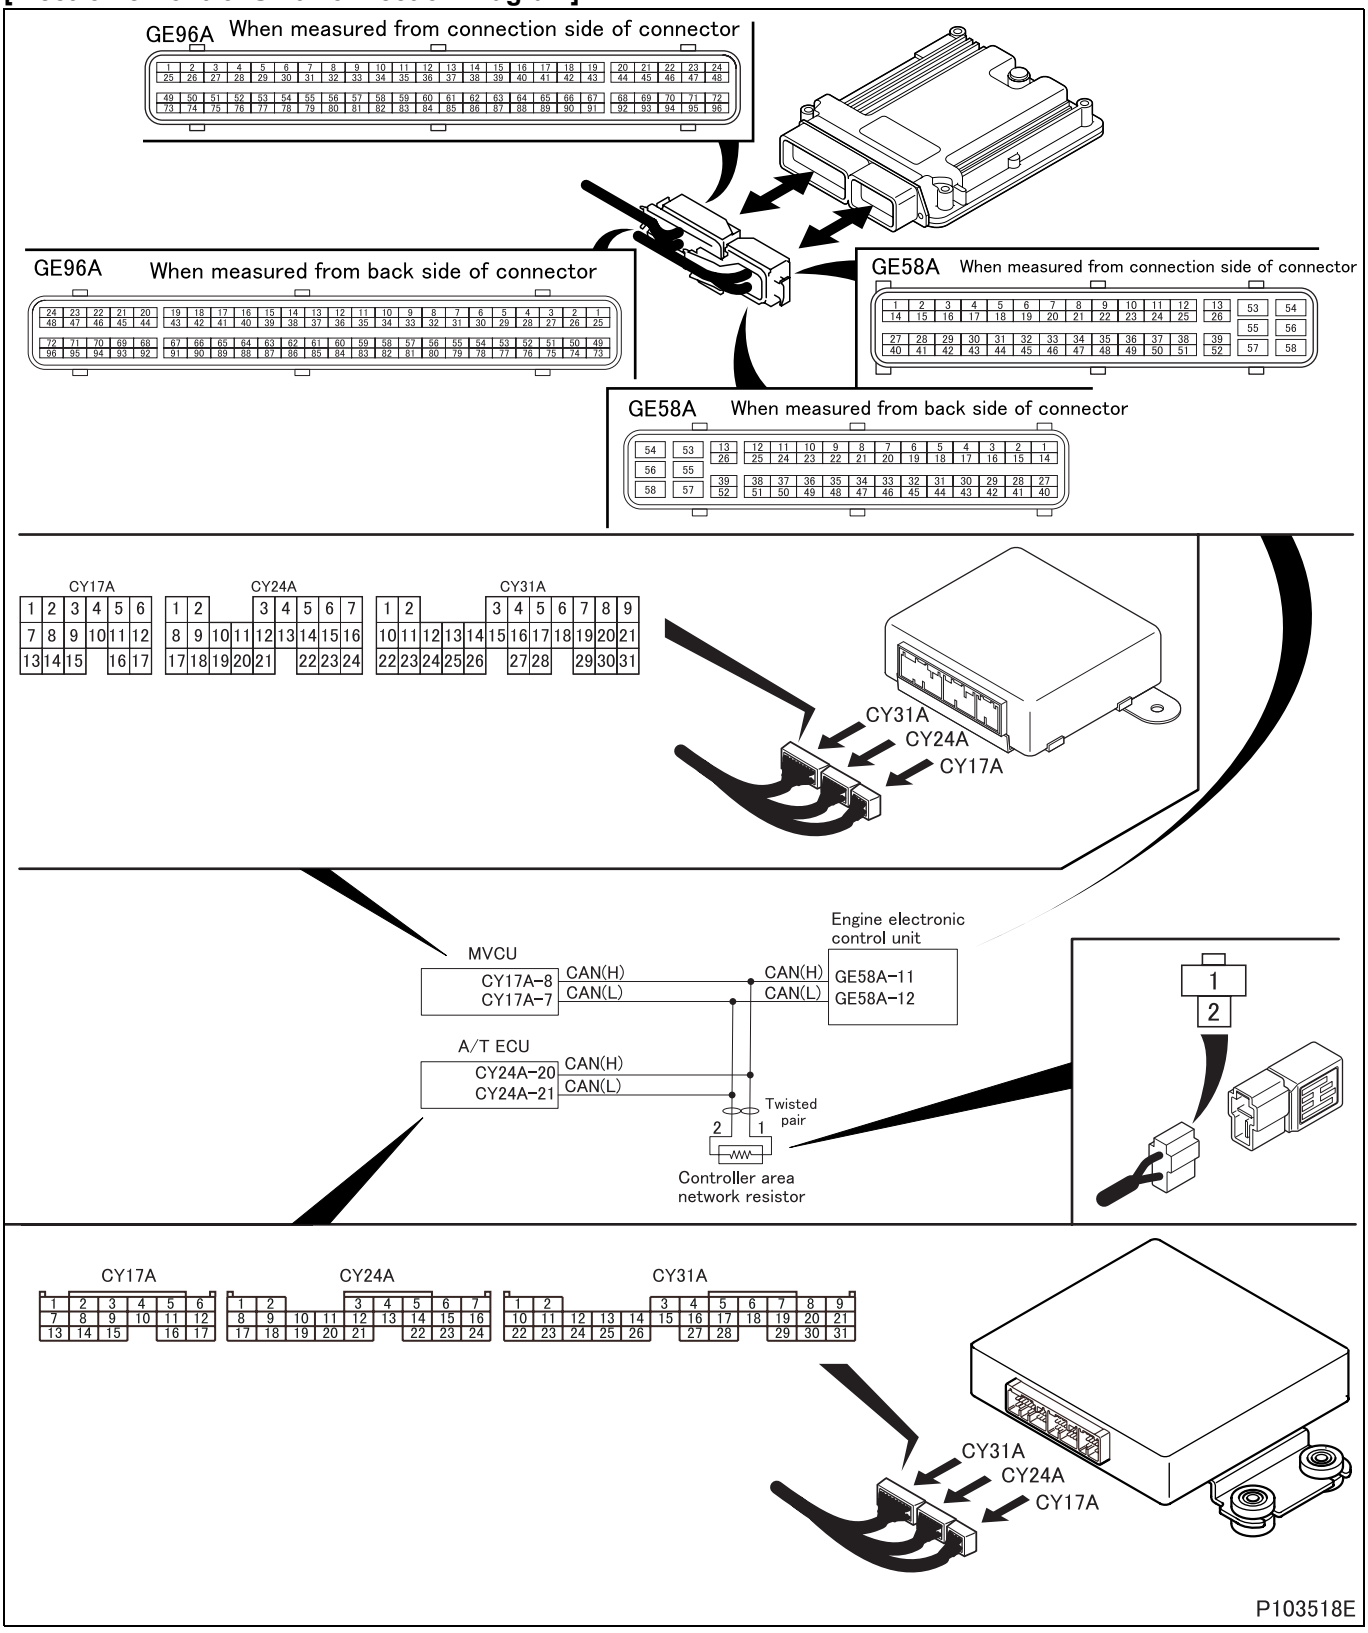
[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
- Auto cruise control stopped
- Speed limitation device control is stopped.
- Traction control is stopped. <Automatic transmission>

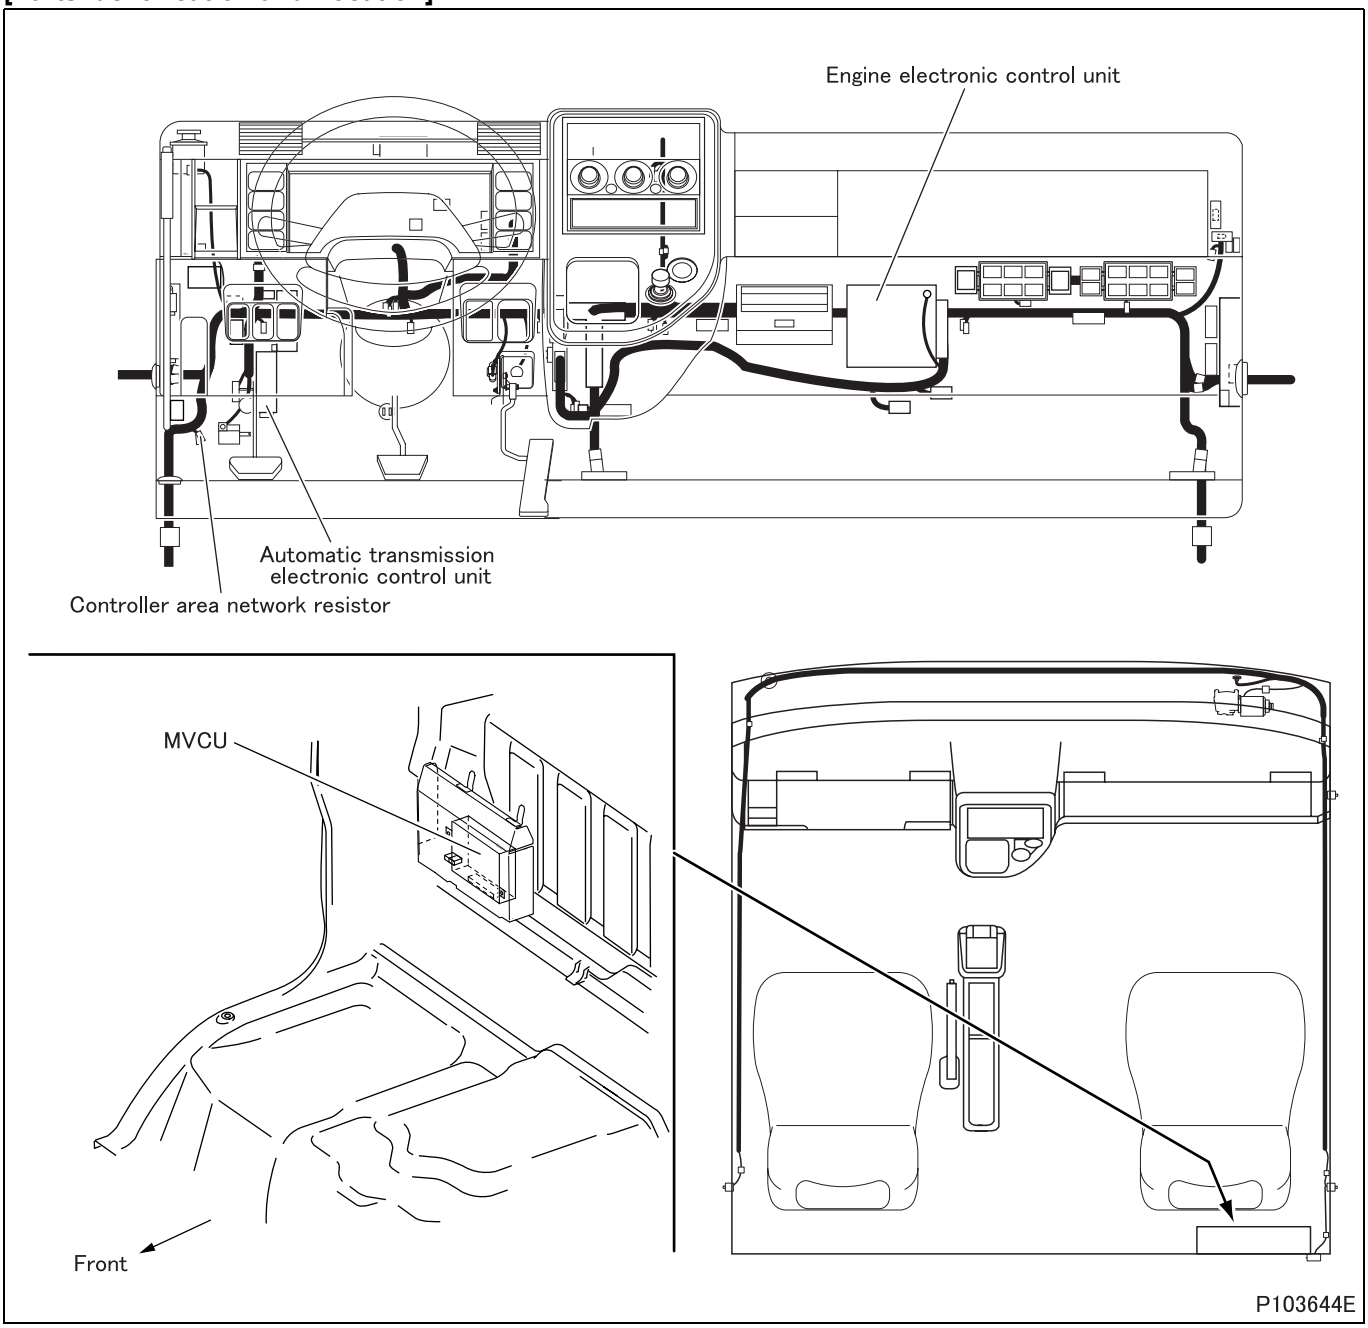
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and each electronic control unit (automatic transmission, multifunction vehicle control unit)
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of each electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Warning lamp is extinguished and diagnosis code is cleared at fourth display of diagnosis code after recovery.)

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

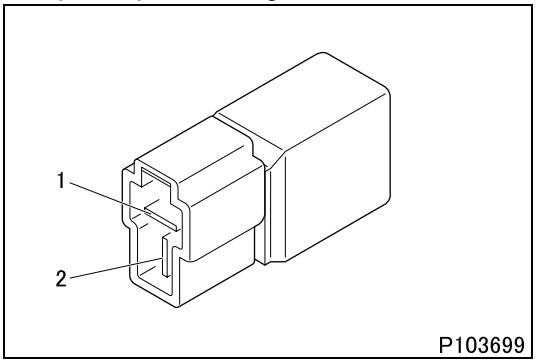
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 11 and 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and multifunction vehicle control unit connector (CY17A) terminal No. 8.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between multifunction vehicle control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and multifunction vehicle control unit connector (CY17A) terminal No. 7.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of multifunction vehicle control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 10	Inspection items		Inspection of harness between automatic transmission electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and automatic transmission electronic control unit connector (CY24A) terminal No. 20.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 11.
		NO	Modify harness.

Step 11	Inspection items		Inspection of harness between throttle electronic drive unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and automatic transmission electronic control unit connector (CY24A) terminal No. 21.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 12.
		NO	Modify harness.

Step 12	Inspection items		Inspection of automatic transmission electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of either multifunction vehicle control unit or automatic transmission electronic control unit.
		NO	Modify connector.

[Fault code]
Diagnosis code: U0101/Flash code: 76
[Monitor]
Abnormality in controller area network (automatic transmission) communication
[Fault (outline)]
Engine warning lamp (orange) request message timeout
[Diagnosis check]
- Controller area network communication between engine electronic control unit and automatic transmission electronic control unit is monitored for abnormality.

[Code generation condition]
Diagnosis code is generated under either of the following conditions.
<Condition (1)>
- Engine electronic control unit fails to receive controller area network signal containing automatic transmission warning information from automatic transmission electronic control unit within specified time.
  (Diagnosis code is displayed on first establishment of code generation condition.)

<Condition (2)>
- Abnormality in controller area network communication in other cases than condition (1) above
  (Warning lamp (red) is lit and diagnosis code is displayed on third establishment of code generation condition.)

[Diagnosis check timing]
- Fault diagnosis is continuously performed during the driving cycle.

[Diagnostic requirement]
–

[Control effected by electronic control unit during fault]
Electronic control unit differs in the way of control by the diagnosis check item.
<Transmission gear position>
- Engine torque is limited.

<Engine speed>
- Traction control is stopped. <Automatic transmission>

<Automatic transmission warning lamp>
- Effects no special control.

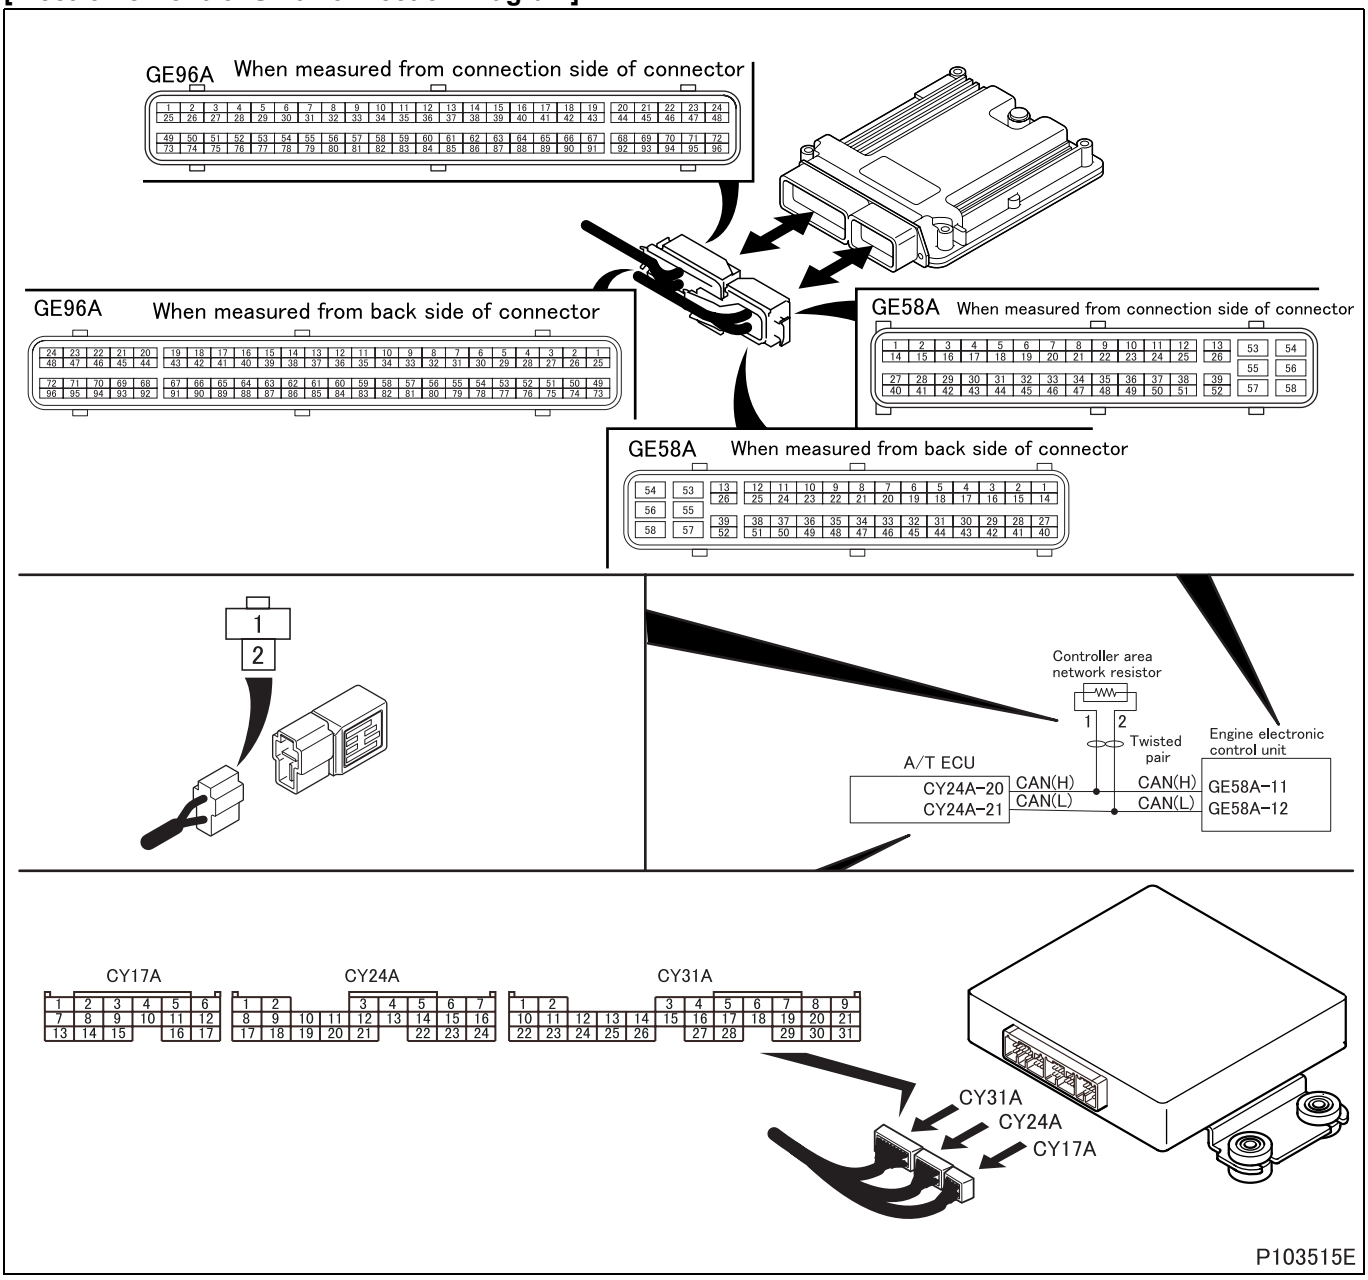
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between engine electronic control unit and automatic transmission electronic control unit
- Malfunction of each connector
- Malfunction of engine electronic control unit
- Malfunction of automatic transmission electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).
  (Timing of warning lamp/diagnosis code OFF depends on condition.)

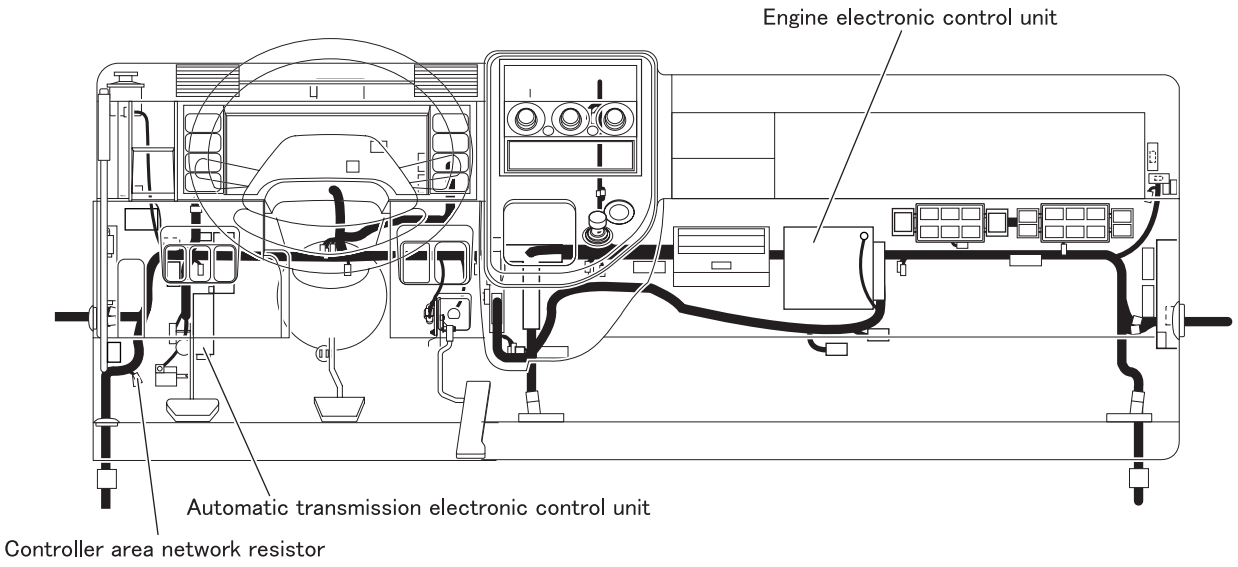
<Condition (1)>
- Code is cleared simultaneously with recovery.

<Condition (2)>
- Lamp is extinguished and code is cleared at fourth diagnosis code display after recovery.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

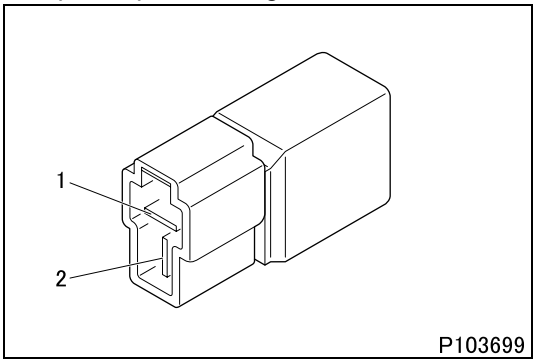
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by engine electronic control unit connector
	Maintenance item		Measure value of resistance between engine electronic control unit connector (GE58A) terminal No. 11 and 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Go to step 2.

Step 2	Inspection items		Inspection of controller area network resistor connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of controller area network resistor unit
	Maintenance item		Measure value of resistance between connector terminal No. 1 and No. 2.
	Inspection condition		Disconnect connector and measure resistor side.
	Requirements		120 ± 6 Ω
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Replacement of controller area network resistor

<Step 3 inspection diagram>



Step 4	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and engine electronic control unit connector (GE58A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify harness.

Step 5	Inspection items		Inspection of harness between engine electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and engine electronic control unit connector (GE58A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of engine electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 7	Inspection items		Inspection of harness between automatic transmission electronic control unit and controller area network resistor (HIGH)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 1 and automatic transmission electronic control unit connector (CY24A) terminal No. 20.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between automatic transmission electronic control unit and controller area network resistor (LOW)
	Maintenance item		Check circuit between controller area network resistor connector terminal No. 2 and automatic transmission electronic control unit connector (CY24A) terminal No. 21.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of automatic transmission electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replace the engine electronic control unit as well if this diagnosis code occurs after the replacement of automatic transmission electronic control unit.
		NO	Modify connector.

4. Multi-Use Tester Service Data

• Both service data and actuator test results are indicated at the same time.

No.	Item	Data	Inspection condition	Criterion for normality
01	Engine Revolution	■■■■.r/min	Racing (engine in operation)	Synchronous with tachometer
02	LOAD Value	■■■■.%	Starter switch ON	0%
0A	Reference Injection Quantity	■■■■.%	Idling	0% or lower
10	Intake Air Temperature (EGR)	■■■. ■°F	Engine cold	Value corresponds to ambient temperature
14	Fuel Temperature (leak)	■■■. ■°F	Engine cold	Value corresponds to ambient temperature
16	PTO Adjustment Resistor No.	1/2/3/4/5/6/7/8/9/10/11/NON	–	–
17	Exhaust Gas Flow	■■■■.m3/h	During warm-up	Gradually increased
19	Reference Common Rail Pressure 2	■■■. ■%	Idling	0% or lower
1B	Actual Common Rail Pressure 2	■■■. ■%	Idling	0% or lower
1C	Difference Common Rail Pressure 2	■■■. ■%	Idling	0% or lower
1F	Auto Cruise Reference Speed	■■■■.mph	Vehicle in auto cruise mode	Same vehicle speed in auto cruise mode
20	Atmospheric Pressure	■■■■.psi	Altitude: 0 m {0 ft.}	14.6 psi
			Altitude: 600 m {1970 ft.}	13.8 psi
21	Boost Pressure	■■■■.psi	Starter switch ON (engine stationary)	Coincides with atmospheric pressure
			After engine has started, press accelerator pedal	Gradually increased
22	Difference pressure across DPF	■■■■.psi	Accelerator pedal pressed	Gradually increased
23	Exhaust gas pressure	■■■■.psi	Accelerator pedal pressed	Gradually increased
24	OXI CAT Temperature	■■■■.°F	During warm-up	Gradually increased
25	DPF Temperature (UpStream)	■■■■.°F	During warm-up	Gradually increased
26	DPF Temperature (DownStream)	■■■■.°F	During warm-up	Gradually increased
27	Downstream OXI CAT Temperature	■■■■.°F	During warm-up	Gradually increased
28	DPF Related Information	Memory/No memory	Before electronic control unit reset	Memory
			After electronic control unit reset	No memory
30	Intake Air Temp. (upstream)	■■■■.°F	Engine cold	Value corresponds to ambient temperature
31	Water Temperature	■■■■.°F	Engine cold	Value corresponds to ambient temperature
			During warm-up	Gradually increased
			When engine is stopped after warm-up	Gradually declines
32	Water Temperature 2	■■■■.°F	Engine cold	Value corresponds to ambient temperature
			During warm-up	Gradually increased
			When engine is stopped after warm-up	Gradually declines

No.	Item	Data	Inspection condition	Criterion for normality
33	Fuel Temperature (inlet)	■■■■.°F	Engine cold	Value corresponds to ambient temperature
			During warm-up	Gradually increased
			When engine is stopped after warm-up	Gradually declines
40	Accelerator sensor voltage 1	■■. ■■V	Accelerator pedal gradually pressed from released position.	0.85 to 4.15 V
41	Accelerator sensor voltage 2	■■. ■■V	Accelerator pedal gradually pressed from released position.	0.85 to 4.15 V
42	Accel Pedal Position (unfiltered)	■■■■.%	Accelerator pedal released	0%
			Gradually press.	Gradually increased
			Accelerator pedal fully pressed	100%
43	Accel Pedal Position (filtered)	■■■■.%	Accelerator pedal released	0%
			Gradually press.	Gradually increased
			Accelerator pedal fully pressed	100%
50	Target EGR Valve Position	■■■■.%	Idling	100%
51	Actual EGR Valve Position	■■■■.%	Idling	100%
			[Actuator test] A0: EGR 1	
52	Target Intake Throttle Position	■■■■.%	Idling	10 to 20%
53	Actual Intake Throttle Position	■■■■.%	Idling	10 to 20%
			[Actuator test] A3: Intake Throttle 1

5. Mode 06 Data

5.1 General description

- Mode 06 data are used for checking if the system and its components are in order, using not a Multi-Use Tester but a commercial tester.
- Monitor IDs identify individual system components or entire systems under diagnostic test.
- Test IDs indicate specific diagnostic test items of the system components or systems identified by monitor IDs.

5.2 Mode 06 data conversion factor list

- Shown below is a list of conversion factors for commercial tester data of diagnostic test items.

Monitor ID $21: Catalyst

Test ID	Description of test data	Description of test limit	Conversion factor
$A1	Difference temperature between OxiCat inlet and DPF inlet	Malfunction criteria for diesel oxidation catalyst deterioration	0.1°C per bit

Monitor ID $31: EGR

Test ID	Description of test data	Description of test limit	Conversion factor
$91	EGR mass flow	Malfunction criteria for blockage and leaks in pipe work or cooler, or EGR valve stuck shut/open	0.001 kg/h per bit

Monitor ID $81: Fuel system

Test ID	Description of test data	Description of test limit	Conversion factor
$81	Rail pressure voltage in offset test	Malfunction criteria for rail pressure sensor	0.001 V per bit

Monitor ID $A2: Mis-fire Cylinder 1

Test ID	Description of test data	Description of test limit	Conversion factor
$0B	EWMA (Exponential Weighted Moving Average) misfire counts for last 10 driving cycles	Malfunction criteria for misfire of cylinder-1	1 per bit
$0C	Misfire counts for last/current driving cycles		

Monitor ID $A3: Mis-fire Cylinder 2

Test ID	Description of test data	Description of test limit	Conversion factor
$0B	EWMA (Exponential Weighted Moving Average) misfire counts for last 10 driving cycles	Malfunction criteria for misfire of cylinder-2	1 per bit
$0C	Misfire counts for last/current driving cycles		

Monitor ID $A4: Mis-fire Cylinder 3

Test ID	Description of test data	Description of test limit	Conversion factor
$0B	EWMA (Exponential Weighted Moving Average) misfire counts for last 10 driving cycles	Malfunction criteria for misfire of cylinder-3	1 per bit
$0C	Misfire counts for last/current driving cycles		

Monitor ID $A5: Mis-fire Cylinder 4

Test ID	Description of test data	Description of test limit	Conversion factor
$0B	EWMA (Exponential Weighted Moving Average) misfire counts for last 10 driving cycles	Malfunction criteria for misfire of cylinder-4	1 per bit
$0C	Misfire counts for last/current driving cycles		

Monitor ID $85: Boost

Test ID	Description of test data	Description of test limit	Conversion factor
$B1	Boost pressure	Malfunction criteria for turbocharger actuator deviation	0.001 kPa per bit

Monitor ID $B2: DPF

Test ID	Description of test data	Description of test limit	Conversion factor
$B1	Filter pressure drop	Malfunction criteria for soot and ash loadings	0.001 kPa per bit

6. Actuator Tests Performed Using Multi-Use Tester

• Both service data and actuator test results are indicated at the same time.

No.	Item	Description	Check method
A0	EGR 1	Exhaust gas recirculation valve opening maintained as commanded by Multi-Use Tester NOTE: Immediately after the starter switch is turned to ON, the exhaust gas recirculation valve is automatically checked for about 5 seconds. An actuator test using the Multi-Use Tester must be performed after waiting this period. [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral or P range • Diagnosis switch: OFF (fuse removed)	Check that exhaust gas recirculation valve opening changes. [Service data] 51: Actual EGR Valve Position
A3	Intake Throttle 1	Intake throttle valve opening maintained as commanded by Multi-Use Tester [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral or P range • Diagnosis switch: OFF (fuse removed)	Check that throttle valve opening changes. [Service data] 53: Actual Intake Throttle Position
A4	VGT 1	Turbocharger opening maintained as commanded by Multi-Use Tester NOTE: • Set turbocharger opening to the range of 20 to 80%. • Immediately after the starter switch is turned to ON, the turbocharger actuator automatically undergoes an initial operational checkup for about 5 seconds. An actuator test using the Multi-Use Tester must be performed after waiting this period. [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral or P range • Diagnosis switch: OFF (fuse removed)	Check that turbine vane opening changes. Used for boost pressure measurement/adjustment (See Gr15.) [Service data] 54: Target VGT Position 55: Actual VGT Position
A5	DPF Regeneration (Manual)	Request is output for manual diesel particulate filter regeneration [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Engine: Idling • Parking brake: Vehicle parked (parking brake switch: ON) • After engine warm-up	• Check that diesel particulate filter indicator lamp flickers • Manual diesel particulate filter regeneration started with diesel particulate filter cleaning switch ON and engine speed increased. [Service data] A4: DPF SW
A6	DPF Lamp	Diesel particulate filter indicator lamp turned ON/OFF [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: Idling • Transmission: neutral or P range	Check that indicator lamp is turned on and off [Service data] B8: DPF Indicator Lamp

No.	Item	Description	Check method
A8	EGR, ETV, VGT	Exhaust gas recirculation, intake throttle and turbocharger opening maintained as commanded by Multi-Use Tester NOTE: • Set turbocharger opening to the range of 20 to 80%. • Immediately after the starter switch is turned to ON, the exhaust gas recirculation valve and turbocharger actuator automatically undergo initial operational checkups for about 5 seconds. An actuator test using the Multi-Use Tester must be performed after waiting this period. [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON (engine started) • Transmission: neutral or P range • Diagnosis switch: OFF (fuse removed) • Caution!: When actuator test is executed during engine stop, turn starter switch OFF after engine startup and then ON within 15 seconds (Do not start engine).	Check that exhaust gas recirculation, intake throttle and turbine vane valve openings change. Used for boost pressure measurement/adjustment (See Gr15.) [Service data] 51: Actual EGR Valve Position 53: Actual Intake Throttle Position 55: Actual VGT Position
AA	Auxiliary Brake M/V 1	Exhaust shutter 2-way magnetic valve driving signal [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Magnetic valve operating sound [Service data] B0: Auxiliary Brake M/V 1
AB	Auxiliary Brake Indicator Lamp	Exhaust brake indicator lamp driving signal [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Check that indicator lamp is turned on and off [Service data] B1: Auxiliary Brake Indicator Lamp
AC	Relay for Glow Relay	ON/OFF switchover of glow drive relay [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Relay operating sound [Service data] B2: Glow Relay
AD	Glow Indicator Lamp	Preheating indicator lamp driving signal [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Check that indicator lamp is turned on and off [Service data] B3: Glow Indicator Lamp
AE	Starter Safety Relay	ON/OFF switchover of starter continuous power-on preventive relay (safety relay) [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Relay operating sound [Service data] B4: Starter Safety Relay
AF	EDU Relay	ON/OFF switchover of electronic drive unit relay (errors involving exhaust gas recirculation, intake air throttle and turbocharger may be detected during this actuator test). [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Relay operating sound [Service data] B5: EDU Power Relay
B0	MIL	Engine warning lamp (orange) driving signal [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral or P range • Engine: stopped	Check that warning lamp (orange) is turned on and off [Service data] B6: MIL
B1	Diagnosis Lamp	Engine warning lamp (red) driving signal [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral or P range • Engine: stopped	Check that warning lamp (red) is turned on and off [Service data] B7: Diagnosis Lamp

No.	Item	Description	Check method
B2	Fuel Leak Check	Rail pressure is increased for a certain period of time (6 seconds). [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral or P range • Diagnosis switch: OFF (fuse removed)	Check for leakage from fuel system.
B3	Air Conditioner SW	ON/OFF switchover of air conditioner operation (idle up control) is performed. [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral or P range • Engine: Idling	Check that engine speed increases and decreases. [Service data] AA: AC SW
B4	Idle Up Cancel SW	ON/OFF switchover of idle up inhibited status [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Transmission: neutral or P range	Check that idling speed remains low. [Service data] A9: Idle Up Cancel SW
B5	GCU (GLOW PLUG)	ON/OFF switchover of the glow plugs [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Starter switch: ON • Engine: stopped	Check to see that the glow plugs are energized.
BB	Injector Test 1	Selected injector magnetic valve is forced to stop. [Can be executed under following conditions] • Vehicle: stationary (vehicle speed 0 km/h {0 MPH}) • Engine speed: 1500 rpm or less • Transmission: neutral • The current diagnosis code does not occur.	Check that No. 1 cylinder injector magnetic valve is stopped.
BC	Injector Test 2		Check that No. 4 cylinder injector magnetic valve is stopped.
BD	Injector Test 3		Check that No. 2 cylinder injector magnetic valve is stopped.
BE	Injector Test 4		Check that No. 3 cylinder injector magnetic valve is stopped.

M E M O

REGISTRATION AND ALTERATION OF DATA IN ENGINE ELECTRONIC CONTROL UNIT

1. Operation at Electronic Control Unit Replacement

- Vehicle information and equipment specifications are registered in each engine electronic control unit as coded data (coding data).
- Given in the chart below are the items on which registered data in the engine electronic control unit are necessary to alter or new data are necessary to register with the disposition of equipment.
- If the electronic control unit is left initialized with no necessary data registered, it is not capable of proper engine control.
- For data alteration/registration and data write operation, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.

Engine electronic control unit data / Disposition of equipment		VIN (Vehicle Identification Number)	Injector correction	Injection quantity correction	Air flow sensor characteristics	PTO idling speed	Ash accumulation data transfer	Remarks
Engine electronic control unit	Replaced with new unit	O	O	O	O	O	O	
	Relocated from other vehicle	O	O	O	O	O	O	
	Erasure of diagnosis codes							No action is required.
Replacement of injector			O					Data code (IQA code) differs from injector to injector and is necessary to change.
Replacement of air flow sensor								Data is not necessary to change if the replacement is identical.
Change of PTO idling speed						O		

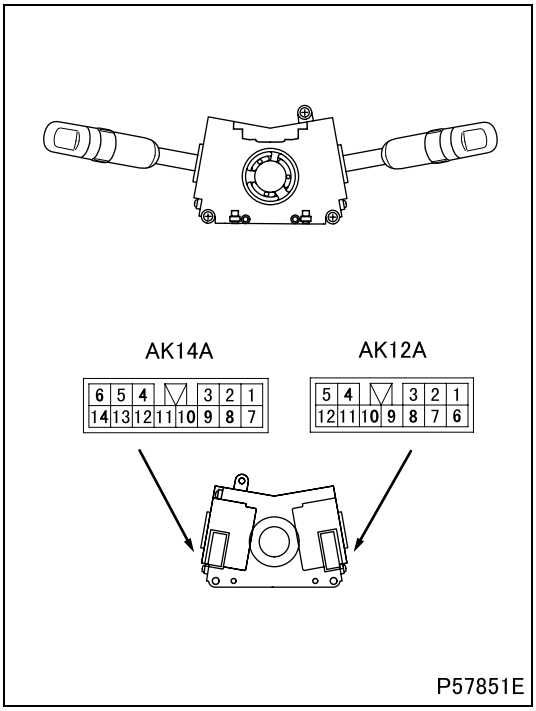
○ : Denotes the necessity of data being updated or registered.

IQA: Injection Quantity Adjustment

2. Resetting the Diesel Particulate Filter Related Information (Resetting Electronic Control Unit)

- On the regeneration control type as diesel particulate filter system, the engine electronic control unit stores many diesel particulate filter related information to control the diesel particulate filter regeneration as diesel particulate filter history.
- If the ceramic filter is replaced or cleaned without regeneration, reset the history of diesel particulate filter using Multi-Use Tester. (For reset procedure, see Gr15.)
- In the case of diesel particulate filter regeneration by use of the diesel particulate filter cleaning switch, however, history reset with a Multi-Use Tester is not required because the history is automatically reset by engine electronic control unit.

M E M O

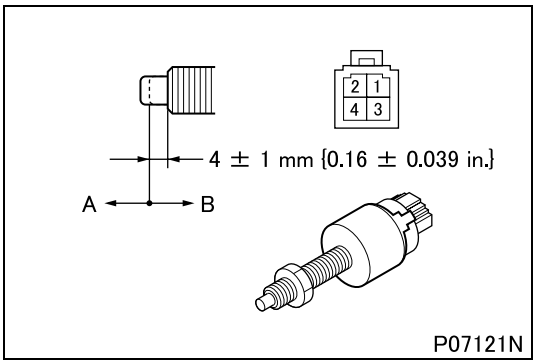


#001 Inspection of combination switch

AK14A connector connection table

Switch position		Terminals with continuity
Exhaust brake switch	OFF	–
	ON	8 - 9

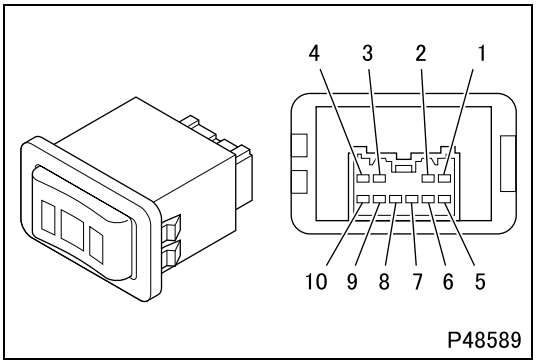
- For other inspections than shown above, see Electrical.
- If there is any abnormality, replace the switch.



#031 Inspection of clutch switch

Switch position	Terminals with continuity
A	1 - 4
B	2 - 3

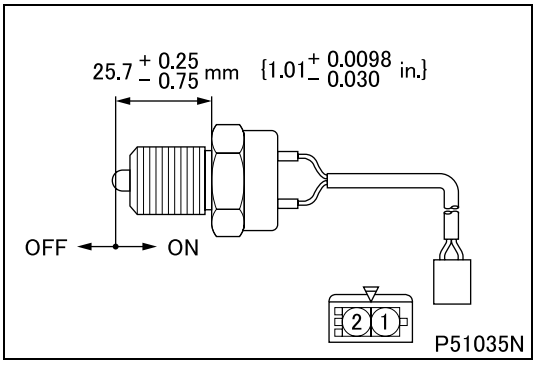
- If there is any abnormality, replace the switch.



#089 Inspection of DPF cleaning switch

Switch position	Terminals with continuity	Night lighting
–	1 - 8	(+) 6 - 2 (–)
ON	1 - 7	

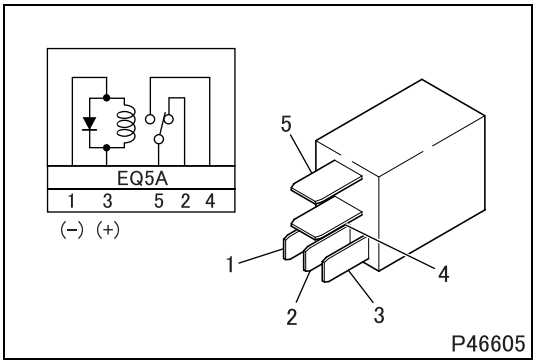
- If there is any abnormality, replace the switch.



#163 Inspection of torque limit switch

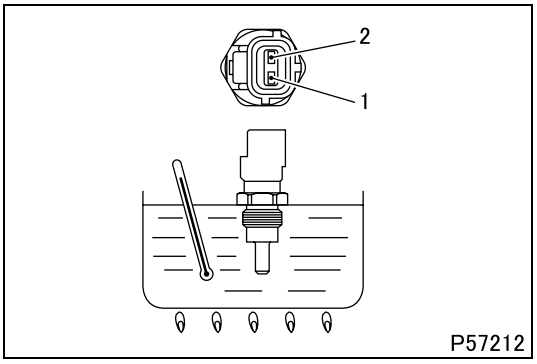
Switch position	Terminals with continuity
OFF	–
ON	1 - 2

- If there is any abnormality, replace the switch.



#201 Inspection of relay (normally open 5-pin)

- Check continuity and operating condition of the relay. Replace the relay if necessary.



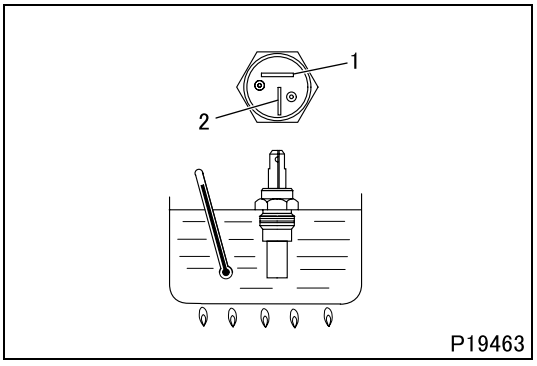
#262 Inspection of water temperature sensor

<Water temperature sensor 1>

- Place the water temperature sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	20°C {68°F}	2.45 ± 0.14 kΩ
	80°C {176°F}	0.32 kΩ (reference value)
	110°C {230°F}	147.1 ± 2 Ω

- If the measurement is out of specification, replace the sensor.

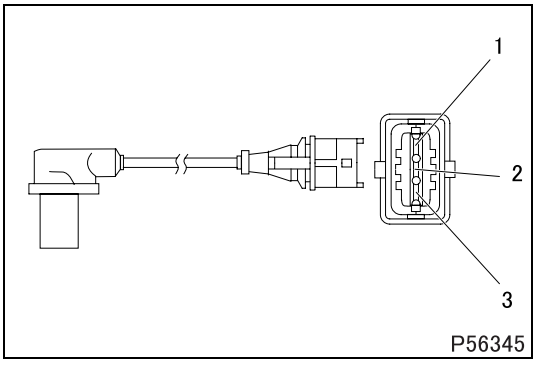


<Water temperature sensor 2>

- Place the water temperature sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 2 and the body.

Standard value	–20°C {–4°F}	24.8 ± 2.5 kΩ
	0°C {32°F}	8.62 kΩ
	20°C {68°F}	3.25 ± 0.33 kΩ
	60°C {140°F}	620 Ω
	80°C {176°F}	300 Ω

- If the measurement is out of specification, replace the sensor.

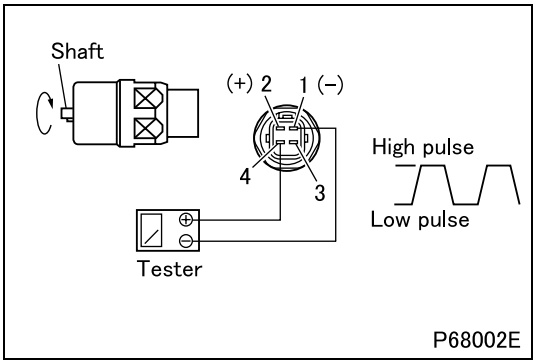


#263 Inspection of engine speed sensor

- Measure the resistance between terminals 1 and 2.

Standard value (at 20°C {68°F})	860 ± 86 Ω

- If the measurement is out of specification, replace the sensor.

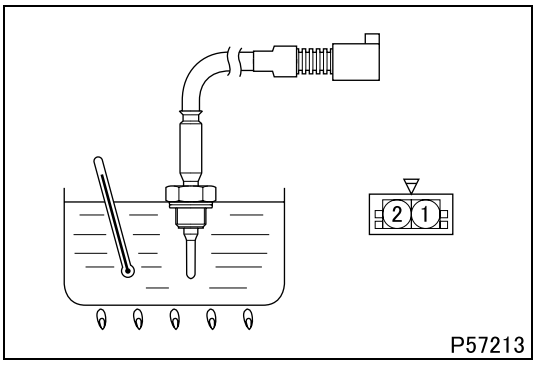


#265 Inspection of vehicle speed sensor

- With the DC 12 V applied to terminals 1 and 2, slowly turn the shaft of the vehicle speed sensor.
- Measure the maximum voltage (high pulse voltage) and minimum voltage (low pulse voltage) occurring at each specified pair of terminals.

Terminals	Inspection condition	Standard value
25-pulse output: terminals 1 and 4	Low pulse voltage	0.5 V or lower
	High pulse voltage	8 ± 1 V

- If any measurement is out of specification, replace the sensor.



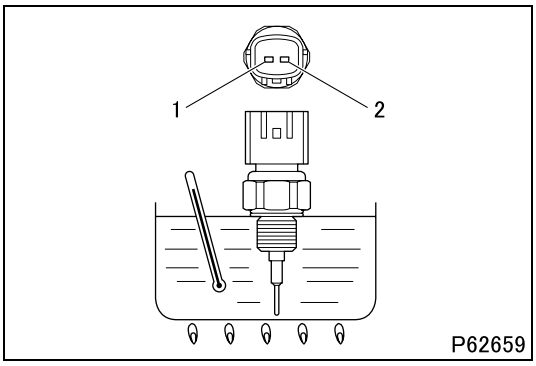
#305 Inspection of air temperature sensor

<Intake air temperature sensor>

- The intake air temperature sensor may output false signals if its tip is contaminated. Clean it if necessary. (See Gr15.)
- Place the sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	50°C {122°F}	$2.202\ ^{+0.233}_{-0.208}$ kΩ
	100°C {212°F}	$508.1\ ^{+41.3}_{-37.7}$ Ω
	150°C {302°F}	$160.4\ ^{+10.3}_{-9.6}$ Ω

- If either measurement is out of specification, replace the sensor.



<Boost air temperature sensor>

- The boost air temperature sensor may output false signals if its tip is contaminated. Clean it if necessary. (See Gr15.)
- Place the sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	0°C {32°F}	$162.3\ ^{+48.8}_{-36.5}$ kΩ
	20°C {68°F}	$61.47\ ^{+15.99}_{-12.35}$ kΩ
	80°C {176°F}	$6.120\ ^{+1.095}_{-0.907}$ kΩ

- If the measurement is out of specification, replace the sensor.

#306 Inspection of air flow sensor

- The sensor cannot be checked as a single unit. Instead, measure and compare the intake air flow rates of the existing sensor mounted on the vehicle and a new sensor installed in the place of the existing sensor for inspection using corresponding Multi-Use Tester Service Data items to determine characteristics deterioration in the existing sensor mounted on the vehicle.

(1) Preparation for inspection

- Clean or replace the air cleaner element.
- Make a new air flow sensor ready for use.
- Warm up the engine enough.
- Connect a Multi-Use Tester. (See Gr00.)

(2) Measurement of existing sensor intake air flow rate

- Press the accelerator pedal from the idling position all the way down to the stopper bolt. (The engine is running at maximum speed under no load.)
- Measure the following items from “Service Data”.
  <General Scanning Tool used>
  Engine speed: “Ne” (rpm)
  Intake air flow rate: “Air Flow Rate from MAFS” (g/s)
  <Multi-Use Tester used>
  Engine speed: 01 “Engine Revolution” (rpm)
  Intake air flow rate: 60 “Air mass flow” (g/s)

(3) Measurement of new sensor intake air flow rate

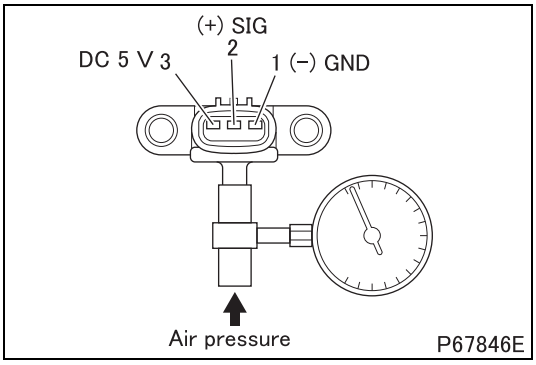
- Remove the existing sensor mounted on the vehicle and install a new sensor in its place.
- Press the accelerator pedal from the idling position all the way down to the stopper bolt. (The engine is running at maximum speed under no load.)
- From “Service Data”, measure intake air flow rate at the same speed as the engine speed under (2) above.

(4) Comparison for characteristics deterioration

- Calculate the characteristics deterioration rate (%) as follows.

$$\text{Characteristics deterioration rate} = \frac{\text{New sensor intake air flow rate} - \text{Existing sensor intake air flow rate}}{\text{New sensor intake air flow rate}} \times 100\ (\%)$$

- If the calculated value is 10% or more, the characteristics of the existing sensor can be judged as deteriorated. In this case, replace it with the new sensor.



#318 Inspection of boost pressure sensor

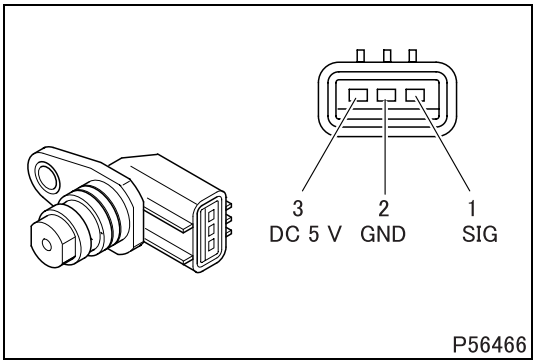
- Apply DC 5 V to terminals 3 and 1.
- Apply air pressure. Gradually increase it and, while doing so, measure the output voltage occurring at terminals 2 and 1.

	Air pressure (gauge reading)	Voltage
Standard value	232.2 kPa {34 psi, 2.3 kg/cm^2}	Approx. 3.2 V
	99 kPa {14 psi, 1.0 kg/cm^2}	Approx. 4.5 V

- If any measurement is out of specification, replace the sensor.

#319 Inspection of common rail pressure sensor

- The sensor cannot easily be inspected in isolation, so you must evaluate it indirectly by inspection of system harnesses and related parts.
- If there is no abnormality in any related part but the system is abnormal, replace the common rail.

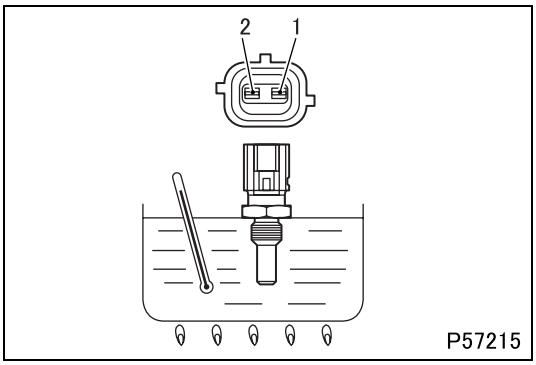


#320 Inspection of cylinder recognition sensor

- Measure the resistance between terminals 2 and 3.

Standard value	200 to 1800 Ω

- If the measurement is out of specification, replace the sensor.

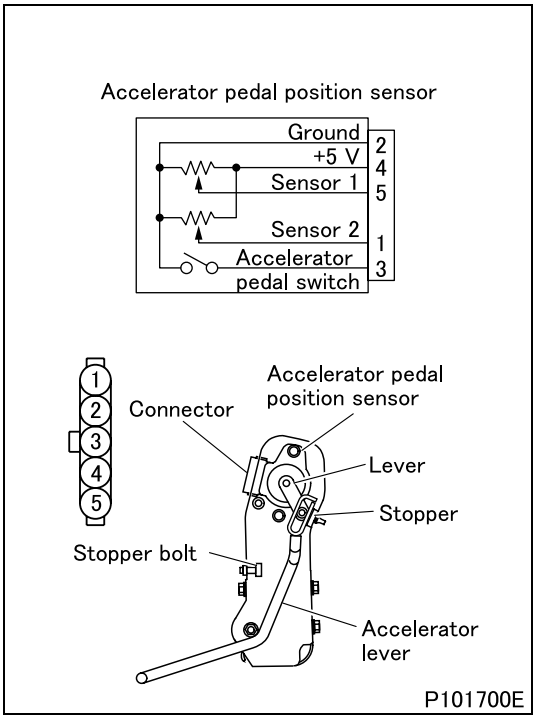


#323 Inspection of fuel temperature sensor

- Measure the resistance between terminals 1 and 2.

Standard value	20°C {68°F}	$2.45\ ^{+0.14}_{-0.13}$ kΩ
	80°C {176°F}	0.318 ± 0.01 kΩ
	110°C {230°F}	0.1417 ± 0.0018 kΩ

- If any measurement is out of specification, replace the sensor.



#324 Inspection of accelerator pedal position sensor

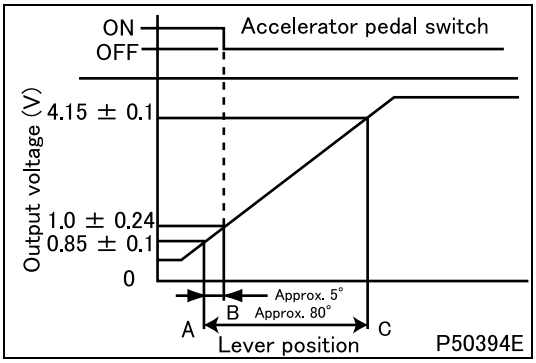
[Inspection]

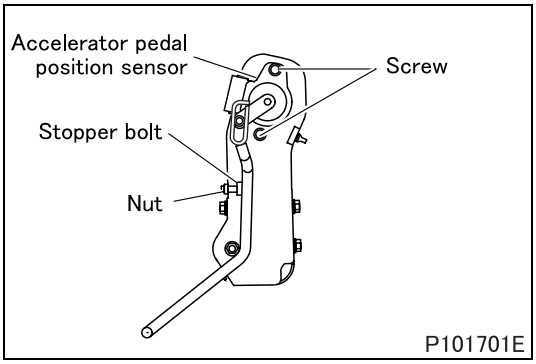
- Apply DC 5 V to terminals 4 and 2 of the accelerator pedal position sensor.
- Measure the output voltage at terminals 2 and 5 (sensor 1) and the output voltage at terminals 1 and 2 (sensor 2) with the accelerator lever in each specified position.

	Accelerator lever position	Output voltage
Standard value	Idling position A	0.85 ± 0.1 V
	Accelerator pedal switch operating position B	1.0 ± 0.24 V
	Full load position C	4.15 ± 0.1 V

A: Position in which accelerator lever is touching stopper
B: Position at which continuity between terminals 2 and 3 disappears as accelerator pedal is pushed downward
C: Position in which accelerator lever is touching stopper bolt

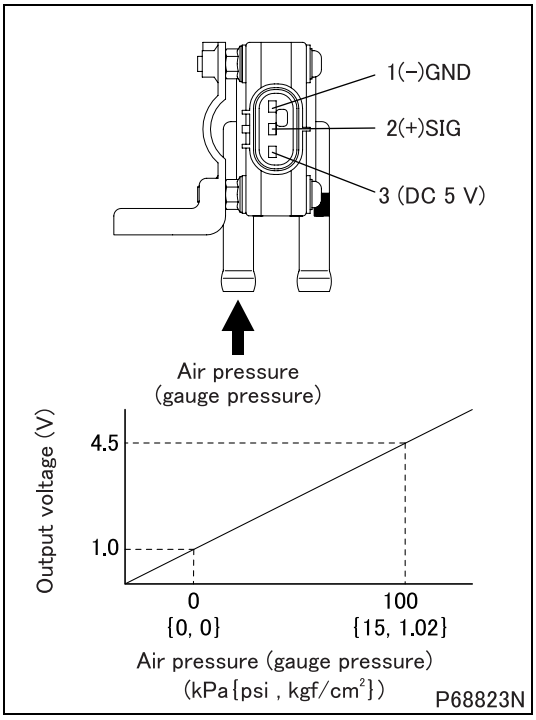
- If any output voltage is out of specification, make an adjustment.
- If any output voltage is still out of specification when you have made an adjustment, replace the sensor.





[Adjustment]

- To adjust the output voltage for the idling position A, loosen the screws and move the accelerator pedal position sensor. Tighten the screws after making the adjustment.
- To adjust the output voltage for the full load position C, loosen the nut and make the adjustment using the stopper bolt. After making the adjustment, lock the stopper bolt in position with the nut.



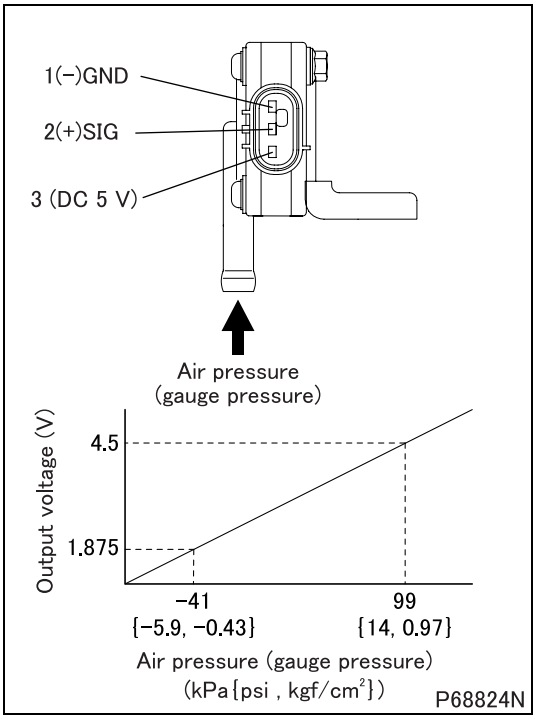
#334 Inspection of DPF pressure sensor

<DPF pressure sensor (DIFF)>

- Apply DC 5 V to terminals 3 and 1.
- Apply air pressure (gauge pressure) and measure the output voltage occurring at terminals 2 and 1 (left figure).

Standard value	0 ± 3.5 kPa {0 ± 0.5 psi, 0 ± 0.04 kgf/cm^2}	1 V
	100 ± 3.5 kPa {15 ± 0.5 psi, 1.02 ± 0.04 kgf/cm^2}	4.5 V

- If the measurement is out of specification, replace the sensor.

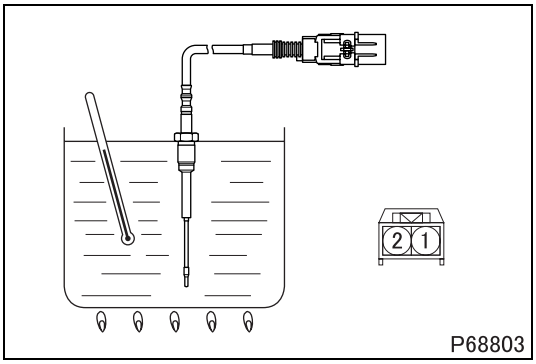


<DPF absolute pressure sensor>

- Apply DC 5 V to terminals 3 and 1.
- Apply air pressure (gauge pressure) and measure the output voltage occurring at terminals 2 and 1 (left figure).

Standard value	–41 ± 3.2 kPa {–5.9 ± 0.5 psi, –0.43 ± 0.03 kgf/cm^2}	1.875 V
	99 ± 3.2 kPa {14 ± 0.5 psi, 1.0 ± 0.03 kgf/cm^2}	4.5 V

- If the measurement is out of specification, replace the sensor.



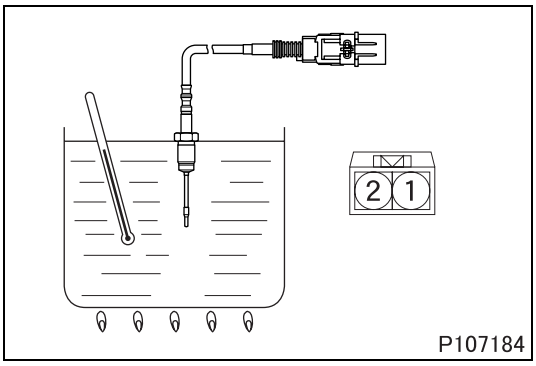
#336 DPF temperature sensor

<DPF temperature sensor 1>

- The DPF temperature sensor 1 may output false signals if its tip is contaminated. Clean it if necessary. (See Gr15.)
- Place the sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	20°C {68°F}	241.8 kΩ
	50°C {122°F}	$106.2^{+74.3}_{-41.8}$ kΩ
	100°C {212°F}	$33.56^{+17.60}_{-10.60}$ kΩ
	150°C {302°F}	$13.90^{+5.36}_{-3.60}$ kΩ
	200°C {392°F}	$6.896^{+2.064}_{-1.252}$ kΩ

- If the measurement is out of specification, replace the sensor.

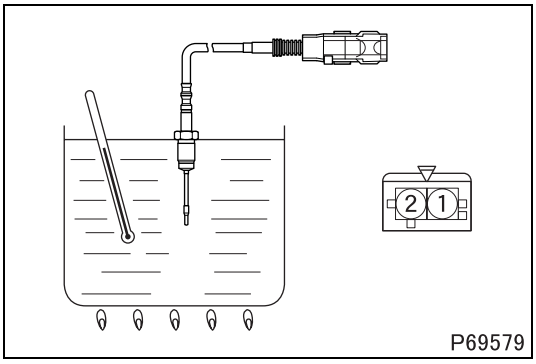


<DPF temperature sensor 2>

- The DPF temperature sensor 2 may output false signals if its tip is contaminated. Clean it if necessary. (See Gr15.)
- Place the sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	20°C {68°F}	241.8 kΩ
	50°C {122°F}	$106.2^{+74.3}_{-41.8}$ kΩ
	100°C {212°F}	$33.56^{+17.60}_{-10.60}$ kΩ
	150°C {302°F}	$13.90^{+5.36}_{-3.60}$ kΩ
	200°C {392°F}	$6.896^{+2.064}_{-1.252}$ kΩ

- If the measurement is out of specification, replace the sensor.

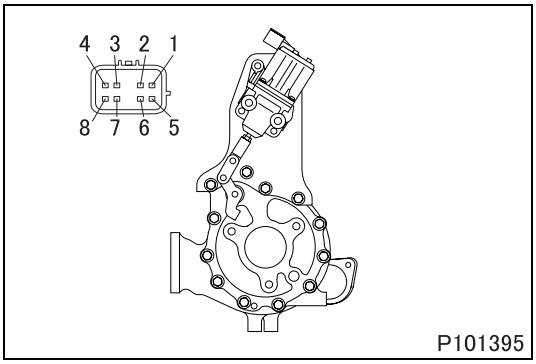


#338 Inspection of catalytic temperature sensor

- The catalytic temperature sensor may output false signals if its tip is contaminated. Clean it if necessary. (See Gr15.)
- Place the sensor in a container filled with engine oil.
- Heat the oil to each of the specified temperatures. Stir the oil well while doing so.
- Measure the resistance between terminals 1 and 2.

Standard value	20°C {68°F}	241.8 kΩ
	50°C {122°F}	$106.2^{+74.3}_{-41.8}$ kΩ
	100°C {212°F}	$33.56^{+17.60}_{-10.60}$ kΩ
	150°C {302°F}	$13.90^{+5.36}_{-3.60}$ kΩ
	200°C {392°F}	$6.896^{+2.064}_{-1.252}$ kΩ

- If the measurement is out of specification, replace the sensor.



#514 Inspection of turbocharger actuator

- Perform the following checks. If there is any abnormality, replace the turbocharger actuator.

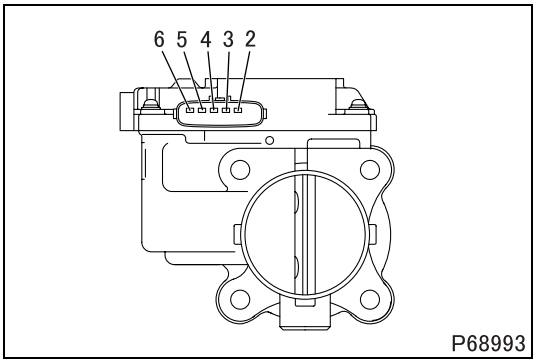
(1) Coil resistance of motor

- Measure the resistance between terminals 8 and 7, 8 and 6, and 7 and 6.

Standard value	2.1 ± 0.3 Ω

(2) Position sensor

- The sensor cannot easily be inspected, so you must evaluate it indirectly by inspection of system harnesses and related parts.
- If there is no abnormality in any related part but the system is abnormal, replace the turbocharger actuator.



#529 Inspection of intake throttle

- Perform the following checks. If there is any abnormality, replace the intake throttle.

(1) Coil resistance of motor

- Measure the resistance between terminals 5 and 6.

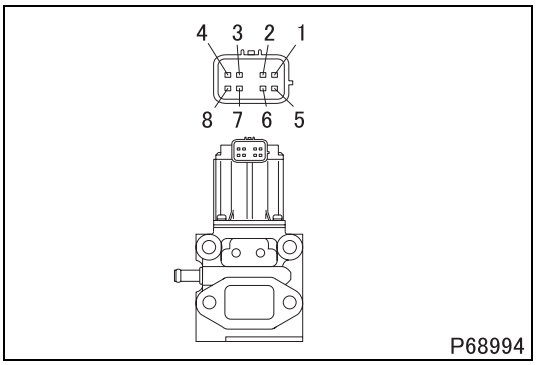
Standard value	0.3 to 80 Ω

CAUTION ⚠

- **If the measurement is out of specification, manually open and close the butterfly valve and measure the resistance again.**

(2) Position sensor

- The sensor cannot easily be inspected, so you must evaluate it indirectly by inspection of system harnesses and related parts.
- If there is no abnormality in any related part but the system is abnormal, replace the intake throttle.



#530 Inspection of EGR valve

- Perform the following checks. If there is any abnormality, replace the EGR valve.

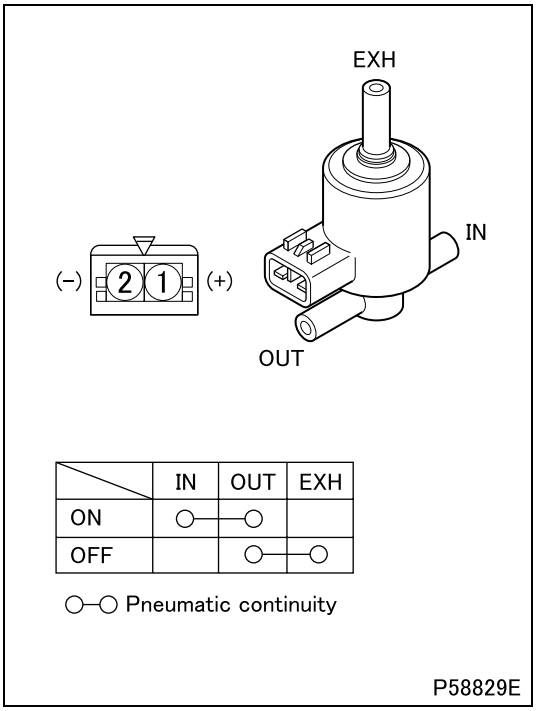
(1) Coil resistance of motor

- Measure the resistance between terminals 8 and 7, 8 and 6, and 7 and 6.

Standard value	2.1 ± 0.3 Ω

(2) Position sensor

- The sensor cannot easily be inspected, so you must evaluate it indirectly by inspection of system harnesses and related parts.
- If there is no abnormality in any related part but the system is abnormal, replace the EGR valve.



#565 Inspection of exhaust shutter 2-way magnetic valve

- Perform the following checks. If there is any abnormality, replace the exhaust shutter 2-way magnetic valve.

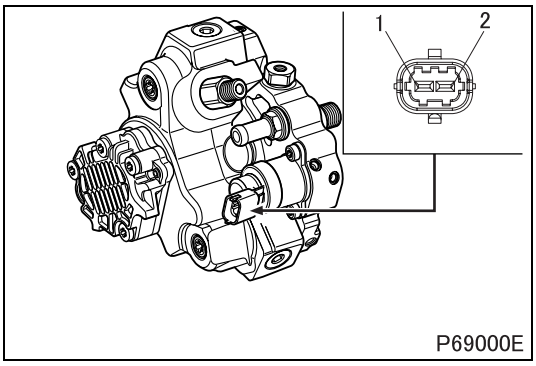
(1) Check of operation

- Gradually increase from zero the voltage applied to terminals 1 and 2.
- Observe the voltage when the exhaust shutter 2-way magenetic valve operates.
  (Determine the magnet valve's OFF-ON operation from the operating sound.)

Standard value (min. operating voltage)	11 V or lower

(2) Check of continuity and airtightness

- Vacuum pressure applied during check:
  –100 kPa {–15 psi, –10 kgf/cm^2}

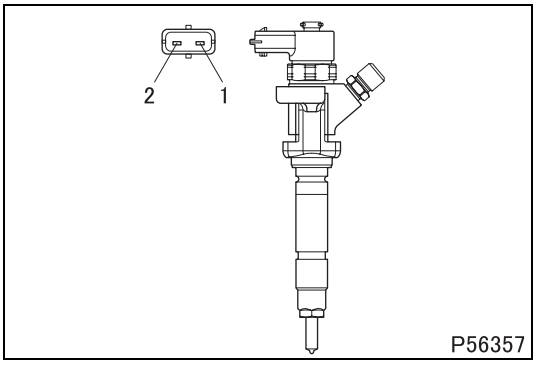


#574 Inspection of MPROP
(rail pressure control valve)

- Measure the resistance between terminals 1 and 2.

Standard value	2.6 to 3.15 Ω

- If the measurement is out of specification, replace the supply pump.



#582 Inspection of injector magnetic valve

- Measure the resistance between terminals 1 and 2.

Standard value (at 20°C {68°F})	0.255 ± 0.04 Ω

- If the measurement is out of specification, replace the injector.
- If an injector is replaced with a new one, the injector correction data must be written in the engine electronic control unit.
- For storing of data in the engine electronic control unit, contact your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.

INSTALLED LOCATIONS OF PARTS 13EB-18

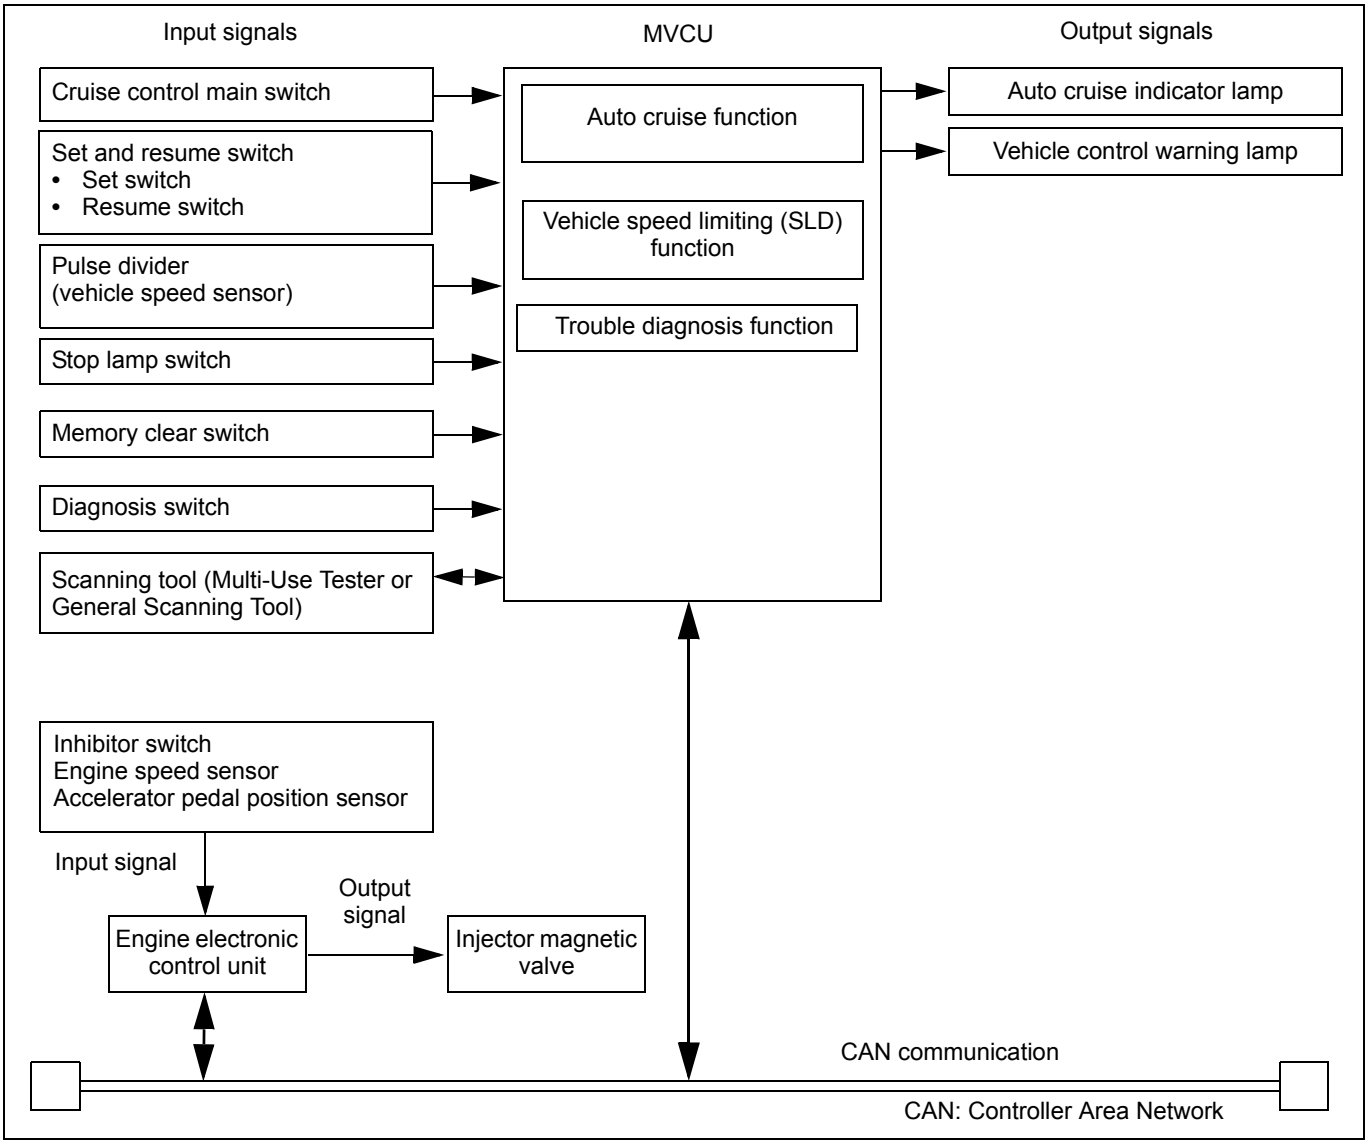
ELECTRIC CIRCUIT DIAGRAM 13EB-22

1. General Description

- The MVCU (Multi function Vehicle Control Unit) is an integrated electronic control unit which has the following functions:
  - Auto cruise function
  - Vehicle speed limiting (SLD) function <Configurable for vehicles with automatic transmission (except Crew-cab models)>
- For these functions, MVCU receives the sensor and switch information from other ECUs via CAN communication system.
- In the auto cruise function, the target vehicle speed is set using the main switch, set switch and resume switch, and the MVCU maintains the set speed by controlling the engine.
- The vehicle speed limiting (SLD) function is designed to send output signals to the engine ECU to restrict the maximum vehicle speed to a preset speed limit regardless of the accelerator pedal operation when the vehicle speed reaches the speed limit on flat or uphill road.
  This vehicle speed limiting (SLD) function is inactive in the initial setting of MVCU. To activate this, consult your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.
- The MVCU also has the self-diagnosis function to diagnose major components and warns the driver if any abnormality is found.

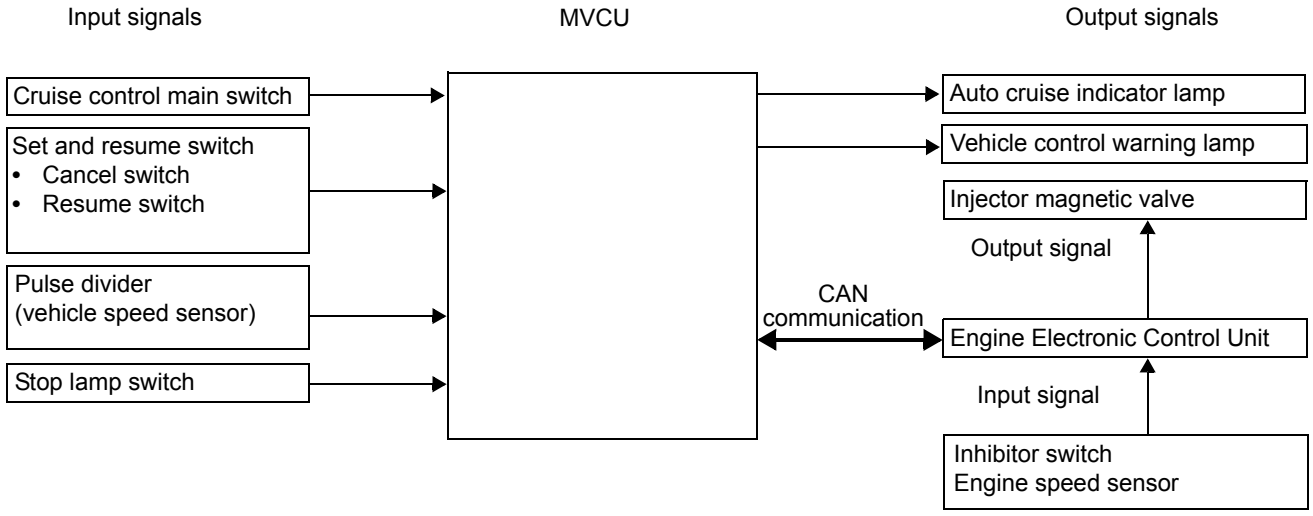
2. Electronic Control System

2.1 System block diagram



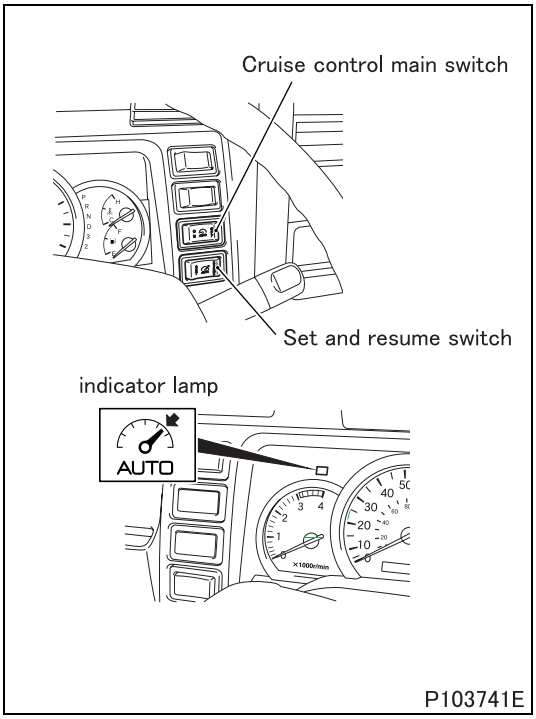
Part name	Function/operation
Cruise control main switch	ON-OFF control of auto cruise system
Set switch	Selection and change of desired cruising speed
Resume switch	Resumption and change of canceled cruising speed
Pulse divider (vehicle speed sensor)	Detection of vehicle speed
Stop lamp switch	Detection of brake pedal depression (lamp lit on pedal being pressed)
Memory clear switch	Clearing of existing diagnosis code, output of earlier diagnosis codes
Diagnosis switch	Output of diagnosis codes
Scanning tool (Multi-Use Tester or General Scanning Tool)	Communication between scanning tool (Multi-Use Tester or General Scanning Tool) and MVCU
Auto cruise indicator lamp	Indication of system in operation
Vehicle control warning lamp	Indication of system failure
CAN communication (engine electronic control unit)	MVCU outputs recognized vehicle data on CAN so that engine electronic control unit receives necessary data for control. Engine electronic control unit outputs necessary signals to MVCU for appropriate control of individual systems.

2.2 Auto cruise function



- In the auto cruise function, the target vehicle speed is set using the main switch, set switch and resume switch, and the MVCU maintains the set speed by controlling the engine.

(1) Setting the auto cruise function



- The operation of the auto cruise function using the set and resume switch is as follows:

(1.1) Setting condition

- To activate the auto cruise function, the following condisitons should be met:
  - Shift lever is in 4th or higher gear position.
  - Vehicle speed is increased to approx. 40 km/h {25 MPH} or higher.
  - The cruise control main switch is in ON position.
  - The brake pedals are released.

(1.2) Set switch ("SET" side of the set and resume switch)

- This switch is used to set or change the target vehicle speed.

Setting the vehicle speed

- Accelerate to a desired speed using the accelerator pedal.
- In this condition, press and release the set switch. The target vehicle speed is set when the switch is released and the auto cruise indicator lamp illuminates.

Lowering the set speed

- During auto cruise driving, pressing the set switch decelerates the vehicle speed. Press the set switch to lower the vehicle speed and, when the speed lowers to a desired speed, release the set switch. A new target vehicle speed is set at that moment.

Raising the set speed

- Press the accelerator pedal and raise the vehicle speed. When the desired speed is reached, press and release the set switch. A new target vehicle speed is set at that moment.

(1.3) Resume switch ("RESUME" side of the set and resume switch)

- This switch is used to resume the auto cruise control when the control is temporarily disengaged or to change the target vehicle speed.

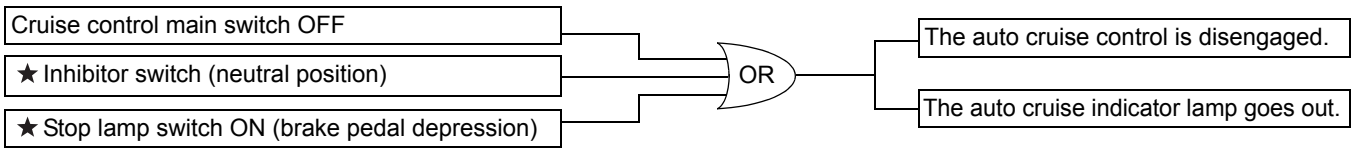
Resuming the auto cruise control (target speed)

- During auto cruise driving when the control has temporarily disengaged due to braking or other reason, press and release the resume switch. The auto cruise control is reengaged and it regulates the vehicle speed to a former target speed.

Raising the set speed

- During auto cruise driving, pressing the resume switch accelerates the vehicle speed. Press the resume switch to raise the vehicle speed and, when the speed rises to a desired speed, release the resume switch. A new target vehicle speed is set at that moment.

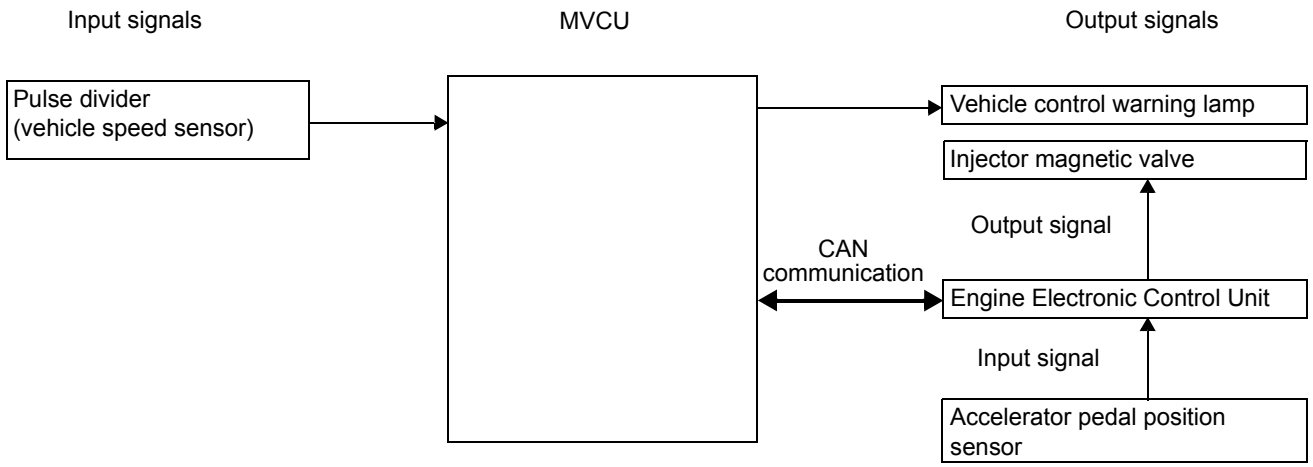
(2) Disengaging the auto cruise control



The condition marked ★ disengages the auto cruise control temporarily.

2.3 Vehicle speed limiting (SLD) function

- This vehicle speed limiting (SLD) function is inactive in the initial setting of MVCU.
- To activate this function, ask your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.



- The vehicle speed limiting (SLD) function is designed to send output signals to the engine ECU to restrict the maximum vehicle speed to a preset speed limit regardless of the accelerator pedal operation when the vehicle speed reaches the speed limit on flat or uphill road.

2.4 Trouble diagnosis function

- The system constantly performs trouble diagnosis to determine if various sensors, etc. malfunction when the starter switch is ON. When a failure is detected, trouble information is indicated on the meter cluster to inform the driver to that effect. At the same time, the location of the trouble is stored in memory as a diagnosis code to start restricted in-trouble control.
- While in trouble, the system's control functions are restricted to ensure safety of the vehicle and its driver. Diagnosis codes stored in memory can be retrieved on the Multi-Use Tester or through blinking warning lamp.
- Diagnosis codes are different in kind between the Multi-Use Tester and blinking warning lamp.

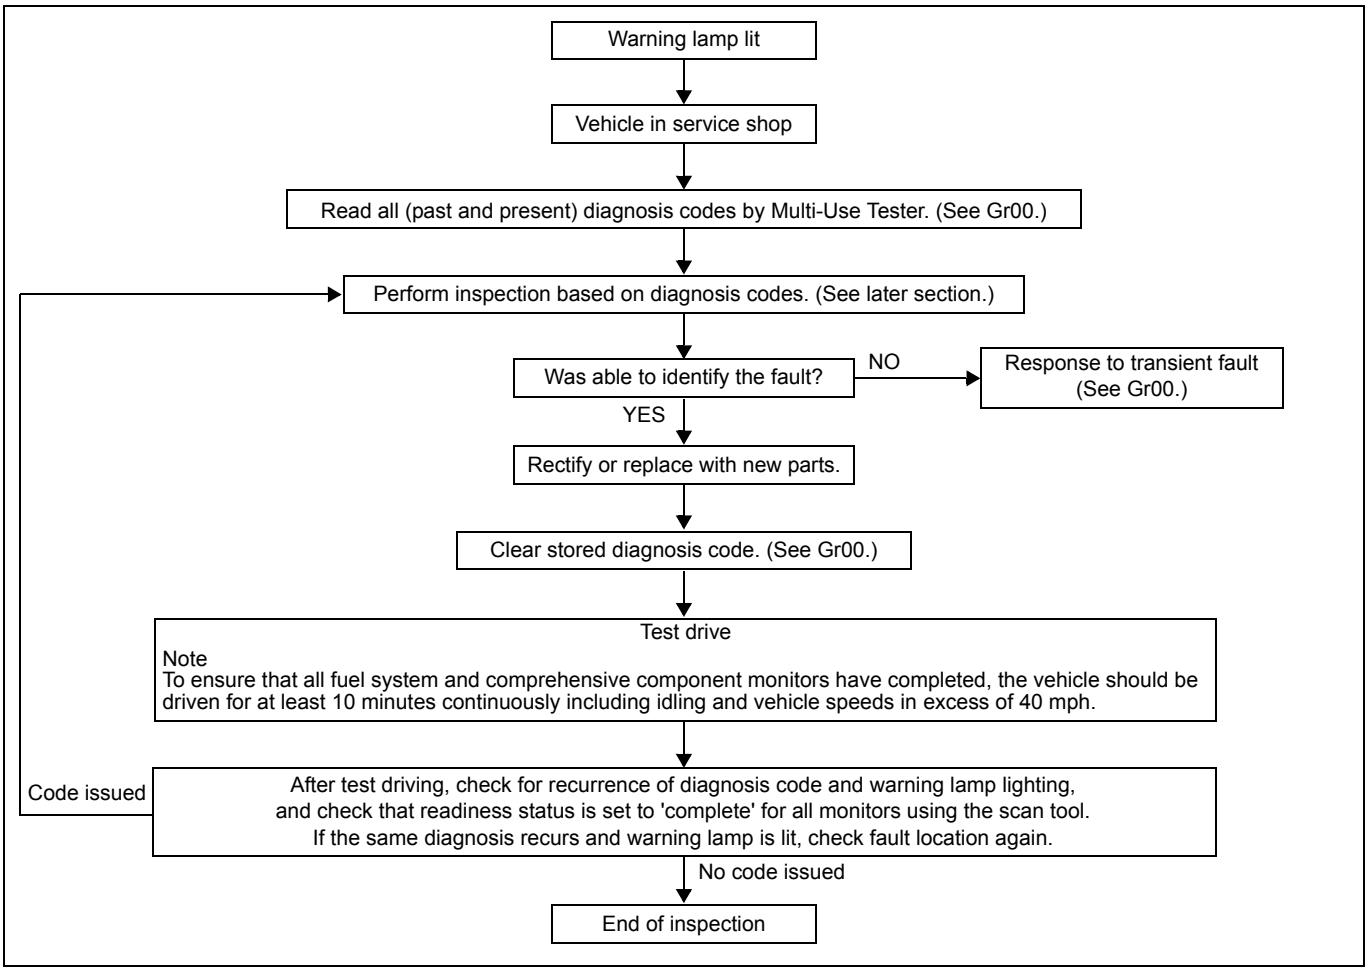
1. Diagnosis Procedure

- Perform the inspection in accordance with the following flowchart.



2. Diagnostic Precautions

- Before measuring voltage, check the battery for charged condition and specific gravity. If system inspection is performed with the battery uncharged or reduced in specific gravity, accurate measurements cannot be achieved.
- Before disconnecting battery cables, harnesses and connectors, set the starter switch to LOCK or OFF, then allow at least 20 seconds.
- To avoid having electrical parts damaged, set the starter switch and lighting switch to LOCK or OFF before reconnecting battery cables, harnesses and connectors.
- When performing measurement with the tester, handle the test bar carefully so that it does not damage internal circuit and other electrical parts of the electronic control unit to result in a short-circuit failure between terminals in connector or between connector and car body.
- Resistance is affected by temperature. Determine the necessity of resistance measurement following given temperature specification as a guide. Otherwise, use normal temperature (10 to 35°C {50 to 95°F}) as the measuring condition.
- If the MVCU is replaced with a new one, some data must be registered in the new MVCU for proper multifunction vehicle control. This also applied to the case when replacing the MVCU with the one that has been used in other vehicle. (See “6. Works Required When Replacing the Multifunction Vehicle Control Unit (MVCU)”.)

3. Inspection Based on Diagnosis Codes

3.1 List of diagnosis codes

NOTE

- **Diagnosis codes are different in kind between the Multi-Use Tester and blinking warning lamp.**
- **The Multi-Use Tester issues diagnosis codes that tell more in detail.**

Code	Message	Warning lamp blinking
–	OK	01
P0500	Vehicle Speed Sensor	06
P0504	Brake SW	11
P1002	Battery Voltage	02
P1003	Battery Terminal	03
P1004	Main Voltage	04
P1007	MVCU	07
P1008	Vehicle Identification	08
P1009	Non Coding	09
P1016	Cruise Variation Identify	16
U0100	CAN Communication	05
U1013	Engine ECU Cruise Control	13
U1031	Engine ECU Speed Limiting	31

3.2 Diagnosis code generation conditions and inspection items

P0500: Vehicle Speed Sensor (Warning lamp: 06)

Generation condition		Engine speed at 1000 rpm or higher, clutch pedal released, transmission neutral switch in ON position and the vehicle speed at 0.75 km/h {0.47 MPH} or lower.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control and vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Service data	03: Vehicle Speed
	Electronic control unit connector	01: Vehicle speed sensor
	Electrical equipment	#265: Vehicle speed sensor
	Electric circuit diagram	Vehicle sensor system

P0504: Brake SW (warning lamp: 11)

Generation condition		Stop lamp switch (H1, H2) signals are not identical.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control is suspended. • Vehicle speed limiting (SLD) control is continued.
Inspection	Service data	24: Brake SW 1, 25: Brake SW 2
	Electronic control unit connector	02: Stop lamp switch
	Electrical equipment	#042: Stop lamp switch
	Electric circuit diagram	Stop lamp system

P1002: Battery Voltage (Warning lamp: 02)

Generation condition		MVCU power terminal (direct from battery) voltage is lower than 10 V for approx. 10 seconds.
Control effected by electronic control unit		Auto cruise control and vehicle speed limiting (SLD) control is continued.
Inspection	Service data	01: Power Supply Voltage (BATTERY)
	Electric circuit diagram	Power supply system
	Other	• Battery (See Gr54.) • Alternator (See Gr54.)

P1003: Battery Terminal (Warning lamp: 03)

Generation condition		MVCU power terminal (direct from battery) voltage is lower than 4 V for approx. 5 seconds.
Control effected by electronic control unit		Auto cruise control and vehicle speed limiting (SLD) control is continued.
Inspection	Service data	01: Power Supply Voltage (BATTERY)
	Electric circuit diagram	MVCU connector (CY31A) terminal No. 21 and No. 31 system
	Other	Battery (See Gr54.)

P1004: Main Voltage (Warning lamp: 04)

Generation condition		MVCU power terminal (starter switch ON) voltage is lower than 10 V for approx. 10 seconds.
Control effected by electronic control unit		Auto cruise control and vehicle speed limiting (SLD) control is continued.
Inspection	Service data	02: Power Supply Voltage (MAIN)
	Electric circuit diagram	Starter switch (M terminal) system
	Other	• Battery (See Gr54.) • Alternator (See Gr54.)

P1007: MVCU (Warning lamp: 07)

Generation condition		Faulty CPU (processor) in MVCU
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control and vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Other	Malfunction vehicle control unit proper

P1008: Vehicle Identification (Warning lamp: 08)

Generation condition		Identification start condition continued for predetermined time after starting the vehicle identification but the vehicle identification remained unidentified.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control and vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Service data	13: Cruise Variation Number
	Electric circuit diagram	Write data in MVCU. (Refer to “Works Required When Replacing the Multifunction Vehicle Control Unit (MVCU)”.)

P1009: Non Coding (Warning lamp: 09)

Generation condition		Data has not written in MVCU.
Recoverability		System recovers after writing data in MVCU.
Control effected by electronic control unit		• Auto cruise control and vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Other	Write data in MVCU. (Refer to “Works Required When Replacing the Multifunction Vehicle Control Unit (MVCU)”.)

P1016: Cruise Variation Identify (Warning lamp: 16)

Generation condition		The vehicle identification and auto cruise control do not match.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control is suspended. • Vehicle speed limitting (SLD) control is continued.
Inspection	Service data	13: Cruise Variation Number
	Other	Write data in MVCU. (Refer to “Works Required When Replacing the Multifunction Vehicle Control Unit (MVCU)”.)

U0100: CAN Communication (Warning lamp: 05)

Generation condition		No CAN data is received from the engine electronic control unit for approx. 2 seconds.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control and vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Electrical equipment	CAN communication system

U1013: Engine ECU Cruise Control (Warning lamp: 13)

Generation condition		When either condition is met. ① : The vehicle speeds recognized by Multifunction Vehicle Control Unit (MVCU) and by engine electronic control unit do not match for 2 seconds. ② : Faulty auto cruise control function under the engine electronic control unit is noticed through CAN communication.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control is suspended. • Vehicle speed limitting (SLD) control is continued.
Inspection	Electronic control unit connector	01: Vehicle speed sensor
	Electrical equipment	#265: Vehicle speed sensor
	Electric circuit diagram	Engine electronic control unit and Multifunction Vehicle Control Unit (MVCU) CAN communication system
	Other	Engine electronic control unit

U1031: Engine ECU SPEED Limiting (Warning lamp: 31)

Generation condition		When either condition is met. ① : The vehicle speeds recognized by Multifunction Vehicle Control Unit (MVCU) and by engine electronic control unit do not match for 2 seconds. ② : Faulty vehicle speed limiting function under the engine electronic control unit is noticed through CAN communication.
Recoverability		System recovers (power is re-supplied to electronic control unit) if signal becomes normal when starter switch is turned OFF → ON.
Control effected by electronic control unit		• Auto cruise control is continued. • Vehicle speed limiting (SLD) control is suspended. • Occurrence of trouble with vehicle speed limiting function sent through CAN bus.
Inspection	Electronic control unit connector	01: Vehicle speed sensor
	Electrical equipment	#265: Vehicle speed sensor
	Electric circuit diagram	Engine electronic control unit and Multifunction Vehicle Control Unit (MVCU) CAN communication system
	Other	Engine electronic control unit

4. Multi-Use Tester Service Data

NOTE

- **Both service data and actuator test results are indicated at the same time.**

No.	Item	Data	Inspection condition	Criterion for normality
01	Power Supply Voltage (BATTERY)	■■.■■ V	Starter switch in ON position	8 to 16 V
02	Power Supply Voltage (MAIN)	■■.■■ V	Starter switch in ON position	8 to 16 V
03	Vehicle Speed	■■■■.MPH	When driving	Synchronous with speedometer
04	Vehicle Speed (Engine Electronic Control Unit)	■■■■.MPH	When driving	Synchronous with speedometer
05	Accel Pedal Position	■■■.■ %	Released	0%
			Gradually pressed	Gradually rising
			Fully pressed	100%
06	Engine Speed	■■■■.rpm	Racing (with engine running)	Synchronous with tachometer
07	Engine Variation ID	■■■■.	Starter switch in ON position	200: 4M50T7 205: 4M50T8
08	Cruise Control Set Speed	■■■■.MPH	During auto cruise driving on a flat road	Equal to vehicle speed in auto cruise mode
12	Limit Vehicle Speed	■■■■.MPH	Vehicle speed limiting function activates with the accelerator pedal pressed	Around limit speed
13	Cruise Variation Number	1/2/3/4/5/6/7/8/9/10/11/12/NON	Starter switch in ON position	Recongnized as “2” (with auxiliary brake non-linked cruise function) through the information record feature of MVCU
21	Neutral SW	Neutral/shift	Transmission in neutral	Neutral
			Transmission in other gear than neutral	Shift
24	Brake SW 1	ON/OFF	Brake pedal pressed	ON
			Brake pedal released	OFF

No.	Item	Data	Inspection condition	Criterion for normality
41	Cruise Lamp	ON/OFF	Auto cruise mode	ON
			Normal driving	OFF
			[Actuator test] 51: Cruise Lamp ON 52: Cruise Lamp OFF	
43	System Warning Lamp	ON/OFF	Starter switch in ON position (engine not started)	ON for some seconds
			[Actuator test] 55: System Warning Lamp ON 56: System Warning Lamp OFF	

5. Actuator Tests Performed Using Multi-Use Tester

NOTE

- **Both service data and actuator test results are indicated at the same time.**

No.	Item	Description	Check method
51	Cruise Lamp ON	Auto cruise indicator lamp drive signal	Lighting status of auto cruise indicator lamp [Service data] 41: Cruise Lamp
52	Cruise Lamp OFF		
55	System Warning Lamp ON	Vehicle control warning lamp drive signal	Lighting status of vehicle control warning lamp [Service data] 43: System Warning Lamp
56	System Warning Lamp OFF		

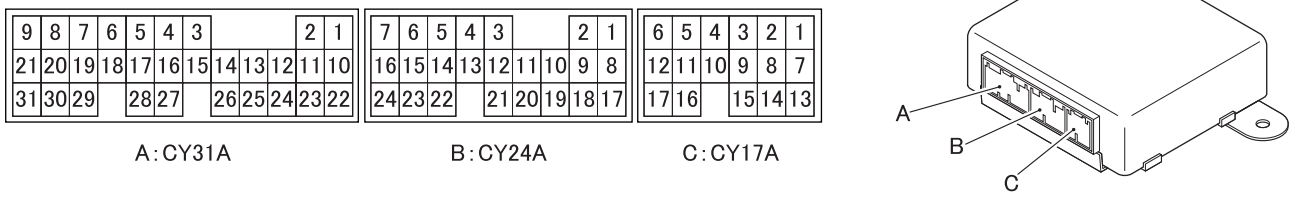
6. Works Required When Replacing the Multifunction Vehicle Control Unit (MVCU)

- When replacing the MVCU with a new one, it is necessary to write the vehicle specification identification data and necessary control parameters for softwares in the new MVCU. Otherwise the system cannot operate correctly, resulting in faulty system.
- For data writing operation, ask your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.

7. Inspections Performed at Electronic Control Unit Connectors

- These inspections aid troubleshooting by enabling you to check whether electronic control unit signals are being correctly transmitted via the vehicle harness and connectors.
  The white-on-black numbers (01, 02 and so on) correspond to the similarly printed reference numbers in section "**3. Inspection Based on Diagnosis Codes**".

7.1 Electronic control unit connector terminal arrangement



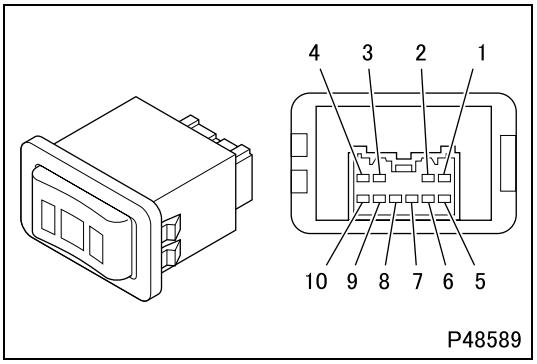
P101774

7.2 Inspection procedure

CAUTION ⚠

- **Depending on check items, checking is performed with connector disconnected or left connected.**
- **Be sure to not touch any other connector terminal than involved in the check. Use extra care so that connector terminals are not shorted by the tester.**

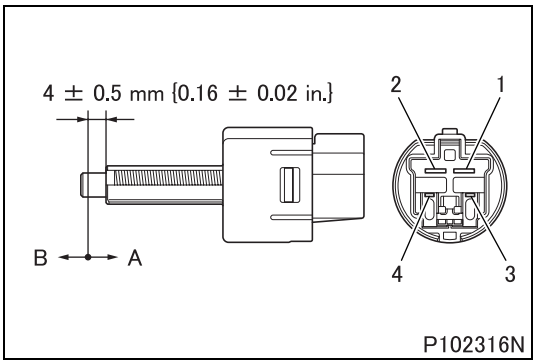
Check item	Check method
01 Vehicle speed sensor signal voltage	[Conditions] • Starter switch is in ON position. • Vehicle-side harness is left connected (checked from behind the connector.) • Wheels are slowly rotated using chassis dynamo or the like. [Criteria] Between terminals (+) - (–): A23-chassis grounding • High pulse voltage: Approx. 8 ± 1 V • Low pulse voltage: 0.5 V or less
02 Stop lamp switch continuity	<Switch (H1)> [Conditions] • Starter switch in ON position. • Cruise control main switch in ON position. • Connector disconnected; check at vehicle-side connector [Criteria] Between terminals: B12-chassis grounding • When brake pedal pressed: Continuity established • When brake pedal released: No continuity <Switch (H2)> [Conditions] • Starter switch in OFF position. • Connector disconnected; check at vehicle-side connector [Criteria] Between terminals: B13-chassis grounding • When brake pedal pressed: Continuity established • When brake pedal released: No continuity



#007 Cruise control main switch inspection

Switch position	Terminal continuity	Operational illumination	Night illumination
ON	1 - 7, 5 - 6	(+) 9 - 3 (–)	(+) 2 - 3 (–)
N (Neutral)	5 - 6	–	
OFF	–	–	

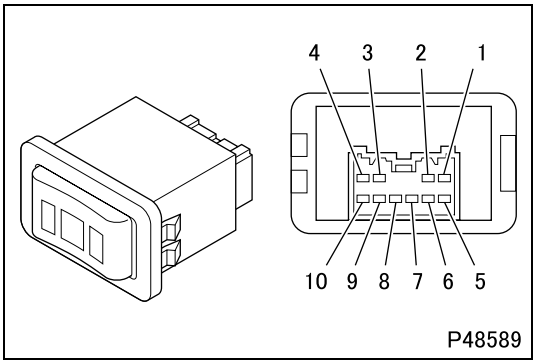
- Replace the switch if found abnormality.



#042 Stop lamp switch

Switch position	Terminal continuity
A	3 - 4
B	1 - 2

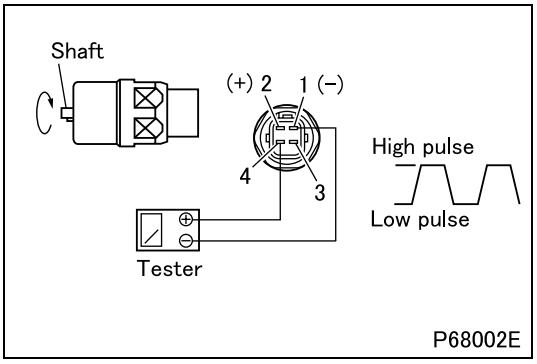
- Replace the switch if found abnormality.



#099 Set and resume switch inspection

Switch position	Terminal continuity	Night illumination
SET	1 - 7	(+) 2 - 3 (–)
N (Neutral)	1 - 8	
RESUME	–	

- Replace the switch if found abnormality.



#265 Vehicle speed sensor inspection

- Slowly rotate the shaft of the vehicle speed sensor with battery voltage applied between terminals 1 and 2 of the sensor.
- Measure maximum voltage (high pulse voltage) and minimum voltage (low pulse voltage) appearing between terminals 1 and 4 of the sensor.

Standard value	Low pulse voltage	0.5 V or less
	High pulse voltage	8 ± 1 V

- If the measurements deviate from the specified standard values, replace the sensor.

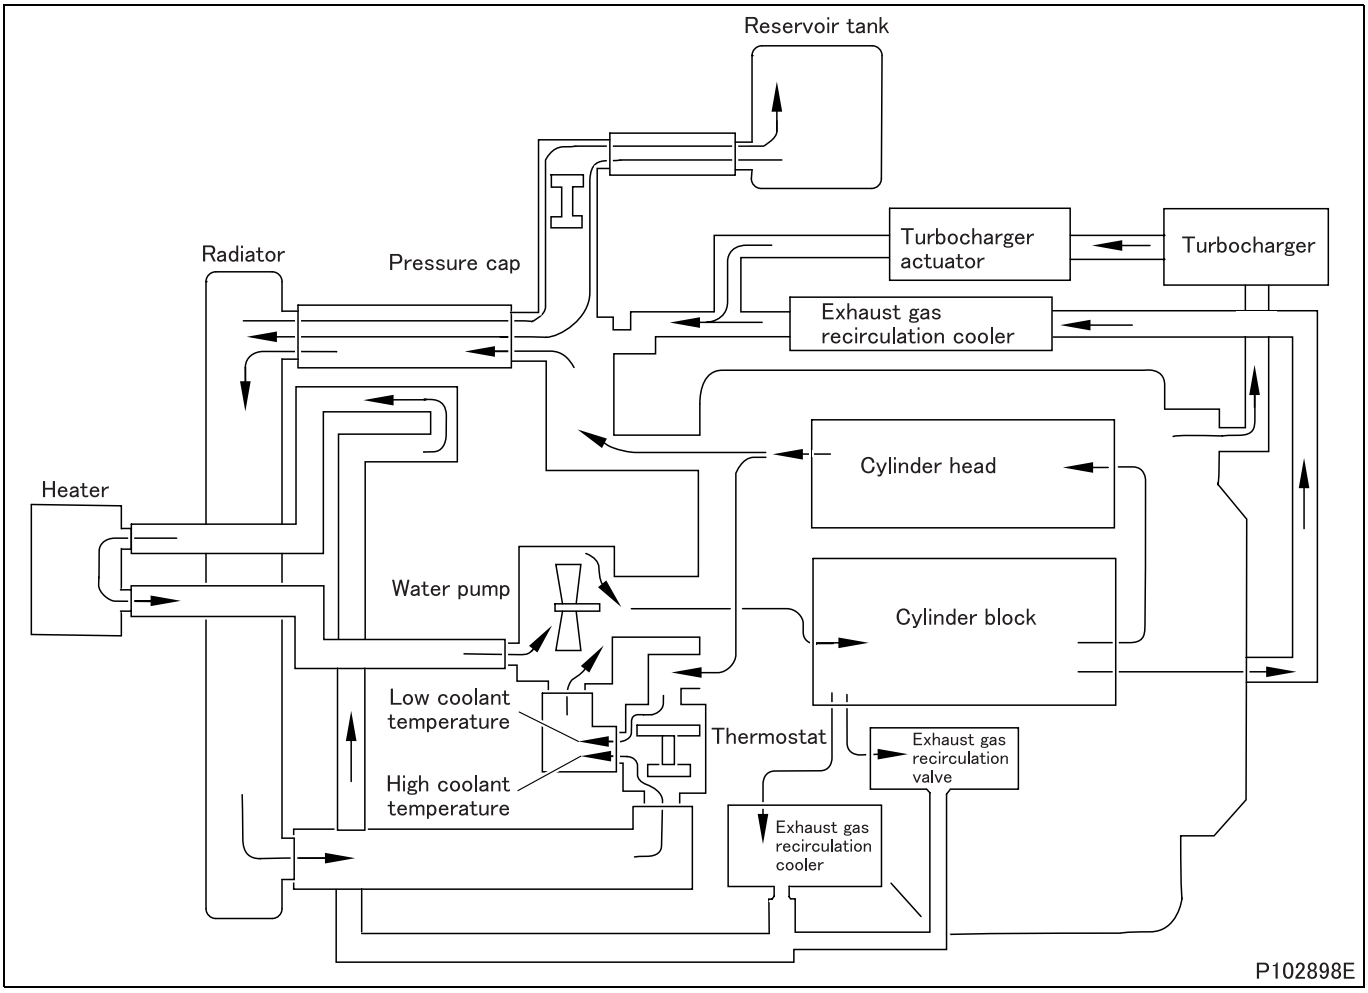
SPECIFICATIONS

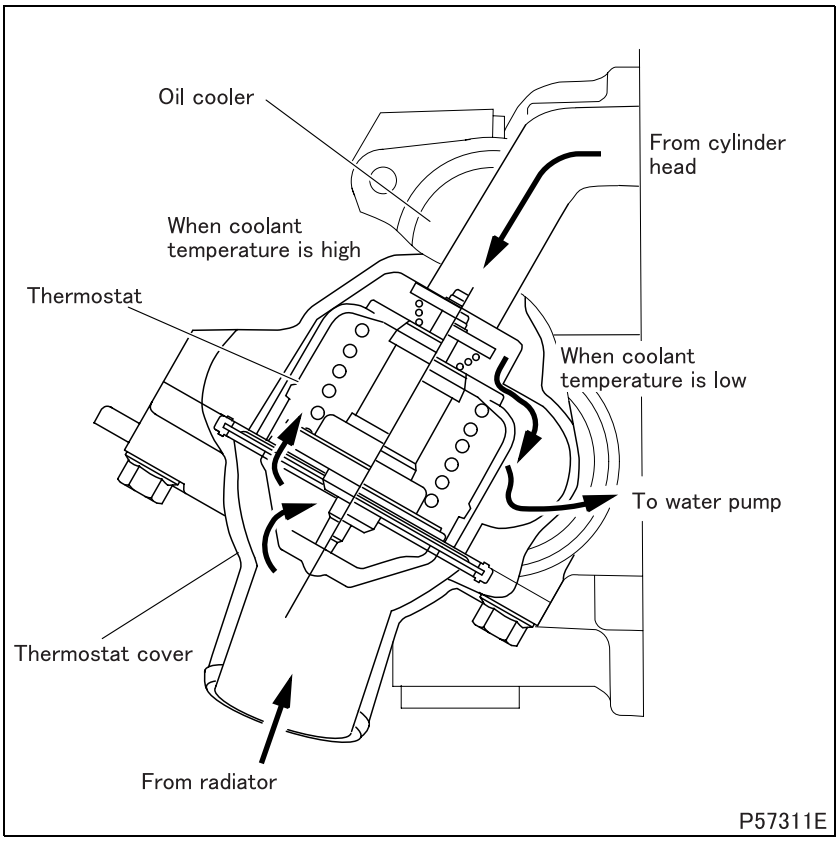
Item	Specifications
Cooling system	Forced water circulation system
Water pump	Belt-driven involute type
Thermostat	Wax pellet, bottom bypass type (with jiggle valve)
Automatic cooling fan coupling	Continuous control type
Radiator	Tube and corrugated fin type
Coolant capacity L {qts}	16.0 {17}

M E M O

1. Cooling System (Flow of Coolant)

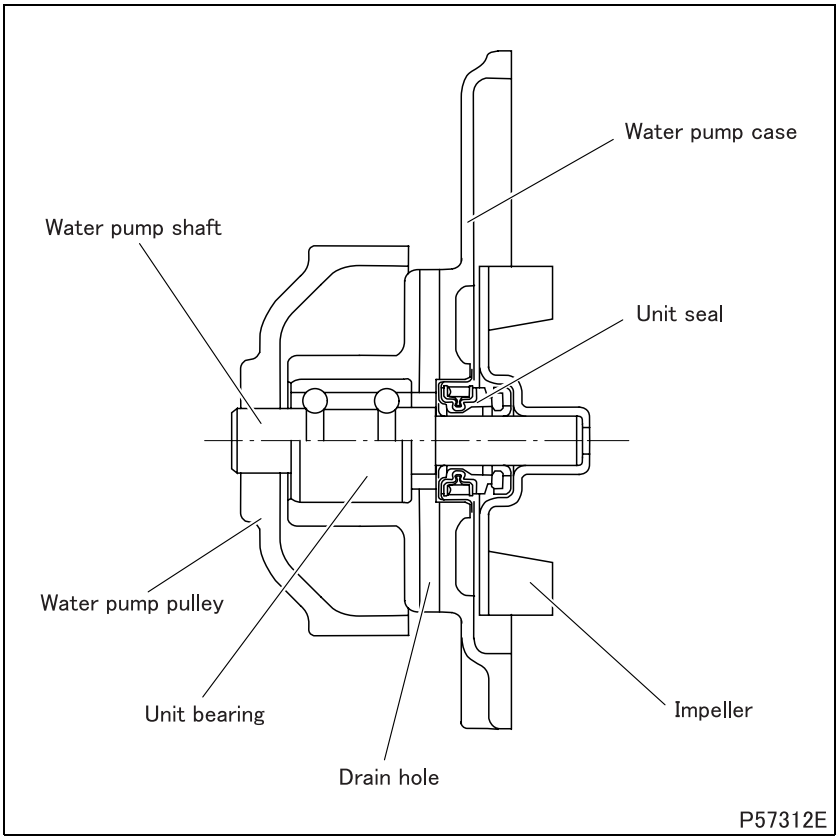


2. Thermostat



- It is a bottom bypass type that uses a wax-filled pellet as its flow-regulating element. When the wax is heated, it melts from solid to liquid, changing its total volume. This allows the valve to open or close in accordance with the coolant temperature, regulating and adjusting the flow of coolant to the radiator and to the cylinder head (bypassing the radiator).

3. Water Pump



- The water pump has a drain hole to prevent coolant from entering the unit bearing in the case of defect of the unit seal.

Possible causes \ Symptoms		Overheating (poor cooling)	Overcooling	Abnormal noise	Excessive coolant loss	Reference Gr
Belt	Loose or damaged	O		O		
	Excessive tension			O		
	Oil on belt	O				
Water pump	Incorrectly mounted water pump	O			O	
	Defective gasket	O			O	
	Defective unit bearing	O		O		
	Defective impeller	O				
	Defective unit seal	O			O	
	Too loose fit of unit bearing on flange and impeller	O		O		
Thermostat	Incorrectly mounted case	O			O	
	Valve opening temperature too high (valve remains closed)	O				
	Valve opening temperature too low (valve remains open)		O			
Radiator	Clogged core	O				
	Cracked core and/or separation in welds	O			O	
	Cracks in upper tank and/or lower tank	O			O	
	Poor clinching of upper tank and/or lower tank	O			O	
	Defective packing of upper tank and/or lower tank	O			O	
Automatic cooling fan coupling	Defective bearing	O		O		
	Damaged bimetal	O				
	Contaminated bimetal	O	O			
	Silicon oil leakage	O		O		
Cylinder head	Incorrectly mounted cylinder head	O			O	Gr11
	Defective gasket	O			O	
Oil cooler	Incorrectly mounted oil cooler	O			O	Gr12
	Defective gasket	O			O	
	Leakage from coolant temperature sensor	O			O	
Exhaust gas recirculation system	Poor installation of exhaust gas recirculation cooler bracket	O			O	Gr17
	Poor installation of exhaust gas recirculation cooler	O			O	
	Poor installation of connectors	O			O	
	Poor installation of adapter	O			O	
	Damaged O-rings	O			O	

Possible causes \ Symptoms		Overheating (poor cooling)	Overcooling	Abnormal noise	Excessive coolant loss	Reference Gr
Breather cover	Poor installation of breather cover	O			O	Gr17
	Poor installation of gaskets	O			O	
	Damaged O-rings	O			O	
Poorly airtight pressure cap		O				
Insufficient coolant amount		O				
Clogged or scaled coolant passage		O				
Incorrectly connected hoses		O			O	
Poor installation of pipes		O			O	
Excessively low exterior temperature			O			

ON-VEHICLE INSPECTION AND ADJUSTMENT

1. Inspection and Adjustment of Belt Tension

CAUTION ⚠

- **Make sure that there is no oil or grease on the belts. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**

Service standards (Unit: mm {in.})

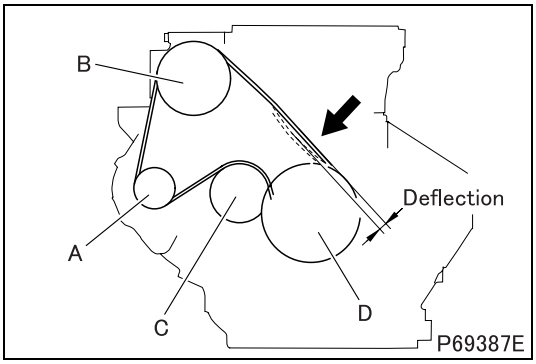
Location	Maintenance item					Standard value	Limit	Remedy
–	Belt tension	40 A, 50 A alternator	When new	When belt tension gauge is used	Deflection	4.5 to 5.5 {0.18 to 0.22}	–	Adjust
				When sonic belt tension gauge is used	Tension	715 to 951 N	–	
			When reused	When belt tension gauge is used	Deflection	6.5 to 7.5 {0.26 to 0.30}	–	
				When sonic belt tension gauge is used	Tension	470 to 580 N	–	
		80 A alternator	When new	When belt tension gauge is used	Deflection	4.5 to 5.5 {0.18 to 0.22}	–	Adjust
				When sonic belt tension gauge is used	Tension	774 to 1029 N	–	
			When reused	When belt tension gauge is used	Deflection	6 to 7 {0.24 to 0.28}	–	
				When sonic belt tension gauge is used	Tension	519 to 666 N	–	

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Nut (for alternator adjustment)	50 {37, 5.1}	–
–	Bolt (for alternator retention)	90 {66, 9.2}	–

Special tools

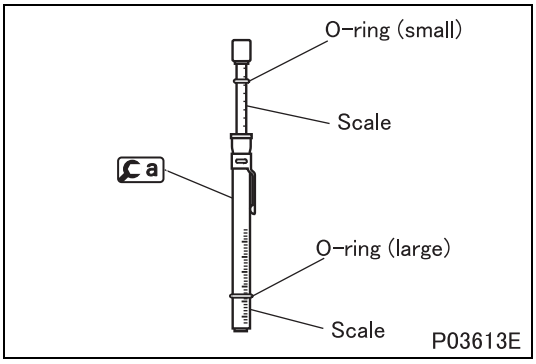
Mark	Tool name and shape	Part No.	Application
a	Belt tension gauge P03612	MH062345	Measurement of tension of belt
b	Sonic belt tension gauge  92054	ME357715	



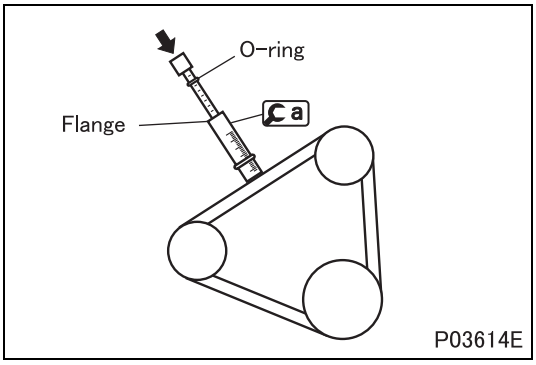
[Inspection]

1.1 Measurement by belt tension gauge

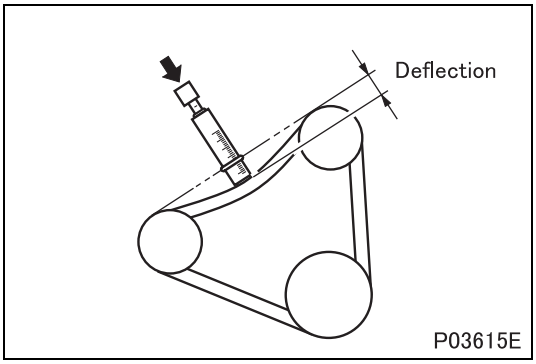
- Press each belt at a central portion between pulleys with a force of approximately 98 N {72 lbs, 10 kgf} as shown in the illustration and measure the amount of deflection of the belt.
  A: Alternator pulley
  B: Air conditioner compressor pulley
  C: Water pump pulley
  D: Fan pulley



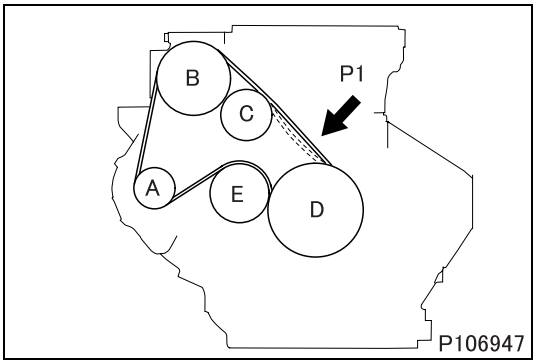
- Place the small O-ring on a at the scale mark corresponding to 98 N {72 lbs, 10 kgf} (press force).
- Place the large O-ring on a at the scale mark corresponding to the maximum permissible deflection value specified for the belt.



- Place a at a central portion between pulleys of the belt and push the handle (indicated by the arrow in the illustration) until the O-ring touches the flange.



- Measure the amount of deflection of the belt.
- If the measured value deviates from the standard value range, adjust the tension of the belt as follows.



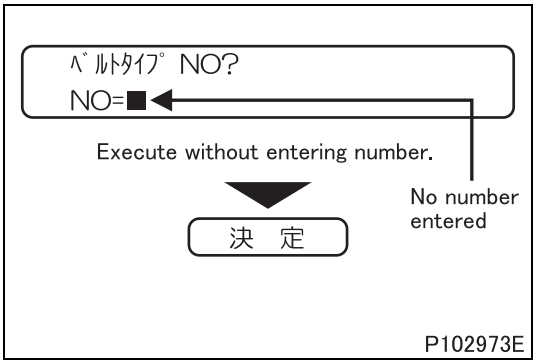
1.2 Measurement using sonic belt tension gauge

- Direct the sensor microphone of [b] to the position shown in the drawing and measure the belt tension.
  - A: Alternator pulley
  - B: Compressor pulley (air conditioner)
  - C: Tension pulley
  - D: Fan pulley
  - E: Water pump pulley
  - P1: Measuring point on the belt

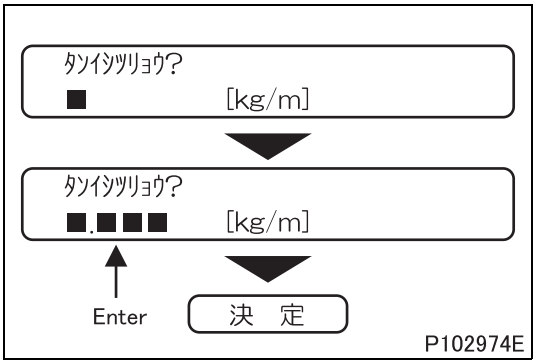
CAUTION ⚠

- **For the operation of the sonic belt tension gauge, refer to the instruction manual of the sonic belt tension gauge.**
- **If the surface temperature of the belt is high, the tension becomes higher. For the correct measurement, measure the tension with the belt surface temperature being similar to the room temperature.**

- Turn on [b] and set the sensitivity of its sensor microphone.
  ON (低: means “low”): Measuring in noisy environment, or outdoors in heavy wind
  ON (高: means “high”): Measuring in silent environment, or measuring a hard-to-vibrate belt

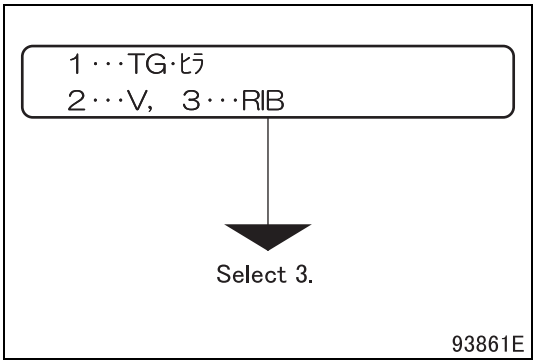


- Press “決定 (means “execute”)” key with no belt type number entered.

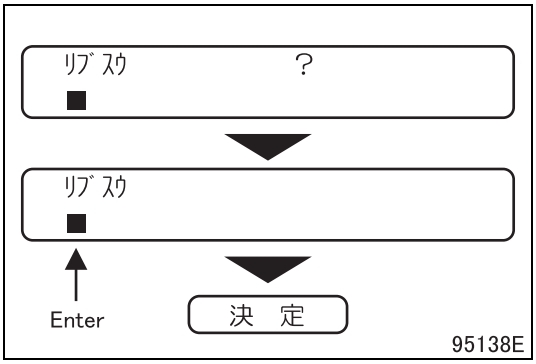


- Enter the unit mass of the belt and push “決定 (means “execute”)”.

Measuring point on the belt	Unit mass of the belt
P1	0.016 kg/m

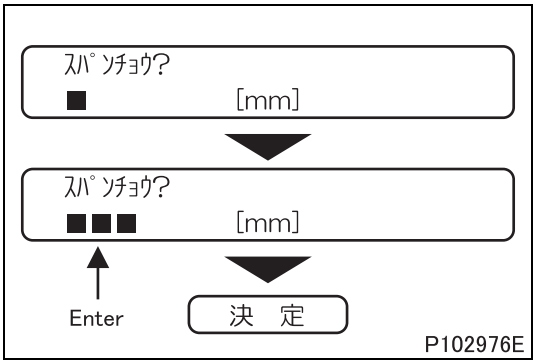


- Select the type of the belt. (Select “3” for ribbed belt.)



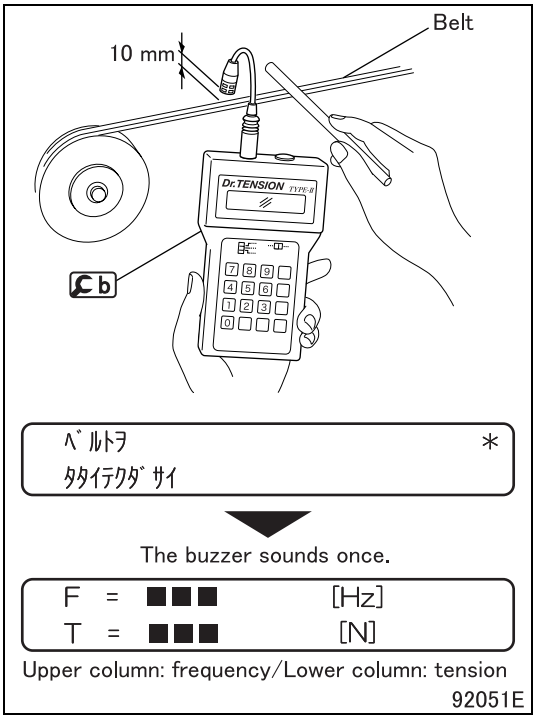
- Enter the number of ribs and push “決定 (means “execute”)”.

Measuring point on the belt	Number of ribs
P1	6

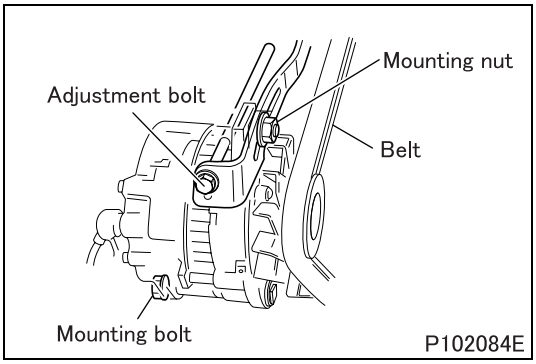


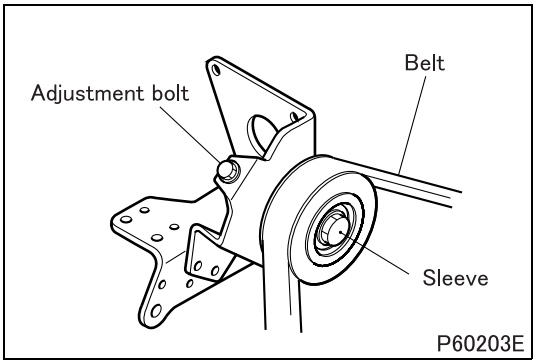
- Enter the length of span and push “決定 (means “execute”)”.

Measuring point on the belt	Length of span
P1	197 mm



- Set the sensor microphone of b approx. 10 mm above the belt, at the middle position between pulleys.
- Tap the belt lightly with a grip of a screwdriver to vibrate the belt.
- Measure the tension a few times and calculate the average value.
- If the average value is out of the standard value, adjust the belt tension.





[Adjustment]

(1) Vehicles with air conditioner

- Loosen the alternator mounting nuts (2 locations) and adjust the tension of the belt by tightening or loosening the adjustment bolt.
- After the adjustment is completed, retighten the mounting nuts firmly.

CAUTION ⚠

- **Excessive tension in the belt may damage not only the belt itself but also the bearings of the related components.**

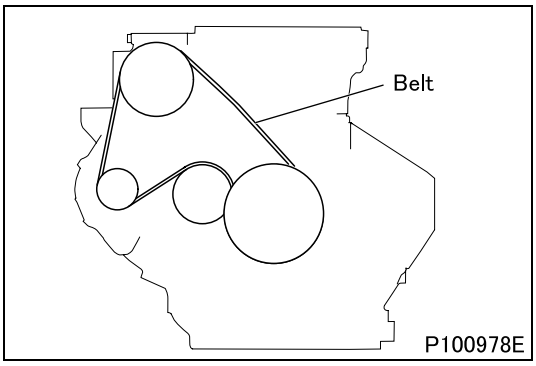
(2) Vehicles without air conditioner

- Loosen the tension pulley mounting sleeve and turn in or out the adjustment bolt to adjust the tension of the belt.
- After the adjustment is completed, retighten the mounting sleeve firmly.

CAUTION ⚠

- **Excessive tension in the belt may damage not only the belt itself but also the bearings of the related components.**

2. Inspection of Cracks or Damage of the Belt



- Visually check the belts for possible cracks and damage.
- If any faults are found, replace the belts.

Belt condition	Remaining service life (reference)
 P69698E	• The driving distance over which the belt can still be used is at least as long as that over which the belt has been used since the vehicle was new or since the belt was replaced (whichever is more recent).
 P69699E	• The driving distance over which the belt can still be used is about half of that over which the belt has been used since the vehicle was new or since the belt was replaced (whichever is more recent).
 P69700E	• The driving distance over which the belt can still be used is about a quarter of that over which the belt has been used since the vehicle was new or since the belt was replaced (whichever is more recent).
 P69701E  P69702E	• The belt has reached the end of its service life and must be replaced.

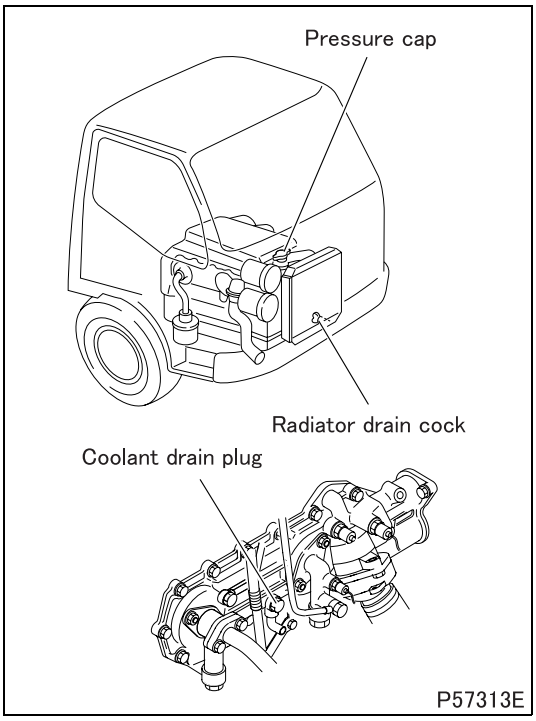
3. Coolant Replacement and Cleaning of Cooling System

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Radiator drain cock	2.5 ± 0.5 {1.8 ± 0.4, 0.25 ± 0.05}	–
–	Water drain plug	24.5 ± 4.9 {18 ± 3.6, 2.5 ± 0.5}	–

- Using the radiator for extended periods of time without cleaning can increase chance of rust and scale formation, which may cause engine overheating. The cooling system must be cleaned periodically.
- Coolants containing FUSO DIESEL LONGLIFE COOLANT require replacement every two years. This replacement interval can be extended to a maximum of six years by adding FUSO DIESEL LONGLIFE COOLANT ADDITIVE to the coolant once every year for the four years following the first two-year limit. For instructions on the use of this product, refer to the Owner's Handbook.

3.1 Draining of coolant



- Before draining the coolant, loosen the pressure cap to reduce the pressure in the cooling system. Remember to drain the coolant out of the reservoir tank as well.

WARNING ⚠

- **Drain the coolant only after it has cooled sufficiently to avoid getting scalded.**
- **Opening the pressure cap while the coolant temperature is still high can cause hot coolant to spray out. Cover the pressure cap with a cloth, and loosen it slowly to let the pressure out before opening it fully.**

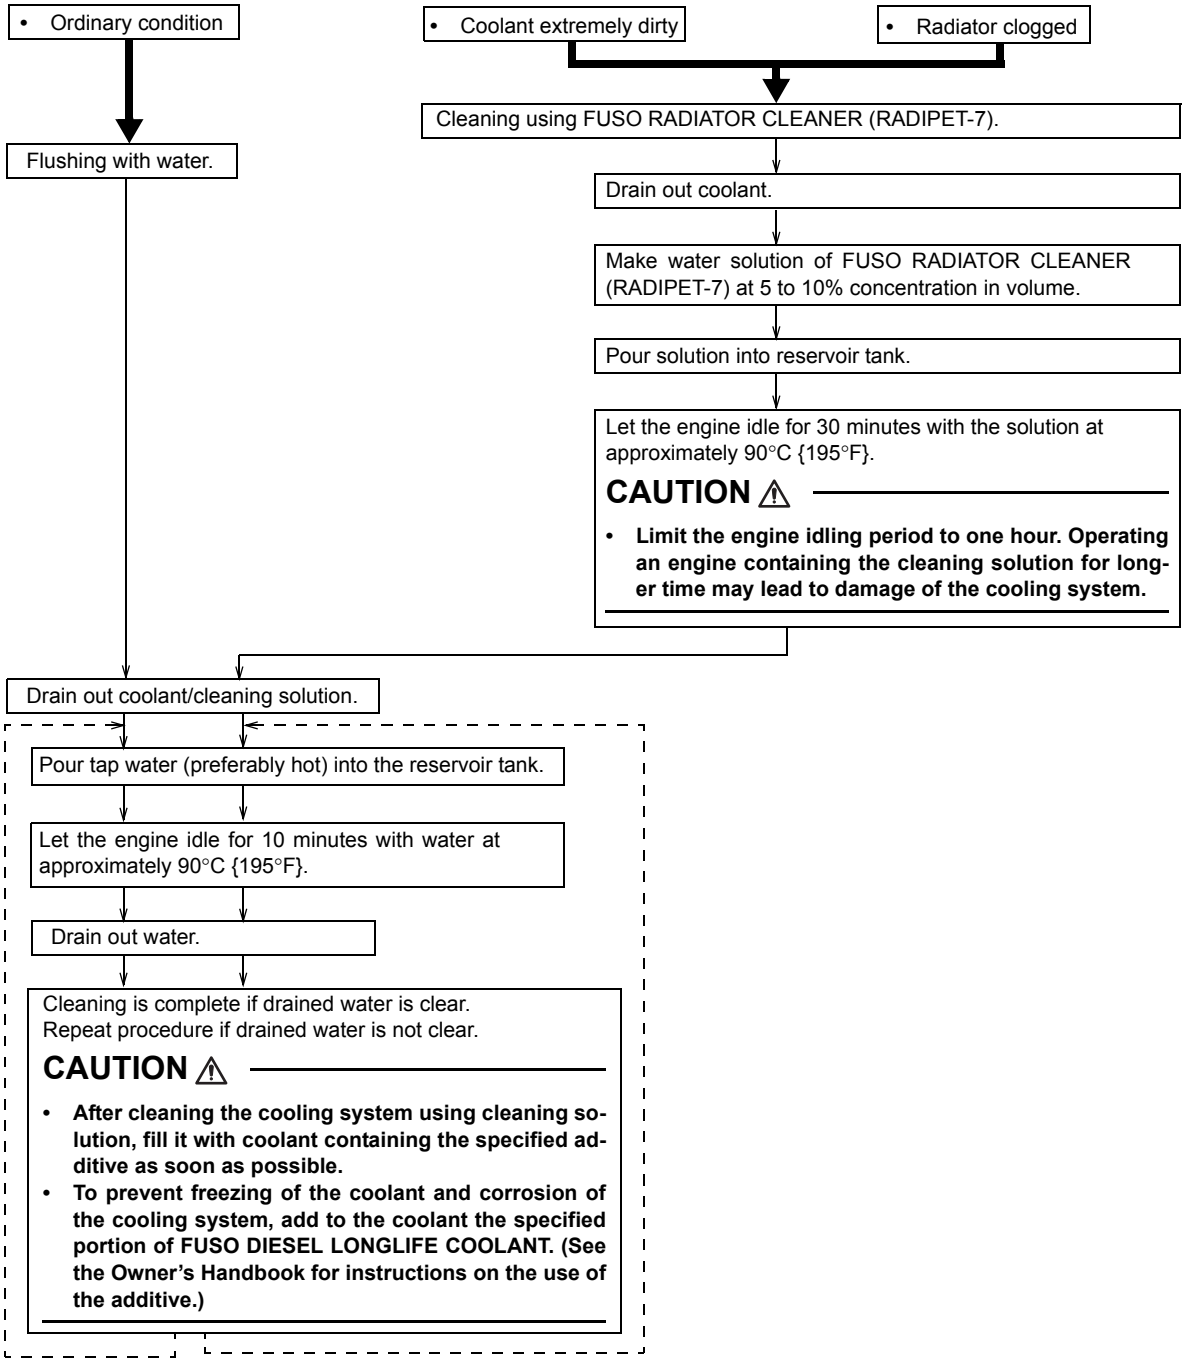
3.2 Cleaning procedure

CAUTION ⚠

- **Water used for flushing the cooling system must be soft water that has a property meeting the requirements indicated below. Using hard water will cause scale and rust to form in the system.**
  Total hardness ..... 300 ppm or less
  Sulfate SO_4^- ..... 100 ppm or less
  Chloride Cl^- ..... 100 ppm or less
  Total dissolved solids ..... 500 ppm or less
  pH ..... 6 to 8

- Keep the coolant temperature at approximately 90°C {195°F} so that the thermostat valve remains open and the coolant continues to circulate in the radiator.
- For the sake of convenience you can raise the coolant temperature quickly by covering the front of the radiator with corrugated cardboard or something similar.
- In cases where a great amount of rust has accumulated it often happens that as a result of cleaning the radiator starts leaking. Conduct a thorough check for leakage after cleaning.

- Select an appropriate cleaning method according to the condition of the cooling system as shown below.



DANGER ⚠

- **If you accidentally splash FUSO DIESEL LONGLIFE COOLANT, FUSO ANTIFREEZE, or RADIATOR ANTIRUST (RADIPET 9) in your eyes, wash it out immediately with water and seek medical attention.**

WARNING ⚠

- **FUSO DIESEL LONGLIFE COOLANT is flammable. Keep them away from heat and flames.**

4. Air Bleeding of Cooling System

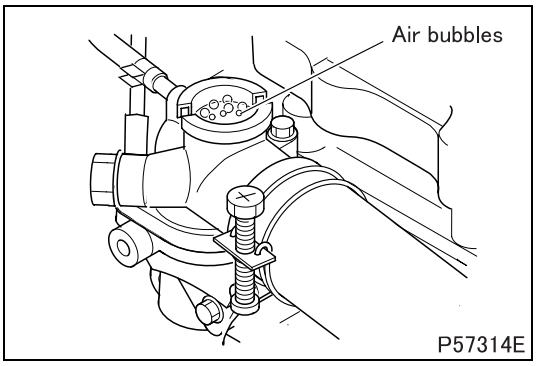
- With the pressure cap removed and the coolant temperature at 90°C {195°F}, let the engine idle in order to bleed air completely out of the cooling system.
- After air bleeding is completed, refill the reservoir tank with coolant as needed.

5. Air/Gas Leakage Test

- Presence of air or exhaust gas in coolant accelerates corrosion of the cooling system components. To prevent this, carry out air/gas leakage tests in accordance with the following procedure.
- Remove the pressure cap.

WARNING ⚠

- **If the engine is hot, boiling coolant may spurt out from the filler port when the pressure cap is loosened. To avoid a scold, make sure to remove the pressure cap only when the coolant is cold.**



- Run the engine until the coolant temperature rises to approximately 90°C {195°F}.
- If air bubbles appear continuously through the filler port, there is air or exhaust gas penetrating into the cooling system.
- Presence of air in coolant can be an indication of loose cylinder head bolts, loose water pump mounting bolts, loose hose connections, and/or a damaged hose.
- Presence of exhaust gas in coolant can be an indication of a damaged cylinder head gasket and/or cracks in the cylinder head.

◆Installation procedure◆

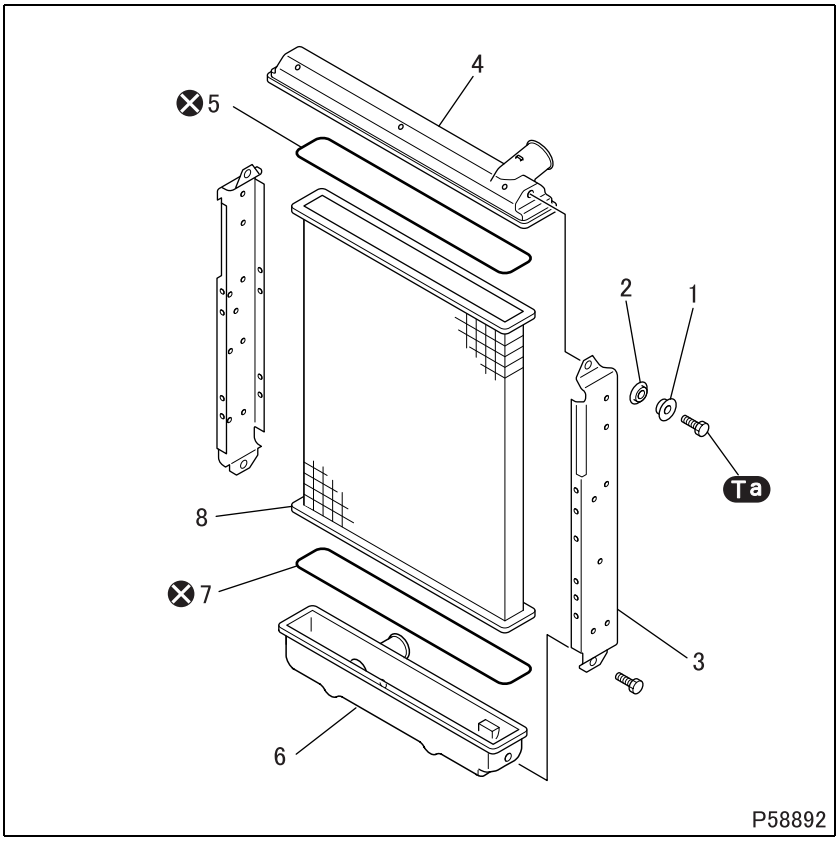
■ Installation: Fan shroud

- Using Ca, adjust the clearance between the fan shroud and cooling fan blades to the dimension shown in the illustration.

RADIATOR, FAN SHROUD

Radiator



● **Disassembly sequence**

1 Pipe
2 Bush
3 Side member
4 Upper tank
5 Packing
6 Lower tank
7 Packing
8 Core

⊗: Non-reusable parts

CAUTION ⚠

- **Do not disassemble the radiator unless defects are evident.**
- **Handle the upper tank and lower tank carefully, as they are made of plastic and may crack under impact.**
- **Check the number of paint marks put near the upper tank and lower tank mounting tabs. The number of paint marks corresponds to the number of times the tabs have been unbent and re-clinched. If the core has already two paint marks, replace it with a new one.**

● **Assembly sequence**

Follow the disassembly sequence in reverse.

Service standards

Location	Maintenance item	Standard value	Limit	Remedy
–	Air leakage from radiator (air pressure 147 kPa {21 psi, 1.47 kgf/cm^2})	0 cm^3 {0 mL}	–	Repair or replace

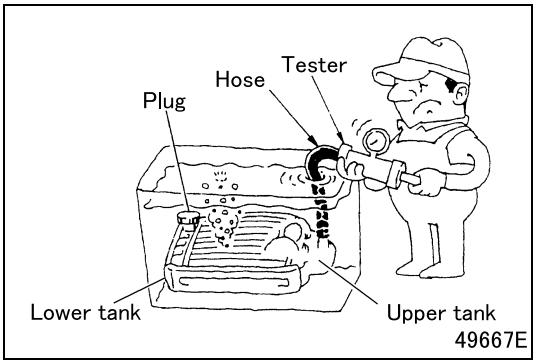
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Bolt (side member mounting)	13 {9.6, 1.3}	–

Special tools

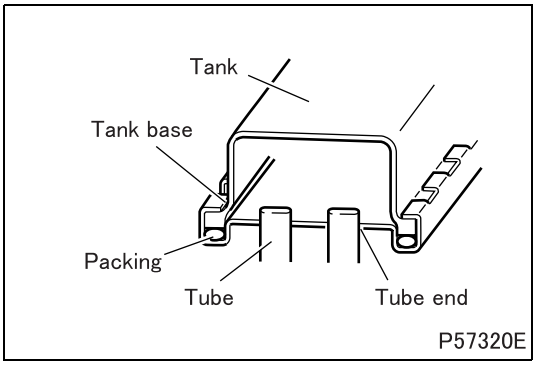
Mark	Tool name and shape	Part No.	Application
a	Overhaul handle  P51240	MH062875	Installation and removal of upper tank and lower tank
b	Claw  P51241	MH062876	
c	Punch assembly  P51242	MH062877	

◆Inspection before removal◆



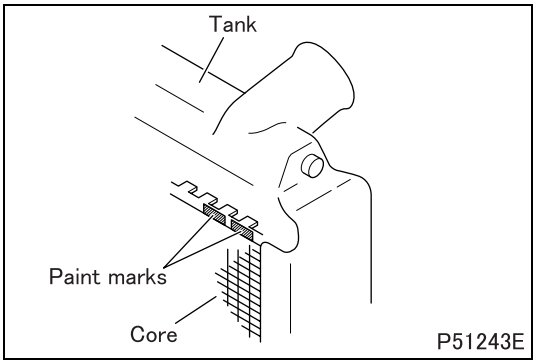
■ **Inspection: Radiator air leakage**

- Connect a hose and radiator cap tester to the upper tank.
- Plug the lower tank and put the entire radiator into a tank filled with water.
- If air leakage is found, repair or replace the radiator.
- Apply a specified air pressure using radiator cap tester, and check for any air leakage.



- Replace the following parts according to the area of leakage.

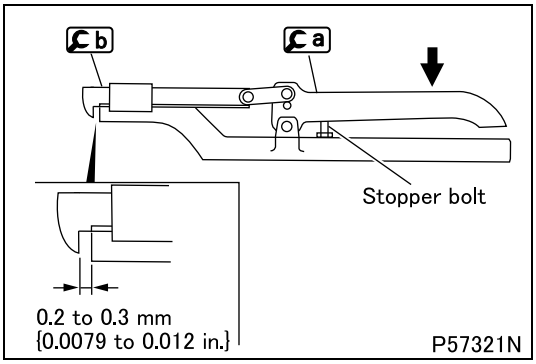
Area of leakage		Cause
Upper tank Lower tank	Tank body	Cracks in tank
	Tank base	Defective tabs Defective packing Cracks in tank
Tube body, tube ends		Cracks in tube



NOTE

- **The core may have paint marks that indicate the number of times the upper tank and lower tank mounting tabs have been unbent and re-clinched. Replace the core if it has already two paint marks.**
- **One paint mark is made every time the tabs are unbent and re-clinched. Upper tank paint marks should be counted separately from lower tank paint marks.**

◆Removal procedure◆

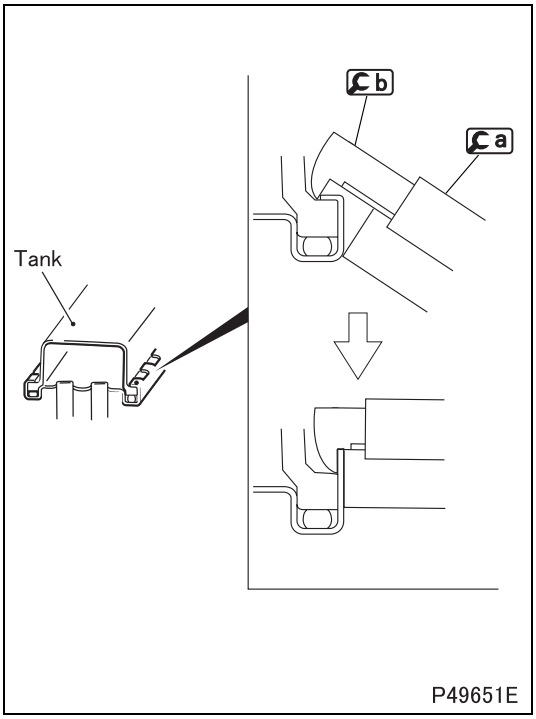


■ Removal: Upper tank and lower tank

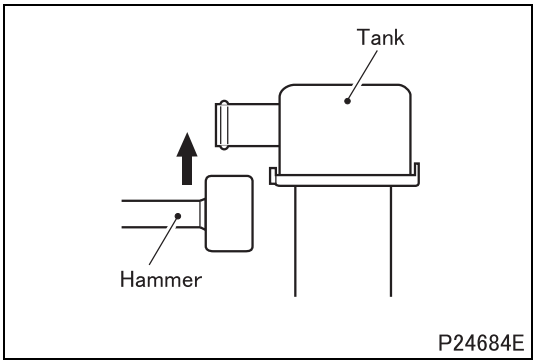
- Attach b onto a.
- Using the stopper bolt on a, adjust the jaw span of b to the dimension indicated in the illustration.

CAUTION ⚠

- **Make sure to adjust the stopper bolt before using the tools. Failure to do so may cause damage to b.**



- Using b, undo the tabs that are holding the tank in place.
- Once each tab is unbent, grip a more tightly to straighten it out completely.
- Undo all the tabs on the entire periphery of the tank, then remove the tank using the inlet hose fitting as a grip.

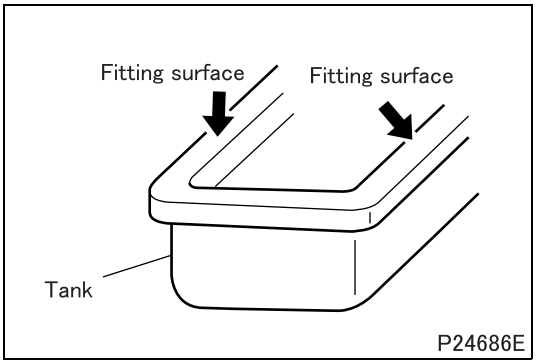


- If the tank does not come off easily, tap it lightly with a soft-face hammer (rubber or plastic hammer) to loosen it.

CAUTION ⚠

- **Handle the tanks carefully, as they are made of plastic and may crack easily under impact.**

◆Inspection procedure◆

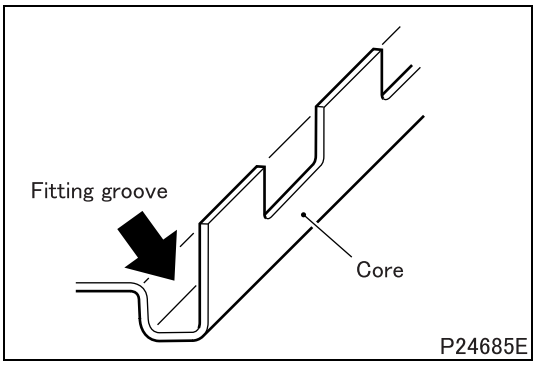


■ Inspection: Core fitting surfaces of tank

- Inspect the core fitting surfaces of the tank for any dirt or damage. If necessary, clean them thoroughly.
- Replace the tank(s) if defective.

CAUTION ⚠

- **Carry out the inspection with your bare hands to avoid putting foreign matter on the fitting surfaces.**

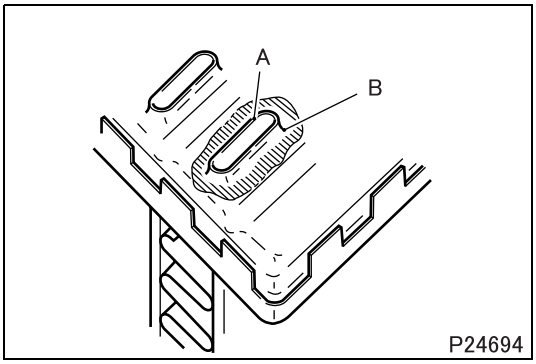


■ Inspection: Tank fitting groove of core

- Check the tank fitting groove of the core for any foreign matter or cracks.
- If foreign matter is found on the groove surfaces, lightly scrub it off with a No.1000 sandpaper taking care not to damage the surfaces, or blow it off with compressed air.
- If a crack is found on the groove surfaces, repair the crack or replace the core.

CAUTION ⚠

- **Installing a packing and tank on the core without removing foreign matter from the groove surfaces can lead to coolant leakage. Make sure to inspect the entire groove surfaces extremely carefully. Even one strand of hair is enough to cause leakage.**

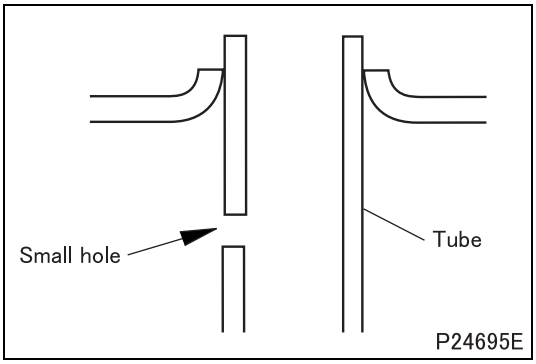


Repair of core

CAUTION ⚠

- **The following core repair procedure involves tungsten inert gas arc welding (TIG arc welding). Only personnel competent for doing this type of welding should carry out the job.**
- **Dry the core completely before performing welding. Welding wet parts could be extremely dangerous.**

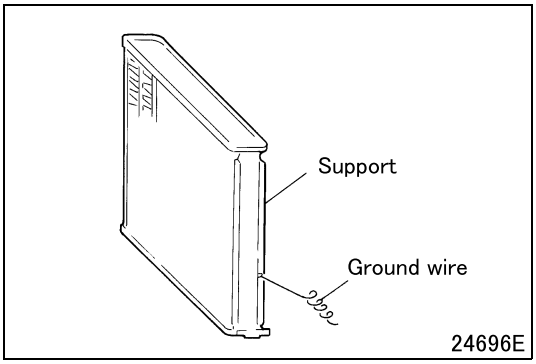
- Scrub both ends A of a leaky tube as well as the surrounding areas B of each end with a stainless wire brush. Continue scrubbing until the aluminum layer becomes exposed.



- Drill a small hole in the tube to let the air out when both ends of the tube are welded closed.

CAUTION ⚠

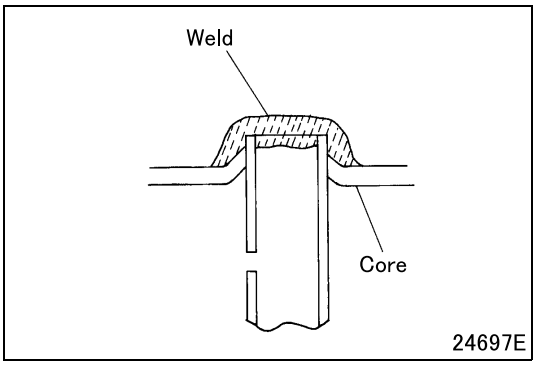
Failure to drill an air release hole in the tube may cause pinholes to form in the welds.



- Connect one of the support edges of the core to ground with a wire.

CAUTION ⚠

- **Inadequate connection of the ground wire can cause a short circuit to a part of the core, which may cause the part to melt.**

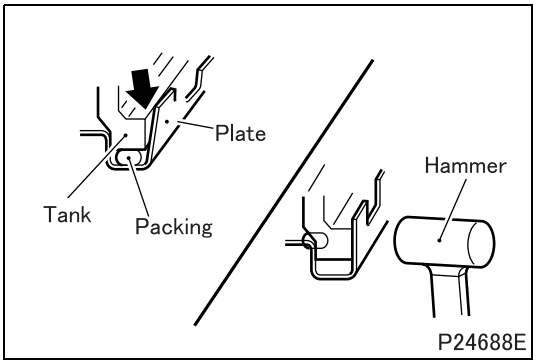


- Close both ends of the tube by TIG arc welding.
  Welding conditions
  - Welding rod: A4043
    (diameter approximately 2 mm {ϕ0.079 in.})
  - Welding current: AC80A
- After the welding is completed, check for the following defects. If any of these defects are spotted, repair the defect or replace the core.
  - Undercuts
  - Cracks in weld bead
  - Cracks in base metal

CAUTION ⚠

- **Make sure that welds are proper. Any defect in welding can lead to recurrence of leakage.**

◆Installation procedure◆

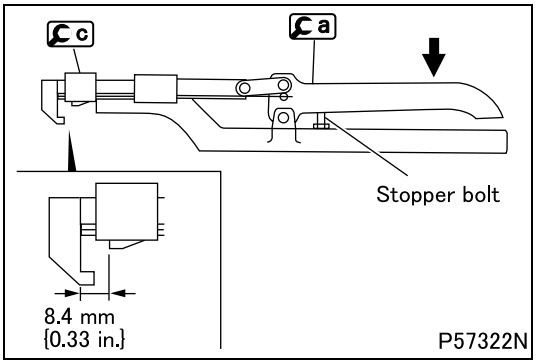


■ Installation: Upper tank and lower tank

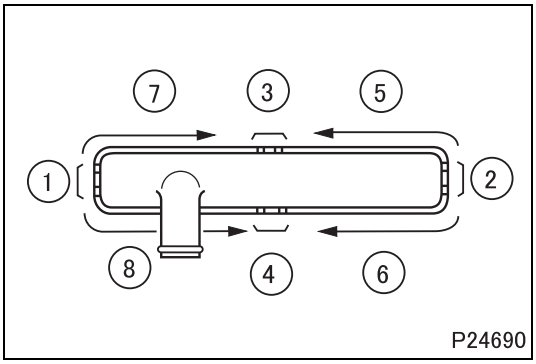
- If there is a gap between the tank and core's tank holding plate when the tank is placed in position, lightly tap the plate with a rubber or plastic hammer to eliminate the gap.

CAUTION ⚠

- **When installing the tank and packing, use your bare hands to avoid putting foreign matter on the parts.**



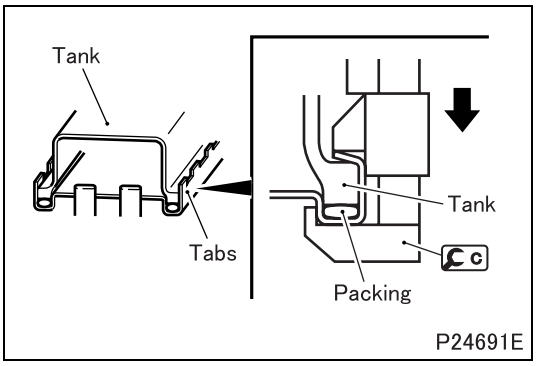
- Attach [c] onto [a].
- Using the stopper bolt on [a], adjust the jaw span of [c] to the dimension indicated in the illustration.



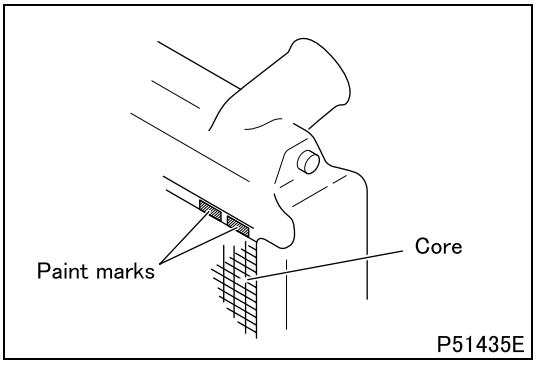
- Bend and clinch the tabs of the core over the brim of the tank in the sequence indicated in the illustration.
  1 to 4: Clinch the two tabs at the center on each side of the tank.
  5 to 8: Clinch the rest of the tabs in the order indicated by the arrows.

CAUTION ⚠

- **The tabs on sides 1 and 2 cannot be clinched using [c]. Use a pair of pliers with the noses wrapped with vinyl tape to clinch these tabs.**



- After clinching all the tabs, check for leakage.

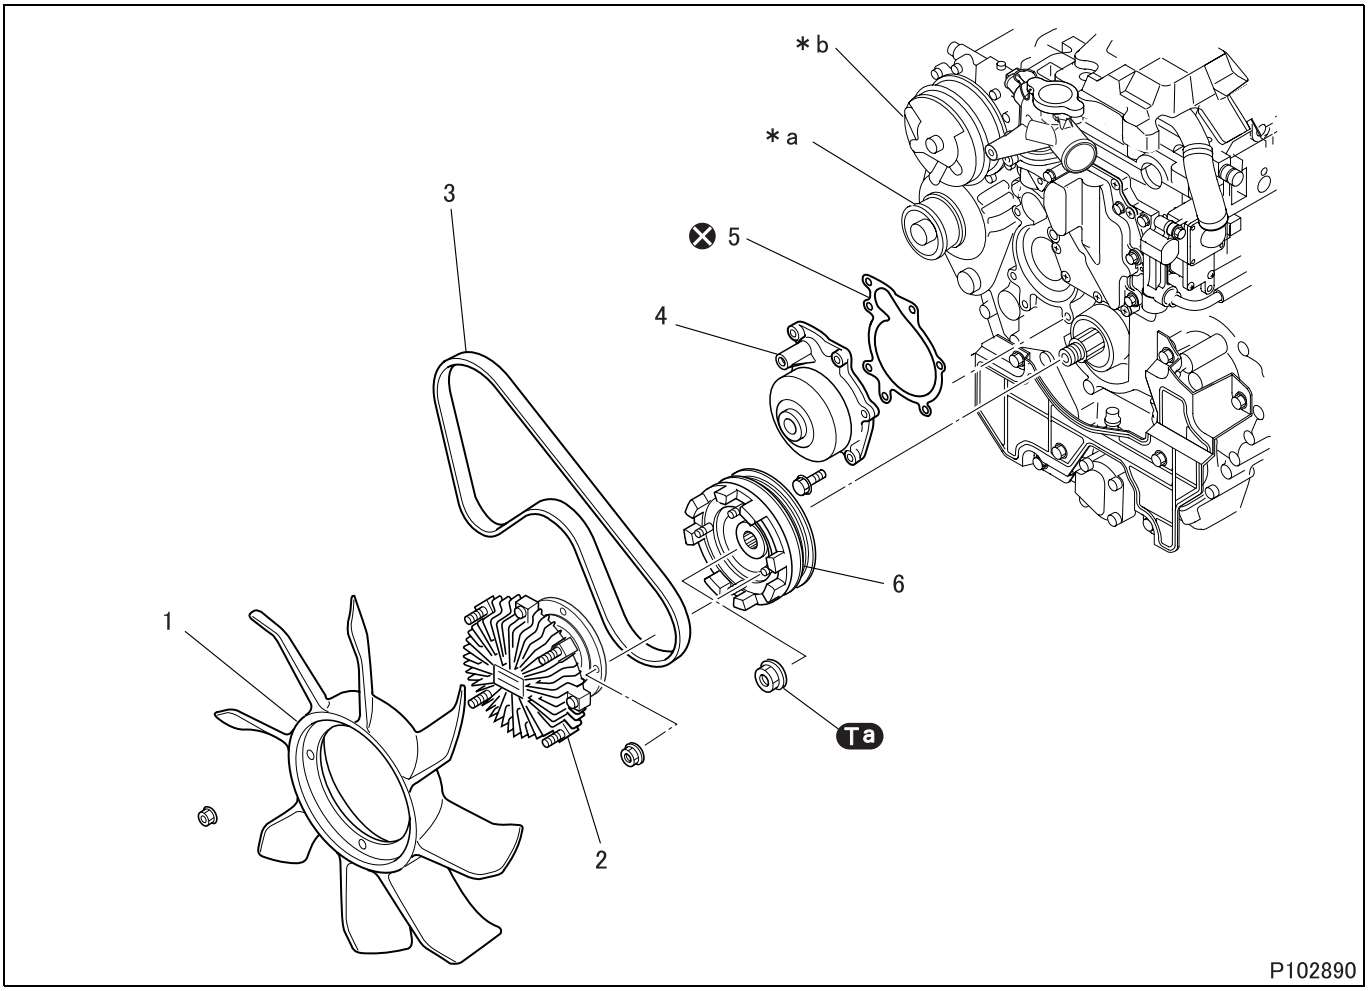


- Put a paint mark on a clearly visible area of the core to indicate the number of times the tabs have been unbent and re-clinched.

CAUTION ⚠

- **One paint mark should be made for each of the upper and lower tanks every time the tabs for it are unbent and re-clinched.**

COOLING FAN, BELT AND WATER PUMP



● **Removal sequence**

1 Cooling fan
2 Automatic cooling fan coupling
3 Belt
4 Water pump
5 Gasket
6 Fan pulley

***a**: Alternator
***b**: Compressor
<With air conditioner>
Tension pulley
<Without air conditioner>

⊗: Non-reusable parts

● **Installation sequence**

Follow the removal sequence in reverse.

CAUTION ⚠

- **The automatic cooling fan coupling and the water pump cannot be disassembled. It must be replaced if defective.**
- **Make sure that there is no oil or grease on the belts. Belts soiled with oil or grease may easily slip, resulting in deteriorated performance of the cooling system.**

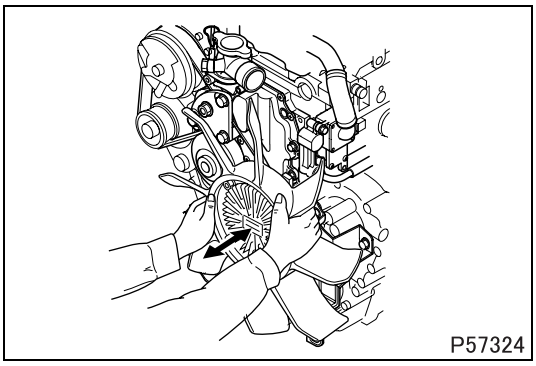
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Nut (fan pulley mounting)	370 {270, 38}	–

Special tools (Unit: mm {in.})

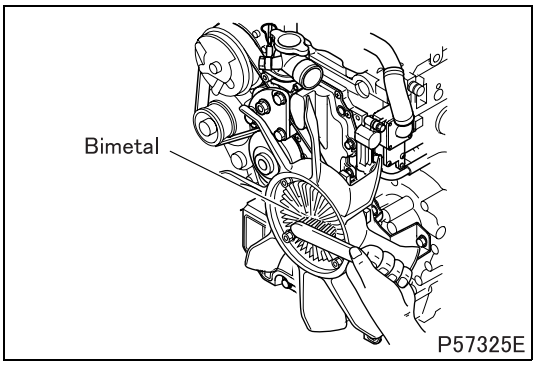
Mark	Tool name and shape	Part No.	Application
Ⓐa	Holding bar A: 114 {4.49}, B: ϕ9 {ϕ0.35}  P69433	MH062970	Holding of fan pulley

◆Inspection and cleaning procedure◆



■ Inspection: Automatic cooling fan coupling

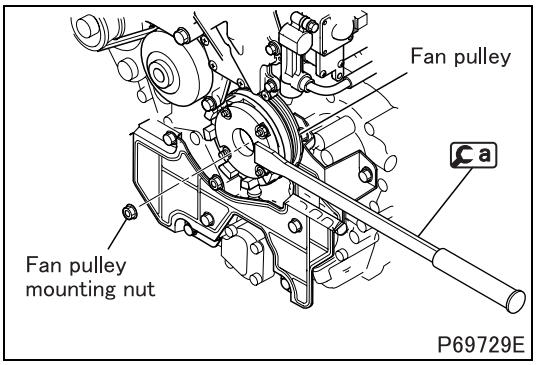
- Make an inspection of the following points. Replace the automatic cooling fan coupling if defective.
  Check that:
  - the hydraulic oil sealed inside the coupling is not leaking;
  - the coupling does not make any abnormal noise or rotate unevenly due to defects in the inside bearing when rotated manually; and
  - the automatic cooling fan coupling does not move too much when pushed and pulled in the axial directions when the engine is cold.



■ Cleaning: Automatic cooling fan coupling

- When removing foreign matter from the bimetal, be careful not to press too hard against the bimetal.

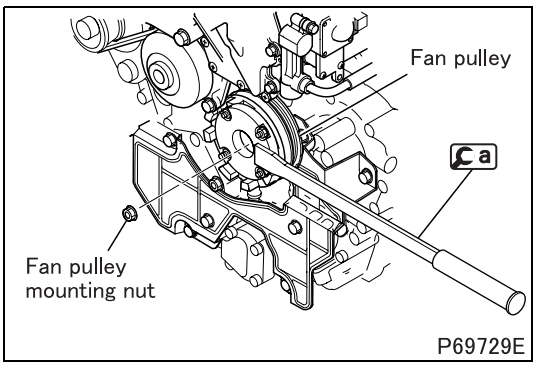
◆Removal procedure◆



■ Removal: Fan pulley

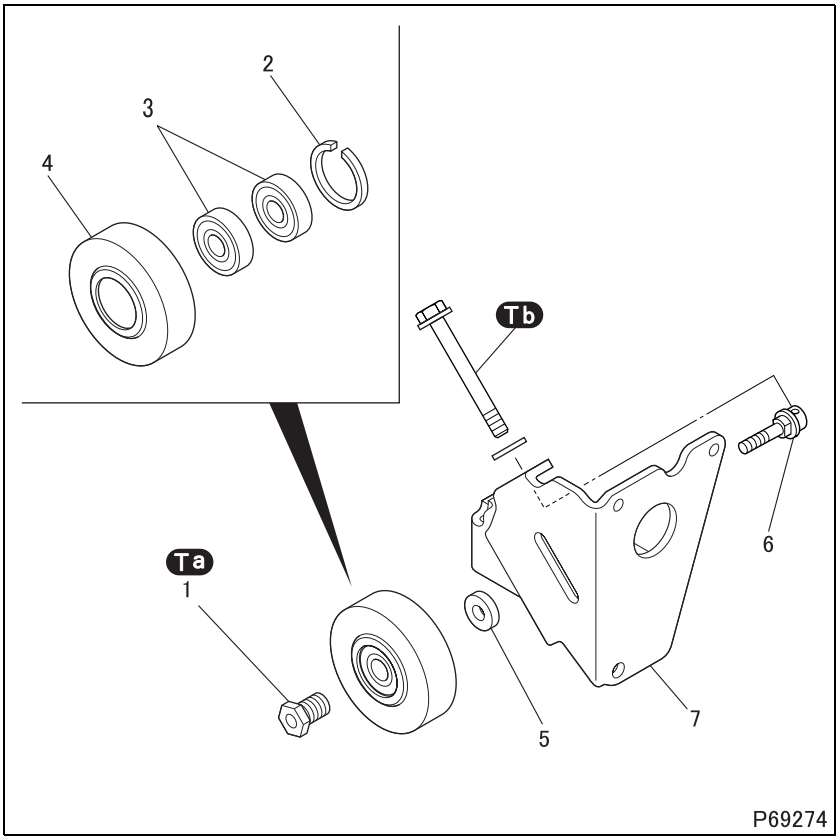
- Put Ⓐa in position on the studs of the fan pulley and fix the tool by using nuts.
- While holding Ⓐa, loosen the fan pulley mounting nut.

◆Installation procedure◆



■ **Installation: Fan pulley**

- Put a in position on the studs of the fan pulley and fix the tool by using nuts.
- Tighten the fan pulley mounting nut to the specified torque while holding a.



● **Disassembly sequence**

1 Sleeve
2 Snap ring
3 Bearing
4 Tension pulley
5 Spacer
6 Shaft
7 Tension pulley bracket

● **Assembly sequence**

Follow the disassembly sequence in reverse.

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

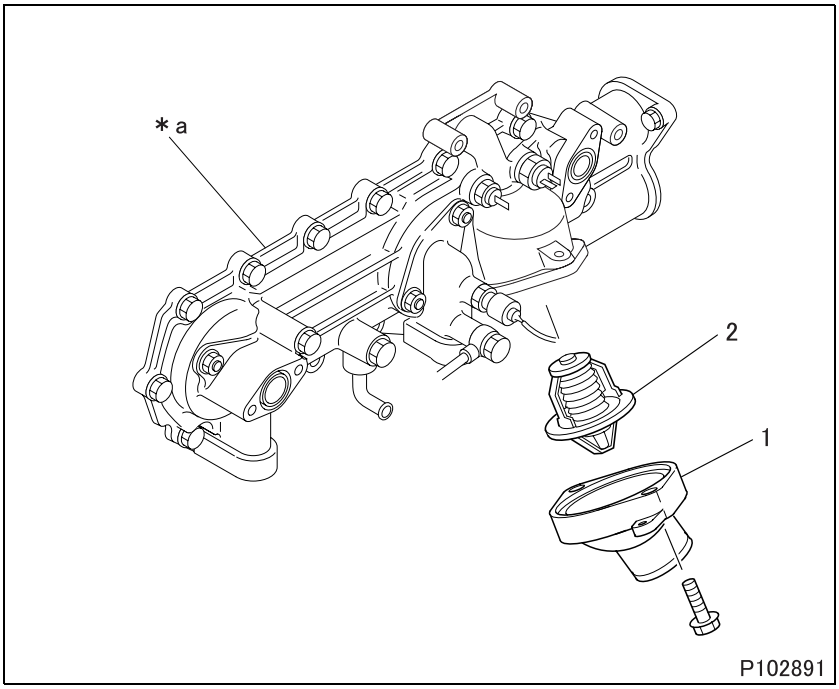
Ta	Sleeve	15 {11, 1.5}	–
Tb	Bolt (fixing of shaft)		

THERMOSTAT



● Disassembly sequence

1 Thermostat cover
2 Thermostat

***a**: Oil cooler

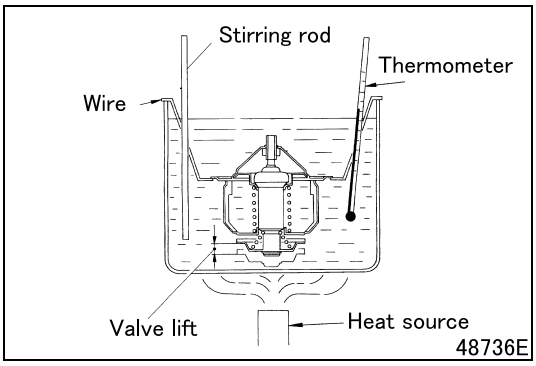
● Assembly sequence

Follow the disassembly sequence in reverse.

Service standards (Unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
2	Thermostat	Valve opening temperature	82 ± 2°C {180 ± 3.6°F}	–	Replace
		Valve lift / temperature	10 {0.39} or more / 95°C {205°F}		

◆Inspection procedure◆



■ Inspection: Thermostat

- Stir the water using a stirring rod to maintain an even water temperature in the container, then conduct the tests indicated below.
- If the measured values deviate from the standard value ranges, replace the thermostat.

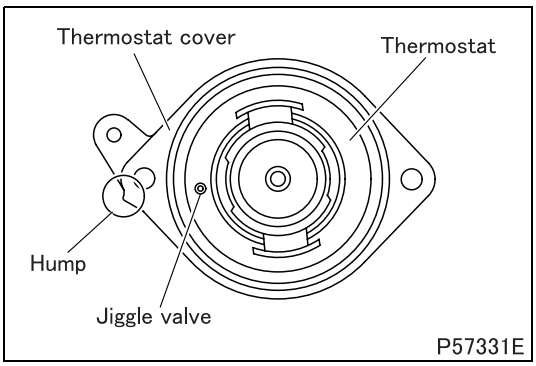
(1) Valve opening temperature

- Hold the thermostat with wire to keep it away from the heat source.
- Heat the water gradually to the valve opening temperature.
- Maintain this temperature for five minutes and make sure that the valve is completely open.
- Make sure that the valve closes completely when the water temperature drops below 65°C {150°F}.

(2) Valve lift

- Heat the water to a temperature slightly higher than the valve opening temperature. Maintain this temperature for five minutes and measure the valve lift.

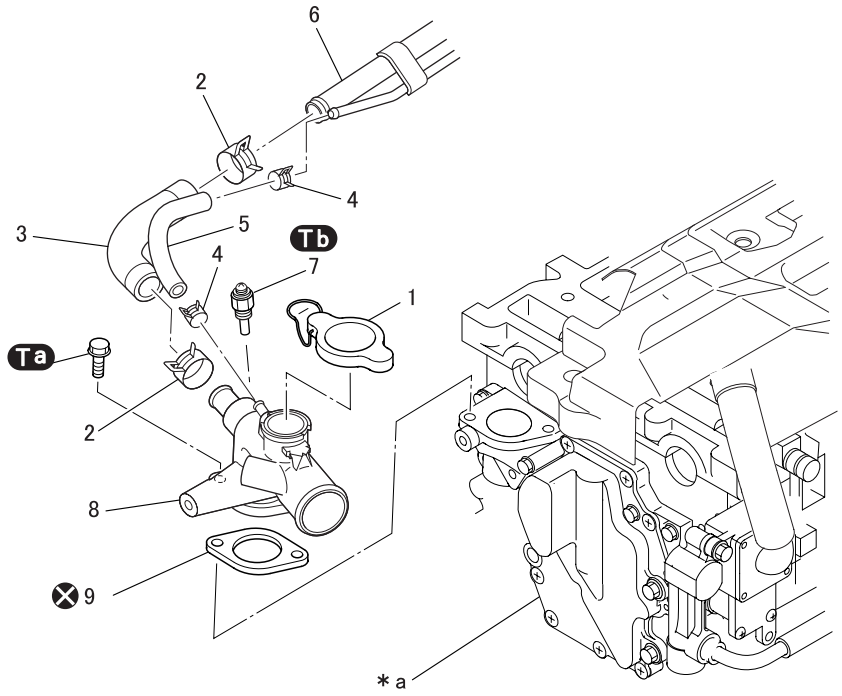
◆Installation procedure◆



■ **Installation: Thermostat**

- Mount the thermostat on the thermostat cover in the illustrated direction.

PRESSURE CAP AND WATER OUTLET CASE



P102892

● **Disassembly sequence**

1 Pressure cap
2 Clip
3 Water hose
4 Clip
5 Water hose
6 Exhaust gas recirculation outlet pipe
7 Overheating switch
8 Water outlet case
9 Gasket

***a**: Breather cover
⊗: Non-reusable parts

● **Assembly sequence**

Follow the disassembly sequence in reverse.

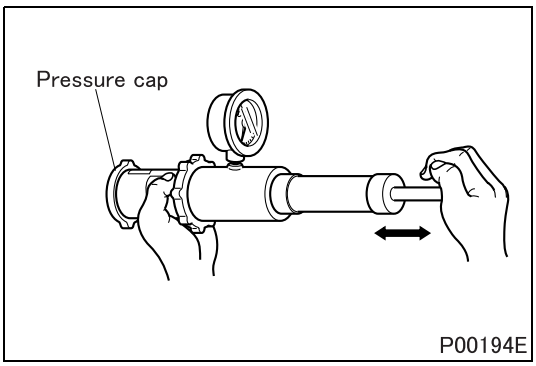
Service standards

Location	Maintenance item	Standard value	Limit	Remedy
1	Pressure cap valve opening pressure	110 ± 15 kPa {16 ± 2.2 psi, 1.1 ± 0.15 kgf/cm^3}	–	Replace

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Bolt (water outlet case mounting)	24 {18, 2.4}	–
Tb	Overheating switch	35 {26, 3.6}	–

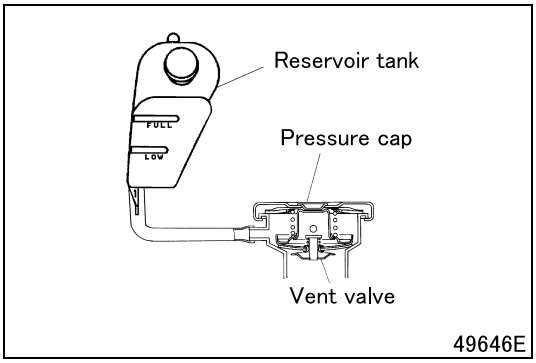
◆Inspection procedure◆



■ **Inspection: Pressure cap**

(1) Pressure valve opening pressure

- Replace the pressure cap if the measured value deviates from the standard value range.



(2) Inspection of vent valve

- Before starting the inspection, check the level of coolant in the reservoir tank.
- Run the engine at full speed. Stop the engine when the level of coolant in the reservoir tank noticeably rises.
- Wait until the coolant temperature drops to the ambient temperature. Then, check if the coolant in the reservoir tank has returned to the same level as that confirmed before the engine was started.
- If the coolant has failed to return to its original level, the vent valve is defective. In this case, replace the pressure cap.

CAUTION ⚠

- **Be aware that removing the pressure cap before the coolant cools down to the ambient temperature will result in loss of vacuum in the radiator, which disables the coolant from being returned to the reservoir tank.**

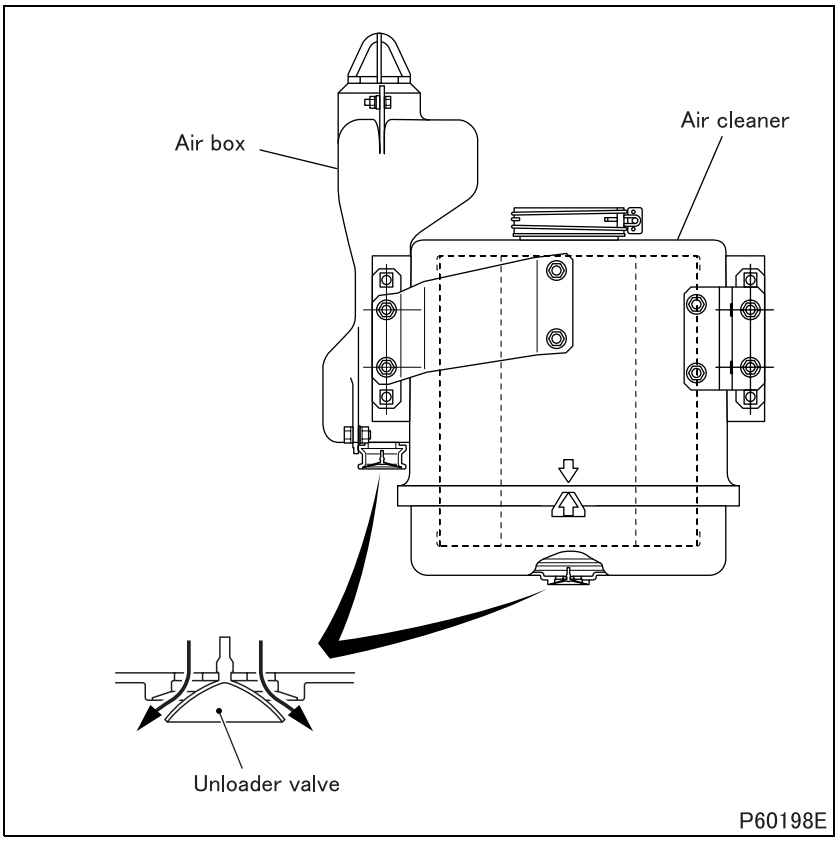
SPECIFICATIONS

Item		Specifications
Air cleaner element		Filter paper type
Turbocharger	Model	TD05
	Manufacturer	Mitsubishi Heavy Industries, Ltd.
Intercooler		Tube and corrugated fin type air-to-air heat exchanger
DPF (Diesel Particulate Filter) type		Regeneration control type diesel particulate filter system

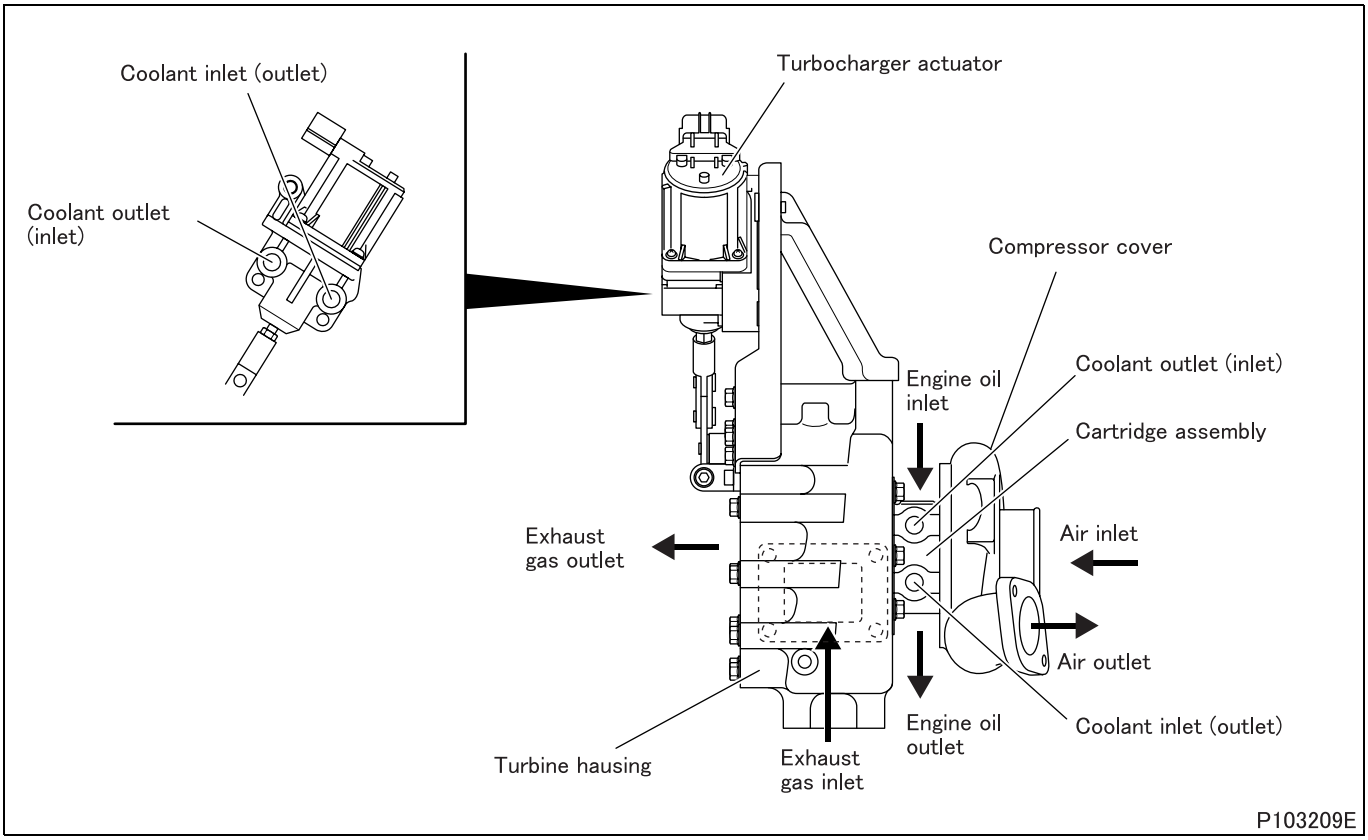
STRUCTURE AND OPERATION

1. Air Cleaner



- The air cleaner is a single element type.
- When the engine slows down below the predetermined speed, the level of vacuum changes and causes the unloader valve to vibrate. Vibration of the unloader valve allows the air cleaner to automatically discharge any water and dust that has accumulated in its inside.

2. Turbocharger

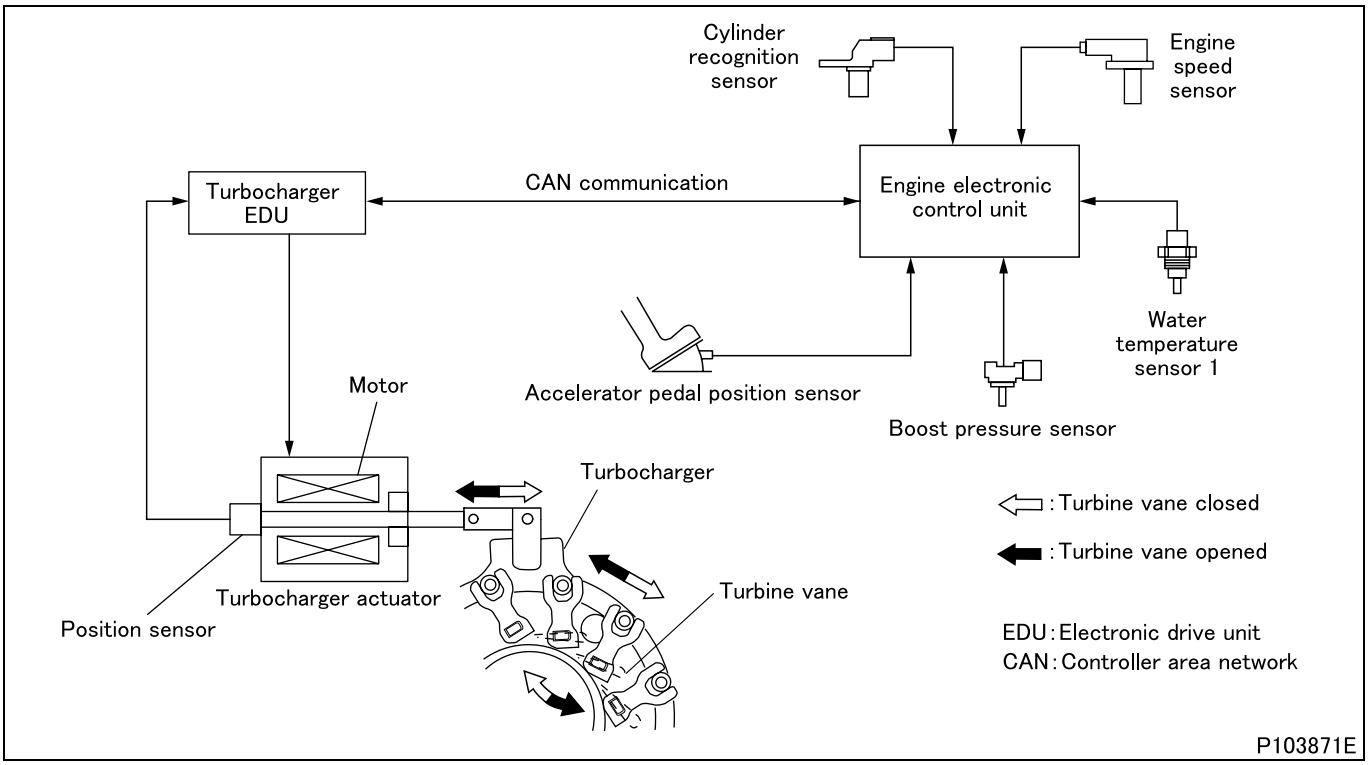


- TD05 model is equipped with turbocharger, which is a variable nozzle vane type turbocharger with adjustable, heat-resistive alloy turbine vanes provided at the turbine exhaust gas inlet port.

3. Turbocharger Control System

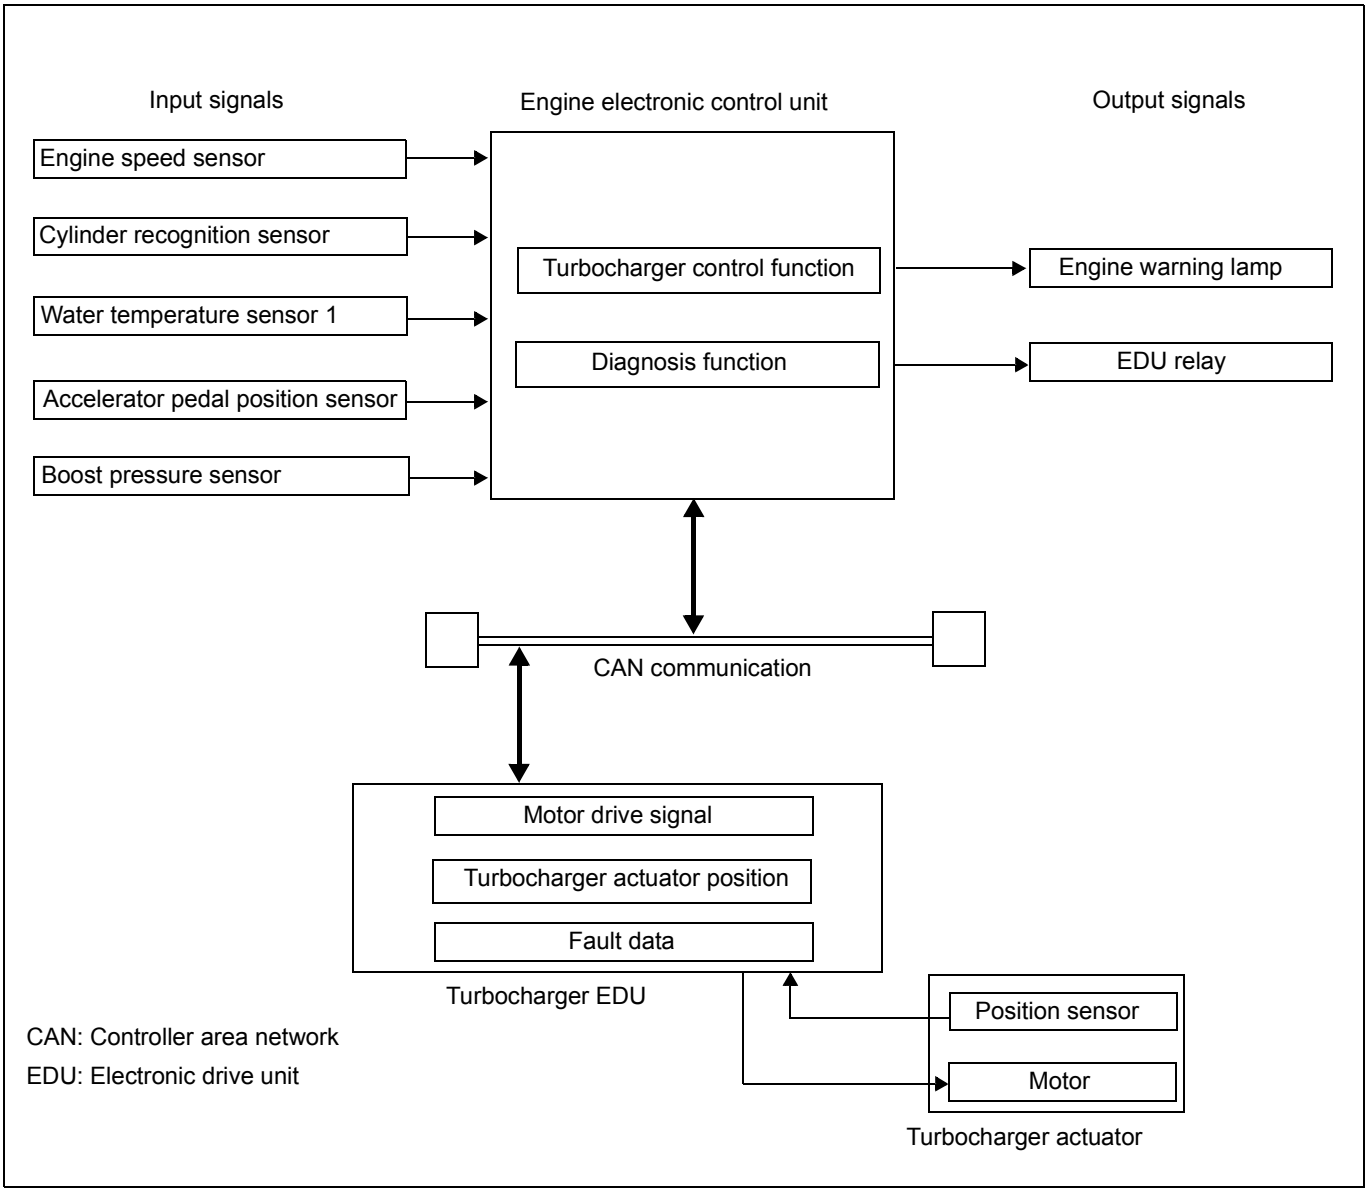
3.1 General description

- In the turbocharger control system, various engine-related information (engine speed, coolant temperature, accelerator position) and driving status are collected by the relevant sensors and are sent to the engine electronic control unit and turbocharger electronic drive unit which then control the engine based on the information received.
- The turbocharger actuator controls the opening of turbine vanes according to control signals to ensure low fuel consumption and high torque operation over the entire speed range.



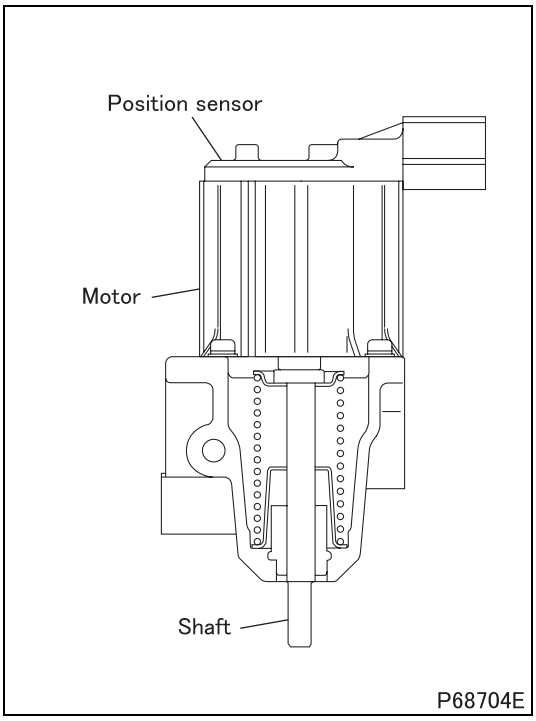
3.2 Electronic control system

(1) System block diagram



(2) Turbocharger control function

- In response to output data from various sensors, the engine electronic control unit determines the opening of turbine vanes as required by the engine operating status and sends necessary control signals to the turbocharger electronic drive unit. (target opening of turbine vanes)
- The turbocharger electronic drive unit activates the turbocharger actuator motor to detect the amount of resultant shaft position by means of the position sensor and sends it to the engine electronic control unit. (actual opening of turbine vanes)
  Thus, the target opening of turbine vanes can be accurately maintained as commanded by the engine electronic control unit.



(2.1) Turbocharger actuator

- In response to command signals from the turbocharger electronic drive unit, the turbocharger actuator moves the shaft up and down by means of its DC motor to open and close the turbine vanes.

(3) Fault diagnosis function

- The engine electronic control unit continuously monitors the electronic drive units and sensors for faults. In the event that the engine electronic control unit finds a component faulty, it causes an indication to be made in the meter cluster to alert the driver. At the same time, it memorizes the fault location in the form of a diagnosis code and starts a control during fault.
- While the engine is running, the turbocharger electronic drive unit continuously monitor communication with the position sensor and motor of the turbocharger actuator communication with the engine electronic control unit. In the event that they identify a fault, they send fault data to the engine electronic control unit.
- While control necessitated by a fault is taking place, the system's functionality is limited to ensure vehicle and driver safety. It is possible to read the memorized diagnosis code using a Multi-Use Tester or from flashing of the warning lamp.
- The control during fault recovers by servicing the faults. However, for some diagnosis codes, the warning lamp stays illuminated until the normal signals are input for several times.
- Diagnosis codes shown by the Multi-Use Tester and those indicated by flashing of the warning lamp are different.
- The Multi-Use Tester is capable of showing more detailed diagnosis codes.

4. Diesel Particulate Filter Regeneration Control System

4.1 General

- The diesel particulate filter regeneration control system burns and removes the particulate matter (PM) in the ceramic filter using high temperature exhaust gas to prevent excessive accumulation of particulate matter in the ceramic filter. Thus the diesel particulate filter is regenerated.
- The regeneration is divided into two types. One is the continuous regeneration utilizing high temperature exhaust gas during high-speed or high-load operations. The other is the automatic or parked regeneration which uses high temperature exhaust gas created by the regeneration control by the engine electronic control unit.
- For automatic or parked regeneration, the engine electronic control unit estimates the accumulated amount of particulate matter from the vehicle operating hours, driving distance and the engine condition during driving, and the regeneration is performed by controlling the fuel injection (amount and timing), turbocharger, exhaust shutter and intake throttle to make high temperature exhaust gas.

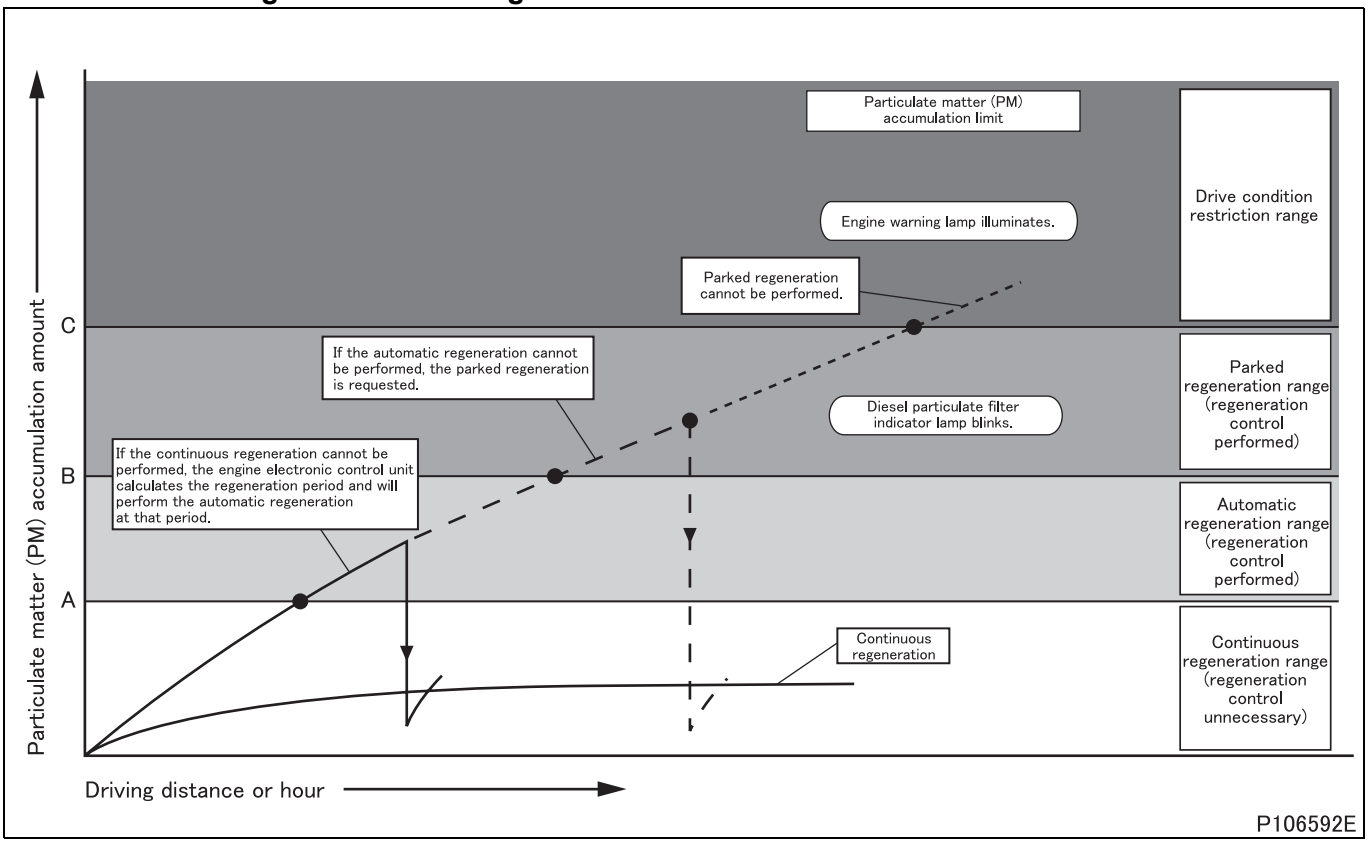
4.2 Continuous regeneration and regeneration control



- The above diagram shows the relations between the driving distance or hours and the particulate matter accumulation amount, and the range of each diesel particulate filter regeneration operation.
- The particulate matter accumulation amount increases as the driving distance or hours increase. However, by conducting the regeneration operation that matches the vehicle operating condition and the particulate matter accumulation amount, the particulate matter accumulation amount is reduced to keep the performance of the diesel particulate filter.
- The regeneration is divided into two types – the continuous regeneration utilizing exhaust gas during normal driving operation and the automatic or parked regeneration which uses exhaust gas created by the regeneration control.

(1) Continuous regeneration

- When exhaust gas temperature is high during high-speed or high-load operation, NO_2 created by the action of the front oxidation catalyst continuously burns the particulate matter accumulated in the ceramic filter.

(2) Regeneration control

(2.1) Automatic regeneration

- When the particulate matter accumulation level is between A and B on the diagram, the engine electronic control unit decides the regeneration period and the automatic regeneration will be performed at an appropriate period. During regeneration, the unburnt fuel (HC) supplied by the post injection is oxidized by the front oxidation catalyst, and the oxidation heat from that reaction burns the particulate matter accumulated in the ceramic filter.

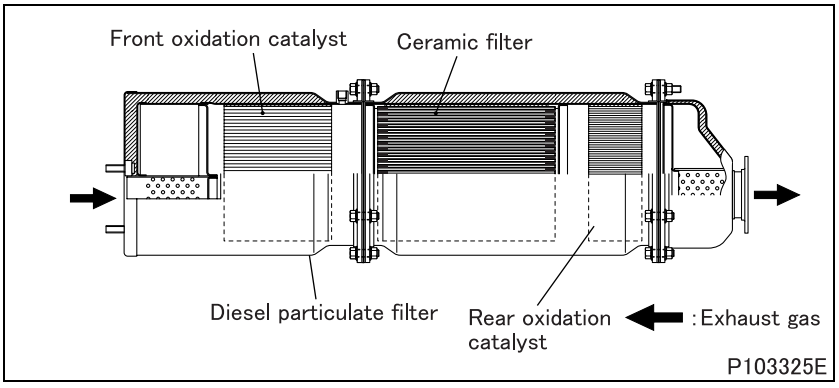
(2.2) Parked regeneration

- When the particulate matter accumulation level is between B and C on the diagram, the engine electronic control unit makes the diesel particulate filter indicator lamp blink. If the diesel particulate filter cleaning switch is turned on by the driver when the following conditions are met, the parked regeneration will take place.
  - Engine has warmed up (coolant temperature: 70°C {158°F} or higher)
  - Diesel particulate filter cleaning switch: ON (Press the switch until the diesel particulate filter indicator stays on.)
  - Accelerator pedal released (accelerator pedal position sensor: 0%)
  - Parking brake applied (parking brake switch: ON)
  - Transmission in neutral position (transmission neutral switch: OFF)
  - Clutch pedal released (clutch pedal switch: ON)
  - Power take-off inactive (power take-off switch: OFF)
- During regeneration, the diesel particulate filter indicator lamp blinks in two intervals (slow and fast) in accordance with the particulate matter accumulation amount.
- The exhaust gas temperature increase procedure and the particulate matter burning procedure are the same as that for the automatic regeneration.

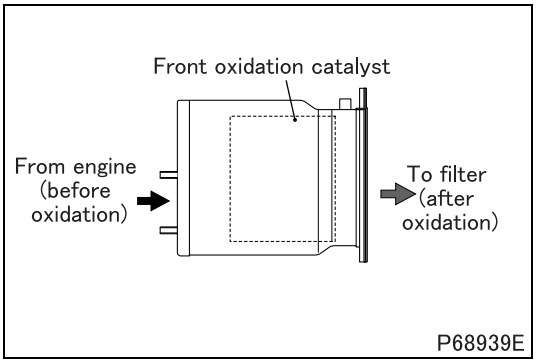
(2.3) Restriction on drive conditions

- When the particulate matter accumulation level exceeds C on the diagram, the engine warning lamp illuminates and some restrictions are applied to the driving conditions.
- Under this restriction, parked regeneration will not take place even if the diesel particulate filter cleaning switch is turned on.

4.3 Diesel particulate filter unit

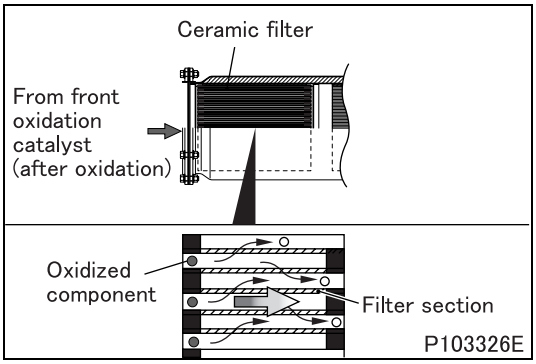


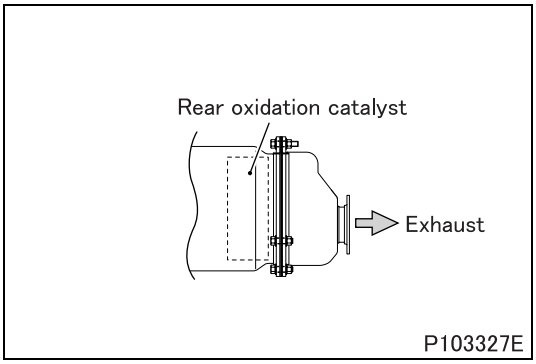
- Diesel particulate filter unit consists of the front oxidation catalyst, ceramic filter and rear oxidation catalyst.



(1) Front oxidation catalyst

- In normal driving condition, unburnt fuel (HC) and part of the particulate matter in the exhaust gas from the engine is purified by this catalyst.
- During filter regeneration, the unburnt fuel (HC) supplied by the post injection is oxidized by the front oxidation catalyst, and the oxidation heat raises exhaust gas temperature.





(2) Ceramic filter

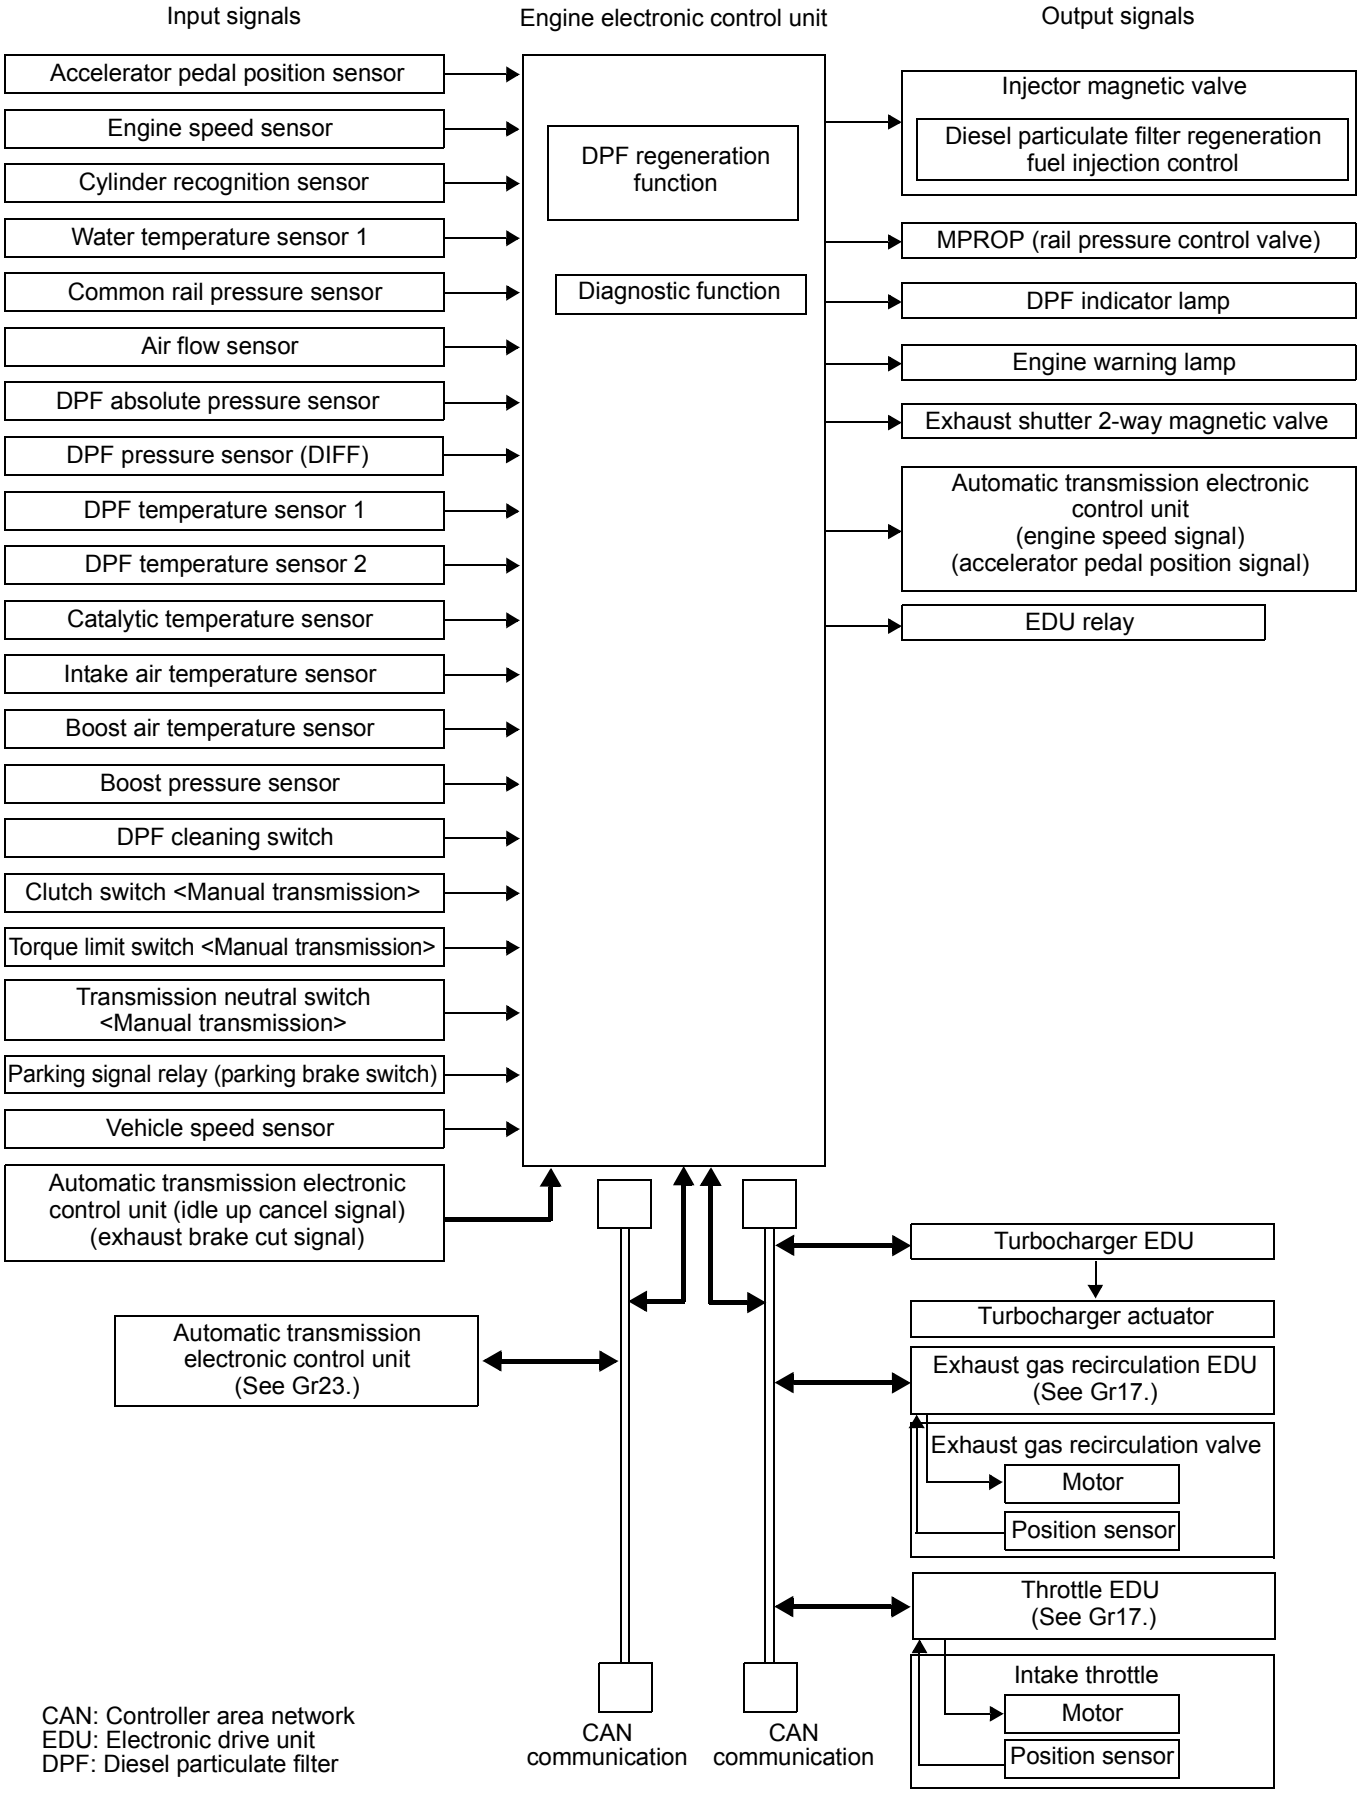
- The ceramic filter is an aggregate of thin tubes, and these tubes are closed at either end alternatively. During normal operation, particulate matter is trapped when the exhaust gas enters a tube and passes through the wall of the tube (filter section) to the adjacent tube.
- During regeneration, the particulate matter accumulated in the filter is cleared by burning at high temperature. This, however, cannot remove the calcium (ash) contained in the engine oil and the ash will accumulate in the filter. The excessively accumulated ash may cause early clogging of the ceramic filter. Therefore, the ceramic filter must be cleaned periodically.

(3) Rear oxidation catalyst

- The rear oxidation catalyst oxidize and remove the components (HC and CO) which remain untreated through the diesel particulate filter.

4.4 Electronic control system

(1) System block diagram



Part	Main function/operation
Accelerator pedal position sensor	Detection of extent of accelerator pedal depression
Engine speed sensor	Detection of engine speed
Cylinder recognition sensor	Cylinder recognition
Water temperature sensor 1	Detection of coolant temperature
Common rail pressure sensor	Sensing of common rail pressure
Air flow sensor	Detection of intake air flow rate
DPF absolute pressure sensor	Detection of DPF absolute pressure
DPF pressure sensor (DIFF)	Detection of DPF differential pressure
DPF temperature sensor 1	Detection of ceramic filter inlet temperature
DPF temperature sensor 2	Detection of ceramic filter outlet temperature
Catalytic temperature sensor	Detection of front catalyst inlet temperature
Intake air temperature sensor	Detection of upper stream side intake air temperature (in the intercooler)
Boost air temperature sensor	Detection of downstream side intake air temperature (after joining the exhaust gas recirculation)
Boost pressure sensor	Sensing of boost pressure
DPF cleaning switch	ON/OFF changeover of DPF parked regeneration
Clutch switch <Manual transmission>	Detection of released/pressed condition of clutch pedal (OFF with pedal released)
Torque limit switch <Manual transmission>	Detection of 1st and reverse positions
Transmission neutral switch <Manual transmission>	Detection of transmission neutral condition (OFF with transmission in neutral)
Parking signal relay (parking brake switch)	Detection of parking condition (turns ON when the parking brake is applied)
Injector magnetic valve	DPF regeneration fuel injection control
MPROP (rail pressure control valve)	Control of fuel injection pressure
DPF indicator lamp	Illuminates when the particulate matter accumulation in the DPF exceeds a certain value.
Engine warning lamp	Indication of system abnormalities Illuminates when the particulate matter accumulation in the DPF is excessive.
Exhaust shutter 2-way magnetic valve	ON/OFF changeover of exhaust shutter
Automatic transmission electronic control unit (engine speed data for automatic transmission control)	Output of engine speed for automatic transmission control
Automatic transmission electronic control unit (accelerator pedal position for automatic transmission control)	Output of extent of accelerator pedal depression for automatic transmission control
EDU relay	Switching ON/OFF supply of power to EGR EDU, turbocharger EDU and throttle EDU
Automatic transmission electronic control unit (idle up cancel signal and exhaust brake cut signal)	• Releasing the idle-up other than N range • Prohibition of the activation of auxiliary brake when the vehicle speed is 10 km/h or lower
Controller area network communication (automatic transmission electronic control unit)	• Engine data recognized by the engine electronic control unit are outputted to the controller area network bus to enable systems to obtain data that they need for control. • Each automatic transmission electronic control unit issues signals to the engine electronic control unit to enable it to effect engine control appropriate for each type of system control. (See Gr23 for control of automatic transmission electronic control unit.)
Controller area network communication (turbocharger EDU, throttle EDU and EGR EDU)	• Engine data recognized by the engine electronic control unit are outputted to the controller area network bus to enable systems to obtain data that they need for control. • Each EDU opens/closes the valves to increase exhaust gas temperature for DPF regeneration. (See Gr17 for control of throttle EDU and EGR EDU.)

(2) Fault diagnosis function

- The engine electronic control unit continuously monitors the electronic drive units and sensors for faults. In the event that the engine electronic control unit finds a component faulty, it causes an indication to be made in the meter cluster to alert the driver. At the same time, it memorizes the fault location in the form of a diagnosis code and starts a control during fault.
- While control necessitated by a fault is taking place, the system's functionality is limited to ensure vehicle and driver safety. It is possible to read the memorized diagnosis code using a Multi-Use Tester or from flashing of the warning lamp.
- Diagnosis codes shown by the Multi-Use Tester and those indicated by flashing of the warning lamp are different.
- The Multi-Use Tester is capable of showing more detailed diagnosis codes.

ON-VEHICLE INSPECTION AND ADJUSTMENT

1. Measurement of Turbocharger Boost Pressure

Service standards

Location	Maintenance item	Standard value	Limit	Remedy
–	Boost pressure	18 to 23 psi {37.5 to 47.6 in.Hg, 950 to 1210 mmHg}	–	Replace

1.1 Preparation

- Place the transmission in neutral. (in the parking range P for automatic transmissions.)
- Hold the steering wheel in neutral position.
- Turn off lamps and accessory devices not to increase the engine speed.
- Connect the Multi-Use Tester. (See Gr00.)
- If any fault exists (corresponding diagnosis code is issued), rectify it.
- Warm up the engine until the engine coolant has been heated to more than 60°C {140°F}. (Determine coolant temperature from service data [32: Water temperature].)
- Check that the non-load minimum speed (idling speed) is as specified. (See Gr13A.)

1.2 Measurement and correction of boost pressure

- Set the diagnosis switch to OFF (disconnect the fuse). (See Gr00.)
- Select [A4: VGT1] in [Actuator Test] of the Multi-Use Tester. Set [Target Value] to 80% and execute.
- When [A4: VGT1] is executed, the engine speed should be automatically increased to 2500 rpm.
- Maintain the state of [Target Value] having been executed (for 5 to 15 minutes) until boost pressure is stabilized.
- Measure the following items from among [Service Data].
  20: Atmospheric pressure (measured atmospheric pressure)
  21: Boost pressure (measured boost pressure)
  30: Intake Air Temp. (upper stream) (measured air temperature)
  After the measurements, set the diagnosis switch to ON (connect the fuse).
- Obtain boost pressure correction value respectively by calculating above Service Data.

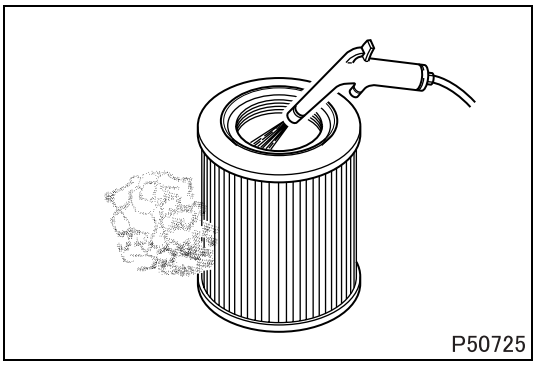
[Calculation of atmospheric pressure correction value]

Atmospheric pressure correction value = Measured atmospheric pressure –100

[Calculation of boost pressure correction value]

- Obtain the boost pressure correction value using the following equation.
  Boost pressure correction value = Measured boost pressure – atmospheric pressure correction value – intake air temperature correction value
- If boost pressure correction value deviates from the standard value, replace the turbocharger.

2. Cleaning and Inspection of Air Cleaner Element



P50725

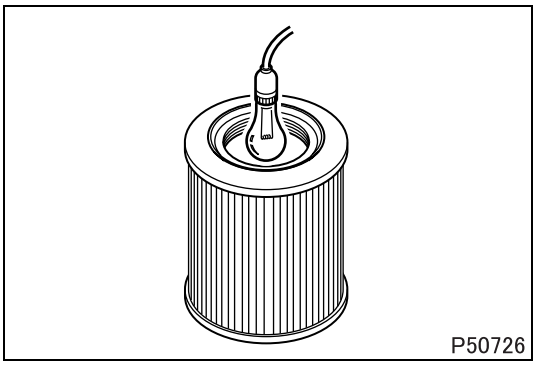
■ **Cleaning: Filter element**

- Blow a jet of compressed air at a pressure not higher than 685 kPa {100 psi, 7 kgf/cm^2} against the inside surfaces of the element.
- Move the compressed air jet up and down along all pleats of the filter paper element.

CAUTION ⚠

- **For the cleaning interval of the element, refer to the Owner's Handbook. Unnecessarily frequent cleaning may damage the element and can be the cause of dust and foreign objects being trapped in the engine.**
- **Do not strike the element or hit it against another object to remove dust.**
- **Do not blow compressed air against outside surfaces of the element.**

◆Inspection procedure◆

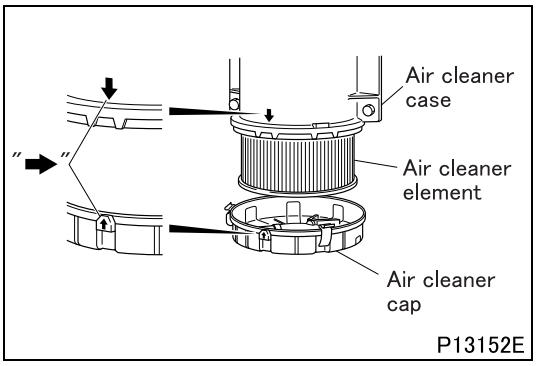


P50726

■ **Inspection: Element**

- Shine some electric light inside the element.
- Replace the element if thin spots or broken parts are evident in the filter paper, or if the packing at the top of the element is damaged.
  Also replace the element if the dust on the element is damp with oily smoke or soot, regardless of the replacement schedule.

◆Installation procedure◆



P13152E

■ **Installation: Air cleaner cap**

➡ : Alignment mark

3. Diesel Particulate Filter Unit Inspection for Clogging and Cleaning the Diesel Particulate Filter Unit

CAUTION ⚠

- **Diesel particulate filter has become very hot after the operation of engine. Cool down the diesel particulate filter sufficiently so as not to get burnt.**
- **The ceramic filter must be cleaned at first 176,000 km {110,000 miles} of driving, and then every 104,000 km {65,000 miles} of driving. Otherwise, ash will accumulate in the filter and the filter may be damaged.**

Service standards

Location	Maintenance item	Standard value	Limit	Remedy
–	Diesel particulate filter differential pressure (after regeneration and cleaning, at no-load max. speed)	Less than 15 kPa {2.2 psi, 0.2 kgf/cm^2}	15 kPa or higher {2.2 psi, 0.2 kgf/cm^2}	Replace

Special tools

Mark	Tool name and shape	Part No.	Application
a	*Pulse cleaner	(*X007954)	Washing of ceramic filter
b	Flange nut (M10) (not used by Donaldson)	MF434105	
c	Drain plug (M12 × 1.25)	MF665003	
d	Drain plug (M14 × 1.5)	MF665004	
e	Gasket (M12)	MF665004	
f	Gasket (M14)	MF660065	

*: Recommend Donaldson “Heavy Duty Diesel Engine DPF Pulse Cleaner” to cleaning the DPF filter soot.
( ): reference No.

3.1 Preparation

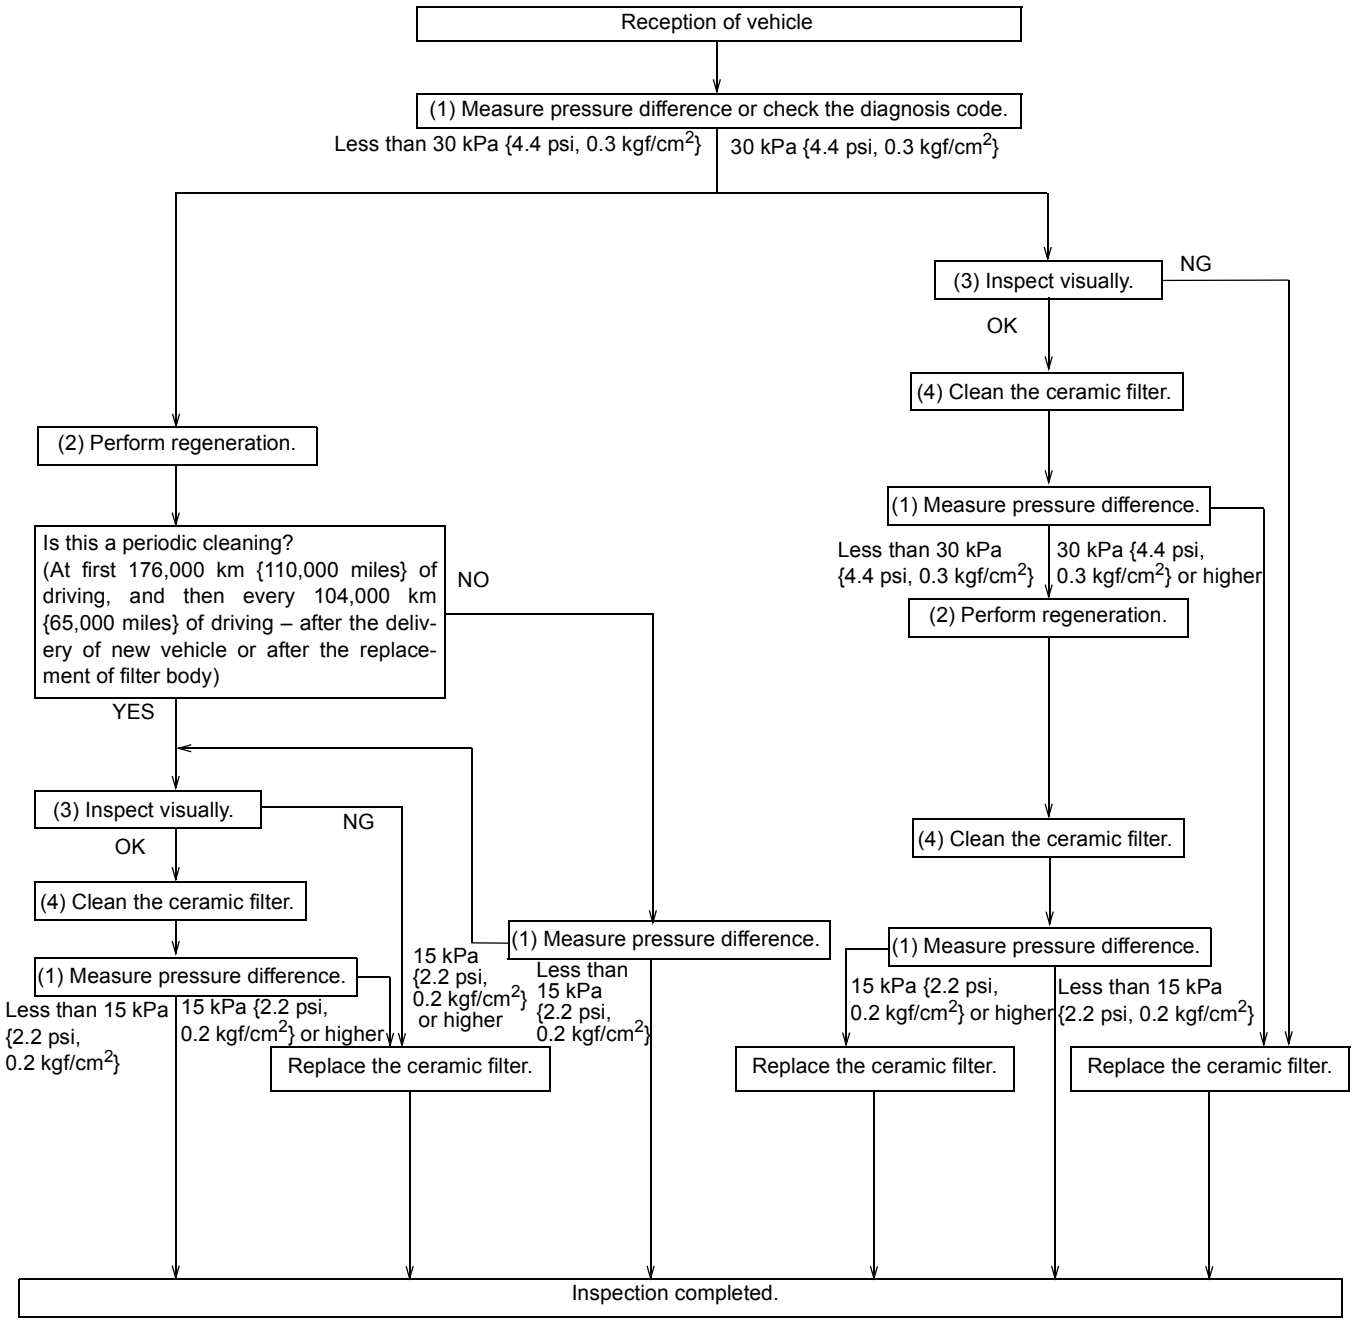
- Place the transmission to neutral position.
- Turn the steering wheel in neutral position. Apply the parking brake securely.
- Turn off the air conditioner not to increase the engine speed.
- Connect the Multi-Use Tester. (See Gr00.)
- Check if there is any diagnosis code stored in the memories of the electronic control units. Repair if any fault is found.
- Warm up the engine until the coolant temperature becomes 70°C {158°F}. (Check this by Multi-Use Tester service data “35: coolant temperature”.)

3.2 Inspection procedure

- Perform the inspection in accordance with the following flowchart.

CAUTION ⚠

- **The differential pressure of diesel particulate filter, that is, the pressure difference between the inlet and outlet of the diesel particulate filter, may exceed 30 kPa {4.4 psi, 0.3 kgf/cm^2} due to the clogging of the ceramic filter. If the diesel particulate filter regeneration is performed using Multi-Use Tester actuator test "DPF regeneration (park)", the abnormal combustion of the particulate matter may make the diesel particulate filter excessively high temperature, resulting in damage of the diesel particulate filter. Before performing the diesel particulate filter regeneration, therefore, be sure to check that the diesel particulate filter differential pressure is less than 30 kPa {4.4 psi, 0.3 kgf/cm^2}.**
- **When replacing the electronic control unit to a new one, current ash accumulation data must be copied to the new electronic control unit.**
- **For data copying procedure, consult your nearest MITSUBISHI FUSO dealer or MITSUBISHI FUSO TRUCK OF AMERICA, Inc.**



(1) Measurement of pressure difference

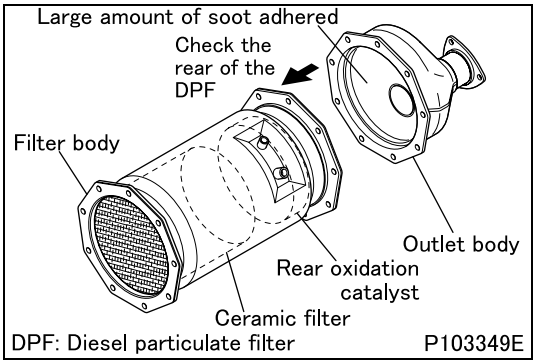
- Measure the pressure difference with the accelerator pedal fully pressed.
- Measurement can be performed using Multi-Use Tester service data “32: DPF pressure difference”.

(2) Regeneration

- Perform Multi-Use Tester actuator test “A5: DPF regeneration (parked)”.

CAUTION ⚠

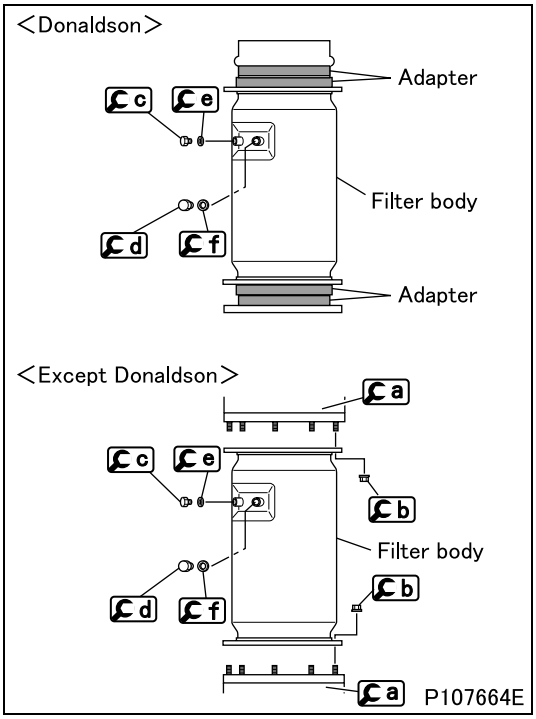
- **The exhaust gas during regeneration is extremely hot. Be sure to confirm that there is no flammables around the rear of the vehicle.**



DPF: Diesel particulate filter P103349E

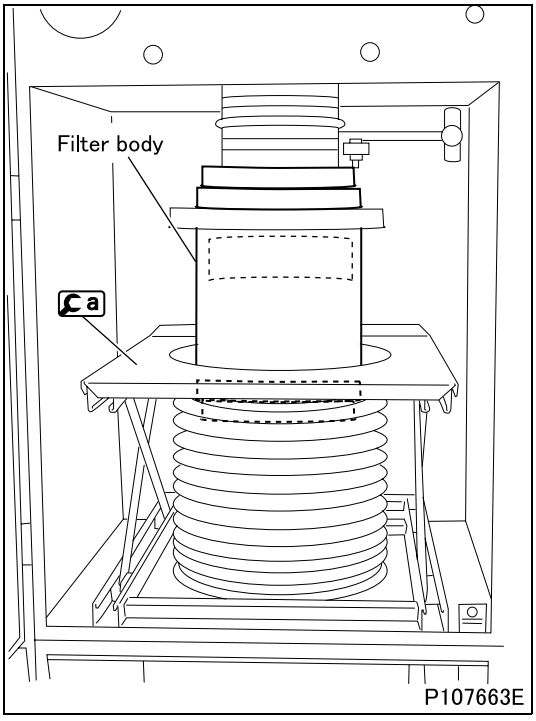
(3) Visual inspection

- Disassemble the diesel particulate filter and check the following.
  - Check if a large amount of soot adheres inside the outlet body.
  - Check the rear oxidation catalyst behind the ceramic filter for damage.
- If a large amount of soot adheres inside the outlet body or if a damage is found on the rear oxidation catalyst, engine-related fault may be suspected. Replace the diesel particulate filter.



(4) Cleaning

- Fit the adapter to the filter body. <Donaldson>
- Fit a to the filter body with b and tighten b to the specified torque (43 N·m {32 ft.lbs, 4.4 kgf·m}). <Except Donaldson>
- Fit c and e to the sensor mounting hole on the filter body and tighten them to the specified torque (30 N·m {22 ft.lbs, 3.1 kgf·m}).
- Fit d and f to the sensor mounting hole on the filter body and tighten them to the specified torque (40 N·m {30 ft.lbs, 4.1 kgf·m}).



- Set the filter body in a with its rear oxidation catalyst side upward.
- Be sure to fit a and the filter body with no air leaks between them.
- Set the air pressure (refer to its instruction manual).
- Set the timer to about 15 minutes (refer to its instruction manual) and perform cleaning.
- For the handling procedure of a, refer to its instruction manual.

4. Resetting the DPF-related Information (Resetting Electronic Control Unit)

- On the regeneration control type as diesel particulate filter system, the engine electronic control unit stores many DPF-related information to control the diesel particulate filter regeneration as diesel particulate filter history.
- This history is automatically reset by the engine electronic control unit when the diesel particulate filter regeneration is performed.
- If the ceramic filter is replaced or cleaned without regeneration, reset the DPF history using Multi-Use Tester as follows.

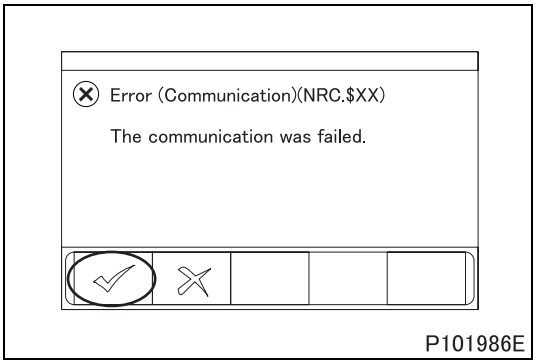
4.1 Preparation

- This operation should be performed under the following conditions.
  - Starter switch: ON (but do not start the engine)
  - Vehicle parked
  - Diagnosis switch: ON (fuse installed)
  - Transmission: Neutral (or P position for automatic transmission)

4.2 Resetting procedure

(1) Error while operating the Multi-Use Tester

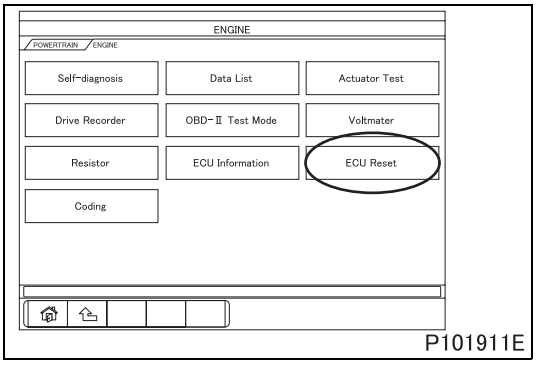
[Communication error] screen



P101986E

- This screen will appear when a reject response signal is sent from the engine electronic control unit to the Multi-Use Tester while performing any operation.
- In this case, check if the conditions for the execution of the procedure are satisfied and retry from the beginning.
- Click “OK”.

(2) System selection

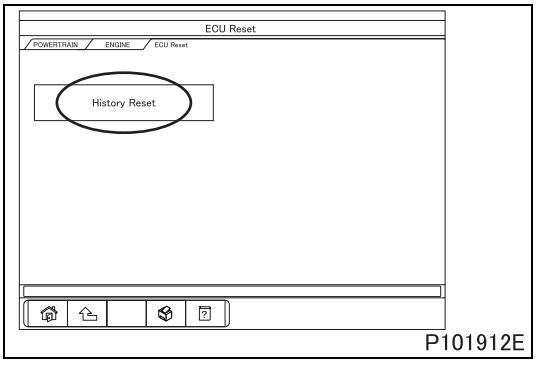


P101911E

- From the System selection menu, select “Engine/Transmission”. The engine control-related menu will appear.
- Select “ECU Reset”.

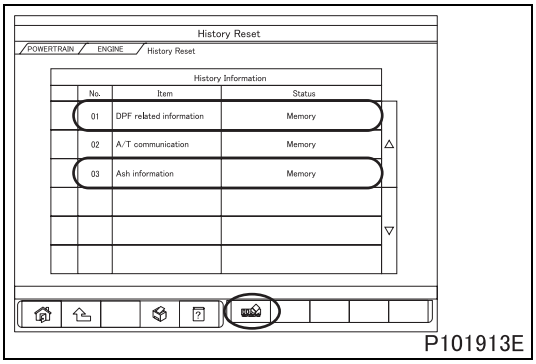
(3) ECU reset function selection

[ECU reset] screen



P101912E

- Select “History Reset”.

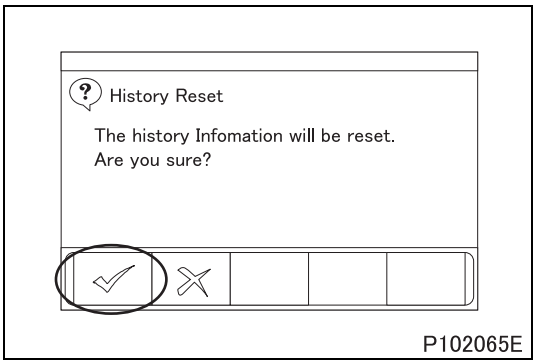


P101913E

(4) History reset

[History reset] screen

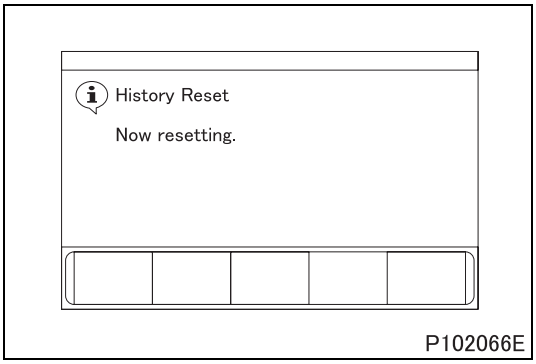
- Depending on the action performed on the ceramic filter, the contents of resetting differ.
  Filter replacement: 01 “DPF-related information”
  Filter cleaning: 03 “Ash information”
- Click “Reset” button.
  If the status column shows “No memory stored”, no resetting action required. Finish this procedure.



P102065E

[History reset confirmation] screen

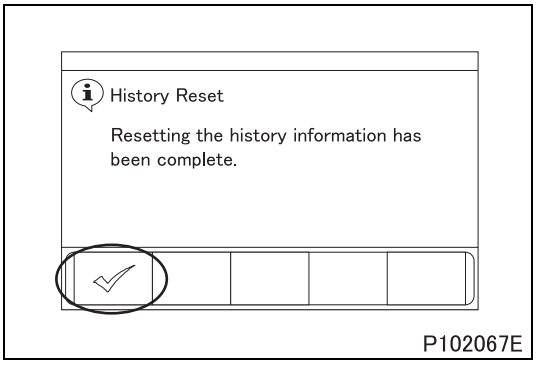
- Click “OK” button.



P102066E

[History resetting] screen

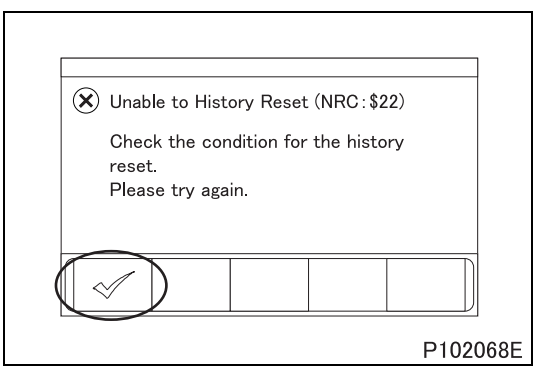
- During resetting, do nothing and wait for a while.



P102067E

[History reset completed] screen

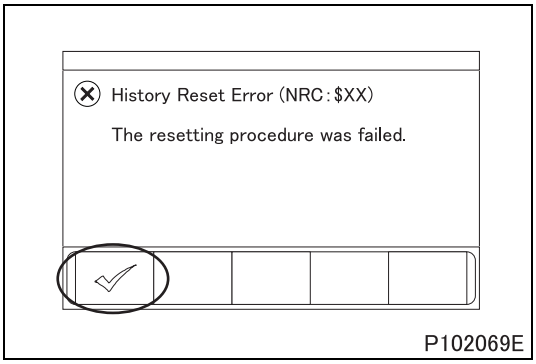
- This screen will appear when resetting of the history has finished. Click “OK” button and return to [History reset] screen.



P102068E

[History reset condition error] screen

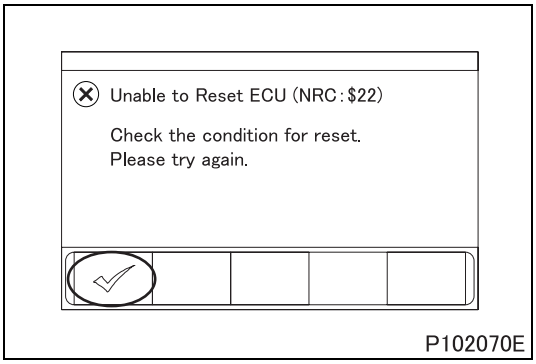
- This screen will appear when a failure signal is sent from the engine electronic control unit to the Multi-Use Tester during resetting.
- In this case, check if the Multi-Use Tester and the vehicle (engine electronic control unit) is connected correctly and if the conditions for the execution of this procedure are satisfied. Then click “OK” to return to the [History reset] screen.



P102069E

[History reset failed] screen

- This screen will appear when the communication error between Multi-Use Tester and the engine electronic control unit or the resetting error occurs.
- In this case, check if the Multi-Use Tester and the vehicle (engine electronic control unit) is connected correctly and if the conditions for the execution of this procedure are satisfied. Then click “OK” to return to the [History reset] screen.



P102070E

[ECU reset condition error] screen

- This screen will appear when a execution failure signal is sent from the engine electronic control unit to the Multi-Use Tester during resetting.
- In this case, recheck the conditions of the vehicle and retry from the beginning.
- Click “OK” to return to the [History reset] screen.

9 Air cleaner cap
10 Air cleaner element
11 Air box
12 Rubber seal
13 Air cleaner case

⊗: Non-reusable parts
PCV: Positive Crankcase Ventilation

● **Assembly sequence**

Follow the disassembly sequence in reverse.

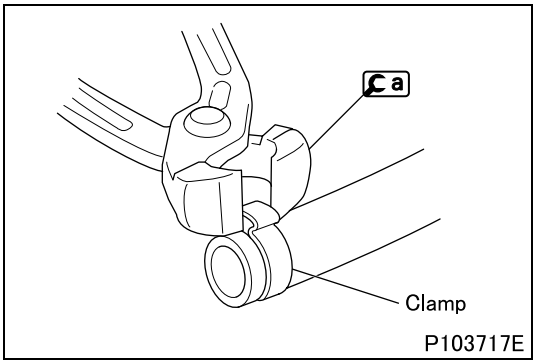
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Clamp	3.0 to 3.4 {2.2 to 2.5, 0.3 to 0.35}	–
Tb	Clamp	9.0 to 11 {6.6 to 8.1, 0.9 to 1.1}	–
Tc	Bolt (air flow sensor mounting)	1.2 to 1.8 {0.9 to 1.3, 0.1 to 0.2}	–

Special tools

Mark	Tool name and shape	Part No.	Application
a	Pincer  P103715	MH063865	Removal of hose clamp
b	Clamp installation tool  P103716	MH063866	Installation of hose clamp

◆Removal procedure◆

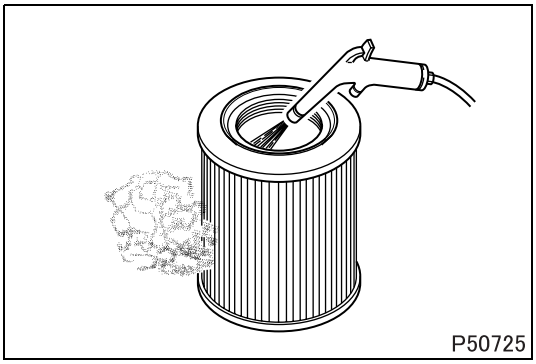


P103717E

■ **Removal: Clamp**

- To remove the clamp, cut the clamp using a.

◆Cleaning procedure◆



P50725

■ **Cleaning: Filter element**

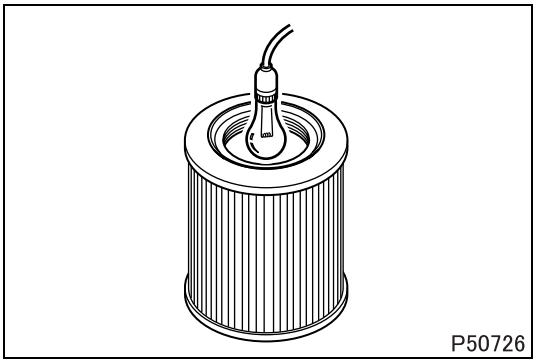
- Blow a jet of compressed air at a pressure not higher than 685 kPa {100 psi, 7 kgf/cm^2} against the inside surfaces of the element.
- Move the compressed air jet up and down along all pleats of the filter paper element.

CAUTION ⚠

- **For the cleaning interval of the element, refer to the Owner's Handbook. Unnecessarily frequent cleaning may damage the element and can be the cause of dust and foreign objects being trapped in the engine.**
- **Do not strike the element or hit it against another object to remove dust.**
- **Do not blow compressed air against outside surfaces of the element.**

AIR DUCT AND AIR CLEANER <EXCEPT CREW CAB>

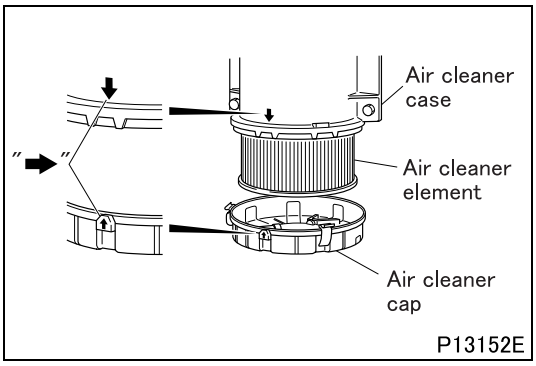
◆Inspection procedure◆



■ **Inspection: Element**

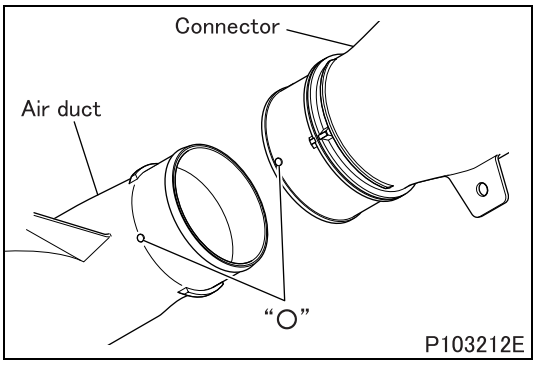
- Shine some electric light inside the element.
- Replace the element if thin spots or broken parts are evident in the filter paper, or if the packing at the top of the element is damaged.
  Also replace the element if the dust on the element is damp with oily smoke or soot, regardless of the replacement schedule.

◆Installation procedure◆



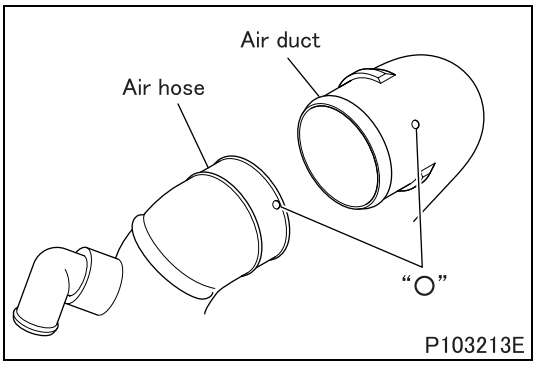
■ **Installation: Air cleaner cap**

➡: Alignment mark



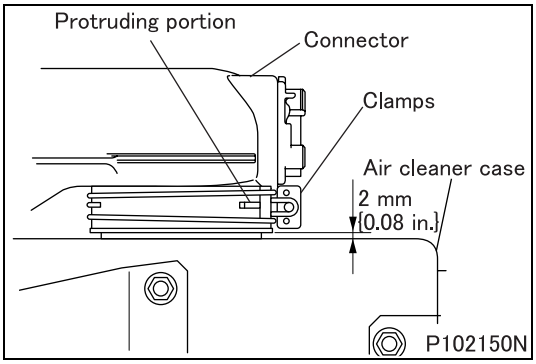
■ **Installation: Air duct**

- Align the marks " ○ " on air duct and push it in until it hits stopper.



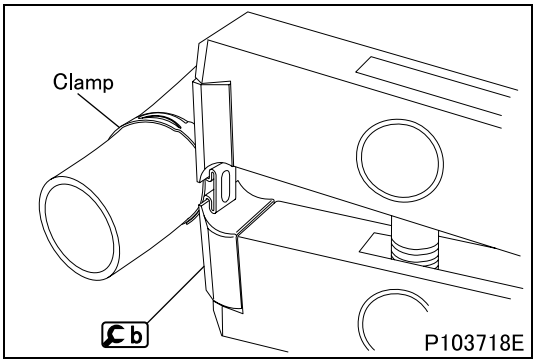
■ **Installation: Air hose**

- Align the marks " ○ " on air hose and push it in until it hits stopper.



■ **Installation: Connector**

- The protruding portion of the connector is put between clamps.
- Installation is such that the space between the connector and the air cleaner case measures the amount shown in the figure.



■ **Installation: Clamp**

- Pinch the projecting part of the clamp with b and tighten to the specified torque.

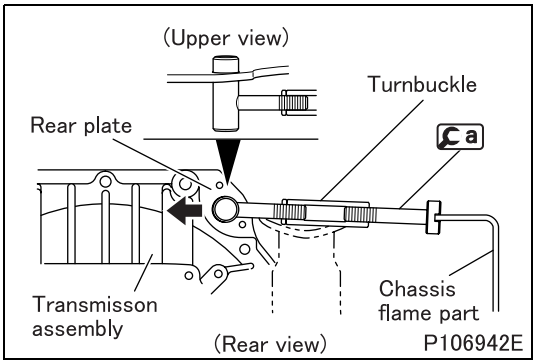
a	Pouring into turbocharger	Engine oil	As required

Special tools

Mark	Tool name and shape	Part No.	Application
a	Jack  P106941	MH063952	Displacement of engine

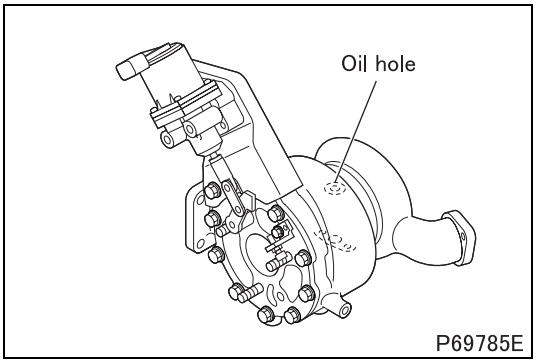
◆Work before removal◆



■ Preparing for engine removal: Installation of jack

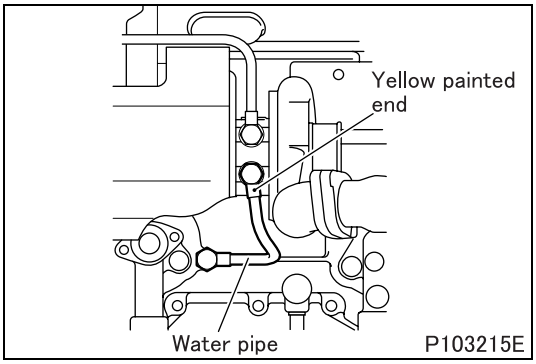
- This work should be performed only if there isn't sufficient space around the turbocharger for removal and installation of it.
- Fit a between the chassis frame and the rear plate of the engine.
- Turn the turnbuckle of a with a wrench and shift the engine leftward by approximately 5 to 15 mm to make the space sufficient for removing and installing the turbocharger.

◆Installation procedure◆



■ **Installation: Turbocharger**

- Before installing the turbocharger assembly, pour engine oil into the oil hole to ensure smooth operation of the internal parts.

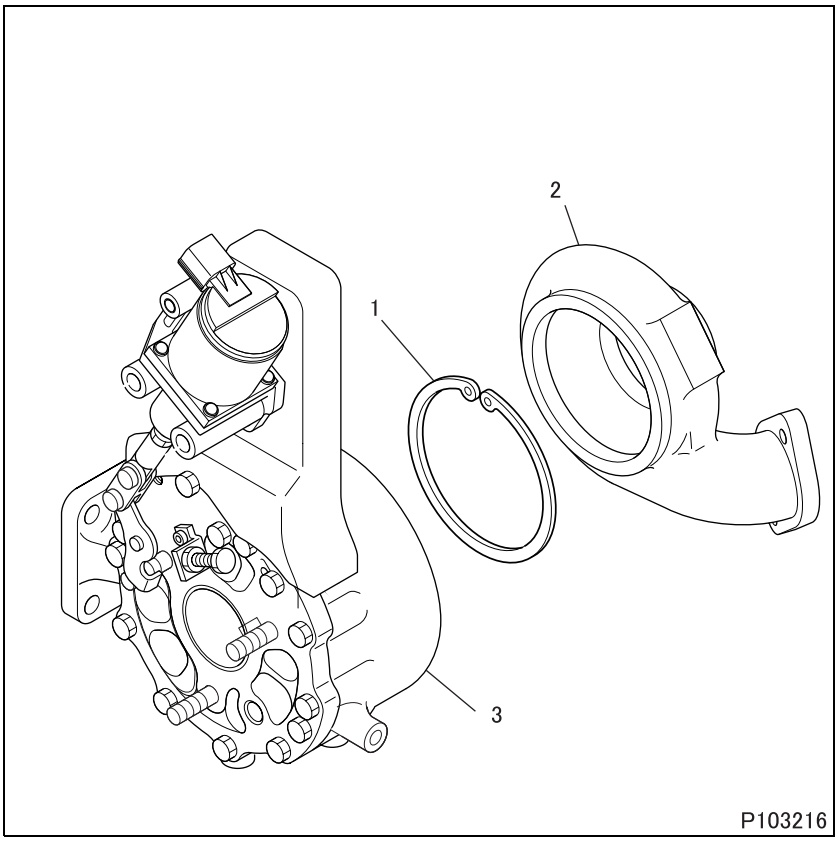


■ **Installation: Water pipe**

- Install the water pipe with its yellow painted end toward the turbocharger.

M E M O

Turbocharger



● **Removal sequence**

1 Snap ring
2 Compressor cover
3 Turbine assembly

- Do not attempt to disassemble the turbine assembly because it is of a unit construction.
- Do not unseal and try to adjust the turbine assembly. It should be replaced as an assembly if any failure is found.

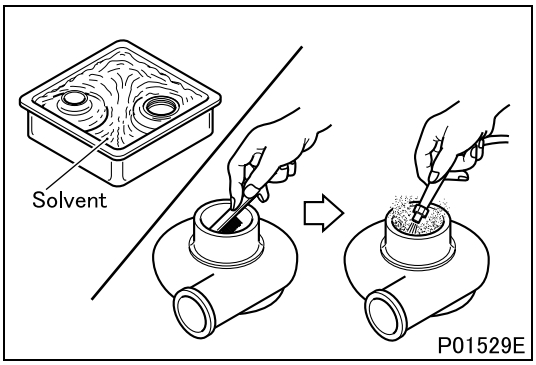
CAUTION ⚠

- **The blades on the turbine assembly are easily bent. Make sure that they do not strike the compressor cover.**

● **Installation sequence**

Follow the removal sequence in reverse.

◆Work after disassembly◆



■ **Cleaning**

- Before cleaning, visually check the disassembled parts for scorches, abrasion and other marks that may be difficult to see after cleaning. Replace any part that appears defective.
- Immerse the disassembled parts in a non-flammable solvent (a 5 to 10 aqueous solution of Oil Clean from New Hope Co., Ltd.). Take out the parts and blow them dry with compressed air. Remove any hard deposits with a stiff brush or plastic scraper.

CAUTION ⚠

- **Do not immerse the cartridge assembly in the solvent. Doing so will cause the O-ring inside the cartridge assembly to sell up, which may adversely affect turbocharger operation.**

- Again, immerse the parts in the solvent.
- Blow them dry using compressed air.

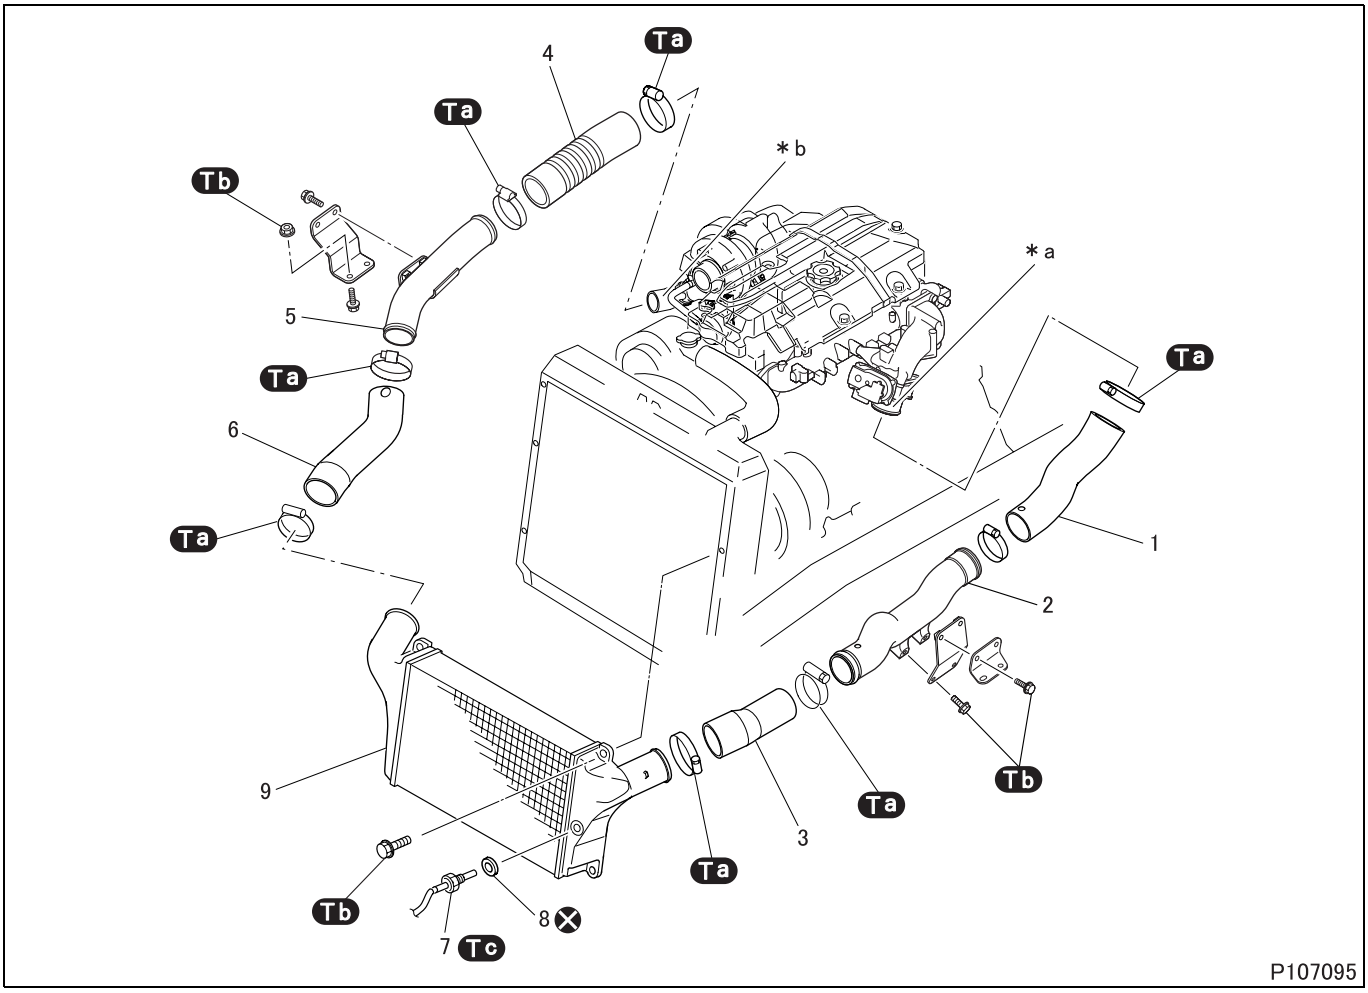
◆Inspection procedure◆

■ **Inspection: Visual inspection of turbine assembly**

CAUTION ⚠

- **The turbine assembly is a non-disassemble component. When it becomes unsmooth in rotation or has a damaged compressor wheel, replace the turbocharger.**

M E M O



●Disassembly sequence

1 Air inlet hose
2 Air inlet pipe LH
3 Air inlet hose
4 Air inlet hose
5 Air inlet pipe RH
6 Air inlet hose
7 Intake air temperature sensor
8 Gasket
9 Intercooler

***a**: Intake throttle
***b**: Turbocharger coupler

CAUTION ⚠

- **Do not remove forcedly the air inlet hose using a screwdriver or other similar tool. Doing so could damage the fluorine treatment layer on the inside surface of the hose, deteriorating the resistance to oil of the hose.**

●Assembly sequence

Follow the disassembly sequence in reverse.

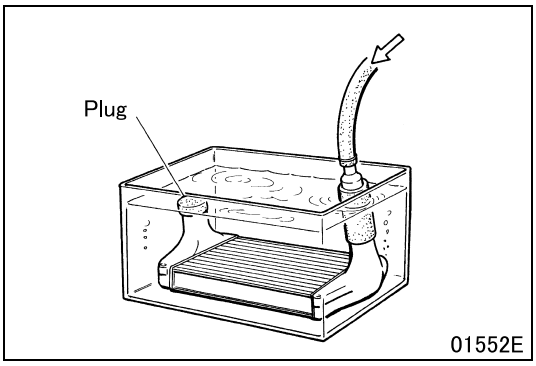
Service standards

Location	Maintenance item	Standard value	Limit	Remedy
8	Intercooler air leakage (air pressure: 200 kPa {29 psi, 2.0 kgf/cm^2} maintained for 30 seconds)	0 cm^3 {0 cu.in.}	–	Replace

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

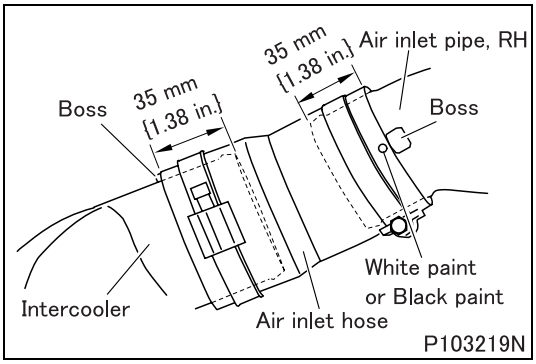
Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Clamp	3.9 to 4.9 {2.9 to 3.6, 0.4 to 0.5}	–
Tb	Bolt (bracket mounting)	12 to 15 {8.9 to 11, 1.2 to 1.5}	–
	Nut (bracket mounting)		
	Bolt (intercooler mounting)		
Tc	Intake air temperature sensor	14.7 to 24.5 {11 to 18, 1.5 to 2.5}	–

◆Inspection procedure◆



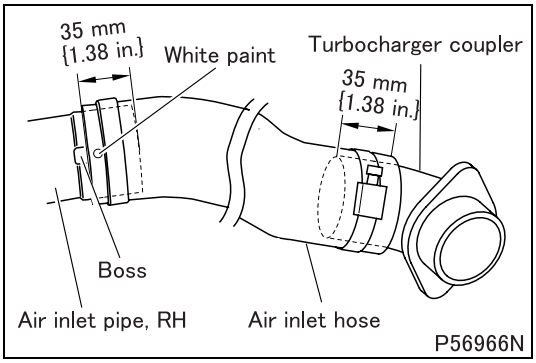
■ **Inspection: Intercooler**

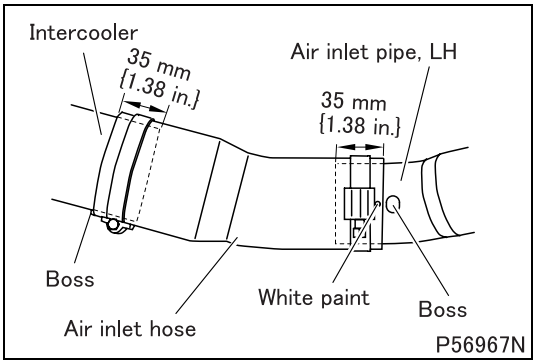
- Plug one of the air ports on the intercooler and connect an air source to the other port. Place the intercooler in a tank of water and apply air pressure of the specified level (200 kPa {29 psi, 2.0 kgf/cm^2}) to the intercooler and retain the pressure for 30 seconds.
- Replace the intercooler if any air leakage is evident.

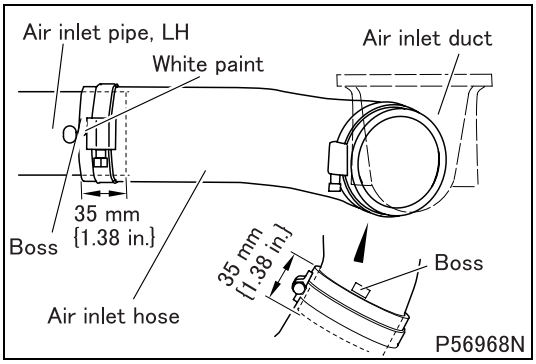


■ **Installation: Air inlet hose**

- Connect the air inlet hose to the RH air inlet pipe with the white paint on the hose aligned with the boss on the pipe.
- Connect the air inlet hoses to the intercooler, RH air inlet pipe and turbocharger coupler to the dimensions indicated in the illustrations.







- Connect the air inlet hose to the LH air inlet pipe with the white paint on the hose aligned with the boss on the pipe.
- Connect the air inlet hoses to the intercooler, LH air inlet pipe and air inlet duct to the dimensions indicated in the illustrations.

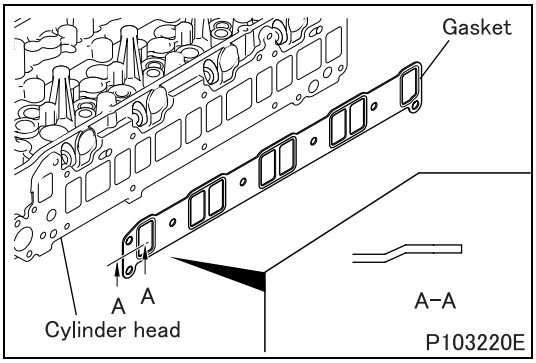
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Bolt (boost pressure sensor bracket mounting)	24 {18, 2.4}	–
Tb	Bolt (intake manifold mounting)	46 {34, 4.7}	–
Tc	Bolt (boost pressure sensor mounting)	5.5 {4.1, 0.6}	–
Td	Gas filter	14.7 to 19.6 {11 to 14, 1.5 to 2.0}	–
Te	Boost air temperature sensor	25 {18, 2.5}	–

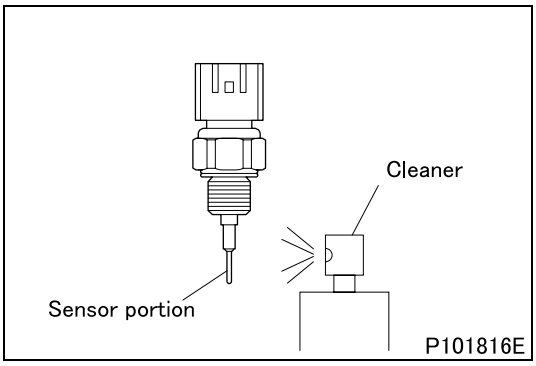
◆Installation procedure◆



■ **Installation: Gasket**

- Install the gasket on the cylinder head in the illustrated direction.

◆Inspection procedure◆



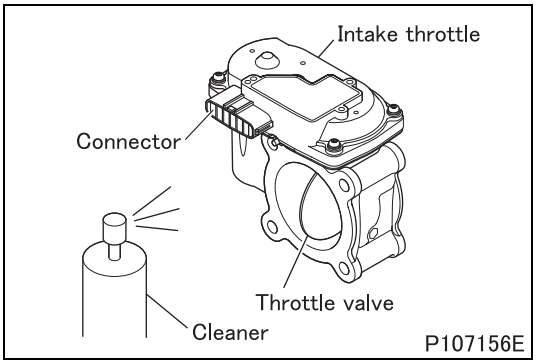
■ **Inspection: Boost air temperature sensor**

- Check that the sensor portion is free of soot, oily substance, etc.
- If not, clean the sensor portion as follows.
- Spray a cleaner on the sensor portion from 2 or 3 cm {0.79 or 1.18 in.} away.
  Recommended cleaners:
  Nonchlorinated solvent
- In 20 to 30 seconds after spraying, wipe the sensor portion clear of the sprayed cleaner using a soft waste cloth the like.

CAUTION ⚠

- **Be sure to wait for 20 to 30 seconds before wiping. It takes the cleaner that long to dissolve foreign matter.**

If the sensor portion is fouled excessively, the positive crankcase ventilation (PCV) may be faulty. Inspect the PCV valve and filter to locate the cause and remove it.



■ **Inspection: Intake throttle**

- Check that the throttle valve is free of soot, oily substance, etc.
- If not, clean the throttle valve as follows.
- Spray a cleaner on the throttle valve from 2 or 3 cm {0.79 or 1.18 in.} away.
  Recommended cleaners:
  Nonchlorinated solvent
- In 20 to 30 seconds after spraying, wipe the throttle valve clear of the sprayed cleaner using a soft waste cloth the like.

CAUTION ⚠

- **Be sure to wait for 20 to 30 seconds before wiping. It takes the cleaner that long to dissolve foreign matter.**
- **Do not spray a cleaner on the intake throttle connector directly. If it is sprayed on the connector, immediately wipe it off.**

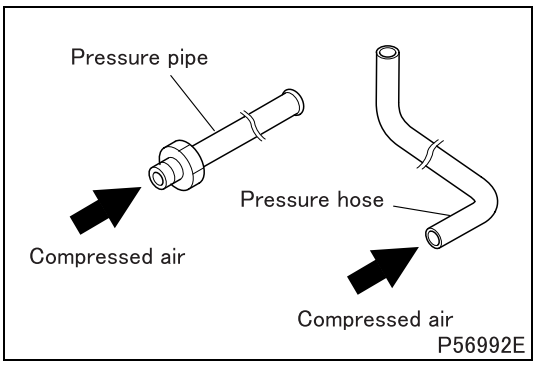
Td	Bolt (bracket mounting)	49 to 63.7 {36 to 47, 5.0 to 6.4}	–

◆Inspection procedure◆

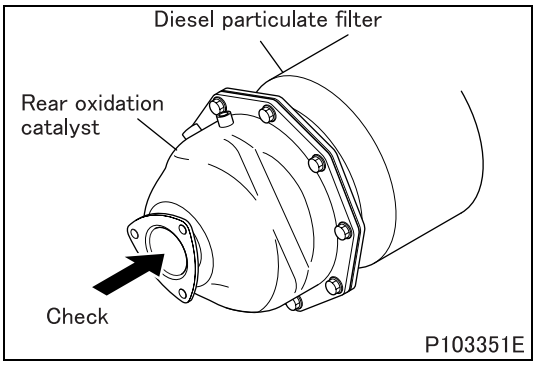


■ Inspection: Pressure pipe and hose

- Check the pressure pipe and hose for clogging by blowing compressed air into the pipe and hose.

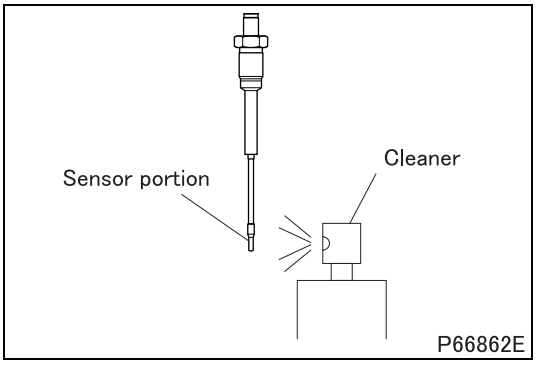
CAUTION ⚠

- **Inspection must be performed on an individual pressure pipe or hose.**
- **If compressed air is blown into the pressure pipe or hose with diesel particulate filter pressure sensor still installed, the sensor may become damaged.**



■ Inspection: Diesel particulate filter

- Check the inside of the rear oxidation catalyst and the diesel particulate filter for adhesion of soot.
- If a large amount of soot is adhered, replace the ceramic filter as it may be damaged.



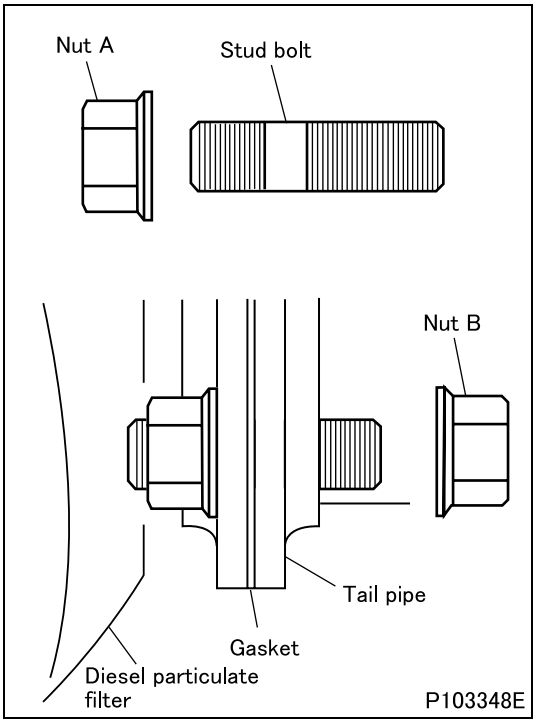
■ Inspection: Temperature sensor

- Check that the sensor portion is free of soot, oily substance, etc.
- If not, clean the sensor portion as follows.
- Spray a cleaner on the sensor portion from 2 or 3 cm {0.79 or 1.18 in.} away.
  Recommended cleaners:
  Nonchlorinated solvent
- In 20 to 30 seconds after spraying, wipe the sensor portion clear of the sprayed cleaner using a soft waste cloth the like.

CAUTION ⚠

- **Be sure to wait for 20 to 30 seconds before wiping. It takes the cleaner that long to dissolve foreign matter.**

◆Installation procedure◆



■ Installation: Tail pipe

- Install nut A to the shorter thread end of a stud bolt. Tighten the nut fully.
- From the diesel particulate filter side, insert the assembled stud bolt and nut A into the bolt hole. Fit the gasket and the tail pipe and tighten nut B to the specified torque.

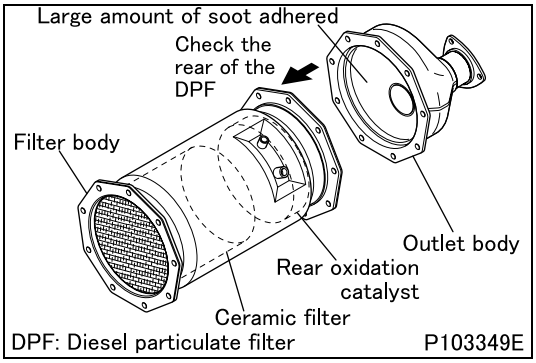
Ta	Nut (inlet body mounting)	49 to 63.7 {36 to 47, 5.0 to 6.4}	–
	Nut (outlet body mounting)		

◆Inspection procedure◆



■ Inspection: Inlet body

- Visually inspect the front oxidation catalyst.
- If there is any abnormality or damage, replace the inlet body.

■ Inspection: Outlet body

- Check if a large amount of soot adheres inside the diesel particulate filter outlet body.
- If a large amount of soot adhesion is found, replace the diesel particulate filter.

■ Inspection: Filter body

- Check the rear oxidization catalyst at the rear of the ceramic filter for damage.
- If any abnormality is found, replace the filter body.
- If no abnormality is found but cleaning of the filter is required, clean the ceramic filter. (See “ON-VEHICLE INSPECTION AND ADJUSTMENT”.)

INDEX

STRUCTURE AND OPERATION

1. Exhaust Gas Recirculation System 17-2
2. Crankcase Emission Control System 17-7

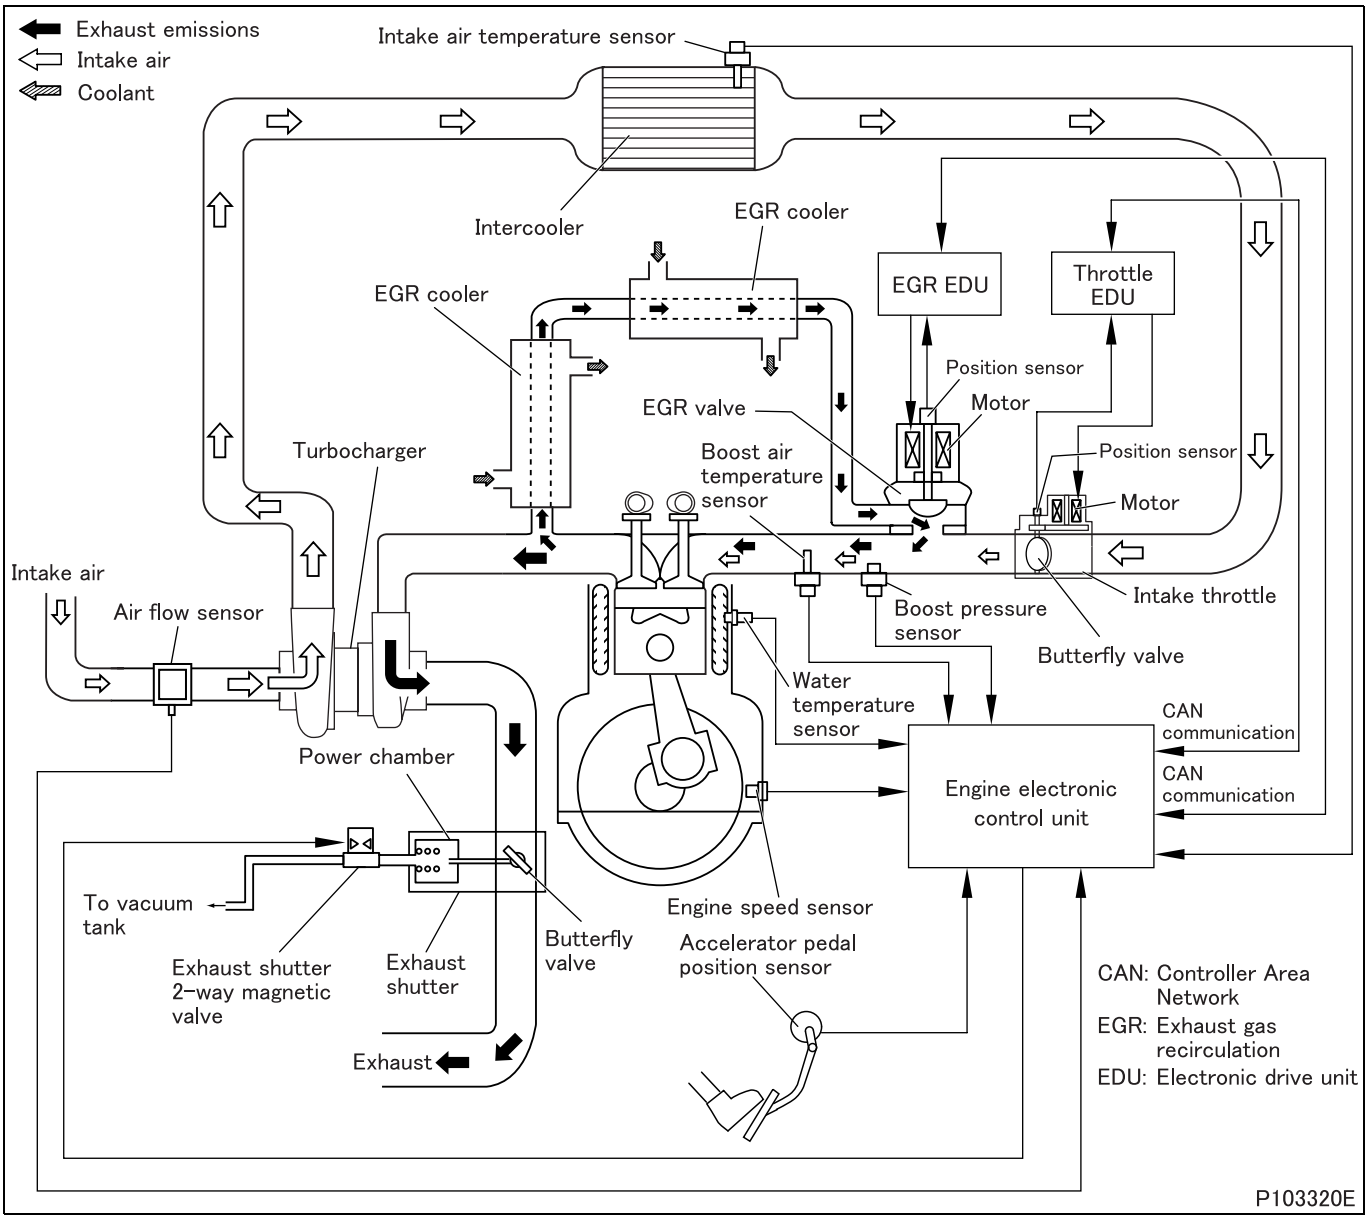
EXHAUST GAS RECIRCULATION VALVE, PIPE AND COOLER 17-8

CRANKCASE EMISSION CONTROL SYSTEM 17-12

1. Exhaust Gas Recirculation System

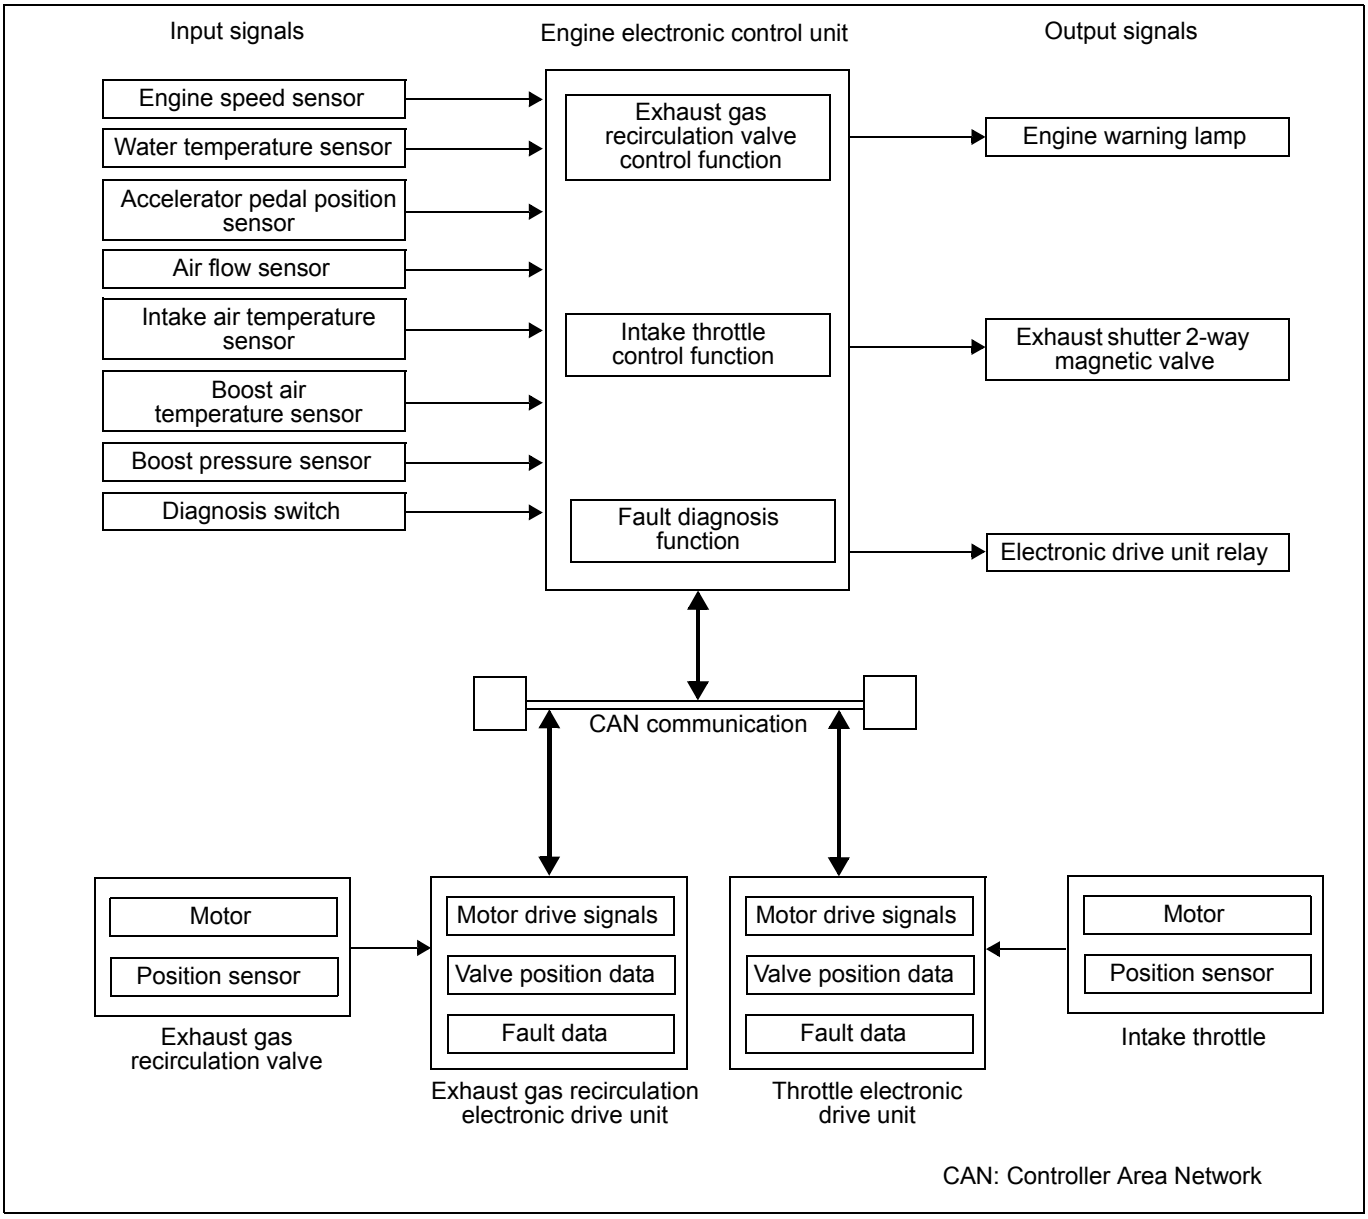
1.1 Overview

- In the exhaust gas recirculation system, the engine electronic control unit and multiple electronic drive units control the exhaust gas recirculation valve and intake throttle in accordance with information from sensors on various aspects of the engine (engine speed, coolant temperature, throttle opening, etc.).
- Exhaust gas recirculation involves the introduction of inert gases in the post-combustion exhaust emissions into the intake manifold. By reducing the combustion temperature, it reduces the amount of nitrogen oxides (NOx), which are harmful, in the exhaust emissions. Further, an exhaust gas recirculation cooler cools the recirculated exhaust emissions, thereby reducing the peak combustion temperature.
- The intake air quantity is adjusted by means of intake throttle control such that the effectiveness of exhaust gas recirculation is maximized.



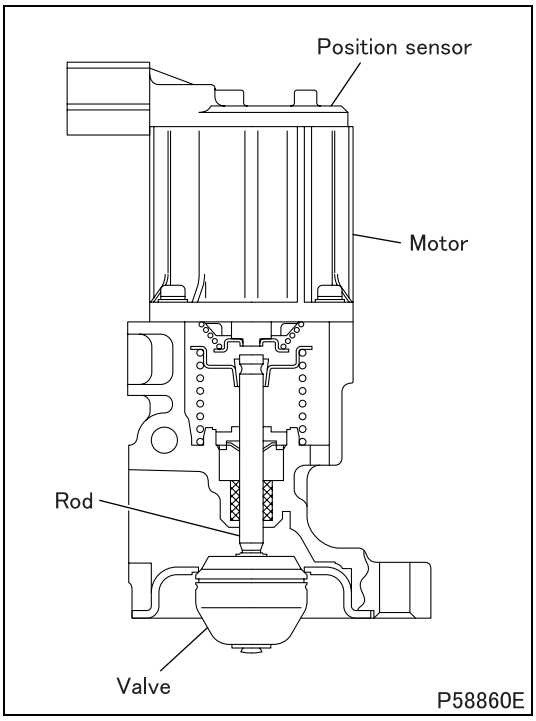
1.2 Electronic control system

(1) System block diagram



(2) Exhaust gas recirculation valve control function

- In accordance with data from sensors, the engine electronic control unit determines the exhaust gas recirculation valve opening that suits the operating condition and sends a control signal (this indicates the target exhaust gas recirculation valve opening) to the exhaust gas recirculation electronic drive unit.
  When necessary to prevent black smoke emissions and engine speed instability (for example, when the engine is heavily loaded, when the engine is lightly loaded, and when the exhaust brake is operating), the engine electronic control unit stops exhaust gas recirculation valve control.
- The exhaust gas recirculation electronic drive unit activates the exhaust gas recirculation valve motor. At the same time, it monitors the extent of valve lift using a position sensor and sends this information (this indicates the actual exhaust gas recirculation valve opening) to the engine electronic control unit.
  This operation makes it possible for the target exhaust gas recirculation valve opening indicated by the engine electronic control unit to be precisely maintained.

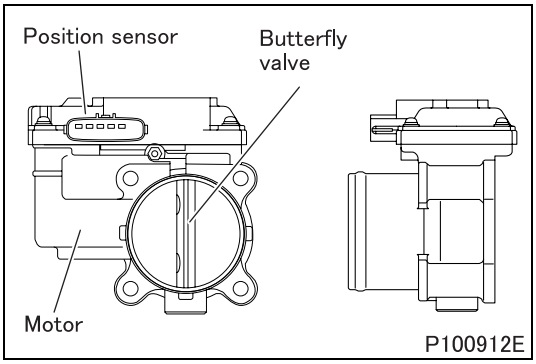


(2.1) Exhaust gas recirculation valve

- A motor in the exhaust gas recirculation valve is driven by control signals from the exhaust gas recirculation electronic drive unit. Via a rod, the motor's operation opens and closes the valve.

(3) Intake throttle control function

- When the engine electronic control unit determines from sensor data on the engine speed and engine loading that the vacuum pressure in the intake manifold is low, it increases the amount of exhaust emissions introduced into the intake manifold by determining an appropriate butterfly valve opening and by sending corresponding control signals (these indicate the target throttle opening) to the throttle electronic drive unit.
- The throttle electronic drive unit activates the valve motor. At the same time, it monitors the valve opening using a position sensor and sends this information (this indicates the actual throttle opening) to the engine electronic control unit.
  This operation makes it possible for the target throttle opening indicated by the engine electronic control unit to be precisely maintained.



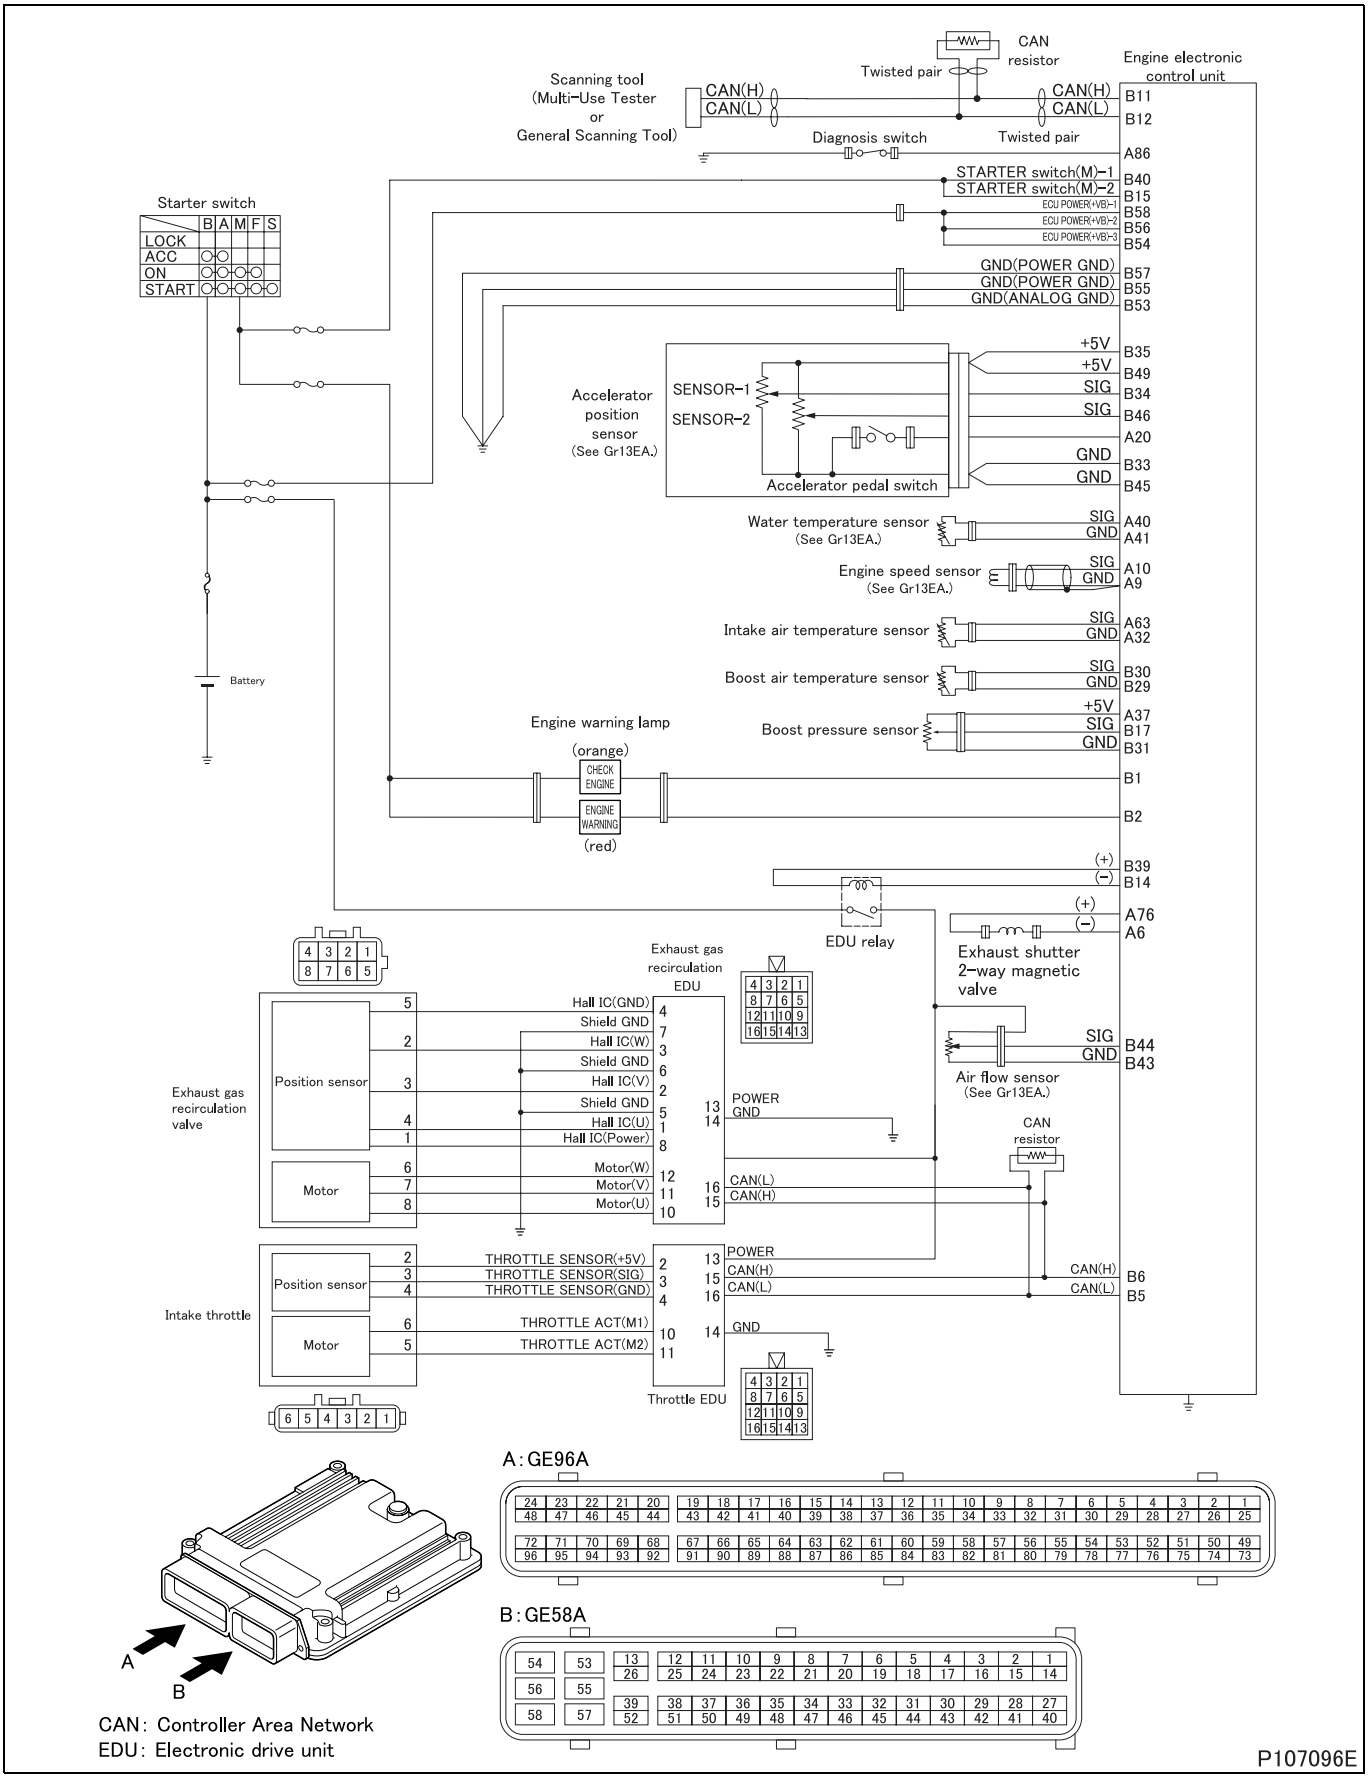
(3.1) Intake throttle

- In accordance with signals from the throttle electronic drive unit, the motor opens and closes the butterfly valve, thereby adjusting the intake air amount such that the effectiveness of exhaust gas recirculation is maximized.

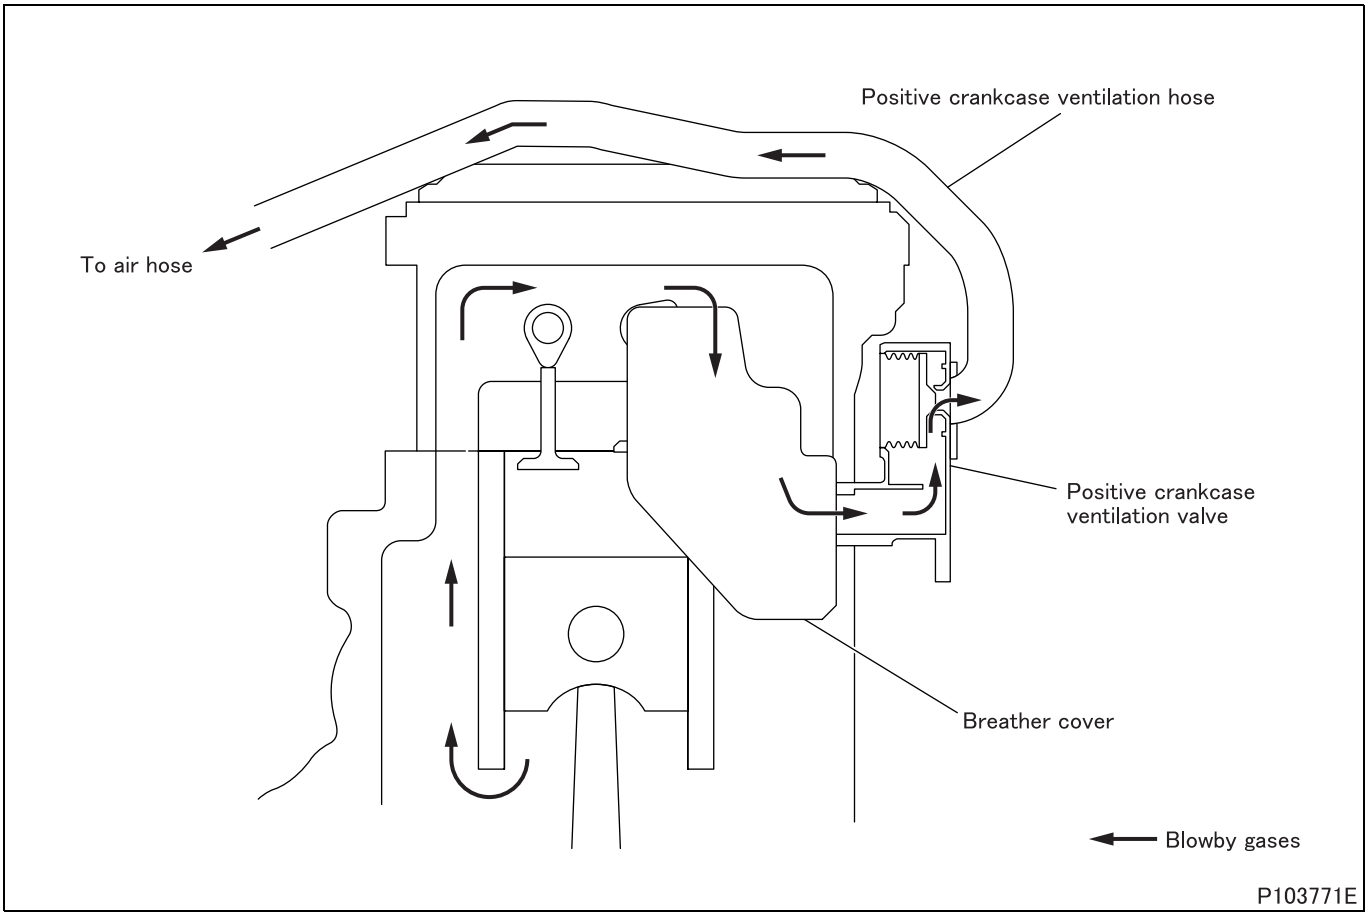
(4) Fault diagnosis function

- While the starter switch is in the ON position, the engine electronic control unit continuously monitors the electronic drive units and sensors for faults. In the event that the engine electronic control unit finds a component faulty, it causes an indication to be made in the meter cluster to alert the driver. At the same time, it memorizes the fault location in the form of a diagnosis code and starts a control during fault.
- While the engine is running, the exhaust gas recirculation electronic drive unit and throttle electronic drive unit continuously monitor communication with the position sensor and motor of the exhaust gas recirculation valve, communication with the position sensor and motor of the intake throttle, and communication with the engine electronic control unit. In the event that they identify a fault, they send fault data to the engine electronic control unit.
- While control necessitated by a fault is taking place, the system's functionality is limited to ensure vehicle and driver safety. It is possible to read the memorized diagnosis code using a Multi-Use Tester or from flashing of the warning lamp.
- Diagnosis codes shown by the Multi-Use Tester and those indicated by flashing of the warning lamp are different.
- The Multi-Use Tester is capable of showing more detailed diagnosis codes.

1.3 Electronic control unit connection diagram



2. Crankcase Emission Control System



- The crankcase emission control system returns blowby gases to an air duct to prevent them from being released to the outside air.
- The positive crankcase ventilation valve keeps constant the pressure inside the crankcase.

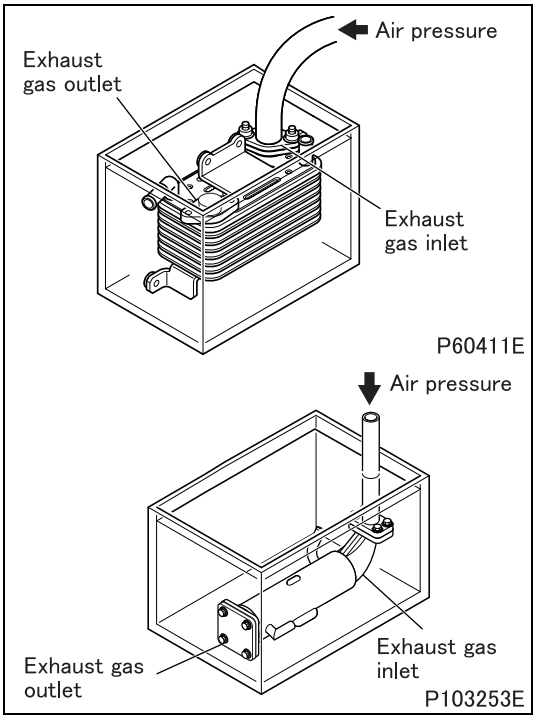
◆Inspection procedures◆

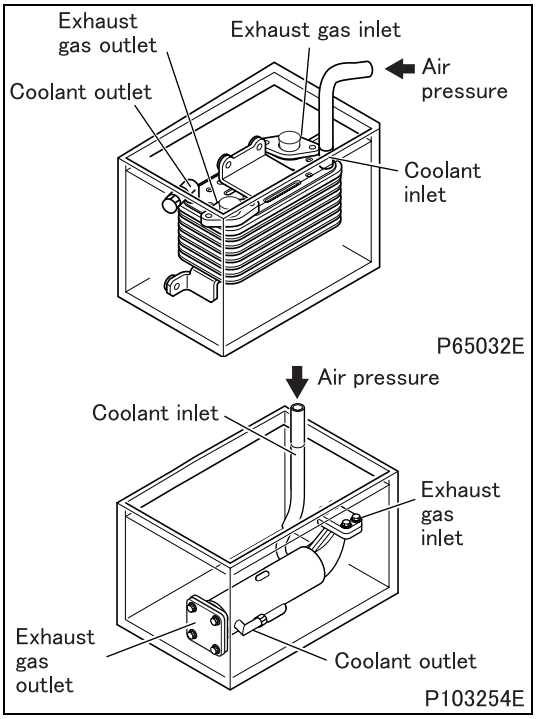


■ Inspection: Exhaust gas recirculation cooler

- Perform the following inspection. If any abnormality is found, replace the exhaust gas recirculation cooler.

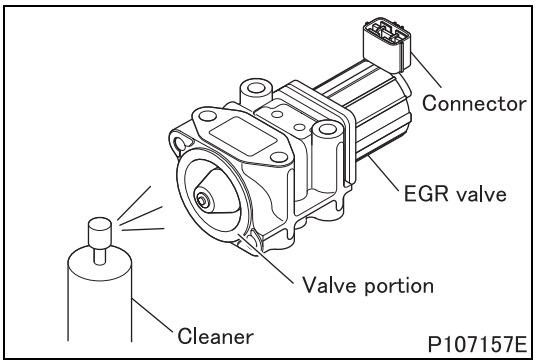
(1) Exhaust gas passage side

- Fit a cover over the exhaust gas outlet of the exhaust gas recirculation cooler, and connect a hose to the exhaust gas inlet. Then, submerge the exhaust gas recirculation cooler in a container of water. Make sure the coolant passage is full of water.
- Apply specified air pressure through the hose. Check that air does not leak from any part of the exhaust gas recirculation cooler.



(2) Coolant passage side

- Fit covers over the exhaust gas recirculation cooler's exhaust gas inlet, exhaust gas outlet, and coolant outlet, and connect a hose to the coolant inlet. Then, submerge the exhaust gas recirculation cooler in a container of water.
- Apply specified air pressure through the hose. Check that air does not leak from any part of the exhaust gas recirculation cooler.



■ Inspection: Exhaust gas recirculation valve

- Check that the valve portion is free of soot, oily substance, etc.
- If not, clean the valve portion as follows.
- Spray a cleaner on the valve portion from 2 or 3 cm {0.79 or 1.18 in.} away.
  Recommended cleaners:
  Nonchlorinated solvent
- In 20 to 30 seconds after spraying, wipe the valve portion clear of the sprayed cleaner using a soft waste cloth the like.

CAUTION ⚠

- **Be sure to wait for 20 to 30 seconds before wiping. It takes the cleaner that long to dissolve foreign matter.**
- **Do not spray a cleaner on the intake throttle connector directly. If it is sprayed on the connector, immediately wipe it off.**

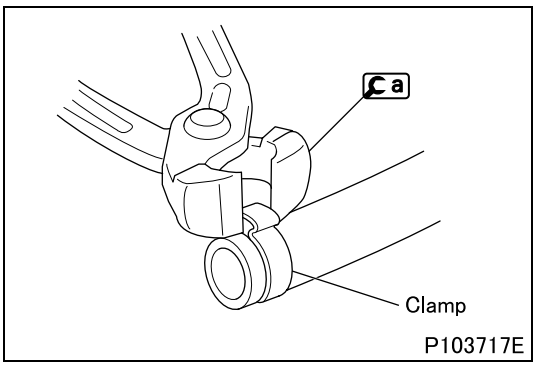
b	Clamp installation tool  P103716	MH063866	Installation of hose clamp

◆Removal procedure◆

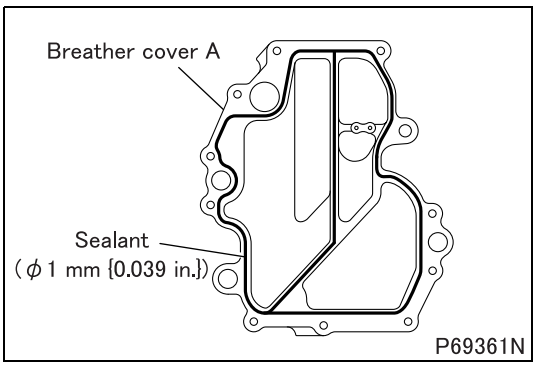


P103717E

■ Removal: Clamp

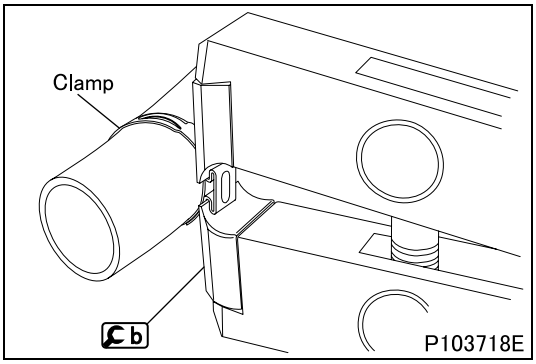
- To remove the clamp, cut the clamp using a.

◆Installation procedures◆



■ **Installation: Breather cover A**

- Clean the sealant application surfaces of each part.
- Apply a bead of sealant to the breather cover A evenly and without any breaks as shown in the illustration.
- Install the lower crankcase within three minutes of applying the sealant to the upper crankcase, being careful not to dislodge the sealant.



■ **Installation: Clamp**

- Pinch the projecting part of the clamp with b and tighten to the specified torque.

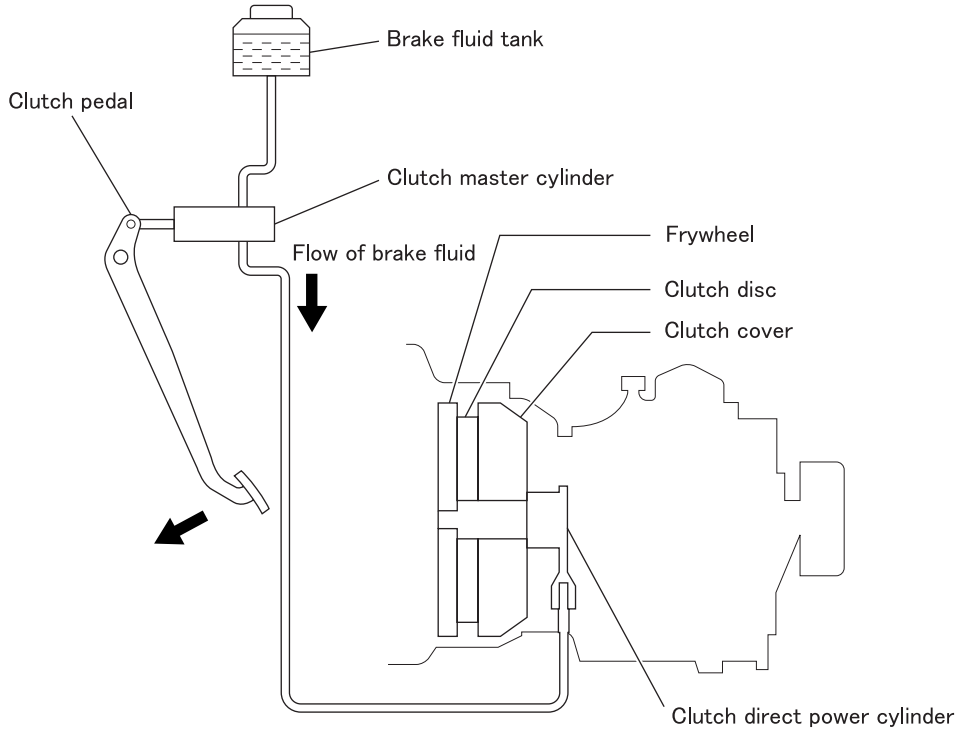
SPECIFICATIONS

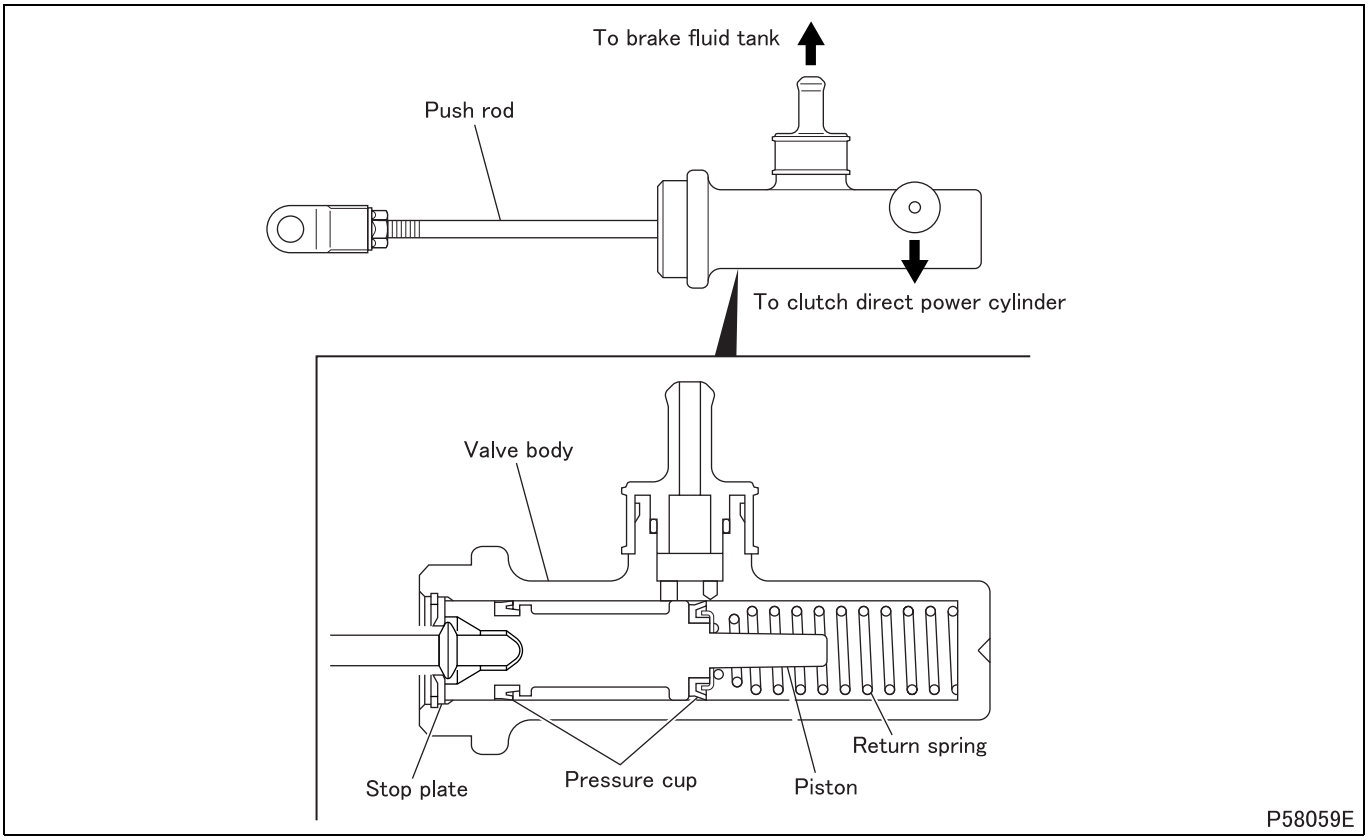
Item	Specifications
Clutch model	C5W33
Drive type	Strap drive
Clutch disc type	Dry, single plate type
Pressure plate type	Diaphragm spring type
Control system	Fluid pressure type
Clutch master cylinder manufacturer	NISSIN KOGYO
Clutch direct power cylinder manufacturer	NISSIN KOGYO

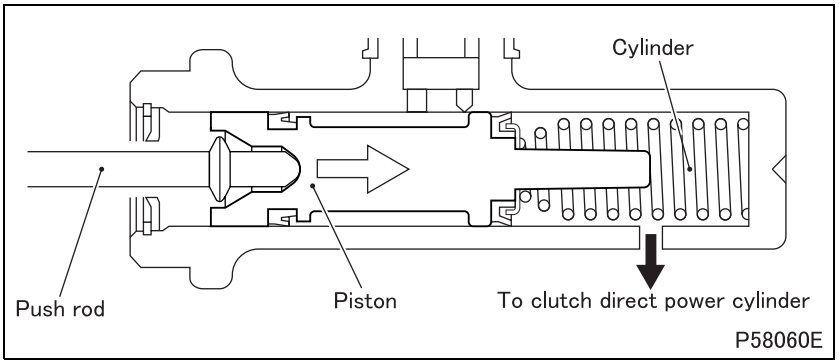
1. Clutch Control



- Fluid pressure is used to control the clutch operation.
- When the clutch pedal is pressed, the boosted force is then applied to the clutch master cylinder. This pressurizes the brake fluid inside the clutch master cylinder, pushing the clutch direct power cylinder and disengaging the clutch.

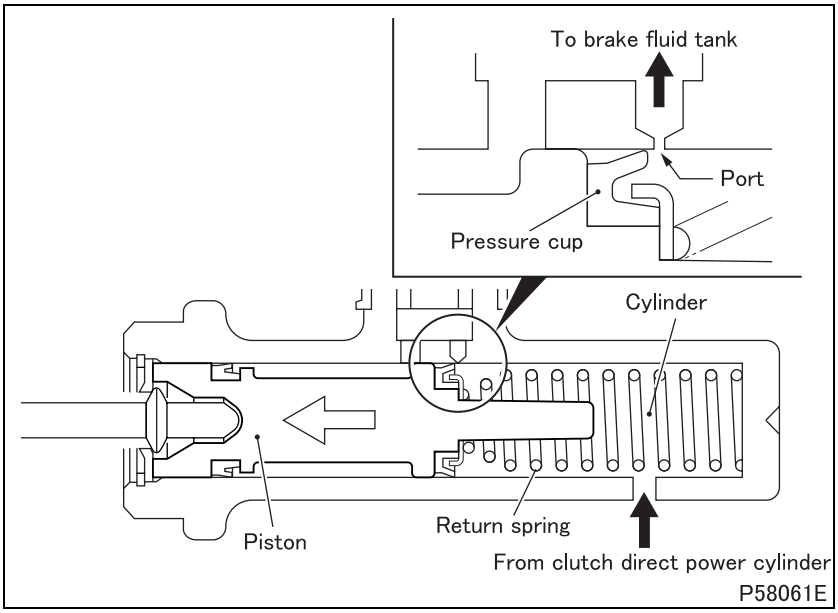
2. Clutch Master Cylinder





2.1 When clutch pedal is pressed

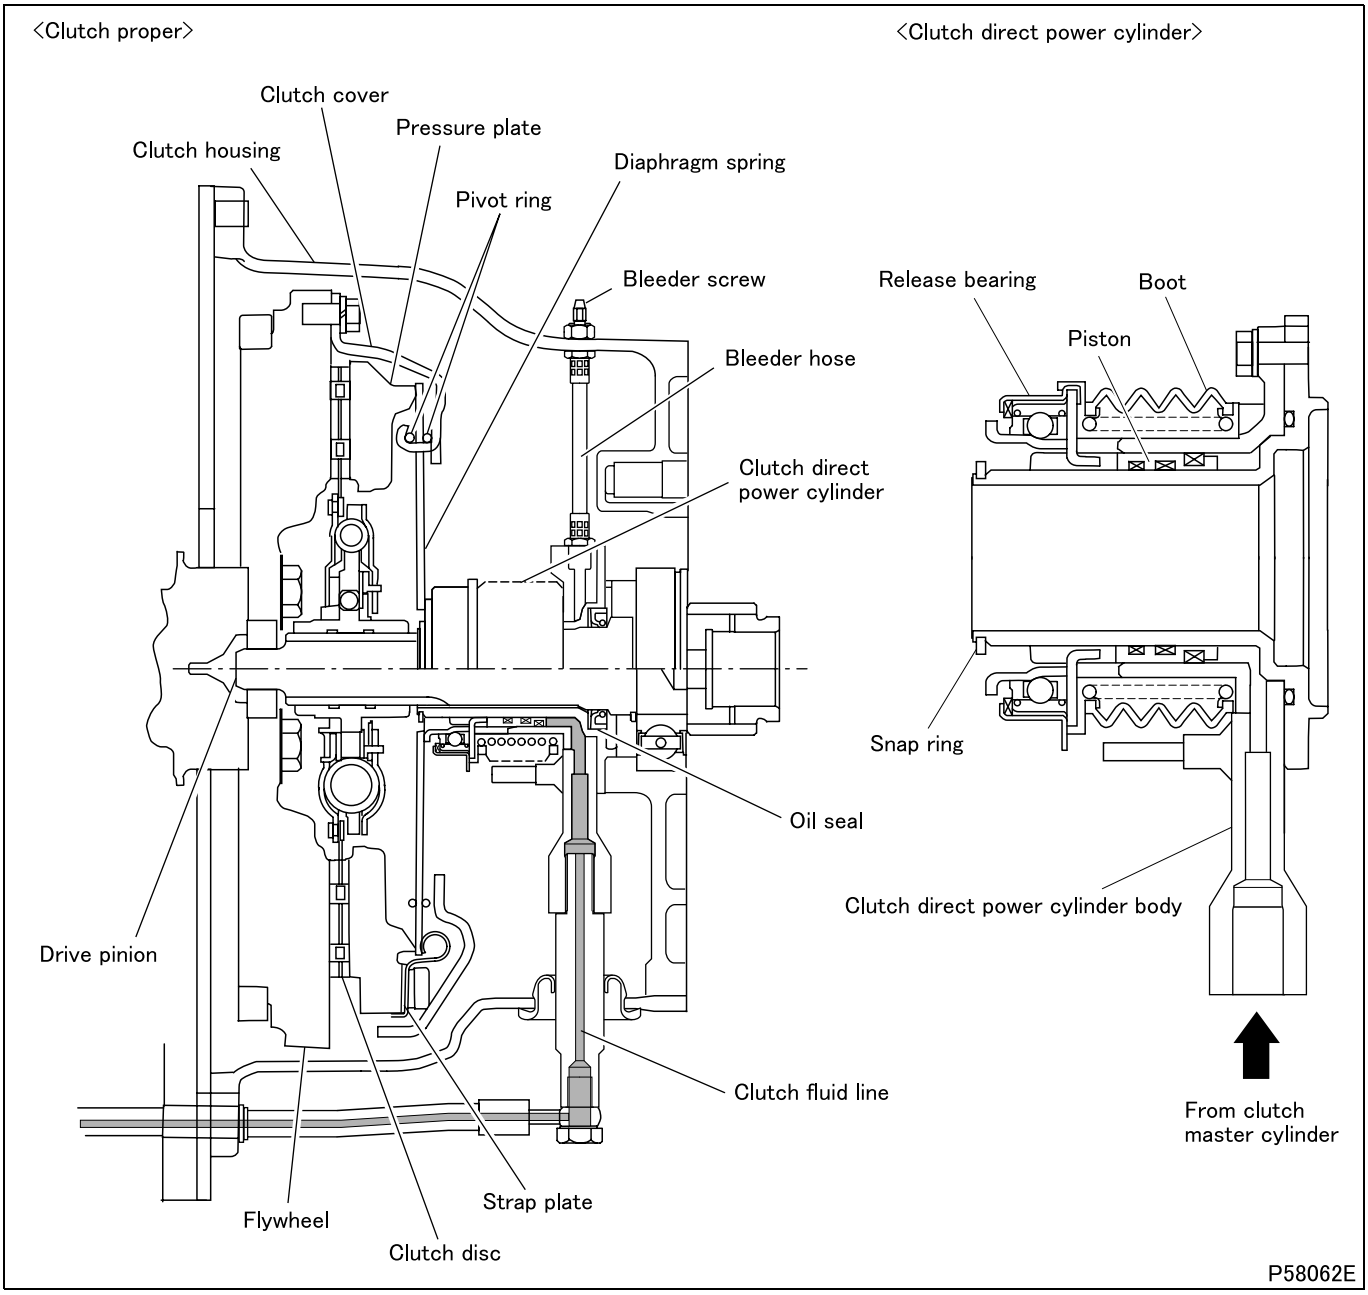
- The piston is pushed to the right by the push rod, pressurizing the brake fluid in the cylinder.
- This brake fluid pressure is transmitted to the clutch direct power cylinder.



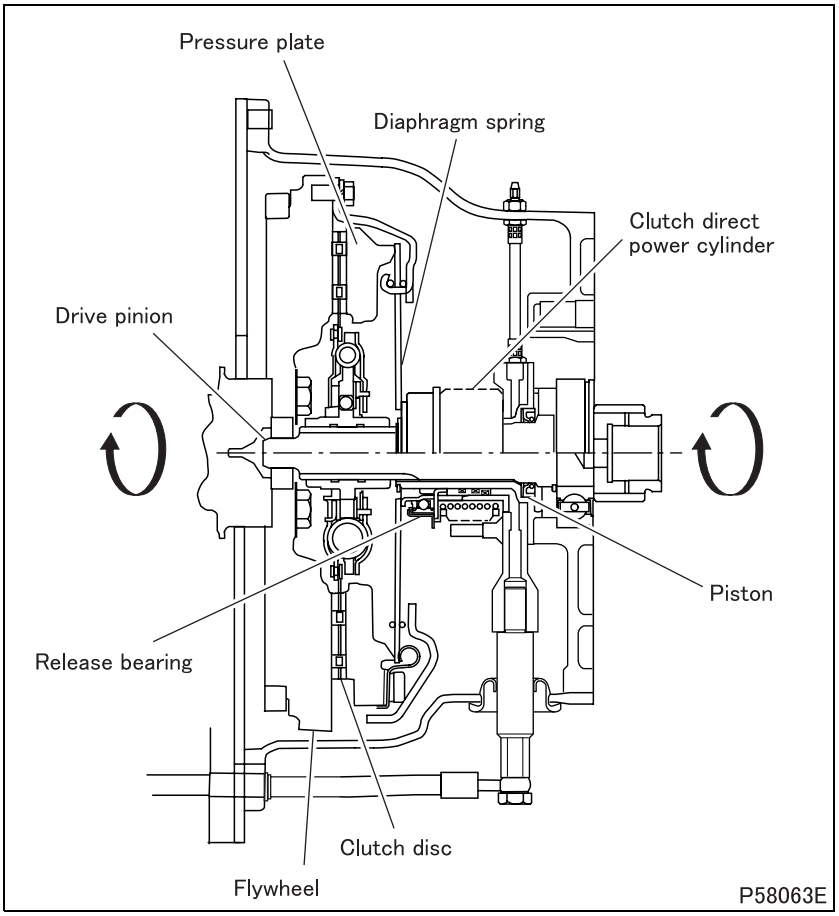
2.2 When clutch pedal is released

- The piston is pushed back to the left by the combined force of oil pressure from the clutch direct power cylinder and the return spring.
- This opens up the port that has been blocked by the pressure cup, connecting the cylinder to the brake fluid tank. This allows the oil pressure to completely drain to the tank.

3. Clutch Proper and Clutch Direct Power Cylinder

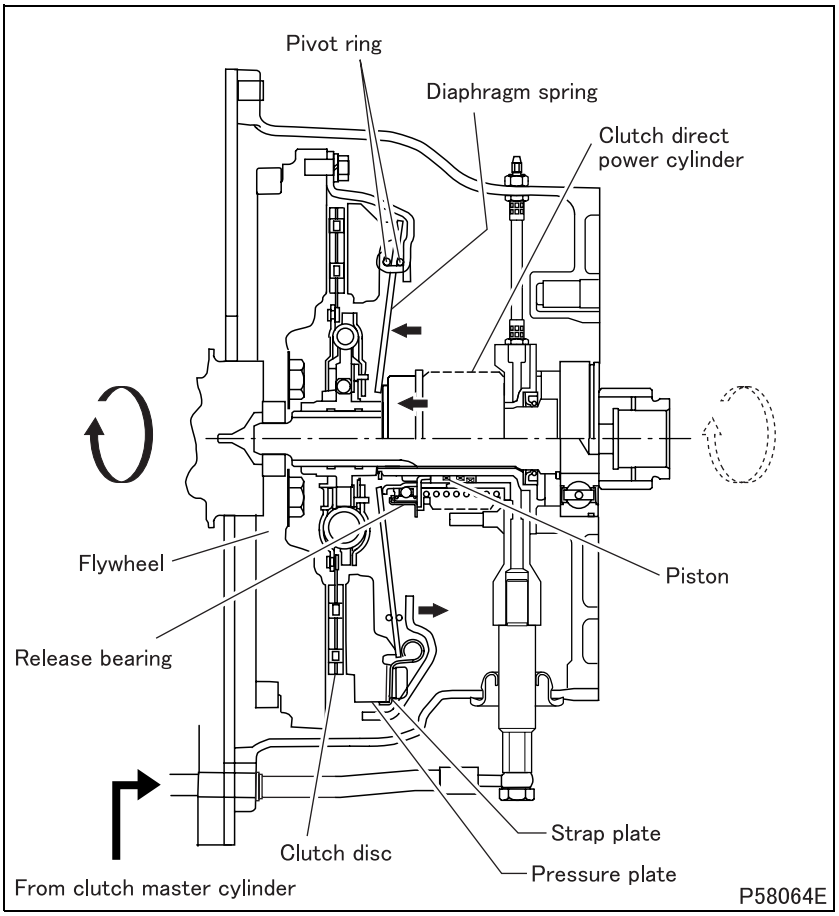


- Clutch engagement and disengagement are controlled by the brake fluid pressure from the clutch master cylinder acting on the piston of the clutch direct power cylinder, and are achieved by the operation of the piston and the release bearing.



3.1 When clutch pedal is released

- There is no brake fluid pressure acting on the clutch direct power cylinder. The piston and release bearing remain in their home positions.
- The force of the diaphragm spring acts on the pressure plate, which in turn keeps the clutch disc pressed against the flywheel.
- Pressed against the flywheel, the clutch disc rotates together with the flywheel and transmits the engine power to the transmission drive pinion.



3.2 When clutch pedal is pressed

- Brake fluid pressure from the clutch master cylinder moves the piston in the clutch direct power cylinder.
- As it moves, the piston pushes the release bearing, which in turn pushes the diaphragm spring.
- The diaphragm spring pivots around the pivot ring. This movement, via the strap plate, causes the pressure plate to retract from the flywheel. As a result, the clutch disc separates from the flywheel, cutting off the transmission of engine power to the transmission.

M E M O

ON-VEHICLE INSPECTION AND ADJUSTMENT

1. Replacement of Brake Fluid (Clutch System)

- Clutch fluid (brake fluid) is shared by the clutch and brake systems, and is divided in the brake fluid tank into the two systems. This section describes the replacement of the clutch fluid (brake fluid) for the clutch system. In order to completely replace the clutch fluid (brake fluid), the brake fluid in the brake system should also be replaced. (See Gr35A.)

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

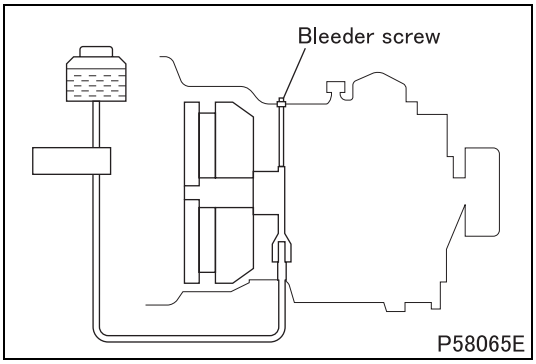
Mark	Parts to be tightened	Tightening torque	Remarks
–	Bleeder screw	6.8 to 8.8 {5.0 to 6.5, 0.7 to 0.9}	–

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
–	Brake fluid tank	Brake fluid (SAE J1703f or FMVSS No. 116 DOT3)	As required

CAUTION ⚠

- **Brake fluid is corrosive on paintwork. Be careful not to spill it onto the paintwork.**
- **If brake fluid is spilled onto the paintwork, immediately wipe it off.**
- **Be sure to use new FUSO Brake Fluid (DOT3). Do not mix it with brake fluid of different properties or mineral oil (gas oil, engine oil, gear oil, automatic transmission fluid, etc.). This will alter the original properties of FUSO Brake Fluid, causing the boiling point to drop as well as the clutch rubber parts to swell. Faulty operation of the clutch will result.**
- **Ensure that no foreign matter or water enter into the brake fluid when refilling it, as they will cause faulty clutch operation.**
- **Use a mug exclusively kept for the specified brake fluid. This ensures that no brake fluid of different properties or mineral oil enter into the system.**



1.1 Work before replacement

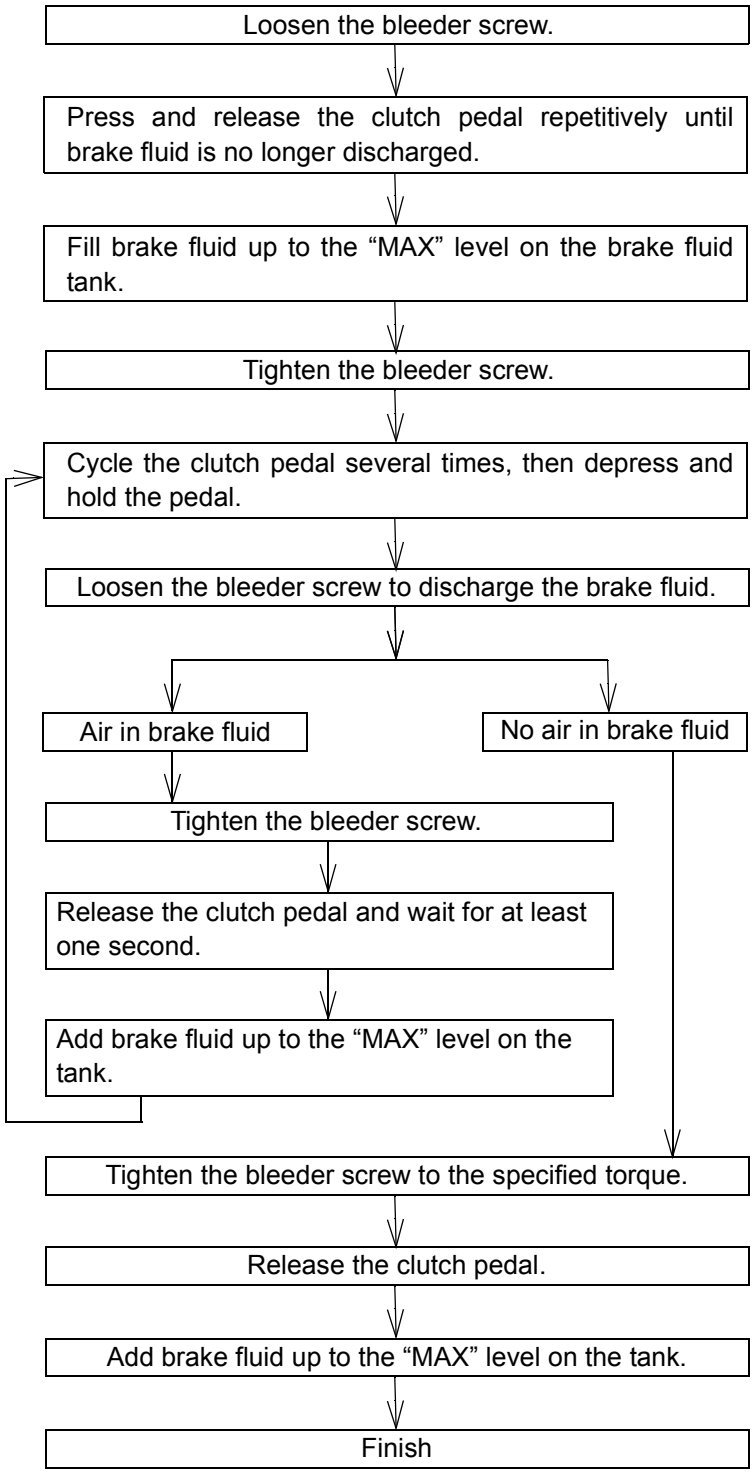
- Install one end of a vinyl pipe onto the bleeder screw. Place the loose end into a container.

1.2 Replacement of brake fluid

- Replace the brake fluid in the following sequence.

CAUTION ⚠

- **Replacement of old brake fluid with new brake fluid in the clutch fluid line can be recognized by a change in color of the brake fluid being discharged through the vinyl pipe.**



2. Air Bleeding of Brake Fluid (Clutch System)

- Clutch fluid (brake fluid) is shared by the clutch and brake systems, and is divided in the brake fluid tank into the two systems. This section describes the air bleeding procedures for the clutch system. For air bleeding procedures for the brake system (See Gr35A.)

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Bleeder screw	6.8 to 8.8 {5.0 to 6.5, 0.7 to 0.9}	–

Lubricant and/or sealant

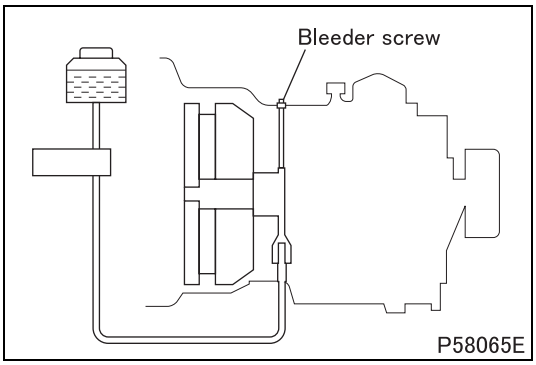
–	Brake fluid tank	Brake fluid (SAE J1703 or FMVSS No. 116 DOT3)	As required

CAUTION ⚠

- **Brake fluid is corrosive on paintwork. Be careful not to spill it onto the paintwork.**
- **If brake fluid is spilled onto the paintwork, immediately wipe it off.**
- **Be sure to use new FUSO Brake Fluid (DOT3). Do not mix it with brake fluid of different properties or mineral oil (gas oil, engine oil, gear oil, automatic transmission fluid, etc.). This will alter the original properties of FUSO Brake Fluid, causing the boiling point to drop as well as the clutch rubber parts to swell. Faulty operation of the clutch will result.**
- **Ensure that no foreign matter or water enter into the brake fluid when refilling it, as they will cause faulty clutch operation.**
- **Use a mug exclusively kept for the specified brake fluid. This ensures that no brake fluid of different properties or mineral oil enter into the system.**

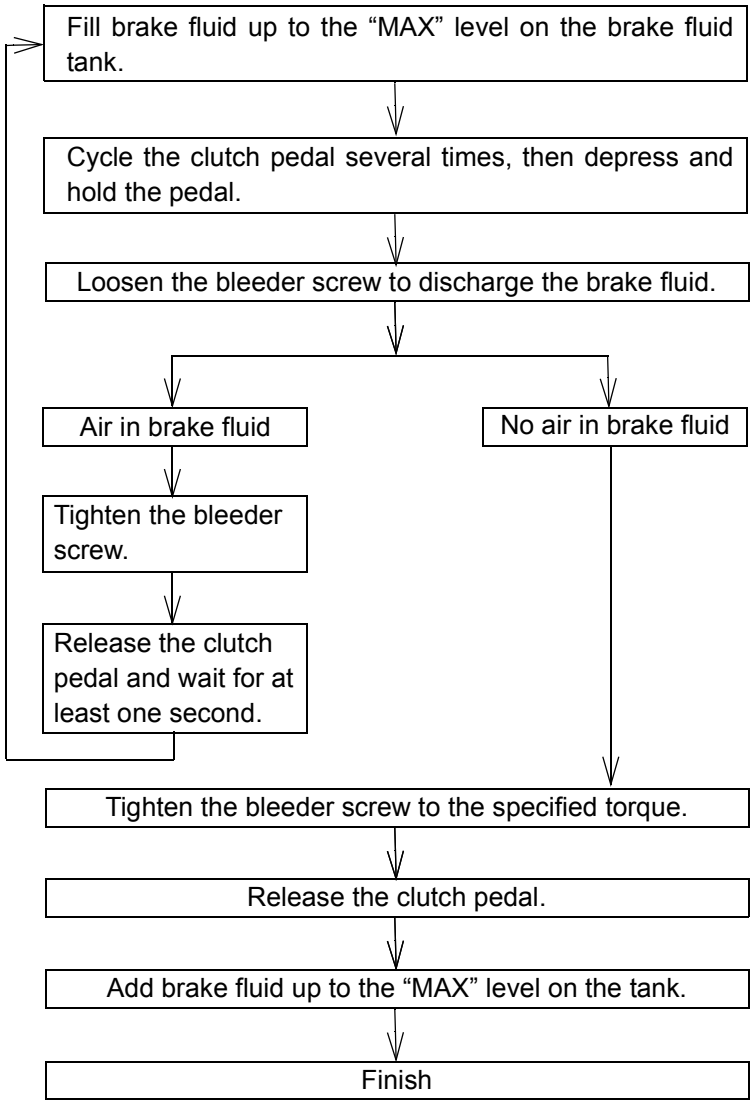


2.1 Work before air bleeding

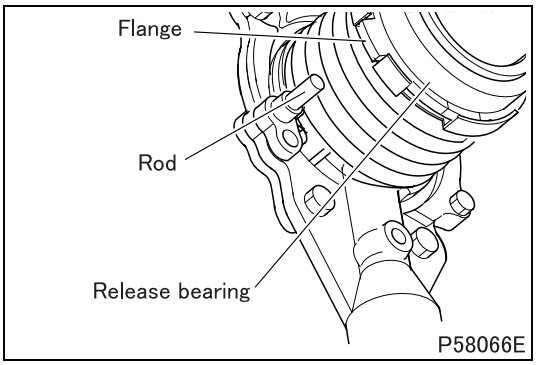
- Install one end of a vinyl pipe onto the bleeder screw. Place the loose end into a container.

2.2 Air bleeding of brake fluid

- Bleed the air in the following sequence.



3. Inspection of Clutch Disc Wear Limit



- Remove the grommet from the clutch housing and make sure that the rod of the clutch direct power cylinder does not reach the flange of the release bearing.
- If the rod reaches the flange, replace the clutch disc.

2 Clutch master cylinder (See later section.)
3 Clevis pin
4 Spring holder
5 Return spring
6 Plate
7 Spring assist rod
8 Cylinder bracket
9 Booster bracket
10 Clutch switch
11 Pedal pad
12 Clutch pedal

⊗: Non-reusable parts

● **Installation sequence**

Follow the removal sequence in reverse.

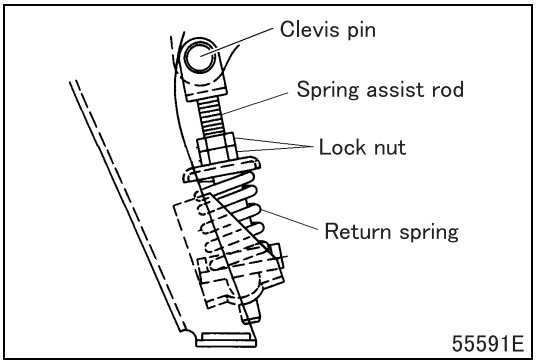
Service standards (Unit: mm {in.})

Location	Maintenance item	Standard value	Limit	Remedy
2	Clearance between push rod and piston of clutch master cylinder	0.2 to 1.2 {0.0079 to 0.047}	–	Adjust
5	Return spring load (installed length: 35.6 {1.40})	225 N {51 lbs., 23.1 kgf}	205 N {46 lbs., 20.8 kgf}	Replace
10	Installed clearance of clutch switch (for exhaust brake)	0.1 to 1.5 {0.0039 to 0.059}	–	Adjust
12	Clutch pedal free play	0.2 to 4.0 {0.0079 to 0.16}	–	Replace

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Sliding surface of spring holder	Chassis grease [NLGI No. 1 (Ca soap)]	As required
	Sliding surface of return spring		
	Sliding surface of plate		
	Clutch master cylinder and spring assist rod mounting clevis-pin hole bushing's inner face of clutch pedal.		

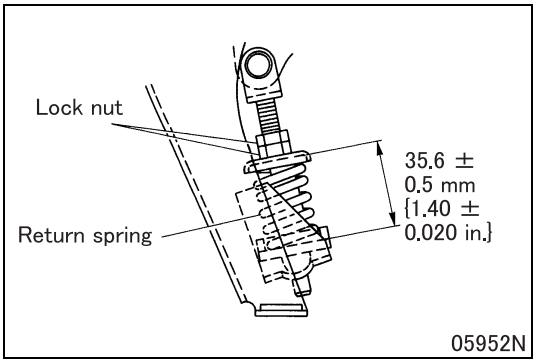
◆Removal procedure◆



■ **Removal: Spring assist rod**

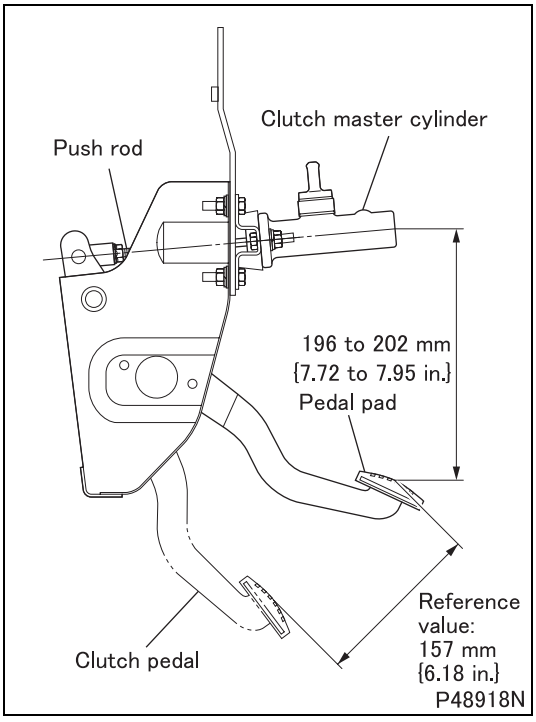
- Loosen the lock nut to release the load on the return spring. Then, remove the clevis pin and remove the spring assist rod.

◆Work after installation◆



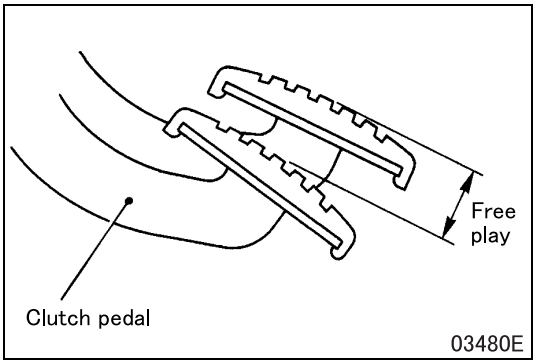
■ **Adjustment: Return spring**

- Tighten the lock nut such that the return spring is set to the illustrated length.



■ **Adjustment: Clutch pedal**

- Adjust the push rod of the clutch master cylinder such that the distance between the center of the clutch pedal pad and the center of the clutch master cylinder is set to the value indicated in the drawing.



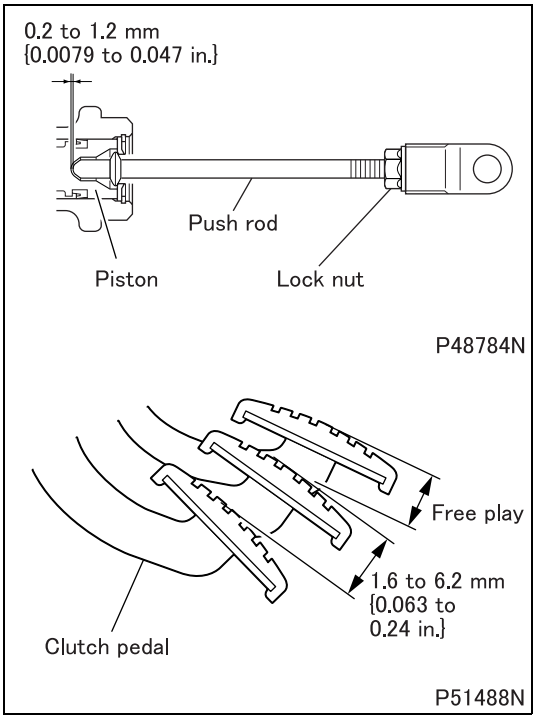
■ **Inspection: Clutch pedal free play**

- After installing the clutch master cylinder, check the clutch pedal free play as follows.
- Using a finger, press the clutch pedal pad in the center until resistance is felt. Measure the distance that the pedal has traveled.

NOTE

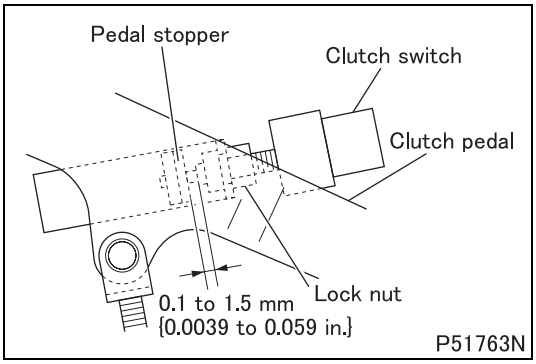
- **Do not press the clutch pedal pad until a second resistance is felt (which is the point at which the clutch master cylinder's push rod contacts the piston).**

- If the measured distance does not conform to the standard value, replace the clutch pedal.



■ **Adjustment: Clearance between clutch master cylinder's push rod and piston**

- Adjust the clearance between the clutch master cylinder's push rod and piston by using the clutch pedal as follows.
- Using a finger, press the clutch pedal in the center.
- Set the pedal travel, from the point at which the first resistance is felt to the point at which the second resistance is felt, to the illustrated value. (This distance corresponds to the clearance between the push rod and the piston.) This is done by turning the push rod in or out.
- With the pedal travel set to the illustrated value, the push rod-to-piston clearance should conform to the standard value.
- After the adjustment, tighten the lock nut to the specified torque.



■ **Adjustment: Clearance between clutch switch (for exhaust brake) and pedal**

- With the clutch pedal adjusted as above, set the clearance between the end of the threaded portion of the clutch switch and the pedal stopper to the value indicated in the drawing. Tighten the locknut.

CAUTION ⚠

- **Do not allow the threaded end of the clutch switch to come into contact with the clutch pedal stopper during the adjustment operation.**

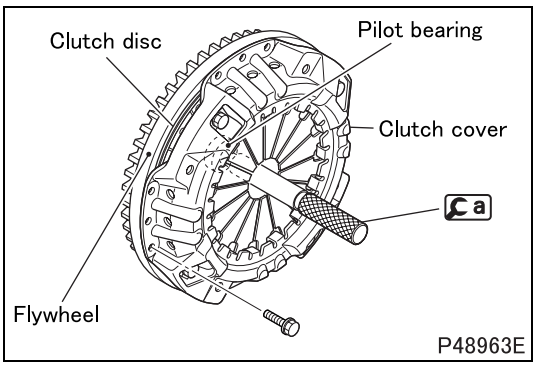
◆Removal procedure◆

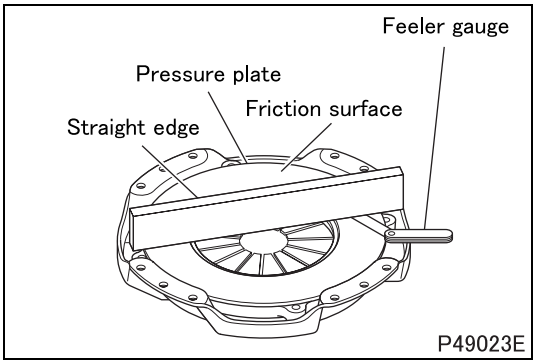


P48963E

■ **Removal: Clutch cover**

- Insert ⓒa into the flywheel pilot bearing. While supporting the clutch disc with ⓒa, remove the clutch cover.

◆Inspection procedure◆

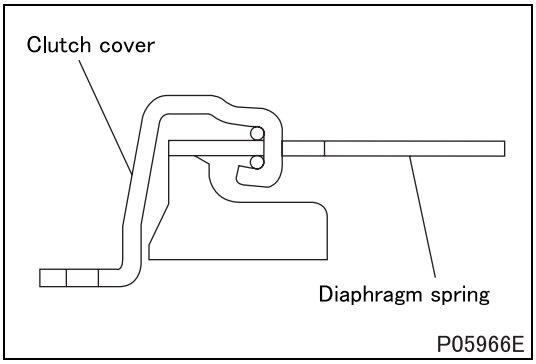


P49023E

■ **Inspection: Clutch cover**

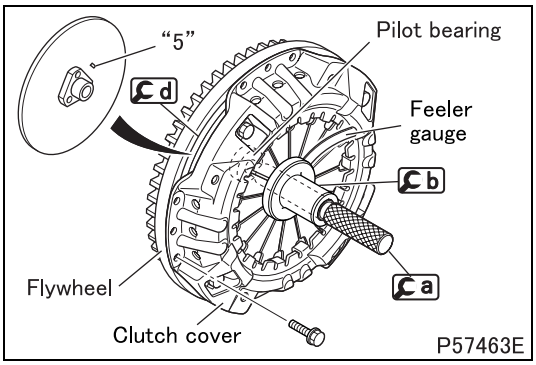
(1) Pressure plate flatness

- Place a straight edge across the friction surface of the pressure plate. Using a feeler gauge, measure the clearance between the gauge and the surface in several locations selected randomly.
- Obtain the flatness of the pressure plate by subtracting the smallest clearance measured from the greatest clearance measured.
- If the flatness is equal to or exceeds the specified limit, replace the clutch cover.



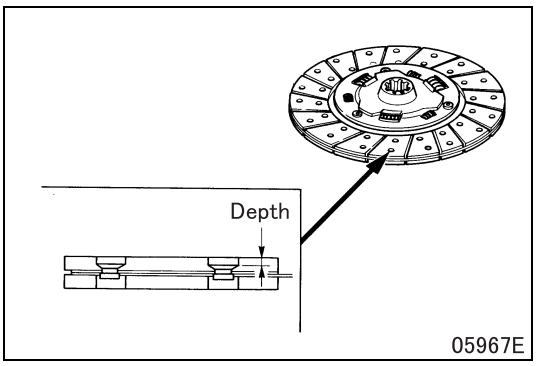
(2) Inspection of diaphragm spring

- Inspect the diaphragm spring for play.
- If the spring has play, the clutch cover needs to be replaced.



(3) Installed height of diaphragm spring

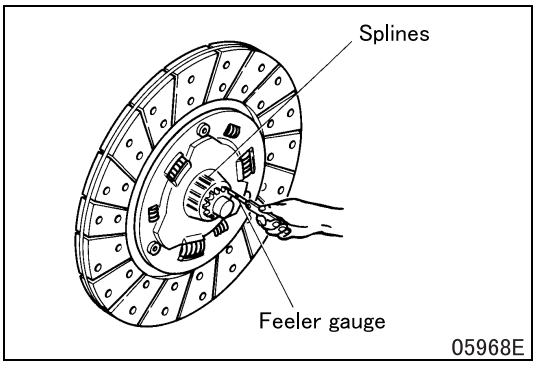
- Using a, install c (in place of the clutch disc) and the clutch cover.
- Install b and check for unevenness in height of the fingers using a feeler gauge.
- If the unevenness exceeds the limit, replace the clutch cover.



■ Inspection: Clutch disc

(1) Depth from facing surface to rivet

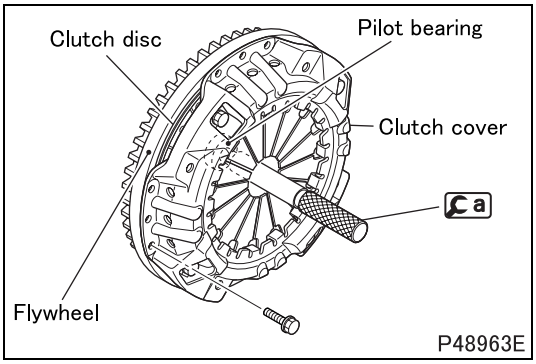
- Measure depth from the clutch disc facing surface to the rivet.
- If the measured value is equal to or less than the limit, replace the clutch disc.



(2) Play in revolving direction in splines

- Reshape a feeler gauge such that it can be inserted into the drive pinion splines. Then, using the gauge, measure the splines for play in revolving direction.
- If the measured value is equal to or exceeds the limit, replace the faulty part.

◆Installation procedure◆



■ Installation: Clutch disc

- Insert a into the flywheel pilot bearing to support the clutch disc.
- Install the clutch cover by tightening the bolts diagonally and gradually.

CAUTION ⚠

- **Remove the bleeder only when cylinder body A is being replaced. Because removing the bleeder may cause the thread deformation of the cylinder body A. Therefore you must replace the cylinder body A when removing the bleeder once. Reusing the body causes oil leak.**

● **Assembly sequence**

Follow the disassembly sequence in reverse.

CAUTION ⚠

- **Install the piston correctly: It needs to be faced as shown in the drawing, and the cups should not be dislodged. An incorrectly installed piston causes brake fluid leakage and clutch drag.**

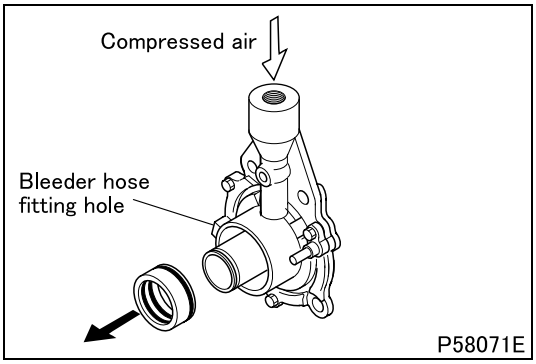
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Bolt (mounting of cylinder bodies A, B and rod)	6.9 to 8.8 {5.1 to 6.5, 0.7 to 0.9}	–
Tb	Bleeder hose	16 to 18 {12 to 13, 1.6 to 1.8}	–

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Front inner cup sliding face with cylinder body B	COSMO Rubber Grease	0.1 to 0.2 g {0.0035 to 0.0071 oz.}
b	Cylinder body A sliding face	Metal rubber #20 (rust preventive oil)	As required
	Cylinder body B sliding face		

◆Removal procedure◆

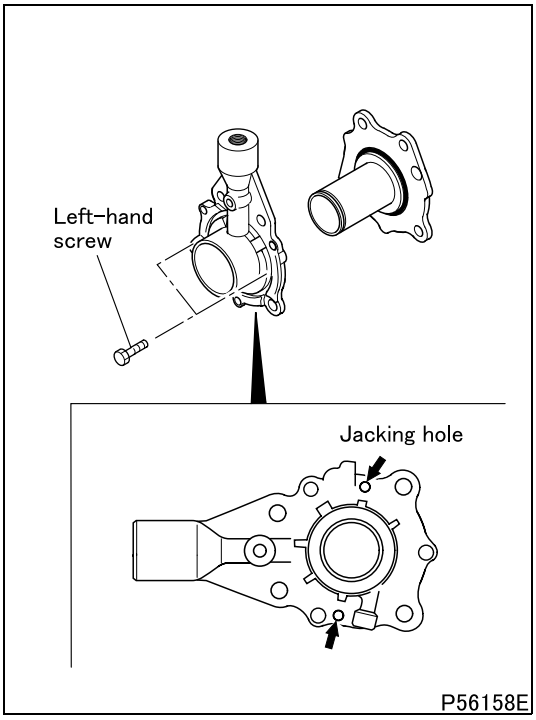


■ Removal: Piston

- With the bleeder hose fitting hole of cylinder body A blocked, feed compressed air gradually starting from 0 kPa {0 psi, 0 kgf/cm^2} to remove the piston.

WARNING ⚠

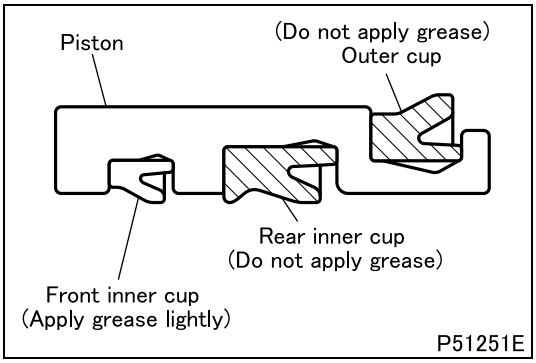
- **Do not apply compressed air suddenly at high pressure, or the piston will fly out with full force.**



■ Removal: Cylinder body A

- Install left-hand screws (M8 × 1.25 mm) evenly into the jacking holes on cylinder body A and remove the body.

◆Installation procedure◆

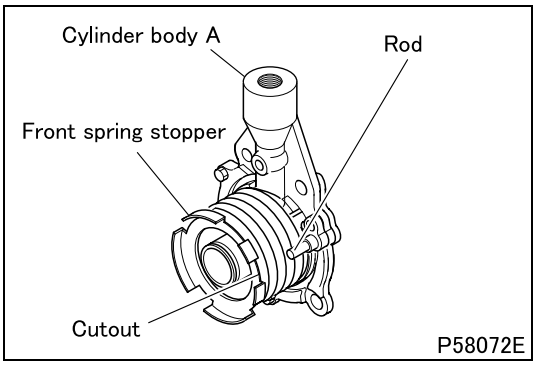


■ Installation: Front inner cup, rear inner cup and outer cup

- Install the front inner cup, rear inner cup, and outer cup onto the piston, facing them in the illustrated directions.

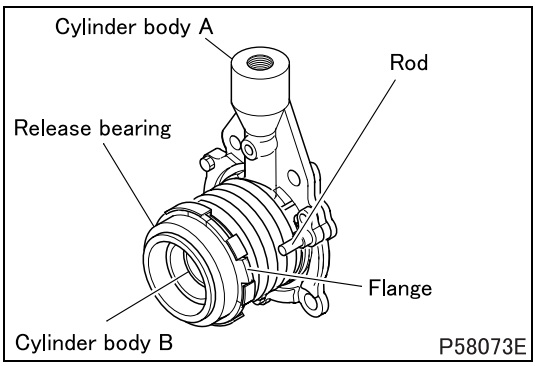
CAUTION ⚠

- **Install the front inner cup, rear inner cup, and outer cup correctly, facing them in the illustrated directions. Incorrectly installed cups cause brake fluid leakage and clutch drag.**
- **Do not apply grease onto the rear inner cup or the outer cup. Otherwise, brake fluid will leak.**
- **Apply only a thin coat of grease to the front inner cup. Greasing it too much can cause brake fluid leakage.**



■ Installation: Front spring stopper

- Install the front spring stopper onto cylinder body A such that its cutout aligns with the rod on the body and that it faces in the illustrated direction.



■ Installation: Release bearing

- Install the release bearing onto cylinder body B such that its flange aligns with the rod on cylinder body A and that it faces in the illustrated direction.

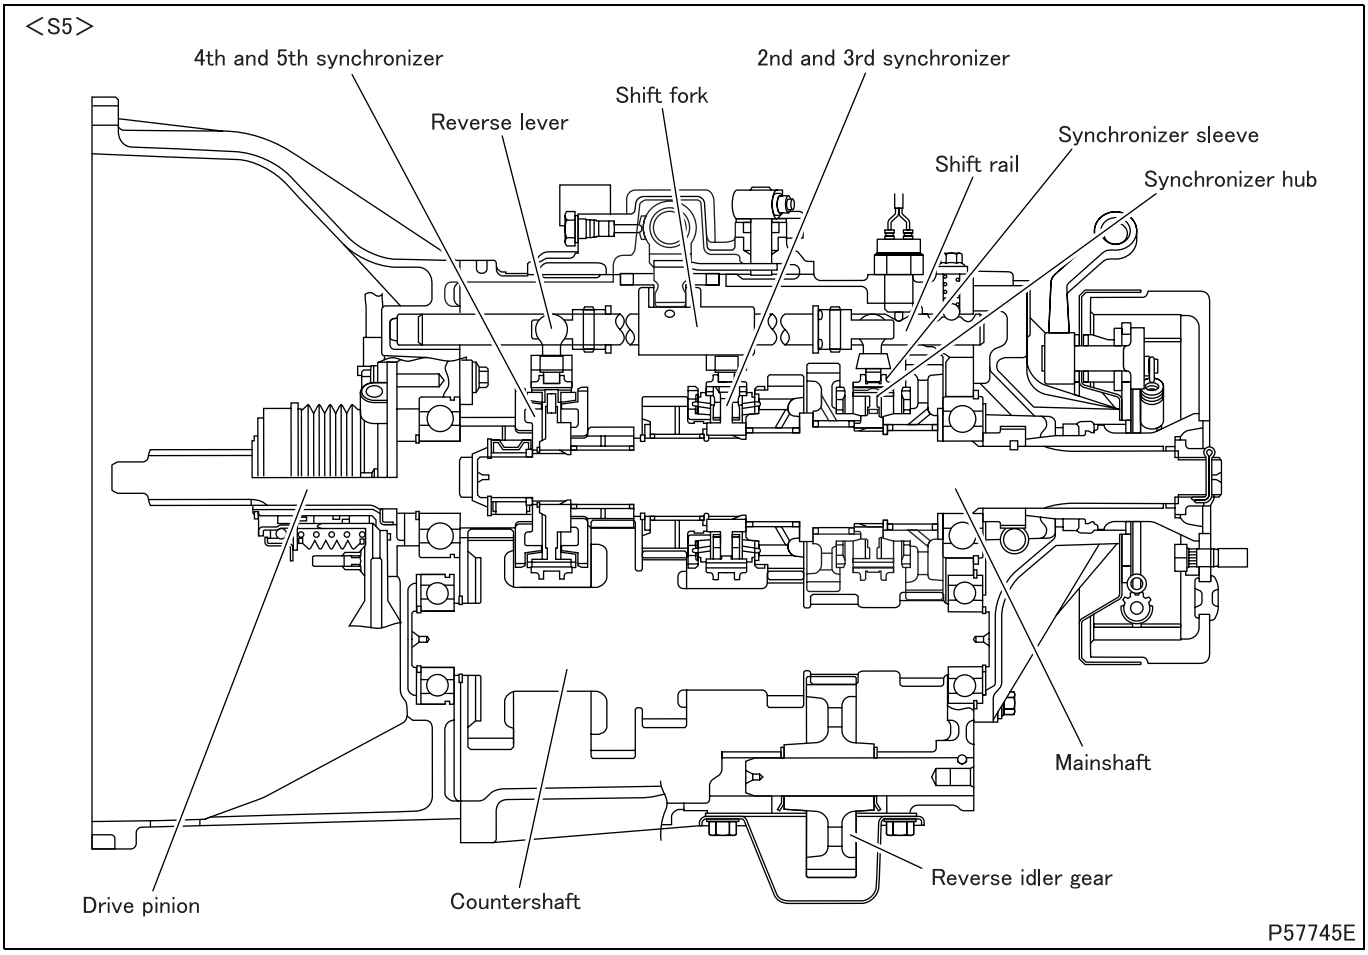
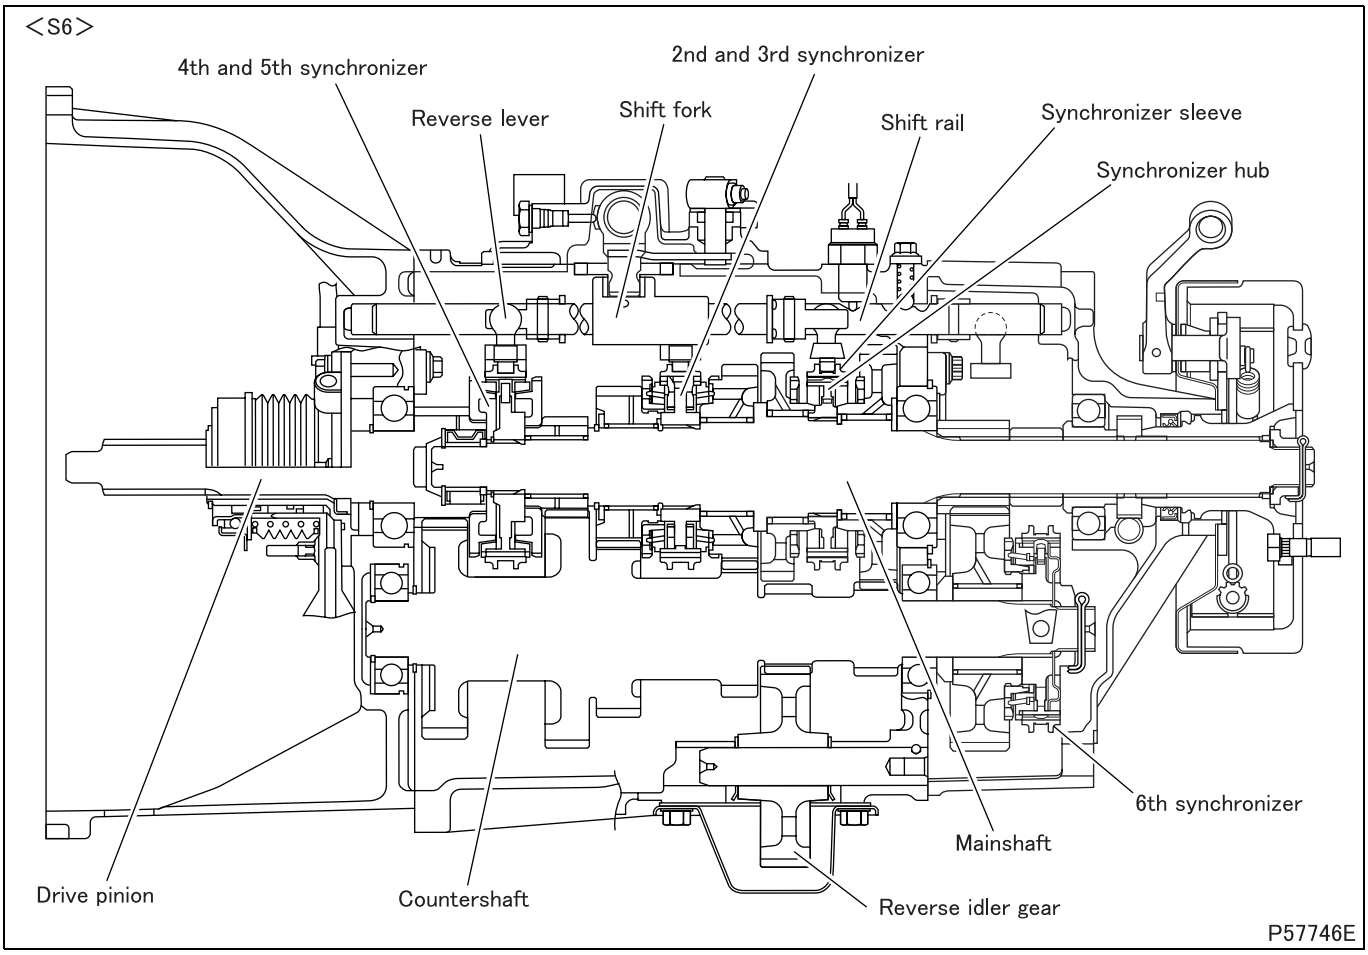
M E M O

1. Transmission





- The transmission changes revolution and torque generated by the engine into those that match the vehicle's power requirement (driving force). The power requirement (driving force) is increased or decreased by making a selection from several sets of engaged gears.
- The transmission uses an interlock mechanism to avoid double engagement.

2. Synchromesh Mechanism

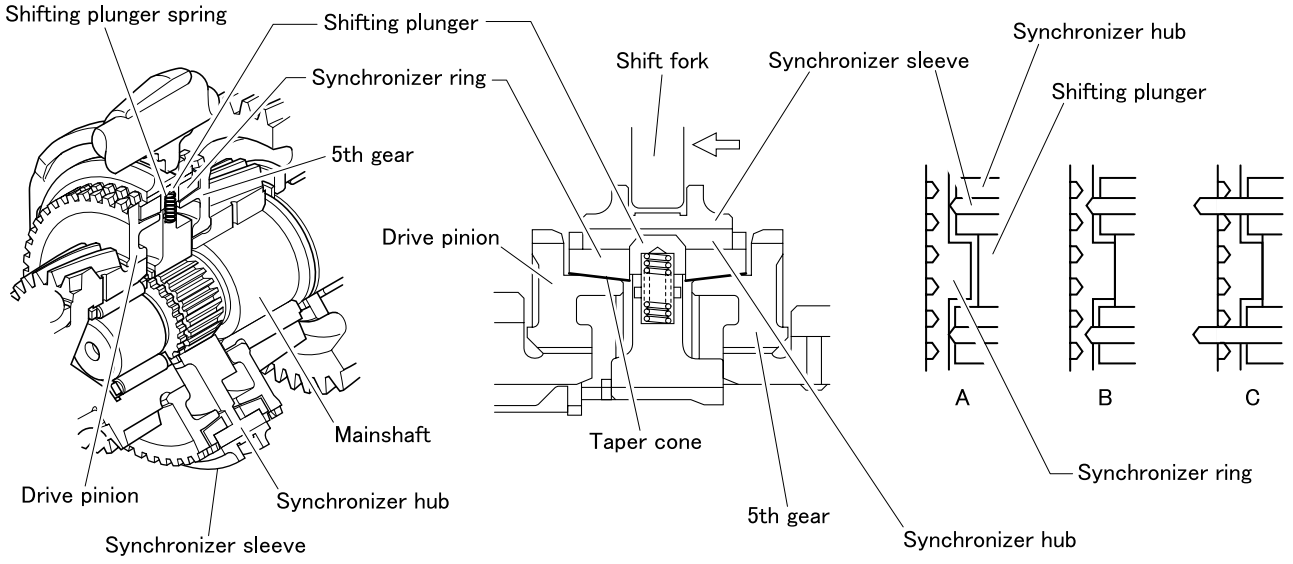
- The synchromesh mechanism, when a shift change is made, synchronizes the rotation speed of the mainshaft, drive pinion and synchronizer hub that rotates integrally with the mainshaft with the rotation speed of the gear to be shifted.
- This vehicle has two synchromesh mechanisms, a warner synchromesh type and a lever synchromesh type. The Warner synchromesh type or the lever synchromesh type is used depending on the gear position as shown below:

Synchromesh type \ Transmission type		M036S5	M036S6
Warner synchromesh type	Single cone type	4th, 5th	4th, 5th
	Triple cone type	–	6th
Lever synchromesh type	Triple cone type	2nd, 3rd	2nd, 3rd

2.1 Warner synchromesh type

(1) Single cone type

The following descriptions are for 4th gear of 4th and 5th synchronizer assembly.

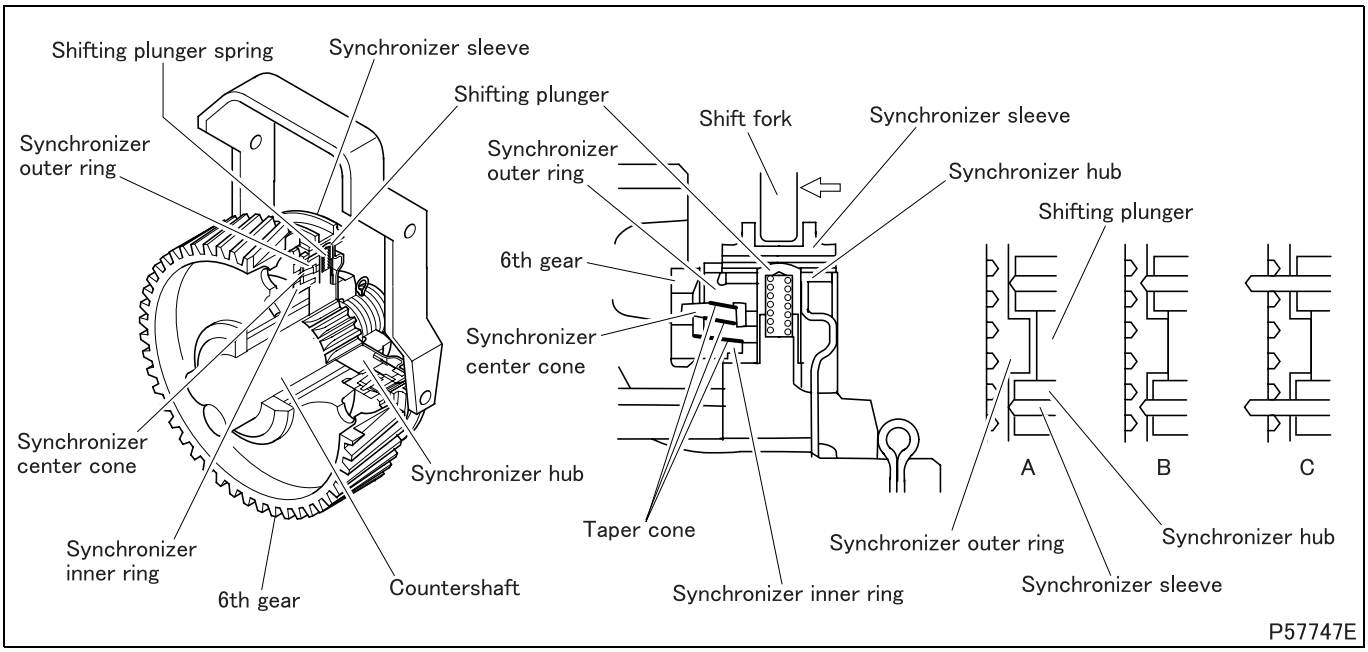


- The inside of the synchronizer hub engages the spline of the mainshaft and rotates with it. The outside of the synchronizer hub has a spline that engages the synchronizer sleeve and three grooves.
- Shifting plungers are inserted into these grooves. When the gear shift is in neutral, the shifting plungers engage grooves in the synchronizer sleeve and are pressed against the inside of the synchronizer sleeve by shifting plunger springs.
- Synchronizer rings are inserted into the respective taper cone of each gear.
- The outer splines of the synchronizer rings engage the synchronizer sleeve. On the synchronizer hub are three grooves in which protrusions of the synchronizer rings are inserted. These grooves are wider than the width of protrusions of the synchronizer rings.
- Synchronizer rings rotate relative to the synchronizer sleeve by the amount of play.
- When the gear shift is in neutral (Figure A), moving the shift fork in the direction of the arrow as illustrated, moves the synchronizer sleeve slightly to the pinion drive. At the same time, the shifting plunger, the central protrusion of which engages the synchronizer sleeve, moves to the drive pinion and presses the synchronizer ring against the taper cone of the drive pinion (Figure B).
- The taper cones of synchronizer rings, which act as cone clutches, generate friction torque and perform synchronous operation.

- The rotation speed of the synchronizer hub becomes gradually closer to that of the drive pinion gear due to the synchronous operation, and eventually they rotate at the same speed. This allows the synchronizer sleeve to move smoothly to engage the synchronizer hub and gear, completing the shift change (Figure C).

(2) Triple cone type

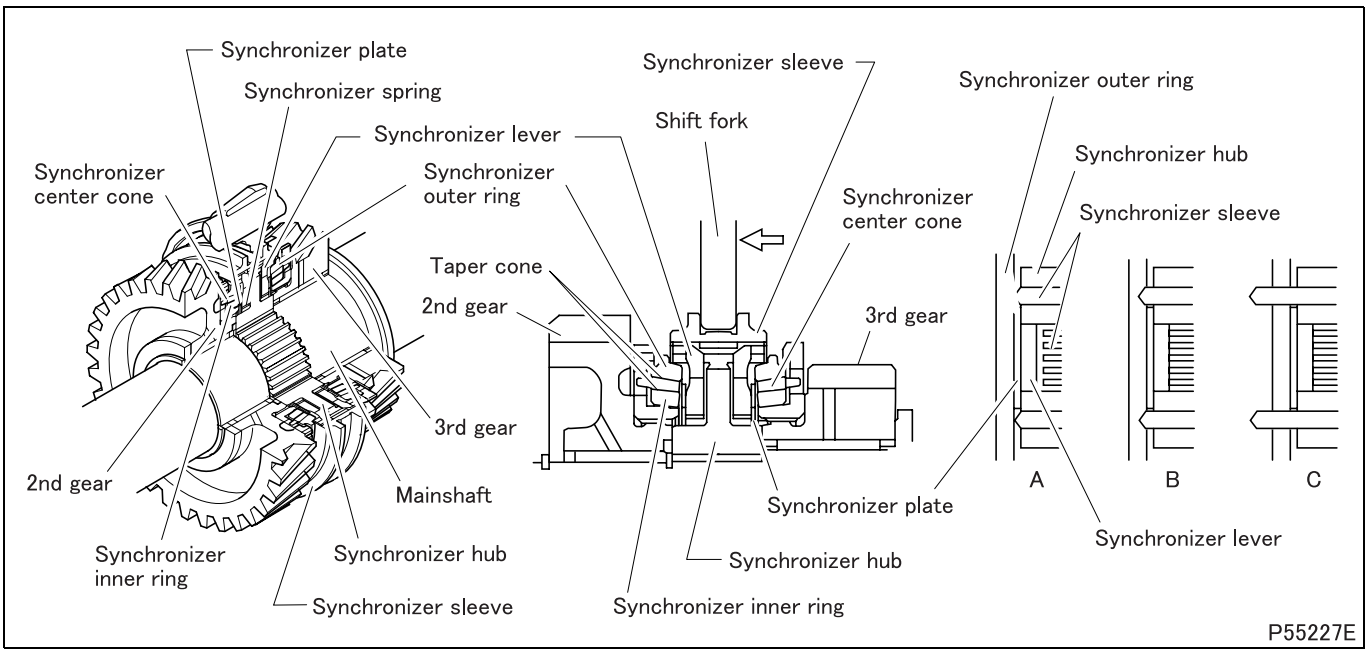
The following descriptions are for 6th gear of 6th synchronizer assembly.



- The synchromesh structure and operation of the triple cone type are basically the same as for the single cone type. The synchronizer ring is divided into three parts (synchronizer inner ring, synchronizer center cone and synchronizer outer ring) and the center cone (both the inside and outside surfaces are tapered) and the inner ring (both the inside and outside surfaces are tapered) are sandwiched between the outer ring and the taper cone of each gear to shorten the time required for synchronization with cone clutches at three locations.
- Six protrusions on the outside of the synchronizer center cone fit into corresponding gear holes. As in the taper cone of the single cone type, the center cone and the gear are installed as if integrated.
- The inside of the synchronizer hub engages the spline of the mainshaft and rotates with it. The outside of the synchronizer hub has a spline that engages the synchronizer sleeve and three grooves.
- Shifting plungers are inserted into these keyways. When the gear shift is in neutral, the shifting plungers engage grooves in the synchronizer sleeve and are pressed against the inside of the synchronizer sleeve by shifting plunger springs.
- The synchronizer outer ring and synchronizer inner ring are inserted into synchronizer center cones, respectively.
- The outer spline of the synchronizer outer ring engages the synchronizer sleeve. On the synchronizer hub are three grooves in which protrusions of the synchronizer outer ring are inserted. These grooves are wider than the width of protrusions of the synchronizer outer ring.
- The synchronizer outer ring rotates relative to the synchronizer sleeve by the amount of play.
- When the gear shift is in neutral (Figure A), moving the shift fork in the direction of the arrow as illustrated, moves the synchronizer sleeve slightly to the 6th gear. At the same time, the shifting plunger, the central protrusion of which engages the synchronizer sleeve, moves to the 6th gear and presses the synchronizer outer ring and the center cone against the taper cone of the synchronizer center cone and the synchronizer inner ring, respectively and in addition, presses the inner ring against the 6th gear (Figure B).
- The taper cones of synchronizer rings, which act as cone clutches, generate friction torque and perform synchronous operation.
- The rotation speed of the synchronizer hub becomes gradually closer to that of the gear of the 6th gear due to the synchronous operation, and eventually they rotate at the same speed. This allows the synchronizer sleeve to move smoothly to engage the synchronizer hub and gear, completing the shift change (Figure C).

2.2 Lever synchromesh type

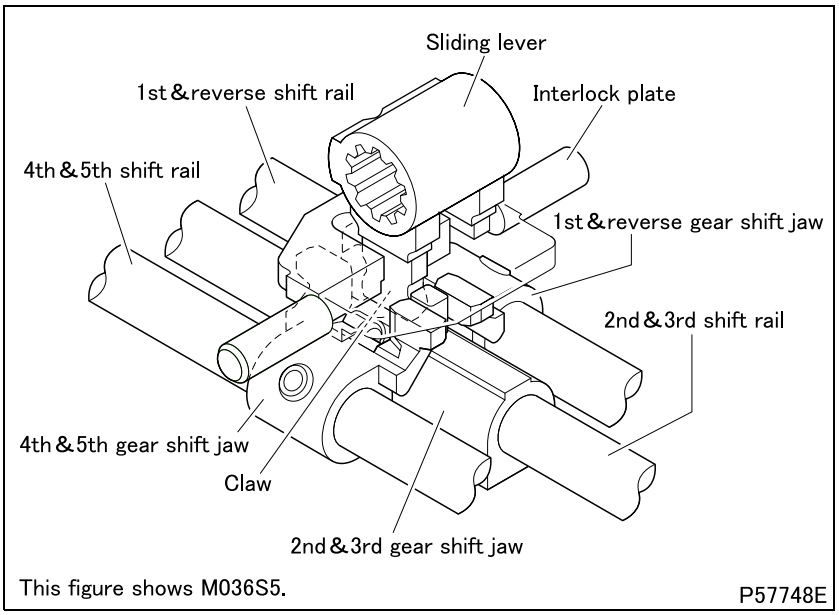
The following descriptions are for 2nd gear of 2nd and 3rd synchronizer assembly.



- The synchronizer ring consists of three elements (synchronizer inner ring, synchronizer center cone and synchronizer outer ring). When a gear is selected, the center cone (having taper cone surfaces on both inner and outer surfaces) and the inner ring (having taper cone surfaces on both inner and outer surfaces) are sandwiched between the outer ring and the taper cone portion of the gear. Since cone clutch actions occur at three places, the mechanism can complete synchronization in a short time.
- Six protrusions on the outside of the synchronizer center cone fit into corresponding gear holes. As in the taper cone of the single cone type, the center cone and the gear are installed as if integrated.
- The inside of the synchronizer hub engages the spline of the mainshaft and rotates with it. The outside of the synchronizer hub has a spline that engages the synchronizer sleeve and four grooves.
- Two arc-shaped synchronizer levers are inserted between the synchronizer outer ring and synchronizer hub, and synchronizer sleeve to double the force pushing the outer ring of the sleeve, shortening the time required for synchronization.
- The synchronizer outer ring and synchronizer inner ring are inserted into synchronizer center cones, respectively.
- When the gear shift is in neutral (Figure A), moving the shift fork in the direction of the arrow as illustrated moves the synchronizer sleeve slightly to the 2nd gear. At the same time, because the synchronizer lever top faces the inside slant of the synchronizer sleeve, the sleeve pushes the lever top toward the 2nd gear on this slant as well as it pushes the lever inside the radius direction (Figure B).
- The two synchronizer levers, whose forces are doubled by leverage with the synchronizer hub as the fulcrum, push the synchronizer outer ring toward the 2nd gear, and press it against the taper cone of the synchronizer center cone, the center cone against the synchronizer inner ring, and in addition the inner ring against the 2nd gear. The levers are constantly expanded outside the radius direction by the synchronizer springs.
- The taper cones of synchronizer rings, which act as cone clutches, generate friction torque and perform synchronous operation.
- The synchronizer outer ring has protrusions at two locations. These protrusions are sandwiched by the two synchronizer levers, restricting rotation of the synchronizer outer ring. Therefore, the synchronizer outer ring expands the levers outward by friction torque.
- The synchronizer sleeve can’t move unless it pushes in the synchronizer levers. Therefore, while friction torque acts on the synchronizer outer ring, the protrusions of the synchronizer outer ring expand the levers, and the sleeve can’t move and keep pressing the synchronizer outer ring.

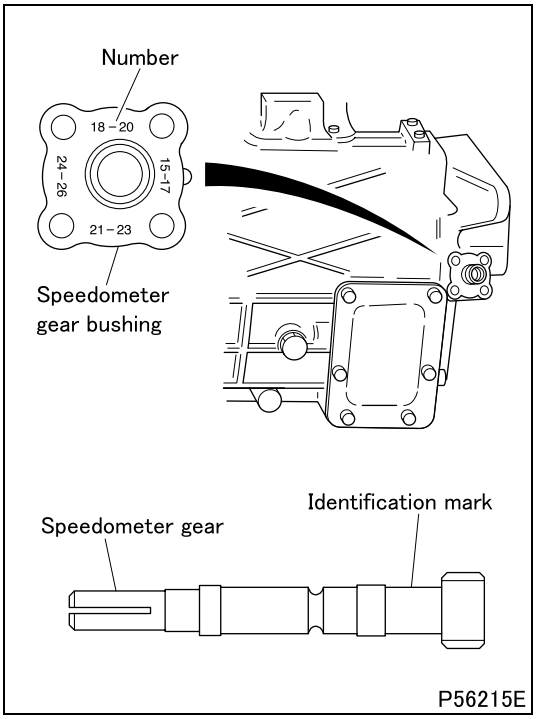
- The rotation speed of the synchronizer hub becomes gradually closer to that of the gear of the 2nd gear due to the synchronous operation, and eventually they rotate at the same speed. This allows the synchronizer sleeve to push in the synchronizer levers on the inside slant and to move smoothly while turning the synchronizer outer ring to engage the synchronizer hub and gear, completing the shift change (Figure C).

3. Interlock Mechanism



- The interlock mechanism prevents double engagement of gears.
- When the 2nd and 3rd shift rail is shifted, the finger of the gear shift sliding lever engages with the 2nd & 3rd gear shift jaw, and the rail on the bottom surface of the interlock plate locks the other gear shift jaws.

4. Speedometer Gear Bushing



- The speedometer gear bushing is eccentric, and displacing the installed position allows it to correspond to the different number of tooth of the speedometer gear.
- The numbers marked on the front at four locations show the range of the number of tooth of the corresponding speedometer gear.
  "15-17": Number of tooth 15 to 17
- An identification mark showing the number of tooth is marked on the speedometer gear.

Identification mark	A	B	C	D	L	E
Number of tooth	15	16	17	18	19	20
Gear ratio	3.0	3.2	3.4	3.6	3.8	4.0

Possible causes \ Symptoms		Gears slip out of engagement	Gears hard to engage	Noise when engine is idling	Noise when cruising	Noise when changing gear	Reference Gr

ON-VEHICLE INSPECTION AND ADJUSTMENT

1. Inspection of Transmission Oil Leak

1.1 Inspection of oil leak in transmission body

- Make sure that there is not oil leak in the transmission body by watching.
- When there is oil leak, replace the defective parts.

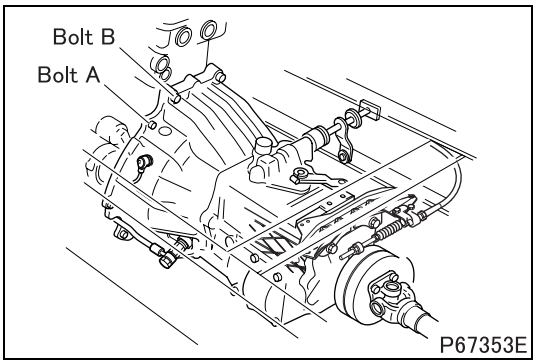
1.2 Inspection of oil leak around transmission mounting part

- Make sure that there is not oil adhesion caused by oil leak from engine etc. around transmission mounting part (around the mating surface of clutch housing).
- When there is oil adhesion, transmission mounting bolts may be loosened. Therefore remove the transmission and clean the mating surface of flywheel housing and clutch housing using brake cleaner after repairing the oil leak part.
  (See “REMOVAL AND INSTALLATION OF TRANSMISSION”.)

2. Inspection of Looseness in Transmission Mounting Bolts

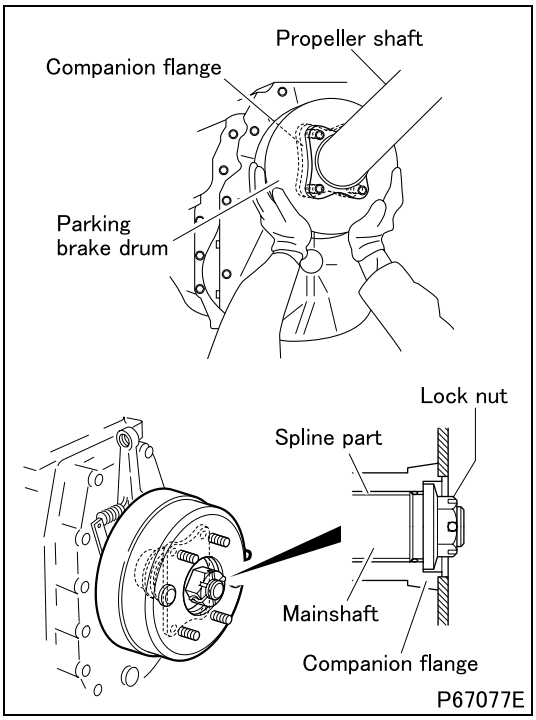
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
–	Bolt A (transmission mounting)	47.1 {35, 4.8}	M10
	Bolt B (transmission mounting)	82.4 {61, 8.4}	M12



- Check the transmission mounting bolts for looseness.
- Retighten any loose bolt to the specified torque.

3. Inspection of Play in Companion Flange and Looseness in Lock Nut



- Move the parking brake drum in axial and vertical directions to check for excessive play between the companion flange and main shaft.
- If excessive play is detected, remove the propeller shaft, then check the lock nut for looseness and the splines on companion flange and main shaft for abnormalities. If any part is found defective, replace the part. (See “REAR COVER <S5> AND PARKING BRAKE” or “EXTENSION HOUSING <S6> AND PARKING BRAKE” section.)

4. Inspection and Replacement of Transmission Oil

Tightening torque (Unit: N·m {ft.lbs, kgf·m})

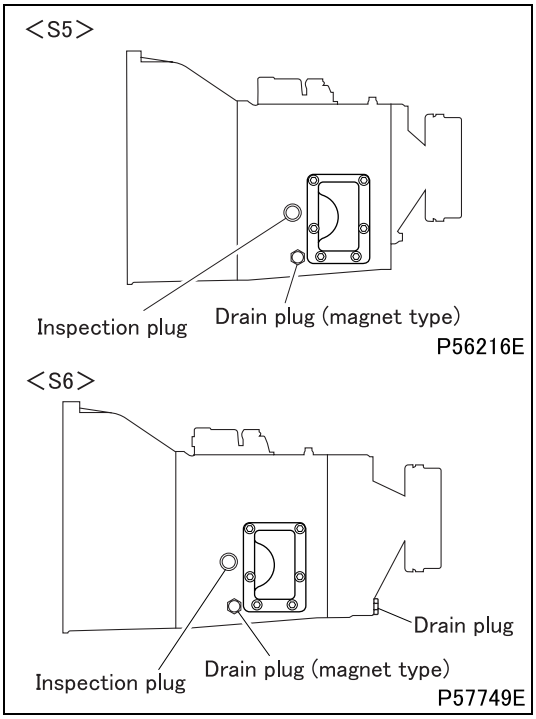
Mark	Parts to be tightened	Tightening torque	Remarks
–	Inspection plug	68.6 ± 14.7 {51 ± 11, 7.0 ± 1.5}	–
	Drain plug		

Lubricant and/or sealant

Mark	Points of application		Specified lubricant and/or sealant	Quantity
–	Thread area of inspection plug		ThreeBond 1105	As required
	Thread area of drain plug			
–	Transmission case and extension housing	M036S5	Gear oil General: API GL-3 SAE80 Warm region: API GL-3 SAE90 Tropical region: API GL-4 SAE90	3.6 L {3.8 qts.}
		M036S6	Engine oil Vehicle operated continuously at high-speed: API CC SAE30 or SAE40	4.4 L {4.6 qts.}

WARNING ⚠

- **Temperature of transmission oil is high immediately after driving. Perform work when oil is cold.**



[Inspection]

(1) Inspection of oil quantity

- Remove the inspection plug, and check that oil is filled up to the neck.
- If oil is not sufficient, fill oil from the inspection plug hole up to the neck.
- After filling, apply sealant to the inspection plug and tighten it to the specified torque.

(2) Inspection of oil quality and inclusions

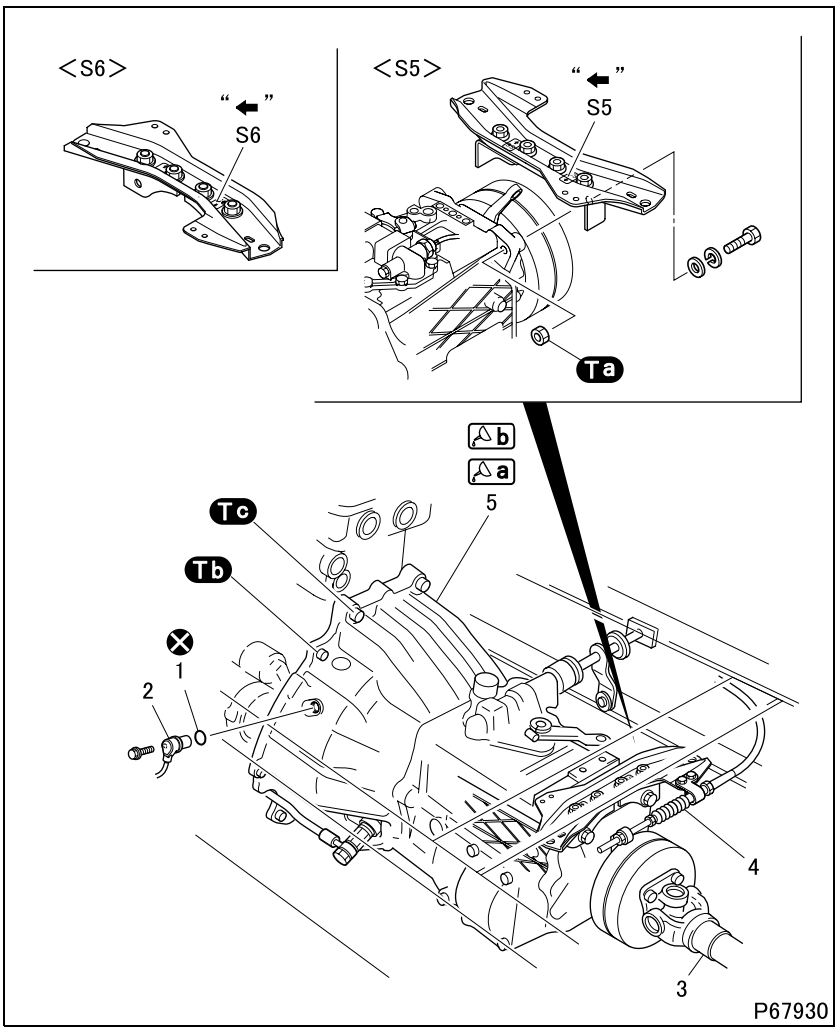
- When draining transmission oil, check for oil quality, metal chips and metal powder.
- If an abnormally large amount of metal chips and metal powder is found, disassemble the transmission assembly for service, as abnormalities may be caused inside.

[Replacement]

- Remove the drain plug to drain transmission oil. Drainage can be made quickly with the inspection plug removed.
- After draining transmission oil, apply sealant to the drain plug and tighten it to the specified torque. In case of the drain plug of magnet type, clean it before installation.
- Fill transmission oil of the specified quantity from the inspection plug hole.
- After filling, check that oil is filled up to the neck. If oil is not sufficient, replenish it.
- After completing work, apply sealant to the inspection plug and tighten it to the specified torque.

M E M O

REMOVAL AND INSTALLATION OF TRANSMISSION



● **Removal sequence**

1 O-ring
2 Engine speed sensor
3 Propeller shaft
4 Parking brake cable
5 Transmission

● **Installation sequence**

Follow the removal sequence in reverse.

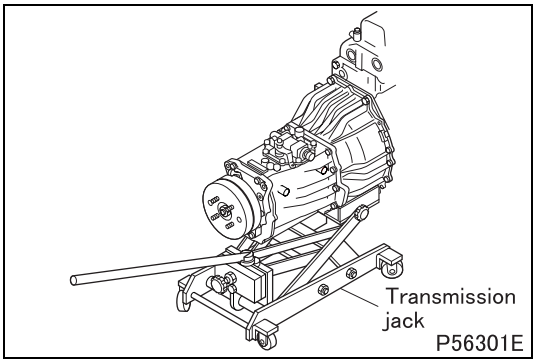
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened	Tightening torque	Remarks
Ta	Nut (transmission mounting)	130 to 180 {96 to 130, 13 to 18}	–
Tb	Bolt (transmission mounting)	47.1 {35, 4.8}	M10
Tc	Bolt (transmission mounting)	82.4 {61, 8.4}	M12

Lubricant and/or sealant

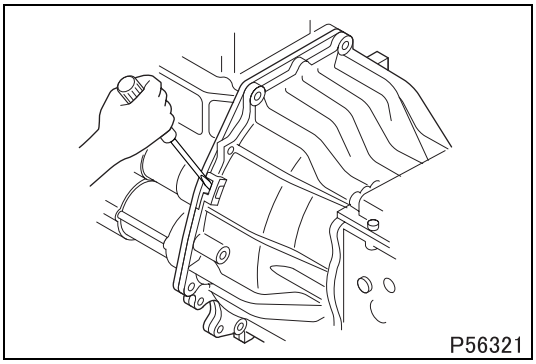
Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Drive pinion spline	Molybdenum disulfide grease [NLGI No. 2 (Li soap)]	As required
b	Engine mounting surface of clutch housing	ThreeBond 1215	As required

◆Removal procedure◆



■ **Removal: Transmission**

- Support the transmission on the transmission jack and remove transmission mounting bolts.

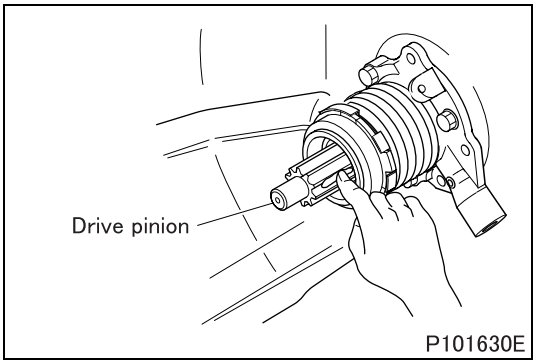


- Insert a screwdriver into the three removal grooves and remove the transmission from the engine.
- Move the transmission backward until the spline of the drive pinion is detached from the clutch.

CAUTION ⚠

- **Make sure that you pull the transmission out in a straight line. If you seesaw the transmission violently, you will damage the spline that connects the drive pinion and the clutch.**

◆Installation procedure◆



■ **Installation: Transmission**

- Check the spline of the drive pinion for rust.
- If rust is found, remove it using a wire brush.
- Rub grease evenly onto the clutch disc sliding surface of the drive pinion using your hand.

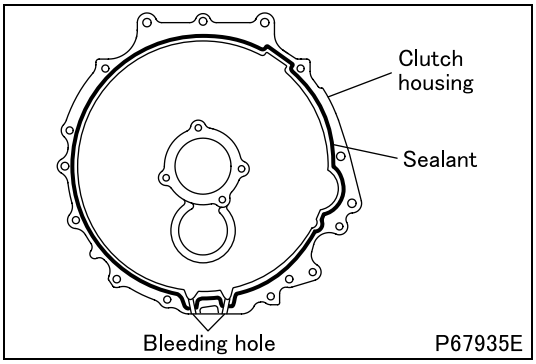
CAUTION ⚠

- **Make sure that you apply only the necessary amount of grease because too much grease would drip and cause clutch slip.**

- Apply sealant following Manners shown below.

CAUTION ⚠

- **Take care not to apply sealant like the following condition. Otherwise it causes water infiltration.**
  - **There is dust, oil, grease, etc. on the mating surface.**
  - **The diameter or thickness of the applied sealant is extremely different at each part.**
  - **The applied sealant has some breaks.**
  - **The applied sealant covers the bleeding hole of the clutch housing and engine parts.**

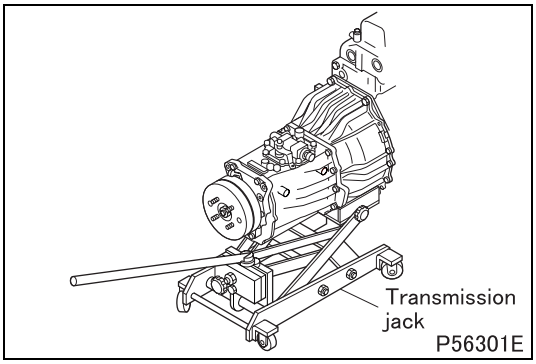


<Case of using nozzle gun>

- Clean the mating surfaces of each part.
- Apply sealant on the width center of the mating surfaces so that the diameter of the applied sealant is the same as the diameter of the nozzle. The line of applying sealant is illustrated.

<Case of using spatula, etc.>

- Clean the mating surfaces of each part.
- Apply sealant evenly on the entire mating surfaces.



- Support the transmission on the transmission jack, and insert the transmission into the pilot bearing of the flywheel paying attention to the drive pinion spline.
- Tighten transmission mounting bolts to the specified torque.

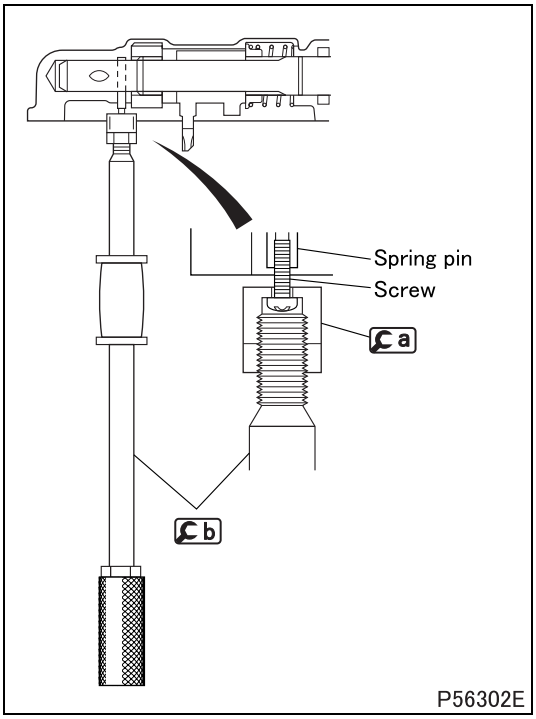
Special tools (Unit: mm)

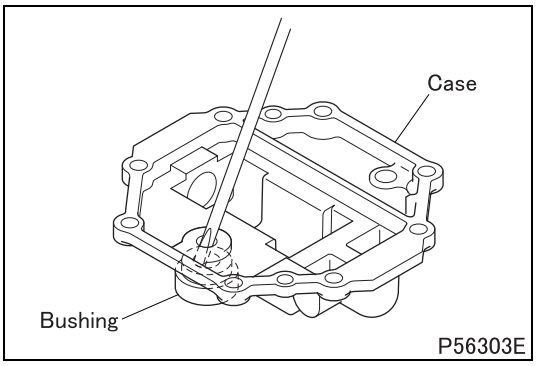
Mark	Tool name and shape	Part No.	Application
Ca	Spring pin puller A: M12 × 1.25  P02399	MH062445	Removal of spring pin
Cb	Reverse shaft puller A: M12 × 1.25  P02118	03726-82000	

◆Removal procedure◆



■ **Removal: Spring pin**

- Tap the spring pin using an M4 tap.
- Insert a spring pin puller with an M4 screw of appropriate length into the spring pin, and remove the spring pin using b reverse shaft puller.



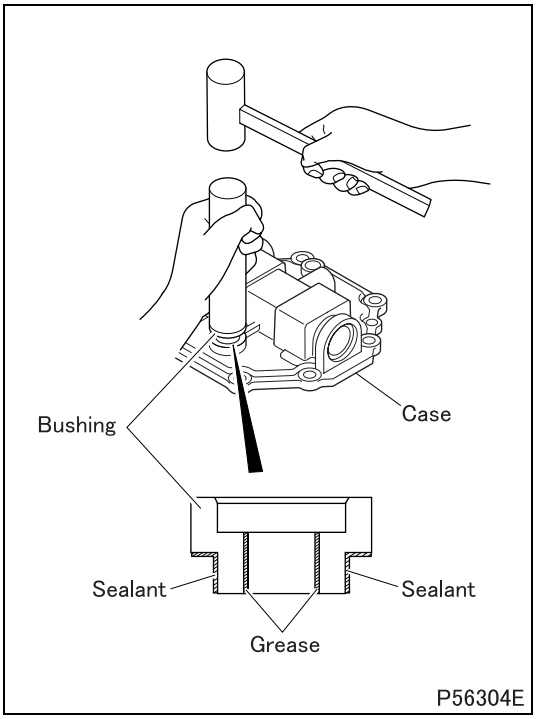
■ **Removal: Bushing**

- Remove the bushing using a screwdriver.

CAUTION ⚠

- **Be careful not to damage the selector lever case.**

◆Installation procedure◆



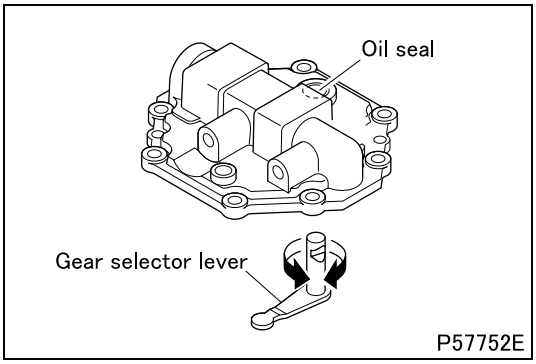
■ **Installation: Bushing**

- Clean the bushing and bushing mounting surface of the selector lever case.
- Apply grease to the inner surface of the bushing and sealant to its outer surface.

NOTE

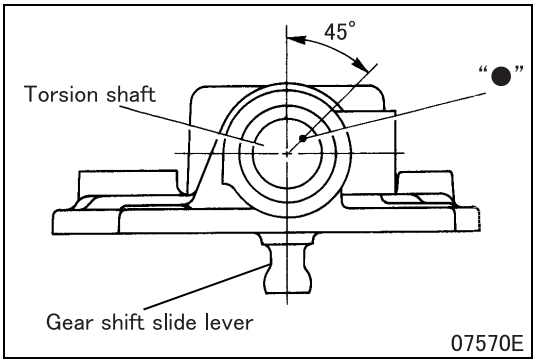
- **Do not allow sealant to adhere to the inner surface of the bushing.**

- Mount the bushing by evenly tapping it using a round bar of outer diameter of approximately 30 mm {1.18 in.}.



■ **Installation: Gear selector lever**

- Turn the gear selector lever when installing it in order to avoid damage to the oil seal lip.



■ **Installation: Torsion shaft**

- Install the torsion shaft so that the angle the punch mark "●" at the tip of the torsion shaft forms with the gear shift slide lever is as illustrated.

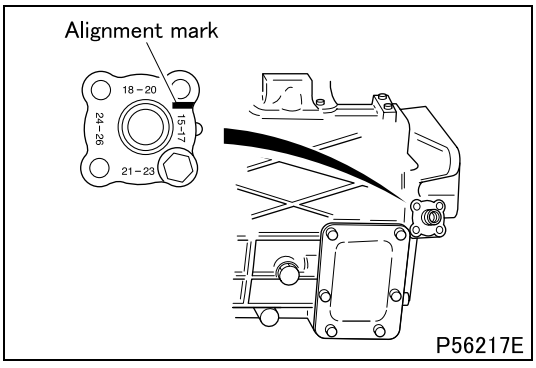
◆Work before removal◆

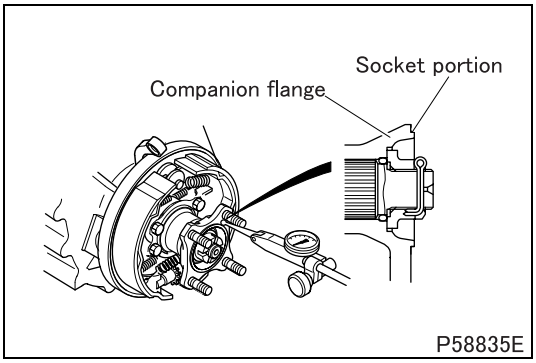


P56217E

■ Alignment marks: Speedometer gear bushing

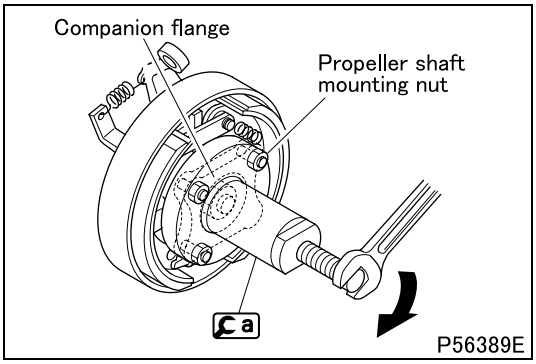
- The installed direction of the speedometer gear bushing is determined by the number of the speedometer gear teeth.
- Put alignment marks to prevent misassembly.

◆Removal procedure◆



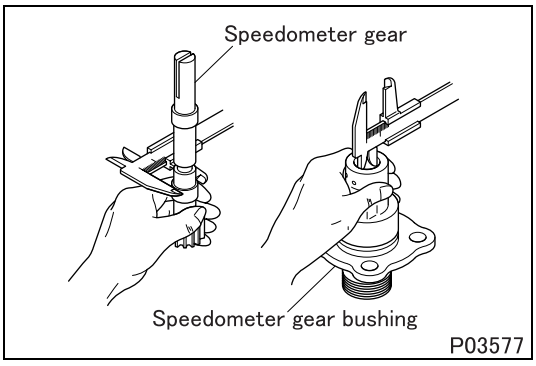
■ Inspection: Runout at socket portion of companion flange

- After removing the parking brake drum, measure runouts of the companion flange at its socket portion.
- If the measurement exceeds the specified limit, replace the companion flange.



■ Removal: Companion flange

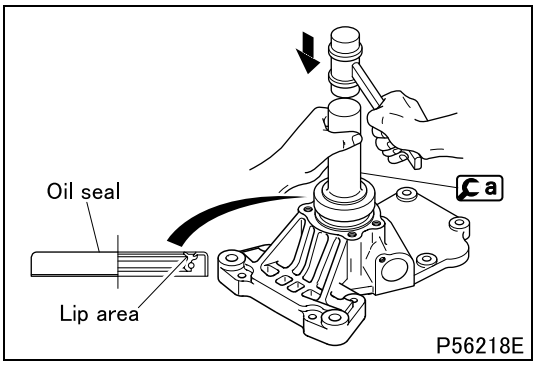
◆Inspection procedure◆



■ Inspection: Clearance between speedometer gear and speedometer gear bushing

- If the measured value exceeds the limit, replace defective parts.

◆Installation procedure◆



■ Installation: Oil seal

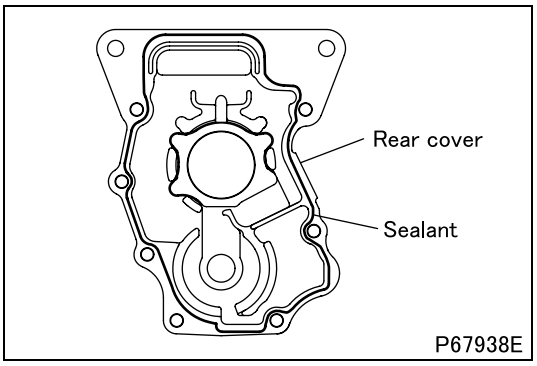
- Apply grease to the lip area of the oil seal, and install it in the illustrated direction.

■ **Installation: Rear cover**

- Apply sealant following Manners shown below.

CAUTION ⚠

- **Take care not to apply sealant like the following condition. Otherwise it causes oil leak.**
  - **There is dust, oil, grease, etc. on the mating surface.**
  - **The diameter or thickness of the applied sealant is extremely different at each part.**
  - **The applied sealant has some breaks.**

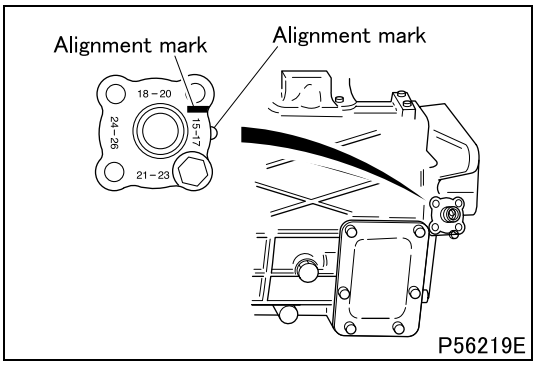


<Case of using nozzle gun>

- Clean the mating surfaces of each part.
- Apply sealant on the width center of the mating surfaces so that the diameter of the applied sealant is the same as the diameter of the nozzle. The line of applying sealant is illustrated.

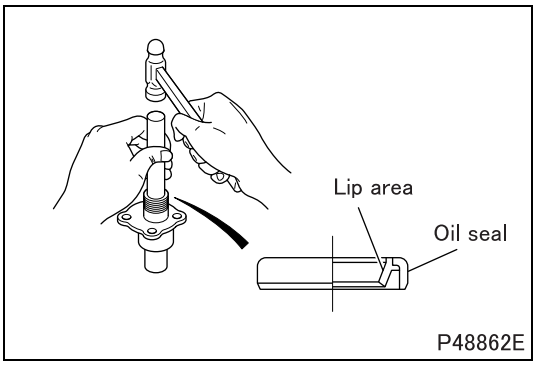
<Case of using spatula, etc.>

- Clean the mating surfaces of each part.
- Apply sealant evenly on the entire mating surfaces.



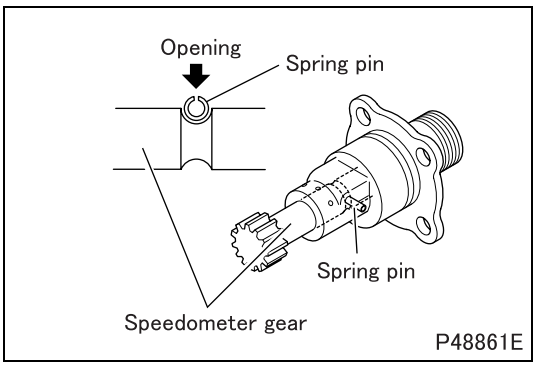
■ **Installation: Speedometer gear bushing**

- When replacing the speedometer gear bushing, align the alignment mark of the old part with that of the rear cover to install.



■ **Installation: Oil seal**

- Apply grease to the lip area of the oil seal.
- Install the oil seal evenly in the illustrated direction using a round bar of outer diameter of approx. 14 mm {0.55 in.}.



■ **Installation: Spring pin**

- Install the spring pin in the illustrated direction to prevent the speedometer gear from slipping off.

Lubricant and/or sealant

Mark	Points of application	Specified lubricant and/or sealant	Quantity
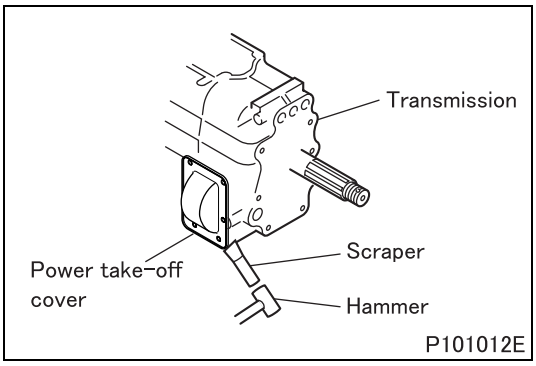
a	Mating surface of power take-off cover and transmission case	Loctite 5999	As required

Special tools (Unit: mm)

Mark	Tool name and shape	Part No.	Application
a	Reverse shaft puller A: M12 × 1.25  P02118	03726-82000	Removal of reverse idler gear shaft

◆Removal procedure◆



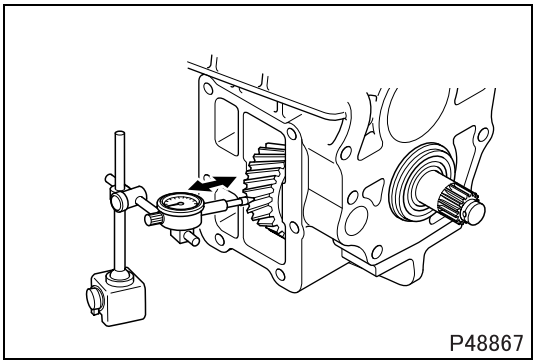
P101012E

■ **Removal: Power take-off cover**

- Insert a scraper from the lower right or lower left of the power take-off cover to remove the power take-off cover.

CAUTION ⚠

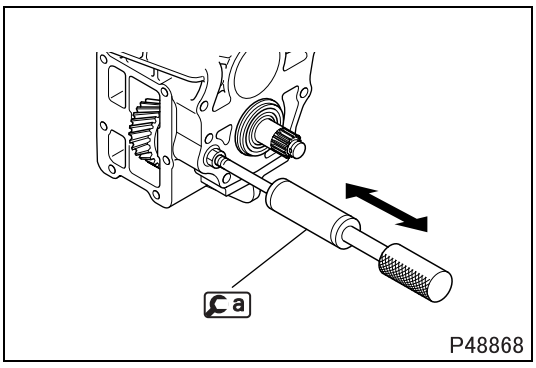
- **Be careful that prying the scraper halfway could deform the power take-off cover or damage the transmission case.**



P48867

■ **Inspection: Play of reverse idler gear in diameter direction**

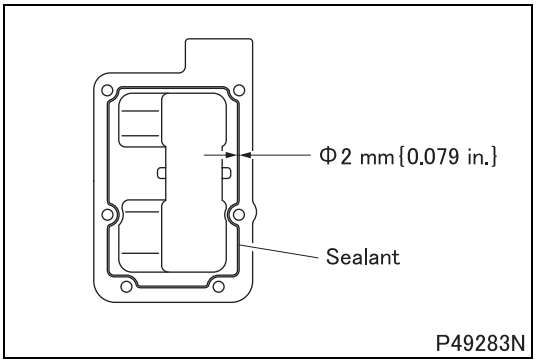
- If the measured value exceeds the limit, replace defective parts.
- Check the play again after assembly and make sure it does not exceed the limit.



P48868

■ **Removal: Reverse idler gear shaft**

◆Installation procedure◆



■ **Installation: Power take-off cover**

- Clean the seal surface of each part.
- Apply the sealant to the transmission case mounting surface of the power take-off cover evenly and without breaks.
- Install the power take-off cover within three minutes after applying the sealant. Be sure not to allow the sealant to be displaced.

CAUTION ⚠

- **Do not start the engine within one hour after installing the power take-off cover.**
- **When loosening or removing power take-off cover mounting bolts, be sure to reapply the sealant.**

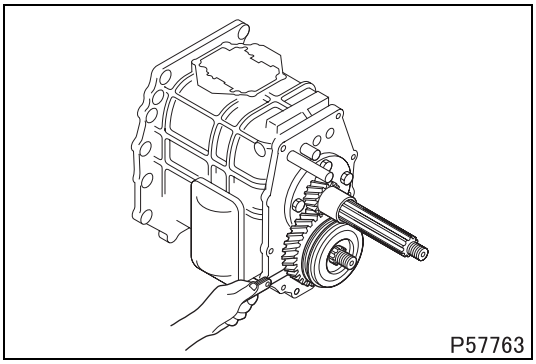
b	Bearing puller and installer A: ϕ80, B: ϕ42  P100093	MH062696	Installation of countershaft rear bearing
c	Bearing puller and installer A: ϕ80, B: ϕ56, C: ϕ45.5  P101523		Installation of countershaft 6th gear sleeve

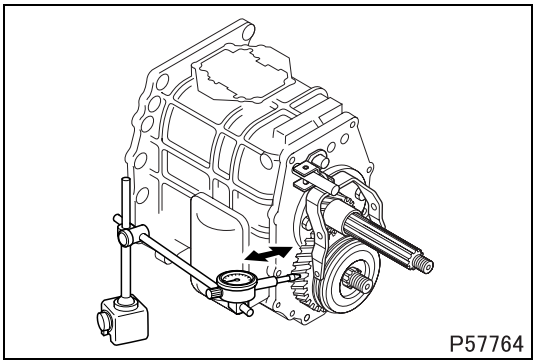
◆Work before removal◆



P57763

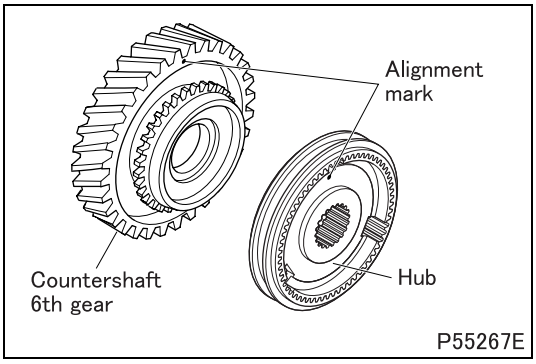
■ Inspection: End play of countershaft 6th gear

- If the measured value exceeds the limit, replace defective parts.



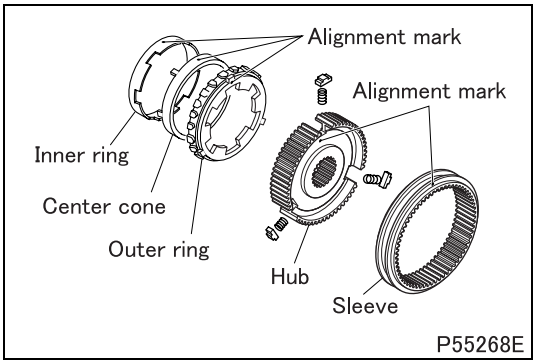
■ **Inspection: Play of countershaft 6th gear in diameter direction**

- If the measured value exceeds the limit, replace defective parts.

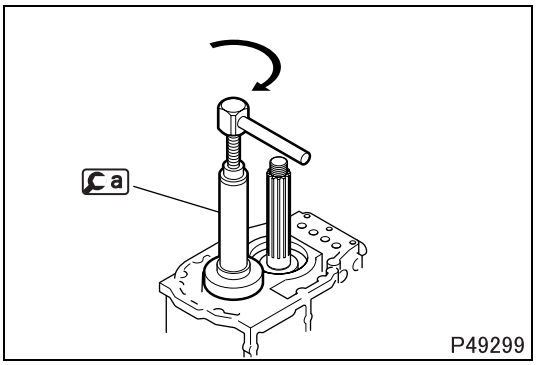


■ **Alignment marks: Synchronizer hub and countershaft 6th gear**

- Put alignment marks on the synchronizer hub and countershaft 6th gear, each at one location before disassembly.
- Put alignment marks on the synchronizer inner ring, center cone, outer ring and sleeve, each at one location, aligning with the alignment mark put on the synchronizer hub before disassembly.



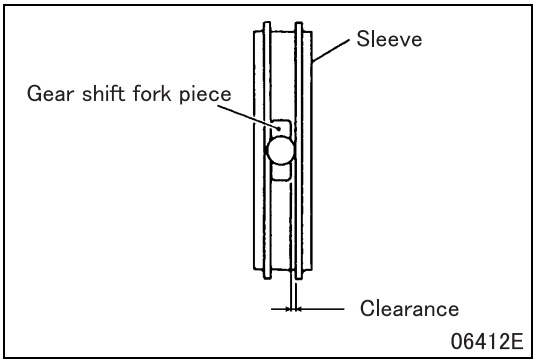
◆Removal procedure◆



■ **Removal: Countershaft 6th gear sleeve, thrust washer and countershaft rear bearing**

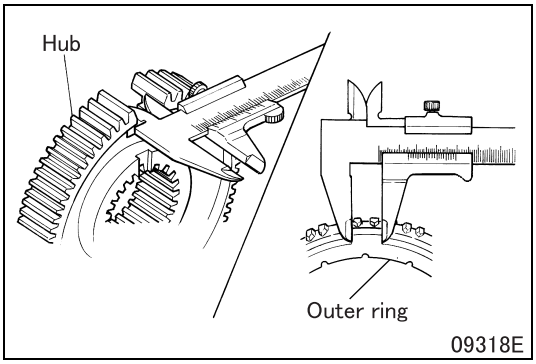
- Remove the countershaft rear bearing together with the sleeve and washer.

◆Inspection procedure◆



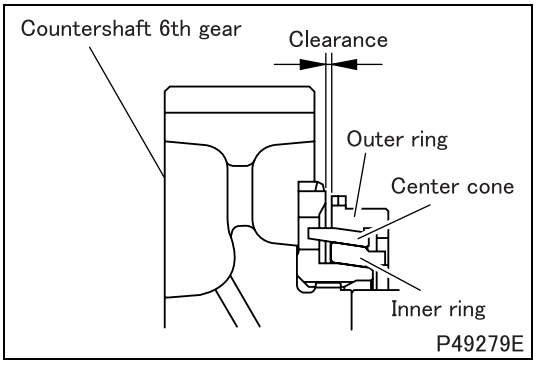
■ **Inspection: Clearance between gear shift fork piece and synchronizer sleeve of mainshaft**

- If the measured value exceeds the limit, replace defective parts.



■ **Inspection: Clearance between synchronizer outer ring and synchronizer hub**

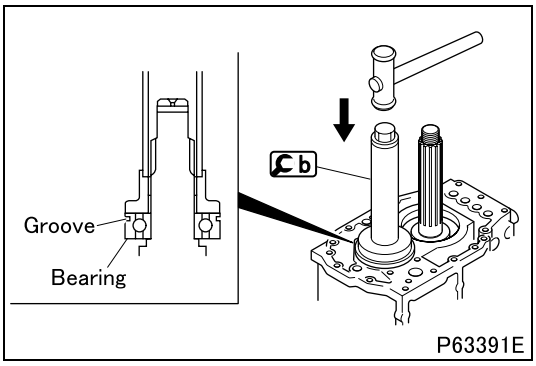
- If the measured value exceeds the limit, replace defective parts.



■ **Inspection: Clearance between synchronizer outer ring and countershaft 6th gear**

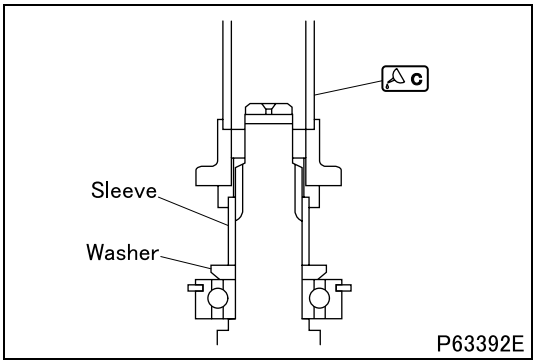
- When measuring the clearance, press each synchronizer ring and center cone evenly against the gear and measure all around the circumference.
- If the measured value is less than the limit, replace defective parts.

◆Installation procedure◆

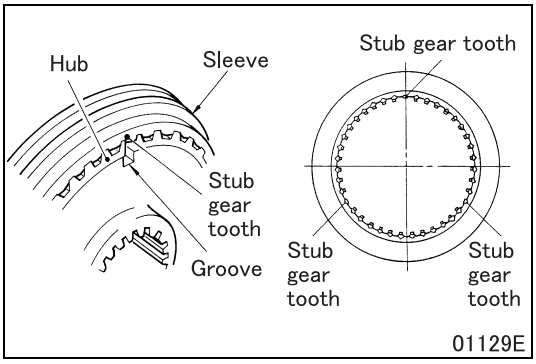


■ **Installation: Countershaft rear bearing**

- Install the countershaft rear bearing on the countershaft in the illustrated direction.

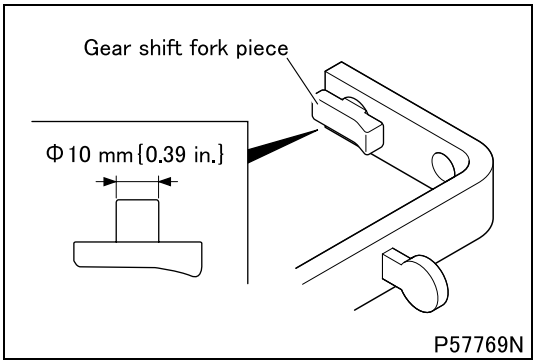


■ **Installation: Countershaft 6th gear sleeve**



■ **Installation: Synchronizer sleeve and synchronizer hub**

- When replacing the synchronizer sleeve or synchronizer hub with a new one, align the three keyways of the synchronizer hub with three locations of the stub gear tooth of the synchronizer sleeve to install.

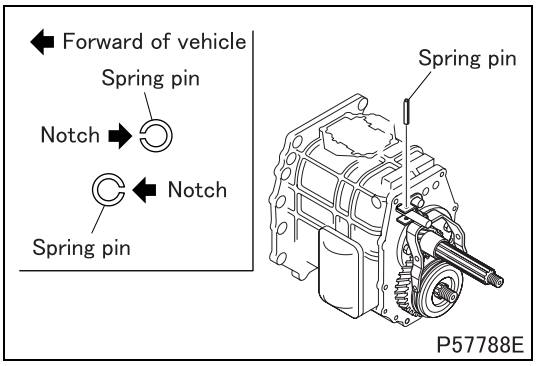


■ **Installation: Gear shift fork piece**

- Install the gear shift fork piece on the reverse lever as shown in the illustration after checking that its shaft diameter is appropriate.

CAUTION ⚠

- **Never fail to check the shaft diameter of the gear shift fork piece. Installation of any gear shift fork piece with a smaller diameter shaft is possible but not permitted.**



■ **Installation: Spring pin**

- Install the spring pin in the illustrated direction (the spring pin notch to be positioned forward or rearward of the vehicle). When installing the spring pin, leave 0 to 0.5 mm {0 to 0.020 in.} outside from the transmission shift rail.

CAUTION ⚠

- **Drive the spring pin carefully not to impose too much load on the transmission shift rail.**

M E M O

TRANSMISSION BODY

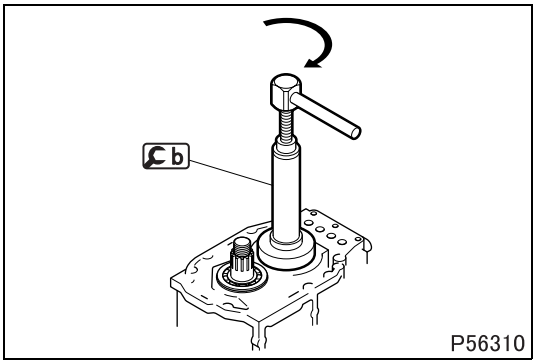
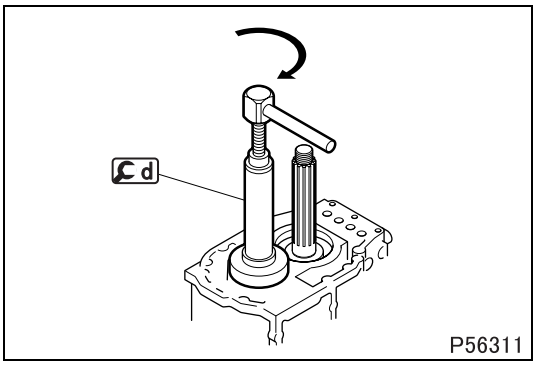
◆Removal procedure◆



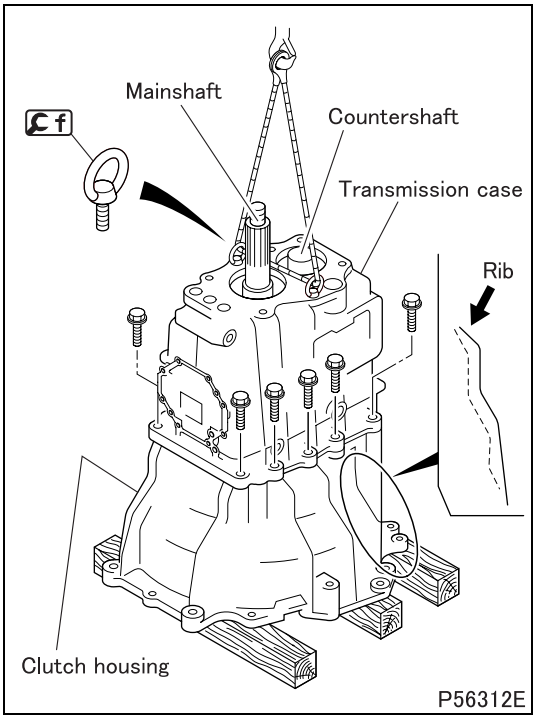
P56310

■ **Removal: Mainshaft rear bearing**



P56311

■ **Removal: Countershaft rear bearing**

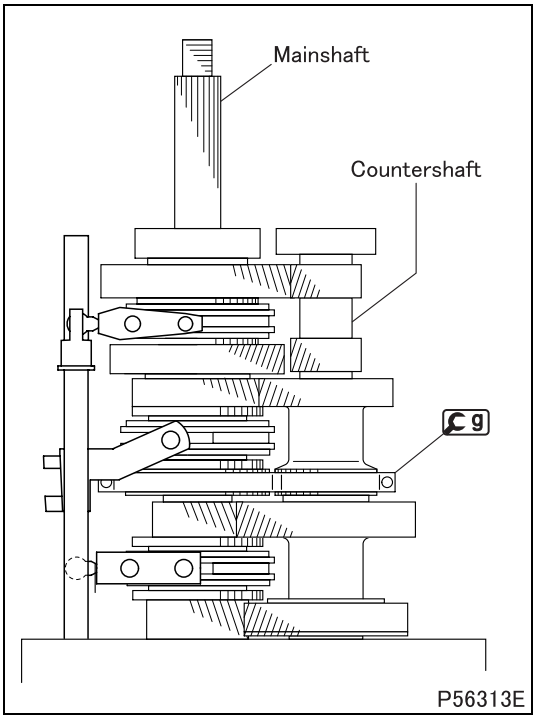


■ **Removal: Transmission case**

- Install [f] on the transmission case and make preparations for lifting it up with a crane.
- After removing the bolts, lift up the transmission case while hitting the rear ends of the countershaft and mainshaft and the rear ribs of the clutch housing with a plastic hammer to remove the transmission case.

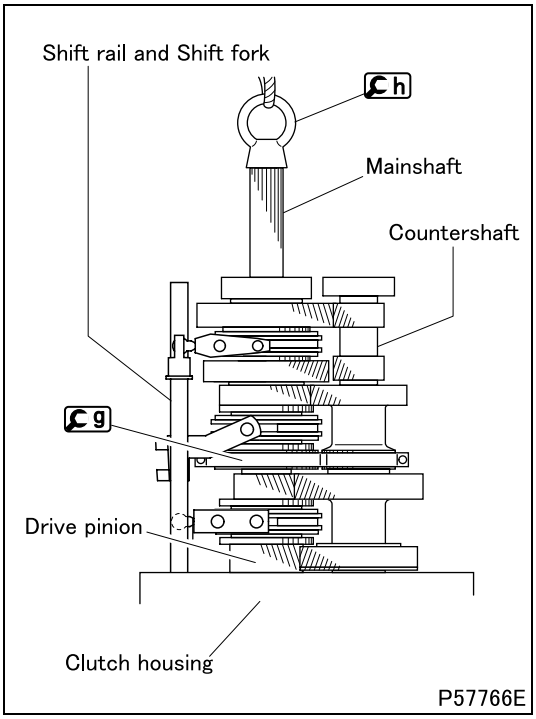
CAUTION ⚠

- **Be sure to hit the ribs as illustrated because hitting other areas may break the clutch housing.**



■ **Removal: Shift rail and shift fork, countershaft, drive pinion and mainshaft**

- Secure the countershaft and the 2nd gear area of the mainshaft with [g] for safety. Be sure to tighten the steel lifting band adequately enough to prevent it from coming undone, but not excessively.

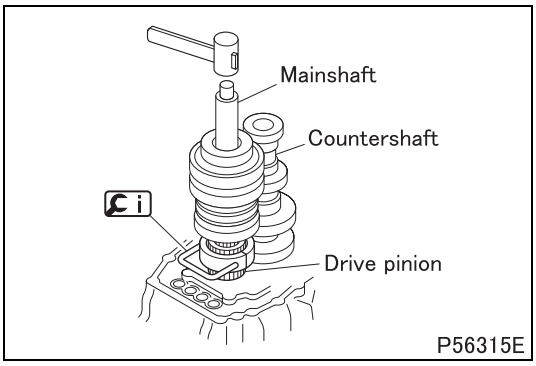


- Leave the countershaft and mainshaft secured with g.
- Install h on the mainshaft and make preparations for lifting it up with a crane.
- Secure the shift rail and shift fork with a rubber band to prevent it from coming undone from the mainshaft.
- Put a piece of wood on the clutch housing and lift it up while hitting it with a plastic hammer to remove.

CAUTION ⚠

- **When lifting up, be sure to support the drive pinion with your hand to prevent it from falling.**

◆Installation procedure◆

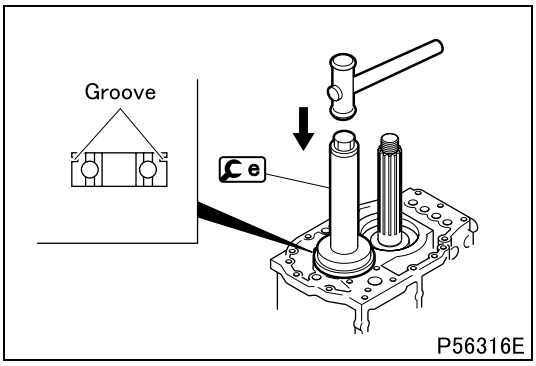


■ Installation: Shift rail and shift fork, countershaft, drive pinion and mainshaft

- When driving in the drive pinion, mainshaft and countershaft, install i to prevent the drive pinion and synchronizer of the mainshaft from sticking.

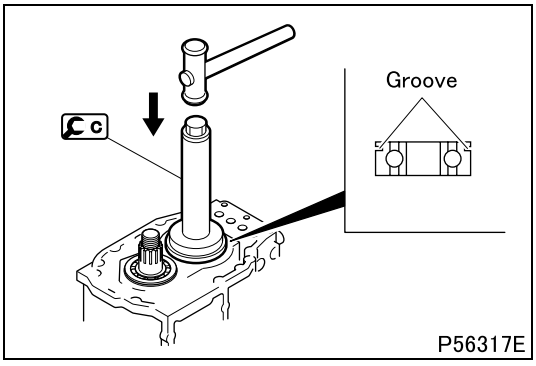
NOTE

- **Be sure to remove all the special tools used.**



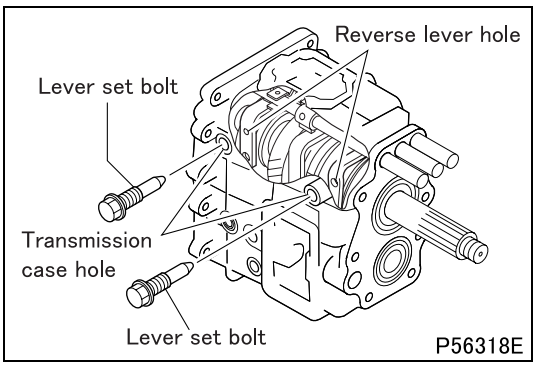
■ Installation: Countershaft rear bearing

- Install the countershaft rear bearing on the transmission case in the illustrated direction.



■ Installation: Mainshaft rear bearing

- Install the mainshaft rear bearing on the transmission case in the illustrated direction.



■ **Installation: Lever set bolt**

- Apply sealant to the thread areas of the lever set bolts to install them onto the transmission case holes and reverse lever hole.

***a**: Drive pinion

● **Assembly sequence**

Follow the disassembly sequence in reverse.

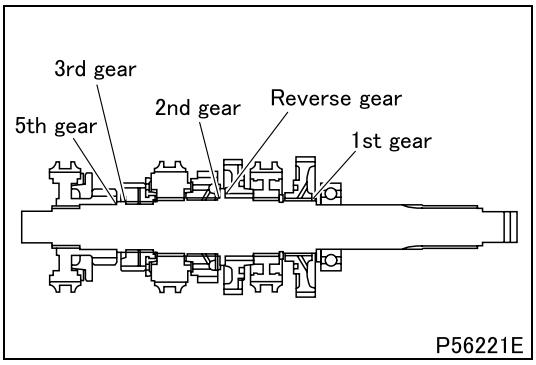
Service standards (Unit: mm {in.})

Location	Maintenance item		Standard value	Limit	Remedy
–	End play	1st gear	0.15 to 0.46 {0.0059 to 0.018}	0.7 {0.028}	Replace
		2nd gear	0.15 to 0.61 {0.0059 to 0.024}	0.8 {0.031}	
		3rd gear	0.15 to 0.46 {0.0059 to 0.018}	0.7 {0.028}	
		5th gear	0.2 to 0.56 {0.0079 to 0.022}	0.8 {0.031}	
		Reverse gear	0.15 to 0.46 {0.0059 to 0.018}	0.7 {0.028}	
–	Play in the diameter direction	1st gear	0.02 to 0.05 {0.0079 to 0.0020}	0.12 {0.0047}	Replace
		2nd gear	0.02 to 0.05 {0.0079 to 0.0020}	0.12 {0.0047}	
		3rd gear	0.02 to 0.06 {0.0079 to 0.0024}	0.12 {0.0047}	
		5th gear	0.05 to 0.09 {0.0020 to 0.0035}	0.2 {0.0079}	
		Reverse gear	0.04 to 0.07 {0.0016 to 0.0028}	0.12 {0.0047}	
12, 13	Clearance between synchronizer ring of 4th and 5th synchronizer and 5th gear		1.23 to 1.47 {0.048 to 0.058}	0.5 {0.020}	Replace
12, *a	Clearance between synchronizer ring of 4th and 5th synchronizer and drive pinion		1.23 to 1.47 {0.048 to 0.058}	0.5 {0.020}	Replace
17, 20	Clearance between 3rd gear and synchronizer outer ring of 2nd and 3rd synchronizer		1.16 to 1.74 {0.046 to 0.069}	0.7 {0.028}	Replace
20, 21	Clearance between synchronizer outer ring of 2nd and 3rd synchronizer and 2nd gear		1.16 to 1.74 {0.046 to 0.069}	0.7 {0.028}	Replace

Special tools

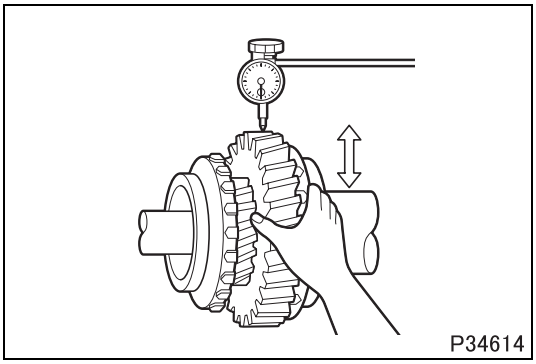
Mark	Tool name and shape	Part No.	Application
a	Snap ring expander  P01137	MH061268	Removal and installation of snap ring

◆Work before removal◆



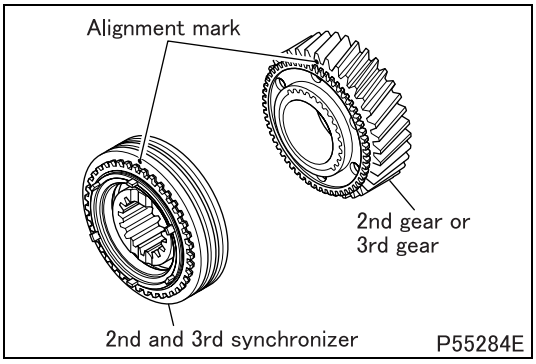
■ Inspection: End play of gears

- If the measured value exceeds the limit, replace defective parts.



■ **Inspection: Play of gears in diameter direction**

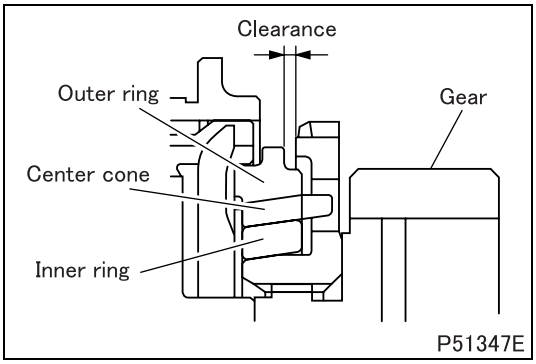
- If the measured value exceeds the limit, replace defective parts.



■ **Alignment marks: 2nd gear, 2nd and 3rd synchronizer and 3rd gear**

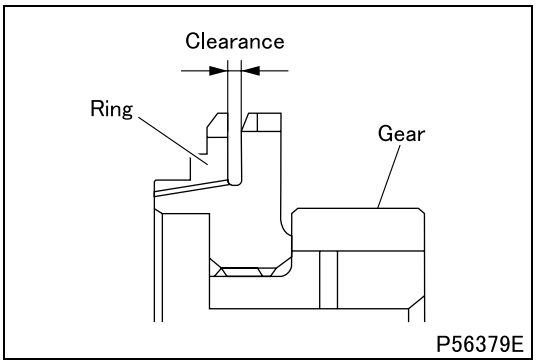
- Put alignment marks on the synchronizer sleeve of the 2nd and 3rd synchronizer, 2nd gear and 3rd gear, each at one location before disassembly.

◆Inspection procedure◆



■ **Inspection: Clearance between synchronizer outer ring of 2nd and 3rd synchronizer and 2nd gear or 3rd gear**

- When measuring the clearance, press each ring and the center cone evenly against the gear and measure all around the circumference.
- If the measured value is less than the limit, replace defective parts.

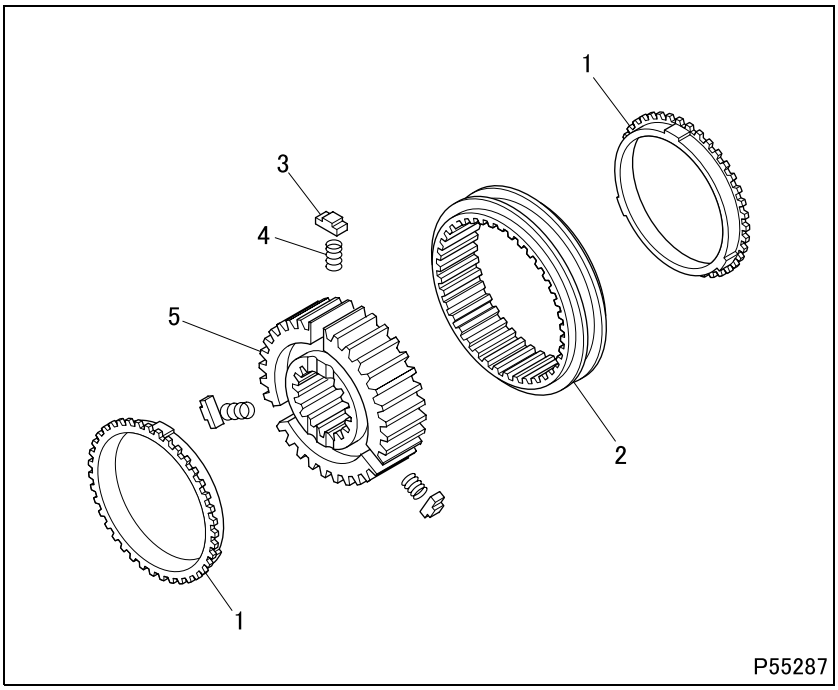


■ **Inspection: Clearance between synchronizer ring of 4th and 5th synchronizer and 5th gear or drive pinion**

- When measuring the clearance, press each ring evenly against the gear and measure all around the circumference.
- If the measured value is less than the limit, replace defective parts.

M E M O

4th and 5th Synchronizer



● Disassembly sequence

1 Synchronizer ring
2 Synchronizer sleeve
3 Shifting plunger
4 Shifting plunger spring
5 Synchronizer hub

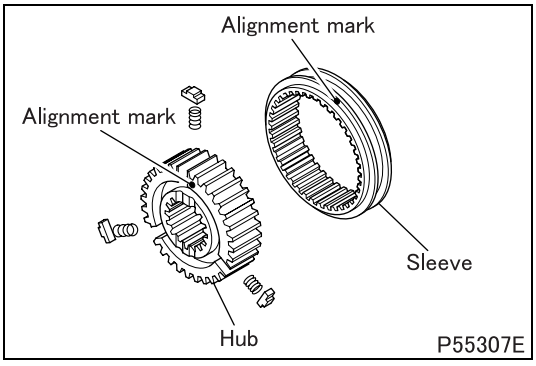
● Assembly sequence

Follow the disassembly sequence in reverse.

Service standards (Unit: mm {in.})

Location	Maintenance item	Standard value	Limit	Remedy
1, 5	Clearance between protrusions of synchronizer ring and synchronizer hub groove	3.0 to 3.3 {0.12 to 0.13}	4.0 {0.16}	Replace

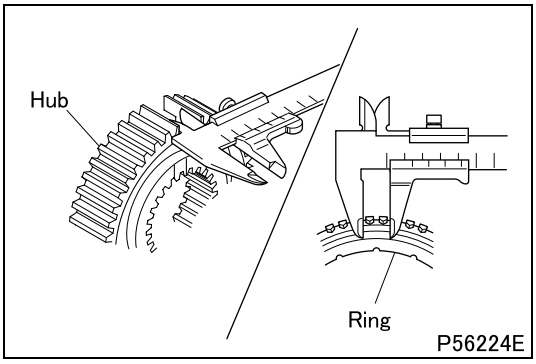
◆Work before removal◆



■ **Alignment marks: Synchronizer sleeve and synchronizer hub**

- Put alignment marks on the synchronizer ring and synchronizer hub, each at one location before disassembly.

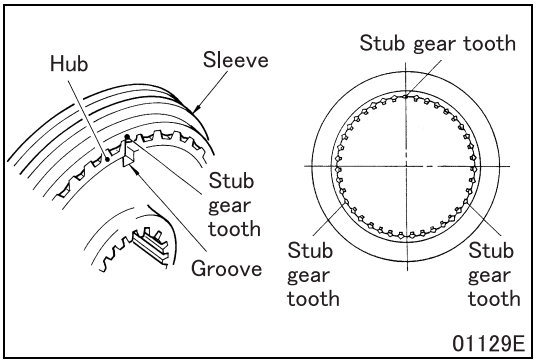
◆Inspection procedure◆



■ **Inspection: Clearance between synchronizer ring or synchronizer outer ring and synchronizer hub**

- If the measured value exceeds the limit, replace defective parts.

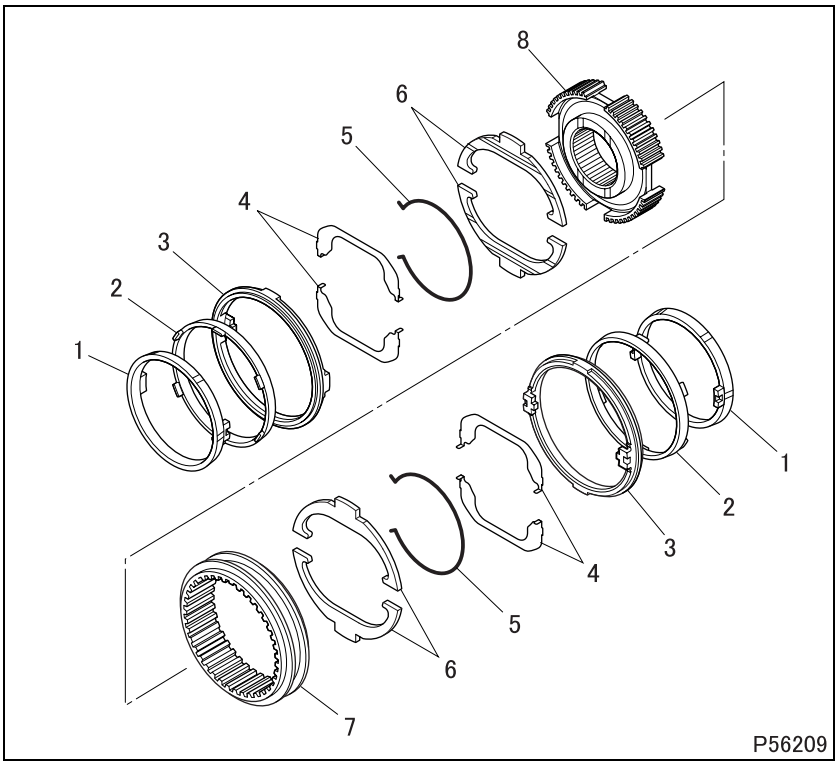
◆Installation procedure◆



■ Installation: Synchronizer sleeve and synchronizer hub

- When replacing the synchronizer sleeve or synchronizer hub with a new one, align the three keyways of the synchronizer hub with three locations of the stub gear tooth of the synchronizer sleeve to install.

2nd and 3rd Synchronizer



● Disassembly sequence

1 Synchronizer inner ring
2 Synchronizer center cone
3 Synchronizer outer ring
4 Synchronizer plate
5 Synchronizer spring
6 Synchronizer lever
7 Synchronizer sleeve
8 Synchronizer hub

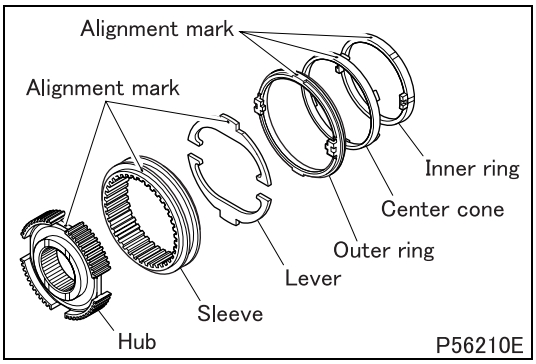
● Assembly sequence

Follow the disassembly sequence in reverse.

Service standards (Unit: mm {in.})

Location	Maintenance item	Standard value	Limit	Remedy
3	Width of claws of synchronizer outer ring	13.8 to 14.0 {0.54 to 0.55}	13 {0.51}	Replace

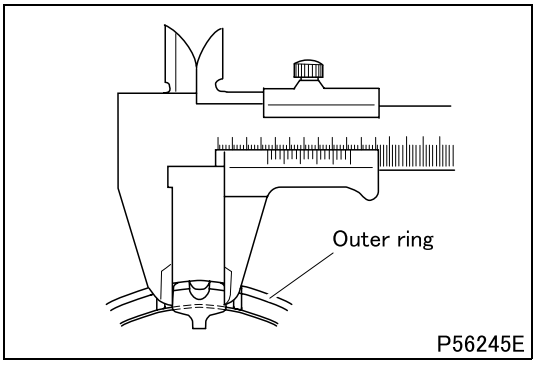
◆Work before removal◆



■ Alignment marks: Synchronizer inner ring, center cone, outer ring, lever and hub

- Put alignment marks on the synchronizer inner ring, center cone, outer ring, lever and hub, each at one location, aligning with the alignment mark put on the synchronizer sleeve before disassembly.

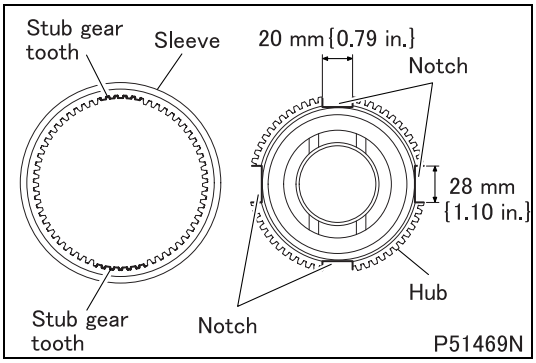
◆Inspection procedure◆



■ Inspection: Width of claws of synchronizer outer ring

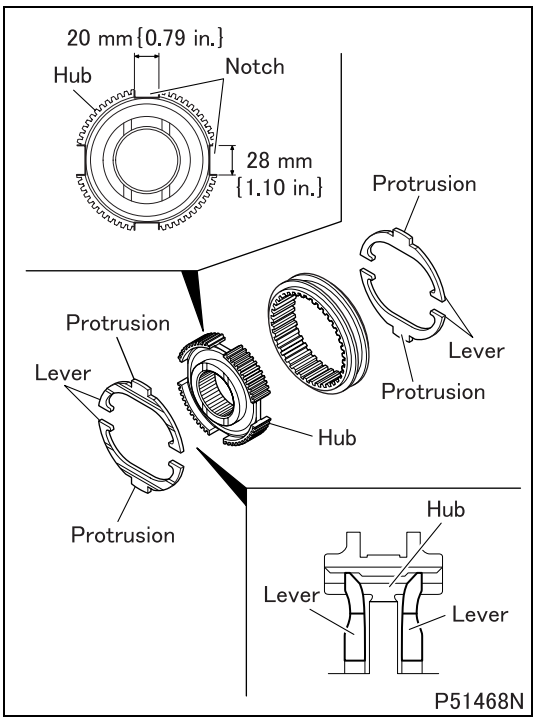
- If the measured value exceeds the limit, replace defective parts.

◆Installation procedure◆



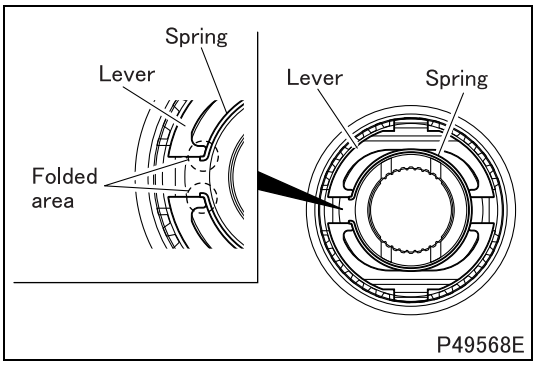
■ **Installation: Synchronizer sleeve and synchronizer hub**

- When replacing the synchronizer sleeve or synchronizer hub with a new one, align the stub gear tooth (2 locations) of the synchronizer sleeve and the notch (2 locations) of the synchronizer hub to install.
- Install the stub gear teeth, aligning with the notches with narrow width (20 mm {0.79 in.}) of the synchronizer hub.



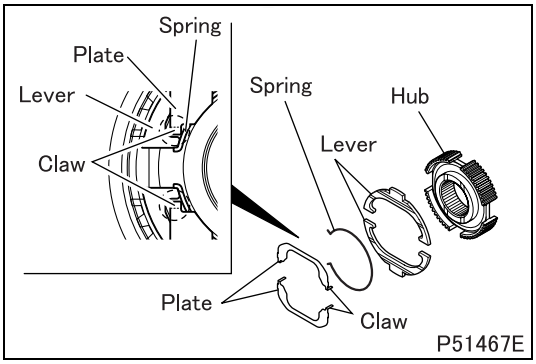
■ **Installation: Synchronizer lever**

- Install the synchronizer lever on the synchronizer hub in the illustrated direction.
- To install the synchronizer lever, install its protrusions on the notches with narrow width (20 mm {0.79 in.}) of the synchronizer hub.



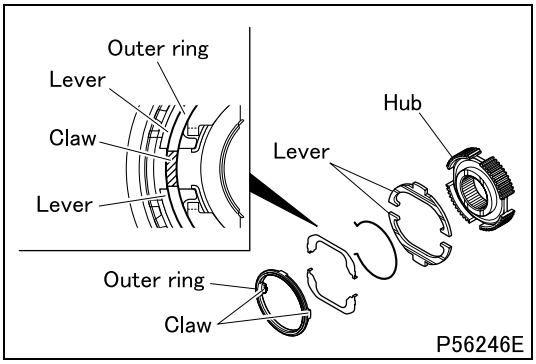
■ **Installation: Synchronizer spring**

- Hang the folded area on the synchronizer lever to install the synchronizer spring.



■ **Installation: Synchronizer plate**

- Install the synchronizer plate facing the claws toward the synchronizer hub so that it may be inserted between the synchronizer lever and synchronizer spring.



■ **Installation: Synchronizer outer ring**

- Install the synchronizer ring facing the claws toward the synchronizer hub so that it may be inserted between the two synchronizer levers.

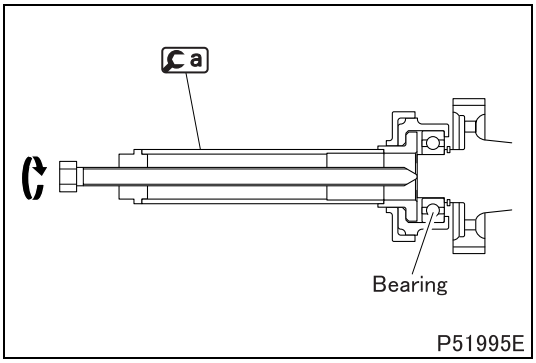
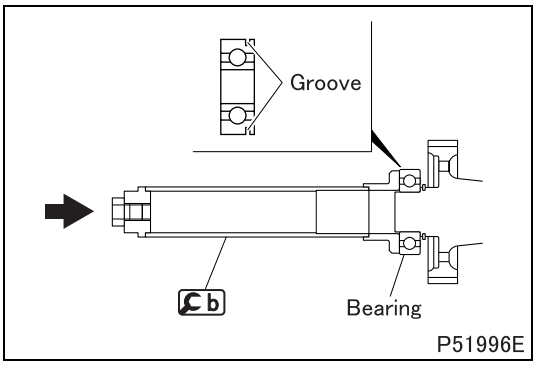
c	Snap ring expander 	MH061268	Removal and installation of snap ring

◆Removal procedure◆



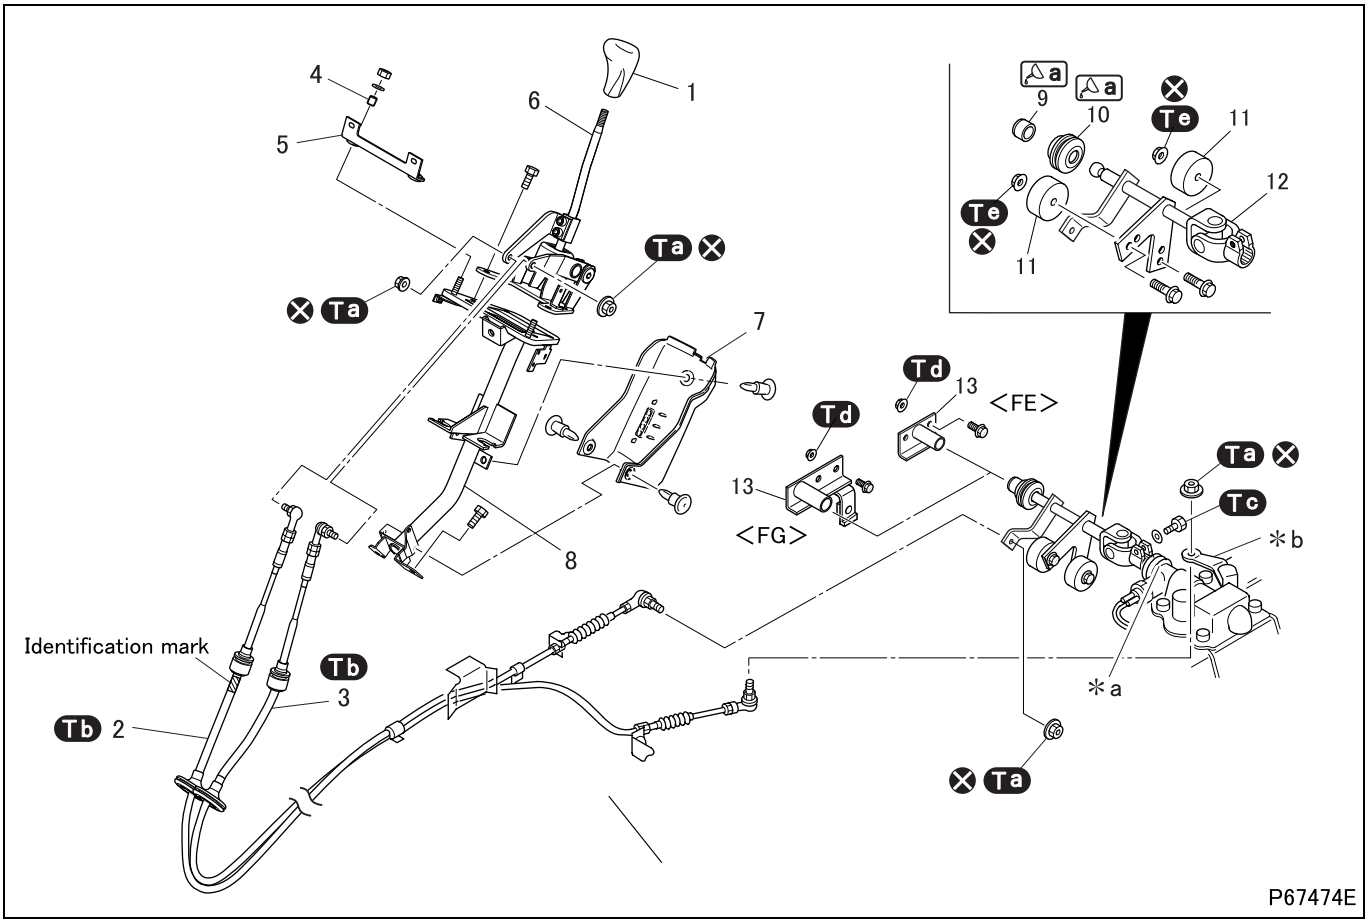
■ Removal: Countershaft front bearing

◆Installation procedure◆



■ Installation: Countershaft front bearing

- Install the countershaft front bearing on the countershaft in the illustrated direction.



● **Removal sequence**

1 Gear shift lever knob
2 Shift cable
3 Select cable
4 Collar
5 Instrument panel bracket
6 Gear shift lever (See later section.)
7 Gear shift lever cover
8 Gear shift lever bracket
9 Cross shaft bushing
10 Cross shaft boot
11 Counter weight
12 Cross shaft
13 Cross shaft bracket

***a**: Torsion shaft
***b**: Gear selector lever
⊗: Non-reusable parts

● **Installation sequence**

Follow the removal sequence in reverse.

NOTE

- **All the nuts used for securing the shift and select cables are coated with thread locking product. These nuts must be replaced with new ones whenever they are loosened or removed.**
- **The counter weight mounting nut is coated with thread locking product. The nut must be replaced with a new one whenever it is loosened or removed.**

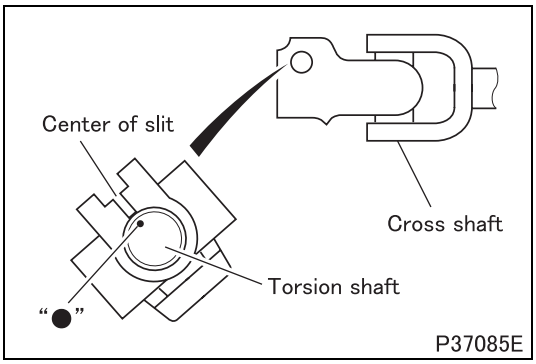
Tightening torque (Unit: N·m {ft.lbs, kgf·m})

Mark	Parts to be tightened		Tightening torque	Remarks
Ta	Nut (shift cable mounting)		19 to 24 {14 to 18, 1.9 to 2.4}	–
	Nut (select cable mounting)			
Tb	Shift cable	Lock nut on transmission side	59 to 83 {44 to 61, 6 to 8.5}	–
	Select cable	Lock nut on transmission side		
Tc	Bolt (cross shaft mounting)		15 to 20 {11 to 15, 1.5 to 2.0}	–
Td	Nut (cross shaft bracket mounting)		59 to 78 {44 to 61, 6 to 8}	–
Te	Nut (cross shaft weight mounting)		9 to 14 {6.6 to 10, 0.9 to 1.4}	–

Lubricant and/or sealant

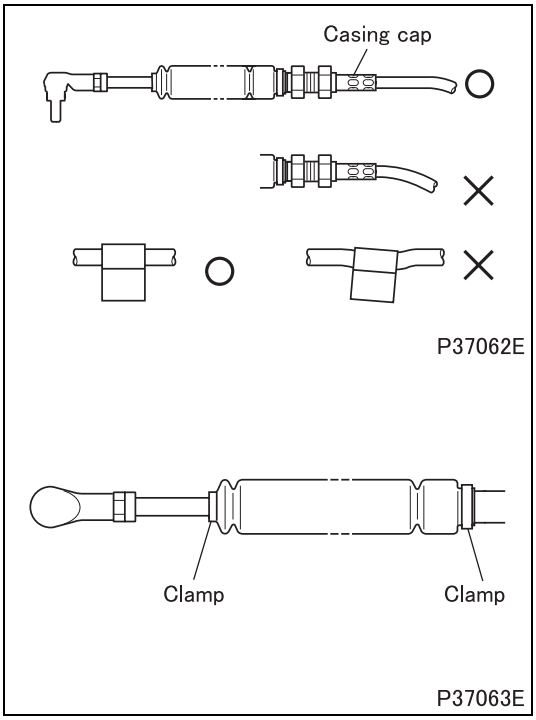
Mark	Points of application	Specified lubricant and/or sealant	Quantity
a	Internal circumference and circumference of cross shaft bushing	Wheel bearing grease [NLGI No. 2 (Li soap)]	As required
	Filling in cross shaft boot		

◆Installation procedure◆



■ Installation: Cross shaft

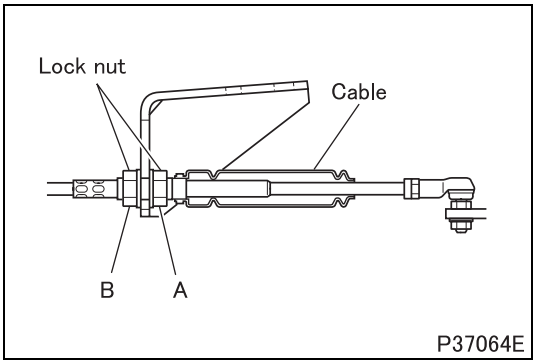
Insert the cross shaft so that the punch mark "●" of the torsion shaft on the transmission is positioned at the center of the slit of the cross shaft.



■ Installation: Shift cable and select cable

CAUTION ⚠

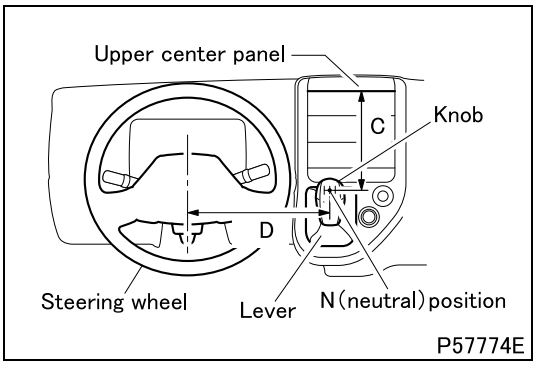
- **Install the casing cap portion as a straight line.**
- **The radius of the cable bend shall be 200 mm {7.87 in.} or more.**
- **Make sure that there is no obstruction in movement of the cable.**
- **Install the clamp at right angles to the cable.**
- **Do not twist clamps at either ends of the boot.**
- **Check for the identification mark on the shift cable.**
- **The twist angle of ball joints at both ends of the cables shall be 15 degrees or less.**
- **Make sure that the ball joints face the correct direction. Installing them in the wrong direction can remarkably reduce durability of the cables.**



- Connect the shift cable and select cable with each clamp temporarily tightened.
- Permanently tighten the lock nuts and each clamp of the cables in this order with no excessive force applied to the shift cable and select cable.

NOTE

- **When tightening lock nuts, tighten B without moving A on the transmission.**



- Make sure when operating the gear shift lever that it shifts and selects smoothly each position.
- Adjust the gear shift lever with the lock nut on the transmission and turn buckle or clevis on the gear shift lever.

  Fore-and-aft direction C: Distance from the upper center panel

  Right-and-left direction D: Distance from the steering wheel center

  N (neutral) position on the 2nd-3rd line of the gear shift lever <S5>

  N (neutral) position on the 4th-5th line of the gear shift lever <S6>

	Fore-and-aft direction C (mm {in.})	Right-and-left direction D (mm {in.})
S5	274 ± 15 {10.8 ± 0.59}	303 ± 5 {11.9 ± 0.20}
S6		333 ± 5 {13.1 ± 0.20}

	Shift cable	Select cable
Tilt forward	E	–
Tilt backward	F	–
Tilt to the right	–	F
Tilt to the left	–	E

E: Move the lock nut and turn buckle to the transmission direction.

F: Move the lock nut and turn buckle to the gear shift lever direction.

NOTE

- **When adjusting cable length, do not move the torsion shaft and gear selector lever from the neutral position.**
- **When adjusting the select position, align N (neutral) position of the transmission with N (neutral) position of the gear shift lever.**

Gear Shift Lever

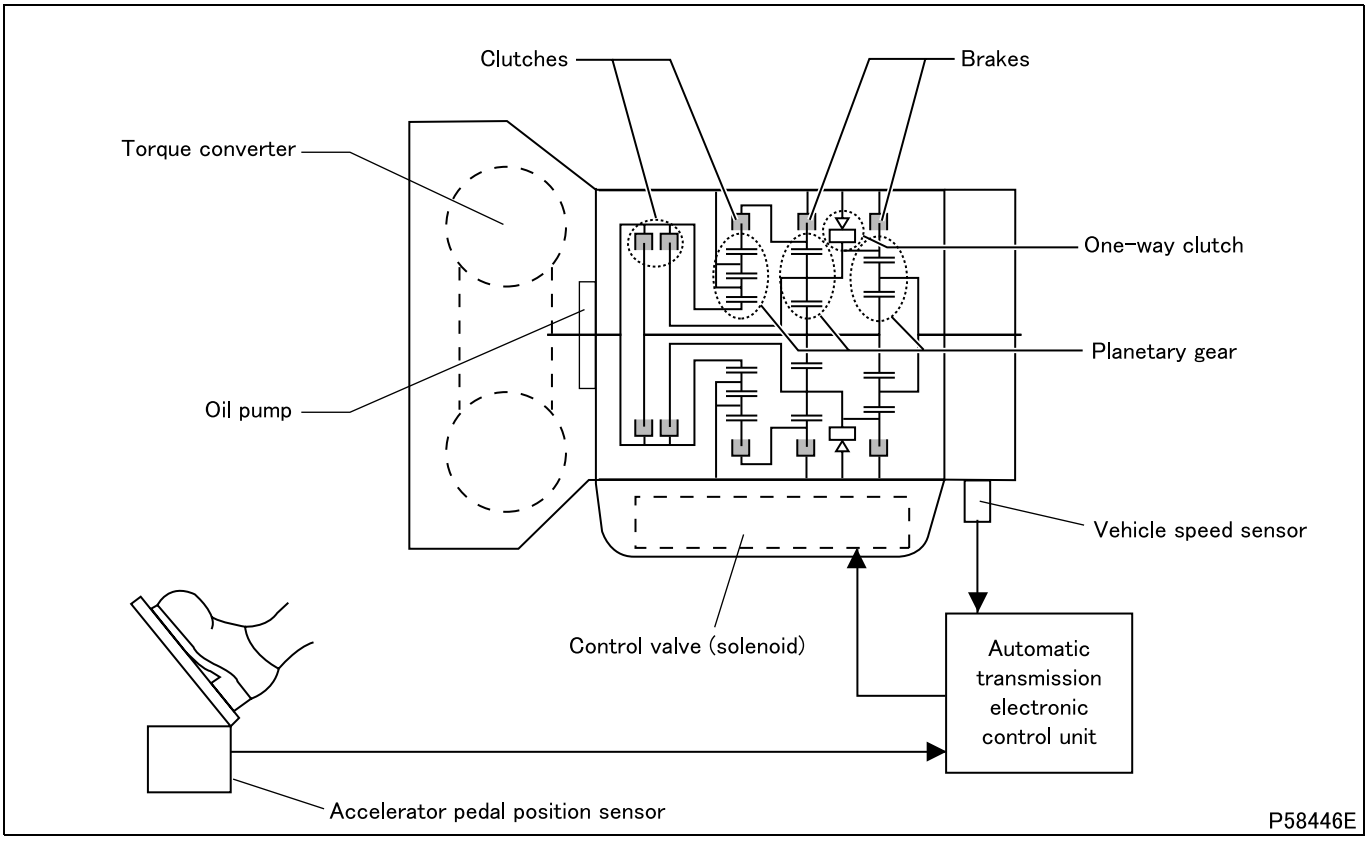
SPECIFICATIONS

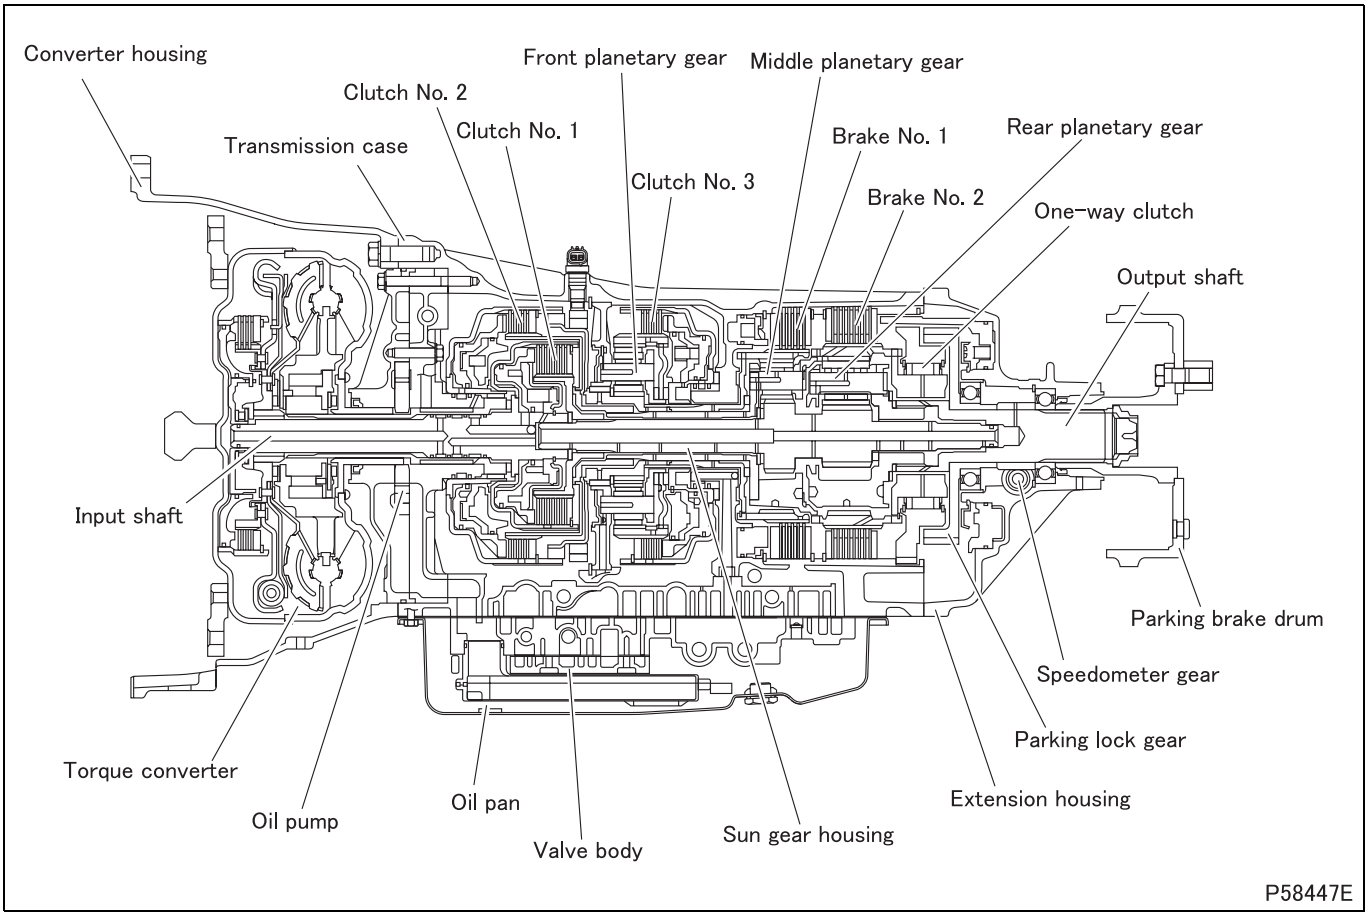
Item			Specifications
Manufacturer			Aisin Seiki Co., Ltd.
Transmission model			M036A6
Torque converter	Type		3-element, single-stage, 2-phase (with lockup clutch)
	Stall torque ratio		1.60
Transmission	Type		Planetary gear type; 6 forward gears, 1 reverse gear
	Gear ratios	1st	3.742
		2nd	2.003
		3rd	1.343
		4th	1.000
		5th	0.773
		6th	0.634
		Rev	3.539
Range selection pattern			P-R-N-D-3-2 (engine startup possible in P and N only)
Automatic transmission fluid	Type		Mobil ATF3309 or equivalent
	Total quantity L {qts.}		13 {14}
	Quantity at time of replacement L {qts.}	Replaced with drain plug removed	Approx. 6.4 {6.8}
		Replaced with oil pan removed	Approx. 8.4 {8.9}

1. Overview

- The automatic transmission forms a system in which gearshifts are automatically realized through direction of automatic transmission fluid on various paths by solenoid valves in accordance with sensor information on the vehicle speed, throttle opening, and other aspects of vehicle operation.
- The automatic transmission electronic control unit provides various control functions. These include a diagnosis function (here, the automatic transmission electronic control unit monitors the main components and warns the driver of any abnormality), a failsafe function (here, the automatic transmission electronic control unit stops control of the automatic transmission when necessitated by an abnormality), and a function (here, the automatic transmission electronic control unit changes the control method to enable continued driving in the event of a relevant abnormality).
- The system consists mainly of electronically controlled control valves (solenoid valves), a torque converter, planetary gears, brakes, clutches, and the automatic transmission electronic control unit and sensors that are used for control of the aforementioned components.



1.1 Automatic transmission



- The automatic transmission combines a torque converter (this has a lockup mechanism) and a fully automatic 6-speed gear system.

(1) Torque converter

- The torque converter serves as the input device for the transmission. It functions as a fluid coupling that increases the torque transmitted from the engine and absorbs shock during standing starts and during gearshifts. At vehicle speeds above a certain level, a lockup mechanism in the torque converter eliminates slippage and thus improves transmission efficiency.

(2) Transmission

- The transmission consists of a gear system with 6 forward gears and 1 reverse gear. It effects gearshifts using 1 one-way clutch, 3 planetary gear sets (each of these consists of a sun gear, pinion gears, and a ring gear), 3 hydraulically activated, wet, multi-plate clutches, and 2 hydraulically activated, wet, multi-plate brakes.

(3) Hydraulic control arrangement

- Extensive electronic control effected by a microcomputer (the automatic transmission electronic control unit) over the hydraulic circuitry enables precise control over gearshifts.

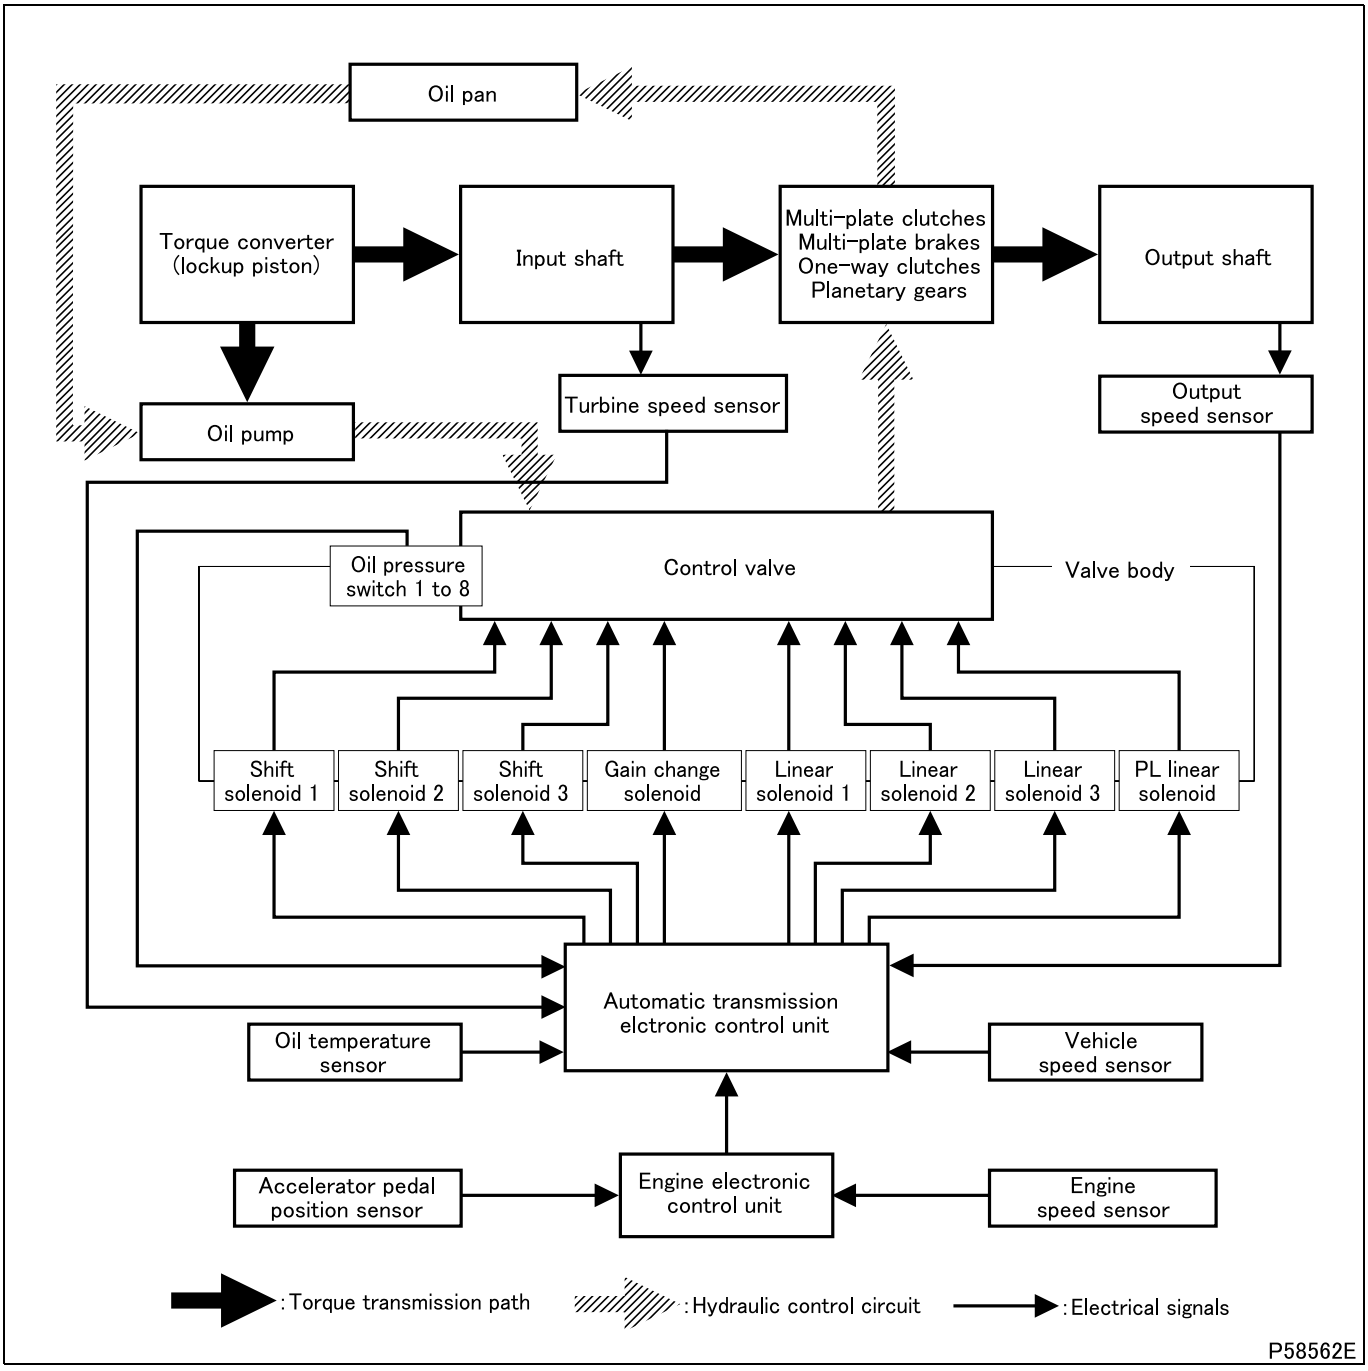
(4) Oil pump

- The gears in the oil pump turn in time with the input shaft rotation to suck in oil from the oil pan. The oil is then compressed and discharged into the hydraulic control components and other parts that need to be lubricated.

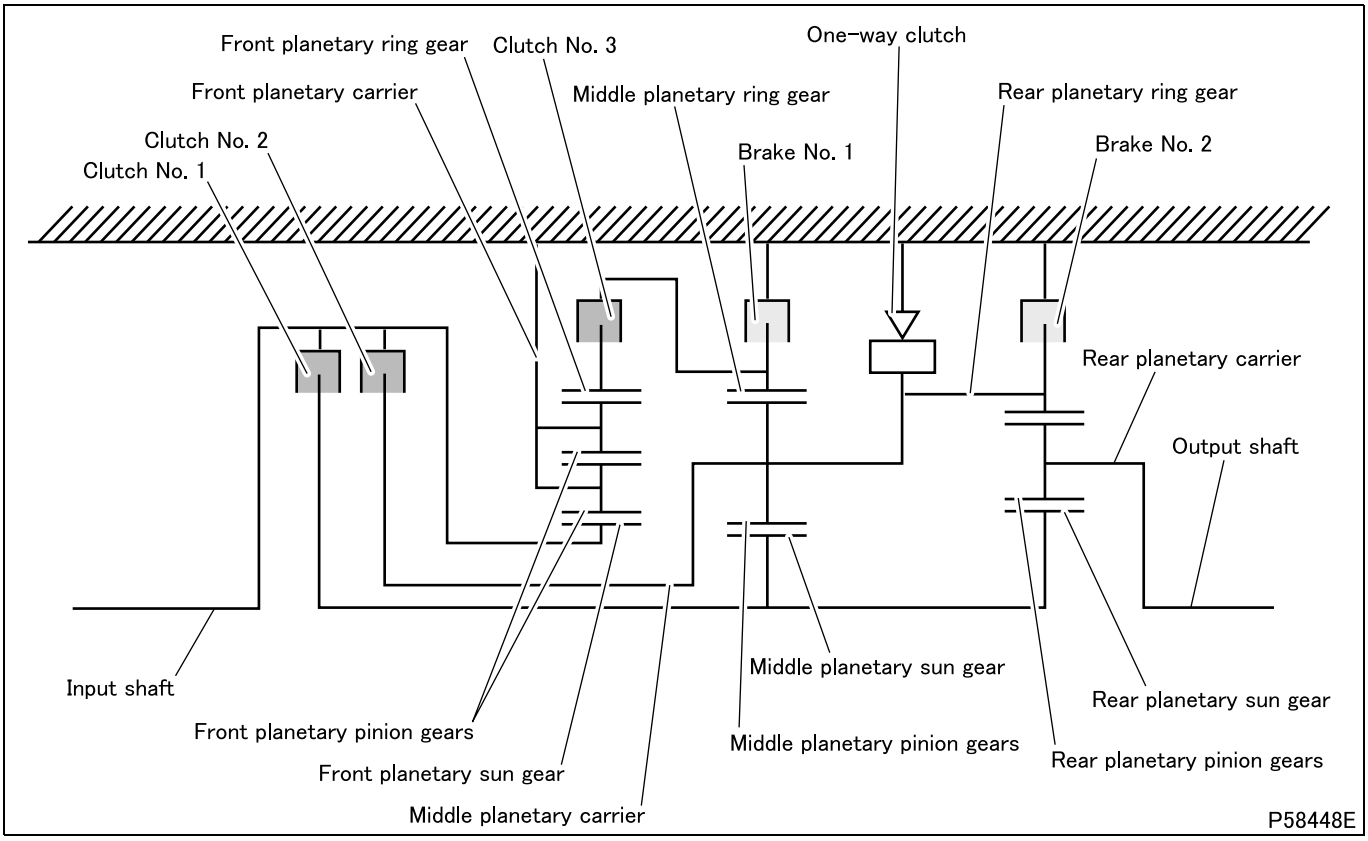
(5) Valve body

- The valve body consists of the solenoids that are activated by command signals from the electronic control unit to select necessary hydraulic circuit and a control valve that actually changes the operating modes of the brakes and clutches and regulates hydraulic pressure through the selected hydraulic circuit.

1.2 Automatic transmission block diagram



1.3 Transmission



(1) Functions of clutches and brakes

Component	Function
Clutch No. 1	Engage input shaft with middle and rear planetary sun gears
Clutch No. 2	Engage input shaft with middle planetary carrier and rear planetary ring gear
Clutch No. 3	Engage front planetary ring gear with middle planetary ring gear
Brake No. 1	Lock middle planetary ring gear
Brake No. 2	Lock front planetary carrier and rear planetary ring gear
One-way clutch	Lock front planetary carrier and rear planetary ring gear against counterclockwise rotation (only allowing them to rotate clockwise)

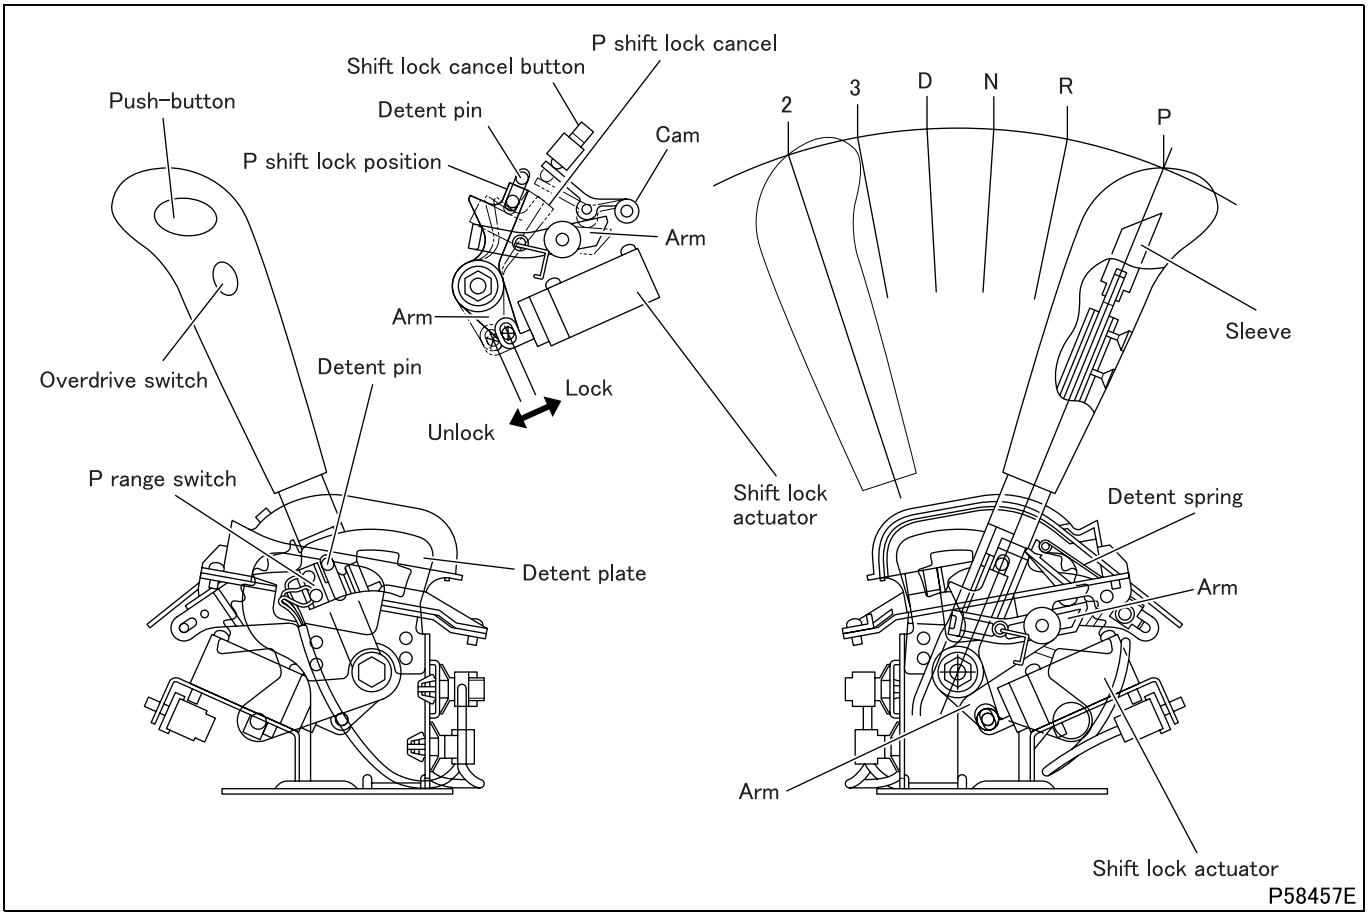
(2) Operation timing of clutches, brakes and solenoids

Shifter position		Shift solenoid			Linear solenoid			Clutch No.			Brake No.		One-way clutch
		1	2	3	1	2	3	1	2	3	1	2	
P	Parking		O	O		O						O	
R	Rev (high torque)	O		O		O	O			O		O	
	Rev (low torque)	O	O	O		O	O			O		O	
N	Neutral		O	O		O						O	
D	1st			O		O		O				O	●
	2nd				O			O			O		
	3rd	O				O		O		O			
	4th	O	O		O			O	O				
	5th		O			O			O	O			
	6th		O		O				O		O		

O :In operation

● :Only in operation when driven

1.4 Range selector lever



- The P range switch indicates whether the P range is selected. It is used for the key interlock function.
- The shift lock actuator is used in control of the P shift lock function.
- The shift lock cancel button cancels the P shift lock function in a way that bypasses the shift lock actuator. It is used in the event of a fault.

(1) Key interlock function

(1.1) Locked condition

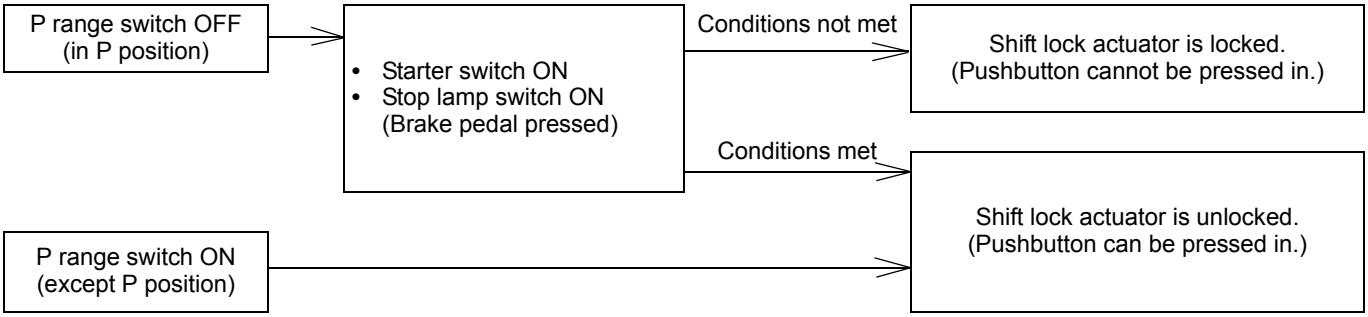
Input signal	Key interlock electronic control unit	Output signal
P Range switch ON (range selector lever in position except P)	Key interlock activation	Key interlock solenoid ON (key cannot be turned to LOCK position)

(1.2) Lock cancellation

Input signal	Key interlock electronic control unit	Output signal
P Range switch OFF (range selector lever in P position)	Key interlock cancellation	Key interlock solenoid OFF (key can be turned to LOCK position)

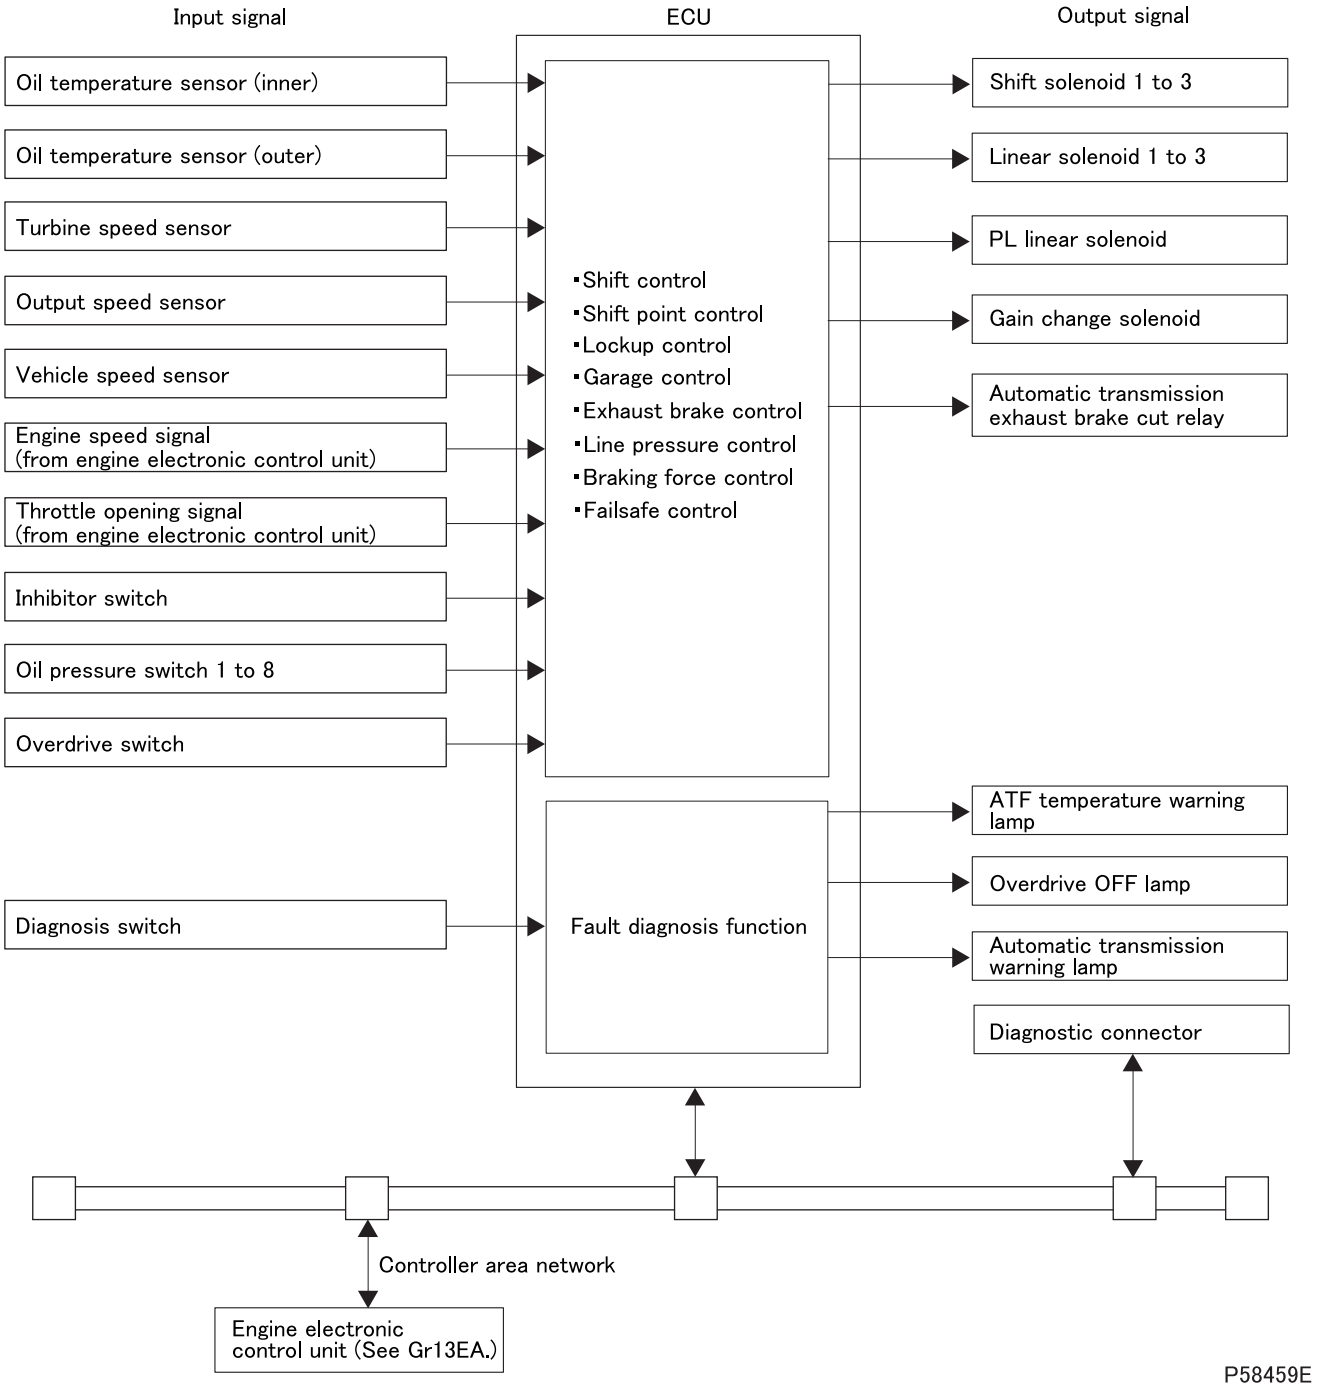
(2) P shift lock function

- When the required condition is not satisfied, the shift lock actuator operates to prevent the push-button from being pushed, effectively preventing movement of the lever from the P position.



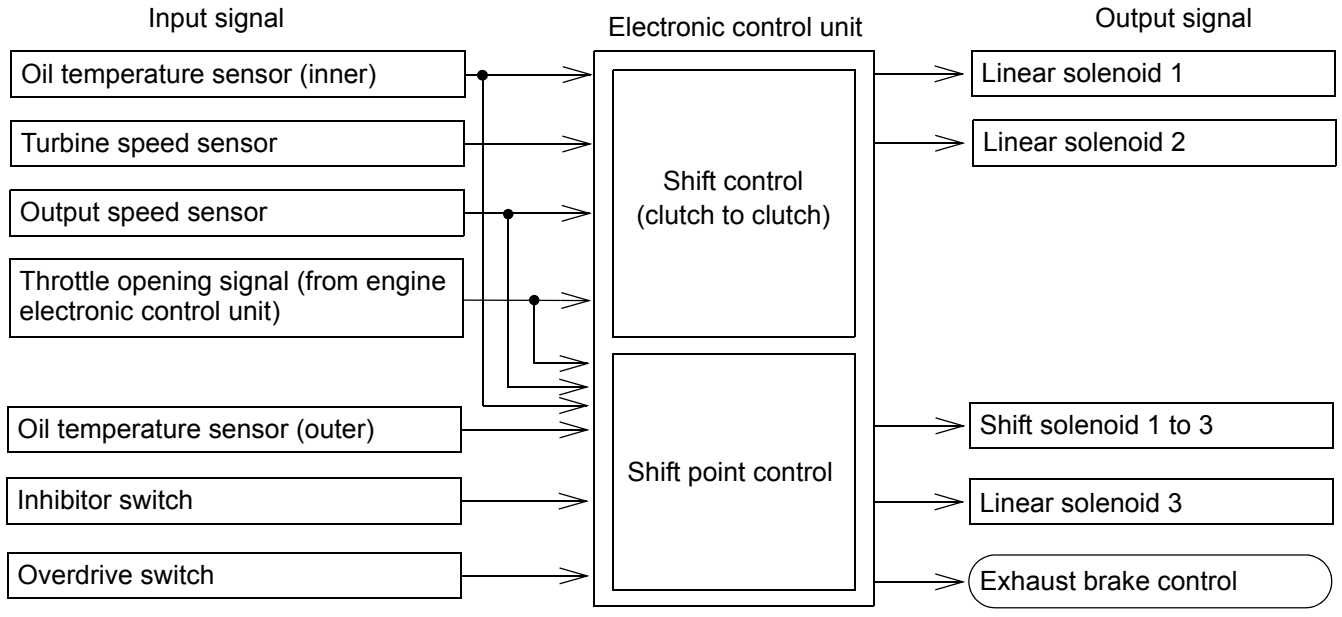
2. Electronic Control System

2.1 System block diagram



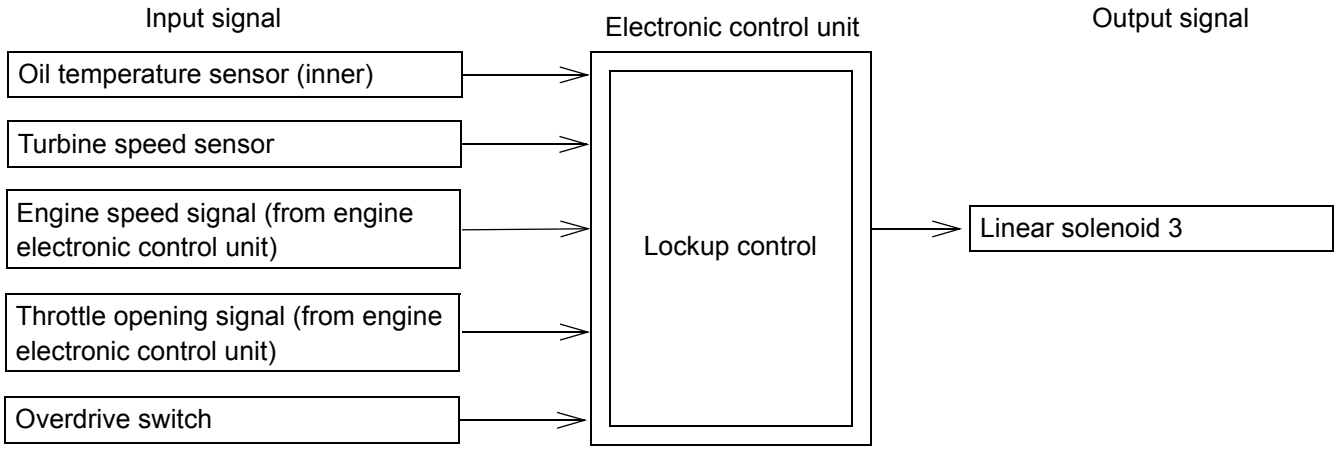
Part name	Major function or operation
Oil temperature sensor (inner and outer)	Detection of automatic transmission fluid temperature
Turbine speed sensor	Detection of input shaft speed
Output speed sensor	Detection of output shaft speed
Vehicle speed sensor	Detection of vehicle speed
Engine electronic control unit (engine speed signal)	Detection of engine speed
Engine electronic control unit (throttle opening signal)	Detection of throttle opening angle
Inhibitor switch	Detection of range selector lever position
Oil pressure switch 1 to 8	Detection of oil pressure
Overdrive switch	Detection of overdrive OFF condition
Diagnosis switch	Displaying diagnosis codes
Shift solenoid 1 to 3	Gear shifting for speed change
Linear solenoid 1, 2	
Linear solenoid 3	Gear shifting for speed change, activation of lockup, shifting from neutral to forward or reverse
PL linear solenoid	Control of line pressure
Gain change solenoid	Change of range where the gearshift pressure is regulated
Automatic transmission exhaust brake cut relay	Cut-off of exhaust brake
ATF temperature warning lamp	Display of abnormal automatic transmission fluid temperature
Overdrive OFF lamp	Display of overdrive OFF
Automatic transmission warning lamp	Display of system fault and diagnosis codes
Diagnostic connector	Communication with scanning tool; displaying and erasing diagnosis codes

2.2 Shift control and shift point control



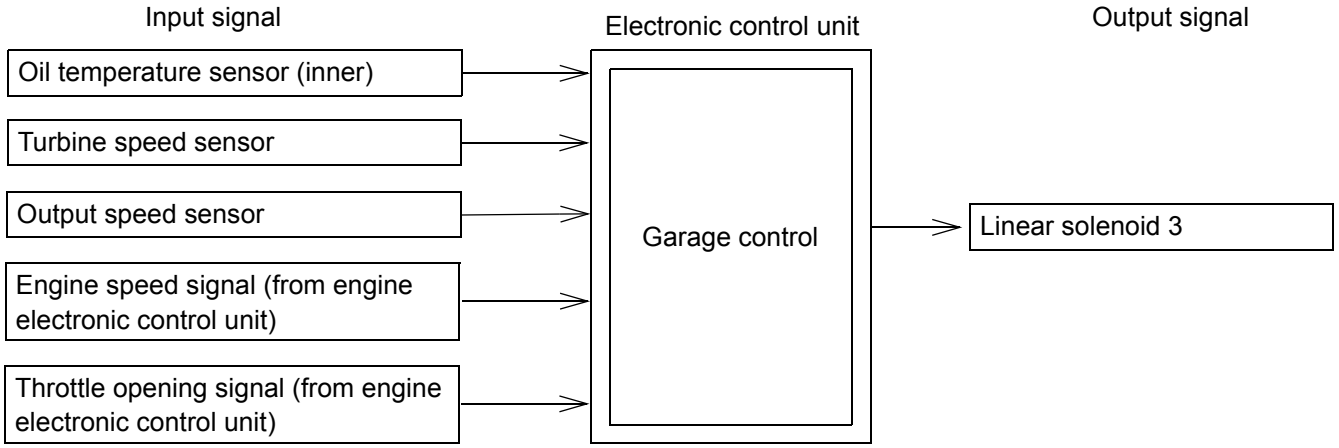
- For automatic selection of the optimal gear, the throttle opening signal and the output speed sensor signals (which correspond to the vehicle speed) cause the automatic transmission electronic control unit to issue relevant signals in accordance with a predetermined shift map to shift solenoid 1-3 and linear solenoid 1 and 2, which are mounted on the valve body.
- Clutch selection for shift control is performed by means of clutch-to-clutch control, whereby one clutch is disengaged as another is engaged.

2.3 Lockup control



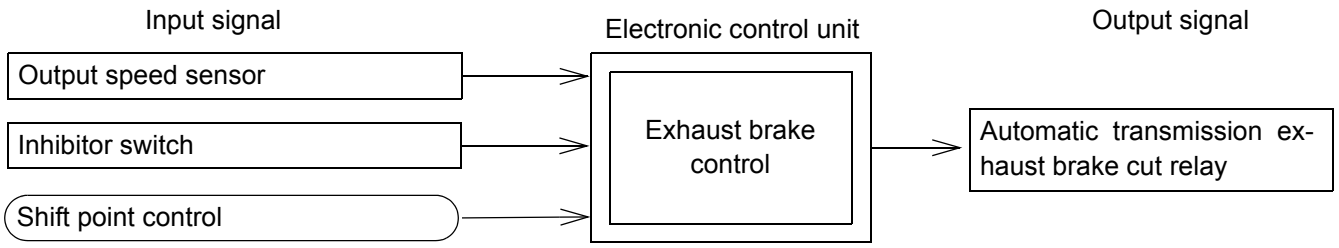
- Lockup control enables slippage in the torque converter to be eliminated for increased transmission efficiency. The throttle opening signal and the output speed sensor signals (which correspond to the vehicle speed) cause the automatic transmission electronic control unit to issue relevant signals in accordance with a predetermined shift map to linear solenoid 3 (this is mounted on the valve body) for lockup ON-OFF-slip selection.

2.4 Garage control



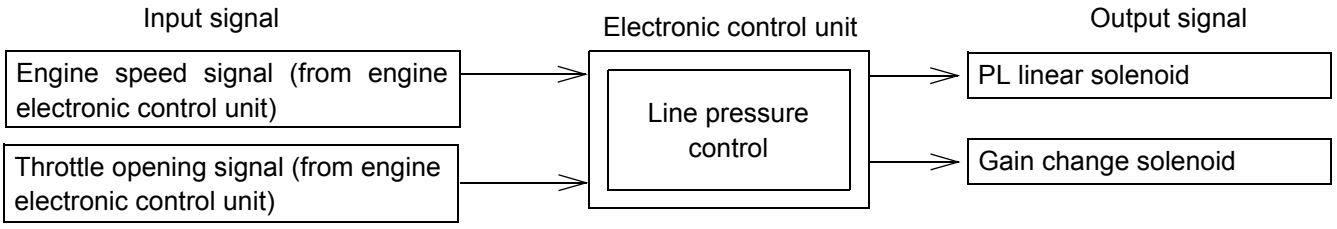
- When the inhibitor switch signal changes from N to a driving range (D or R), a signal is issued by the automatic transmission electronic control unit to linear solenoid 3 (this is mounted on the valve body) to realize a forward or reverse gear.

2.5 Exhaust brake control



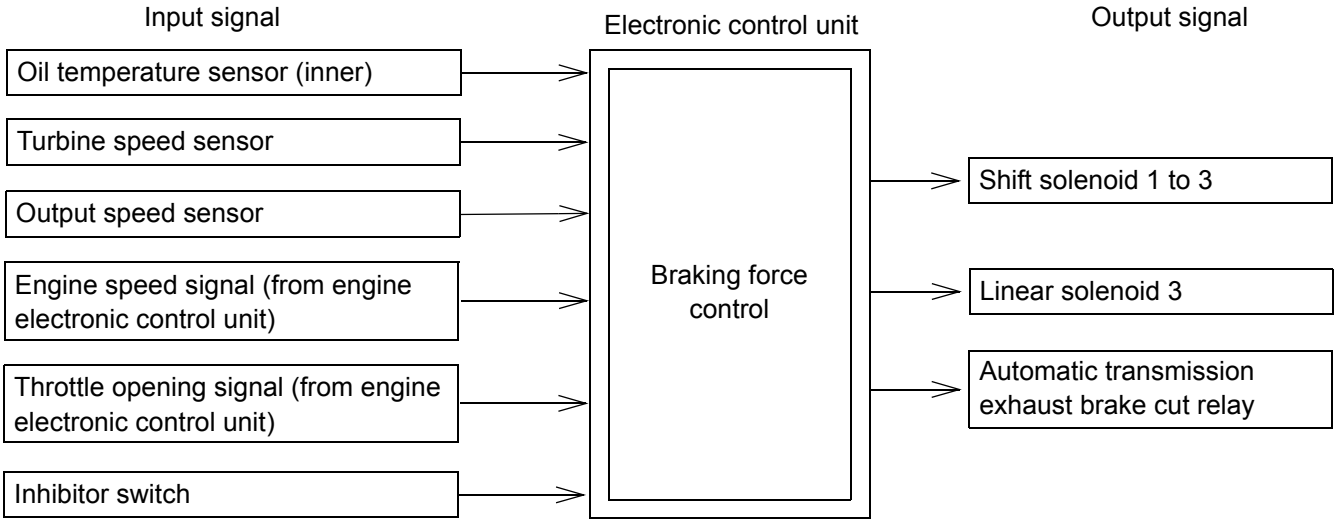
- The exhaust brake is released under any of the following conditions.
  - Range selector lever is in P or N
  - Low speed driving
  - During automatic transmission shifting
  - ATF temperature is high

2.6 Line pressure control



- The line pressure control optimizes the automatic transmission line pressure in accordance with the throttle opening signal and engine speed signal.

2.7 Braking force control



- If the accelerator pedal is released when the vehicle speed is higher than a certain level, a gear is selected in accordance with the road grade and cargo weight to realize optimal engine braking.

2.8 Failsafe control

- Failsafe control is designed to maintain the highest possible level of driveability in the event of an abnormality in either output speed sensor, in the engine speed signal, throttle opening signal, oil temperature sensor, or inhibitor switch, or in any solenoid or mechanical valve.

(1) Inhibitor switch

If, with the vehicle either stationary or moving, an inhibitor switch abnormality occurs such that no signals are applied to the automatic transmission electronic control unit, the automatic transmission electronic control unit selects and holds 3rd gear. If multiple signals are applied to the automatic transmission electronic control unit, the automatic transmission electronic control unit maintains driveability by effecting control in the following order of range precedence: P > N > range signals prior to duplicate signal input. The selected hydraulic circuit in the valve body is determined by the manual valve in accordance with the range selector lever position, so the actual vehicle condition is as shown below.

Actual range selector lever position	Inhibitor switch input signals	Vehicle operating condition
P	P and another select signal	P
R	R and another select signal (except P or N range signal)	R
N	N and another select signal	N
D	D and another select signal (except P or N range signal)	3rd gear
3	3 and another select signal (except P or N range signal)	3rd gear
2	2 and another select signal (except P or N range signal)	3rd gear

2.9 Fault diagnosis function

- While the starter switch is in the ON position, the sensors and other components are continuously monitored for faults. In the event that a component is found faulty, an indication is made in the meter cluster to alert the driver, the fault location is memorized in the form of a diagnosis code, and special control necessitated by the fault is initiated.
- While the special control is taking place, the system's functionality is limited to ensure vehicle and driver safety. It is possible to read the memorized diagnosis code using a general scanning tool or from flashing of the warning lamp.

NOTE

- **Diagnosis codes shown by the general scanning tool and those indicated by flashing of the warning lamp are different.**
- **The general scanning tool is capable of showing more detailed diagnosis codes.**

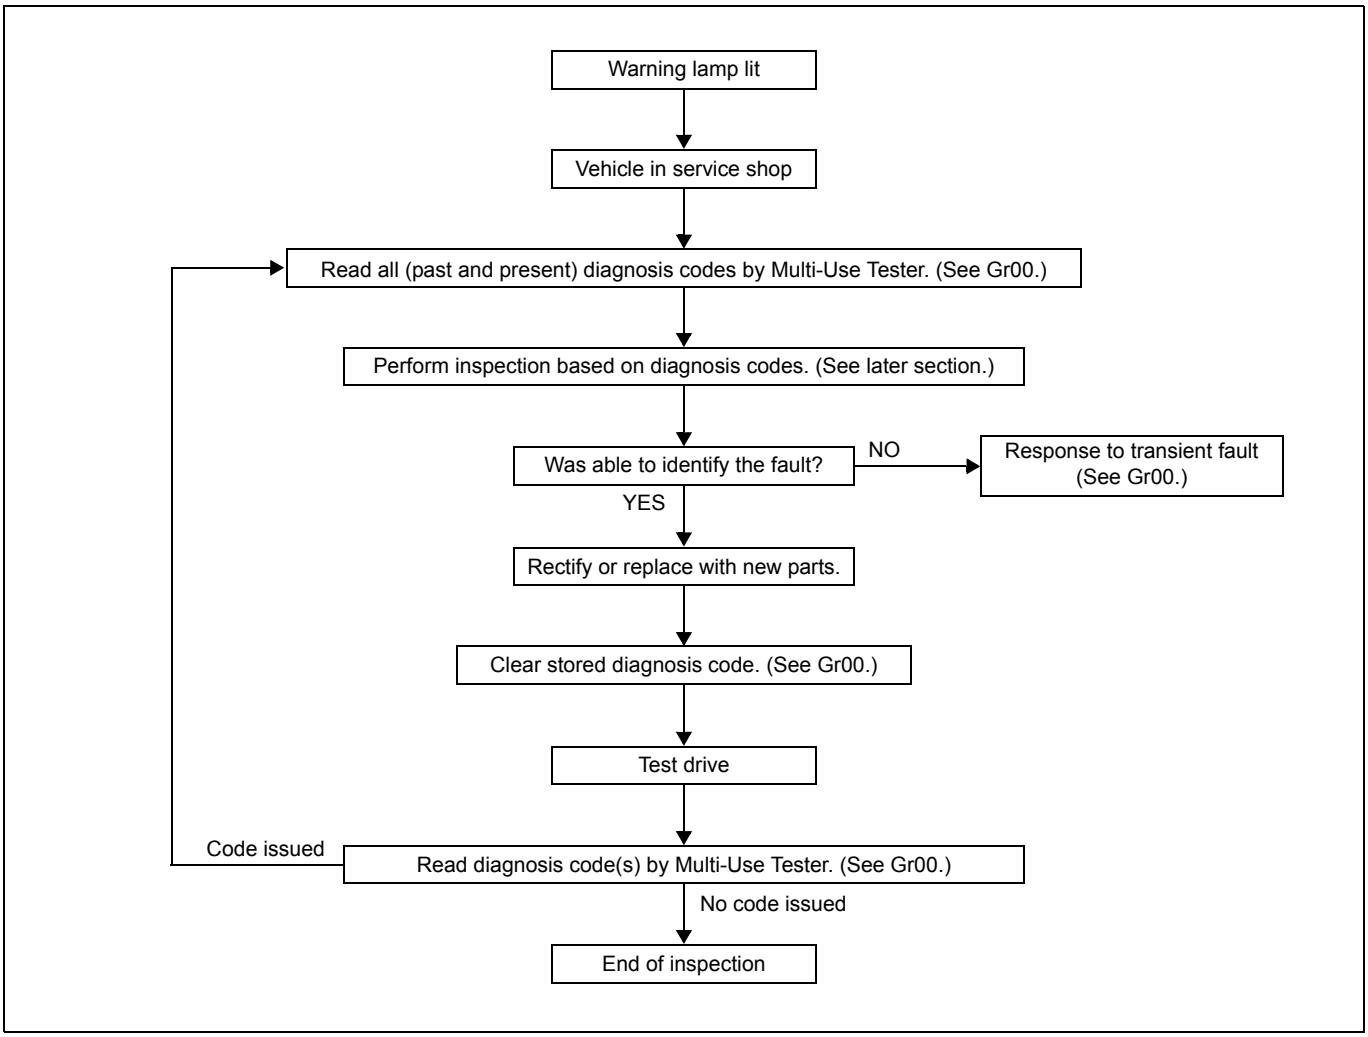
TROUBLESHOOTING

1. Diagnosis Procedure

- Perform the inspection in accordance with the following flowchart.



2. Diagnostic Precautions

- Before measuring voltage, check the battery for charged condition and specific gravity. If system inspection is performed with the battery uncharged or reduced in specific gravity, accurate measurements cannot be achieved.
- Before disconnecting battery cables, harnesses and connectors, set the starter switch to LOCK or OFF, then allow at least 20 seconds.
- To avoid having electrical parts damaged, set the starter switch and lighting switch to LOCK or OFF before reconnecting battery cables, harnesses and connectors.
- When performing measurement with the tester, handle the test bar carefully so that it does not damage internal circuit and other electrical parts of the electronic control unit to result in a short-circuit failure between terminals in connector or between connector and car body.
- Resistance is affected by temperature. Determine the necessity of resistance measurement following given temperature specification as a guide. Otherwise, use normal temperature (10 to 35°C {50 to 95°F}) as the measuring condition.

3. Inspections Based on Diagnosis Codes

3.1 Diagnosis code list

- Fault codes can be monitored through the scanning tool (General Scanning Tool or Multi-Use Tester) or the flashing of the warning lamp in the meter cluster.
- There are two kinds of fault codes, i.e., fault code displayed by the General Scanning Tool or Multi-Use Tester and flash code given by the flashing of the warning lamp.
- Scanning tool (General Scanning Tool or Multi-Use Tester) can display diagnosis codes that are more specific than flash codes.
- Diagnosis codes asterisked in the list differ in fault diagnosis period according to the fault diagnosis condition. (For details on fault diagnosis condition, see “Inspection against Each Diagnosis Code”.)

Fault code		Monitor ID	Fault (outline)	Warning	Multi-Use Tester indication	Fault diagnosis period
Diagnosis code	Flash code					
P0078	54	–	Failure of exhaust brake cut relay	O	EXH brake Cut Signal	8TRIP
P0500	12	1	Failure of vehicle speed sensor	●	Vehicle Speed Sensor	2DC
*P0501	12	2	Failure of vehicle speed sensor	●	Vehicle Speed Sensor Performance	IMD or 2DC
P0562	11	72	Open-circuit of starter switch ON power supply	●	Power Supply Voltage (Low)	IMD
P0604	91	74	Failure of electronic control unit	●	ECU Hardware (RAM)	2DC
P0605	92	75	Failure of electronic control unit	●	ECU System (Hardware)	2DC
P062F	93	76	Failure of electronic control unit	●	ECU System (EEPROM)	IMD
P0702	11	73	Open-circuit of battery power supply	●	Power Supply Low (Battery)	2DC
P0706	49	49, 50	Failure of oil pressure switch 8	●	Oil Pressure SW 8 Performance	IMD
P0707	43	19	Failure of inhibitor switch	●	Shift Position SW Low	IMD
P0708	43	20	Failure of inhibitor switch	●	Shift Position SW High	IMD
P0711	13	13, 14	Failure of oil temperature sensor (inside)	●	Oil Temp Sensor “OP” Performance	IMD
P0712	13	11	Failure of oil temperature sensor (inside)	●	Oil Temp Sensor “OP” Low	IMD
P0713	13	12	Failure of oil temperature sensor (inside)	●	Oil Temp Sensor “OP” High	IMD
P0714	13	15	Failure of oil temperature sensor (inside)	●	Oil Temp Sensor “OP” Intermittent	IMD
P0717	16	5	Failure of turbine speed sensor	●	Turbine Speed Sensor No Signal	2DC
*P0721	25	4	Failure of output speed sensor	●	Output Speed Sensor Performance	IMD or 2DC
P0722	25	3	Failure of output speed sensor	●	Output Speed Sensor No Signal	2DC
P0726	15	6	Abnormality of engine speed signal	●	Engine Speed Sensor Performance	2DC
P0730	37	7, 8	Incorrect gear ratio	●	Incorrect Gear Ratio	IMD
P0746	41	38, 39	Linear solenoid 1 binds in OFF state.	●	Linear Sol Valve 1 Stuck Off	IMD
P0747	41	40	Linear solenoid 1 binds in ON state.	●	Linear Sol Valve 1 Stuck On	IMD
P0748	26	21, 22	Linear solenoid 1 is open-circuited or short-circuited.	●	Linear Sol Valve 1 Electrical	IMD
P0751	45	52	Shift solenoid 1 binds in OFF state.	●	Shift Solenoid 1 Stuck Off	IMD
P0752	45	51	Shift solenoid 1 binds in ON state.	●	Shift Solenoid 1 Stuck On	IMD
P0756	46	56	Shift solenoid 2 binds in OFF state.	●	Shift Solenoid 2 Stuck Off	IMD

Fault code		Monitor ID	Fault (outline)	Warning	Multi-Use Tester indication	Fault diagnosis period
Diagnosis code	Flash code					
P0757	46	55	Shift solenoid 2 binds in ON state.	●	Shift Solenoid 2 Stuck On	IMD
P0761	47	60	Shift solenoid 3 binds in OFF state.	●	Shift Solenoid 3 Stuck Off	IMD
P0762	47	59	Shift solenoid 3 binds in ON state.	●	Shift Solenoid 3 Stuck On	IMD
P0766	55	64	Shift solenoid 3 binds in OFF state.	●	Shift Solenoid 4 Stuck Off	IMD
P0767	55	63	Shift solenoid 3 binds in ON state.	●	Shift Solenoid 4 Stuck On	IMD
P0776	42	43, 44	Linear solenoid 2 binds in OFF state.	●	Linear Sol Valve 2 Stuck Off	IMD
P0777	42	45	Linear solenoid 2 binds in ON state.	●	Linear Sol Valve 2 Stuck On	IMD
P0778	27	23, 24	Linear solenoid 2 is open-circuited or short-circuited.	●	Linear Sol Valve 2 Electrical	IMD
P0796	48	47	Linear solenoid 3 binds in OFF state.	●	Linear Sol Valve 3 Stuck Off	IMD
P0797	48	46	Linear solenoid 3 binds in ON state.	●	Linear Sol Valve 3 Stuck On	IMD
P083D	48	48	Failure of oil pressure switch 7	●	Oil Pressure SW 7 High	IMD
P0842	41	37	Failure of oil pressure switch 1	●	Oil Pressure SW 1 Low	IMD
P0843	41	36	Failure of oil pressure switch 1	●	Oil Pressure SW 1 High	IMD
P0847	42	42	Failure of oil pressure switch 2	●	Oil Pressure SW 2 Low	IMD
P0848	42	41	Failure of oil pressure switch 2	●	Oil Pressure SW 2 High	IMD
P0863	88	67	Abnormality in CAN communication	●	CAN Communication	IMD
P0872	45	54	Failure of oil pressure switch 3	●	Oil Pressure SW 3 Low	IMD
P0873	45	53	Failure of oil pressure switch 3	●	Oil Pressure SW 3 High	IMD
P0877	46	58	Failure of oil pressure switch 4	●	Oil Pressure SW 4 Low	IMD
P0878	46	57	Failure of oil pressure switch 4	●	Oil Pressure SW 4 High	IMD
P0973	31	29	Failure of shift solenoid 1	●	Shift Solenoid 1 - Low	IMD
P0974	31	30	Failure of shift solenoid 1	●	Shift Solenoid 1 - High	IMD
P0976	32	31	Failure of shift solenoid 2	●	Shift Solenoid 2 - Low	IMD
P0977	32	32	Failure of shift solenoid 2	●	Shift Solenoid 2 - High	IMD
P0979	33	33	Failure of shift solenoid 3	●	Shift Solenoid 3 - Low	IMD
P0980	33	34	Failure of shift solenoid 3	●	Shift Solenoid 3 - High	IMD
P0985	52	–	Failure of gain change solenoid	O	Shift Solenoid 4 - Low	IMD
P0986	52	35	Failure of gain change solenoid	●	Shift Solenoid 4 - High	IMD
P0989	47	62	Failure of oil pressure switch 5	●	Oil Pressure SW 5 Low	IMD
P0990	47	61	Failure of oil pressure switch 5	●	Oil Pressure SW 5 High	IMD
P0994	55	66	Failure of oil pressure switch 6	●	Oil Pressure SW 6 Low	IMD
P0995	55	65	Failure of oil pressure switch 6	●	Oil Pressure SW 6 High	IMD
P1604	24	10	Abnormality in accelerator pedal position signal	●	Accel Sensor	IMD
P2716	34	27, 28	PL linear solenoid is open-circuited or short-circuited.	●	Linear Sol Valve 4 Electrical	IMD
P2742	17	16	Failure of oil temperature sensor (outside)	●	Oil Temp Sensor “TC” Low	IMD
*P2743	17	17, 18	Failure of oil temperature sensor (outside)	●	Oil Temp Sensor “TC” High	IMD or 2DC
P2757	61	9	Failure of lockup clutch	●	Lockup Clutch	2DC
P2759	35	25, 26	Linear solenoid 3 is open-circuited or short-circuited.	●	Linear Sol Valve 3 Electrical	IMD
U0100	88	68, 69, 70, 71	Abnormality in CAN communication	●	CAN Communication	IMD

IMD: Immediate CAN: Controller area network
DC [Drive cycle]: “Start switch ON to start engine till starter switch OFF” constitutes 1 DC.
TRIP: Starter switch ON to OFF constitutes 1 TRIP.
●: Engine warning and automatic transmission warning lamps lit
O : Automatic transmission warning lamp only lit

3.2 Inspection against Each Fault Code in the List

[Fault code]
Diagnosis code: P0078/Flash code: 54
[Monitor ID]
None
[Fault (outline)]
Failure of exhaust brake cut relay
[Diagnosis check]
- The operating condition of exhaust brake under exhaust brake cut control is monitored.

[Code generation condition]
- Input of controller area network signal of exhaust brake operation from engine electronic control unit continues for more than 0.5 second.

[Diagnosis check timing]
- Fault diagnosis is performed each time when the control is activated.

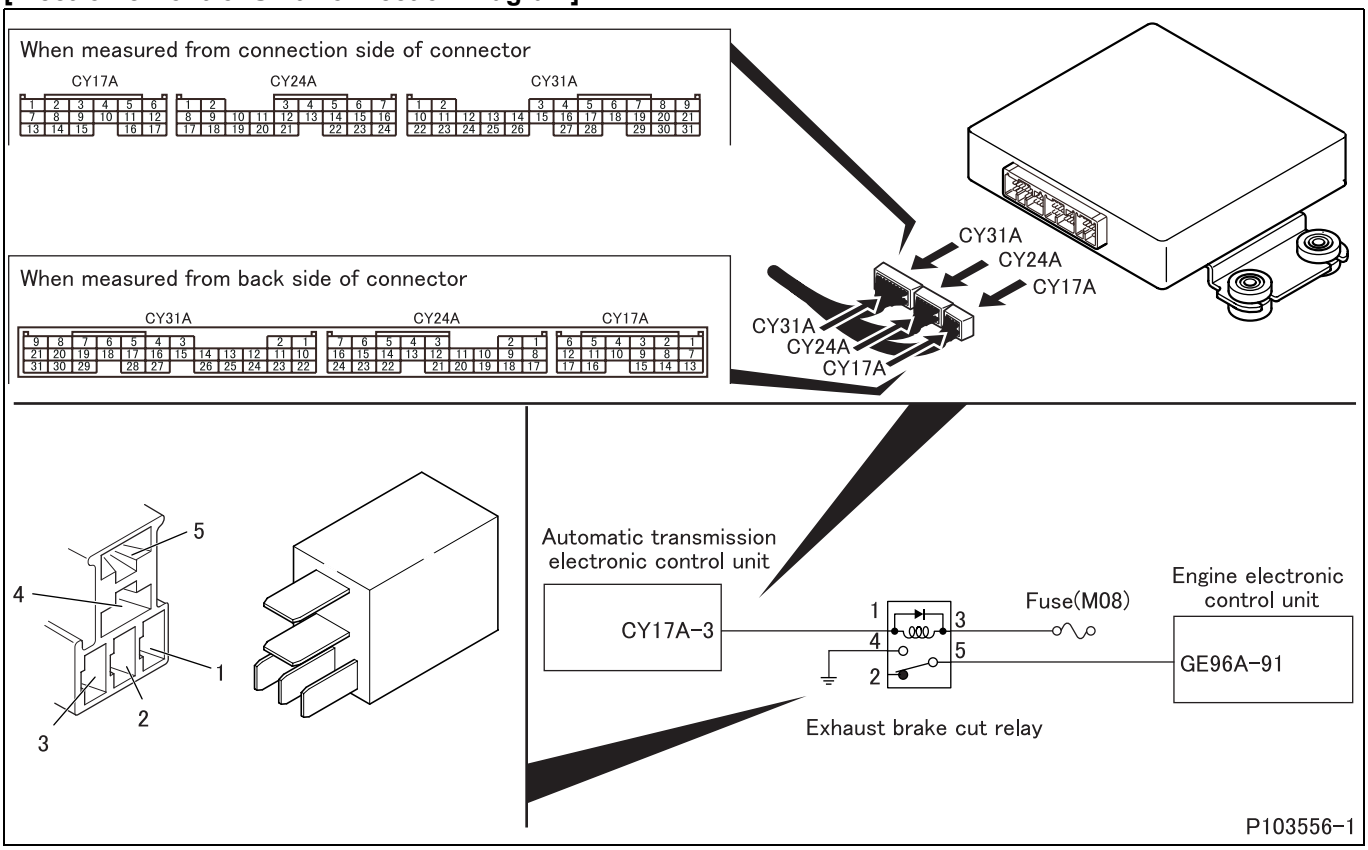
[Diagnostic requirement]
- Exhaust brake cut being requested

[Control effected by electronic control unit during fault]
- Braking force control is inhibited.

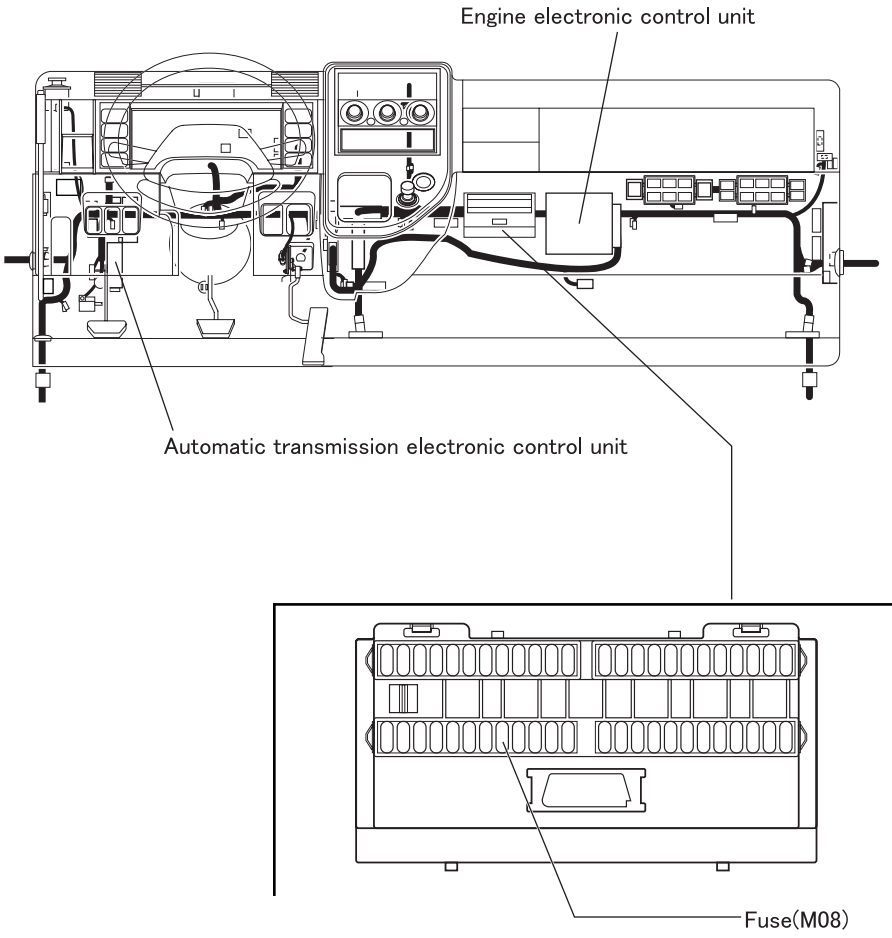
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and automatic transmission exhaust brake cut relay
- Malfunction of each connector
- Malfunction of automatic transmission exhaust brake cut relay
- Defective electronic control unit

[Recoverability]
- When diagnosis code is cleared with scanning tool (General Scanning Tool or Multi-Use Tester).

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

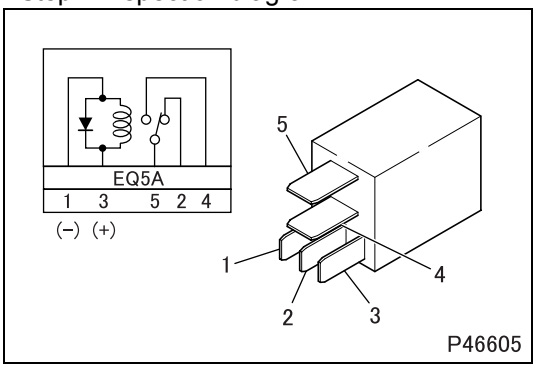
Step 1	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Measure value of voltage between connector (CY17A) terminal No. 3 (+) and connector (CY24A) terminal No. 8 (–). **<Multi-Use Tester used>** Measure item No. 54 “Exh Brake Cut SIG” of Service Data.
	Inspection condition		When vehicle is running **<Multi-Use Tester not used>** Measure from back side of harness connector with electronic control unit connected to harness.
	Requirements		**<Multi-Use Tester not used>** • Decelerated and stopped: 12 V → 0 V • During acceleration: 12 V **<Multi-Use Tester used>** • Decelerated and stopped: OFF → ON • During acceleration: OFF
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Modify connector.

Step 3	Inspection items		Inspection of relay connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify connector.

Step 4	Inspection items		Inspection of relay unit
	Maintenance item		Measure continuity between terminals No. 4 and 5 when relay operates.
	Inspection condition		Apply battery voltage across connector terminals No. 3 (+) and 1 (–).
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Replacement of sensor

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between relay and electronic control unit (signal)
	Maintenance item		Check circuit between relay connector terminal No. 1 and electronic control unit connector (CY17A) terminal No. 3
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between relay and fuse
	Maintenance item		Check circuit between relay connector terminal No. 3 and electronic control unit fuse (M08)
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Measure value of voltage between connector (CY17A) terminal No. 3 (+) and connector (CY24A) terminal No. 8 (–). **<Multi-Use Tester used>** Measure item No. 54 (Exh Brake Cut SIG) of Service Data.
	Inspection condition		When vehicle is running **<Multi-Use Tester not used>** Measure from back side of harness connector with electronic control unit connected to harness.
	Requirements		**<Multi-Use Tester not used>** • Decelerated and stopped: 12 V → 0 V • During acceleration: 12 V **<Multi-Use Tester used>** • Decelerated and stopped: OFF → ON • During acceleration: OFF
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0500/Flash code: 12
[Monitor ID]
1
[Fault (outline)]
Failure of vehicle speed sensor
[Diagnosis check]
- Vehicle speed sensor is monitored for fault during vehicle run (after at least 4 seconds of running at 5 km/h {3 mph} or more)

[Code generation condition]
- Input signal from vehicle speed sensor is missing when output speed sensor output is normal.

[Diagnosis check timing]
- Fault diagnosis is performed once at the minimum during the driving cycle.

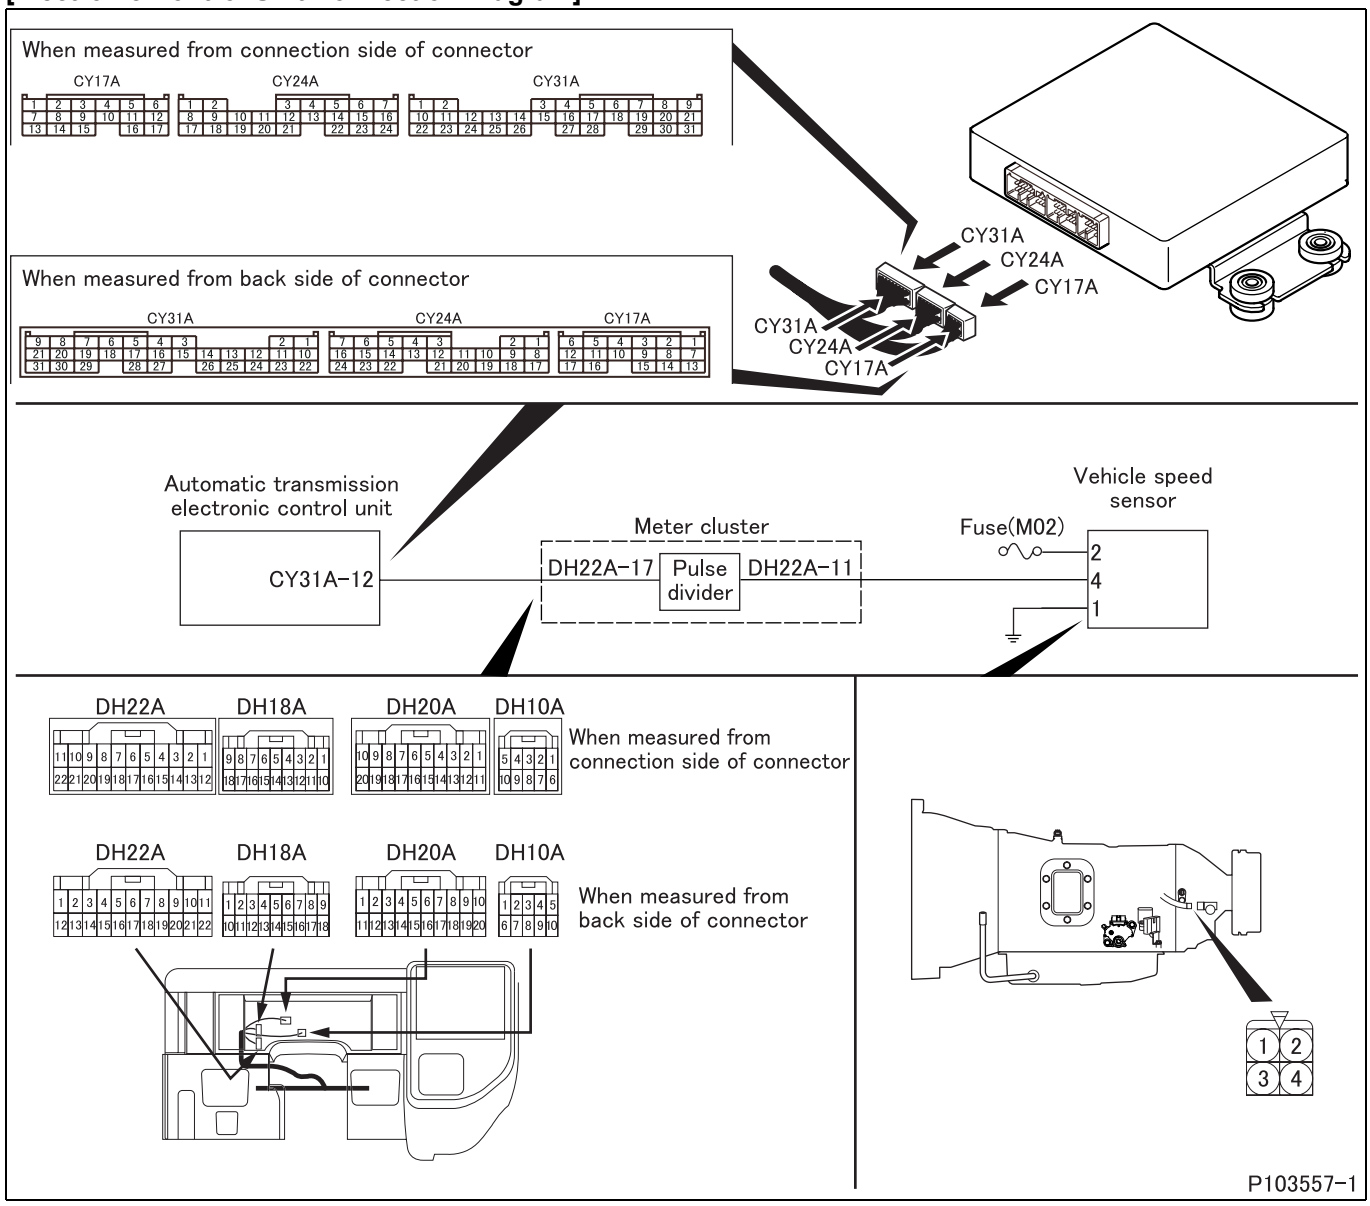
[Diagnostic requirement]
- Vehicle speed: above 5 km/h {3 mph} (not less than 4 sec.)
- Shift position: except P or N range
- Output speed sensor related diagnosis code (P0721, P0722) does not occur.

[Control effected by electronic control unit during fault]
- Normal control is effected using output speed sensor.

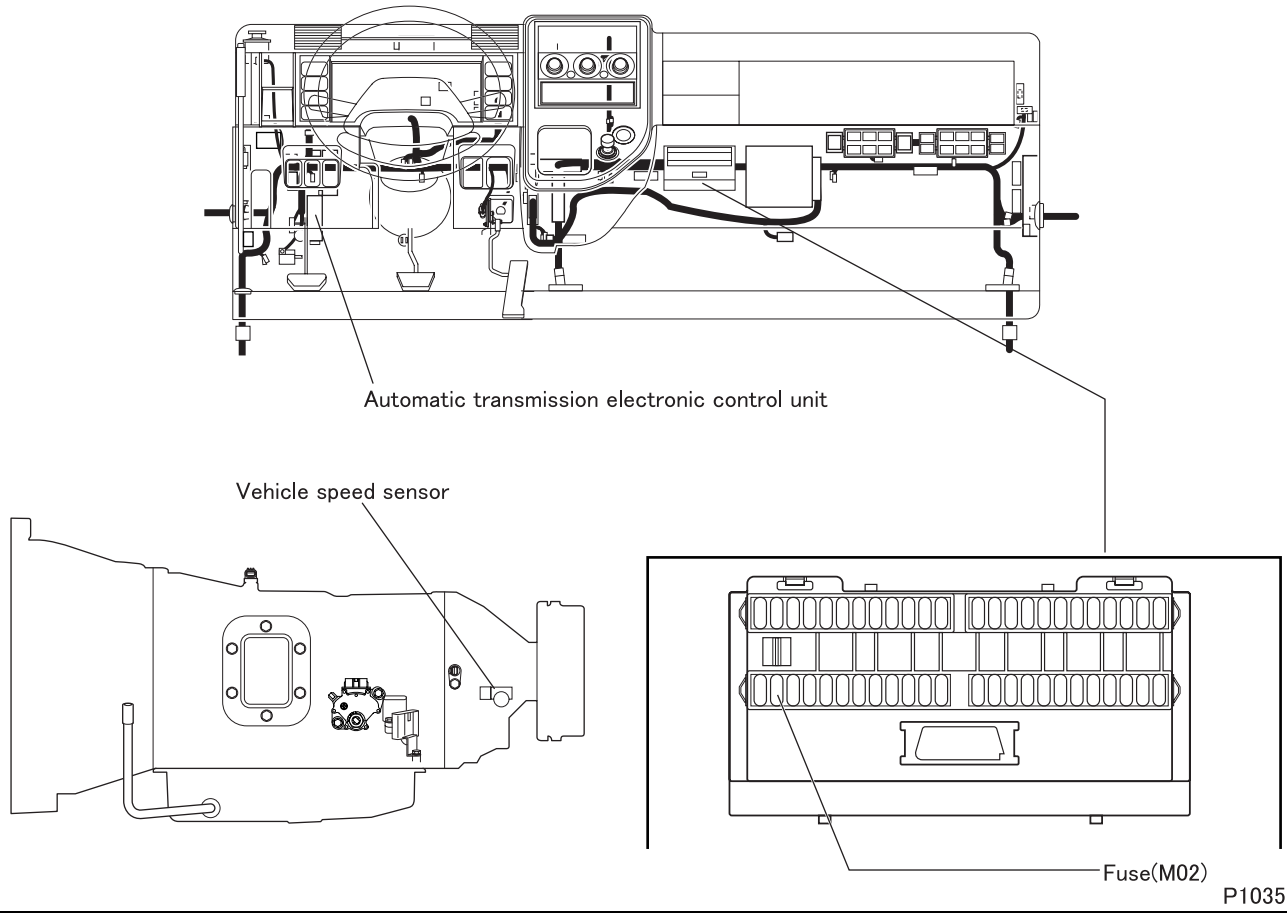
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and pulse divider in meter cluster
- Open-circuit or short-circuit of harness between pulse divider in meter cluster and vehicle speed sensor
- Malfunction of each connector
- Malfunction of pulse divider in meter cluster
- Malfunction of vehicle speed sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Go to step 2. **<Multi-Use Tester used>** Measure item No. 12 “VEH Speed 1” of Service Data.
	Inspection condition		During vehicle run
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

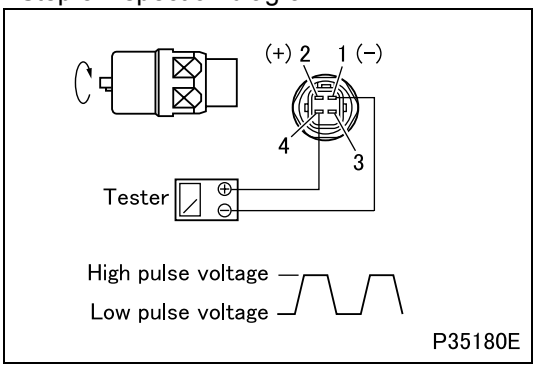
Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (CY31A) terminal No. 12 (+) and (CY24A) terminal No. 8 (–).
	Inspection condition		• Measure from back side of harness connector with electronic control unit connected to harness. • Slowly turn the wheel using chassis dynamometer or the like. • Starter switch: ON
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and pulse divider
	Maintenance item		Check circuit between meter cluster connector (DH22A) terminal No. 17 and electronic control unit connector (CY31A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of sensor unit <25 pulse output>
	Maintenance item		Measure maximum value (high pulse voltage) and minimum value (low pulse voltage) of voltage generated between sensor connector terminals No. 4 (+) and No. 1 (–).
	Inspection condition		Slowly turn sensor shaft with battery voltage applied between terminals No. 2 (+) and No. 1 (–).
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between sensor and fuse (power supply)
	Maintenance item		Check circuit between sensor connector No. 2 and fuse (M02).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between sensor chassis and ground (ground)
	Maintenance item		Check circuit between sensor connector No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between sensor and pulse divider (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 4 and meter cluster connector (DH22A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection by pulse divider connector
	Maintenance item		Measure value of voltage between meter cluster connector (DH22A) terminal No. 17 (+) and No. 6 (–).
	Inspection condition		• Measure from back side of connector with harness left connected • Remove sensor and slowly turn sensor shaft. • Starter switch: ON
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of meter cluster

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Measure value of voltage between connector (CY31A) terminal No. 12 (+) and (CY24A) terminal No. 8 (–). **<Multi-Use Tester used>** Measure item No. 12 “VEH Speed 1” of Service Data.
	Inspection condition		**<Multi-Use Tester not used>** • Measure from back side of harness connector with electronic control unit connected to harness. • Slowly turn the wheel using chassis dynamometer or the like. • Starter switch: ON **<Multi-Use Tester used>** During vehicle run
	Requirements		**<Multi-Use Tester not used>** • Low pulse: 0.5 V or less • High pulse: Approx. 8 V **<Multi-Use Tester used>** Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0501/Flash code: 12
[Monitor ID]
2
[Fault (outline)]
Failure of vehicle speed sensor
[Diagnosis check]
- Vehicle speed sensor in control as backup for output speed sensor is monitored for fault with vehicle in running condition.

[Code generation condition]
Vehicle speed sensor is judged faulty in either of the following cases.
- Electronic control unit determines vehicle stop after sudden input of deceleration signal from vehicle speed sensor. (Lamp indication: IMD) <A>
- Abnormality established by comparison with turbine speed sensor and output speed sensor and of output gear ratio has continued for 4 seconds. (Lamp indication: 2DC) <B>

[Diagnosis check timing]
- Fault diagnosis is performed once at the minimum during the driving cycle.

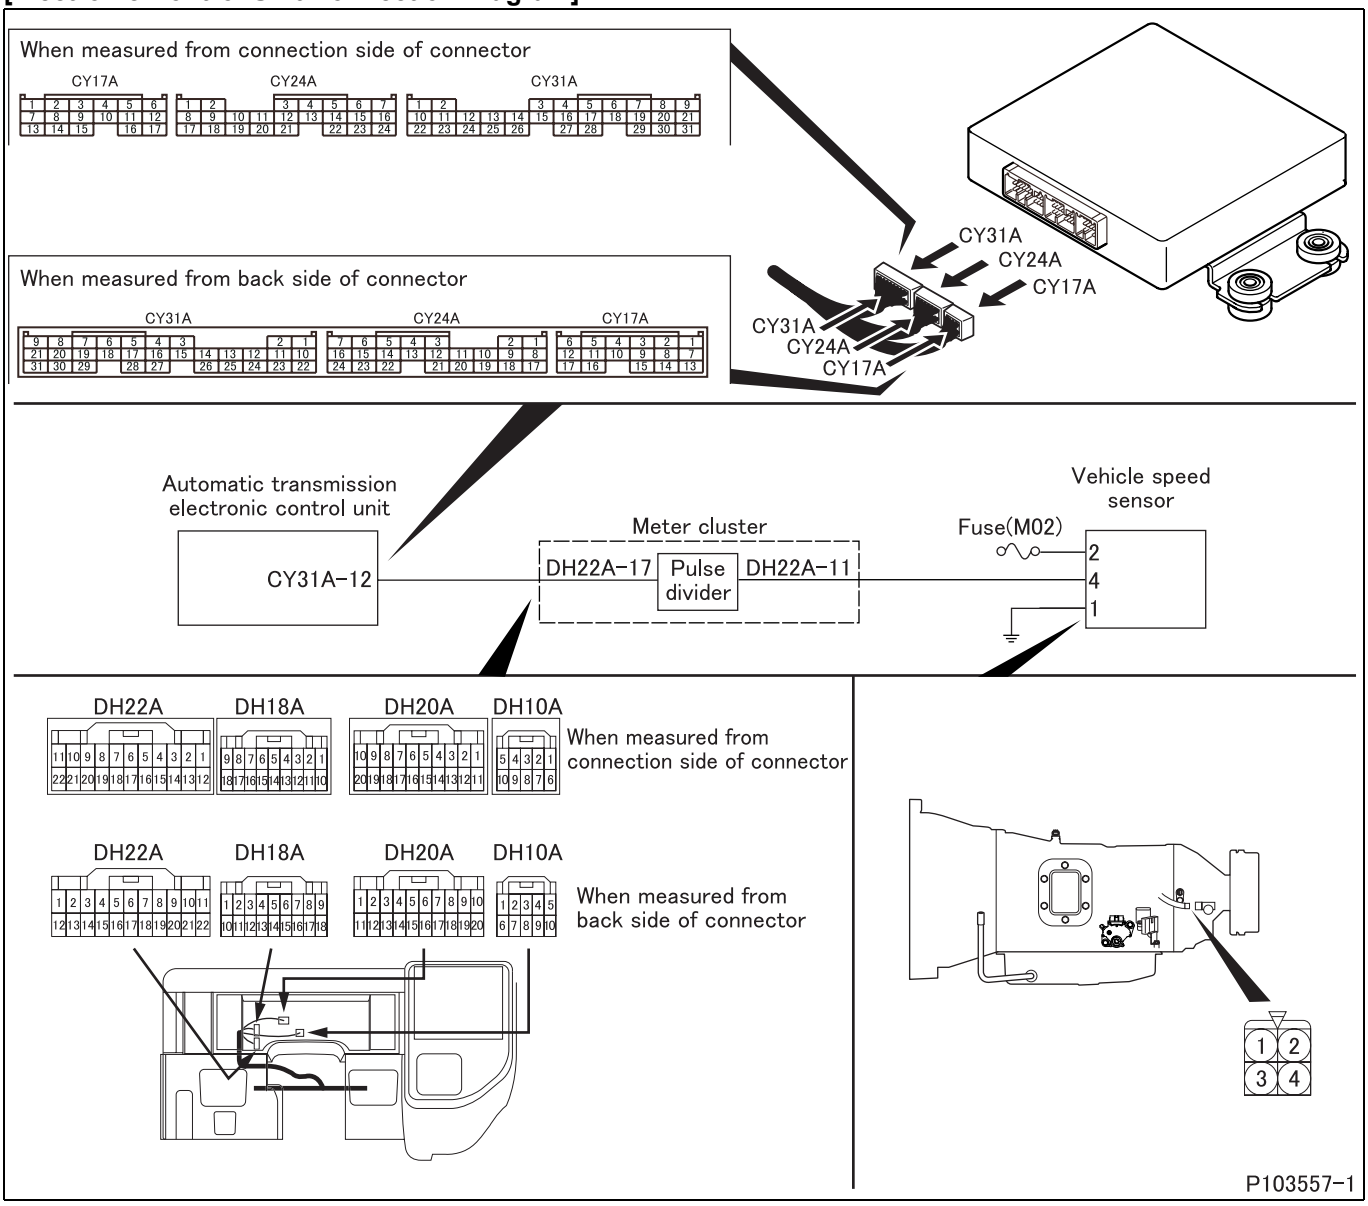
[Diagnostic requirement]
- Vehicle speed sensor related diagnosis code (P0500) does not occur.
- Output speed sensor related diagnosis code (P0721, P0722) does not occur.
- Turbine speed sensor related diagnosis code does not occur.
- Engine speed sensor related diagnosis code does not occur.
- Inhibitor switch related diagnosis code does not occur.
- Control with the fixed speed gear signals outputted under fault conditions is not effected.
- Shift position: except P or N range
- Control at the time of gear shifting is not effected.

[Control effected by electronic control unit during fault]
- The gear last selected is active on a steady basis. <A>
- Normal control is effected using output speed sensor. <B>

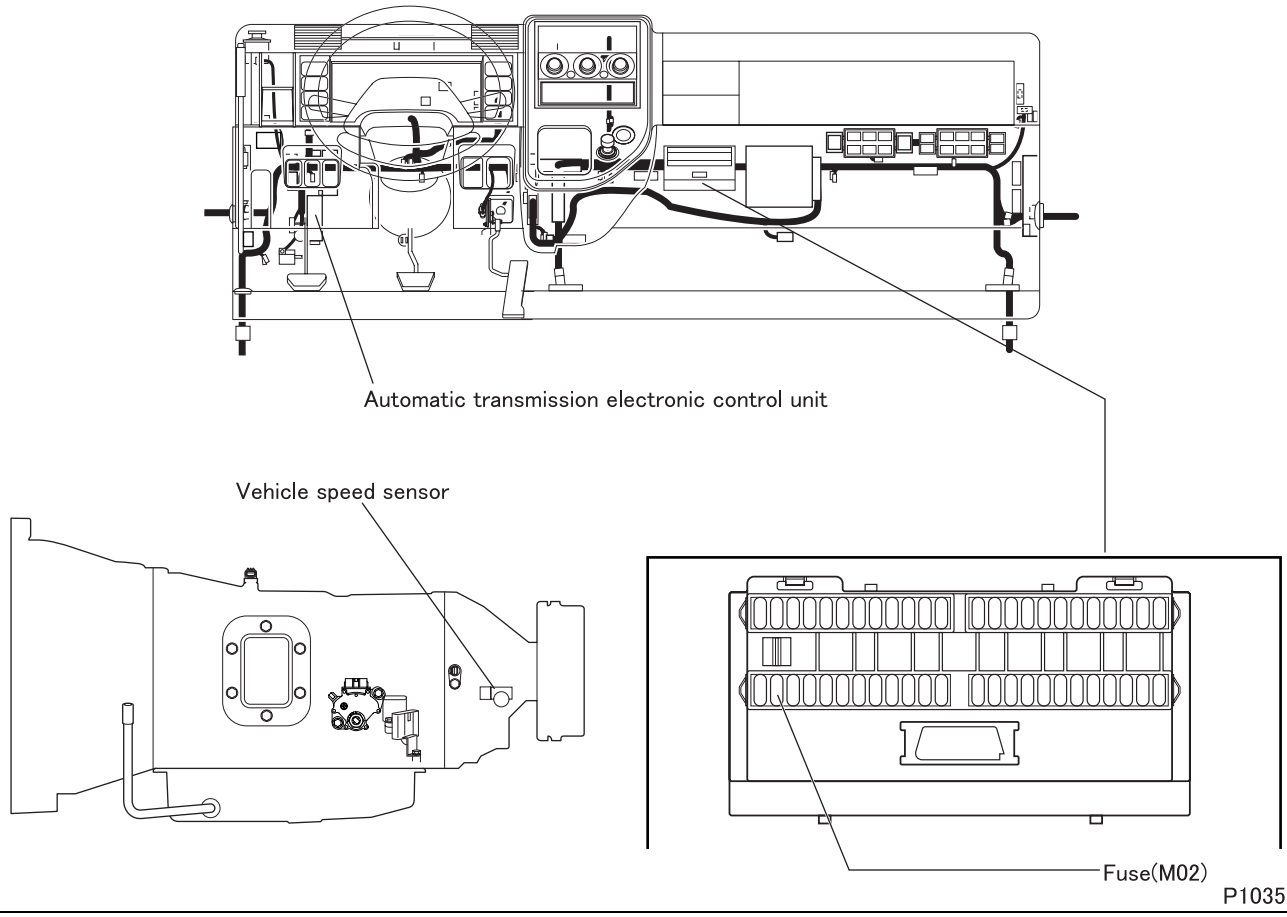
[Probable cause of trouble]
- Open-circuit or short-circuit of harness between electronic control unit and pulse divider in meter cluster
- Open-circuit or short-circuit of harness between pulse divider in meter cluster and vehicle speed sensor
- Malfunction of each connector
- Malfunction of pulse divider in meter cluster
- Malfunction of vehicle speed sensor
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal with starter switch in ON position.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Go to step 2. **<Multi-Use Tester used>** Measure item No. 12 “VEH Speed 1” of Service Data.
	Inspection condition		During vehicle run
	Requirements		Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

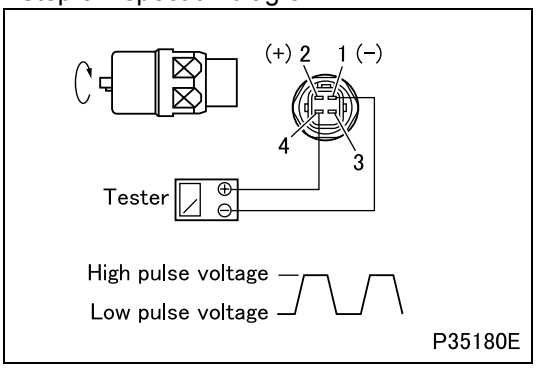
Step 2	Inspection items		Inspection by electronic control unit connector (signal)
	Maintenance item		Measure value of voltage between connector (CY31A) terminal No. 12 (+) and (CY24A) terminal No. 8 (–).
	Inspection condition		• Measure from back side of harness connector with electronic control unit connected to harness. • Slowly turn the wheel using chassis dynamometer or the like. • Starter switch: ON
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify connector.

Step 4	Inspection items		Inspection of harness between electronic control unit and pulse divider
	Maintenance item		Check circuit between meter cluster connector (DH22A) terminal No. 17 and electronic control unit connector (CY31A) terminal No. 12.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection of sensor unit <25 pulse output>
	Maintenance item		Measure maximum value (high pulse voltage) and minimum value (low pulse voltage) of voltage generated between sensor connector terminals No. 4 (+) and No. 1 (–).
	Inspection condition		Slowly turn sensor shaft with battery voltage applied between terminals No. 2 (+) and No. 1 (–).
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Replacement of sensor

<Step 5 inspection diagram>



Step 6	Inspection items		Inspection of harness between sensor and fuse (power supply)
	Maintenance item		Check circuit between sensor connector No. 2 and fuse (M02).
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection of harness between sensor chassis and ground (ground)
	Maintenance item		Check circuit between sensor connector No. 1 and chassis ground.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Modify harness.

Step 8	Inspection items		Inspection of harness between sensor and pulse divider (signal)
	Maintenance item		Check circuit between sensor connector terminal No. 4 and meter cluster connector (DH22A) terminal No. 11.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection by pulse divider connector
	Maintenance item		Measure value of voltage between meter cluster connector (DH22A) terminal No. 17 (+) and No. 6 (–).
	Inspection condition		• Measure from back side of connector with harness left connected • Remove sensor and slowly turn sensor shaft. • Starter switch: ON
	Requirements		• Low pulse: 0.5 V or less • High pulse: Approx. 8 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Replacement of meter cluster

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Measure value of voltage between connector (CY31A) terminal No.12 (+) and (CY24A) terminal No.8 (–). **<Multi-Use Tester used>** Measure item No. 12 “VEH Speed 1” of Service Data.
	Inspection condition		**<Multi-Use Tester not used>** • Measure from back side of harness connector with electronic control unit connected to harness. • Slowly turn the wheel using chassis dynamometer or the like. • Starter switch: ON **<Multi-Use Tester used>** During vehicle run
	Requirements		**<Multi-Use Tester not used>** • Low pulse: 0.5 V or less • High pulse: Approx. 8 V **<Multi-Use Tester used>** Same indication as speedometer is given.
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0562/Flash code: 11
[Monitor ID]
72
[Fault (outline)]
Open-circuit of starter switch ON power supply
[Diagnosis check]
- Engine speed after starter switch is turned OFF is monitored for open-circuit of starter switch ON power supply.

[Code generation condition]
- Engine speed remains higher than 300 rpm for 12 seconds after starter switch is turned OFF.

[Diagnosis check timing]
- Fault diagnosis is performed once when the electronic control unit is powered off.

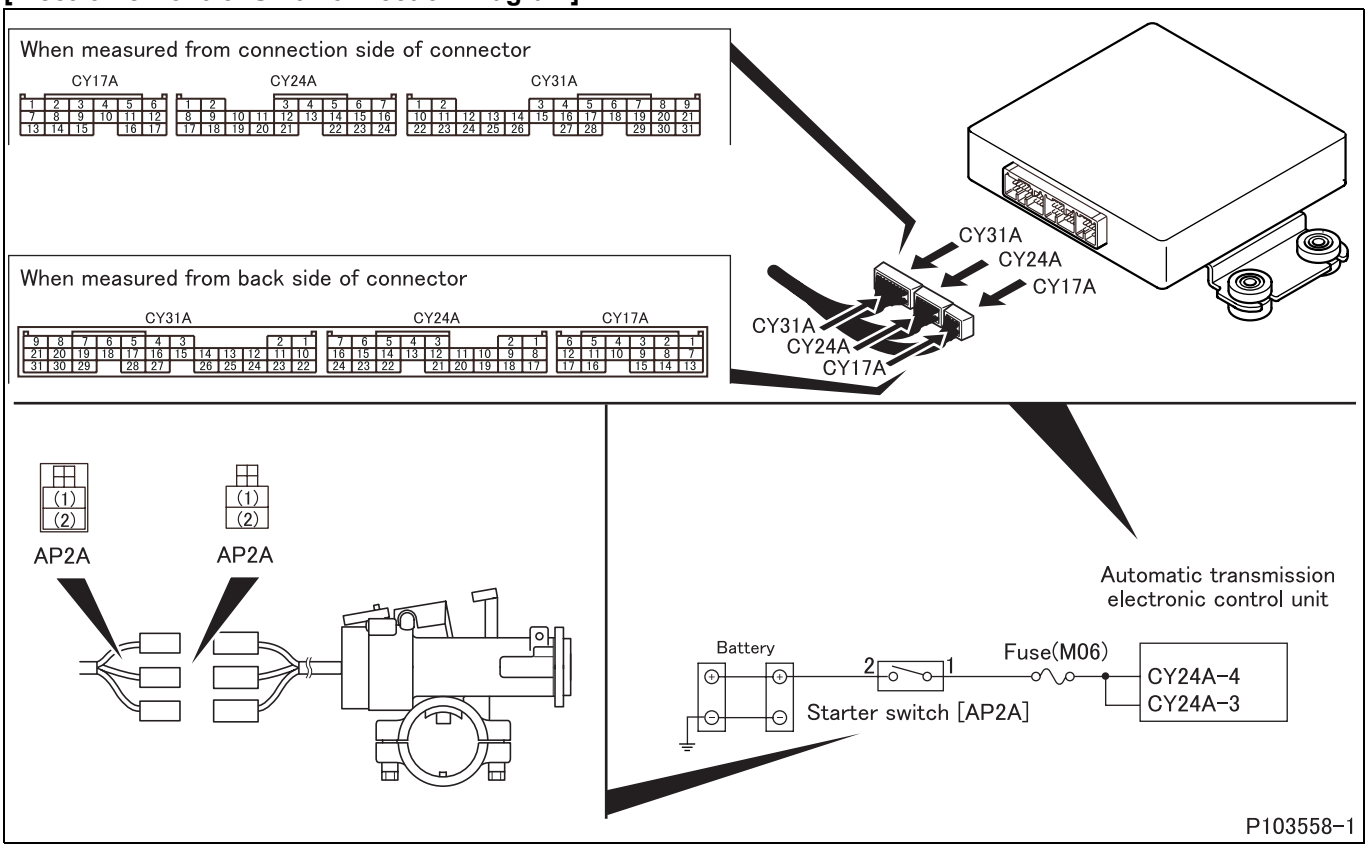
[Diagnostic requirement]
- Starter switch: OFF

[Control effected by electronic control unit during fault]
- All solenoids are turned OFF and control is effected at fixed speed gear output (3rd or 5th) corresponding to vehicle speed.

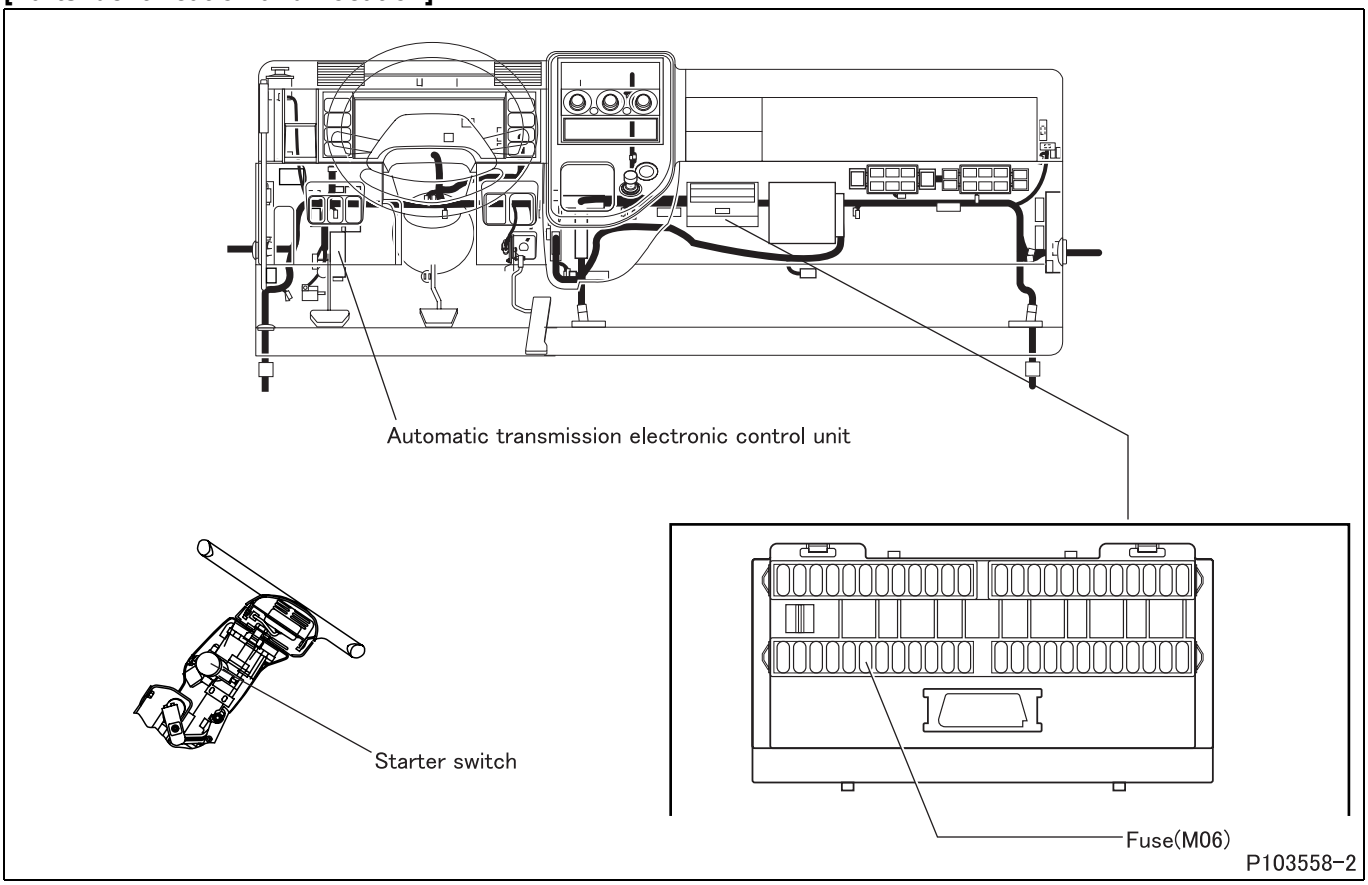
[Probable cause of trouble]
- Open-circuit of harness between electronic control unit and starter switch
- Malfunction of each connector
- Malfunction of starter switch
- Malfunction of electronic control unit

[Recoverability]
- Recovered when the starter switch is turned from OFF to ON.

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Go to step 2. **<Multi-Use Tester used>** Measure item No. 11 “IG” of Service Data.
	Inspection condition		Starter switch: ON
	Requirements		12 V (equivalent to battery voltage)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Go to step 2.

Step 2	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (CY24A) terminal No. 3, 4 (+) and 8 (–).
	Inspection condition		• Measure from back side of harness connector with harness left connected • Engine stopped
	Requirements		• Starter switch ON: 12 V • Starter switch OFF: 0 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 3.
		NO	Go to step 4.

Step 3	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify connector.

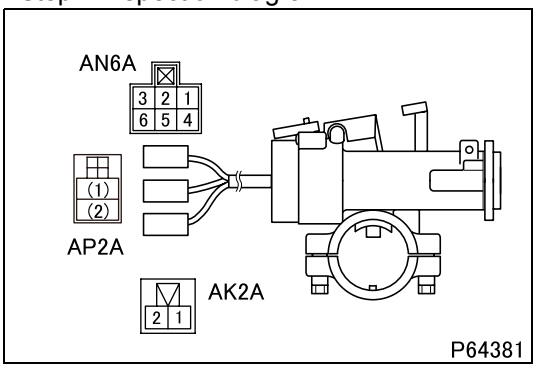
Step 4	Inspection items		Inspection of starter switch connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify connector.

Step 5	Inspection items		Inspection by starter switch connector
	Maintenance item		Measure value of voltage between switch connector (AP2A) terminal No. 1 (+) and chassis ground.
	Inspection condition		• Measure from back side of connector with harness left connected • Starter switch: ON
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Go to step 7.

Step 6	Inspection items		Inspection of harness between electronic control unit and starter switch
	Maintenance item		Check circuit between starter switch connector (AP2A) terminal No.1 and electronic control unit connector (CY24A) terminal No. 3, 4
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity (Fuse (M06) not blown).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 7	Inspection items		Inspection of starter switch unit
	Maintenance item		Measure continuity between switch connector (AP2A) terminals No. 1 and No. 2.
	Inspection condition		Starter switch: ON
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 8.
		NO	Replacement of switch

<Step 7 inspection diagram>



Step 8	Inspection items		Inspection of harness between battery and electronic control unit (power supply)
	Maintenance item		Check circuit between battery terminal (+) and electronic control unit connector (CY24A) terminal No. 3, 4.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity (Fuse (M06) not blown).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 9.
		NO	Modify harness.

Step 9	Inspection items		Inspection of harness between battery and electronic control unit (ground)
	Maintenance item		Check circuit between battery terminal (–) and electronic control unit connector (CY24A) terminal No. 8, 17.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 10.
		NO	Modify harness.

Step 10	Inspection items		Inspection by control data
	Maintenance item		**<Multi-Use Tester not used>** Measure value of voltage between connector (CY24A) terminal No. 3, 4 (+) and 8 (–). **<Multi-Use Tester used>** Measure item No. 11 “IG” of Service Data.
	Inspection condition		**<Multi-Use Tester not used>** • Measure from back side of harness connector with harness left connected • Engine stopped **<Multi-Use Tester used>** Starter switch: ON
	Requirements		**<Multi-Use Tester not used>** • Starter switch ON: 12 V • Starter switch OFF: 0 V **<Multi-Use Tester used>** 12 V (equivalent to battery voltage)
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0604/Flash code: 91
[Monitor ID]
74
[Fault (outline)]
Failure of electronic control unit
[Diagnosis check]
- Write device (RAM) in electronic control unit is monitored for fault.

[Code generation condition]
- RAM in electronic control unit malfunctions.

[Diagnosis check timing]
- Fault diagnosis is performed once when the electronic control unit is powered on.

[Diagnostic requirement]
- Performed once when electronic control unit is powered up.

[Control effected by electronic control unit during fault]
- All solenoids are turned OFF and control is effected at fixed speed gear output (3rd or 5th) corresponding to vehicle speed.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Clear memory, resume power supply to electronic control unit and check for recurrence of the same diagnosis code.
	Maintenance item		–
	Inspection condition		–
	Requirements		No recurrence detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0605/Flash code: 92
[Monitor ID]
75
[Fault (outline)]
Failure of electronic control unit
[Diagnosis check]
- Write device (RAM) in electronic control unit is monitored for fault.

[Code generation condition]
- FlashROM in electronic control unit malfunctions.

[Diagnosis check timing]
- Fault diagnosis is performed once when the electronic control unit is powered on.

[Diagnostic requirement]
- Performed once when electronic control unit is powered up.

[Control effected by electronic control unit during fault]
- All solenoids are turned OFF and control is effected at fixed speed gear output (3rd or 5th) corresponding to vehicle speed.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Clear memory, resume power supply to electronic control unit and check for recurrence of the same diagnosis code.
	Maintenance item		–
	Inspection condition		–
	Requirements		No recurrence detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P062F/Flash code: 93
[Monitor ID]
76
[Fault (outline)]
Failure of electronic control unit
[Diagnosis check]
- Write device (RAM) in electronic control unit is monitored for fault.

[Code generation condition]
- EEPROM in electronic control unit malfunctions.

[Diagnosis check timing]
- Fault diagnosis is performed once when the electronic control unit is powered on.

[Diagnostic requirement]
- Performed once when electronic control unit is powered up.

[Control effected by electronic control unit during fault]
- Effects no special control.

[Probable cause of trouble]
- Malfunction of electronic control unit (replacement of electronic control unit)

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).

[Fault diagnosis]
- Perform checks in the sequence of the following steps.

Step 1	Inspection items		Clear memory, resume power supply to electronic control unit and check for recurrence of the same diagnosis code.
	Maintenance item		–
	Inspection condition		–
	Requirements		No recurrence detected
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0702/Flash code: 11
[Monitor ID]
73
[Fault (outline)]
Open-circuit of battery power supply
[Diagnosis check]
- When starter switch is turned OFF to ON, electronic control unit determines whether there was abnormality in power supply at last engine start by means of its internal write device (EEPROM).

[Code generation condition]
- Presence of abnormality at last engine start has been written in EEPROM.

[Diagnosis check timing]
- Fault diagnosis is performed once when the electronic control unit is powered on.

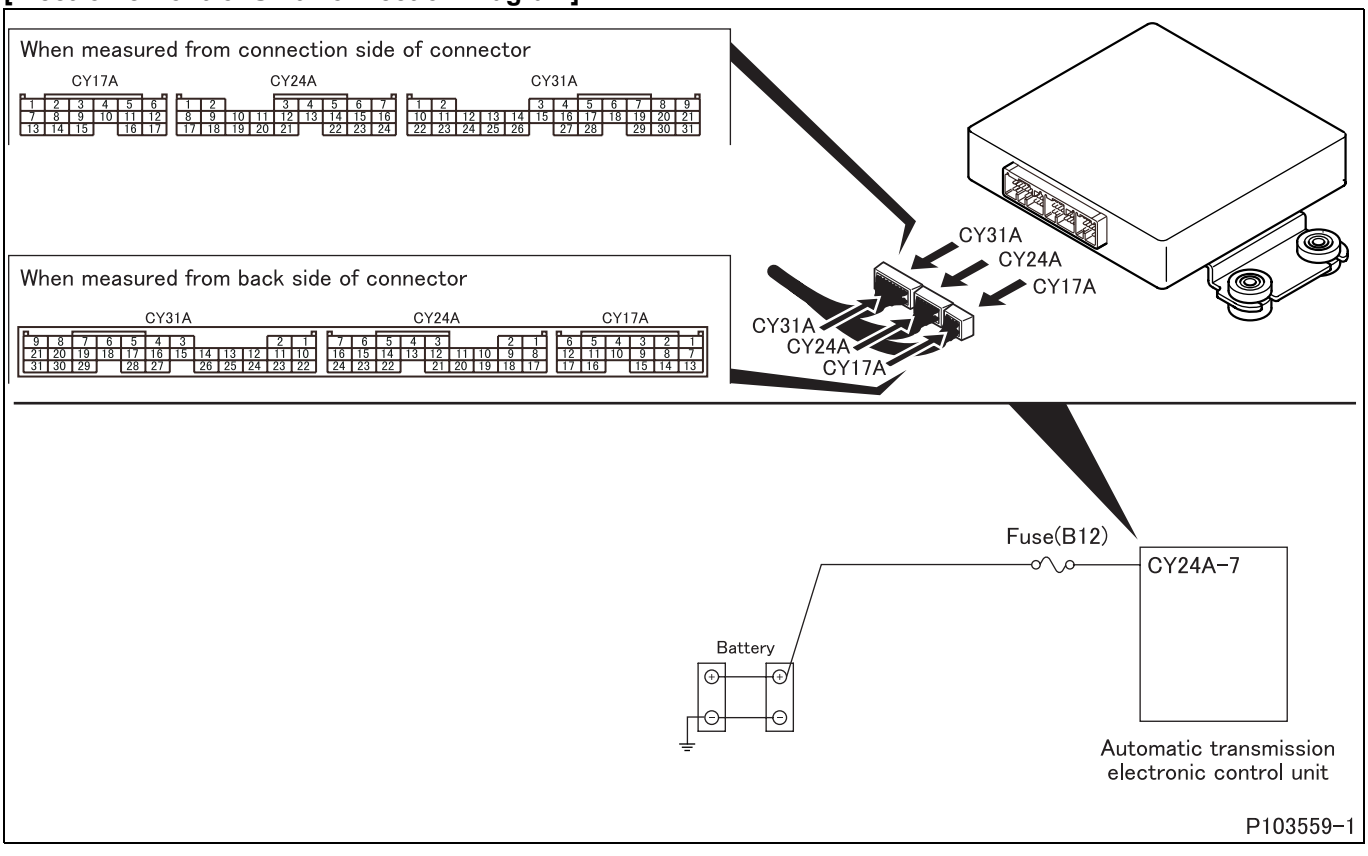
[Diagnostic requirement]
- Performed once when electronic control unit is powered up.

[Control effected by electronic control unit during fault]
- No control is effected in particular.

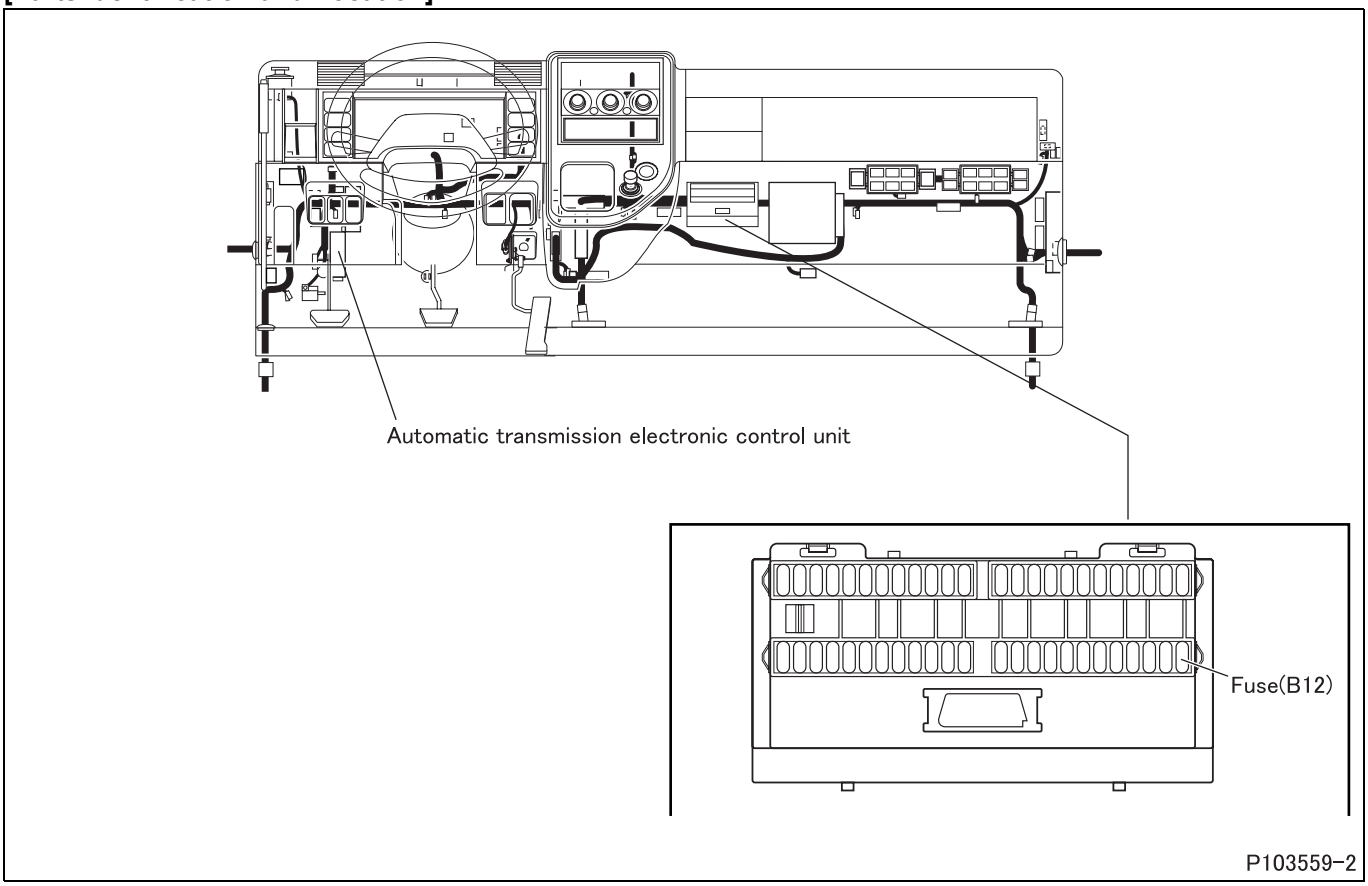
[Probable cause of trouble]
- Open-circuit of battery harness
- Malfunction of each connector
- Malfunction of electronic control unit

[Recoverability]
- Recovered if signal becomes normal when starter switch is turned OFF to ON (power supply resumed to electronic control unit).

[Electronic Control Unit Connection Diagram]



[Parts Identification and Location]



[Fault diagnosis]

- Perform checks in the sequence of the following steps.

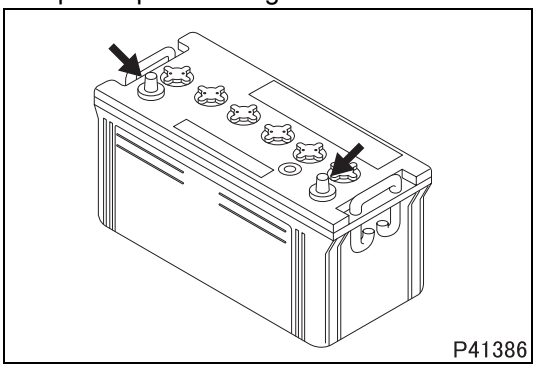
Step 1	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (CY24A) terminal No. 7 (+) and 8 (–).
	Inspection condition		• Measure from back side of harness connector with harness left connected • Engine stopped
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 2.
		NO	Go to step 3.

Step 2	Inspection items		Inspection of electronic control unit connector
	Maintenance item		Inspection of connector
	Inspection condition		–
	Requirements		• Connector is properly connected. • No trace of water entry is found. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Replacement of electronic control unit
		NO	Modify connector.

Step 3	Inspection items		Inspection of battery terminal
	Maintenance item		Inspection of battery terminal
	Inspection condition		–
	Requirements		• Connector is properly connected. • No corrosion is found in terminal. • Connection to terminal is appropriate.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 4.
		NO	Modify terminal.

Step 4	Inspection items		Inspection of battery
	Maintenance item		Measure battery terminal voltage.
	Inspection condition		Engine stopped
	Requirements		Approx. 12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 5.
		NO	Modify battery.

<Step 4 inspection diagram>



Step 5	Inspection items		Inspection of harness between battery and electronic control unit (power supply)
	Maintenance item		Check circuit between battery terminal (+) and electronic control unit connector (CY24A) terminal No. 7.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity (Fuse (B12) not blown).
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 6.
		NO	Modify harness.

Step 6	Inspection items		Inspection of harness between battery and electronic control unit (ground)
	Maintenance item		Check circuit between battery terminal (–) and electronic control unit connector (CY24A) terminal No. 8, 17.
	Inspection condition		Disconnect each device from harness and measure from connection side of harness connector.
	Requirements		There is continuity.
	Inspection result (Is the judging standard satisfied?)	YES	Go to step 7.
		NO	Modify harness.

Step 7	Inspection items		Inspection by electronic control unit connector (power supply)
	Maintenance item		Measure value of voltage between connector (CY24A) terminal No. 7 (+) and 8 (–).
	Inspection condition		• Measure from back side of harness connector with harness left connected • Engine stopped
	Requirements		12 V
	Inspection result (Is the judging standard satisfied?)	YES	Go to transient fault (See Gr00.).
		NO	Replacement of electronic control unit

[Fault code]
Diagnosis code: P0706/Flash code: 49
[Monitor ID]
49, 50
[Fault (outline)]
Failure of oil pressure switch 8
[Diagnosis check]
- ON/OFF status of oil pressure switch 8 at range shifts is monitored.

[Code generation condition]
- Oil pressure switch 8 remains OFF for 7 seconds for 3 times in 1 TRIP when range is shifted to D, 3 or 2. (Open-circuit) <A>
- Oil pressure switch 8 remains ON for 0.5 second when range is shifted to P, R or N. (Short-circuit) <B>

[Diagnosis check timing]
- Fault diagnosis is performed once at the minimum during the driving cycle.

[Diagnostic requirement]
- Starter switch: ON <A>
- Engine revolution: above 550 rpm (not less than 0.1 sec.) <A>
- Continuous <B>

[Control effected by electronic control unit during fault]
- Control is effected on fixed speed gear output (3rd).

[Probable cause of trouble]
